
doesn't mean that you'll get fame, fortune, or the slightest bit of recognition out of it. In fact, some inventors get so little credit that we completely forgot about them in our previous article, and since we really don't like angering the ghosts of people who could probably invent a way to punch us from beyond the grave, here they are.

#6. Siegel and Shuster, Superman's Creators Jerry Siegel and Joe Shuster created Superman, the most famous superhero ever, perhaps with the exception of Spider-Man or that kid who changes the channel with his eyes in X2. Debuting in 1938, Superman was an instant success. DC Comics soon followed up the "man in underpants punches criminals" concept with Batman, and that was it, there was no turning back: Siegel and Shuster's creation had started a multibillion-dollar industry that is still going strong today, spawning toys, T-shirts, and, oh yeah, some of the highest-grossing movies of all time. Nice one, Siegel and Shuster! Alan Light "Take it from us, kids: Work hard, change the world, and you too can see absolutely no reward from it!" But Then They Got Screwed "Nice one, Siegel and Shuster" is exactly what DC must have said, in a sarcastic tone, when the duo famously sold them all rights to Superman for a measly \$130, a check that's now ironically worth hundreds of thousands of dollars. At the time, no one suspected that the guy in blue pajamas that they'd been drawing would turn into a cultural icon - so when he did, and Siegel and Shuster continued getting squat, the pair embarked on perhaps the longest clusterfuck in copyright history. The duo spent the better part of their lives unsuccessfully trying to reclaim some part of their creation, only to be rebuffed time and time again. While DC raked in billions from Superman alone, Siegel and Shuster lived the lives of paupers. They were given a yearly pension in the late 1970s by Warner Bros. (which had purchased DC), but only because the studio couldn't afford the bad publicity with a Superman movie on the way. In 1999, three years after Siegel died, his family successfully won the rights to his half of his creation. A happy ending, right? Nope! This meant dick to Warner Bros., who still refused to pay them a penny, leaving them to fight in court for another 10 fucking years. And the superdickery continues: More recently, documents disappeared from Siegel's daughter's attorney's office and somehow wound up in the hands of Warner Bros. executives.

#5. Philo T. Farnsworth, the Farm Boy Who Invented Television Philo Farnsworth, besides having the supreme honor of inspiring a Futurama character, was a serial inventor with a list of credited patents longer than his forehead. Among those patents was the one that made television possible: an "image dissector" that could capture images as a series of lines to be displayed electronically. If that isn't impressive enough for you, consider the fact that Farnsworth came up with the idea at age 14, while growing up on a farm in Idaho, and first demonstrated it at 21, in 1927. If that didn't make you feel bad about yourself, it should have. But Then He Got Screwed When the young inventor applied for a patent at age 20, David Sarnoff of the Radio Corporation of America took notice. Radio had a pretty cozy spot at the center of the American living room at this point, and Sarnoff wasn't interested in letting that change. And if it did, then he would at least make sure that RCA would be the one getting rich from it. Sarnoff kept Farnsworth tied in a series of legal battles over the next decade using a number of bullshit tactics, like hiring a Russian inventor to spy on him or using said inventor's earlier patents (which they could never get to work) to argue that he had invented TV. At one point Sarnoff just said "Fuck it" and started making TVs without paying Farnsworth. RCA was eventually forced to pay him a one-time \$1 million licensing fee, but it wasn't worth the emotional stress that had left the man crippled. Then the whole television business was put on hold when the '40s rolled around and the government told everyone to focus on building things that could kill Germans. The final blow came when Farnsworth's patents expired just as World War II ended - and, what do you know, television sales skyrocketed. RCA, or anyone else for that matter, no longer had to even pretend to give a shit about paying Farnsworth for his invention. It wasn't until 20 years after his death that the government decided that Farnsworth probably deserved some recognition. No shit. Following Farnsworth's final wishes, his statue is about to insert something into Sarnoff's anus.

#4. Edwin H. Armstrong, the Father of FM Radio When is the last time you listened to AM radio? Intentionally? The sound quality is so bad that most of the programming is reduced to things that already sound like shit, like conservative talk radio or a single, never-ending religious sermon in Spanish. The much superior FM was invented by Edwin Armstrong, who created a system to reduce interference across radio bands in the 1910s. He continued his lifelong vendetta against crappy sound in the '20s, when he came up with frequency modulation (FM) as a way to reduce static. We will now reiterate that he developed all this technology nearly 100 years ago, and it's still present in all modern radios. But Then He Got Screwed Things seemed to be going swimmingly for Armstrong for a while, but it was at this point that a remarkably smug asshole came into the picture. Yes, David fucking Sarnoff from RC-fucking-A proceeded to mess with the life of yet another world-changing inventor. Sarnoff had built his empire with AM radio, so he decided that if FM was the way of the future, then he'd do anything possible to pull a John Connor on that future. Since Armstrong wouldn't relinquish

his patent, Sarnoff made sure that RCA not only stopped supporting the development of the new technology, but actively tried to stop it. In 1937, Armstrong used money from his own pocket to build the very first FM radio station. Another followed, then another, until by the mid '40s a string of stations known as the Yankee Network were busy convincing everyone of the superiority of FM, just by existing. And then it all stopped. In a dick move of epic proportions, Sarnoff successfully lobbied the FCC to move the FM band to a different place on the dial, from 42 to 50 MHz to 88 to 108 MHz. While there were somewhat valid technical reasons for this, a happy side effect for RCA was that it made all of Armstrong's stations instantly obsolete. It took decades for FM radio to recover. In the late '70s, it finally surpassed AM, but Armstrong was long gone by then, having committed suicide in 1954 by jumping from the 13th floor of his office building, presumably screaming "FUCK SARNOOOOOOFFFF" all the way down.

#3. John Walker, Inventor of the Match About 500 billion matches are used every year in the United States - that's the kind of volume you can do when your product sets itself on fire with every use. Before the invention of self-igniting friction matches, people simply used sticks that caught on fire when you, y'know, put them near fire. This changed when John Walker, an English chemist born in 1871, began coating sticks in a number of dangerous-sounding chemicals until he happened upon one that, when struck against a surface, erupted in flames. Other self-igniting matches had been tried before, but they were extremely impractical, by which we mean that a lot of people probably lost their eyebrows or worse using them. And clearly, eyebrows were very important to this man. Walker's invention caught on fire, both literally and figuratively, and we still keep matches around today, despite the fact that we've all heard of lighters. But Then He Got Screwed Walker, unaware of the potential of his invention, worked on these new "friction lights" for about a year, then promptly forgot about the whole thing and stopped selling them. People close to him implored Walker to patent his friction light, since he'd just revolutionized the creation of fire and all. Walker declined, believing that his invention could better benefit mankind without a patent. Others, however, believed that Walker's invention could better benefit mankind by making them rich. Getty- "How does fire help humanity if it doesn't allow me to buy prostitutes?" In 1829, another inventor named Isaac Holden independently came up with an improved version of Walker's friction matches. Like Walker, Holden neglected to patent his idea - and that's where one Samuel Jones came in. Jones, realizing that Walker and Holden had effectively created one of the most useful inventions in the history of civilization and weren't making money from it, decided to do it on their behalf, because he was nice like that. Almost immediately, Jones patented the exact same thing and began selling it under the name "Lucifers," because fuck it - if you're gonna be evil, you might as well go to the source. Soon other brands began offering improved versions of the same thing, all for a price, of course. It wasn't until they were all dead that Walker was credited for his invention, and Jones for being a douchebag.

#2. Stephen Foster, the Father of American Music There are some tunes that you're just born knowing. If we somehow forced you to hum a melody right now, chances are that a great number of you would go with something like "Oh! Susanna": Or "Camptown Races" (you know, the one that goes "doo-da, doo-da"): Or maybe something more nostalgic, like "Old Folks at Home": Man, can you imagine if all these songs had been written by the same guy, and that he'd been actively trying to get money from them? That dude would have been richer than Madonna and Bono combined. Actually, all those songs and more were written by the same person, and he did try to cash in on them - the keyword being "try." Then "she" came around the mountain and snatched up all his royalties. But Then He Got Screwed In the 1800s, Stephen Foster wrote classics like "My Old Kentucky Home" and "Beautiful Dreamer" and over 200 other songs. Foster was a professional songwriter before those existed. Seriously: The profession literally did not exist before Foster trailblazed it like a motherfucker. Of course, the problem with being the first in his profession was that there were no such things as "enforcing copyright" or "not screwing over songwriters" back then. Today, Foster would have earned obscene amounts of money from "Oh! Susanna" alone, but in 1848, he got exactly \$100 for the rights to publish the sheet music, while the publisher made \$10,000 selling his work. Even when Foster became a minor celebrity, he continued getting nothing but pennies for every copy of his work that was sold. For his dozens of hit songs, he saw around \$15,000 in royalties in his whole life. In the 1860s, he was dumped by his wife, who had probably had enough of sticking around with this dude who wrote like a rock star, and drank like a rock star, but was not rich like one. He died at the age of 37 after hitting his head on a washbasin, with around 40 cents in his pocket. Some of which were melted down to make this statue. His contributions can't be overstated. Not only did he create most of the conventions of popular songwriting as we know them today, but he also demonstrated the need for intellectual property laws by getting repeatedly screwed.

#1. Gary Kildall, the Father of the Operating System Gary Kildall is one of the guys we have to thank for the fact that you don't need to be a genius to use the ultra advanced computer you are looking at right

now to search for porn. Thank you, Gary. In 1973, Kildall made life a lot easier for nerds everywhere when he created CP/M, a groundbreaking operating system for microcomputers (which is what they called any computer smaller than a semi truck back then). The program became the industry standard for the next decade. This guy was basically Bill Gates before Bill Gates was Bill Gates. Michael Ochs Archives / Getty ?It's cool, I'll just donate a bunch of money to charity someday when I'm all old and prune-faced.? But Then He Got Screwed Of course, at the same time, Bill Gates was busy trying to become Bill Gates, and he eventually achieved that at Kildall's expense. In 1980, IBM was getting ready to launch its first personal computer and needed an operating system to operate the shit out of it. They first knocked on Microsoft's door, but Microsoft wasn't really into the OS-making business at that point, so they directed the IBM suits to Gary Kildall's company. However, as nerd lore has it, Gary picked that day to go flying (he was an amateur pilot), blowing off IBM and his chance at history. Accounts differ on whether Kildall met the IBM suits that day or not, but either way, the company went back to Microsoft, totally forgetting the whole ?We don't make OS's here? part. Not one to miss out on an opportunity, Bill Gates turned to local programmer Tim Paterson, who had built a CP/M clone he called QDOS (for ?Quick and Dirty Operating System?), bought it for a paltry 50 grand, then turned around and sold it to IBM under the name PC-DOS. The term ?user-friendly? meant something very different back then. PC-DOS, later renamed MS-DOS, was included in every computer IBM made, and, long story short, that's why roughly 90 percent of you are using Microsoft Windows right now. Today, Kildall's name is barely known, while Bill Gates will be a household name in the fucking 25th century. Most of Kildall's innovations ended up being credited to other people ? and he can't even defend himself, having died in 1994 after falling down in a tavern, which pretty much just seems like his luck. Today's lesson is, if you're an inventor, wear a freaking helmet. Karl Smallwood wrote a book (yes, a real one), which you can read all about here. If you want to read words he's written for free, feel free to follow him on Twitter. Mike Floorwalker has a website that's like ? whoa. Like, seriously, dude ? whoa. Robert William Kearns (March 10, 1927 ? February 9, 2005) was an American inventor who invented the intermittent windshield wiper systems used on most automobiles from 1969 to the present. His first patent for the invention was filed on December 1, 1964. Kearns won one of the best known patent infringement cases against Ford Motor Company (1978?1990) and a case against Chrysler Corporation (1982?1992). Having invented and patented the intermittent windshield wiper mechanism, which was useful in light rain or mist, he tried to interest the ?Big Three? auto makers in licensing the technology. But then he got screwed. They all rejected his proposal, yet copied his idea and began to install intermittent wipers in their cars, beginning in 1969. march Abraham made the film: ?Flash of Genius? about him. Preston Tucker was a car-crazy kid who hung around auto speedways and grew up to create an automobile?the Tucker?that was years ahead of its time. He was a man of pioneering spirit, ingenuity and daring, who revolutionized Detroit in the 1940s with his stunning ?Car of Tomorrow.? It was streamlined, futuristic and fast?the car every American dreamed of owning, at a price most people could afford. A man of endless enthusiasm, Tucker publicized his model all over the country to wild acclaim. He sold stock, set up a factory . . . But then he got screwed. ?and then the auto industry launched a devastating anti-Tucker campaign in order to character assassinate, industrially spy on and sabotage his car. Francis Ford Coppola made a movie: ?The Man and His Dream? about him. Nikola Tesla helped established robotics, radar, remote control, and he helped expand ballistics, nuclear physics, and theoretical physics. But then he got screwed. Practically no one's heard of him. Why? Because of a man named Thomas Edison, who is widely credited with the invention of the light bulb. Edison was an all-around pretentious ass, who totally tried to steal Tesla's credit? which kinda worked, considering everyone remembers him and not Tesla. Anyway, the two men had initially worked together ? well, Tesla worked for Edison ?and this is where Tesla was first screwed over by the man. Edison had offered \$50,000 ? over a million bucks, adjusted for inflation ? to someone who could fix his crappy and inefficient motors. When Tesla did (probably by staring them down until they worked harder), Edison wrote his deal off as a joke, and continued to pay Tesla \$18 per week. Keep in mind, Tesla was one of the most brilliant humans to have ever lived; it didn't take long for him to flip Edison the bird and get his ass outta there to start his own company. Soon enough, Edison's electricity, direct current (DC) was competing with Tesla's far superior electricity, alternating current (AC). Edison actually tried to discredit Tesla's AC by having the first electric chair run on it; this was supposed to discourage people from putting it in their home. There are a few movies based on Nikola, one is: ?The Prestige?."

Silicon Valley lobbyists trying to get out of paying inventors! Tries to create law to make intellectual property theft OK! Technology Suppression by Billionaire Cartel. Proposed Bill Is Anti-Innovation and Serves Only Billionaire Special Interest Groups

"<http://www.aminn.org> New York, N.Y. ? American Innovators for Patent Reform (AIPR), an industry group representing small patent owners ? start-ups, R&D companies, universities and independent inventors ? as well as patent practitioners, is opposed to the ""Trade Protection Not Troll Protection"" bill introduced last month by Rep. Blake Farenthold (R-TX). ""This is yet another misguided 'anti-troll' legislative proposal that misses the point entirely, and shows a fundamental lack of understanding by Rep. Farenthold of what a patent really is,"" says Alexander Poltorak, founder and President of American Innovators for Patent Reform. ""Non-practicing entities ? what Rep. Farenthold calls 'patent trolls' ? are no different from any other patent holder because practicing a patented technology has no relevance in patent law. A patent is a quid-pro-quo for invention disclosure, not for practice of the patent,"" explains Dr. Poltorak. ""Our Founding Fathers were very clear when they included the 'patent and copyright' clause in the U.S. Constitution,"" adds Alec Schibanoff, Executive Director of AIPR. ""Article I, Section 8, Clause 8 establishes the purpose of patents and copyrights to be to '...promote the Progress of Science and useful Arts...' There is no reference in the Constitution to inventors practicing their inventions or song-writers singing their songs."" The sharp rise in the use of the International Trade Commission (ITC) for patent disputes is not a sign of litigation abuse, but a direct consequence of the eBay Supreme Court Decision, which muddled the definition of a patent as the 'right to exclude' and made it practically impossible for an NPE to obtain an injunction against an infringer of the patent-at-suit. The ITC has the mandate to issue an exclusion order, which is not available to non-practicing entities in a Federal Court. Hence, the ITC has become the battleground of choice for patent litigation,"" elaborates Dr. Poltorak. American Innovators for Patent Reform calls on every engineer, researcher, inventor and entrepreneur ? and every U.S. citizen who values American innovation ? to write to Rep Farenthold and urge him to withdraw this misconceived bill! About American Innovators for Patent Reform Headquartered in New York City, American Innovators for Patent Reform (AIPR) represents a broad constituency of American innovators and innovation stakeholders, including inventors, engineers, researchers, entrepreneurs, patent owners, small businesses, universities, investors, and intellectual property professionals such as patent attorneys, patent agents, tech transfer managers and licensing executives. AIPR opposes any patent legislation that makes it more difficult to enforce patents because such legislation ultimately weakens the U.S. Patent system and decreases the value of patents. AIPR advocates patent reform that creates a multi-tier patent system, strengthens U.S. patents, and provides full funding for the U.S. Patent and Trademark Office. For more information about AIPR, please visit www.aminn.org"

Taxpayers' loss on GM bailout looks to be over \$10 billion "Taxpayers' loss on GM bailout looks to be over \$10 billion By Jerry Hirsch The U.S. Treasury's deal to sell 30 million shares of General Motors Co. will recoup taxpayers another \$1 billion of the bailout money the government put into the automaker back in 2009. All told, taxpayers have recovered \$32.5 billion of the \$49.5 billion used to restructure the nation's biggest automaker. The government also still owns 189 million GM shares, worth about \$6.5 billion at the \$34.41 share price that the Treasury got for the batch of stock it sold this week. If the Treasury is able to liquidate its remaining stock, as it plans to do over the next 15 months, at that price or above, the government will still be short about \$10 billion on its GM investment."http://www.thenewsdaily.org/taxpayers-loss-on-gm-bailout-looks-to-be-about-10-billion/9/14/2014

Who's Paying the Pro-War Pundits?

Talking heads like former General Jack Keane are all over the news media fanning fears of ISIS. Shouldn't the public know about their links to Pentagon contractors?

By Lee Fang

"Retired General Anthony Zinni, retired General Jack Keane and former Bush administration official Fran Townsend"

"If you read enough news and watch enough cable television about the threat of the Islamic State, the radical Sunni Muslim militia group better known simply as ISIS, you will inevitably encounter a parade of retired generals demanding an increased US military presence in the region. They will say that our government should deploy as retired General Anthony Zinni demanded, up to 10,000 American boots on the ground to battle ISIS. Or as in retired General Jack Keane's case, they will make more vague demands, such as for 'offensive' air strikes and the deployment of more military advisers to the region. But what you won't learn from media coverage of ISIS is that many of these former Pentagon officials have skin in the game as paid directors and advisers to some of the largest military contractors in the world. Ramping up America's military presence in Iraq and directly entering the war in Syria, along with greater military spending more broadly, is a debatable solution to a complex political and sectarian conflict. But those goals do unquestionably benefit one player in this saga: America's defense industry. Keane is a great example of this phenomenon. His think tank, the Institute for the Study of War (ISW), which he oversees along with neoconservative partisans Liz Cheney and William Kristol, has provided the data on ISIS used for multiple stories by The New York Times, the BBC and other leading outlets. BBC and other leading outlets."

"Jack Keane (Screenshot: Fox News) Keane has appeared on Fox News at least nine times over the last two months to promote the idea that the best way to stop ISIS is through military action—in particular, through air strikes deep into ISIS-held territory. In one of the only congressional hearings about ISIS over the summer, Keane was there to testify and call for more American military engagement. On Wednesday evening, Keane declared President Obama's speech on defeating ISIS insufficient, arguing that a bolder strategy is necessary. 'I truly believe we need to put special operation forces in there,' he told host Megyn Kelly. Left unsaid during his media appearances (and left unmentioned on his congressional witness disclosure form) are Keane's other gigs: as special adviser to Academi, the contractor formerly known as Blackwater; as a board member to tank and aircraft manufacturer General Dynamics; a 'venture partner' to SCP Partners, an investment firm that partners with defense contractors, including XVionics, an 'operations management decision support system' company used in Air Force drone training; and as president of his own consulting firm, GSI LLC. To portray Keane as simply a think tank leader and a former military official, as the media have done, obscures a fairly lucrative career in the contracting world. For the General Dynamics role alone, Keane has been paid a six-figure salary in cash and stock options since he joined the firm in 2004; last year, General Dynamics paid him \$258,006. Keane did not immediately return a call requesting comment for this article. Disclosure would also help the public weigh Keane's policy advocacy. For instance, in his August 24 opinion column for The Wall Street Journal, in which he was bylined only as a retired general and the chairman of ISW, Keane wrote that 'the time has come to confront the government of Qatar, which funds and arms ISIS and other Islamist terrorist groups such as Hamas.' While media reports have linked fundraisers for ISIS with individuals operating in Qatar (though not the government), the same could be said about Saudi Arabia and Kuwait, where many of the major donors of ISIS reportedly reside. Why did Keane single out Qatar and ignore Saudi Arabia and Kuwait? Is it because his company,

Academi, has been a major business partner to the United Arab Emirates, Qatar's primary rival in the region? Other examples abound."

"Anthony Zinni (Screenshot: Charlie Rose) In a Washington Post story about Obama's decision not to deploy troops to combat ISIS, retired Marine General James Mattis was quoted as a skeptic. "The American people will once again see us in a war that doesn't seem to be making progress," Mattis told the paper. Left unmentioned was Mattis's new role as Keane's colleague on the General Dynamics corporate board, a role that afforded Mattis \$88,479 in cash and stock options in 2013. Retired General Anthony Zinni, perhaps the loudest advocate of a large deployment of American soliders into the region to fight ISIS, is a board member to BAE Systems' US subsidiary, and also works for several military-focused private equity firms. CNN pundit Frances Townsend, a former Bush administration official, has recently appeared on television calling for more military engagement against ISIS. As the Public Accountability Initiative, a nonprofit that studies elite power structures, reported, Townsend "holds positions in two investment firms with defense company holdings, MacAndrews & Forbes and Monument Capital Group, and serves as an advisor to defense contractor Decision Sciences.

"Fran Townsend (Screenshot: CSPAN) "Mainstream news outlets have a polite practice of identifying former generals and former congressmembers as simply "formers" neglecting to inform the public of what these individuals are doing now, which is often quite pertinent information, like that they are corporate lobbyists or board members," says Jeff Cohen, an associate professor of journalism at Ithaca College. Media outlets might justify their omissions by reasoning that these pundits have merely advocated certain military strategies, not specific weapons systems, so disclosure of their financial stake in the policy need not be made. Yet the drumbeat for war has already spiraled into calls for increased military spending that lifts all boats or non-operational jets for that matter. When the Pentagon sent a recent \$2 billion request for ramped-up operations in the Middle East, supposedly to confront the ISIS issue, budget details obtained by Bloomberg News revealed that officials asked for money for additional F-35 planes. The F-35 is not in operation and would not be used against ISIS. The plane is notoriously over budget and perpetually delayed some experts call it the most expensive weapon system in human history with a price tag now projected to be over \$1 trillion. In July, an engine fire grounded the F-35 fleet and again delayed the planned debut of the plane. How it ended up in the Pentagon's Middle East wish list is unclear. "I think an inclination to use military action a lot is something the defense industry subscribes to because it helps to perpetuate an overall climate of permissiveness towards military spending," says Ed Wasserman, dean of the UC Berkeley Graduate School for Journalism. Wasserman says that the media debate around ISIS has tilted towards more hawkish former military leaders, and that the public would be best served not only with better disclosure but also a more balanced set of opinions that would include how expanded air strikes could cause collateral civil casualties. "The past fifty years has a lot of evidence of the ineffectiveness of air power when it comes to dealing with a more nimble guerrilla-type adversary, and I'm not hearing this conversation," he notes. The pro-war punditry of retired generals has been the subject of controversy in the past. In a much-cited 2008 exposé, The New York Times revealed a network of retired generals on the payroll of defense contractors who carefully echoed the Bush administration's Iraq war demands through appearances on cable television. The paper's coverage of the run-up to a renewed conflict in the region today has been notably measured, including many voices skeptical of calls for a more muscular military response to ISIS. Nonetheless, the Times has relied on research from a contractor-funded advocacy organization as part of its ISIS coverage. Reports produced by Keane's ISW have been used to support six different infographics used for Times stories since June. The Times has not mentioned Keane's potential conflict of interest or that ISW may have a vested stake in its policy positions. The Public Accountability Initiative notes that ISW's corporate sponsors represent "a who's who of the defense industry and includes Raytheon, SAIC, Palantir, General Dynamics, CACI, Northrop Grumman, DynCorp, and L-3 Communication." As the business network CNBC reported this week, Raytheon in particular has much to gain from escalation in Iraq, as the company produces many of the missiles and radar equipment used in airstrikes. In addition to providing reports and quotes for the media, ISW leaders have demanded a greater reaction to ISIS from the Obama administration. In The Weekly Standard this week, ISW president Kim Kagan wrote that President Obama's call for a limited engagement against ISIS "has no chance of success." ISW's willingness to push the envelope has gotten the organization into hot water before. In 2013, ISW suffered an embarrassing spectacle when one of its analysts, Elizabeth O'Bagy, was found to have inflated her academic credentials, touting a PhD from a Georgetown program that she had never entered. But memories are short, and the media outlets now relying heavily on ISW research have done little to scrutinize the think tank's policy goals.

Over the last two years, ISW, including O'Bagy, were forcefully leading the push to equip Syrian rebels with advanced anti-tank and anti-aircraft weaponry to defeat Bashar al-Assad. For Keane, providing arms to Syrian rebels, even anti-American groups, was a worthwhile gamble. In an interview with Fox Business Network in May of last year, Keane acknowledged that arming Syrian rebels might mean "weapons can fall into radical Islamists' hands." He continued, "It is true the radical Islamists have gained in power and influence mainly because we haven't been involved and that is a fact, but it's still true we have vetted some of these moderate rebel groups with the CIA, and I'm convinced we can't it's still acceptable to take that risk, and let's get on with changing momentum in the war." That acceptable risk Keane outlined has come to fruition. Recent reports now indicate that US-made weapons sent from American allies in the region to Syrian rebels have fallen into the hands of ISIS. Keane, and ISW, is undeterred. The group just put out a call for 25,000 ground troops in Iraq and Syria. READ MORE ABOUT THE TOP U. S. MARINE TALKING ABOUT WAR PROFITEERING"

Defense contractors already are reaping the bounty of the all new unwinnable war

by Laurence Lewis Follow for Daily Kos

It's just business

The new U.S. war in the Middle East has only begun and already there are clear winners:

"Support for Islamic State increased after U.S. airstrikes began in Iraq and the militant group may take more hostages to try to force concessions from Washington, the FBI director told Congress on Wednesday. Islamic State is "committed to instilling fear and attracting recruits" and to drawing public attention, as shown through its use of social media and in videos it released of the beheadings of American journalists James Foley and Steven Sotloff, said FBI Director James Comey. "ISIL's widespread use of social media and growing online support

intensified following the commencement of U.S. airstrikes in Iraq,"" Comey, using an acronym for the group, said in prepared testimony for a congressional hearing on threats to the U.S. homeland."

Because the U.S. is doing exactly what the terrorists want:

"There are many reasons the U.S. shouldn't go to war with the Islamic State and the best one may be because that is exactly what they want us to do. A growing number of people I consider experts in the field believe that the recent beheadings of two American journalists and a British aid worker were deliberate acts of provocation, and that ISIS is not just hoping for an American overreaction, but depending on it perhaps even for its own survival."

"Of course humane people are horrified and outraged by the viciousness of the terrorists. That's the point of terrorism: to terrorize, to shock people out of rationality and into self-destructive irrational reaction. Even the CIA doubts the U.S. strategy:"

"At a recent closed-door congressional briefing on the administration's new strategy to combat the Islamic State, a top CIA official left little doubt among those in the room about the agency's attitude toward the project. The official's muted approach to the briefing dovetails with what senior intelligence community officials tell The Huffington Post is deep behind-the-scenes skepticism, ranging from ambivalence to outright opposition, from within the CIA to the administration's proposal to task the Department of Defense with arming the so-called moderate Syrian rebels. The opposition derives from a number of factors. First, the CIA has already been covertly equipping Syrian rebels at the instruction of the White House, but has come to find the fighters increasingly disorganized and radicalized as the conflict goes on, with U.S.-supplied arms winding up in the hands of more radical fighters."

But all is not lost. Join me over the fold for more.

"As I wrote last week, from a strategic standpoint, the plan is doomed to fail:"

"So, the plan is to bomb the terrorists, which almost certainly will only make things worse, to rely on local forces who are reportedly making a deal with the terrorists not to fight each other so they can all focus on fighting the Syrian government, and to keep in the back pocket the possibility of using ground troops. Just in case they become necessary. In the far off future somewhere. Just in case this plan of bombing, making things worse, and relying on local forces who have an entirely different agenda somehow doesn't work out. And it gets even worse, because the history of sending arms to local forces has not been a pretty one. Many of the nearly quarter million small arms sent to Afghanistan are missing and unaccounted for. The terrorists in Syria and Iraq already have been winning battles by using captured American weapons, and now there will be even more American weapons for them to capture, from forces supposedly friendly to the U.S. but who are not themselves intent on fighting the same enemy the administration wants them to fight. Even the CIA thinks the idea of arming Syrian rebels is doomed to fail. More people will needlessly die, billions of more dollars will be wasted, and the bad guys inevitably will end up with more American-made weapons. And the neocons will demand an escalation. And the traditional media will back them. And the American generals already are contemplating American troops on the ground, if this impossible plan with impossible goals somehow proves unsuccessful. When has a U.S. military incursion in the region ever proved successful? The Bush war in Iraq led directly to the current crisis. Thirteen years after it started, and despite two escalations from the Obama administration, the Bush war in Afghanistan remains a persistent failure. The effort in Syria was failed from the start, and with more money and more arms will only get worse. President Obama continues to choose his words very carefully, when discounting the possibility of using ground troops, but he still hasn't explained how a bombing campaign while relying on local forces to fight on the ground somehow will succeed where previous such efforts have failed. It will get worse. As will the politics. Blowback is coming. In the Middle East and in the United States."

"But that doesn't mean that the terrorists will be the only winners. It's neither coincidence nor mistake that the neocons and their traditional media enablers prey on people's emotions. It's neither coincidence nor mistake that the American people perpetually get drawn into supporting unwinnable wars halfway around the world. Because

there are winners right here at home, even if the wars themselves are lost causes before they even start. In fact, this latest and greatest war already is producing some very big winners right here at home. It's just business:"

"A massive, \$7.2 billion Army intelligence contract signed just 10 days ago underscores the central role to be played by the National Security Agency and its army of private contractors in the unfolding air war being carried out by the United States and its Gulf States allies against the Islamic State in Iraq and Syria. That war was greatly expanded Monday night when U.S. forces launched a "mix of fighter, bomber, remotely-piloted aircraft and Tomahawk" cruise missiles against ISIS targets in Syria. The Central Command said the strikes were led by the United States with support from Bahrain, Jordan, Saudi Arabia, Qatar and the United Arab Emirates. INSCOM's "global intelligence support" contract will place the contractors at the center of this fight. It was unveiled on Sept. 12 by the U.S. Army's Intelligence and Security Command (INSCOM), one of the largest military units that collects signals intelligence for the NSA. Under its terms, 21 companies, led by Booz Allen Hamilton, BAE Systems, Lockheed Martin and Northrop Grumman, will compete over the next five years to provide "fully integrated intelligence, security and information operations" in Afghanistan and "future contingency operations" around the world."

Big business:

"Stock prices for Lockheed Martin, General Dynamics, Raytheon and Northrop Grumman set all-time record highs last week as it became increasingly clear that President Obama was committed to a massive, sustained air war in Iraq and Syria. It's nothing short of a windfall for these and other huge defense contractors, who've been getting itchy about federal budget pressures that threatened to slow the rate of increase in military spending."

"Shelves of old inventory are being dumped on Syria and Iraq, which makes room for new inventory."

"To the extent we can shift away from relying on troops and rely more heavily on equipment " that could present an opportunity," Jack Ablin, chief investment officer at BMO Private Bank, whose \$66 billion portfolio includes Northrop Grumman Corp. and Boeing Co. shares, told Bloomberg. Defense contractor stocks have far exceeded the performance of the broader market. A Bloomberg index of four of the largest Pentagon contractors rose 19 percent this year, compared to 2.2 percent for the S&P 500."

"An opportunity. It won't stop the terrorists, and it's at least as likely to help them, but for the savvy investor, it's an opportunity:"

"It's far too soon to tell how the American escalation in the sprawling, complex mess unfolding in Iraq and Syria will play out. But this much is clear: As our military machine hums into a higher gear, it will produce some winners in the defense industry. New fights mean new stuff, after all. And following the U.S. withdrawal from Iraq and Afghanistan and the belt-tightening at the Pentagon imposed by steep budget cuts, military suppliers are lining up to meet a suddenly restored need for their wares. Presenting his vision for expanding the confrontation with the terrorist group ISIS in a speech to the nation on Wednesday night, President Obama outlined a program of intensified airstrikes designed to keep American troops away from the danger on the ground. So defense analysts are pointing to a pair of sure-bet paydays from the new campaign: for those making and maintaining the aircraft, manned and unmanned, that will swarm the skies over the region, and for those producing the missiles and munitions that will arm them. "The drone builders are going to have a field day," says Dov Zakheim, who served as Pentagon Comptroller during the George W. Bush administration. That could mean a tidy profit for privately held General Atomics, maker of the Predator drone, the granddaddy in the category and still widely in use, as well as the second-generation Reaper, designed to carry 3,000 pounds worth of bombs. And to help survey vast expanses of desert, the military will rely on the Global Hawk, made by Northrop Grumman NOC to hover at altitudes as high as 50,000 feet for up to four days at a time. Those vehicles will likely be making use of the Gorgon Stare. This sensor, developed by privately held Sierra Nevada, is capable of scoping a 4-kilometer

diameter by filming with nine cameras. Indeed, the widening conflict could even reverse the trend of tapering investments in the technology, says Mark Gunzinger, a retired Air Force colonel and former deputy assistant secretary of defense now at the Center for Strategic and Budgetary Assessments. "One of the things that can help a new capability break through is an operational stressor, like a major air campaign," he says."

"Forget about the terrorism and the carnage and pissing away yet another generation of tax revenues that could have been spent to nation-build the United States, there are tidy profits to be had!"

"Led by Lockheed Martin Corp. (LMT), the biggest U.S. defense companies are trading at record prices as shareholders reap rewards from escalating military conflicts around the world. Investors see rising sales for makers of missiles, drones and other weapons as the U.S. hits Islamic State fighters in Syria and Iraq, said Jack Ablin, chief investment officer at Chicago-based BMO Private Bank. President Barack Obama approved open-ended airstrikes this month while ruling out ground combat. "As we ramp up our military muscle in the Mideast, there's a sense that demand for military equipment and weaponry will likely rise," said Ablin, who oversees \$66 billion including Northrop Grumman Corp. (NOC) and Boeing Co. (BA) shares. "To the extent we can shift away from relying on troops and rely more heavily on equipment -- that could present an opportunity."

Record profits!

"Lockheed, the world's biggest defense company, reached an all-time high of \$180.74 on Sept. 19, when Northrop, Raytheon Co. (RTN) and General Dynamics Corp. (GD) also set records. That quartet and Chicago-based Boeing accounted for about \$105 billion in federal contract orders last year, according to data compiled by Bloomberg Government."

"The U.S. has been bombing and sending massive stores of weapons to Iraq for more than two decades now, the American people suckered into war after war after war, and just because the arms we send to kill the bad guys inevitably end up being used by the next bad guys doesn't mean the cycle should stop. One must not make the mistake of presuming these wars are about solving a series of crises that cannot be solved by war. It's not about the crises. It's just business. And it's a growth business."

U. S. CHILD ENTEROVIRUS D-68 EPIDEMIC: DAY 1 1 infection: Patient Zero (Chart Below)

"U. S. CHILD ENTEROVIRUS D-68 EPIDEMIC: DAY 12 10,000+ Infections. Lethality Rate 4% (Chart

Below) "

POTENTIAL U.S. EBOLA EPIDEMIC: DAY 1 6 infections: International travelers or terrorists intending to infect (Chart Below)

"POTENTIAL U.S. EBOLA EPIDEMIC: DAY 30 - 190,000,000 Infections. Lethality Rate 52% - 68 Million Dead (Chart Below)"

"What have we learned in the Enterovirus D-68 epidemic? How good are our systems? Are we controlling it? What can we improve? How is our command and control on a national basis? While the lower chart, on Ebola, is a worse-case-scenario, it does not make it any less likely if there is an agency Fuster-Cluck! We can look at how we did on the current virus, which is only a little bit lethal, and how we might do on a bigger virus which is many, many times more lethal and may be more contagious. Have we shut down national in and out systems enough to guarantee 100% health monitoring? The new Season of The Walking Dead is about to start and the public concern will be raised regarding horrific viral wipe-outs. While Ebola doesn't make people into Zombies, it does make them dead. Dead is dead and that is bad! Are we taking this potential seriously enough? We have seen enough epic screw-ups at federal agencies, lately, to see that efficiency is not at the top of the skills list in DC, right now. Many Senators are spending more time worrying about their insider trading stock than worrying about contingency plans. Shouldn't we already have C.D.C., W.H.O. and Red Cross Centers set-up in every major U.S. City

CDC issues Ebola checklist: 'Now is the time to prepare'

By Paul Bedard |

"The Centers for Disease Control and Prevention, warning hospitals and doctors that "now is the time to prepare," has issued a six-page Ebola "checklist" to help healthcare workers quickly determine if patients are infected. While the CDC does not believe that there are new cases of Ebola in the United States, the assumption in the checklist is that it is only a matter of time before the virus hits home. For example, one part reads: "Encourage healthcare personnel to use a "buddy system" when caring for patients." Another recommends a process to report cases to top officials:"

"Plan for regular situational briefs for decision-makers, including:"

-- Suspected and confirmed EVD patients who have been identified and reported to public health authorities.

-- Isolation, quarantine and exposure reports."

-- Supplies and logistical challenges.

-- Personnel status, and policy decisions on contingency plans and staffing."

"The checklist has been distributed to major hospitals and even little ones, including an urgent center in Leesburg, Va. "Every hospital should ensure that it can detect a patient with Ebola, protect healthcare workers so they can safely care for the patient, and respond in a coordinated fashion," warns the CDC. "While we are not aware of any domestic Ebola Virus Disease cases (other than two American citizens who were medically evacuated to the United States), now is the time to prepare, as it is possible that individuals with EVD in West Africa may travel to the United States, exhibit signs and symptoms of EVD, and present to facilities," it adds. Several hospital and medical websites have just begun to post the checklist online. Paul Bedard, the Washington Examiner's ""Washington Secrets"" columnist, can be contacted at pbedard@washingtonexaminer.com."

"----- For Sale: Deadbeat Fisker electric-car loan Joseph N. DiStefano The Department of Energy is selling rights to collect the defaulted \$168 million it lent electric carmaker Fisker Automotive Inc. to restart a former General Motors plant on Boxwood Road in Vice President Biden's home state of Delaware. Fisker did make some cars in Finland, hired (then laid off) dozens of Delaware managers, workers and contractors, and collected \$21.5 million in additional Delaware state subsidies, but hasn't made any cars there. The loan sale may result in investors trying to revive Fisker, though the company owned few of its own patents. More at GoveSale.gov, and from Reuters, which notes an earlier sale of another failed ""green"" car loan, to Vehicle Production Group LLC, raised just \$3 million vs a taxpayer loss of \$50 million. Excerpts from the loan sale announcement : ""The Department of Energy plans to sell by competitive auction, to be held on October 11, 2013, the future advance promissory notes issued by Fisker Automotive, Inc. in connection with a secured loan under the Advanced Technology Vehicles Manufacturing Program in respect of which approximately \$168,000,000 is outstanding. ""The loan is presently not performing. Persons interested in purchasing the notes should promptly contact the Advanced Technology Vehicles Manufacturing Program at portfolio.fisker@hq.doe.gov to learn how qualified prospective purchasers may obtain additional information about the auction, including requirements for submitting an initial bid... The deadline for submitting initial bids is October 7, 2013 at 5:00 PM EDT. Bidders will have an opportunity to conduct due diligence prior to the bid deadline. Inquiries should include the sender's name, business name, postal, street and email addresses, and telephone numbers."" "What are the things the media has said, that Tesla did, that was naughty "By Tom Terry- Investigator * ""They bribed White House staff in order to get nearly free taxpayer funding. * The investors for Tesla paid McKinsey Consulting to write manipulated white papers, for the White House, saying that Tesla was the way to go and then they got McKinsey to staff the Dept. of Energy with their investor's friends, from McKinsey, so that they would make sure they favored the schemed-up deal through the process. ie: Matt Rogers, etc. * White House Staff: Gibbs, Rattner, Emanuel, Axelrod et al.: All took off from the White House at nearly the same time for fear of getting caught, knew about this. * DOE staffers: Lachlan Seward and Matt Rogers were ordered, by Tesla investors, to destroy documents at DOE that documented the Tesla transaction. * The Section 136 law and Federal Procedural Protocol stated that applicants would be reviewed in the order they applied. DOE issued 42 documents stating that applicants would be reviewed and processed in the order they applied. Suddenly, in March of the application process, year, Matt Rogers & Lachlan Seward ordered a DOE press releases sent out which changed the law (illegally) to remove the first-come-first-served requirement in order to attempt to allow them to move Fisker and Tesla to the front of the line. This was done on orders from Tesla's investors at Kleiner. * People who already have Tesla cars say the battery packs overheat and the cockpit gets too hot and the car is noisy as all get out. * When Tesla applied to DOE, they were hand-walked through the process by DOE staff when no other applicants got the same ""personal valet service"" treatment. This fact helps prove bribery and collusion. Many, many other facts prove this too. * In a meeting with one of the law firms Tesla hired to leverage the loan, the law

firm said: ""don't worry, we control 14 agencies in DC!"" That firm paid themselves millions of dollars for a small amount of work. * When Tesla applied to DOE, they had no actual engineering or factory plans done for the car and showed fake plans, none of which have been used in the factory that exists today. They said they were going to build a factory in San Jose, California when they knew they did not even need one but Goldman Sachs had said they could get ""all the money they wanted because the deal was rigged for favors"" so ""just go for it"".

* Tesla has announced a number of ""showcase"" famous people hires but once those people did get hired and started working at Tesla, they saw what a rigged company it was, and quit or suddenly ""left to pursue other interests"" * Two well known Tesla staff were starting to whistle-blow about Tesla but they were killed in a plane crash right next to Tesla's offices. Their notes have been distributed to the media, though, by their co-workers. * Tesla got thousands of order requests from Tesla investors and their business friends at Stanford in order to prop up the appearance of orders but, in reality, not so much! * Tesla investors ordered Chu to rig the tests done by Argonne labs about Tesla to make the results look better than they were. * Tesla changed the prices on customers AFTER they had left deposits. This is extremely unethical. * Tesla's books showed that they have wasted over \$40M on ""expenses of no value or engineering that had to entirely thrown away"". * Tesla's CEO bugged his own employees because of his extreme paranoid personality. * An ex-co-founder has a copy of the CEO's hard drive. * Tesla's CEO paid the producers of Iron Man to refer to him in the movie in order to manifest his delusional image of himself. He paid 60 minutes to do a story about him. * Kleiner Perkins put Steven Chu in office by manipulating campaign funding so that Chu could make sure Fisker & Tesla got their funding so the kick-backs would come around into the 360 deal that was set-up. Kleiner staff hid contributions via law firms but ""bundled"" millions of dollars of contributions and received over \$1B in profit options. * The number of people Tesla said they were going to hire at the NUMMI plant and the number of people that are hired are not quite what we expected. If you look at the cost to the taxpayer per new job created by Tesla you could have paid the mortgage for some taxpayers homes for what it cost the taxpayer per new job at Tesla after they got the DOE money. * A man named Marty invented the Tesla, Elon Musk took it away from him so Kleiner could use it as an industry manipulation bull dozer. * They bribed DOE staff in order to get nearly free taxpayer funding by bundling campaign funds via third parties and PAC's. * 16 Tesla investor law firms, most with primary offices in Washington, DC managed the hiding, conduiting, bundling and re-cloaking of the money movements in this whole scam guided by staff from Goldman Sachs. * They took our money and built multiple bragging cars for rich middle-age-crisis males that no family can afford nor that have any value for the average American. There is nothing novel or special about either Tesla car. * The CEO screwed his ex wife over, his co-founders over and the public over. He paid millions to shut them up but her never paid their friends to shut up so, it is all going to come out now. * You can buy an electric car that does much more than a Tesla for many, many, many times less money. There is no need for Tesla. * Foreigners from the middle east own parts of Tesla. * Tesla staff bribed DOE reviewers to give Tesla good fake reviews in the loan due diligence, when, in fact, in a public side-by-side comparison, Tesla would have failed miserably against all other applicants. * The amount of money Tesla needs to make compared to the amount of money Tesla has had invested in it compared to the other companies selling electric cars compared to the world car market shows numbers that clearly show today, and at the time of application to DOE, that Tesla had the worst financial upside metrics of any car company in the world. SO why did they get the Loan? * The Tesla investors worked with Goldman Sachs and LIBOR rigging of loans to get the finders and intermediaries sweetheart fees. * Intermediaries and ""finders"" who were friends of the CEO, took huge amounts of public dollars as "" upfront fees"" and ran. * Senators and their husband's business ownerships got favors from the associated real estate deals from the NUMMI plant for Tesla. * Tesla took our tax money yet posted numerous job openings on LinkedIn, and other sites, to hire ""Immigration Paralegals"" to hire H-1B foreigners to work for them. * Tesla is run by the 1% for the 1%. * Steve Westly is the bundler who threatened Washington officials with campaign fund cut-offs if they did not give his company: Tesla, a nearly free loan. * Tesla manipulated their books when they applied for the loan in order to look like they met the DOE requirements but a true forensic examination of their books from that time shows that they did not meet the requirements. * The CEO lied to the City of San Jose about building a factory there. * The CEO of Tesla has been sued by his ex wife for cheating on his wife and children with loose women. * It is a Ponzi scheme of a company. * The CEO has been sued by his Tesla co-founders for engaging in civil criminality. Those co-founders and Tesla staff provided almost all of the data in this website. * The CEO paid GQ magazine to write an article about how wonderful girls should think he is so he could get more silicon valley hook-ups. * It was a scam to launder and conduit campaign cash * The two models of the cars have had multiple EMF meters placed in them at different states of operation

and been found to have enough EMF to cause cancer. The cars were measured with isotropic broadband EMF meters, Agilent Technologies portable spectrum analyzers, Aaronia calibrated broadband antenna's and spectrum sweeping multiplex antennas while charging and driving at increments of 20 MPH up to 110MPH. Drivers have reported experiencing sleep problems, heart problems, depression, migraines, seizures, and changes in neurological chemistry. Thousands of peer reviewed scientific papers prove that these EMF ranges do cause these health issues as well as triggering cancer cell growth per cell. Tesla engineers advised that the car should be shielded but Tesla executives said it wasn't worth the cost and that nobody would find out. * Steve Spinner, was put in the DOE by McKinsey under orders from Kleiner. He was a liaison for Solyndra, his wife worked for Solyndra, and he was an "early warning system" watchdog for Tesla at DOE and notified Tesla if anybody not in the "inside group" came snooping around at DOE. * They were so screwed up in planning to build the car that they were over \$100,000.00 IN ERROR, on the cost per car. With engineering this bad, they still got their federal loan and this shows that bribes took place. * If law enforcement interviews all past and current Tesla staff and investors, they will find multiple validation evidence for every statement on this site. * The CEO stays up at night writing different fake emails to each of his employees with a few words different in each email to see which employees might be spying on him. Many Tesla staff collect these spy emails as a hobby. * The CEO has stated that he hates unions and wants to come up with as many robots as possible to AVOID using people in jobs. More coming...." Viera reveals Abuse. 1 in 4 women, in marriages in America, are currently being abused by Alpha Male alcoholic jock husbands #whyIStayed - Executives, Wives, Coaches, Players just trying to protect their insane profits. No intent to reform! - Demographic study of NFL stadiums shows majority to be alcoholic alpha males and enabling wives fearful to leave husbands. Many Attendees beat their wives and girlfriends. - Parents re-evaluate kids and ""Organized Sports"" groups - CNN: Apologists & Enablers for NFL beaters just want to protect their cash - Major league sports has a culture of abuse starting with owners. Most owners accused of abuse by ex-wives and girlfriends. Many owners are fighting alcoholism. Whole system built on bad role models. - Secretary says NFL owner said: ""It's like still being able to have your own Plantation without that 'F*cker', Lincoln gettin' all up in yer face!,"". Majority of owners now caught on tape & email with horrid racial comments. - For a long time, politicians believed that ""Football will let the 'Nose-Pickers' release their anger and calm them down so they don't revolt in the streets"". Turns out, they were wrong, it does the opposite. - ""Do NFL revelations epitomize society's ills? Should misogynistic, racist, alcoholic, wife-beating Old Boys Club owners & coaches be allowed to continue to ruin our children ", asks Denver Mom Upon further investigation, vast numbers of football players, NFL and College, have been charged with rapes, murder threats, actual murders and many, many cases of wife beating, girl-friend beating and economic spousal slavery. Most of these cases are covered-up. More are exposed daily. Rice is NOT the exception. He is the rule, created by the animalistic training programs the coaches are encouraged to use to get attendance profits. The very rules the heads of the NFL and the College regents signed off on. Not only are coaches encouraged to contract the most animalistic people (because rage sells tickets and T-Shirts), they promote rage to encourage animalistic fans to show up. On top of that the players are given steroids and performance drugs which destroy their mental capacity and induce rage syndrome. So you have crazy men, being hired by crazy male coaches, and approved by crazy male regents, and owners, who are given drugs that make them crazy and more money than they deserve which makes them even crazier. What do you expect to happen? Alpha Male alcoholics are the #1 targeted ticket sales group. Wives and girlfriend enablers of alcoholics are often, themselves abused and unable to leave. At a post-Rice disclosure Ravens game, it was discovered that women still wearing Rice shirts were told to wear them by their husbands. Owners of major sports teams are being turned out, by their own emails and conversations as racist, ego-centric, white male pigs. They turbo-charge the madness by their prick-ness. Put all of these factors together and you have the perfect recipe for social evil. Women across America are finally standing up against this kind of corporately sponsored abuse.

WORKING THE COVER-UP:

Redskins/NFL

NFL's elaborate security network is supposed to protect league from TROUBLE

"NFL Commissioner Roger Goodell, shown earlier this year, has an elaborate security network in place that is supposed to protect the league's reputation from legal incidents like the ones in the news this week. (John Raoux/AP)"

By Kent Babb and Adam Goldman

"Larry Wansley convinced himself long ago that three hours' sleep is plenty. His thoughts kept him up anyway, but even if he did drift off, the chances were good that the phone — always next to his ear, whether at home or in a hotel room — would ring. Sometimes it would be a contact in the Dallas Police Department; other times there'd be a nightclub owner on the other line. So rather than close his eyes and take his chances, the Dallas Cowboys' longtime security director learned to stay up and wait. "All my professional life," Wansley said, "has basically been on call, responding to situations that take place and addressing them, resolving them." Wansley is one member of a vast network of problem solvers who work security in one capacity or another for the National Football League. America's most popular sports league is also one of its more valuable companies, generating about \$10 billion in annual revenue, and behind the scenes is an intricate and largely secretive three-layered security force — mainly comprised of former federal agents — in charge of staying in front of the league's problems. Its emphases are swiftness and thoroughness, its tentacles reaching into states even without an NFL team, its code mostly one of silence. And while its agents can help keep bad actors from ever getting to the league by vetting them beforehand, they are equally if not more valuable in funneling information back to the league office once problems occur to help make sure NFL leaders are not caught off guard."

"At the first game since Ray Rice's release from the Baltimore Ravens, female fans share mixed reactions to the video that showed him knocking out his then-fiancee and the NFL's treatment of the former-star player. (Whitney Leaming/The Washington Post)"

"But this past week, something somehow slipped through the fine mesh barrier of "The Shield's" shield, apparently catching even the NFL by surprise — something that, by design of its security apparatus, should never happen. Ray Rice, the former Baltimore Ravens running back, punched his then-fiancee during a February dispute in an Atlantic City casino elevator; this much the Ravens and the league office knew. On Monday the Web site TMZ published previously unreleased — and, the league has insisted, unseen by anyone in its office — video from inside the elevator. Rice was subsequently released by the Ravens and suspended indefinitely by the league, which suffered another black eye Friday when news surfaced that a grand jury had indicted Minnesota Vikings running back Adrian Peterson for allegedly striking his 4-year-old son with a tree branch. Peterson turned himself in, posted bond and was released 30 minutes later. The NFL and its commissioner, Roger Goodell, faced heavy scrutiny this past week because of the incidents themselves — but also for how they collect information and what is done with it."

"It's set up just like the FBI?"

"The uppermost level of the NFL's security department is based at the league's New York City headquarters and is comprised of about a dozen employees — the NFL won't give a precise number — most of them decorated former law-enforcement officials. Jeffrey Miller, its chief security officer, was once Pennsylvania's state police commissioner; his lead investigator is John Raucci, a former assistant director of the Federal Bureau of Investigation, where he was the bureau's top agent in London and helped coordinate the 2012 Olympics. Despite

the bona fides, only the most potentially damaging cases ? Michael Vick's involvement in a dog fighting ring, former Ravens linebacker Ray Lewis's connection to a double murder in 1999, the New England Patriots videotaping opposing teams' signals in 2007 ? typically lead to loafers-on-the-ground investigations by the league office's security staff. Another specialist within the league office, a former FBI agent, oversees security for the NFL draft and the Super Bowl, the league's most visible events, often making preliminary plans years in advance. Another official supervises security at each of the league's 32 stadiums, according to an individual familiar with the staff's organization. On top of the FBI flavor inside the league office, a former FBI director will now be taking a deep look into how the NFL handled evidence in the Rice case: On Wednesday, the league appointed Robert S. Mueller III, who led the Bureau for a dozen years, to oversee an independent investigation."

The Post Sports Live crew looks at which games will be the ones to watch for in Week 2. (Post Sports Live/The Washington Post)

"Before Miller was elevated to senior vice president in 2011, the league's three previous security directors ? Jack Danahy, Warren Welsh and Milt Ahlerich ? were all former FBI executives, and when they built the second, considerably broader level of the NFL's security machine, they used a familiar blueprint. Each NFL team is assigned a contractor, along with an associate investigator, to act as the league's eyes and ears (many teams hire their own in-house security experts to protect their interests). Of the consultants assigned by the league, many have experience in federal law enforcement agencies ? most commonly the FBI ? and their directive is to establish knowledge of and comfort within the local legal setting. They get to know the area's information brokers, and after player arrests or potential incidents of misconduct, the representative ferrets out information ? often details that would never be made public ? with the intention of sharing it with the league office. ?You were the liaison between the league and the team,? said Bill Mattingly, a retired FBI agent who served as the NFL security representative to the Indianapolis Colts for more than two decades until 2008. ?If players got arrested you'd find out the details and tell the league.? Mattingly has also done work for the National Basketball Association. Each consultant is assigned a broader geographical area to monitor in addition to the confines of each team's headquarters. The league stations a representative in both Honolulu and Las Vegas because, though there's no team within hundreds of miles of either city, players might visit and could be tempted to find trouble. It's also helpful to the league if its envoy is familiar with the local courts ? any advantage to reach its prime directive: protecting the reputation of the league. ?It's set up just like the FBI,? said another former NFL team official. ?Think of the 32 teams as field offices.? The official, like more than a half-dozen other current and former people involved in NFL security interviewed for this story, spoke on condition of anonymity so he could talk more openly about an organization that rarely shares specifics about how it operates. Many of the NFL security representatives contacted declined to talk about what they did for the league, referring all questions to the league office. An NFL spokesman declined to make league security staff members available for interviews. One current team consultant said he spends most of his time offering guidance to players: which parts of town to avoid, the restaurants or bars where an athlete is more likely to find trouble, which friends or family might be stealing the player's money or using his name to acquire favors. ?You're there to protect the players, to keep them out of trouble and make sure they don't get scammed,? Mattingly said. Another team's consultant said he spends much of his time at the stadium on game day helping with security. If a player is arrested, it's the security contractor's job to monitor the proceedings but also to be hands-on: pull police reports, work his legal contacts for insight that might not be made public and, as quickly as possible, a former team official said, contact the league office to ?report anything that's serious and potentially embarrassing.? One current representative referred to himself as a kind of risk manager, an operative in a high-level business that sees facts as invaluable ? particularly when they're acquired and delivered before the situation is in full view of the public. Most of those contacted by The Post refused to discuss the Rice case, but one former league official expressed confusion as to how the NFL found itself in such a bind. The confusion was only deepened by the fact that the incident occurred inside a casino."

Protecting the shield

"To be sure, the NFL in recent years has found itself trying to manage situations that exploded out of control: Vick went to prison in 2007 for dogfighting, and former New England Patriots tight end Aaron Hernandez has spent more than a year in jail as he awaits a trial for his alleged role in multiple murders. Both players were vetted before their respective drafts, a former security official said, but teams took chances on them nonetheless. ?It sounds trite when one or two of them screw up,? the former official said, ?but the expectations are so damned

high on NFL players, the public expects: "Why can't they just behave?" When they do misbehave and NFL players have been arrested 38 times so far this year, according to a USA Today database the league puts an emphasis on knowing and evaluating its challenges before anyone else. "There's so much information that's rumored every day about players and conduct, and part of what's important is to evaluate what's real and what isn't," said a current team contractor. Although the Rice case and its aftermath raised questions about coverups and whether the NFL is interested only in information that supports its public-relations message, the league-assigned contractor insisted he has never been pressured by team or league officials to bury information or corrupt an investigation. Sure, there are favors, he said, adding that they're minor: a heads-up to the assigned team's executive or coach about a looming player suspension, for instance. "Nobody likes to be blindsided," he said. The NFL security consultant said he feels loyalty to the players, too, and if an athlete faces a legal problem the liaison might broker a meeting with a trustworthy attorney or, if the player is considering an investment, offer to investigate a company. Another day might send him to a college town in his territory to begin vetting a potential draft pick, and from there the report would be part of a prospect's profile before a team decides whether to avoid him or take a chance. The work is expected to be thorough and fast, drawing little attention. "They're not calling up the media," said one person who spent years inside the system. "You would be fired. It's confidential work." It's also reliant on impressive credentials. According to examinations of many consultants' backgrounds, one team-appointed liaison spent years in the Drug Enforcement Agency, another in the California justice department; two others were formerly deputy police chiefs in New Orleans and Charlotte, and others oversaw high-level investigations in Massachusetts, Tennessee and Michigan. Although law enforcement training is not required, according to someone familiar with the system, understanding of law enforcement is. It doesn't hurt to have a hefty résumé, when seconds count. "When you walk into the local police department and you're either former FBI or NYPD," the former NFL team official said, "it can open doors." Occasionally, though, such a sprawling web finds itself in tangles. Teams are encouraged to hire their own in-house security director, such as Wansley with the Cowboys, though the league does not mandate qualifications and rarely vets potential candidates, sometimes leading to confusion about jurisdiction. The NFL does not forbid teams from bringing in a player whose background shows red flags, though the league itself carries much of the blame when a player breaks the law. Wansley was a former undercover FBI operative who, during a hiatus from the Cowboys, oversaw global security for American Airlines. Although his priorities are different from those working to protect the interests of the league Wansley's boss is Cowboys owner Jerry Jones, not Goodell, and the team has its own brand and philosophies to consider he said his job description is similar to the representative assigned to Dallas by the NFL. "Assets protection," said Wansley, who once pulled Hall of Fame Coach Tom Landry off the sideline and strapped a bulletproof vest to him after a series of death threats. "It's players, but everyone included in the organization. I hate to put it that simply, but it is. And that includes the integrity of the organization, the business itself, and it's simply that straightforward." Wansley, who said he rarely attempts sleep before 3 or 4 a.m., said that in his line of work he must always be ready to confront surprises. The goal each day and night, he and others said, is to get in front of every potential threat ideally even before they happen. "If the program is working, you're serving everyone the same," the league-assigned security consultant said. "If you can be proactive, and if you can prevent a guy from screwing his life up or screwing up the brand, whether it be the [team] or the league, that's the purpose."

NFL's weekend headlines have little to do with football

By CNN Staff

Troubled times for the NFL

STORY HIGHLIGHTS

Senator: NFL commissioner should resign if there was a cover-up in the Ray Rice case

"Adrian Peterson turns himself in, posts bond, claims innocence in child abuse case"

The Carolina Panthers sit Greg Hardy at the last minute as his jury trial in appeals court looms

"There are calls for 49ers to bench Ray McDonald, as Roger Goodell misses stadium opening"

(CNN) -- There was lots of news in the NFL this weekend. Little of it had to do with the pigskin.

"Domestic violence has dominated professional football's story lines for weeks, and this weekend saw three star players miss their games because of issues at home."

A black cloud hangs over a fourth player as California's lieutenant governor requested that the San Francisco 49ers bench a defensive end as his domestic violence case navigates the court system.

Here is what you may have missed:

"Ray Rice was initially cleared to play next week, until footage of him brutalizing his then-fiancee in an Atlantic City, New Jersey, hotel elevator surfaced."

The NFL and domestic violence

Reports: Rice to appeal NFL suspension

Should NFL top boss resign?

O'Brien on NFL: 'There's no punishment'

NFL star won't play amid uproar

"Once the video was made public, the Baltimore Ravens cut Rice, and the NFL made his suspension indefinite. There are reports that Rice intends to appeal the new punishment."

"Sen. Amy Klobuchar, D-Minnesota, who joined 15 other women senators in asking NFL Commissioner Roger Goodell to institute a zero-tolerance policy for domestic violence, has said it's ""outrageous"" the NFL didn't try harder to obtain the tape."

Goodell has said no one in the league office saw footage of Rice striking Janay Palmer until TMZ posted the video online.

""I have a feeling there's a lot of people that know stuff, what went on here,"" Klobuchar told CNN on Sunday. ""I'm waiting to see if there is a major cover-up. If it shows (Goodell) lies, there could be many factual situations where, in fact, he should step down.""

"Adrian Peterson turned himself in to authorities in East Texas on Saturday after a grand jury indicted him on felony child abuse charges. He quickly posted \$15,000 in bail and was released, the Montgomery County Sheriff's Office said."

"The Minnesota Vikings star running back, considered one of the best -- if not the best -- in the NFL, missed his team's game against the New England Patriots on Sunday."

State law says an accused person can defend himself against the charge Peterson faces if he can demonstrate he was administering reasonable discipline.

"While the prosecutor in the case alleges Peterson hurt his child ""with criminal negligence or recklessly,""

Peterson's attorney says his client used a switch to spank his son, thus doling out discipline much like "he experienced as a child growing up in East Texas."""

"Greg Hardy was set to take the field Sunday, despite being convicted of domestic violence this summer and facing a jury trial in an appeals court later this year. That changed shortly before game time when the Carolina Panthers announced he would sit out the team's match against the Detroit Lions."

"Authorities say Hardy in May choked his then-girlfriend, threw her around, dragged her by her hair and threatened to kill her. He was sentenced in July to 18 months of probation and a 60-day suspended sentence."

"The 6-foot-4, 275-pound defensive end says he is innocent and has appealed a guilty verdict rendered by a Mecklenburg County judge in North Carolina, but many observers wondered how Rice could face suspension, but not Hardy."

"Despite sitting Hardy, the Panthers were accused of reacting to the new climate regarding domestic violence rather than any acting out of any concern about the crime or victim. Coach Ray Rivera acknowledged the changed climate and said in post-game remarks, ""We really do have to get this right."""

NFL owner weeps during speech

Do TV contracts block NFL reporting?

NFL stars and domestic violence

A systemic domestic abuse problem in the NFL?

Sports Illustrated's Richard Deitsch was not impressed with Hardy's last-minute benching.

""They ceded to press/public pressure. It was disgrace it took this long,"" he tweeted."

"Ray McDonald had two tackles in the San Francisco 49ers' Sunday Night Football game against the Chicago Bears, but according to Sports Illustrated, Goodell was not in attendance."

"Goodell, who often attends stadium openings and was reportedly scheduled to be at Levi's Stadium for its christening, is under fire for his handling of the Rice case, prompting the women's rights group Ultraviolet to fly banners over NFL stadiums with the hashtag, #GoodellMustGo."

"Police were called to a birthday party at McDonald's home about 3 a.m. on August 31 and determined McDonald had been involved in an altercation with his fiancée, who was 10 weeks pregnant, The Sacramento Bee reported. She showed police minor bruises on her arms and neck, the paper reported."

"McDonald told CNN affiliate KTVU that ""the truth will come out"" after he was released from jail on felony domestic violence charges."

"California Lt. Gov. Gavin Newsom asked the 49ers to bench their defensive tackle Sunday, saying the team's ""continued insistence on playing Ray McDonald during his ongoing criminal investigation is a painful affront to every victim of domestic violence and sends a troubling message to our community and especially our children that 'zero tolerance' are empty words, not real actions.""

"CNN's Elliott C. McLaughlin, Mary Grace Lucas, Candy Crowley, Greg Botelho, Ray Sanchez, Steve Almasy, Kevin Conlon and Holly Yan contributed to this report."

"Associates and friends of Gary Conley are pleading for help with the case at:

<http://thegaryconleycase.weebly.com> Do a connection chart using social relationship software (ie: <http://www.smrfoundation.org>) for every death of a prominent Washington DC official from 2000 to 2013 and notice the curves, relationships and spike points. It is a bit frightening. Plane crash, heart attack, hanging and jump are the most untraceable kill-types per Brazilian secret police. Per Tom Clancey: first you ""taint"" the subject with a sex or money scandal then you whack them, then you get an erroneous toxins report filed, so people will think it was the ""victims fault"" and not pay too much attention. TDS- Boston G -----
----- Gary D. Conley The big VC's didn't like the maverick approaches that Gary took. He did not play the Silicon Valley Frat boy brogrammer game. Unlike Silicon Valley, he treated women executives as equals and not as reception room eye candy like the other VC's. But Gary's biggest indiscretion was that he got past the VC's technology suppression and control system in the Valley. Time after time he created, launched and got funded one amazing new energy technology company after another. The Big VC's only want things funded that support their portfolio and they stop anything that is going to compete with it. As an example: The Valley VC's decided that they wanted a chemical called ""lithium Ion"" to be the main chemical to power electric cars. Even though many other options existed, they picked this one chemical because they had configured their investment plays in lithium mining, lithium processing, lithium cars and lithium batteries in each of their portfolios and then, even though they were billionaires, they made Congress give them many more billions of tax money just for this one chemical because they had monopolized it globally. Alas, Gary promoted a technology that competed with the Silicon Valley VC's at Solyndra and with all of their lithium plays. He had the metrics, working proof and opportunity to exceed their technology. First they tried putting a FULL MONTY on him but that didn't work out. It is now almost impossible to kill reporters and whistle-blowers without it getting recorded. Glenn Greenwald, and people like him, are now under so much surveillance that, if anybody did try to whack Mr. Greenwald, it would be caught on so many drones, microphones, laser scanners, cameras, tracking chips, window vibrators, IR chipcams, cell phones, bugs and other gadgets that the killers could never get away with it. Watch the TV show: Person of Interest. Everything in that show already exists today. Private investigators, taking another look at the case, have been sourcing new surveillance data sources to try to find out what really happened to Mr. Conley in the time period leading up to, and at, the shooting. History has proven: 1.) That Solyndra panels self-ignited and Lithium ion blows up when it gets banged, 2.) That Gary had better plans. 3.) That Gary's efforts conflicted with the plans of the Silicon Valley VC's. 4.) That Silicon Valley VC's will stop at nothing to get their way; politically, egotistically and industrially. Did he pay the ultimate price for his innovations and for speaking out? Ironically, Ford has announced that their new electric car will use the same type of solar optical concentrator on the roof of the car, as Gary's SolFocus developed, although Gary is no longer alive to participate in the profits. Many reporters find it ""strange"" that Steven Chu, the Secretary of Energy, who openly hated Hydrogen energy, was nominated and lobbied into office by opponents of hydrogen energy (who were investors in competing technologies) and that during Steven Chu's reign, a record number of hydrogen executives and companies died. Of course, it could all just be a coincidence. Forced suicide? Murder? Cover-up? Unusual number of coincidences? What do you think? ghj-de, sdLAT, rf-Den Gary Conley Dead: Silicon Valley Entrepreneur Dies Of Gunshot Wound A man found dead Sunday afternoon from a gunshot wound outside a Beale Air Force Base residential area was a well-known Silicon Valley entrepreneur and clean energy pioneer, according to base

officials. Gary D. Conley, 52, whose most recent corporate venture, b2u Solar of San Jose and Gurgaon, India, was one of several energy-related companies he founded, was discovered by a Beale resident at about 1 p.m. Sunday. His body was found outside a parked car near the Vassar Lake Gate with a gun in close proximity, according to Brian Wagner, 9th Reconnaissance Wing spokesman. According to officials at the Air Force Office of Special Investigation, no foul play was involved. Conley's brother, who lives in Oklahoma, said he and other family members are mystified by details surrounding the body's discovery. "It's very perplexing," said Mark Conley, 55. "The circumstances don't seem to make much sense." Gary D. Conley served in the US Air Force from 1979-83, as did Mark Conley and their father before them, according to Mark Conley. "We're an Air Force family," said his sister, Michele Conley, 59, of Paradise Valley, Ariz., who said her brother was born at McClellan Air Force Base, about a half-hour south of where his body was found. B2u Solar frequently negotiated military and other government contracts, she said, which would explain his presence in the area. The energy entrepreneur was named Clean Energy Entrepreneur of the Year in 2005 by the National Renewable Energy Laboratory Growth Forum. He is credited with having founded SolFocus in 2005 in order to commercialize products created through its predecessor, a research company called H2Go. That firm, also founded by Conley, began with hydrogen-related energy projects and later switched focus to solar energy. "He was a genius," Mark Conley said. "He did some really amazing stuff." According to Michele Conley, he also was a gourmet cook. Christmas Eve featured an elaborate meal he prepared in their Saratoga home for his wife, Grace, and their two teenage sons. Gary D. Conley's profile on LinkedIn, an online professional networking site, lists flying, skiing, food, several branches of science, economics and hydroponics among his interests. B2u Solar, a small startup he founded in 2010, had solar demonstration projects in the works in China, and at the NASA Ames Research Center at Moffett Field in Mountain View, according to GigaOM, a technology news website. Michele Conley said her brother had been expected to meet a friend at the former Castle Air Force Base outside Merced this week to help with a solar project there. She last saw him a month ago, she said. "He was having so much fun, traveling and doing so well," Michele Conley said. He recently bought a new car, which he did pretty regularly, she said. The three siblings had been raised by their mother, primarily in Ohio, according to Mark Conley. Their father had been killed when his Air Force fighter jet was shot down over Vietnam in 1967, he said. "We didn't have any money," said Michele Conley of their upbringing. "Gary was always the whiz kid -- the braniac." She described her brother as a self-made man. His suspected suicide, she said, is implausible to her. "He was not depressed. He was like a big kid -- always excited about everything. It just makes zero sense," Michele Conley said.

----- Call me old fashioned, but isn't killing taxpayers, and their companies, because they won't join your business monopoly, considered to be a bad thing these days? As of Jan. 1, 2014, Steven Chu's actions, and those of his staff, have put over 118 companies out of business that might have otherwise survived, and every single one of those companies competed with Steven Chu's Silicon Valley venture capital sponsors/buddies. Now there is an interesting coincidence! MT- MJ -----"
Huffington Post discloses the biggest assassination in these scandals: Journalistic Freedom!

"2013 Was An Insane, Important Year For The Media"

Posted: 12/16/2013 7:28 am EST | Updated: 12/16/2013 11:20 am EST

" Video, 2013 In Media, 2013 Journalism, The Year You Missed, Media News"

"When we at HuffPost Media started talking about what 2013 was like in the media world, we kept coming back to one word: ""insane."" It's a sentiment that's almost always hyperbolic, but, in this case, we're sticking with it. 2013 was a pretty insane year for the media: a dramatic, jaw-dropping, thunderbolts-and-lightning kind of a year. It was also a deeply important one. In this post, we're going to focus on what was undoubtedly the biggest story of the year: perhaps the most titanic clash between media and government in living memory. (We'll get to the rest of the year's big events in another post.) Time and again, people in 2013 grappled with the fact that governments in multiple countries seemed willing to intervene in journalism in startling ways. They were also reminded, if they needed it, of the power and value of journalism itself. In the United States, President Obama found his administration repeatedly condemned as the most hostile and dangerous to the press since Richard Nixon's. Though the White House vociferously disputed these comparisons, it was easy to see why people were pulling out the history books. There was, for instance, the Justice Department's admission in May that it had secretly gotten its hands on two months of phone records of reporters and editors for the Associated Press?something which the AP, an organization not typically known for its fiery statements, called a ""massive and unprecedented intrusion"" into its journalistic operations."

"Less than a week later, the Washington Post revealed that the DOJ had also systematically surveilled Fox News reporter James Rosen?and, even worse, had dubbed him a ""co-conspirator"" in a national security leak case. The notion that the practicing of journalism could be so baldly equated with criminality was met with responses like this one:"

"Serious idea. Instead of calling it Obama's war on whistleblowers, let's just call it what it is: Obama's war on journalism. ? Eli Lake (@EliLake) May 20, 2013"

"The targeting of the AP and Fox News proved to be a kind of tipping point, bringing the long-simmering story of the Obama administration's aggressive targeting of the media fully into the light. The backlash against the DOJ was so intense that Attorney General Eric Holder was forced to assure journalists that he would change the way

the department conducted its investigations. The bad blood between the press and the president continued throughout the year. December, for instance, saw a revolt by White House photographers and others, who decried the fact that they were allowed so little access to Obama and were instead forced to rely on carefully crafted pictures from the White House staff. The AP's director of photography called the tactic "Orwellian." All in all, it was easy to see why an October report about the state of press freedom in America from the Committee to Protect Journalists was so downbeat. The report, by former Washington Post editor Leonard Downie, detailed the chilling effects the White House's tactics were having on journalism. In a widely-repeated statement, New York Times reporter David Sanger called the Obama administration the "most closed, control-freak administration I've ever covered." If the DOJ's operations showed how dangerous the White House apparently considered journalists to be, the publication of the Edward Snowden leaks by the Guardian, the Post, the Times and other outlets around the world—including, in one instance, The Huffington Post—provided a perfect example of why. People searching for a better case for the impact journalism can have would be hard-pressed to find one. The revelations sparked international outcry and debate, turned journalist Glenn Greenwald into a global celebrity, and led to an eye-poppingly brutal response from the British government. The UK's hostility towards the Guardian was breathtaking, even to Americans who had just recently been condemning their own government's excesses. Prime Minister David Cameron's government dispatched civil servants to the paper's offices, where editors were told in no uncertain terms that they could either destroy the hard drives containing the Snowden documents or face crippling legal action. (The paper complied, since it had copies in other countries.) Then, police at Heathrow Airport detained Greenwald's partner, David Miranda, for nearly nine hours under Britain's Terrorism Act. The White House essentially admitted it had known of the planned detention in advance."

"The targeting of the Guardian culminated in a rather disturbing parliamentary hearing in which editor Alan Rusbridger was asked whether or not he loved his country. Rusbridger staunchly defended himself: The Snowden saga also tended to expose deep fissures in the elite media. While some outlets and pundits were either publishing Snowden's leaked revelations or praising him for revealing so much hidden information, others were condemning him and essentially siding with the U.S. government. CBS News' Bob Schieffer, for instance, sneered that Snowden was no Rosa Parks: So, how should we look at 2013 as a whole? Seen in one light, the picture that emerges is unremittingly depressing: of a media under continual assault, of governments using new technological powers to fight journalism in sophisticated ways not available to their predecessors; of press freedom attacked at every turn. Yet there are many reasons to be hopeful. If 2013 was a year that showed that the state was willing to exert its power more than ever, it also showed how much power the media still retains—and, with the Snowden stories, the good it can do when it flexes its muscles in service of holding the state to account. It seems quite likely that 2013 could be seen as a watershed moment for the media and journalism. At the very least, it will make 2014 a fascinating year. <http://www.youtube.com/watch?v=Pu8Gnds1nlg>

----- Suppression and Termination

Technologies While this used to be all hush-hush, the glut of ex spies that have retired and authored spook books (see the vast number of examples on Amazon.com), along with the research for their own books conducted by Tom Clancy, Robert Ludlum and other authors, has put the whole "Distinct Interdiction" ("DI" in the biz) industry out in public view. The main reasons people are "off'd" in a scandal are: Suppression- To shut them up. Guilt- They kill themselves because they realize the horrible thing they did is about to be revealed. Frame-Ups- They are killed to make it look like they suicided out of guilt in order to steer suspicion away from the actual criminals. Secondary Intimidation- If a key player is suspected of considering leaking or confessing, a close member of their family is eliminated to break their will. During the Cold War the Russian spies mastered the craft of "Distinct Interdiction" with acidic vapors that you could spray under a person's nose in a crowd (still in use today), hidden in a rolled up newspaper, and cause an undetectable heart attack; polonium or heavy metal poisoning which causes slow cancer-like death; and electromagnetic pulse waves which also caused an undetectable heart attack by interrupting the heart beat impulses. Suddenly withering away, over a matter of months, or unexpected heart attacks are good indications of foul-play in these sorts of cases. Until recently, all of these kill methods were undetectable, but modern medicine has thrown a wrench in the works. All of the previously known kill methods leave nano-evidence, micro-cellular traces and biological degradation effects which new genome science, DNA processing equipment, molecular imaging and other recent science advances can, now, detect and document. These techniques are still used in third-world countries but modern science labs,

that even consumers can contract, can too easily source the culprits. In the developed world; hair, tissue, saliva and blood samples of the deceased can now tell the true cause of death. Planes are easy for spies to crash by manipulating GPS and landing instrumentation, Tom Clancy has told listeners at book readings. A plane is a device constantly fighting gravity. Bad guys help gravity along and much of the evidence is lost at sea or in a fireball in a farmers cornfield. The plane crash scenario is becoming passe, though, and is now frowned upon by most spy groups as it, too, has become more detectable. A- NY Times -----"

Ex-NSA chief: Airstrikes like ?casual sex?

By Peter Sullivan

"Former National Security Agency Director Michael Hayden likened using air power against the Islamic State in Iraq and Syria to ?casual sex.? "The reliance on air power has all of the attraction of casual sex: It seems to offer gratification but with very little commitment,? the retired general told U.S. News & World Report. Hayden's remark caught fire on Twitter, after CNN showed the quote on air Friday morning. Hayden was director of the CIA and the NSA under President George W. Bush. He was also a sharp critic of the disclosures from former NSA contractor Edward Snowden about the country's secret surveillance programs. Hayden said those leaks endangered national security. Hayden's comments come with President Obama opening the door to airstrikes targeting ISIS in Syria. The general though cautioned that air power alone might not be enough to defeat the al

Qaeda offshoot. "We need to be wary of a strategy that puts emphasis on air power and air power alone," he said. "The sooner we take the fight into Syria against [ISIS], the better off we'll be," he added. Asked about the remarks on Friday, State Department deputy spokesman Marie Harf said Hayden is "well aware" of the tools that the U.S. has to take down terrorists. "General Hayden, all joking aside, knows very well the counterterrorism tools that we have at our disposal from when he was CIA director — some of which we obviously don't utilize any more, as we've been clear, but some of which are tools we still have at our disposal, including, of course, direct action. So he is well aware of how you take the fight directly to terrorists." Harf reiterated that the the United States won't be using American ground troops to fight ISIS. "The best partner on the ground in that role is the Iraqi and the Kurdish security forces in Iraq and the moderate opposition in Syria," Harf said. "

What We're Afraid to Say About Ebola

By MICHAEL T. OSTERHOLM FOR THE NEW YORK TIMES

Credit Jonathon Rosen

MINNEAPOLIS — THE Ebola epidemic in West Africa has the potential to alter history as much as any plague has ever done.

"There have been more than 4,300 cases and 2,300 deaths over the past six months. Last week, the World Health Organization warned that, by early October, there may be thousands of new cases per week in Liberia, Sierra Leone, Guinea and Nigeria. What is not getting said publicly, despite briefings and discussions in the inner circles of the world's public health agencies, is that we are in totally uncharted waters and that Mother Nature is the only force in charge of the crisis at this time."

There are two possible future chapters to this story that should keep us up at night.

"The first possibility is that the Ebola virus spreads from West Africa to megacities in other regions of the developing world. This outbreak is very different from the 19 that have occurred in Africa over the past 40 years. It is much easier to control Ebola infections in isolated villages. But there has been a 300 percent increase in Africa's population over the last four decades, much of it in large city slums. What happens when an infected person yet to become ill travels by plane to Lagos, Nairobi, Kinshasa or Mogadishu ? or even Karachi, Jakarta, Mexico City or Dhaka

"The second possibility is one that virologists are loath to discuss openly but are definitely considering in private: that an Ebola virus could mutate to become transmissible through the air. You can now get Ebola only through direct contact with bodily fluids. But viruses like Ebola are notoriously sloppy in replicating, meaning the virus entering one person may be genetically different from the virus entering the next. The current Ebola virus's hyper-evolution is unprecedented; there has been more human-to-human transmission in the past four months than most likely occurred in the last 500 to 1,000 years. Each new infection represents trillions of throws of the genetic dice."

"If certain mutations occurred, it would mean that just breathing would put one at risk of contracting Ebola. Infections could spread quickly to every part of the globe, as the H1N1 influenza virus did in 2009, after its birth in Mexico."

"Why are public officials afraid to discuss this? They don't want to be accused of screaming 'Fire!' in a crowded theater ? as I'm sure some will accuse me of doing. But the risk is real, and until we consider it, the world will not be prepared to do what is necessary to end the epidemic."

"In 2012, a team of Canadian researchers proved that Ebola Zaire, the same virus that is causing the West Africa outbreak, could be transmitted by the respiratory route from pigs to monkeys, both of whose lungs are very similar to those of humans. Richard Preston's 1994 best seller 'The Hot Zone' chronicled a 1989 outbreak of a different strain, Ebola Reston virus, among monkeys at a quarantine station near Washington. The virus was transmitted through breathing, and the outbreak ended only when all the monkeys were euthanized. We must consider that such transmissions could happen between humans, if the virus mutates."

"First, we need someone to take over the position of 'command and control.' The United Nations is the only international organization that can direct the immense amount of medical, public health and humanitarian aid that must come from many different countries and nongovernmental groups to smother this epidemic. Thus far it has played at best a collaborating role, and with everyone in charge, no one is in charge."

"A Security Council resolution could give the United Nations total responsibility for controlling the outbreak, while respecting West African nations' sovereignty as much as possible. The United Nations could, for instance, secure aircraft and landing rights. Many private airlines are refusing to fly into the affected countries, making it very difficult to deploy critical supplies and personnel. The Group of 7 countries' military air and ground support must be brought in to ensure supply chains for medical and infection-control products, as well as food and water for quarantined areas."

Continue reading the main story 308Comments

"The United Nations should provide whatever number of beds are needed; the World Health Organization has recommended 1,500, but we may need thousands more. It should also coordinate the recruitment and training around the world of medical and nursing staff, in particular by bringing in local residents who have survived Ebola, and are no longer at risk of infection. Many countries are pledging medical resources, but donations will not result in an effective treatment system if no single group is responsible for coordinating them."

"Finally, we have to remember that Ebola isn't West Africa's only problem. Tens of thousands die there each

year from diseases like AIDS, malaria and tuberculosis. Liberia, Sierra Leone and Guinea have among the highest maternal mortality rates in the world. Because people are now too afraid of contracting Ebola to go to the hospital, very few are getting basic medical care. In addition, many health care workers have been infected with Ebola, and more than 120 have died. Liberia has only 250 doctors left, for a population of four million."

"This is about humanitarianism and self-interest. If we wait for vaccines and new drugs to arrive to end the Ebola epidemic, instead of taking major action now, we risk the disease's reaching from West Africa to our own backyards."

Michael T. Osterholm is the director of the Center for Infectious Disease Research and Policy at the University of Minnesota.

Domestic violence survivors: How we escaped

By Melanie Hicken AT CNN
NEW YORK (CNNMoney)

"There are many reasons why people stay in abusive relationships, but one that makes it especially difficult for victims to leave is money."

"If a victim is financially dependent on their abuser -- for income, for a roof over their head, even for health insurance -- walking away is made all the more difficult. They often must struggle to become financially self-sufficient, putting them at greater risk of falling into poverty and homelessness."

""I had to plan my escape for months before I even had a place to go and the money for the bus to get there. #WhyIStayed,"" domestic violence survivor Beverly Gooden, 31, tweeted Monday, in reaction to those who

questioned why women like Janay Rice, the wife of Baltimore Ravens football player Ray Rice, hadn't left her husband after he had abused her."

"Gooden's tweets have prompted tens of thousands of responses and a national conversation around the complex nature of domestic violence. With no job, credit cards or money of her own, Gooden was reliant on her husband, who she had been dating since college, for basic living expenses. Plus, she had no personal credit history. So when she started secretly applying for apartments, she kept getting denied. But she remained determined, setting aside a bit of cash whenever she had a chance, dipping into things like gas and grocery money. Related: Hungry, tired and stressed out Gooden was able to leave her husband in 2010 with the help of a local domestic violence shelter that she found online. The shelter provided her with emergency housing and passes for public transportation. Within a few days, she rented a room in an apartment she found through Craigslist. After explaining her situation, the landlord allowed her to pay a small deposit and partial rent until she started receiving regular paychecks from the temp job she landed. Unable to qualify for a car loan, she bought a 1989 Toyota Camry for \$450 to get to and from work each day. Four years later, Gooden works in human resources and relishes being financially independent. "It feels so good to be able to say I'm in control now," she said. "Even if it is difficult, I'm in control." Abusers often use money as a way to maintain power over their victims. They will withhold money, ruin the victim's credit, even forbid them to work so they don't have an independent source of income, according to the National Network to End Domestic Violence. Before she left her abusive fiance last year, 25-year-old Ana Andrew had no access to her personal bank account, even though her paychecks were deposited into it each month. Instead, her fiance handled all of their money and gave her only a small allowance. "He was in control of everything," Andrew said. "I was scared to go out on my own." She reached her breaking point when he struck her while she was six weeks pregnant with their second child, breaking the cartilage in her left ear. She took her young son and fled to her mother's house and then to a domestic violence shelter run by the Urban Resource Institute. Related: Retired women: 'How I'm getting by' A year later, things are looking up. After promptly closing her old bank account, she opened a new one at a new bank. Shelter staff helped her successfully apply for affordable housing. She got promoted at work, and is hoping to return to school to study to be a physician's assistant. "If you push yourself you'll be okay," she said. "It's not an easy process, but it's better than your kids waking up without (a mom)."

WASHINGTON POST By Craig Timberg

"The U.S. government threatened to fine Yahoo \$250,000 a day in 2008 if it failed to comply with a broad demand for user data that the company believed was unconstitutional, according to court documents unsealed Thursday. (Justin Sullivan/Getty Images)"

By Craig Timberg

"The U.S. government threatened to fine Yahoo \$250,000 a day in 2008 if it failed to comply with a broad demand to hand over user data that the company believed was unconstitutional, according to court documents unsealed Thursday that illuminate how federal officials forced American tech companies to participate in the NSA's controversial PRISM program. The documents, roughly 1,500 pages worth, outline a secret and ultimately unsuccessful legal battle by Yahoo to resist the government's demands. The company's loss required Yahoo to become one of the first companies to begin providing information to PRISM, a program that gave the National Security Agency extensive access to records of online communications by users of Yahoo and other U.S.-based technology firms. The released documents underscore how we had to fight every step of the way to challenge the U.S. Government's surveillance efforts," said company General Counsel Ron Bell in a Tumblr post published Thursday afternoon. The program, which was discontinued in 2011, was first revealed by former NSA contractor

Edward Snowden last year, prompting intense backlash and a wrenching national debate over allegations of overreach in government surveillance. Federal Judge William C. Bryson, presiding judge of the Foreign Intelligence Surveillance Court of Review, ordered the documents from the legal battle unsealed on Thursday as part of a broad effort by the court system to declassify the arguments that formed the legal foundation for PRISM. The original order to Yahoo came in 2007 and set off alarms at the company because of the sweep of its requests and its side-stepping of the traditional requirement that each target be subject to court review before surveillance could begin. The order, Yahoo officials said, required only that the target be outside of the United States at the time, even if the person was a U.S. citizen. The company challenged the order on constitutional grounds but lost repeatedly, both at the Foreign Intelligence Surveillance Court and an appeals court, the Foreign Intelligence Court of Review. The government requested and obtained permission to share the ruling with other companies as it gradually pressured most of the major players in the American tech industry ? including Google, Apple and Facebook ? to comply with the data demands. The requests concerned not the content of e-mails but what it called ?metadata,? which detailed who users exchange e-mails with and when. It is not known if e-mail collection continues in some other form. The ACLU, which had supported Yahoo?s legal fight in 2008, applauded Thursday?s move to release the documents but said it was long overdue. ?The public can?t understand what a law means if it doesn?t know how the courts are interpreting that law,? said Patrick Toomey, a staff attorney with the ACLU?s national Security Project."

White House staff order protection of Company ?at all costs? to protect image (and maybe \$ Scheme?) "White House staff order protection of Tesla ""at all costs"" to protect DOE's image and the image of those associated in Washington. By Public Team Aslam Analysts that are in the pockets of Tesla investors market stock values that have no basis in reality. Using manipulated Google stories that are rigged into search engine output to make them look like they are the main opinion rather than the exception that they are. The persons backing this effort are the exact same people who were campaign bundlers and contributors. Fake Tesla financial reports use Federal and State tax credits to magically show as revenue upside when, in fact, the company is bleeding money and desperately trying to reconfigure its NUMMI building contract. Tesla is still getting taxpayer money to keep it operating by getting kickbacks from State and Federal agencies on orders from those agency bosses. State kickbacks and DC kickbacks got Tesla where it is and nothing more. Tesla cars turn out to be NOT ""the best built car ever built"" as stated in paid-for ""consumer reports"" but, rather full of electronic problems, door handle lock-ins, overheating, range issues, shock absorber failures, mounting bolt failures, and DEADLY FIRES THAT WATER MAKES EVEN WORSE AND TOXIC GASES FROM BATTERY FIRES COMBINED WITH BURNING PLASTIC. When Fisker died, the orders went out from on high: ""Never Let Mitt Romney's call that Tesla AND Fisker were losers"" become verifiable"". Cover up anything that makes Tesla look bad. The order from The Hill was given to protect Tesla as a DOE ""success Story"" ""no matter what"". See ""THROW THEM ALL OUT- PART 2: The Fix is In."" Asta Lee- Denver CL CITIZENS INTERNITED CHARGES ""TESLA & SOLYNDRA WERE CAMPAIGN MONEY LAUNDERING SCAMS"" -----
----- Tesla-specific ""analysts"" and ""financial bloggers"" pushing Tesla stock online all have paid relationships, positions and Tesla investor connections per MarketWatch tracking and Disclosure filings. Using fake ""trade publications"" like EV WORLD and others, the ""amazing perfection of Tesla"" is always trumpeted by them like fanboys talking about MAC's or Wolverine comics. It helps that Googles executives are secret backers of Tesla and make all of the Google products push Tesla (kind of against the law, per SEC, but nobody seems to care about that anymore) TL- LA Times Stringer -----
----- Steven Chu was practically married to each and every silicon valley investor DNC bundler/contributor recipient of DOE manipulated funding before he was suggested as Secretary of Energy. Once he got thrown out of DOE for being such an obvious shill, he couldn't even get a job except at the VC's own college campus: Stanford, where the VC's can keep an eye on him. Alas, so can the authors and researchers of: THROW THEM ALL OUT, too. Now they are trying to train Moniz to be their bitch but it isn't going as fast as they like and actual facts are starting to slip out as the few honest DOE staff have had enough and are now whistleblowing. We got Chu and a bunch of his corrupt staff terminated..THROW THEM ALL OUT actually DOES work, Let's roll... PK -----
----- Tesla could sell cars with dead bodies in the back seat painted in pink paint and the shills would still write that they were the greatest thing since god and that no other car on Earth is as wonderful, perfect, excellent, pristine, angelic and otherwise a total work of bullshit spin. Tesla is the Miley Cyrus Twerk of the Hill!

Tesla exists entirely out of hundreds of paid bloggers and paid reviewers; paid search engine hype; paid off analysts; exclusive one-of-a-kind just-for-tesla tax dodges and free taxpayer loans. Elon Musk is the P.T. Barnum-Madoff of the investment world. Musks insane plan to built a Libertarian Cult on Mars, with him as the head priest, shows what kind of a whack he is. They have their dealers park their cars in rich neighborhoods during commute hours so people think there are more of them around than have actually been purchased. They made all of their investors buy them and buy them and put them in their friends and families names to trump up volume appearances. "Newspapers, TV, Magazines just died. Old America just died. Illuminati just lost control: SAY HI TO THE MILLENNIALS!" - Power elite tried to scare everybody off of the internet in order to hold control via information blockades. It back-fired. - New generation see's THE EMPERORS NEW CLOTHES, calls them ""naked old white guys"" - Global New generation of digital newspapers has broken through the old information systems. - All the top reporters saw the writing in the wind and left to do digital newspapers: Klein, Greenwald, Taibbi, etc... - The public are now part of the reporting teams, changed the Whole Ball Game. Tsunami of Transparency emerges - ""Net Neutrality/Cluster-F*cking the Internet"" seen as ploy to grasp last fading bit of consumer information control - Toothpaste is way out of the tube and old white guys don't get it - Millennials set to do shocking things in coming elections - Congress clueless about what is happening. About to get blind-sided in many arenas. Counted on the last 100 years of ""old-school"" politics. Missed class bell. - Matt Drudge and his Pajamas now as powerful as NY Times. Digital Newspapers now #1 source of news globally In this New Age of News, even old brands can disappear over-night and new brands can quickly rise to the top. How? Now, if the old brands are running cover-ups or acting as shills, it will soon be found out because there are now so many untainted options. The disappearance of news is now as noticeable as the appearance of it. While most of Washington may hate Matt Drudge, nobody will dare mess with him because his cadre of Blog-News-ers will expose their crimes. For example, if Coca-Cola, a big advertiser in The Wall Street Journal, kills a story in the Journal about the dangers of sugar, there are now so many other publication options that the story will still get printed. SEE INVESTIGATIVE VIDEOS ABOUT THIS STORY (HERE)

Mark Boster / Los Angeles Times

The job listings board at the Verdugo Jobs Center in Glendale in November.

"- One man with an associates degree has applied for more than 1,300 openings and has had some 30 interviews"

"- Of the 3 million long-term jobless today, about one-third have been unemployed for more than two years"

- Jobless workers with a 2-year degree have the longest duration of unemployment among all education groups

"It has come down to this for Brian Perry: an apple or banana for lunch, Red Sox ballgames on an old Zenith TV and long walks to shake off the blues. At 57, Perry has been unemployed and looking for work for nearly seven years, ever since that winter when the Great Recession hit and he was laid off from his job as a law firm clerk. By his count, Perry has applied for more than 1,300 openings and has had some 30 interviews, the last one a good two years ago. With his savings running dry, this summer he put up for sale his one asset ? a three-bedroom house his parents used to own in this suburb of Providence. ""I'm not looking for pity, just one last opportunity,"" said Perry, a boyish-looking man with bright blue eyes and a nasal New England brogue."

"I'm not looking for pity, just one last opportunity.- Brian Perry"

"The national economy, now in its sixth year of recovery, is gaining momentum and the unemployment rate has fallen sharply over the last year to 6.1%. But the number and share of people out of work for more than six months, the so-called long-term unemployed, remain at historically high levels. Of the 3 million long-term jobless today, about one-third have been unemployed for more than two years, Labor Department data show. A small minority ? roughly 100,000 Americans like Perry ? have been actively looking for at least five years. They might be called the super long-term unemployed. While others have quit looking, taken early retirement or entered disability rolls, these workers have pressed on year after year despite the increasingly long odds of finding a new job. Extreme as their cases are, they reflect the devastating effects of the worst economic downturn in 75 years and how much the risks of being unemployed for extended periods have increased compared with the past."

lRelated

Business

"1 in 6 California construction workers labors in shadows, study finds"

"The longer people remain jobless, the more likely they are to suffer the scarring effects of unemployment that can hurt their earnings permanently and create a cycle of instability. Even as some get re-employed, research shows that many find themselves unemployed again before long. From 2008 to 2012, only 1 in 10 long-term unemployed person in a given month had returned to steady, full-time work a year later, according to a study by Princeton University economists. Although relatively few workers are in this boat, experts call the problem deeply worrisome. ""Just because you aren't long-term unemployed doesn't mean you won't be tomorrow,"" said Justin Wolfers, a senior fellow at the Peterson Institute for International Economics. Having large numbers of people drawing food stamps, Medicaid and other public programs instead of being productive, taxpaying workers hurts the overall economy, he said. ""The budgetary impact is quite large."""

Number of long-term unemployed workers still at record levels

Don Lee / Los Angeles Times

"Brian Perry has been unemployed and looking for work for nearly seven years. He has applied for more than 1,300 openings and has had some 30 interviews. (Don Lee / Los Angeles Times)"

"In many ways, Perry typifies the long-term unemployed. Like him, a disproportionately large share are single. Perry also belongs to a group of older workers that has suffered the biggest increase in long-term unemployment in recent years. Perry has a two-year associate's degree in liberal studies, and it turns out that jobless workers with that level of schooling have the longest duration of unemployment among all education groups, according to Labor Department statistics. "It might be that folks with associate degrees are skilled enough that they won't take just any job, and spend more time looking for something better," said Georgetown University economist Harry Holzer. At the same time, he said, employers "may not believe their skills are high enough for what they need in many cases." Perry was laid off from his \$15-an-hour clerical job in January 2008, a month after the official start of the Great Recession. He remembers that afternoon vividly: He came back to the office after lunch and "was told to leave now or at the end of the day," Perry said. He left immediately, hurt by the way he was dismissed after 15 years on the job. He took with him vacation pay and a few weeks of severance, adding that to hefty savings that he had amassed over the years. He wouldn't say how much, only that it was in the five figures. He had braced for a tough job hunt, especially given that Rhode Island's unemployment rate has consistently run much higher than the nation's. It was last at 7.7%, the highest after Mississippi's. His first application was with the Biltmore Hotel in downtown Providence; his last with Brown University, where he eyed an opening for a storeroom attendant. In between, Perry has emailed and sent out resumes to companies in practically every industry. He's written about his plight to politicians, including President Obama, whose office replied twice with standard letters starting "Dear Friend."

"Related story: Weak August jobs report appears to be anomaly, analysts say"

Jim Puzzanghera

"Job growth wilted in August to 142,000, ending a six-month hiring hot streak with the worst performance of the year. But economists cautioned that it was not yet time to panic."

"Job growth wilted in August to 142,000, ending a six-month hiring hot streak with the worst performance of the year. But economists cautioned that it was not yet time to panic. (Jim Puzzanghera)"

"The president has sought to help long-term jobless by enlisting some 300 companies to sign a pledge that they would review their hiring practices to make sure they are not unfairly screening out or otherwise discriminating against people who have been out of work for many months. Jeff Zients, director of the National Economic Council and assistant to Obama for economic policy, said the companies are living up to their promise. "We'll have data to show their progress soon." But Perry said his long unemployment continues to be seen by some employers as a big black mark on his forehead. Sometimes, Perry avoided thinking about the heap of rejections by gorging on junk food and soda, even as he stopped eating out and cutting back on other spending. His weight climbed to 220 pounds ? until Feb. 10. That afternoon, while talking with a neighbor in the backyard, Perry was sweating and breathing heavily. His neighbor called 911, and Perry spent the next four days in the hospital, where cardiologists put in a stent, later followed by three more. It didn't cost him a penny because it was covered by the state's healthcare program for those who can't afford it. Since then, Perry has followed a strict diet. He lost 40 pounds and his waist shrank from 48 to 40 inches. Now when he gets stressed or discouraged, Perry said, he walks for an hour or two around his working-class neighborhood. Perry doesn't remember the last major purchase that he made; his biggest living expense, apart from \$555 a month for an \$85,000 mortgage, is \$120 a month for Internet, telephone and TV. He doesn't own a car or a cellphone. In winter, he keeps the thermostat at 63 degrees. Still, Perry said, he has drawn down his savings to four digits, so two months ago he listed his colonial-style house for \$299,000. Perry has lived in Rhode Island his entire life and wants to stay. But if he can't find a job soon, he said, he's prepared to move to someplace warm like Florida, where he won't have to worry about heating bills. "That's one big plus," he said with a laugh. "You know how expensive it is to heat a house."

Did You Know You Had Diabetes? It's All Over the Internet

By Shannon Pettypiece and Jordan Robertson FOR BLOOMBERG

Solyndra just the tip of the iceberg in \$300B U.S. Treasury embezzlement cover up! The Big Fix.

"Is the Tesla GigaFactory a ""FRONT"" to conduit cash to the 2016 Presidential Campaign like Tesla was for the Obama campaign? Is Tesla getting Taxpayer money from Nevada to kick back to campaigns

Detroit Free Press busts Tesla's Musk's BIG LIE! "In recent interviews Elon Musk refused to say how many cars had been built by Tesla. Elon Musk, after scamming a number of other cities about their factory, bought the NUMMI car factory in Fremont. NUMMI was built by Toyota and General Motors and operated as the premiere showcase car factory in the world. GM was using it to learn how Toyota builds cars so good. It was built to deliver 500,000 CARS PER YEAR!! 500,000 CARS PER YEAR IS WHAT NUMMI WAS FULLY EQUIPPED TO BUILD!! NUMMI could rapidly shift from one new car design to the next if people knew what they were doing. NUMMI switched out between the Chevy Nova, The Geo Prizm, The Chevy Prizm, The Hilux, The Voltz, The Vibe, Tacoma Pick-up Trucks, The Matrix and could change up to a whole new car within 19 days. This was a ready-to-go car factory. There should have been no learning curve, no ""build-a-new-car factory"" delays, it should have been all up and running per the notarized written assurances Tesla gave to the DOE, In WRITING! So Musk got it and fired all of the car builders. Tesla has been trying to get people to buy a non-hand-built version of their car since 2003!!! That is a LONG TIME. GM AND TOYOTA built a ton of new car designs in the same factory in the same time-span!! SO... after spending HUNDREDS AND HUNDREDS AND HUNDREDS of MILLIONS of YOUR TAX DOLLARS and beating their awful car design for a decade, how many cars have they built?: 255 CARS!!! They are still hand building the cars. The factory turns out to be almost unused except as a very expensive roof. In a 500,000 car capacity ready-to-go, state-of-the-art car factory after spending hundreds and hundreds of millions of dollars for a factory that GM AND Toyota had already tuned up they find that EVERYBODY thinks their car is a narcissistic Stanford yuppie Sandhill Road rich frat-boy meat-head man-toy! Nobody wants it!!!"

"- More government legal actions, from more countries, underway against Google, for data-abuse, spying, privacy harvesting; than any other Company on Earth, aside from Chevron."

This gadget can knock drones and Google Glass offline

"By Doug Gross, CNN"
| Filed under: Mobile

"(CNN) -- Bothered by gadgets like Google Glass that can, theoretically, be used to snoop on you in public? Then why not get your own gadget that can knock them all offline

"That's what the creators of Cyborg Unplug promise. Billed as a ""wireless anti-surveillance system,"" Unplug is, essentially, a portable router that can detect drones, surveillance cameras and mobile tech like Glass trying to access your Wi-Fi signal and boot them off of it."

""Whether business office, restaurant, school or nightclub: it's your territory and your rules, so make it harder for those that seek to abuse it,"" Cyborg's website reads."

"That's Unplug's stated purpose, anyway. But, as its creators freely note, it also has an ""All Out Mode"" that would let you knock devices off of any wireless network, not just yours."

"The company says it doesn't recommend doing that because ... you know ... it's probably really, really illegal."

""We take no responsibility for the trouble you get yourself into if you choose to deploy your Cyborg Unplug in this mode,"" the company says on its site."

"The company notes that the device is not a jammer, which blocks all digital signals in a particular area. Instead, it targets certain devices the user has identified. So, for example, you could tell Unplug that Glass is no bother, but drones and microphones need to be shut down. It uses the unique hardware signature that all Wi-Fi devices have to recognize what it's seeing before sending a ""deauthentication packet"" blocking access."

"To be clear, Cyborg Unplug can't stop anyone from using mobile devices to record or photograph you. It only keeps that data from being streamed afterward."

"Cyborg Unplug was developed by Julian Oliver, an engineer and artist from New Zealand living in Berlin"

"This spring, Oliver made headlines in the tech press by writing glasshole.sh, a Web script that can be used to find and kick Glass, specifically, off local computer networks."

He said positive response to the program led him to pursue making Cyborg Unplug.

"Two versions will be available for \$50 and \$100, available for pre-order starting September 30."

"Although Glass has no more capabilities to record video or take photos than most smartphones, the wearable

gadget from Google, still officially in its testing phase, has been targeted by privacy advocates who say technology has made it too easy to violate privacy rights."

"Cyborg says Unplug was created ""in shared spirit with"" Stop the Cyborgs, a campaign that urges restaurants and other public spaces to ban Glass and other surveillance devices."

Google did not immediately respond to a message seeking comment.

Running the Scam "What happens when you get: Free ""loans"" from taxpayer money acquired by submitting manipulated applications. Competitors artificially blocked using taxpayer resources. Tax credits from taxpayers to artificially reduce the price of your goods when your competitors do not get it. Tax credits from taxpayers to build your factory cheaper when your competitors do not get it Tax credits from each taxpayer for each car sold to be paid back to you for being green when your competitors do not get it. Inflated stock scores on the taxpayer supported public stock exchange created by inflating results using tax credits and investors-acting-as-buyers. Tax loss postings in annual tax filings for investors of the company who gain profits by reporting losses. Personal manipulation of the process in disfavor to the taxpayer and in unjust reward to the manipulating entity. ?? You get a liability situation in which any taxpayer can sue for just cause, any company can sue for just cause, any state can sue for just cause or any citizens group can sue for just cause.. and win. Tesla, Nissan & Ford are now at HUGE risk to be caught and reamed according to Detroit News Reporter B.

9 questions for Tesla's Elon Musk; Reporters embrace the ?jump Musk? tactic to expose him "9 questions for Tesla's Elon Musk By Alex Taylor III, senior editor-at-large elon musk (Fortune) At about \$90,000 apiece, Tesla's zero emission cars have become a symbol for those in the moneyed class who want to show a commitment to the environment. At the same time, billionaire CEO Elon Musk has emerged as the company's chief spokesman and cheerleader, encouraging optimistic sales projections and batting away doubters and naysayers who say the company's shares are overpriced and the cars are overrated. In recent weeks, he's battled both the New York Times and Barron's over what he perceived to be negative coverage about the company's prospects. ""I have no interest in an article that debates what we consider to be an obvious point -- which is that there is a dramatic reduction in battery costs,"" Musk told the Barron's reporter. ""You clearly do not understand the business."" Then he terminated the interview. Is Musk the next Henry Ford -- or Preston Tucker? By getting Tesla (TSLA) into production with a saleable car designed from the ground up, he's already gone further in the auto business than many people expected (see Henrik Fisker), but Tesla's stratospheric rise has generated heated debate on websites like Seeking Alpha and Motley Fool as to whether it can continue to expand at its current rate. Here are nine questions for Tesla and Musk: 1. Is Tesla's stock price the result of irrational exuberance? As numerous

commentators have pointed out, your company's finances look more like an Internet startup's in 1999 than those of a traditional automaker. Tesla has made money in only one quarter during its 10-year history, is expected to only break even this year, and make a buck a share in 2014. That works out to a forward p/e of roughly 100. Tesla could possibly make 35,000 vehicles per year by 2015, but GM (GM, Fortune 500) and Ford (F, Fortune 500) respectively produced 252,894 and 246,585 vehicles during the month of May in the U.S. alone. GM has a trailing p/e of 11.9 and Ford 10.7. Investors have to decide where the best value lies.

2. Can you make money selling cars without air pollution credits? Behind Tesla's \$11 million first-quarter profit, analysts figure there is nearly \$100 million in one-time or otherwise unsustainable items, including \$68 million in zero emission credits that you've said will disappear by the end of the year. That will leave a big hole in your operating statement. How will you be able to fill it?

3. AutoData reports that Tesla sales declined 14.7% in May. Is this a one-month blip or a sign that the immediate demand by early adopters has been satisfied? Part of the auto business is fashion; cars with flashy designs or novel concepts get a big initial boost but have a faster decay in their sales curve than more conventional cars with steadier demand. Tesla's are high fashion: eye-catching designs combined with unusual powertrains. The sales slump could also be a sign that your company is exhausting the market for super-premium priced cars. The number of people shopping for Porsches and higher-priced Mercedes and BMWs is thin and essentially finite, and Tesla may have already gotten its share. It is also worrisome that you used to brag about your order backlog, but now you won't release that information any longer. What is going on?

Elon Musk: Electric car competition is key

4. Can you continue to roll out your distribution model nationwide, given the opposition of local dealers and the barriers of state franchise laws? Instead of using franchised dealers, Tesla is distributing its cars through company-owned outlets. You argue, reasonably, that "existing franchise dealers have a fundamental conflict of interest between selling gasoline cars, which constitute the vast majority of their business, and selling the new technology of electric cars." But that puts you in opposition to state franchise laws enacted in the 1920s to protect independent dealers. Tesla has won court decisions in Massachusetts and New York but suffered setbacks in Virginia and Texas. Advocates of the franchise system argue that independent dealers are essential to provide inventory buffers and to interface directly with customers.

5. Does it really make sense to build a nationwide recharging network? Since electric cars have limited ranges, everyone agrees that a network of charging stations is essential to their widespread adoption. Supercharger stations can return most of a vehicle's range in 25 minutes but cost \$150,000 apiece. You currently operate eight supercharger stations, including six in California, one in Connecticut, and one in Delaware, and you have promised to install 200 coast-to-coast by the end of 2014. Won't the supercharger attendant in Nevada or Kansas be as lonely as the Maytag repairman?

6. Is guaranteeing the residual value a smart business decision? In May, you announced that you will guarantee to anyone who leases a Tesla that it will have a higher residual value after three years than any other luxury car on the market. That's nice, but who knows what a Tesla will be worth three years from now? As analysts have pointed out, that just shifts the risk from car owners to shareholders. You could be stuck with a lot of vehicles that are worth less than expected.

7. Can you bring down the price of batteries far enough to build a \$40,000 car? You have said you will launch a small electric sedan in late 2016 with a range of at least 200 miles and a price point "half" that of the flagship Model S. That means it will start at about the same price as the Nissan Leaf -- around \$30,000 -- but have triple the range. You said you were "pretty optimistic" that the necessary advances in battery technology are achievable without "any miracles happening." There aren't many who are equally optimistic.

8. Every other EV manufacturer is struggling. Are you really that much better? GM just cut the price of the 2013 Chevrolet Volt by \$4,000 to boost stalling sales. Nissan sold only 2,138 Leafs in May. The only electric car that has been made so far that could compete with the Model S was the Fisker Karma, which looked attractive, was powerful, and had a high range. Unfortunately, the Karma was not a success, and Fisker is now defunct.

9. Are you in danger of overreaching? Google (GOOG, Fortune 500) founders Larry Page and Sergey Brin were both investors in Tesla before its 2010 initial public offering, and that's pretty intoxicating company. So perhaps we shouldn't be surprised that you are talking with Google about adding driverless technology to your cars. "Autopilot is a good thing to have in planes," you said in an interview, "and we should have it in cars." Personally, I'd be happy if you just continue to develop your cars, bring your prices down, and blanket the East and West Coasts with service centers and charging stations. That way, if you don't become the next Henry Ford, at least you would be the next Walter Chrysler.

The Strange Death Of Tesla's investor's buddy: Karl Slym

"You lay back on your long-tail boat, totally relaxed, as it winds its way down the Chao Phraya River towards your destination - Shangri-La Hotel, Bangkok. Your boat arrives at the hotel. With a warm smile, the porter leads you to your room. You are enchanted by what you see. The luxurious room has a Thai-inspired decor with high ceilings, chandeliers and spacious balconies offering memorable views of the Chao Phraya River. Silk and teak finishings add an elegant touch. Your eyes close gently in the relaxing whim of the boat and you recall all the day's wonderful activities. Shopping at shiny malls, charming boutiques and open-air markets. Visiting the Grand Palace and marvelling at its magnificent architecture and intricate designs. Breathing in the aroma of street food as tuk tuks zoom around you. Watching saffron-robed monks bow low before giant Buddhas in serene temples. It is time for dinner and you head back to the hotel's Salathip Restaurant, where you settle into a traditional Thai teak pavilion. Graceful Thai dancers perform while you enjoy cuisine prepared with fragrant spices. Now for something which you've been looking forward to all day. YOUR DEATH! Managing Director Karl Slym, head of Tata Motors' domestic operations, walked to the edge of the roof of the Shangri-La Hotel, took one last look at the lovely skyline and then turned himself into a stain on the sidewalk below. He fell to his death at the Shangri-La Hotel in Bangkok, where he was attending a company meeting, and police are investigating the case as an apparent suicide. The Dynasty told Karl to take a hike, right off the top of the building, and he did. Because they are THAT powerful. The Nano, conceived by the Tata Motors Ltd. (TTMT) chairman as the world's most ground breaking car and whose sales plunged and never fully recovered after they caught fire, had a little bit to do with it but not all. The Nano, which starts at 141,898 rupees (\$2,565) was developed as an upgrade option for millions of Indian motorcycle owners. First introduced in 2009, demand fell to a record low of 509 units in November 2010 after the cars caught fire. (<http://www.bloomberg.com/news/2012-08-21/chairman-tata-seeks-to-salvage-world-s-cheapest-nano-car.html>) The Indian family dynasty had plans for cars that drove straight into Silicon Valley. Dynasties like the Tata, Mahindra and Vinohd Khosla conneced clans are one part of the core of the Silicon Valley VC's dynasties. Elon Musk, whose cars also explode in flames, exists because of his connection to European and Russian dynasties and funding from Stanford dynasties. Neelam Raaj, writes about how Dynasty dominates India in his work on ""The Great Indian family"". The Badals of Punjab, the Bachchans of Bollywood, the Yadavs of Bihar, the Karunanidhis of Chennai, the Gandhis, the Deols of Mumbai, the Pawars of Maharashtra and the Gavaskars are part of the systems of power in India. ""It is undemocratic that the Congress is still led by a Gandhi...But it is a fact of life in India that success in politics depends on who you know or are related to. I want to change the system"", said Rahul Gandhi. This is entirely the case in Silicon Valley. Who better than dynasty's child to turn the spotlight on the blood ties that course through Indian politics? If proof was needed, it came on results day - the roll call of famous political surnames came attached to different, usually younger faces. By one rough count, 27 MPs in the 15th Lok Sabha belong to prominent political families. Sons, siblings, wives, cousins...Indian politics appears to be a family business, with a parliamentary seat almost an heirloom to pass on. But while much fuss is made about money's influence on politics, another form of privilege - blood or marriage - is taken for granted. Like money, blood is not enough to guarantee victory, but it improves the odds. In Bollywood, it can help you get that all-important first break (and a second and a third chance if you don't make it). ""A star son or daughter does have a better chance of getting their calls returned than average Joe from Patna who has moved to Mumbai to knock on the doors of directors,"" says film critic Anupama Chopra. The audience, too, extends existing goodwill for the parents to Gen Next. But then, it's over to the box office. The failure of some recent films starring Sonam Kapoor, Sikander Kher, Adhyayan Suman and Mimoh is testimony to the fact that the audience often rejects the brat pack. But hit or flop, the great Indian family is always in the picture. And what's family, without the drama? Tamil Nadu's first family provided more than its share before the new Cabinet was sworn in. The spat that hit primetime had as much melodrama as an Ekta Kapoor soap and as many characters: sons, daughters, wives, nephews and grandnephews. The ties that bind had become the ties that strained. Strain over succession has often been the reason India's business dynasties, which dominate the country's corporate landscape, have hit the headlines. Be it the Ambanis, Birlas or Bajajs, fortunes have been fought over. Family has always been a great source of strength and support in India but clans also spell the end of transparency and professionalism. ""At their best, they are minor ecologies of creativity like the Kapoors in Bollywood. But they can also be the worst of nepotism,"" says sociologist Shiv Vishwanathan. But those who have the right surname don't have it easy. If they seize what has been held up as a birthright, they must also accept the inevitable comparisons with the giants whose shoes they aim to fill. So why does the family business still beguile and

beckon many to live under relentless scrutiny and the pressure of great expectations? Is it noblesse oblige or a sense of divine right? Do they represent the last gasp of an old order, or the first breath of a new one? Sometimes, it's the old order that brings forth the new. The push to change the yardstick of selection of candidates from "loyalty" to "potential" came from Rahul Gandhi himself, says Ashok Tanwar, president of the Youth Congress who won the Sirsa seat in Haryana. One of only two first-time young MPs who does not have a grand political legacy - the other is Meenakshi Natarajan - Tanwar says the gates have now opened for people from non-political backgrounds. But it wasn't always like that, says the 33-year-old. "When I decided not to sit the civil services exam and continue full-time with politics, my family and friends kept discouraging me. I had no connections and even they wrote me off." But now, with the democratization of Youth Congress continuing apace, he sees the stranglehold of lineage loosening. So does Meera Sanyal, an independent candidate who contested against the Congress' Milind Deora (son of petroleum minister Murli Deora) from Mumbai South. "Political lineage is certainly a factor but now, those with merit are willing to step forward into an area where the barriers to entry are high for those not from a political dynasty," says Sanyal. She cites professionals who unsuccessfully contested the polls, such as Capt Gopinath and Mallika Sarabhai as examples. South Asia has always had its share of dynasties - the Gandhis in India, Bhuttos in Pakistan and Sheikh Hasina in Bangladesh - but the US is no stranger to them either. The Adamses and Harrisons, and in the last century, Roosevelts, Kennedys and Bushes. The Clintons almost started another. So why does the magic of the pedigree still work? Management experts put it down to brand extension because an established name is the political equivalent of a commercial brand. Call it covert dynasticism, but from America to India, everyone falls under its spell. Sometimes dynasties produce great leaders. Some of India's new MPs boast impressive CVs. A childhood or marriage steeped in politics may be good training for a demanding career. But a political inheritance mocks the aspiration of equal opportunity. Surely anyone can grow up to lead a country? Yes, they can." Rajeev Motwani was found dead in Silicon Valley. Floating face down in his swimming pool. He had no health problems. He created Google. Some say Silicon Valley elites had him killed to cover their take-over of Google. No one may ever know for sure. Silicon Valley's Vinohd Khosla is featured in 60 Minutes, CNN, MSNBC, FOX and other documentaries as a two faced billionaire manipulator who hides behind a "green energy facade" in order to get huge federal taxpayer grants that he rolls back into buying lobbyists in Washington DC. He is now under fire for buying up the most beautiful parts of California and throwing the public off of them in order to create an exclusive coastal Bohemian Grove dynastic encampment. Organized rape gangs are so extensive and on-going, in India because the family dynasties not only tolerate it, but participate in it. Dynasties love their cover-ups."

But this story isn't about Indian Elitists...

"It is about family dynasties, of every nationality, from around the world who tried to create a system to control the FUNDING OF EVERYTHING via a little path called SANDHILL ROAD in Palo Alto.. The Skull and Bones Stanford and Yale Contingent, The Asian Family Contingent, The Rothchildian Euro-scum contingent and the Indian Contingent all join hands to decide who lives and who dies, which technology survives and which one must be destroyed, because it competes with their portfolio. (See the Mike Chieky story online: "Killing Mike Chieky") Using database sharing sites like GUST.COM and other deep-web databases, they cull and conspire, deciding who in the herd of entrepreneurs to breed and who to slaughter. When Tech-Crunch Founder Michael Arrington outed some of this, they attacked him voraciously. Dynasties are almost all male. Hence the sex abuse of entry level receptionists, horrific misogyny, hooker malls, Rosewood Hotel "Mistress Suites", Standford Shopping Center girlf-friend hunts and extra-low glass ceilings that Silicon Valley is famous for. When you draw the big chart of every VC and funded entrepreneur in Silicon Valley, you see they are all "connected" (Yes, not unlike the "connected men" in the mafia). Non connected entrepreneurs don't get funded unless they agree to let the dynasties place their people in controlling positions in their companies. Those dynasty insiders eventually perform the standard hostile take-over and the non-connected entrepreneur is out on the curb. But these dynasty VC's don't like to just take-over technologies and companies, they like to take over governments. (Stay Tuned)..."

?BIG DATA? consumer information harvesting is utter BS for a few reasons! "You have seen the extensive commercials on TV, where IBM is marketing the "IBM Cloud"..."http://www.thenewsdaily.org/big-data-consumer-information-harvesting-utter-bs-reasons/ 9/8/2014 THE EDITORS & WIKI MEMBERS
Uncategorized "BIG DATA" consumer information harvesting is utter BS for a few reasons!" publish
ccft_post_comment_title: panels_data: Array kopa_fastnewsight_total_view: 4

"...Using hamsters, tennis balls and a scruffy hipster with San Francisco-inappropriate shoes. IBM is desperate to try to save their vast investment in cloud-based data harvesting and user personal information harvesting. The thing is, they can't. First: Nobody is willing to put up with spying, mood manipulation, privacy abuse and personal information harvesting. Silicon Valley is losing billions as consumers give them the finger for these very indiscretions. IBM is not a "Silicon Valley" company, they are back east, so the rejection notices have not reached them yet. They will. Second, and more profoundly: BIG DATA DOESN'T WORK. Since the dawn of time, humans have had a mental health issue around their need to control the real world. Humans created numbers, money and time; things that are not actually real, to try to assign metrics to the organic world. The thing is, the organic world/reality/God's creation, (call it what you may), does not willingly comply with being reduced to a spreadsheet. The root of most of the world's problems lies in the attempts, by humans, to assign these metricized controls to the natural and organic world around us. To try to use the black and white logic world of math and computers to figure out, control or determine the future of fuzzy logic organic human process is a sham. It is a great way to throw around tons of acronyms in order to baffle corporate purchasing directors and sell millions of dollars of pricey IBM software and "professional services" but the results will never have value. History has shown that all of the privacy harvested ads that corporations bought on Google, Facebook and similar sites using "assumptive algorithms", "intuitive trend processing" and other Big Data Big BS were off the mark. Humans don't do what numbers say! Organic creatures will ALWAYS surprise you and you can't use metal machines to accurately tell you what organic brains are really going to do. The charts and linear curves the big data software spits out may look cool. But cool and accurate and not always the same thing. - Westin Leeds-UVLA "

How many cities are claiming Tesla defrauded them? "Supervisors, real estate groups, job councils and others ranging from San Jose, California to New Mexico to Downey, California to Detroit are now claiming Tesla made promises to put their factory in their locations and then backed out after due diligence discovered Tesla to be engaged in crooked real estate kick-backs via their investors and certain officials. SF GATE quotes Tesla executives public stating that The NUMMI plant was dysfunctional for building their car yet they took it, after screwing over a number of cities, so that investors, and friends of investors could get real estate upsides. Now the lawsuits are starting. The first is from New Mexico. The developer that was going to build a 150,000 square foot facility in New Mexico that was going to produce the Model S. The developer, Rio Real Estate Investment Opportunities, has now filed a law suit against Tesla for fraud, breach of contract, negligent misrepresentation and negotiating in bad faith, over Tesla's decision to abandon the deal and is seeking damages and attorney fees. The complaint, filed back in May, says that Tesla was going to lease a building that Rio Real Estate Investment Opportunities was going to build for \$1.35 million per year for ten years, plus a 2 percent annual increase. The developer says it spent money on creating environmental reports, obtaining government approvals, and developing engineering designs for the site. Rio Real Estate says it entered into a binding development agreement with Tesla on February 19, 2007, and as a result of the lost deal, they've suffered financially. In tracking all of the finders, intermediaries, real estate bundlers and investors of Tesla.. some interesting links are now emerging in the Tesla and Solyndra real estate connections. Each city is saying that jobs, revenue, tax fees, property valuation upgrades and other losses were caused by Tesla's actions. Watch the fireworks... FGH-

Bost"<http://www.thenewsdaily.org/how-many-cities-are-claiming-tesla-defrauded-them/> 9/7/2014 THE EDITORS & WIKI MEMBERS Uncategorized "60 minutes investigation, barack obama, Bob Woodward, Bribery, Dept. of energy, Dianne FEinstein, DOE Corruption, grassley, Kleiner, Kleiner Perkins, kleiner perkins lawsuit, LIBOR SCANDAL, solyndra, Solyndra Real Estate, Steve Spinner, Steve Westly, Throw Them All Out, wall street journal investigation, washington corruption" publish reddit: Array original_post_id: 101 OPH_original_pub_date: 2012-07-31 22:20:12

DOE Corruption Ran Deep "DOE misdeeds screw up new DOE staff beyond belief. So the DOE has billions of dollars stuck in this bank account. The federal law says you can only use the money to build green alternative energy cars. It is taxpayer money and many people were concerned that someone would try to steal it (even though they did, ie: Fisker, etc.) that they made the law really, really good. They MUST use the money to help American companies who want to build alternative energy cars. Everybody keeps trying to swipe the cash for their other private kickback schemes but each time they get close they realize they can get sued for misappropriation. So... since the only way to use the taxpayer money is to, you know, use it for what it was originally intended for, they have to use it for that. Ahh but here is the amazing rub. They offered it to every company in America who could possibly have used it ONCE ALREADY. All of those companies said: ""Yes, we really need it!"" and applied for it. But every one of them had their applications manipulated by DOE staff so that they got screwed, lied to, stone-walled, blockaded, and shut out, EXCEPT FOR a handful of insider companies who happen to have been the biggest campaign contributors. So, only those few got the money and all of their

potential competitors got killed off. BUT... Now DOE insiders are trying to use that money because it is, just sitting there, BUT, the only people that they can legally give it to ARE THE VERY COMPANIES THEY SCREWED IN THE ASS! They already had everybody who was qualified apply the first time. The CEO's and founders of those companies, ie: Bright Automotive, have published very public denouncements of the DOE sham. So in order to make things right, DOE needs to call each of those past applicants back, apologize, and make things right. It isn't good to screw with taxpayers and American business owners. DOE owes a make-up kiss to the 168 original applicants who applied and got shafted or they are NEVER, EVER getting that money out of there without careers evaporating. Let's see how Moniz plays this. Will he Money up or Chu Down? ""Show me the Moniz"", says Bright Automotive. P.B- Wall Street Journal"http://www.thenewsdaily.org/doe-misdeeds-screw-up-new-doe-staff-beyond-belief/ 9/7/2014 THE EDITORS & WIKI MEMBERS Uncategorized "bright automotive, illuminati, NASDAQ: TSLA, Tesla Stock, TSLA" publish original_post_id: 655

Foreign Powers Buy Influence at Think Tanks

"By ERIC LIPTON, BROOKE WILLIAMS and NICHOLAS CONFESSORE"

"Borge Brende, the foreign minister of Norway, in June at the Brookings Institution in Washington. Credit Stephen Crowley/The New York Times "

"WASHINGTON ? The agreement signed last year by the Norway Ministry of Foreign Affairs was explicit: For \$5 million, Norway's partner in Washington would push top officials at the White House, at the Treasury Department and in Congress to double spending on a United States foreign aid program."

But the recipient of the cash was not one of the many Beltway lobbying firms that work every year on behalf of foreign governments.

"It was the Center for Global Development, a nonprofit research organization, or think tank, one of many such groups in Washington that lawmakers, government officials and the news media have long relied on to provide independent policy analysis and scholarship."

"More than a dozen prominent Washington research groups have received tens of millions of dollars from foreign governments in recent years while pushing United States government officials to adopt policies that often reflect the donors' priorities, an investigation by The New York Times has found."

The money is increasingly transforming the once-staid think-tank world into a muscular arm of foreign governments' lobbying in Washington. And it has set off troubling questions about intellectual freedom: Some

scholars say they have been pressured to reach conclusions friendly to the government financing the research.

Selected Documents on Think Tanks and Foreign Money

1 Money and Influence in the Think Tank World

"Foreign governments are a major source of money for think tanks in Washington, making donations, in many cases, with a goal of..."

2 Center for Global Development and Norway

"Norway entered into an agreement with the Center for Global Development, a Washington-based think tank that focuses on how..."

3 Atlantic Council and Norway

"The Atlantic Council, which has experienced explosive growth in recent years, has negotiated a number of important, and..."

"The think tanks do not disclose the terms of the agreements they have reached with foreign governments. And they have not registered with the United States government as representatives of the donor countries, an omission that appears, in some cases, to be a violation of federal law, according to several legal specialists who examined the agreements at the request of The Times."

"As a result, policy makers who rely on think tanks are often unaware of the role of foreign governments in funding the research."

"Joseph Sandler, a lawyer and expert on the statute that governs Americans lobbying for foreign governments, said the arrangements between the countries and think tanks "opened a whole new window into an aspect of the influence-buying in Washington that has not previously been exposed."

"It is particularly egregious because with a law firm or lobbying firm, you expect them to be an advocate," Mr. Sandler added. "Think tanks have this patina of academic neutrality and objectivity, and that is being compromised."

"The arrangements involve Washington's most influential think tanks, including the Brookings Institution, the Center for Strategic and International Studies, and the Atlantic Council. Each is a major recipient of overseas funds, producing policy papers, hosting forums and organizing private briefings for senior United States government officials that typically align with the foreign governments' agendas."

"Most of the money comes from countries in Europe, the Middle East and elsewhere in Asia, particularly the oil-producing nations of the United Arab Emirates, Qatar and Norway, and takes many forms. The United Arab Emirates, a major supporter of the Center for Strategic and International Studies, quietly provided a donation of more than \$1 million to help build the center's gleaming new glass and steel headquarters not far from the White House. Qatar, the small but wealthy Middle East nation, agreed last year to make a \$14.8 million, four-year donation to Brookings, which has helped fund a Brookings affiliate in Qatar and a project on United States relations with the Islamic world."

Some scholars say the donations have led to implicit agreements that the research groups would refrain from criticizing the donor governments.

"If a member of Congress is using the Brookings reports, they should be aware they are not getting the full story," said Saleem Ali, who served as a visiting fellow at the Brookings Doha Center in Qatar and who said he had been told during his job interview that he could not take positions critical of the Qatari government in papers. "They may not be getting a false story, but they are not getting the full story."

"In interviews, top executives at the think tanks strongly defended the arrangements, saying the money never compromised the integrity of their organizations' research. Where their scholars' views overlapped with those of donors, they said, was coincidence."

"Our business is to influence policy with scholarly, independent research, based on objective criteria, and to be policy-relevant, we need to engage policy makers," said Martin S. Indyk, vice president and director of the Foreign Policy Program at Brookings, one of the oldest and most prestigious think tanks in Washington."

"Our currency is our credibility," said Frederick Kempe, chief executive of the Atlantic Council, a fast-growing research center that focuses mainly on international affairs and has accepted donations from at least 25 countries since 2008. "Most of the governments that come to us, they understand we are not lobbyists. We are a different entity, and they work with us for totally different purposes."

"In their contracts and internal documents, however, foreign governments are often explicit about what they expect from the research groups they finance."

"In Washington, it is difficult for a small country to gain access to powerful politicians, bureaucrats and experts," states an internal report commissioned by the Norwegian Foreign Affairs Ministry assessing its grant making. "Funding powerful think tanks is one way to gain such access, and some think tanks in Washington are openly conveying that they can service only those foreign governments that provide funding."

"The think tanks' reliance on funds from overseas is driven, in part, by intensifying competition within the field: The number of policy groups has multiplied in recent years, while research grants from the United States government have dwindled."

"Foreign officials describe these relationships as pivotal to winning influence on the cluttered Washington stage, where hundreds of nations jockey for attention from the United States government. The arrangements vary: Some countries work directly with think tanks, drawing contracts that define the scope and direction of research. Others donate money to the think tanks, and then pay teams of lobbyists and public relations consultants to push the think tanks to promote the country's agenda."

Michele Dunne resigned as the head of the Atlantic Council's center for the Middle East after calling for the suspension of military aid to Egypt in 2013. Credit Global Development Network

"Japan is not necessarily the most interesting subject around the world," said Masato Otaka, a spokesman for the Japanese Embassy, when asked why Japan donates heavily to American research groups. "We've been experiencing some slower growth in the economy. I think our presence is less felt than before."

"The scope of foreign financing for American think tanks is difficult to determine. But since 2011, at least 64 foreign governments, state-controlled entities or government officials have contributed to a group of 28 major United States-based research organizations, according to disclosures by the institutions and government documents. What little information the organizations volunteer about their donors, along with public records and lobbying reports filed with American officials by foreign representatives, indicates a minimum of \$92 million in contributions or commitments from overseas government interests over the last four years. The total is certainly more."

"After questions from The Times, some of the research groups agreed to provide limited additional information about their relationships with countries overseas. Among them was the Center for Strategic and International Studies, whose research agenda focuses mostly on foreign policy; it agreed last month to release a list of 13 foreign government donors, from Germany to China, though the organization declined to disclose details of its contracts with those nations or actual donation amounts."

"In an interview, John J. Hamre, president and chief executive of the center, acknowledged that the organization's scholars at times advocate causes with the Obama administration and Congress on the topics that donor governments have funded them to study. But Mr. Hamre stressed that he did not view it as lobbying and said his group is most certainly not a foreign agent."

"I don't represent anybody," Mr. Hamre, a former deputy secretary of defense, said. "I never go into the government to say, 'I really want to talk to you about Morocco or about United Arab Emirates or Japan.' I have conversations about these places all the time with everybody, and I am never there representing them as a lobbyist to their interests."

"Several legal experts who reviewed the documents, however, said the tightening relationships between United States think tanks and their overseas sponsors could violate the Foreign Agents Registration Act, the 1938 federal law that sought to combat a Nazi propaganda campaign in the United States. The law requires groups that are paid by foreign governments with the intention of influencing public policy to register as "foreign agents" with the Justice Department."

"I am surprised, quite frankly, at how explicit the relationship is between money paid, papers published and policy makers and politicians influenced," said Amos Jones, a Washington lawyer who has specialized in the foreign agents act, after reviewing transactions between the Norway government and Brookings, the Center for Global Development and other groups."

At least one of the research groups conceded that it may in fact be violating the federal law.

"Yikes," said Todd Moss, the chief operating officer at the Center for Global Development, after being shown dozens of pages of emails between his organization and the government of Norway, which detail how his group would lobby the White House and Congress on behalf of the Norway government. "We will absolutely seek counsel on this."

Parallels With Lobbying

The line between scholarly research and lobbying can sometimes be hard to discern.

"Last year, Japan began an effort to persuade American officials to accelerate negotiations over a free-trade agreement known as the Trans-Pacific Partnership, one of Japan's top priorities. The country already had lobbyists on retainer, from the Washington firm of Akin Gump, but decided to embark on a broader campaign."

"Akin Gump lobbyists approached several influential members of Congress and their staffs, including aides to Representative Charles Boustany Jr., Republican of Louisiana, and Representative Dave Reichert, Republican of Washington, seeking help in establishing a congressional caucus devoted to the partnership, lobbying records show. After those discussions, in October 2013, the lawmakers established just such a group, the Friends of the Trans-Pacific Partnership."

"To bolster the new group's credibility, Japanese officials sought validation from outside the halls of Congress. Within weeks, they received it from the Center for Strategic and International Studies, to which Japan has been a longtime donor. The center will not say how much money the government has given or for what exactly but an

examination of its relationship with a state-funded entity called the Japan External Trade Organization provides a glimpse."

"In the past four years, the organization has given the center at least \$1.1 million for 'research and consulting' to promote trade and direct investment between Japan and the United States. The center also houses visiting scholars from within the Japanese government, including Hiroshi Waguri, an executive in the Ministry of Defense, as well as Shinichi Isobe, an executive from the trade organization."

Graphic

Foreign Government Contributions to Nine Think Tanks

"Foreign governments and state-controlled or state-financed entities have paid tens of millions of dollars to dozens of American think tanks in recent years, according to a New York Times investigation."

OPEN Graphic

"In early December, the center held an event featuring Mr. Boustany and Mr. Reichert, who spoke about the importance of the trade agreement and the steps they were taking to pressure the White House to complete it. In addition, at a Senate Foreign Relations Committee hearing later that month, Matthew P. Goodman, a scholar at the center, testified in favor of the agreement, his language driving home the very message Japan's lobbyists and their congressional allies were seeking to convey."

"The agreement was critical to 'success not only for the administration's regional economic policy but arguably for the entire Asia rebalancing strategy,' Mr. Goodman said."

"Mr. Hamre, the center's president, acknowledged that his organization's researchers were pushing for the trade deal (it remains pending). But he said their advocacy was rooted in a belief that the agreement was good for the United States economy and the country's standing in Asia."

"Andrew Schwartz, a spokesman for the center, said that language in the agreements the organization signs with foreign governments gives its scholars final say over the policy positions they take 'although he acknowledged those provisions have not been included in all such documents.'"

"'We have to respect their academic and intellectual independence,' Mr. Otaka, the Japanese Embassy spokesman, said in a separate interview. But one Japanese diplomat, who asked not to be named as he was not authorized to discuss the matter, said the country expected favorable treatment in return for donations to think tanks."

"'If we put actual money in, we want to have a good result for that money ' as it is an investment,' he said."

"Qatar and the United Arab Emirates ' two nations that host large United States military bases and view a continued American military presence as central to their own national security ' have been especially aggressive in their giving to think tanks. The two Persian Gulf monarchies are also engaged in a battle with each other to shape Western opinion, with Qatar arguing that Muslim Brotherhood-style political Islam is the Arab world's best hope for democracy, and the United Arab Emirates seeking to persuade United States policy makers that the Brotherhood is a dangerous threat to the region's stability."

"The United Arab Emirates, which has become a major supporter of the Center for Strategic and International Studies over the past decade, turned to the think tank in 2007 after an uproar in Congress about the nation's plan to purchase control of terminals in several United States ports. After lawmakers questioned whether the purchase would be a national security threat to the United States, and the deal was scuttled, the oil-rich nation sought to remake its image in Washington, Mr. Hamre said."

The nation paid the research organization to sponsor a lecture series to examine the strategic importance of the gulf region and to identify opportunities for constructive U.S. engagement. It also paid the center to organize annual trips to the gulf region during which dozens of national security experts from the United States would get private briefings from government officials there.

"These and other events gave the United Arab Emirates' senior diplomats an important platform to press their case. At a round table in Washington in March 2013, Yousef Al Otaiba, the ambassador to the United States, pressed Gen. Martin E. Dempsey, the chairman of the Joint Chiefs of Staff, about whether the United States would remain committed to his country given budget reductions in Washington."

"Mr. Dempsey's reply was quickly posted on the Facebook page of the United Arab Emirates Embassy: The country, he assured Mr. Al Otaiba and others in the crowd, was one of America's most credible and capable allies, especially in the gulf region.

Access to Power

Small countries are finding that they can gain big clout by teaming up with American research organizations. Perhaps the best example is Norway.

"As one of the world's top oil producers, a member of NATO and a player in peace negotiations in spots around the globe, Norway has an interest in a broad range of United States policies."

"The country has committed at least \$24 million to an array of Washington think tanks over the past four years, according to a tally by The Times, transforming these nonprofits into a powerful but largely hidden arm of the Norway Foreign Affairs Ministry. Documents obtained under that country's unusually broad open records laws reveal that American research groups, after receiving money from Norway, have advocated in Washington for enhancing Norway's role in NATO, promoted its plans to expand oil drilling in the Arctic and pushed its climate change agenda."

Photo

"John J. Hamre, the president of the Center for Strategic and International Studies, said that he did not view as lobbying his scholars' advocacy on topics foreign donors have funded them to study. Credit Drew Angerer for The New York Times "

"Norway paid the Center for Global Development, for example, to persuade the United States government to spend more money on combating global warming by slowing the clearing of forests in countries like Indonesia, according to a 2013 project document describing work by the center and a consulting company called Climate Advisers."

"Norway is a major funder of forest protection efforts around the world. But while many environmentalists applaud the country's lobbying for forest protection, some have attacked the programs as self-interested: Slowing deforestation could buy more time for Norway's oil companies to continue selling fossil fuels on the global market even as Norway and other countries push for new carbon reduction policies. Oilwatch International, an environmental advocacy group, calls forest protection a "scheme whereby polluters use forests and land as supposed sponges for their pollution.

"Kare R. Aas, Norway's ambassador to the United States, rejected this criticism as ridiculous. As a country whose territory extends into the Arctic, he said, Norway would be among the nations most affected by global warming."

"We want to maintain sustainable living conditions in the North," Mr. Aas said."

"But Norway's agreement imposed very specific demands on the Center for Global Development. The research organization, in return for Norway's money, was not simply asked to publish reports on combating climate change. The project documents ask the think tank to persuade Washington officials to double United States spending on global forest protection efforts to \$500 million a year."

"Target group: U.S. policy makers," a progress report reads."

"The grant is already paying dividends. The center, crediting the Norwegian government's funding, helped arrange a November 2013 meeting with Treasury Department officials. Scholars there also succeeded in having language from their Norway-funded research included in a deforestation report prepared by a White House advisory commission, according to an April progress report."

"Norway has also funded Arctic research at the Center for Strategic and International Studies, at a time when the country was seeking to expand its oil drilling in the Arctic region."

"Mr. Hamre, of the center, said he was invited to Norway about five years ago and given a presentation on the Arctic Circle, known in Norway as the "High North."

"What the hell is the High North?" he said in an interview, recalling that he was not familiar with the topic until then."

"But Norway's government soon began sending checks to the center for a research program on Arctic policy. By

2009, after the new Norway-supported Arctic program was up and running, it brought Norway officials together with a key member of Congress to discuss the country's energy aspirations for the region.

"In a March 2013 report, scholars from the center urged the Obama administration to increase its military presence in the Arctic Circle, to protect energy exploration efforts there and to increase the passage of cargo ships through the region — the exact moves Norway has been advocating."

Continue reading the main story

"The Brookings Institution, which also accepted grants from Norway, has sought to help the country gain access to American officials, documents show. One Brookings senior fellow, Bruce Jones, offered in 2010 to reach out to State Department officials to help arrange a meeting with a senior Norway official, according to a government email. The Norway official wished to discuss his country's role as a "middle power" and vital partner of the United States."

"Brookings organized another event in April 2013, in which one of Norway's top officials on Arctic issues was seated next to the State Department's senior official on the topic and reiterated the country's priorities for expanding oil exploration in the Arctic."

"William J. Antholis, the managing director at Brookings, said that if his scholars help Norway pursue its foreign policy agenda in Washington, it is only because their rigorous, independent research led them to this position. "The scholars are their own agents," he said. "They are not agents of these foreign governments."

Photo

"A drilling rig in the Barents Sea in 2012. Norway, which as a top oil producer has an interest in United States policy, has committed at least \$24 million to Washington think tanks in recent years. Credit Harald Pettersen/Statoil, via Scanpix, via Associated Press "

"But three lawyers who specialize in the law governing Americans' activities on behalf of foreign governments said that the Center for Global Development and Brookings, in particular, appeared to have taken actions that merited registration as foreign agents of Norway. The activities by the Center for Strategic and International Studies and the Atlantic Council, they added, at least raised questions."

"The Department of Justice needs to be looking at this," said Joshua Rosenstein, a lawyer at Sandler Reiff."

"Ona Dosunmu, Brookings's general counsel, examining the same documents, said she remained convinced that was a misreading of the law."

"Norway, at least, is grateful for the work Brookings has done. During a speech at Brookings in June, Norway's foreign minister, Borge Brende, noted that his country's relationship with the think tank "has been mutually beneficial for moving a lot of important topics." Just before the speech, in fact, Norway signed an agreement to contribute an additional \$4 million to the group."

Limits on Scholars

"The tens of millions in donations from foreign interests come with certain expectations, researchers at the organizations said in interviews. Sometimes the foreign donors move aggressively to stifle views contrary to their own."

"Michele Dunne served for nearly two decades as a specialist in Middle Eastern affairs at the State Department,

including stints in Cairo and Jerusalem, and on the White House National Security Council. In 2011, she was a natural choice to become the founding director of the Atlantic Council's Rafik Hariri Center for the Middle East, named after the former prime minister of Lebanon, who was assassinated in 2005."

"The center was created with a generous donation from Bahaa Hariri, his eldest son, and with the support of the rest of the Hariri family, which has remained active in politics and business in the Middle East. Another son of the former prime minister served as Lebanon's prime minister from 2009 to 2011."

[Continue reading the main story](#)

[Continue reading the main story](#)

"But by the summer of 2013, when Egypt's military forcibly removed the country's democratically elected president, Mohamed Morsi, Ms. Dunne soon realized there were limits to her independence. After she signed a petition and testified before a Senate Foreign Relations Committee urging the United States to suspend military aid to Egypt, calling Mr. Morsi's ouster a "military coup," Bahaa Hariri called the Atlantic Council to complain, executives with direct knowledge of the events said."

"Ms. Dunne declined to comment on the matter. But four months after the call, Ms. Dunne left the Atlantic Council."

"In an interview, Mr. Kempe said he had never taken any action on behalf of Mr. Hariri to try to modify positions that Ms. Dunne or her colleagues took. Ms. Dunne left, he said, in part because she wanted to focus on research, not managing others, as she was doing at the Atlantic Council."

"Differences she may have had with colleagues, management or donors on Middle Eastern issues "inevitable in such a fraught environment where opinions vary widely "don't touch our fierce defense of individual experts' intellectual independence," Mr. Kempe said."

"Ms. Dunne was replaced by Francis J. Ricciardone Jr., who served as United States ambassador to Egypt during the rule of Hosni Mubarak, the longtime Egyptian military and political leader forced out of power at the beginning of the Arab Spring. Mr. Ricciardone, a career foreign service officer, had earlier been criticized by conservatives and human rights activists for being too deferential to the Mubarak government."

"Scholars at other Washington think tanks, who were granted anonymity to detail confidential internal discussions, described similar experiences that had a chilling effect on their research and ability to make public statements that might offend current or future foreign sponsors. At Brookings, for example, a donor with apparent ties to the Turkish government suspended its support after a scholar there made critical statements about the country, sending a message, one scholar there said."

"It is the self-censorship that really affects us over time," the scholar said. "But the fund-raising environment is very difficult at the moment, and Brookings keeps growing and it has to support itself."

The sensitivities are especially important when it comes to the Qatari government "the single biggest foreign donor to Brookings.

"Brookings executives cited strict internal policies that they said ensure their scholars' work is "not influenced by the views of our funders," in Qatar or in Washington. They also pointed to several reports published at the Brookings Doha Center in recent years that, for example, questioned the Qatari government's efforts to revamp its education system or criticized the role it has played in supporting militants in Syria."

[Continue reading the main story](#) [650Comments](#)

"But in 2012, when a revised agreement was signed between Brookings and the Qatari government, the Qatar

Ministry of Foreign Affairs itself praised the agreement on its website, announcing that "the center will assume its role in reflecting the bright image of Qatar in the international media, especially the American ones." Brookings officials also acknowledged that they have regular meetings with Qatari government officials about the center's activities and budget, and that the former Qatar prime minister sits on the center's advisory board."

"Mr. Ali, who served as one of the first visiting fellows at the Brookings Doha Center after it opened in 2009, said such a policy, though unwritten, was clear."

"There was a no-go zone when it came to criticizing the Qatari government," said Mr. Ali, who is now a professor at the University of Queensland in Australia. "It was unsettling for the academics there. But it was the price we had to pay."

"Bloomington, Indiana 10 hours ago"

"The authors demonstrate something that people in the field have known for a long time: that Norway has more money than it knows what to do with -- or more than anyone could know what to do with, really. Norway's goals are good, but it's vulnerable to the temptation to throw money at issues."

"While the NYT's article emphasizes the perceptions of corruption that too much money can stimulate, the more interesting problem is that money is often not the solution. In many cases, institutions don't exist, don't have the absorptive capacity, or don't have the leadership, policy framework, or professional staff they need to make use of a lot of money. Protection of tropical forests for the sake of mitigating climate change (and conserving biodiversity) arguably falls into this category. Washington think tanks, who work in an environment where everything revolves around the U.S. Government's budget appropriations, are also vulnerable to over-emphasizing the importance of budgets. It's probably natural that Norway and they would find common cause in efforts to influence budgets."

Joshua Schwartz

"Ramat-Gan, Israel 10 hours ago"

"Money may not be able to buy happiness, but it can buy research and subsequently power and influence."

"As think tanks are not supported by public funds, and probably should not be so, they need money from someplace and foreign governments with an agenda or rich people with an agenda are more than happy to step in. The same might also be true of university research centers. Objectivity, peer review etc. are nice phrases, but there is always a bottom line. Safeguards may exist but are rarely fool proof. Everybody has an agenda and everything is political. Those who believe anything else, whether in a research center or on the receiving end of the research are living in a fool's paradise."

In peer-reviewed literature there is always a conflict of interest and a donor statement. Why don't these reports have them? Conflict of interest would typically be a patent or a company that is owned in part by any of the authors which operates in the same field and could benefit from the study. Donor/funding statements include all sources of funding that contributed to the study. You cannot have objectivity without disclosure of this information.

"It should really come as no surprise to anyone that think tanks are advocacy groups, not research institutions."

"1) Research institutions rarely align with one party or ideological position. Almost all think tanks do as a matter of course. 2) Research institutions do not employ politicians without academic credentials. Think tanks frequently do. 3) Research institutions study problems from various angles, so that fellow researchers and politicians can make informed decisions. Think tanks give policy advice. As an academic, I've always felt that think tanks soil the reputation of academic research. Of course, university professors and other researchers have their own intellectual agendas and political convictions. And they often get things wrong. But they know that they are part of a conversation, and that their work will be carefully scrutinised by others. Think tanks pontificate based on flimsy data, and they do so to serve their paymasters."

Indignation was my first reaction to this article. Then I realized that all of our political institutions and their associated lobbying organizations depend on donor's money to fund their purpose and their lifestyles.

"Our SCOTUS, especially our Justices of Original Intent Roberts and Scalia, have determined money to be the equivalent of free speech, so why should it surprise us that all of these Washington law firms and think tanks are basically shells for their sponsors. Baksheesh is the norm in government and politics. It's just practiced differently in Washington than in the rest of the world."

It's not as if paid sponsorship doesn't happen outside of the DC think tankosphere -- it's common for university professors and medical researchers to do work that has been paid for by interested parties and publish the results in academic journals.

In a perfect world the people would find a way to fund basic research so that researchers could work free of the expectations of the funders. Fat chance! We have created for ourselves a world that is far from perfect. A requirement of disclosure of funds sources (using real names so their agenda is not hidden) may be the best we can achieve.

The US could do worse than listening to Norway a little more. Arguably the freeist and most democratic country in the world. Spend some time there and it only makes you sad about what the US has become.

"This article raises a valid point that we should understand what the goals of think tanks are, however it completely misleads with its presentation of the facts it presents. If you open the Brookings Institute annual report and look at the list of donors who give over \$1 million USD per year, the UAE is listed. It is LISTED on the annual report. Norway is listed as well. They gave between \$249,99-500,000 in a year. Where is the ""secret influence " How do law makers not know Brookings is partially funded by foreign governments? It took 30 seconds on google to find the whole list of donors."

"There are also other organizations that gave over \$1 million: The Ford Foundation, the Gates Foundation, JP Morgan, the Hewlett Foundation, Microsoft, and several other major corporations and their owners. Brookings has an annual budget of approx. \$100 million, of which ~85% comes from grants. \$85 million a year in grants for one think tank, yet this article talks about the massive influence of foreign governments due to ""tens of millions of dollars"" given over the past few years to 28 non-profits. Tens of millions of dollars wouldn't even cover half

of the budget for Brookings for one year, much less several years. Shouldn't politicians worry just as much, if not more, about where the rest of the \$85 million a year is coming from? Subtracting the \$1+ million from UAE and the <500k from Norway, we have ~83.5 million left...."

"The premise of this report, that think tanks are objective, intellectual organizations, is absurd. A better definition would be that they are propaganda mills paid for by oligarchs and corporations to provide a veneer of intellectual credibility to the promotion of a particular agenda. In the process the funders receive handsome tax deductions for ""charitable"" contributions. The media abets this hypocrisy by sourcing these groups as background or support for their reporting."

"As our research showed, some US think tanks are very transparent about who funds them. At the same time, a few think tanks (as the NYT itself has covered) are largely opaque about funding inflows."

"It's time for all think tanks to be fully transparent about who funds them, national and international. This is the best way to demonstrate that they are confident in the integrity of their research, on its own terms. For results of our assessment of leading US think tanks, check www.transparify.org."

""groups in Washington that lawmakers, government officials and the news media have long relied on to provide independent policy analysis and scholarship.""

"I am glad the column was written, but you just have to read things coming from any of these organizations to realize they have clear points of view and their research is biased to support that viewpoint, it is not truly neutral in a true scientific sense. Generally the donors give money to those organizations leaning in the policy direction the donor supports and where it is clear nudges and shoves in a certain direction will be well received in exchange for donations. This is not at all surprising. The corruption of democracy to varying degrees is part and parcel of free enterprise and trade and capitalism where they coexist. They can coexist (not in the purest of forms), it is a question of balance and right now, despite political rhetoric the balance is increasingly shifting away from democracy."

Tech's frustration with Congress boils over

Getty Images

By Julian Hattem -

"Silicon Valley's checks haven't been buying them many bills. Lawmakers made multiple trips to the tech industry capital this summer to stage meet-and-greets with company executives and get them to open their wallets. But for all the work some members of Congress do to take industry's money and run, many of the sector's highest priorities have been left on the table. That's leading to growing frustration around the San Francisco Bay Area and causing some industry advocates to eye a more aggressive posture for dealing with Washington. "I think there's definitely frustration," said Julie Samuels, executive director of the San Francisco-based startup advocacy group Engine. "I'm lying if I said otherwise." "However, there's also an understanding that nothing is passing in this Congress," she added. "It's not so simple as just being mad about the things that haven't happened. I think people here - like they are all over the country - are mad at the overall inability of this

Congress to get anything done. The tech industry finds itself in the frustrating position of dealing with deadlock while also wielding a cachet few others can boast. The industry's pioneer spirit has captured the imagination of both sides of the aisle, and Silicon Valley executives have both deep pockets and social influence. "I think that the most disappointing and frustrating part is that the street cred that members get from spending time from tech doesn't translate into policies that enable those innovations," said Dean Garfield, president of the Information Technology Industry Council. The lobbying group includes industry giants like Google, Microsoft and Facebook among its dozens of members. Few lawmakers go posting pictures on Twitter after hanging out on Wall Street as they do with tech icons. "There is no doubt that policymakers love to spend time with our companies and our CEOs," Garfield added. "They are not only rocket scientists; in many respects they're also rock stars." But to date, many industry advocates say they feel more like an ATM than an economy-driving constituency.

Immigration reform – a key demand for a sector struggling to bring in skilled foreign developers and techies – has died a slow and painful death since the 2012 election, when congressional action seemed imminent. Patent reform, another major issue for tech companies who dread dealing with the "trolls" that file harassing lawsuits merely to extract a costly settlement, is also dead. Tough negotiations in the Senate were torpedoed by Majority Leader Harry Reid (D-Nev.) in May. A congressional effort to reform the National Security Agency, which companies say has damaged their reputation to the tune of tens of billions of dollars in lost profits, is also on precarious footing in the Senate and could face an uphill battle in a packed autumn with little room for legislative deal-making. The Senate NSA effort comes only after the House passed a version of surveillance reform in May that privacy advocates and tech companies said had been gutted by the time it hit the floor, causing many to drop their support. "This is just a particularly difficult time," said Linda Moore, the CEO of trade group TechNet. "But we're not going to walk away. Not being at the table and not having our voice heard is not the way to go." Moore's organization has coordinated more than 60 visits by government officials to tech companies this cycle, and she is responding to the absence of action by focusing on next year. For instance, Rep. Tom Marino (R-Pa.) – who is poised to take over the House Judiciary subcommittee on Intellectual Property – came to San Francisco in August to talk with TechNet, Engine, Yelp and ride service Lyft about patents and other issues. While in the area, he attended a fundraiser at the home of San Jose, Calif., city councilmember Pete Constant, where \$2,500 could get a group of six a photo of the congressman. The industry and its friends may also take a harsher tone with the lawmakers who ignore tech firms even when they're not asking for money. "There are tons of people who spend time in Silicon Valley, who fundraise in Silicon Valley and then return to Washington and take votes that are completely contrary to the interests of the innovation ecosystem," said Garfield. His organization is going to do more to "hold those policymakers accountable," he said, by "saying 'no' more often and... being stronger supporters for those who get it and are working hard to move policies that are in our national best interest." Signs of a more aggressive approach are coming from other places, too. This summer, a handful of people at the intersection of Washington and the tech world launched a new political action committee called America Innovates, which promises to bring in a new crop of lawmakers who share the tech sector's "creativity and determination." "This is kind of an inflection point," Mike McNerney, one of the group's founders, told The Hill. "I hope that we're one solution to helping bridge that gap [between lawmakers and tech entrepreneurs] and helping those issues gain a little bit more traction." The new approach could be a signal of growing disenfranchisement with the current political leaders, Samuels said, and could foretell a sea change in the sector's approach to politics. "I do think the frustration is more palpable," she said. "Though that hasn't stopped people from coming out and asking for money."

"Could ISIS be Fake, or, not what it seems" - Many strange inconsistencies - Most video has same 20 guys in too cute-sie black Hollywood evil NINJA ""Spiderman suits"" - ""Super scary"" black pirate flags and dramatic comic book outfits too theatrical for region - Spokesman and dead ISIS guys keep turning out to be westerners - Iranian scam? Western scam? Black-water put-on? Israeli Set-up? - Messages to Middle East and West inconsistent. Social media style never seen in Middle East before. - Curious timing - Guy in pro-west Syria video later in Pro ISIS video? - Over the top social media baiting - Beheading victims strangely calm - Are ""dead reporters"" actually still alive? - Many things about ISIS just don't make sense - How could the West have missed a ""nonexistent"" threat moving from ""JV Team Status"" to ""the biggest threat on Earth"" in just a few months? - Did you ever see the movie: ""WAG THE DOG" Same exact story-line? - Mid-Term distraction? Full bore Iranian attack without using Iran's name? Huh <http://www.thenewsdaily.org/isis-fake-seems/> 9/7/2014 THE EDITORS & WIKI MEMBERS Uncategorized "Could ISIS be Fake, not what it seems?, or" publish ccft_post_comment_title: panels_data: Array kopa_fastnewsight_total_view: 36

" If ISIS was some sort of ""Wag The Dog""-thing, then you would have to assume they got some insane, 70 year old gay Hollywood director to put it on: ""Ok, Ok.. So here's what ya do.. Ya get all of the prisoners and put 'em in florescent orange Togas, a good triple biased rayon; I did a shoot with Phylis Diller with orange against sand, it was FABULOUS!...OK, and the bad guys, yah, the bad guys...NINJA's.. We have them be NINJA's! Everybody is scared of Ninja's, right? Honey, So we put the bad guy's in head to toe black pajamas with just their mouths showing like in Ninja movies; like a nice brushed cotton. Then we can use the same extras in all of the shots and nobody will know it is all the same handful of dudes.. OK.. Get them from Central Casting.. maybe get a few with British accents so they sound extra creepy and weird, but polite... So These Ninja bad dudes they shoot their guns all over and blow stuff up, lots of explosions, the audience loves explosions.. and head chopping.. nothing freaks people out like head chopping. Danny at the prop department can make fake heads like nobody's business. Make them just act nuts so you think they are all outa control. They need flags.. so..uh, let's see.. oh SHIT, when I directed Errol Flynn, the damn Pirate Flags would totally scare the shit out of the audience.. Give them black pirate flags with a white thing in the middle that looks like a skull when you squint at it... And have them do really freaky shit in September! September freaky things always make the voters do whatever you say...ah love it.. this will be an Oscar! Now THERE's a distraction.. HUH? Whaddya say? So I get time and expenses plus a double per diem, right " Danny - Guardian"

Fake | Define Fake at Dictionary.com

"Bankrupt solar panel firm took DOE stimulus money, left a toxic mess, says report" "Bankrupt solar panel firm took DOE stimulus money, left a toxic mess, says report A Colorado-based solar company that got hundreds of millions of dollars in federal loan guarantees before going belly-up didn't just empty taxpayers' wallets - it left behind a toxic mess of carcinogens, broken glass and contaminated water, according to a new report. The Abound Solar plant, which got \$400 million in federal loan guarantees in 2010, when the Obama administration sought to use stimulus funds to promote green energy, filed for bankruptcy two years later. Now its Longmont, Colo., facility sits unoccupied, its 37,000 square feet littered with hazardous waste, broken glass and contaminated water. The Northern Colorado Business Report estimates it will cost up to \$3.7 million to clean and repair the building so it can again be leased. "As lawyers, regulators, bankruptcy officials and the landlord spar over the case, the building lies in disrepair, too contaminated to lease," the report stated. ""If a coal, oil or gas company pulled something like that the EPA would send out SWAT teams and the U.S. Marshals to track down the offenders, bankrupt or not."" - National Legal and Policy Center, a think tank The owner of the property tried to force a bankruptcy trustee to clean the facility, but the report said it would ""place humans at imminent and significant health risk."" One of the hazards is the presence of cadmium, a cancer-causing agent that is used to produce the film on the solar panels, the report said. While the loan guarantees exposed taxpayers to hundreds of millions of dollars, the federal government lost a total of \$70 million backing the failed company. Unsold inventory which should have been used to offset those losses, including 2,000 solar panels, mysteriously disappeared, according to the National Legal and Policy Center. ""If a coal, oil or gas company pulled something like that the EPA would send out SWAT teams and the U.S. Marshals to track down the offenders, bankrupt or not,"" the center said in a report of its own. President Obama touted Abound in a July 3, 2010 announcement of a \$2 billion "investment" in green energy projects. ""The second company is Abound Solar Manufacturing, which will manufacture advanced solar panels at two new plants, creating more than 2,000 construction jobs and 1,500 permanent jobs,"" Obama said. ""A Colorado plant is already underway, and an Indiana plant will be built in what's now an empty Chrysler factory. When fully operational, these plants will produce millions of state-of-the-art solar panels each year."" But less than two years later, the company laid off half of its 400 workers, and then, in the summer of 2012, filed for bankruptcy. It became the third clean-energy company to seek bankruptcy protection after receiving a loan from the Energy Department under the economic stimulus law. California solar panel maker Solyndra and Beacon Power, a Massachusetts energy-storage firm, also declared bankruptcy. Solyndra received a \$528 million federal loan, while Beacon Power got a \$43 million loan guarantee. While solar energy is touted as clean, The Associated Press reported that many panel makers are grappling with a hazardous waste problem. Fueled partly by billions in government incentives, the industry is creating millions of solar panels each year and, in the process, millions of pounds of toxic sludge and contaminated water. To dispose of the material, the companies must transport it by truck or rail far from their own plants to waste facilities hundreds and, in some cases, thousands of miles away. The fossil fuels used to transport that waste, experts say, is not typically considered in calculating solar's carbon footprint, giving scientists and consumers who use the measurement to gauge a product's impact on global warming the impression that solar is cleaner than it is. After installing a solar panel, ""it would take one to three months of generating electricity to pay off the energy invested in driving those hazardous waste emissions out of state,"" said Dustin Mulvaney, a San Jose State University environmental studies professor who conducts carbon footprint analyses of solar, biofuel and natural gas production. The waste from manufacturing has raised concerns within the industry, which fears that the problem, if left unchecked, could undermine solar's green image at a time when companies are facing stiff competition from each other and from low-cost panel manufacturers from China and elsewhere. The Associated Press contributed to this report ----- Solyndra and Tesla have left toxic waste on, and around their plants too. DA-----

Lithium ion danger warning site raises huge red flags! Warnings ignored? "The industrial issues website at THIS URL has the following information posted: <http://lithium-ion.weebly.com> (A mirror of that site is shown below:) The lurking threat in your car and home ""over a million failures of this chemistry and these batteries..""

Go to <http://www.nts.gov/> and demand action: ""LITHIUM ION BATTERIES ARE MADE OVERSEAS BY CHEAP LABOR WHERE OSHA CAN'T WATCH. POOR PEOPLE MAKE LITHIUM ION BATTERIES OFF SHORE WHERE THEY ARE NOT TOLD ABOUT THE TOXIC CANCER, LIVER AND LUNG DISEASES THEY GET FROM THE MANUFACTURING PROCESS. SILICON VALLEY VC'S PUSH LITHIUM ION BECAUSE THEY CAN MAKE A HUGE PROFIT ON THE CHEAP LABOR BUILDING A BATTERY THAT SELF DESTRUCTS BUILT BY WORKERS WHO DIE FROM TOXIC POISONING. CHINESE, MALAY, MEXICAN AND OTHER WORKERS, SHOULD FILE CLASS ACTION LAWSUITS AGAINST SILICON VALLEY VC'S WHO PUSH THESE BATTERIES."" TESLA EXPLODE IN FLAMES:

<http://static3.businessinsider.com/image/524c7d5369bedd842edc40a0-482-361/tesla-58.jpg>

<http://www.youtube.com/watch?v=uF18v1lxH0k> ----- October 2, 2013, 4:27 PM

Tesla Motors Inc. TSLA shares tanked after a video of a Model S on fire circulated on the web, prompting the electric car company to move quickly to douse the flames of bad publicity. Elizabeth Jarvis-Shean, director of global communications at Tesla, confirmed that the vehicle engulfed in flames was indeed a Tesla but stressed that the driver walked away without injuries. ----- Tesla Issues Statement On Fiery Car Crash That Caused The Stock To Tank ?Mamta Badkar Oct. 2, 2013, 3:45 PM 13,469 11 tesla Aj Gill via YouTube Tesla's stock was down over 7% to a low of \$175.40 today, but pared some of its losses to close down 6.24% at \$180.95. It appears that shares began to tumble in the last half hour on reports that a Tesla Model S car caught fire on Washington State Route 167. Some speculated that the video highlights problems with the car's battery. Though others rushed to point out that the battery is located in the back of the car. -----

----- ""Media finds that ""Safety Investigators"" (read ""SHILLS"" are bribed by VC's and lithium holding companies to say ""nothing to see here"" , ""lithium batteries are probably ok"". Beware of NTSB

""consultant's"" and ""investigators"" who are being bribed, offered after-politics high pay jobs, called up by bribed congressional staff with ""suggestions"", given sports tickets, handed stock in certain ventures and other bribes. Many of the ""investigators"" need to be put under investigation themselves!!!! When you see an investigator talking about how lithium ion is a wonderful thing, investigate them!"" The following are a variety of quotes, from across the web, demonstrating the critical nature of this public safety issue: ?Lithium ion batteries are blowing up, starting fires and, generally, destroying people?s homes, cars, electronics and physical health. Boeing was just ordered to stop flying the 787 Dreamliner because it's Lithium ion batteries are catching fire spontaneously."" ""A group of silicon valley venture capitalists forced/leveraged the government to buy and pay for these specific batteries, that they have stock in, in order to benefit their profit margins. Other batteries don?t have these problems. They knew about this from day one but put greed ahead of safety. There are thousands and thousands of reports of spontaneous lithium ion fires but the VC's who back lithium ion pay to keep this information hushed up. Millions of these batteries have been recalled for fire risk. The VC's tried to push as many as they could before they got caught. Now they are caught. These VC's own stock in lithium mining companies too."" ""Here is the Fisker Karma after it got wet and the batteries blew up. These batteries blow up JUST FROM GETTING WET! ALL of these burned up hulks are brand new \$100,000.00+ cars that just blew up and torched everything around them just because they got wet! How bad do you want a Fisker or Tesla now? Fisker's insurance company is balking at paying for this saying: ""You knew this would happen"". These links show vast sets of Fisker electric cars that burst into flames just because they GOT WET:

<http://updates.jalopnik.com/post/34669789863/more-than-a-dozen-fisker-karma-hybrids-caught-fire-and>

<http://fellowshipofminds.wordpress.com/2012/05/12/karma-burns-owners-mansion/>

<http://www.carbuzz.com/news/2012/11/1/Karmas-Ignite-After-Hurricane-Floods-Newark-Port-7711437/> There are vast sets of other links proving the point. Look at this: We were just sent a link that our website showed up in this movie: Here is another link to the movie at: <http://tinypic.com/r/7295hs/6> Picture

HERE IS THE BATTERY YOU COULD HAVE BEEN SITTING ON TOP OF IN A TESLA Picture THIS IS THE TESLA MAGIC CARPET OF DOOM. THIS WHOLE THING IS FULL OF LITHIUM. YOUR WHOLE FAMILY IS SUPPOSED TO SIT ON TOP OF THIS!!! TESLA HAS TO TEST THEIR BATTERIES IN a BLAST CHAMBER!!!!!!!: Picture IF TESLA SAYS THIS THING IS SO SAFE WHY DO THEY TEST IT IN A STEEL ENCLOSED EXPLOSION ROOM WITH WIRES COMING IN THROUGH BLAST HOLES!!!!??????

""TESLA ELECTRIC CARS HAVE 6800 CHANCES OF ""GOING THERMAL"". ""TESLA ELECTRIC CAR BATTERIES ARE MORE LIKELY TO BLOW UP."" SAYS STANFORD ENGINEER, ""USING LITHIUM ION IN AN ELECTRIC CAR DOUBLES THE CHANCES IT WILL EXPLODE OR GO THERMAL BECAUSE AN ELECTRIC CAR PUSHES IT FURTHER THAN ANYTHING ELSE. BOEING HAD MANY SAFETY CIRCUITS AND EVEN THOSE FAILED. THERE IS NO WAY THE TESLA SAFETY CIRCUITS WILL NOT EVENTUALLY FAIL"" ""Tesla Electric cars have 6800 lithium ion batteries wedged into a box. This can create a repercussive thermal event that can set the whole car off. The TESLA 18650 batteries can be seen exploding in multiple YOUTUBE videos. It is NOT TRUE that they are ""an entirely different battery"" they are the same chemical compound that blows up."" ""A direct quote from Tesla's patent application, below. Tesla KNEW this was going to happen and never adequately warned anybody. Tesla wrote these words in the federal papers they filed yet they never showed these words to any buyers : ""Thermal runaway is of major concern since a single incident can lead to significant property damage and, in some circumstances, bodily harm or loss of life. When a battery undergoes thermal runaway, it typically emits a large quantity of smoke, jets of flaming liquid electrolyte, and sufficient heat to lead to the combustion and destruction of materials in close proximity to the cell. If the cell undergoing thermal runaway is surrounded by one or more additional cells as is typical in a battery pack, then a single thermal runaway event can quickly lead to the thermal runaway of multiple cells which, in turn, can lead to much more extensive collateral damage. Regardless of whether a single cell or multiple cells are undergoing this phenomenon, if the initial fire is not extinguished immediately, subsequent fires may be caused

that dramatically expand the degree of property damage. For example, the thermal runaway of a battery within an unattended laptop will likely result in not only the destruction of the laptop, but also at least partial destruction of its surroundings, e.g., home, office, car, laboratory, etc. If the laptop is on-board an aircraft, for example within the cargo hold or a luggage compartment, the ensuing smoke and fire may lead to an emergency landing or, under more dire conditions, a crash landing. Similarly, the thermal runaway of one or more batteries within the battery pack of a hybrid or electric vehicle may destroy not only the car, but may lead to a car wreck if the car is being driven or the destruction of its surroundings if the car is parked." ""WTF!!!!!! Tesla's own staff have now admitted that once a lithium ion fire gets started in one of their cars, it is almost impossible to extinguish burning lithium ion material. This is Telsa's own words in THEIR patent filing, (You can look it up online) saying that the risk is monumental. Tesla has 6800 lithium ion batteries, any one of which can 'go thermal' and start a chain reaction! If you look at all of the referenced YOUTUBE movies you will see how easy it is to set these things into danger mode." ""Imagine a car crash with a Tesla where these 6800 batteries get slammed all over and then exposed to rain, fire hose water, water on the roads, cooling system liquid.. OMG!! And then if, in that same accident the other car is a gasoline car? getting burned alive sounds 'BAD?! Telsa is covering up the problems with its batteries." ""Lithium ion batteries have already crashed a UPS plane and killed people. Look here: <http://washingtonexaminer.com/dreamliner-fires-spark-new-doubts-about-a-green-energy-technology/article/2519353> "" More Lithium Ion Battery disasters: <http://www.forbes.com/sites/petercohan/2013/01/24/is-787s-lithium-ion-battery-hazardous-to-boeings-health/> ""AS A DEMONSTRATION OF HOW DANGEROUS LITHIUM IS, NASA IS GOING TO MAKE IT BURN IN OUTER SPACE: ""If you're along the Eastern Seaboard tonight, it might be worth your while to look at the sky this evening. NASA's Wallops Flight Facility is scheduled to launch a sounding rocket

that will release ""two red-colored lithium vapor trails in space."" As Space.com reports, those trails might be seen across the Mid-Atlantic and perhaps as far north as Canada and as far south as northern Florida. Space.com explains how these trails will produce a ""night sky show:"" ""The sounding rocket that will be used to create the two NASA-made glowing cloud trails will be a Terrier-Improved Orion. In this technology test launch, two canisters in the rocket's payload section will contain solid metal lithium rods or chips embedded in a thermite cake. The thermite is ignited and produces heat to vaporize the lithium. ""Once the vapor is released in space, it can be detected and tracked optically. The rocket will eject two streams of lithium which will be illuminated at high altitudes by the sun (which will be below the local horizon at ground level)."" In a statement, mission project manager Libby West said the launch is a test flight for two upcoming missions. It'll give scientists a view of two different methods for creating lithium vapor trails. By the way, NASA says the ""lithium combustion process poses no threat to the public during the release in space."" If lithium is so dangerous it will even burn in space, why are we putting it in our airplanes and cars?????? Lithium Ion batteries blow up and burn down commercial building: <http://westhawaii.com/sections/news/nation-world-news/787-battery-blew-%E2%80%99906-lab-test-burned-down-building.html> ""Tesla and Fisker have only sold a few hundred cars, (thank god) because nobody but dicks want these overpriced eliteist toys. A regular car company sells hundreds of thousands of cars per model. Every single Tesla or Fisker sold increases the likelihood of a burn up. Those burn-ups will affect the homes, cars and lives of the people next door who never even bought one."" ""Go to <http://www.youtube.com> and type into the search window: ?Lithium ion explosion? or ?lithium battery and water? or ?lithium ion water? and any related derivation and you will find hundreds of videos about how dangerous these batteries are. There are numerous videos of Tesla's 18650 batteries blowing up." ""This article in the LA Times sheds more light of the horrors of Lithium Ion: <http://articles.latimes.com/2013/jan/18/business/la-fi-dreamliner-battery-20130119> "" ""Lithium Ion batteries 'go thermal' in peoples pockets, in your notebook, especially in your Tesla and Fisker car and everywhere else. There are thousands and thousands of articles documenting this and there is a cover-up by the VC's that fund these things to keep this fact out-of-sight. Making Lithium Ion batteries poisons the workers who make them. It is a dangerous product. Each time the workers, particularly in Asia, realize they are being poisoned by the factory, they jack up the product. Outlaw lithium ion batteries. Demand a recall.? There are PLENTY of other energy storage solutions that do not involve the highly compromised Lithium Ion chemistry!"" ""Below are a few samples of HUNDREDS of videos proving that Lithium Ion Batteries JUST BLOW UP. This is why TSA does not want them, or liquid, on planes."" Report: Lithium Explosion Burns Hong Kong Home To The Ground: By Stephanie Mlot July 30, 2013 A Hong Kong couple have been displaced after an exploding Samsung Galaxy S 4 smartphone burst into flames, burning their

house to a crisp. The man, identified in the original Xianguo.com report only as Mr. Du, claims that his phone, battery, and charger were all legitimate Samsung products, but that's now difficult to confirm since his home and everything in it were destroyed. According to the translated report, Du sat on the living room sofa playing the game "Love Machine" on his charging GS4 when it suddenly exploded. In the heat of the moment, he threw the device onto the couch, which caught fire. The flames then spread to the curtains and the rest of the house, "out of control," Xianguo said. Du, his wife, and his dogs managed to escape the house unscathed; neighbors were temporarily evacuated as firefighters fought the flames. Almost all of the couple's furniture and appliances burned to ash, the news site said, adding that their Mercedes parked outside was also damaged. Whether or not the true cause of an entire house fire was a singular 5-inch smartphone remains to be seen, though a fire department investigation initially resulted in a report of "no suspicious circumstances." Samsung did not immediately respond to PCMag's request for comment, but told Xianguo that it will "carry out detailed investigations and tests to determine the cause of the incident." Last year, a Galaxy S III owner in Dublin was driving in his car when the device caught fire. Cell phone safety is increasingly becoming an issue in Asia, where two cases of iPhone shock occurred within a week of each other this month. On July 11, a 23-year-old flight attendant with China Southern Airlines was allegedly electrocuted when she took a call on her Apple device while it was charging. She was reportedly using the original charger when she was killed. Here is what the Lithium Ion Batteries did to their home: Picture Boeing 787 Dreamliner woes put spotlight on lithium ion battery risks BY KEN BENSINGER, Los Angeles Times Chances are the same kind of battery that twice caught fire in Boeing 787 Dreamliners in recent weeks is in your pocket at this very moment. Lithium ion batteries, small and powerful, have become the electricity storage device of choice. They are everywhere ? in cellular phones, laptops, power tools, even cars. They allow us to talk, email and drill longer than ever possible in the past. But the incidents that led to the grounding of the 787 fleet worldwide, and the decision by Boeing on Friday to temporarily halt all deliveries of the plane, have highlighted a troubling downside of these energy-dense dynamos: their tendency to occasionally burst into flames. FOR THE RECORD: Dreamliner batteries: An article in the Jan. 19 Section A on lithium ion battery safety and the grounding of the Boeing 787 incorrectly described a fire in a Chevrolet Volt automobile. The battery did not ignite spontaneously; instead it burned after a crash test damaged the vehicle's cooling system and the test car was left parked with the battery fully charged, eventually causing it to overheat. With investigators now working to determine the cause of the incidents, one on a Dreamliner on a Boston runway, the other forcing an emergency landing of a 787 in western Japan, the larger question of lithium ion safety has snapped into focus. "Every battery can burn and every battery can be flammable," said Mike Eskra, a Milwaukee-based battery development scientist who also works as a battery fire investigator for insurers. "But lithium ion batteries are more dangerous because they store more energy. It's like a firecracker instead of a stick of dynamite." The casualty list is long. In recent years, tens of thousands of laptop batteries have been recalled due to the risk of fire or explosion. The 400-pound lithium ion battery on General Motors' cutting-edge electric car, the Chevrolet Volt, burst into flames seemingly spontaneously while parked in 2011. And investigators blamed a cargo hold full of lithium ion batteries for a fire that caused a UPS-operated 747 to crash shortly after takeoff from Dubai in late 2010. That crash, which killed both pilots, is one of more than 100 incidents recorded by the Federal Aviation Administration linking lithium ion batteries to onboard fires over the last two decades. This month, new rules took effect limiting the transport of lithium ion batteries in aircraft. And the FAA had long prohibited use of the technology in commercial airplanes. That changed in 2007, when it granted Boeing permission to use the batteries in the 787 under a number of conditions to ensure safety. For Boeing the lithium ion advantage was clear. Thanks to their chemistry, the rechargeable batteries can store as much energy as a nickel metal hydride pack that's 50% heavier, while charging and discharging faster than other battery types. That's made them attractive for military applications such as the B-2 bomber and also for use on the International Space Station and the Mars Rover. Lithium ion batteries enabled Boeing to swap out heavy hydraulic systems in the airframe for lightweight electronics and electric motors to operate systems like wing de-icers. That's a key reason the Dreamliner burns 20% less fuel than other wide-body aircraft. The weight and power savings are exactly what made lithium ion batteries popular in other applications. In excess of 95% of mobile phone batteries worldwide are lithium ion, and without lithium ion, laptops couldn't run anywhere near as long as they do without a recharge. "They completely dominate the consumer market," said Vishal Sapru, energy and power systems research manager at consulting firm Frost & Sullivan in Mountain View, Calif.. He estimates that global sales of lithium ion batteries reached \$14.7 billion last year, up from \$9.6 billion in 2009, a 53% increase. Sapru expects the market to soar to \$50.7 billion by 2018. "No other battery chemistries are growing at that rate." But lithium

ion also has downsides. The batteries tend to have shorter life spans than older, more proven battery technologies. And although the price is falling, lithium ion is still more expensive than other batteries. Although some carmakers have embraced the technology, others, such as Toyota, have decided against it. Several makers of lithium ion auto batteries for electric vehicles have filed for bankruptcy last year because of weak demand. Safety experts also have concerns. Because lithium ion batteries can store more energy, and discharge it more quickly, than other batteries, lithium ion cells can get

much hotter than other technologies in the event of an overcharge or the external application of a heat source. Larger applications, such as the 63-pound batteries on the 787, incorporate multiple cells and the heat can spread rapidly from cell to cell, a chain reaction called "thermal runaway." And while other types of batteries use a water-based electrolyte in each cell, lithium ion relies on a highly flammable solvent. When heated up, that solvent tends to vaporize, spraying the burnable gas into the surrounding air. As a result, lithium ion battery fires burn extremely hot, as high as 2,000 degrees Fahrenheit. Those conditions were blamed for an explosion at a General Motors battery testing lab last April that caused \$5 million in damage and sent one person to the hospital. GM said flammable gas had vented from an experimental lithium ion battery that heated up during extreme testing. "Lithium ion is very controversial in the safety engineering space," said Brian Barnett, vice president for battery technology at TiAx, a technology firm in Lexington, Mass. He spoke last month at a conference on battery safety in Las Vegas, where more than three-quarters of the presentations focused on lithium ion batteries. The cause of the fires in the two Dreamliners has still not been determined and neither Boeing nor the Japanese company that made the batteries, GS Yuasa, have publicly commented on likely factors. Boeing subjected the batteries on the plane to thousands of hours of testing and installed numerous safety systems specific to the batteries. "We have high confidence in the safety of the 787 and stand squarely behind its integrity as the newest addition to our product family," Boeing Chief Executive Jim McNery said Friday. Barnett and others emphasize that it's not uncommon to see problems in relatively new technologies. But they add that most lithium ion fires are caused by an external problem, such as a bad circuit or a software glitch that leads to overcharging. Another common problem in consumer electronics is the use of low-cost wiring and other components that can overheat and spark or catch fire next to the battery itself. Eskra, the battery fire investigator, said he's seen fires started by Chinese-made toys that use lithium ion batteries hooked up to chargers designed for nickel cadmium or nickel metal hydride batteries. Manufacturing errors, including allowing tiny metal particles to contaminate cells, can cause dangerous shorts, although they are exceedingly rare. "Somebody tried to cut corners somewhere," he said, noting that most lithium ion fires are caused by a tiny part that malfunctioned somewhere along the line and are easily resolved. "It's a \$2 fix, but it takes half a million dollars in research to figure out what it is." Sometimes the problem is more persistent. In 2006, Sony announced a global recall of more than 10 million lithium ion laptop batteries used in a variety of laptop computers after more than a dozen fires, and two years later issued a second recall. "This is a battery type that is only one of hundreds of possible batteries but this particular type was pushed by a few companies and investors so they could make money off it at the risk of public injury or death..." **Picture THIS IS AN ACTUAL BOEING BATTERY** "2006 fire under NTSB scrutiny Carli Brosseau Arizona Daily Star When a test of a lithium-ion battery charger turned into an inferno at Securaplane Technologies Inc. in 2006, temperatures reached as high as 1,200 degrees and three waves of firefighters failed to save the building. An employee of the Oro Valley company blasted the flaming battery with a fire extinguisher to no effect. Two hours later, the galvanized metal roof collapsed, and the 10,000 square-foot building was a total loss. It's a fire that federal safety regulators are taking another look at now, since Securaplane provides two key battery components to the Boeing 787 Dreamliner, the start-power and battery-charger units. Records from local Golder Ranch Fire Department, the first of three fire departments to respond to the blaze, describe "an uncontrolled thermal reaction (that) caused the battery to vent and this venting caused the ignition to various items and fixtures throughout the test lab area." "The electrical technician who was performing a test on the battery when it exploded likened the experience to being near a jet after-burner. Electrolytes from inside the battery were shooting 10 feet into the air, the former Securaplane employee, Michael Leon, said in an interview Friday. "The magnitude of that energy is indescribable." "The fire stands as a graphic illustration of the power stored within energy-dense lithium-ion batteries and the potential consequences if something goes awry. It also highlights the importance and delicacy of the quality-control measures applied to a novel - and potentially explosive - technology, a technology now allowed, under special conditions, to be used as the main and auxiliary power source of certain aircraft. The Boeing 787 Dreamliner, the company's newest and most energy-efficient plane, uses two lithium-ion batteries. After two battery-related incidents in the past month, the 50 Dreamliners

distributed so far have been grounded." "Whistleblower: Dreamliner LITHIUM ION Batteries Could Explode He says he was fired after warning about battery problems By Christopher Freeburn, InvestorPlace Writer Boeing's (NYSE:BA) new 787 Dreamliner could end up being a nightmare for the aircraft giant. A former senior engineering technician at Securaplane Technologies, which makes the charging system for the lithium-ion batteries used in 787 Dreamliners, told CNBC that the batteries are defective and liable to explode if they overheat." "Lithium-ion batteries are heat intolerant, according to a potential whistleblower familiar with... Lithium-ion batteries are heat intolerant, according to a potential whistleblower familiar with their technology. "Too much heat on those things, they will go into a thermal runaway, they will explode." The informant, a former senior engineering technician of Securaplane Technologies, was fired in 2007 for repeated misconduct, but he says it was in retaliation for voicing concerns about the batteries. The NTSB acknowledges that the lithium-ion batteries in Boeing's (BA) Dreamliner experienced a thermal runaway, but insists there's no connection between the incident and the whistleblower's claims. "The Japan Transport Safety Board makes a number of interim points. This battery, unlike one that burst into flames in a Japan Airlines 787 earlier in January, did not actually ignite. It experienced a thermal runaway, as a result of a build up of heat, yet the materials affected did not start burning. While the semantics might escape the casual observer the safety investigator said:- "The battery was destroyed in a process called thermal runaway, in which the heat builds up to the point where it becomes uncontrollable. "But it is still not known what caused the uncontrollable high temperature?. In simple language, uncontrollable rises in temperature will if uncontrolled most likely result in a fire, including one that can burn through structural composites and alloys, and prove almost uncontrollable by fire fighters, even on the ground. It took a Boston airport fire brigade detachment 99 minutes to put out the Japan Airlines fire using equipment unavailable if the airliner was hours away from an emergency landing strip in the high arctic or north Pacific, which that particular flight had only recently traversed before the fire broke out after landing. he Japan air safety investigator said the wire supposed to ground or discharge static electricity build ups in the battery had been severed meaning it had experienced abnormal levels of current. However as also confirmed by the early stage of the US incident investigation into the Japan Airlines fire, this large lithium-ion battery had not experienced a voltage surge, and had so far as flight data recordings could tell, had been operating normally immediately before the emergency landing. Expect the news release in Japan to cause more tension between those who want the 787s to fly again pending a full understanding of the causes and cures in these incidents, and independent safety investigators who will recommend to safety regulators like the FAA a continuation of the grounding" "One aspect that may confuse some people relates to the decision to use this particular type of battery. The danger posed by it has been evident by a lengthy and documented list of disturbing events in recent years. They include many thousands of batteries used in laptops being recalled, because of determined risks of fire or explosion. General Motors were also placed in the battery limelight. In 2011, the 400 pounds Lithium ion battery in their Chevrolet Volt apparently was subject to spontaneous combustion when it burst into flames, while reportedly in a parked vehicle. In 2010, a UPS-operated Boeing 747 crashed just after take-off from Dubai. Investigators placed the blame on a cargo hold that contained Lithium ion batteries, for a fire that caused the incident." A number of incidents of cell phones with lithium ion batteries blowing up in peoples pockets, notebook computers blowing up in peoples briefcases and other shocking fires have been deeply documented. Picture LITHIUM ION BATTERIES BLOWING UP ON THEIR OWN Picture FISKERS CARS THAT BLEW UP AND BURST INTO FLAMES JUST BECAUSE THEIR LITHIUM ION BATTERIES GOT WET "Here is where they make some of these batteries, in forced labor camps:

<http://www.thedailybeast.com/newsweek/2013/01/13/china-s-labor-pains.html> Because, as we all know, chinese prostitutes are the best choice to make the things that keep our airplanes in the air and our cars on the road. The silicon valley venture capital guys front these batteries because they have such cheap labor to give them great profits.. quality control? not so much..."

""GOOGLE IS A CRIMINAL ORGANIZATION"" - Study Results by Investigative Reporters Group"

From The Report By The Alliance of Investigative Reporters:

""Summary- Google is a criminal organization operating in felony violation of numerous City, State, Federal and Constitutional laws. They are protected from prosecution because The Beneficiary of their crimes: The White House, appointed the heads of the major law enforcement agencies with orders to leave Google alone. Additionally, The White House has hired and appointed Google staff to major federal positions in order to protect Google's interests. Google operates as a front for the CIA, NSA and DNC interests in order to harvest taxpayers intents and subliminally direct their political and buying interests via their page-ranking mood manipulation technology. Google conduits campaign and issue funding from the U.S. Treasury to White House approved political campaigns via tens of millions of dollars of cash Google receives from the U.S. Treasury, at regular intervals as ""service fees"". When confronted, Google claims it is ""charging the U.S. for documentation services"". In a U.S. Federal Court, Investigators recently uncovered Google's attempt to delete court records of it's carte blanche opening of the public's emails, in advance of the public even reading their emails. While the low level workers at Google believe they are working on ""wonderful technologies for the future"", The Board of Directors at Google is directing them with the purpose of using those technologies for nefarious purposes. A

higher than normal incident of over-the-top sex scandals, sex clubs, deaths-by-hooker, and escort services incidents are documented around Google, indicating a failed ethics compass within the organization. Rajeev Motwani, the man who taught Google's founders the code, was found floating dead in his Silicon Valley swimming pool from "an unexpected heart attack". Some say he was killed to shut him up. Over 23 unexpected, convenient deaths are associated with Google. Google staff have had over 120 meetings with White House and DNC staff to coordinate page ranking that benefits White House favored issues and harms White House disfavored issues and persons. Google Works with Gawker Media to lock Gawker Media attacks in top page position if those attacks are against White House enemies. Said one Google Whistle-blower: "Gawker loads the bullet and Google fires the gun...over, and over and over..." Eric Schmidt runs a stealth organization called: The New America Foundation. This group is an Illuminati-like political policy direction manipulation organization to conduit billionaires cash into Washington decisions benefiting their business's and egos. Google manipulates the news and rankings of the internet in order to improve the appearance of the stock value of it's associated Silicon Valley VC's and down-grade the public perception of their enemies. Google is a monopoly. Google violates Monopoly laws but the White House orders them protected. Google uses their control of internet perceptions to target and character assassinate reporters, activists and politicians that speak out against them or their VC's interests. Because all traditional law enforcement routes against Google have been compromised. The only U.S. Option left is for the public to demand the appointment of A Special Prosecutor. The public should send this report to every elected official and newsdesk and make this demand in writing, in volume." **ORDER YOUR POLITICIAN TO ORDER THE U.S. TO CEASE ALL PAYMENTS TO GOOGLE! DEMAND REMOVAL OF GOOGLE'S DNS REGISTRATION FROM THE WEB, OR AT LEAST IN VOLUMES EQUAL TO ANY OTHER COMPANY.** NOTE: The full report has been provided to the U.S. GAO and can be acquired from them at <http://www.gao.gov>. It is also hoped to be available on THE INTERCEPT, soon."

"Lithium Ion Giga-Factories Kill Workers! Contact with, and breathing the chemicals causes Cancer, Lung Damage, Brain Damage!In ""Brain Damage""

"Tesla Fire Victims' and relatives demand answers from Tesla over hidden 'death trap' toxic smoke from Tesla car batteries.In """"blood for batteries""""

""Lemon Law King' sues Tesla MotorsIn ""Lemon Law King' sues Tesla"" "

The 500 trolls of Tesla Motors!

"Elon Musk has a massive amount of fake meat puppet social media accounts that he uses to create the false impression that there are ""no problems at Tesla Motors"" and that the fires, lawsuits, staff departures, investor departures, criminal charges, cartel charges, toxic smoke, cancer causing chemicals, DOE application fraud, factory workers on fire, ex-wife & girlfriend abuse stories, battery factory worker deaths, buyer homicide charges, Lemon Law litigation, Billionaire sex clubs, Tesla patents disclose lethal & conflagration potential, Mexican worker battery factory ""death camps"" plans, dangerous chemicals, political corruption and hundreds of other issues are ""keep walking, nothing to see here"" issues. "

"Ex-Tesla staff say that, in addition to the hundreds of hired ""meat puppet"" trolls that Musk has hired, in India, to watch the internet 24/7 for any mention of the word Tesla"", (so they can instantly bombard the comment section with ""A Tesla is Christ in the form of a car"" messages), Musk has 4 news scanning services that email him, and the trolls, any mentions of the company so that their greasy troll-like knobby fingers can leap into action in their dark little troll caves. Every comment section of every article about Tesla has been IP and sequence-route traced backed to the same Tesla-hired shills and trolls who login, comment after comment, under a massive number of fake accounts and identities. There is NO massive Tesla fanboy acclaim by millionaires sitting around blogging about the orgasmic joy of even thinking about a Tesla. There are only dour 17 year old bloggers in basements in Idaho and India collecting \$5.00 per post. But the biggest, hairiest, most wart-ridden Tesla troll of all, the one that towers above all trolls, is Tesla investor: Google. Google scrapes any negative Tesla press off of the internet and manually moves all positive troll Tesla press to the top of its search and news engine. This is cartel-level falsification of the stock market via coordinated manipulation of false information about a stock. It is an SEC felony, but federal executives, who arranged the scam, won't allow the SEC or FBI to go after these people because it will be politically embarrassing to ""Senior People"". "

"It will be politically embarrassing because certain Washington, DC politicians gave a ""massively unqualified"", ""bankrupt"" (Per Elon Musk himself), ""failing"", ""lethally debt-ratio'd"", ""no-demand"", ""technically old-school"" Tesla a free gift of Taxpayer money as a pass along kickback to Tesla investors in exchange for billions of dollars of campaign financing. Submit your links. Let's discuss... T- LA Times [wpvideo Az6PiFCv]"

"HA! See this article: <http://www.bbc.com/news/technology-27741041> BBC News - Tesla boss Elon Musk hints at technology giveaway Ever since 1745, horses considered, and then, actually, began giving away their horse-shit. Nobody was excited about it then. Nobody is excited about it today. Horse-shit is still just horse-shit. Musk's patents disclose that Tesla knew that their cars energy system could ""kill you"" and ""burn down your home or office"". It says it right in the very papers that TESLA MOTORS wrote and filed with the U.S. Patent office. They posted on the public U.S. Government servers, where they can never be removed, the awful truth: Tesla's WILL burn you, your family, your house, your office. Tesla's own engineers wrote this! They should give them away because they are worthless! Danny- Times"

Who's Tesla's Bitch? THE LIST:

"(Draft 1.3 - Constantly updated) Which media outlets cover-up Tesla Motors misdeeds and abuses? Which ones are run, or directed, by Tesla's investors seeking to manipulate stock values? Let's track, chart and document which media outlets are willfully smoke-screening Tesla Motors. Which outlets publish counter-stories when other outlets publish negative disclosure about Tesla to try to cover-up, or flood-out, the Tesla issues and charges? Some reporters are compensated by Tesla's IR Department, PR contractors, founders, VC and banking groups with either cash, discounts, tickets, jobs, advertising contracts, sex workers, meals, travel and/or political access. Send in your submissions... Which outlets now have documented tracking evidence, that can be exhibited in court?: -- Google (Investors) - Hundreds of online news outlets - Also via web routing manipulation -- Hearst Communications (Investors) - SF Gate - SF Chronicle - 15 daily and 34 weekly newspapers including - Houston Chronicle - San Francisco Chronicle - San Antonio Express-News - Albany Times Union - Hundreds of magazines around the world, including - Good Housekeeping - Cosmopolitan - ELLE - O - The Oprah Magazine - 29 television stations, which reach a combined 18 percent of U.S. viewers; ownership in leading cable networks, including Lifetime, A&E, HISTORY and ESPN; significant holdings in automotive, electronic and medical/pharmaceutical business information companies - a 50 percent stake in global ratings agency Fitch Group - Internet and marketing services businesses - television production - etc... -- Gawker Media (White House

Character Attack Conduit) - Gawker - Gizmodo - Jalopnik - Kinja - Deadspin - Kotaku - Jezebel - Valleywag - Lifehacker - 109 etc... -- The A.L.I.C.E. Alliance (Investor-Synchronized Reporters) - Stands for: American Legislative and Issue Campaign Exchange - 1400 coordinated reporters using the ""Alice News Alerts"" in order to seek to cover up campaign backer crimes with synchronized story releases, include: - The top two political reporters for The Huffington Post - A Reuters reporter - The editor of The Nation magazine - A producer for Al Jazeera America television - A U.S. News & World Report columnist - Approximately two dozen Huffington Post contributors - All of ""Gamechanger Salon"" - Sally Kohn, formerly a Fox News contributor, now works for CNN - Amanda Terkel, the ?Senior Political Reporter and Politics Managing Editor at The Huffington Post - The Huffington Post's Washington bureau chief, Ryan Grim. - A former New York Times freelance columnist who now works as an energy and commodities reporter for Thomson Reuters is also a member of Gamechanger Salon. - Anna Louie Sussman is listed as an ?investigative reporter and journalist? on the Gamechanger Salon membership list, and while her beat focuses on energy issues, she has also writes about ?local and international human rights and social justice issues? according to her website. - Katrina vanden Heuvel is the editor and publisher of The Nation magazine, a prominent and well-known periodical of leftwing political and social thought. She is also a member of Gamechanger Salon and a regular opinion writer for the online edition of The Washington Post. - Lisa Graves, who leads the Madison, Wisconsin-based Center for Media and Democracy, is also a member of Gamechanger Salon, and ? according to e-mails reviewed by Media Trackers ? regularly promotes material developed by CMD to attack ALEC and the right-of-center lawmakers who tend to make up the majority of ALEC's active legislative membership. - Vanden Heuvel suggested in her column that liberals support the efforts of the American Legislative and Issue Campaign Exchange ? ALICE (a leftwing counterpart to ALEC) ? and the Progressive States Network. - Jordan Flaherty was, as of last year, a producer for Al Jazeera America television. He is also listed as a member of Gamechanger Salon and for a while he occasionally blogged for The Huffington Post. - In addition to working at the left-leaning American Sustainable Business Council, David Brodwin writes an online column for U.S. News & World Report."

TV Investigation blows lithium ion dangers out into the open!

SEE: <http://www.ktvu.com/news/news/local/lab-test-video-dangers-lithium-batteries/nfzcS/>

2 Investigates: Government tests show lithium batteries in flames

By Tom Vacar

KTVU.com

"Though lithium batteries are lightweight, hold a charge longer and deliver six times more energy than traditional lead batteries, the US Federal Aviation Administration banned the carrying of any commercial shipments of lithiums in the cargo holds of passenger aircrafts, because they can start fires. ""Safety is a major concern within the lithium ion battery industry,"" said battery expert Elton Cairns, who is an Engineering Professor at UC Berkeley, and a senior scientist at Lawrence Berkeley National Lab, long specializing in battery technology. Cairns says though he believes the overwhelming majority of lithiums are safe, they are far from fault

free. "We're still learning how to make lithium batteries safer," he said. Thirteen months ago, KTVU asked the U.S. Department of Energy to show us video of tests it had been conducting on lithium batteries. When it said no, KTVU used the Freedom of Information Act and obtained what the Energy Department did not want the public to see."

Watch the video of the tests here

"The tests make the batteries fail by doing what has made them fail in real operation - overcharging them, over heating them, draining them too quickly and damaging them. One common failure was batteries spewing highly flammable and toxic gases. In another failure, the batteries catch fire. In yet another test, a build-up of pressure led to an explosion. It gets even more dangerous when you have a cluster of lithiums that fail like a row of dominoes. "And that is a situation where it feeds on itself. The faster the reaction, the more heat is released. The more that gets released causes the reaction to go faster," said Cairns. That's the small batteries that consumers can still bring on board. But what about big shipments, and what about lithiums to power up passenger planes? For the last six years in the U.S., only cargo planes have been permitted to carry commercial shipments of lithiums. Even so, Investigators blamed lithiums, at least in part, for the destruction of three cargo planes since 2006 - two of which crashed. All three were carrying large amounts of lithium batteries. Meanwhile, the current missing Malaysian airliner was carrying 2.5 tons of lithiums in its cargo hold. Many foreign air carriers have no restrictions. Shortly after the first 787 battery failure early last year, the Federal Aviation Administration undertook a series of full scale tests to document the characteristics of large battery fires and how to suppress them on a real, but retired cargo jet. The tests illustrate the potential for a fire to rapidly gain size and strength. In one case, toxic smoke kept thickening throughout the plane including the pilots' flight deck. Eventually, the smoke got so thick, it's doubtful a pilot could see the instrument panel, let alone look out the window. In another case, pressure released from the burning batteries did internal damage to the aircraft's structure. In some cases, the tests were terminated because the fuselage got too hot - in excess of 1,700 degrees. Many of the lessons learned have been and are being incorporated into aircraft systems design as well as how the batteries themselves are being packaged. "It's a very, very small fraction of lithium ion batteries that fail," said Cairns. The world's newest airliner, the 787, had an original design, according to Cairns, of its lithium batteries sitting right next to each other with no space between them for cooling. The FAA approved a redesign, separating the batteries, enclosing all of them in a stainless steel box with venting so they cool with air. Cairns isn't sure that air cooling is the best solution, "I think a much better design would be to have a liquid cooling system that is insensitive to altitude and can provide a much greater rate of heat removal so that if any one of the cells begins to overheat, for whatever reason, that overheating will not be transferred to adjacent cells." Four months ago, a Japan Airlines 787, with the approved fix, suffered a battery leak and smoke which temporarily grounded that plane. It is now flying again. <http://www.ktvu.com/videos/news/2-investigates-dangers-of-lithium-batteries/vCbbYP/>

NOBODY WANTS TO PLAY WITH TESLA ANY MORE SINCE BATTERY FACTORY WORKER DEATH REPORTS: <http://investorplace.com/2014/05/tesla-stock-tsla-gigafactory/>

[wpvideo quTdL0Qf] [wpvideo LawOt7hw] [wpvideo VJMkJPg9] [wpvideo KI2DM6bx] [wpvideo IWVAQdmj] [wpvideo 6Uyn2vPy] [wpvideo 8TD8d8iK] [wpvideo gLiazbtP] [wpvideo S833Y9ji] [wpvideo uTGKHhrZ]

[wpvideo xLJfcI3V] [wpvideo fqujjwi1]

BATTERY FACTORIES KILLING FOREIGN WORKERS AND NEARBY CITIES.

THE DEADLY BATTERY FACTORY IMMIGRATION COVER-UP COMING TO THE U.S.

"Lithium-ion batteries are made in ""concentration camp-like"" fenced-in compounds where low income workers are exposed to poison gas and powders from the lithium-ion manufacturing process. A dramatically large group of these workers die from the cancers and toxic poisoning from these factories. They have always been made in overseas, impoverished, regions because there is little or no occupational safety regulation there. Now they are trying to build these factories in the American southwest to try to exploit Mexican workers like they do overseas. Some argue that large ?white man owned? corporations ?fighting for immigration rights? are really fighting to relax laws to allow cheap labor into these kinds of camp-factories in the desert. Some of the factory owners have even purchased multiple lots, in multiple southern states, and told investors that they will ?build on the one where we can buy control of the most local politicians?. When even towns in China are rioting to shut down these ""death-factories"", you know it is a bad thing! [wpvideo Az6PiFCv] Tesla Motors ""giga-factory"" is an ill-considered profiteering scam designed to help billionaires profit on the bodies of migrant workers. The old tactic of: ""let's put the lethal factory where only poor people will come to work because they can't afford good lawyers""-concept is running dry. The last 4 Lithium Ion battery factories in the U.S. gave campaign cash and stock to the politicians in charge of the areas where those factories were built. Most of those factories are now bankrupt. Now they are doing it again with the plans for the new factories. Also see THIS report on the TOXIC DETAILS (CLICK HERE>>>) See the Film: ""WORKED TO DEATH: THE TESLA BATTERY COVER-UP"": [wpvideo KI2DM6bx] [wpvideo 6b7UYygJ] [wpvideo JBbJM8ub] [wpvideo tO5TROjP] [wpvideo PrmlZbSb] [wpvideo VJMkJPg9] [wpvideo dA40NCCC] [wpvideo LawOt7hw] "

"Tesla Lithium Ion Giga-Factories Kill Workers! Contact with, and breathing the chemicals causes Cancer, Lung Damage, Brain Damage!"

"That is why all of the batteries are made overseas. Because they can make them in Asia where there are almost no safety regulations! Share this page with this link: <http://wp.me/p4e1uX-2lo> Dead Asian factory workers tell no tales. Will this hold true for a USA operation? Slow death from toxic poisoning is not an immediate problem, it is, for Tesla, a ""post-profit problem"" to be dealt with later, after the money is grabbed. Musk is looking to position the factories in states near Mexico so that cheap Mexican labor can be used to build the batteries but Mexican labor leaders say that ""the time has come to stop looking at workers from Mexico as having less valuable lives, and less important health needs than white workers."" OSHA just fined Tesla's factory for setting workers ""ON FIRE"". Battery suppliers have cut Elon Musk off because of the dangerous way he uses batteries. The dangerous way is that he uses batteries in cars that were never designed to be used in cars. That is why they blow up, release toxic smoke and are hard to get! Monolithic factory-like encampments in the dessert where ""undesirable"" foreigners are exposed to poison gas doesn't sound Auschwitz-like at all. Nobody body has done that before. Tesla is famous for taking taxpayer money and then using it to hire offshore H1-B workers. Tesla and the Silicon Valley companies ""support immigration"" because they want cheap workers, not because they ""uphold the American dream"". Is Tesla working both ends of the deal: Grab all the cheap ones and kill off all the rest? Ask Elon Musk, the Head of the EPA, The head of the CDC, the head of OSHA and the head of MSDS to confirm, or deny, these facts! If any of them deny that they have the reports that show these facts, we will show you the data that proves who is lying. If the Giga-Factory blows up or catches on fire, it will poison the towns nearby. Where will the toxic waste from these factories go? The factories are a result of the DOE funding, yet Tesla had to GUARANTEE AND WARRANT, in their federal contract that they would NEVER violate the NEPA laws. These factories will violate the NEPA agreements Musk signed. Let's look at why these chemicals, that Musk uses, are so dangerous. Below you will find a chemical analysis break-down and a partial list of hundreds of manufacturer, corporate and government reports confirming the danger:"

Tesla Fire Victims' and relatives demand answers from Tesla over hidden 'death trap' toxic smoke from Tesla car batteries.

- Over 1000 scientific papers on chemical analysis now confirm the known danger...

"- Many reporters are calling ""BULLSHIT"" on the NHTSA Tesla studies. "

"- It's not ""Green"" to buy a Tesla, It's Toxic! Workers overseas DEAD! Drivers in fires POISONED! "

"- Detailed State-of-the-art laboratory ""smoke room"" spectrograph chemical analysis proves lethal toxins"

"- Hair, blood & tissue analysis can prove if you were exposed by being near a Tesla fire "

"- Chemical ""cancer-cocktail"" from Tesla smoke detailed in element-by-element breakdown"

"- Firefighters warned: ""Burning lithium ion batteries can produce toxic fumes including HF, oxides of carbon, aluminum, lithium, copper, and cobalt. Volatile phosphorus pentafluoride may form...""

"- Tesla ""GIGA-FACTORY"" a deathplant for Mexican workers? Economically & biologically ""Fatal"" to closest town if a fire erupts? "

- Tesla lobbyists & campaign backers force NHTSA to close investigation rather than complete it and reveal the depth of the cover-ups and extensive safety defects. Tesla coddled BECAUSE OF TESLA'S INVESTORS CAMPAIGN FINANCING AND AFGHANI_SCAM INVOLVEMENT!

"Link to this page: <http://wp.me/p4e1uX-2a8> Owners, Family members and BYSTANDERS whose loved ones were poisoned in auto accidents linked to a defect in Tesla cars demanded answers -- and accountability from Tesla in light of safety cover-ups Congress has exposed by GM and Toyota. The implication of corruption involving federal funding has arisen. Many reporters are calling ""BULLSHIT"" on the NHTSA Tesla studies. First the head of NHTSA quits over revelation of Tesla safety cover-ups, then the new staff state that there are no ""actual defects"" even though the numbers of cars-in-flames vs. cars produced exceeds every other car company. They ignore the proven toxic gas charges in the same week that the EPA is being investigated for exposing citizens to 10 times less toxic vapors in laboratory ""test chambers"", without full consent. These are gasses that 8 different federal agencies say are ""lethal in exposure effect."" They ignore the fact that the Tesla battery pack is exposed on every edge and across the bottom and state that ""no complex engineering studies have been

performed". NHTSA ignores the review of a rolled-over Tesla with burning lithium above you and dripping molten metal and plastic dripping down on you. NHTSA ignores the recommended fully charged battery shock and moisture tests recommended by experts and fails to publish all FOIA materials. Very clearly White House staff and campaign investors have ordered NHTSA to wave Tesla through at a time when GM and Toyota are undoing federal hearings and billion dollar fines for equally dangerous circumstances. One has to wonder of NHTSA staff will lose their pensions if they go to Federal prison for rigging safety reviews. If even one battery goes off, poisonous gases and vapors are released. At least one of the thousands and thousands of batteries under your seats in a Tesla will eventually vent toxic gas even if you do not get caught in one of the catastrophic Tesla or Fisker fireball explosions. The odds are not in your favor with over 7000 possible battery failures in each car. These are gasses that 8 different federal agencies say are "lethal in exposure effect." Tesla is being coddled for campaign favors."

"The burning Tesla battery chemicals are known to CAUSE: Neurological dysfunction, cancer, lung damage, liver damage and other long-term fatality repercussions."

"If you were within 800 feet of a Tesla on fire, you need to see your doctor, even if you were only driving, or a neighbor to a home where a Tesla fire took place, or walking or by-standing nearby. Tesla has been fully aware of this per a report from their battery team, including Bernad Tse, of Tesla, for over 10 years ago. Certain elected officials and DOE staff have personal investments in Lithium Ion profiteering, thus certain federal officials are resistant to regulating these batteries. These facts can now be proven via multiple federal investigations and liability lawsuits are certain to follow. The head of the NHTSA, A Mr. Strickland, recently quit over these charges. Calling the Tesla cars a "death trap," they said the company knew for years the vehicles were dangerous -- but their sons, daughters and relatives are potentially dying "because they were a cost of doing business Tesla's and Elon Musk's way." Said one concerned owner: "The GM defect kills you fast but the Tesla defect kills you slowly over time, it isn't right that Tesla never fully disclosed this to owners and the public. I have a baby and a teenager. What will happen to them from exposure to this stuff " "

"For years, Elon Musk, and Tesla executives, have adopted a: "Nothing to see here, move along, move along" approach when confronted with the dangers. Now the proof is irrefutable, GM and Toyota have been busted doing similar cover-ups of potentially lethal defects, Congress is investigating and the public are demanding answers! A report submitted to Congress discloses: "A fellow CPF?r whom I hold in high regard for his experience and knowledge for guidance. Unfortunately, he was unavailable. OH wait, here it comes again!! another episode, this time though without the chest pain and not as severe as the first one. We rushed to the hospital, wife driving me, and into the emergency room and to the doctor. We explained what had happened, and surprisingly the doctor was well versed in this type of poisonous inhalation. He could relate to all the symptoms, and concluded I had inhaled dangerous Hydrofluoric acid vapor. The delayed reaction, he said, was due to the bloodstream absorbing the vapor and hence the shortness of breath, chest pain, and weak limbs. A third episode took place while in the emergency room but this time it was much less than the first or second episodes. It has been about 14 hours since this incident, I did not get much sleep last night but not because I felt bad, only very scared. Hydrofluoric acid will, with a possible delayed effect, affect the nervous system, respiratory tract, lungs, and impair the cardiovascular system. Those effects are from inhalation only, more severe effect including weakening of the bones and a host of other things if ingested or from wounds such as LunarModules. i.e. skin contact."

WHAT I LEARNED AND MY DOCTOR SAID TO ME:

"1) DO NOT DELAY a trip to the emergency room in the hospital if you have inhaled, ingested, or came into

skin contact with Lithium battery venting. 2) Have someone else drive you to the hospital if possible. You could become quickly and without warning completely impaired. Oxygen and emergency treatment by qualified personnel are your only chances of survival after cardiac arrest or if you are unable to breathe. 3) DO NOT ASSUME you are OK if you as much as think you've been exposed to battery fumes, EVEN IF the battery seems to be OK and explosions are not a requisite. 4) Keep handy antidote in the form of calcium gluconate saline solution for inhalation or in gel form for skin cuts or burns. Intravenous solutions are a possibility and must be administered by hospital personnel. This incident was very mild compared to other cases, but I assure you fellow CPFers, it is very scary and dangerous. A battery can start to vent if mishandled or dropped as in my case, it does not have to explode. It happened to a name brand chinese made CR123, it does not have to be a "cheap battery", this one cost me \$2.00 a piece. Don't ever pull the vent holes in the positive end of the battery up close to your face or nose like I very stupidly did. If you suspect a battery is venting, just toss it aside. ""

"ABOVE: A TESLA ON FIRE RELEASES TOXIC SMOKE WHICH CAN AFFLICT FIREMEN, PASSENGERS, PASSERS-BY, PEDESTRIANS, NEIGHBORS AND ANYONE ELSE NEARBY."

"Even then, Sony and Dell had millionaire recalls of laptop computers with defective batteries. The department of transportation has prohibited the carriage of Lithium cells aboard passenger aircraft Hydrofluoric acid is indeed a dangerous chemical, both as a fume and in liquid form. IMO, as a chemist it should not be allowed in consumer products."

"ABSTRACT Wang, Q., Sun, J. and Chu, G., 2005. Lithium Ion Battery Fire And Explosion. Fire Safety Science 8: 375-382. doi:10.3801/IAFSS.FSS.8-375"

"With the extensive applications of lithium ion batteries, many batteries fire and explosion accidents were reported. Base on the combustion triangle theory, the combustion triangle contributions of lithium ion battery were analyzed. By using C80 micro calorimeter, the thermal behavior studies on the materials show that the flammable electrolyte, oxygen generated by charged cathode and anode decomposition, and exothermic reaction heats form the combustion triangle together. The thermal runaway of working materials in lithium ion battery system was studied with common used battery materials, and the no return temperature TNR was calculated is 75oC and the self-accelerating decomposition temperature (SADT) is 66.5oC. Further analysis shows that the lithium ion battery reaction chain according with Domino effect, therefore, the lithium ion battery fire and explosion developing sequences was drawn by ""Domino chain.""

"In the related GM Death investigation, General Motors' new CEO, Mary Barra, and the head of the nation's auto safety watchdog are set to testify before Congress Tuesday afternoon about the defect in small cars that is linked to 13 deaths. In written testimony released ahead of the House subcommittee hearing, acting National Highway Traffic Safety Administration chief David Friedman said GM had information connecting defective ignition switches to the non-deployment of air bags, but didn't share it until last month. Committee members will press Barra and Friedman to explain why neither the company nor the safety agency moved to recall millions of small cars with a defective ignition switch, even though GM knew of the problem as early as 2001. ""Sitting here today, I cannot tell you why it took years for a safety defect to be announced in (the small car) program, but I can tell you that we will find out,"" Barra said in prepared testimony submitted to the subcommittee. Barra plans to apologize to family members of victims, according to her prepared testimony. But the family members, appearing alongside lawmakers, aired their frustration and grief Tuesday morning. Ken Rimer, whose teenage stepdaughter was killed in a 2006 crash in Wisconsin, recalled how she died. ""What was to be a simple shopping excursion turned into a death trap as their vehicle, without any warning, lost power,"" he said. ""The steeringwheel lock, power breaks, no longer worked and the safety airbags were turned off. When all of this happened the car followed a path off the road, went airborne over an adjoining driveway, crushed a phone box, and tragically collided with a group of trees."" He added: ""Would fixing the problem when it was discovered saved these two girls' lives and the lives of many others? Yes. Should GM be able to hide behind their bankruptcy and not accept the responsibility and liability of these young lives? No. Please help us in standing up for what is right. GM knew it was wrong. GM hid it during their bankruptcy proceedings. GM is liable for these young deaths."" "

"Tesla is accused of also knowing and hiding the threats, as disclosed in internal Tesla documents, Tesla patent filings and by former Tesla staff. GM has recalled 2.6 million cars for the faulty switch. That recall prompted GM to name a new safety chief and review its recall processes. GM continued its efforts to show regulators and consumers that it is more focused on safety, announcing the recall of 1.5 million more vehicles on Monday for a power steering problem. With Monday's recall, GM has now recalled 6.3 million vehicles since February. GM estimates the actions will cost it \$750 million. The House hearing -- and a separate one Wednesday before a Senate subcommittee -- will likely be tense and emotional. At least a dozen family members of victims will attend, wearing blue shirts featuring a photo of 16-year-old Amber Marie Rose, who was killed in a 2005 Cobalt crash, and the words ""Protect Our Children."" Barra may try to limit her answers to Congress, citing an ongoing internal review and government investigations. ""When we have answers, we will be fully transparent with you, with our regulators, and with our customers,"" she said in the prepared testimony. That could test the patience of committee members, who will want to know immediately why GM failed to protect its customers in this case. Laura Christian, birth mother of Amber Marie Rose, a teenager who died in a 2005 Maryland crash involving a Chevrolet Cobalt, said about 30 family members met with Barra and two GM attorneys Monday night. All got a chance to tell their stories to GM's new CEO, but Christian said they got little reaction. ""A lot of, 'I'm so sorry, I'm so sorry,'"" Christian said. GM would not comment on details of the meeting. Congress also wants to know if it needs to strengthen a 2000 law intended to improve communication between automakers and the government. The information found leads one to believe that fumes from lithium batteries are very dangerous. According to

Energizer ?Fire fighters should wear self-contained breathing apparatus. Burning lithium ion batteries can produce toxic fumes including HF, oxides of carbon, aluminum, lithium, copper, and cobalt. Volatile phosphorus pentafluoride may form at a temperature above 230ø F.? http://data.energizer.com/PDFs/lithiumion_psd.pdf Hydrofluoric acid is mentioned because if the battery _burns_ then one of the ingredients (the lithium trifluoromethanesulfonate) can produce hydrofluoric acid. This only happens if the battery burns or ""vents with flame"". An analogous material would be the Teflon that is used to make non-stick cooking pans - if it burns it too will emit hydrofluoric acid. Here is the MSDS sheet for a very common LG 18650 Li-Ion cell: http://www.hp.com/hpinfo/globalcitiz...s_lg_liion.pdf Molicel: <http://www.tek.com/Measurement/cgi-b...ameSet=service> Battery Space Li-Ion: <http://www.batteryspace.com/prod-specs/MSDSLion.pdf> International Battery Li-Ion: http://www.internationalbatteryinc.c...SDS_090105.pdf As you get more recent MSDS sheets for Li-ion cells you will find the following standard disclaimer: ""Hydrofluoric Acid Exposure During Fire Fighting This information is given for use of professional fire fighters responding to a warehouse fire where fire from other materials may incinerate battery. This section is provided solely in case of exposure, during fire fighting, to the combustion by-products. Hydrofluoric acid is not present in the product. Contact with battery causes none of the following symptoms. Hydrofluoric acid is extremely corrosive. Contact with hydrogen fluoride fumes is to be avoided. Permissible exposure limit is 3 parts per million. In case of contact with hydrogen fluoride fumes, immediately leave the area and seek first aid and emergency medical attention. Symptoms may have delayed onset. Fluoride ions penetrate skin readily causing destruction of deep tissue layers and even bone. Fluoride interferes with nerve impulse conduction causing severe pain or absence of sensations. Immediately flush eyes or skin with water for at least 20 minutes to neutralize the acidity and remove some fluoride. Remove and destroy all contaminated clothing and permeable personal possessions. Before re-use, impermeable possessions should be soaked in benzalkonium chloride after washing. Following flushing of the affected areas, an iced aqueous solution of benzalkonium chloride or 2.5 % calcium gluconate gel should be applied to react with the fluoride ion. Compresses and wraps may be used for areas where immersion is not practical. Medicated dressing should be changed every 2 minutes. Exposure to hydrofluoric acid fumes sufficient to cause pain requires immediate hospitalization for monitoring for pulmonary edema."" So, where does this hydrofluoric acid come from? Reviewing MSDS (Material Safety Data Sheet) for many of the cell layer separators (you can find a foot or two of it wrapped inside the Lithium Ion cell) show the generation of HF (Hydrogen Fluoride) and PFIB (Perfluoroisobutylene) from heat decomposition (such as a cell venting/explosion). HF, is a clear gas, will become Hydrofluoric Acid upon contact with even minute amounts of moisture (such as humidity). The United States Army Medical Research Institute of Chemical Defense has classified PFIB, also a clear gas, as a pulmonary agent. Usually, items like this get glossed over in MSDS sheets. Another item found in Lithium Ion cells that has fluorine in it is the Lithium Hexafluorophosphate or LiPF6. This can also break down during venting/explosion and contribute to the generation of hydrofluoric acid. A MSDS for LiPF6: <http://www.gfschemicals.com/Search/MSDS/2534MSDS.PDF> One company gives a better breakdown of what is in their product, instead of calling it proprietary:"

"TESLA Lithium Ion Batteries Contain, at least, (but there may be more):"

Acetylene Black (CAS# 1333-86-4) 0-2% Biphenyl (CAS# 92-52-4) 0-15% Diethyl Carbonate (CAS# 105-58-8) 0-15% Dimethyl Carbonate (CAS# 616-38-6) 0-15% Ethyl Methyl Carbonate (CAS# 623-53-0) 0-15% Ethylene Carbonate (CAS# 96-49-1) 0-15% Graphite (CAS# 7782-42-5) 7-22% Lithium Cobalt Oxide (CAS# 12190-79-3)

15-30% Lithium Hexafluorophosphate (CAS# 21324-40-3) 0-5% Lithium Tetrafluoroborate (CAS# 14283-07-9) 0-5% n-Methyl Pyrrolidinone (CAS# 872-50-4) 0-1% Oxalic Acid (CAS# 144-62-7) 0-1% Propylene Carbonate (CAS# 108-32-7) 0-15%

...and BURNING lithium ion combined with burning Tesla plastic and Chassis metal DOUBLES the amount of toxins!

"One of our erstwhile cpfers showed me a link to some testing that was done with Li-Ion cells:
<http://www.pcpitstop.com/pcsafety/video.asp> Hydrofluoric acid is very dangerous, here is the MSDS for hydrofluoric acid <http://www.bu.edu/es/labsafety/ESMSD...l#anchor888417>"

Breaking out the Li-Ion chemicals:

"Energizer Lithium Ion: Acetylene Black (CAS# 1333-86-4) 0-2%
<http://www.itcilo.it/english/actrav/...ic/1333864.htm> Biphenyl (CAS# 92-52-4) 0-15% Synonyms: Diphenol; 1,1'biphenyl; phenylbenzene 3. Hazards Identification Emergency Overview ----- QUOTE: ""WARNING! HARMFUL IF SWALLOWED, INHALED OR ABSORBED THROUGH SKIN. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. MAY AFFECT LIVER, CENTRAL AND PERIPHERAL NERVOUS SYSTEMS. MAY CAUSE ALLERGIC SKIN REACTION.""

Potential Health Effects -----

"Inhalation: Inhalation of dust or vapors can irritate the mucous membranes and respiratory tract. Other symptoms may parallel those from ingestion exposure. Ingestion: Exerts toxic effects on the central nervous system and liver. Symptoms may include headache, diffuse gastro-intestinal pain, nausea, numbness, body aches, and general fatigue. Skin Contact: May cause irritation. May be absorbed through the skin with symptom paralleling those from ingestion exposure. May cause allergic reaction insensitive individuals. Eye Contact: Vapors and dust cause eye irritation. Chronic Exposure: Chronic exposure may cause peripheral nerve damage and liver injury. Aggravation of Pre-existing Conditions: No information found. "Ingestion of internal material from Tesla batteries will kill you, your children or your pets."

"Tesla batteries are made overseas because workers who make them die from exposure to the chemicals. Good luck to Tesla with their GIGA-FACTORY death warehouse for Mexican workers in New Mexico. Tesla, already under investigation by OSHA, has found a new way to tell OSHA to screw themselves!"

"They KNEW: Laptops draw scrutiny from airline-safety officials August 15, 2006 12:00 AM By Corey Dade The Wall Street Journal Passengers aboard Lufthansa Flight 435 at Chicago O'Hare International Airport on May 15 were settling in for the nine-hour haul to Munich, Germany, when a burning odor floated into the first-class cabin. According to witnesses, the luggage bin above seat 2A was burping smoke. Flight attendants evacuated first class just before a computer case in the compartment began to spit fire. The crew grabbed extinguishers and sprayed the bin. Someone swung open a cabin door, snatched the case and tossed it onto the ramp. The case erupted in flames. As passengers watched, fire trucks -- then the bomb squad -- roared to the scene and put out the blaze. But they found no terrorist device. Instead, authorities discovered a charred laptop computer and a six-pack of melted lithium-ion batteries. Long before last week's foiled plot to blow up airlines using material secreted in carry-on luggage, a growing number of transportation and product-safety officials had expressed concerns that batteries in laptops and other electronics pose a serious risk to airplanes -- for reasons completely unrelated to global terror. Although the risk is small, the Consumer Product Safety Commission has documented 339 cases of lithium and lithium-ion batteries for portable electronics overheating, emitting smoke and fumes or exploding since 2003. There is no record of a serious injury or death, but the Federal Aviation Administration has logged 60 incidents since 1991. In the past two years, six incidents have occurred on aircraft, including five fires and an overheated flashlight that had to be handled with oven mitts. In February, a United Parcel Service Inc. plane full of packages -- including lithium-ion batteries -- was engulfed in flames while landing in Philadelphia. Investigators haven't reached a final ruling on the cause but continue to closely examine the melted shipment of batteries. In October 2004, a plane carrying Vice Presidential candidate John Edwards made an emergency landing after a lithium-ion battery exploded in the hand of a television newsman. Worries about the possible dangers are serious enough that the National Transportation Safety Board held a two-day hearing in July in Washington to discuss the safety of lithium-ion batteries on passenger and cargo planes and the investigation into the UPS fire. No formal proposal for new regulations has yet been put forward, but regulators are discussing options ranging from tightening manufacturing guidelines for the batteries to potentially restricting their use on passenger jets. A series of fires dating back to 1999 led to a federal regulation in 2004 banning cargo shipments of an earlier generation of batteries from the bellies of passenger aircraft. These batteries, known as lithium batteries, differ from lithium-ion models in that they can't be recharged. The rule called lithium batteries on commercial airliners ""an immediate safety risk"" but did not prohibit them from carry-on or checked luggage. Today, the more-advanced lithium-ion batteries account for the majority of battery incidents. There are currently no controls on them in carry-on or checked bags, nor when they are shipped in the cargo holds of passenger planes. Major airlines say they will comply with whatever safety regulators determine. ""It's too early to weigh in on the issue,"" says Victoria Day, a spokeswoman with the airline trade group Air Transport Association. ""We understand the experts are working on the matter, and we'll just have to wait and see what they say."" No action is expected in the near future until the Federal Aviation Administration completes its testing of lithium-ion batteries, which it began in 2004. A trade group representing battery makers has defended the manufacturing practices of its member companies. ""Based on the millions of lithium-ion batteries in use today and the exceptionally small number of cases in which a battery malfunction has occurred, we believe these batteries are safe and reliable when used according to manufacturers' guidelines,"" said Norm England, president and chief executive of the Portable Rechargeable Battery Association, on the group's Web site. The U.K. last week banned laptops and all other electronics in the cabins of flights from or through the U.K. after information surfaced that the alleged plotters planned to use an electronic device to detonate bombs. The ban, which British Airways extended to its flights into

the U.K., was excruciating to many fliers. "I feel naked," said Jon Thompson last week, after being told to check his laptop at the British Airways ticket counter at Atlanta's Hartsfield-Jackson International Airport. About to board a flight to London, he hastily wrapped a shirt around his computer for extra cushioning and jammed it into his suitcase. Capable of storing an enormous amount of energy in a small package, the lithium-ion battery is perhaps the most popular power source for notebook computers, MP3 players and high-performance cellular phones. The nickel-metal-hydride battery is the closest competitor on the laptop and mobile phone markets but requires more care to prolong battery life and generates less power. The lithium-ion model holds a charge longer, is more powerful and has the capacity to produce ever-greater power as manufacturing technology advances. But its fragile chemistry requires circuitry to control peak voltage. Product-safety officials say that as technology enhancements produce models packed with more power, more of them are overheating or blowing up. The hazards have prompted dozens of manufacturers to recall more than two million rechargeable batteries for cellphones, laptops, portable DVD players and digital cameras since 2003. Major U.S. computer makers Hewlett-Packard Co., Apple Computer Inc. and Dell Inc. each cited reports of overheating and fire risk as reasons for recalling a total of 300,700 units of laptop batteries world-wide since May 2005. "The affected batteries could overheat, posing a fire hazard to consumers," said an Apple statement posted on its Web site detailing a program in which consumers can exchange their recalled batteries for new ones. The three companies say the recalled batteries were made by suppliers based in Asia, and that batteries now for sale are safe. "It's safe to assume that, yes, we are selling a safe product," says Hewlett-Packard spokesman Ryan Donovan. Dell said the defects discovered in the cells of its batteries have been corrected. An Apple spokeswoman declined to comment beyond the company's online statement. Cellphones are of less concern in the air because their use is barred during flights. In general, they also operate at lower energy levels than computers and thus pose less of a fire risk. The problem, experts say, is "thermal runaway" -- a chemical reaction inside a battery cell that generates intense heat so rapidly that it flares out of control. Most of the failures are traced to a short circuit in the cell or the wires that connect the cell to contact points on the battery pack. Richard L. Stern, associate director of compliance at the Consumer Product Safety Commission, says tiny metal shards can contaminate the battery pack during assembly and later pierce the insulation separating the positive and negative terminals. The opposite poles touch and create an electrical spark. A defective or damaged battery that is vigorously jostled -- like a laptop rattling around in a luggage compartment -- can trigger a flare. Many of the airplane incidents involved batteries purchased separately from the computer. "The trend with smoke or fires would be some type of after-market use, like with spare batteries," says Bill Wilkening, who enforces hazardous-materials regulations at the Federal Aviation Administration. Product regulators say replacements marketed as compatible with many different devices frequently aren't. Some of them, including a significant number of counterfeits, lack circuitry that protects the battery cell from overcharging. "That's where you tend to see a lot more allegations of fire or explosions," Mr. Stern says. "It's difficult for consumers to know which are good and which aren't, unless you're an electrical engineer." The passenger whose case caught fire on the Lufthansa flight, Dana Smith, told officials the batteries were bought on eBay and possibly were "not built to the original specifications," according to the incident report filed with federal regulators. Mr. Smith couldn't be reached at his Munich address. Lufthansa, in Frankfurt, Germany, said it has no position on whether lithium batteries should be further restricted, but will comply with any government regulations. But sometimes, batteries seem to blow up for no clear reason. A sound technician with ABC News had just decided to change a battery as the Edwards' campaign's chartered Boeing 727 lifted off from Raleigh-Durham International Airport four days before the 2004 election. In the rear of the cabin, the sound man pulled a nine-volt battery from his equipment and it burst into flames. Someone screamed "fire!," according to official accounts of the incident and witnesses. Within a few seconds, Secret Service agents barreled into the cabin and extinguished the fire. The plane immediately returned to the airport. "It was a little scary. It was dark, it was smoky," Mr. Edwards said in a recent interview. He was in the front of the cabin with his wife and two children and campaign staff. "It got people worked up." Nearly three months earlier, a box of batteries caught fire aboard a FedEx Corp. cargo plane in Memphis, Tenn., moments before it departed for Paris. The fire damaged most of the other boxes packed in the huge freight container. FedEx

and Memphis firefighters put out the blaze on the ground. Marvin Sudduth, a safety manager in FedEx's dangerous goods section, examined the container of 64 batteries more than three hours later--and they were still sparking. "I had to jerk my hand back pretty quick," he says. "Not one of my top 10 things to experience." FedEx says the shipper violated federal guidelines requiring the batteries be packaged in a plastic sheath to protect them from making contact with other objects. Instead they were rolled in cardboard wrapping and placed

in a cardboard box with metal tools used to install the batteries. Mr. Sudduth said the tools probably shifted during transit and struck the batteries, causing sparks. The Memphis-based air cargo carrier says it has tightened standards to exceed federal requirements. It now refuses to carry hazardous materials without first confirming they have been packaged according to federal standards. The potential danger to airlines first surfaced in 1999 involving the lithium "primary" battery that preceded the rechargeable lithium-ion version. After two pallets holding 120,000 of those batteries unloaded from a passenger plane went up in flames at Los Angeles International Airport, the NTSB requested an investigation of the products by the FAA. In 2004, the federal agency that regulates the transport of dangerous substances, now called the Pipeline and Hazardous Materials Safety Administration, ended the transport of those batteries in the cargo holds of passenger carriers. After the FedEx incident earlier in 2004, the FAA began a still-ongoing investigation into lithium-ion batteries. The most dramatic mishap so far involved the UPS jet descending on Philadelphia International Airport from 31,000 feet the night of Feb. 7. "Smells like wood burning. Smell that " the co-pilot told his two fellow crew members about 25 minutes before landing, according to the flight cockpit recording. The flight engineer left his seat and entered the cargo hold to check for smoke. He later told investigators that nearly every inch was filled with freight, and he had no path to walk through the holding area for a closer look. So he aimed a flashlight at the upper cargo deck and ran it the length wall. He smelled smoke but found no fumes and returned to the cockpit. At about 4,000 feet and a few minutes before landing, the warning light for smoke on the main deck flashed on. "Alright," the first officer said, "I'm turning into the airport then." Air traffic control cleared the plane to land. Then the fire warning indicator for the lower rear cargo area lit, and the captain ordered his crew to put on their oxygen masks. On final approach some functions on the instrument panel began to fail, and smoke streamed into the cockpit. The captain landed the plane and opened his window to breathe but inhaled a thick plume of smoke. The co-captain leaned out his window and was choked with smoke. In a raspy voice, he managed to radio the tower: "UPS Flight 1307 evacuating the aircraft." One by one, they disappeared in the haze through the back of the cockpit and made their way off the plane. The fire raged for four hours, with the DC-8 sitting on the tarmac, destroying the cargo and burning two gigantic holes through the top of the fuselage. In the months since then, investigators have methodically excluded possible causes of the fire. They say there is no sign that airplane wiring or systems were the culprit. Containers of hazardous material being shipped on the plane don't appear to be the cause. Several partially burned lithium-ion computer batteries are still undergoing tests. "It is not known at this time the role that these types of batteries may have played in the fire," NTSB lead investigator Frank Hildrup said at the federal hearing in July. "Nevertheless, secondary lithium batteries, as well as primary, can present fire hazards. Several lithium battery incidents have occurred in recent years." Of the more than 60 incidents of batteries overheating since 1991: Short circuits appear to be the primary cause Unexplained fires/explosions usually involve lithium-based batteries Almost all incidents involve unlabeled "nonregulated" or "excepted" batteries No incident involved batteries in retail packaging Almost all incidents detected on the ground Source: Federal Aviation Administration Read more: <http://www.post-gazette.com/business/technology/2006/08/15/Laptops-draw-scrutiny-from-airline-safety-officials/stories/200608150233#ixzz2xetLkzkW> "

"For more TESLA SAFETY REVIEW DATA, [CLICK HERE](#)>>> Tesla lobbyists & campaign backers force NHTSA to close investigation rather than complete it and reveal the depth of the cover-ups and extensive safety

defects. "

"Here is how this is going to happen: In a few years there will be a number of consumer lawsuits in court, Tesla will say ""we didn't know that"", then all of these documents will come out, then it will become absolutely clear that Tesla knew about this danger for ages and covered it up. Then Tesla will lose the lawsuits and either go out of business or have to pay billions of dollars like Toyota and soon, GM. Those politicians and administrators who covered up will fry and lose their pensions. That's all there is to it. FG- LAT"

"Tesla battery plant faces skepticism from stakeholders, analysts"

"It's all about the numbers: If Tesla Motors intends to sell more of its electric cars, it'll need more batteries to power them. And while the company has ambitious plans for its own battery manufacturing plant, some of Tesla's backers aren't yet committed to the project."

"By John Voelcker, Guest blogger / April 6, 2014"

"A man looks around Tesla Motors' Model S P85 at its showroom in Beijing. Panasonic is considering investing in a U.S. car battery plant planned by Tesla Motors, with total investment estimated by one source at around \$979 million."

"Now he faces new doubts over the company's plans for a massive ""gigafactory"" costing as much as \$5 billion to manufacture more lithium-ion cells than any other plant in the world. Having mostly convinced disbelieving analysts, journalists, and industry colleagues that Tesla can at least design, engineer, build, and sell good-looking high-performance all-electric luxury sedans, Musk may not pay a lot of attention to ""You can't"" noises from critics."

Panasonic: large risk

"But even Tesla's lithium-ion cell supplier Panasonic--which owns a small share of the company--hasn't yet committed to participating in the gigafactory plan. Bloomberg noted last week that the Japanese electronics giant's president, Kazuhiro Tsuga, told reporters the project would pose an ""investment risk [that] is definitely larger"" than the company prefers. Panasonic prefers to ""make investments step by step,"" he said, adding that he ""would like to cooperate"" with Musk's plans. He also noted that Panasonic's battery production ""depends"" on Tesla sales, which it monitors closely. Tsuga's comments may reflect the slow pace of building consensus for such a major investment on Panasonic's part. VW, Daimler perplexed But it is hardly the only voice saying the gigafactory plan could be too large, and too much for Tesla to bite off. An article yesterday in The Wall Street Journal quoted Harald Kroeger, the head of Daimler's electric-vehicle efforts, who noted that the gigafactory plan had ""some huge disadvantages"" to go along with its benefits. (Daimler, which makes Mercedes-Benz and Smart cars, owns a small stake in Tesla Motors too, as does Toyota.) And Volkswagen CEO Martin Winterkorn said he didn't ""quite get it,"" noting that VW would not consider opening its own battery plant, as it had enough suppliers for its needs. Few details Musk announced a handful of high-level details about the proposed plant, which could be the world's largest single factory, in late February. The need is clear: Even at a production rate of about 25,000 cars a year, Tesla used one-third of the world's electric-car batteries. To scale up to 100,000 Model S sedans and Model X crossovers by 2016, he needs to quadruple that supply--which Panasonic and Tesla together expect to happen. But if the company starts production of its next model, a lower-cost sedan often dubbed the ""Model E,"" it will need multiples of its current battery supply. And to hit the target price of \$35,000 or less for the new car, which is expected to offer at least 200 miles of rated range, Tesla will need every bit of the 30-percent cost reduction it says it can achieve with the gigafactory. Can Tesla sell 500,000 cars? In the end, as investment journal Barron's notes, the gigafactory will only pay off if Tesla can reliably sell half a million cars a year. (The Barron's article also noted that Tesla has not responded to any of its inquiries since Musk hung up on its reporter a year ago.) If Tesla can sell that many cars by 2020, it is likely to become one of the top three plug-in electric car makers in the world--along with Nissan and General Motors. Meanwhile, rivals say they will keep

pace with its cost reductions--although they are likely banking on far lower volumes of electric-car sales that Musk and Tesla anticipate. More details are likely to emerge about the Tesla gigafactory, perhaps including a site selection. The candidates are Arizona, Nevada, New Mexico, and Texas, each of which putting together incentives to offer to Tesla. "

Tesla Model S

The all-electric Tesla Model S sedan.

"Tesla Motors TSLA -3.31% Inc. makes electric cars ? and they must be pretty good cars because they cost \$70,000. Despite selling really expensive cars, Tesla has long been the darling of the left. Nothing says ?I am committed to saving the polar bears? better than driving a luxury, battery-powered car."

"For several years, Tesla has been in a fight with the states. Tesla does not use dealerships. It sells its cars on its website and in showrooms. Almost every state bans or limits the sale of automobiles directly to customers, which is terrible and reflects the power of auto dealerships. The dealerships want you to buy your car from them because, well, that?s how they make money. And because they are wealthy and connected, they have persuaded many states to make it hard for automakers to sell directly to people. After all, if you were buying a car directly from a manufacturer, who would sponsor the local Little League teams

"The auto dealers argue that direct sales will result in massive layoffs, disruptions in the community, and less odious car-selling techniques. Actually, they?re not making the last argument, but they?re saying that without dealerships, customers will never figure out where or how to get their cars repaired. By the way, the dealerships pay lawmakers with campaign contributions and promised future support if the lawmakers keep Tesla out of their states."

"Tesla?s response is that the car dealerships? position violates every notion of free markets. Tesla argues that prohibiting direct sales protects only the dealerships and harms the consumer. Tesla is right. There?s no reason to prohibit a consumer from buying directly from the manufacturer. Cutting out the middleman is generally a good thing ? unless you?re the middleman. So Tesla is right ? but few companies owe their existence to the government and the public dole as Tesla does. The idea that Tesla can enter a legislature and sing the praises of free markets with a straight face is rich. In 2010 the company received a \$500 million loan from the U.S. Department of Energy. It prospers because of the federal tax credit of up to \$7,500, plus \$2,500 in California credits for each new purchase. It receives credits from the California Air Resources Board, which it sells for a large profit. Last year the company received \$34 million in tax breaks from California as an incentive to build a plant in the San Francisco area. Tesla has the gall to encourage consumers to ask state lawmakers to subsidize the purchase of their vehicles. Free markets, indeed."

"Tesla wants to expand its operations and is considering investing up to \$5 billion for a new plant in Nevada, Arizona, New Mexico, or Texas, all of which ban direct sales except Nevada. Tesla wants Texas to repeal its direct sale prohibition, but while the Lone Star State is offering infrastructure money, it?s not budging on the direct sale issue. Arizona has already introduced a bill to lift its ban on direct sales and Gov. Jan Brewer (R) is promising tax breaks. New Mexico Gov. Susana Martinez (R) has promised that the state will do whatever is necessary to land the expected 6,500 jobs. Rumors are that in lieu of tax breaks, Nevada is willing to purchase all the land Tesla needs for the plant. You can be sure the free-market-loving Tesla lobbyists are in the middle of the fight."

"Why would Tesla do something so dangerous, thinking nobody would notice? Greed! Tesla can play all the ""ignore the facts"" games they want, but when the lawsuits start, Tesla will lose in a very big way!"

Millenials have over-thrown America?and nobody noticed! Massive American Revolution taking place in silence. "- Last two generations, and Millenials, so disconnected, neither sees what the other is doing. - New studies show Millenial generation avoiding marriage, government, banks and other mass marketing institutions -

Millenials NOT reflected in Polls. Gallup, Pew, CNN, etc. Off-base on results. Millenials don't talk to Pollsters. Don't trust them. Privacy concerns. Surprise election results ahead? - More savvy. They hate subliminal manipulation and now know how it works - Enough of them now legal to vote to cause one of the most Tectonic shifts in political history, in one of the next three election cycles. - ""Old White Man"" club ignorant of power of new Millenials. OWM hated by Millenials - The two most hated things, by Millenials: ""Mass Marketing"" & ""Washington, DC"" - OWM supporters just died in huge numbers; from old age - November campaigns ignoring Millenials likely to be in for a shock. Totally non-crooked candidates have better chances. - They now understand how politics ACTUALLY work and are prepared to uproot it all. End of ""Revolving Doors"", ""Crony Contracts"", ""Kickbacks""? - ""World Coming Apart"" In the News-effect is actually Millenials waking up - All caused by Internet and free speech. Damn that First Amendment! Even hacker and NSA tactics didn't scare them off of it! - They are here! DEAL WITH IT! (Public News Team- DF, FG, GH, HG, HJ, K)

"EXCLUSIVE: At least seven companies that received a total of \$15.25 million in grants from state Regional Economic Development Councils are linked to \$1.25 million in donations to Cuomo's campaign treasury since 2010, the records show."

"BY Glenn Blain , Kenneth Lovett "

NEW YORK DAILY NEWS

"ALBANY ? Several companies run by big-time donors to Gov. Cuomo have won millions of dollars in state economic development grants since he took office, state records show. At least seven companies that received a total of \$15.25 million in grants from state Regional Economic Development Councils are linked to \$1.25 million in donations to Cuomo's campaign treasury since 2010, the records show. One of those companies, Taylor Biomass LLC in Orange County, was awarded \$1 million in 2013 to build a waste-to-energy facility. Its president, James Taylor, gave Cuomo's campaign more than \$100,000 since 2010, including \$34,000 this year, campaign finance records show. And the company and its affiliates gave Cuomo another \$50,000, including \$12,500 this year. In another case, BFC Partners, of Brooklyn, won \$3.5 million in 2013 to construct Empire Outlets, a planned development on Staten Island featuring 100 designer outlets and a posh hotel just steps from the ferry terminal. BFC donated \$25,000 to Cuomo's campaign in 2014, the year following the grant. And three of the company's partners, Donald Capoccia, Joseph Ferrara, and Brandon Baron, have ponied up a combined \$81,500 since 2010."

New York Daily News; Photo by Chester Higgins Jr./The New York Times

"Cuomo aides said the grants cited by the Daily News represent a fraction of the more than 2,600 projects awarded \$2.2 billion in funding since 2011 under the Regional Economic Development Council program. The aides also said the governor's office has no formal role in selecting who receives the awards. The projects, they

pointed out, are recommended by the 10 regional councils, under a system Cuomo established in 2011 to create competition for the hundreds of millions of dollars in state funding distributed each year. The Cuomo-controlled Empire State Development Corp. scores the recommendations and picks the winners, which Cuomo typically announces in a public ceremony. Cuomo aides said the process is far better than the old "member item" system in which state legislators picked projects in their districts to fund, without much vetting. The aides also argued that some donors to the governor applied for project funding but did not receive grant money. "To suggest any conflict or connection here is absurd as the recommendations for all of these projects are made by local community representatives," said Cuomo aide Melissa DeRosa."

"<http://bfcnyc.com/> In another case, BFC Partners, of Brooklyn, won \$3.5 million in 2013 to construct Empire Outlets, a planned development on Staten Island featuring 100 designer outlets and a posh hotel just steps from the ferry terminal."

"Cuomo aides said several of the companies cited by The News, including Taylor Biomass, received state and federal funding for other projects in the past. Some of the grants, they said, funded projects that already were under way before Cuomo even became governor. In one case cited by The News, a \$2 million grant for the Dover Knolls Development, a plan to renovate an abandoned psychiatric hospital in Dutchess County, was withdrawn when the developer sold the project. The company, its parent, Benjamin Millennium Group, and assorted affiliates contributed a combined \$271,700 to Cuomo, and the company's president at the time, Alvin Benjamin, gave \$25,000 in 2011. Bill Mahoney, of the New York Public Interest Research Group, said the awarding of grants tied to donors raises questions. "Businesses rarely contribute to candidates for purely altruistic reasons - in most cases, they're hoping to help their bottom lines," Mahoney said. "If Gov. Cuomo had fulfilled his promises to overhaul the campaign finance system, perhaps there wouldn't be concerns over decisions like these."

"ALL OF THE ""WINNERS"" OF THE DEPARTMENT OF ENERGY FUNDING UNDER OBAMA'S STEVEN CHU WERE THE BIGGEST OBAMA CAMPAIGN DONORS AND FRIENDS OF CHU. ALL OF THEIR BUSINESS COMPETITORS WERE KICKED OUT OF THE PROGRAM."

"The system is rigged against the little guy. A true technical innovation company, who has not signed onto the bribe programs, will never have a chance."

"That is why you always see the "same old crap" from the same old-boys clubs getting the grants, and "never any new technology that would actually make a difference", Said Arnold Wester of The Inventors Alliance **THE FIX IS EASY! WRITE YOUR ELECTED OFFICIALS, HERE (AT THIS LINK) and DEMAND a law in EVERY STATE that makes it illegal for any group who has a connection to campaign funding to receive a state or federal grant! Easy!, DONE! "**

Recognizing the problem

The problem is easy to recognize.

"Step one: Does your City, State or Federal group offer a grant program, application-based funding program or other program which gives tax dollars to outside entities? Step two: Have you had this, or a similar program, in operation for more than a year? Step three: When you line up a list (LIST A) of the past "winners" alongside a list (LIST B) of their campaign contributions, lobbying expenditures, gifts and incentives; are the curves of each of those lists "strangely" the same? If the answer is Yes: **THEN YOU HAVE THE PROBLEM! "**

The General Process Issues

" Over 30 ?green?, ?cleantech? companies were put out of business by the DOE ATVM/LGP program. Many more companies, in each state, were terminated by the ?efforts? of the officials of those states. Some were intentional terminations because they competed with contributor?s business interests and some were terminations caused by mismanagement of the grant process. :: Most grant programs ostensibly seek innovation and better solutions. BUT: Most ?winning applicants? end up being big old companies who supply the same old thing who generally usually ?win? the ?contests?. :: True innovators are scientists, chemists, physicists and engineers. They do not know about, have the skills for or have the aptitude for generating political documents. BUT: Big old campaign contributor companies have rooms full of grant writers and spin doctors who can conveyor-belt out, political grant document-after-grant document, with all of the checklist items in carefully mnemonically metricized catch-phrases, but they offer no innovation. :: Big campaign contributor ?winners? have big teams of people that go around and ?work the system? (promise or imply incentives). These teams are smiley, golden-ratio faced, out-going personality-type PR people. BUT: True innovator scientists, chemists, physicists and engineers are, more often than not, socially awkward and uncomfortable with that sort of PR pretension and they avoid working the system. :: If one wants to pay off campaign contributors then these ?contests?/?grant programs? they actually are a great way to provide ?kickbacks in plain sight?. BUT: In the age of the Everybody-Can-See-Everything internet, the public is now pretty much aware that this is what is going on, ie: <http://www.youtube.com/watch?v=CHiicN0Kg10> <http://youtu.be/CHiicN0Kg10> Reality: If a City, State, Federal or NGO group wants true innovation solutions to public problems and issues, then they need to recognize that their grant programs, award programs and public funding programs are, in most cases, set-up to accomplish exactly the opposite!"

One Perspective- Siry

" ?Siry Slams DOE Loan Program For ?Stifling Innovation? By Edward Niedermeyer in ?THE TRUTH ABOUT CARS? Former Tesla PR honcho Daryl Siry lays into the Department of Energy?s Advanced Technology Vehicle Manufacturing Loan program (ATVML) at Wired?s Autopia blog, taking the \$25b program to task for ?stifling innovation.? At its core, his argument is a simple one: Startup companies that enjoy DOE support, most notably Tesla Motors and Fisker Automotive, have an extraordinary advantage over potential competitors since they have secured access to capital on very cheap terms. The magnitude of this advantage puts the DOE in the role of kingmaker with the power to vault a small startup with no product on the market -? as is the case with Fisker ? into a potential global player on the back of government financial support. As a result, the vibrant and competitive market for ideas chasing venture capital that has been the engine of innovation for decades in the United States is being subordinated to the judgments and political inclinations of a government bureaucracy that has never before wielded such market power. All of which sounds very TTAC? in fact, our lengthy Bailout Watch series began with a similar analysis of the ATVML program (albeit with a Detroit-focused twist). Unfortunately, Siry?s intentions in this case are questionable? as are his conclusions. At the very bottom of his editorial, Siry reveals himself to be a ?special advisor to Coda Automotive,? the EV startup born from the ashes of Miles Electric Vehicles. That Coda has not sought an ATVML handout (because all its manufacturing is done in China) is presumed to give Siry a free pass on conflict-of-interest questions, but Siry?s critique relates directly to the private capital market as well. Siry writes: The proposition is so irresistible that any reasonable person would prefer to back a company that has received a DOE loan or grant than a company that has not. It is this distortion of the market for private capital that will have a stifling effect on innovation, as private capital chases fewer deals and companies that do not have government backing have a harder time attracting private capital. This doesn?t mean deals won?t get done outside of the energy department?s umbrella, but it means fewer deals will be done and at worse terms. Translation: Coda can?t raise funds without DOE backing, a reality the company petulantly hinted at in the most recent post on its corporate blog. There, the company lashed out at analyst suggestions that DOE loans would be best spent on established automakers, and now Siry is bashing the DOE?s ?kingmaking? of ?small startups with no product on the market.? So which is it? The answer can be found in Siry?s conclusion: A potential solution to this problem may seem counter-intuitive. The best way to avoid market distortion would be for the DOE to cast the net more broadly and provide loans and grants to a larger number of companies ? which ironically means being less selective. Subject to the existing equity matching requirement, this would allow the private markets to function more effectively in funding a broader range of companies and driving more

innovation. Several innovative companies with great potential have been in the DOE pipeline for many months. Perhaps it is time for the DOE to stop playing favorites and start spreading the love. Give out money to more firms, less selectively. What a plan. But if Siry is suggesting that Coda Automotive represents the kind of ?innovation? being ?stifled? by the ATVML program, he?s able to see far more innovation in selling an electrified Chinese Hafei sedan with 100 miles of range for \$45k than we do (he doesn?t explicitly, preferring Aptera as a poster child for stifled innovation). The reality is that the EV sector is crammed with as many hucksters and wannabes as legitimate innovators, and ?spreading the love? is more likely to result in wasted investments. In theory we agree that DOE ?kingmaking? distorts the market, and elevated some questionable firms to near-player status? but interpreting those results as a reason for the DOE to be ?less selective? with its lending makes even less sense. Unless, of course, you work for a firm that might benefit from lowered loan standards. As a lesson in the ATVML?s unintended consequences, Siry?s editorial is dead-on. As a roadmap for future DOE policy, however, it comes up way short. Posted in Electric Vehicles, Government, Green, News Blog Tagged as ATVML, Coda, DOE, electric car, EV, Fisker, Tesla ? " "

The Solutions- Part 1

1. Go to greater lengths to find the small innovators and let them know about the program. Sending a general email out to ?the usual suspects? doesn?t cut it.

"2. Provide a dedicated small innovator advocate, in each funding program who is missioned to assist the small innovator companies. Make them call, and email, each one personally."

3. Fire that advocate if more than 3 small business groups prove that they are compromised.

"4. For any applicant with less than 10 staff, YOU, verbally interview them and fill out the forms for them. They do not have the staff to do it. You place them in a ?no win? situation by even offering these grant opportunities, they all know it by now and so almost none of them apply any more unless they just formed their company. After the first burn, when they realize the cards are stacked against them, they won?t waste their time again."

"5. Make the application as simple as possible. One of the richest people in the world: Bill Gates, and his wife Melinda, decided to give away quite a lot of money in grants. They had the resources to test, validate and prove what the best kind of grant application is. What did they figure out for the Grand Challenge: That they just needed a TWO PAGE APPLICATION. They have used this for years, it works great and has funded some of the greatest innovations in the world."

"6. Announce who your reviewers are, by name and affiliation. Just like the law now requires for financial writers. State ANY positions your reviewers have in any companies related to the industry involved in the grant."

"7. Post the reviewer results online. Allow the transparency to have their assumptions, or comments challenged to prove the game isn?t rigged."

"8. Does the world seem to be in disarray? Does every news cycle seem like there are more and more problems and more and more people complaining? IT ISN?T TRUE! The same amount of disarray and problems exist today as have existed over the last few centuries. BUT NOW EVERY VOTER CAN SEE EVERYTHING. While the internet has brought us awful things like cyber-bullying child suicides and the hacking of everything, it has created a transparency that will never go away. The toothpaste is out of the tube. Organizations need to accept the fact that corruption only works in darkness and the internet has lit up everything. If old systems of reward exist to pay back donors, it can now be found out by a bored soccer mom or an out of work construction worker with a notebook computer, and there are millions of them. Change up any systems that could be rigged because we live in an age where those sorts of things can come back and bite you during your current career cycle. The FBI is much tougher on these sorts of things these days."

"9. News Media now have databases equal to those of the NSA. New online media outlets have been starting up in great quantities, lately, using ?big data? story research engines. They can track every connection of every applicant, executive and associate and other party in a very short period of time. Just read the detail they have gone into about CGI Federal, the company that screwed up Obamacare, and their staff, ownerships, personal relations, etc. Plan on transparency in the new world. It has arrived."

"10. To repeat, however efficiently you think your application is written: YOUR APPLICATION PAPERWORK IS TOO LONG. The DOE spent more money and resources on due diligence and had more application paperwork for their ATVM/LG and other loan programs THAN ANY COUNTRY HAD DEVOTED IN HUMAN HISTORY! Yet we had the stunning failures of Abound, A123, Fisker, Solyndra, etc.. etc

"11. Hold three online web conference for 1.) Under 10 person companies 2.) Under 20 person companies 3.) The big guys. Give each segment a chance to comment, ask questions and get informed within their peer group."

12. Publicly identify revolving door staff.

"13. Allow for a challenge process for any member of the media or applicant groups to challenge a decision and correct, or comment on, erroneous data."

14. Don't rig the stock market or investor market by setting up financing that makes your organization cause outside investors to wait until they see your term sheet like DOE did.

"15. Provide a CrowdFunding support resource in all new funding from now, forward. The SEC has made CrowdFunding fully legal now. Allow Crowdfunded offsets and co-promote them using your agency PR resources."

16. Don't use the 'delayed review' tactic to try to put contributors competitors out of business by stringing them along until they run out of cash. The media has covered this tactic in great detail and new laws allow those who got strung out to sue you and win if they catch you.. and it is easier to catch people these days.

17. More Solutions coming?

What happens when your friends start leaving Facebook?

"Theo Merz followed his friends onto the social networking site, and now he's following them out. How did it come to this

FOMO: 'It now feels like the party is happening away from Facebook' Photo: Alamy

By Theo Merz For THE TELEGRAPH

"I logged in north, south, east and west. I checked it at work and during Sunday rest. I liked and commented, posted status and song. I thought Facebook would last forever: I was wrong."

"Apologies if that feels like a bit of a heavy introduction for a piece on the decline of Facebook amongst my peers but I like Auden's love I had always assumed the network would be constant presence in my life. A couple of times at university I wondered what would happen if people stopped using the site, or if it disappeared. I would have no physical photos of my college friends, like those of my parents that we sometimes unearthed at home; I would be stripped of the wall-to-wall messages we had built up over the years and left with only a handful of letters and cards."

"Sometimes I thought about printing out pictures or saving some of the more memorable messages to computer, but I never did. Just like three-month summer holidays and the ability to function after four hours' sleep, I reasoned that Facebook would always be there."

"But two years after graduation, to continue in the mournful vein in which I began, the site is crumbling before my eyes. There's nothing new about predicting the demise of world's most popular social networking site: articles in 2010 told us that 'everyone was quitting Facebook', 2013 was the year of 'virtual identity suicide' and figures released earlier this year suggested some 600,000 people in the UK had 'disappeared' from the site last December (a claim the California-based company denies)."

"On the other hand, Facebook has more users and is more profitable than ever before. As it celebrated its tenth anniversary earlier this year, the site which was famously launched by Mark Zuckerberg from his Harvard dorm room boasted 1.23 billion monthly active users and 757 million daily users. Despite a shaky initial public offering, the network is now worth \$135bn, generating a profit of \$1.5bn in 2013."

Why Zuckerberg still wants to be our friend 03 Feb 2014

Young people are lonely - but social media isn't to blame 25 Jul 2014

Facebook goes down for some US users 04 Sep 2014

"The problem with these death of Facebook/triumph of Facebook headlines is that they refer to the site or the company as a whole, whereas anyone who uses it knows that it's only as good as the content your friends are posting and that you are interacting with. If my notifications are all from friends and family sharing stories they know I'll like or laugh at, it's a good site; if my newsfeed is full of people I met on my gap yah throwing buckets of ice over their head, it's rubbish. It doesn't matter that technology websites are telling us that 'everyone who's anyone' is deleting their profiles whether out of concerns about privacy or after learning that Facebook is trying to manipulate users' moods. It's when the people we're interested in start leaving that it's over for us. And, for me, they are. Last month a close friend from university, now working in the arts and one of the heavier Facebook users I know, decided to go cold turkey. For a couple of years she had mainly been posting to promote projects she was working on, and decided this was coming across as bragging and unpleasant. Inspired by her example, another friend permanently logged out, explaining the decision thus: 'It makes me depressed to look through other people's pictures even though I know they curate their profiles. But mainly I don't like living my life in a way that's hyper-aware of how it looks to other people who I don't care about. So I'd rather cut it out.' So two fewer reasons to log on, and six years worth of photos and public messages between the three of us taken off the site. Others I know are using it less and less, either because they're worried about what their employers might see, or just because they don't feel the need to update 500 people they studied with on where they've been on holiday. Whereas a couple of years ago I would have been surprised to find that someone my age didn't have a profile (a fact generally announced in the same smug tone as someone revealing they never watch TV), now it's hardly worthy of comment. And so I care about Facebook less, and check notifications less often. It's lemming-like, I know, to have followed my friends into the social network and then follow them out in this way. But the thing about social networks is that they only work when everyone's there and everyone's active. It was Facebook that gave us FOMO, or Fear Of Missing Out. Despite the record-breaking number of users and profits, it increasingly feels like the party is happening elsewhere."

USA TODAY exposes Google Conspiracy Attempt <http://www.thenewsdaily.org/usa-today-exposes-google-conspiracy-attempt/> 9/4/2014 THE EDITORS & WIKI MEMBERS Uncategorized "Conspiracy,

Thomas R. Burke and Jonathan Segal

"Once the fact was out, the internet giant tried to get a judge to help them hide it again."

"(Photo: Jefferson Graham, USAT)"

"Back in February, in a San Jose courtroom, a bombshell was dropped that could have been erased from the public record. It turns out that Google, which bases its business on collecting and analyzing huge reams of data for advertising purposes, has been scanning users' emails even before users have a chance to open or read them, including email messages that are deleted without being opened. Google knows what's in your email before you do. The revelation came in a now-settled legal dispute over Google's Gmail service. Dozens of the nation's largest newspapers and media companies fought to make sure that the case ? and its wide-ranging implications for Internet users ? received a full public airing. It has been an unfolding drama ever since, affecting what analysts estimate are 500 million Gmail users worldwide. Google tried, and failed, to redact information about its email scanning process from a transcript of a public court hearing. Last month, the judge in the case ruled that portions of the transcript from that February hearing could not be redacted retroactively, since that would be tantamount to closing a public courtroom. The company's attempt ? akin to putting toothpaste back into a tube ? was a reversal of its previous position in the lawsuit, a pledge that there would be a ""fully public airing of the issues raised by plaintiffs' motion for class certification."" The NSA recently used the very same tactic when it tried to secretly delete portions of a public court transcript in a lawsuit filed against its surveillance practices. As a result, we now know much more about how Google collects personal information from users of Gmail and Google Apps and, in this case, how it plugged a critical gap in its data mining operation to sweep up even more of your information. Here's what happened: Back in 2010, Google was facing a vexing problem. It was losing out on a treasure trove of personal information from millions of Gmail users who were slipping through its chief analytical tool, known as ""Content OneBox."" Anytime they accessed their email through Outlook or on their iPhone, Google's data machine wasn't there to capture it all. So it needed a way to sidestep the problem. Within a matter of months, the company shrewdly moved the Content OneBox from Gmail's storage area to the ""delivery pipeline"" ? meaning that it could now scan messages before they were received. As the plaintiffs explained: ""Google made a choice. They said, you know what, when people are accessing emails by an iPhone, we are not able to get their information. When people aren't opening their emails or they are deleting them, we are not able to get their information. When people are using Google Apps accounts where ads are disabled, we are not able to get that information. When people are accessing Gmail through some other email provider, we are not able to get that information. So what they did is they took a device that was in existence already and operating just fine back in the storage area, and they moved it to the delivery pipeline."" This move has sweeping consequences, as Chris Hoofnagle, director of privacy programs at Berkeley's Center for Law & Technology, has described: ""Hiding ads while analyzing data takes advantage of a key deficit users have around internet services: users only perceive profiling if they receive ads. The content one box infrastructure would allow Google to understand the meaning of all of our communications: the identities of the people with whom we collaborate, the compounds of drugs we are testing, the next big thing we are inventing, etc. Imagine the creative product of all of Berkeley combined, scanned by a single company's 'free' email system."" Google's stated goal is to ""organize the world's information,"" but they fought to avoid disclosing how and why they've done it. Now we know. Thomas R. Burke and Jonathan Segal of Davis Wright Tremaine represented media companies, including the corporate parent of USA Today, Gannett Co. Inc, in the Google Gmail litigation. "

SHOCKER: Humans Tired of Being Used Like Cattle. Cramped Seat Syndrome just one of the signs.

"SHOCKER: Humans Tired of Being Used Like Cattle. Cramped Seat Syndrome just one of the signs. - Huge surge in jetliner emergency landings from abused passenger revolts resulting from jamming as many humans into a box as possible - Huge consumer rejection of internet companies using them for ""mood manipulation"" brain-washing, to get them to buy mass-market goods - Consumers reject banks for using them as ""fee tools"" on loans and credit cards in volume billing scams. DOJ has filed multiple charges. Bank revenue falling like rock - Millennials got the internet, got aware and rejected the BS of cattle-marketing ploys - The New World cluster-f**k is not a ""New World Order"" it is a New World Re-Ordering All around America, the signs and actions are clear, in the subways, on the planes and in the Malls. People are not only speaking with their wallets; they are speaking with their wallets, votes, intentions and voices! Politicians in Washington create a self-reinforcing bubble around themselves and rely on rigged McKinsey reports to tell them what is ""trending"" (Ignoring the fact that business owners pay to steer those reports.) ""Trending"" and Reality turn out to be TWO VERY DIFFERENT THINGS. They never see anything until it is too late. Obama's record-low sub-39% Poll numbers have more to do with the out-of-touch White House staff he hired than the man himself. American's need to write their leaders and tell them what is really going on. Even better, Americans need to be the leaders and run for

office and make these changes. Creating social unrest for profit was only supposed to be Matt Drudge's job, according to Senator Cruz; but the public transit industry is now contributing to civil unrest as much as a Berkeley student agitator. The new American consumer is aware, mad as hell and they have stood up and proven that they really are ""not going to take it anymore"". Corporations that don't, rapidly, change their business plans to acknowledge people as humans, and not as cattle, are going to rapidly wither and pass away. Mid-Term election campaign managers are, in many cases, completely ignoring the ""Hipster Vote"". They have missed the fact that more of their base just died, or became senile, than ever before in history. Mid-Term elections could bring another kind of shocker. It is much harder to fool the new American voter. It may actually take honesty (OMFG) to win elections,now! Plane Makers Add Seats to Help Airlines Boost Profits ...

***** Federal funds flow to clean-energy firms with Obama administration ties By Carol D. Leonnig and Joe Stephens, Washington Post Sanjay Wagle was a venture capitalist and Barack Obama fundraiser in 2008, rallying support through a group he headed known as Clean Tech for Obama. Shortly after Obama's election, he left his California firm to join the Energy Department, just as the administration embarked on a massive program to stimulate the economy with federal investments in clean-technology firms. Following an enduring Washington tradition, Wagle shifted from the private sector, where his firm hoped to profit from federal investments, to an insider's seat in the administration's \$80 billion clean-energy investment program. He was one of several players in venture capital, which was providing financial backing to start-up clean-tech companies, who moved into the Energy Department at a time when the agency was seeking outside expertise in the field. At the same time, their industry had a huge stake in decisions about which companies would receive government loans, grants and support. During the next three years, the department provided \$2.4 billion in public funding to clean-energy companies in which Wagle's former firm, Vantage Point Venture Partners, had invested, a Washington Post analysis found. Overall, the Post found that \$3.9 billion in federal grants and financing flowed to 21 companies backed by firms with connections to five Obama administration staffers and advisers. Obama's program to invest federal funds in start-up companies ? and the failure of some of those companies ? is becoming a rallying cry for opponents in the presidential race. Mitt Romney has promised to focus on Obama's ?record? as a ?venture capitalist.? And in ads and speeches, conservative groups and the Republican candidates are zeroing in on the administration's decision to extend \$535 million to the now-shuttered solar firm Solyndra and billions of dollars more to clean-tech start-ups backed by the president's political allies. White House officials stress that staffers and advisers with venture capital ties did not make funding decisions related to these companies. But e-mails released in a congressional probe of Obama's clean-tech program show that staff and advisers with links to venture firms informally advocated for some of those companies. David Gold, a venture capitalist and critic of Obama's investments in clean tech, said that even if staffers had been removed from the final decision-making, they had the kind of inside access to exert subtle influence. ?To believe those quiet conversations don't happen in the hallways ? about a project being in a certain congressman's district or being associated with a significant presidential donor, is naive,? said Gold, who once worked at the Office of Management and Budget. ?When you're putting this kind of pressure on an organization to make decisions on very big dollars, there's increased likelihood that political connections will influence things.? Energy Department spokesman Damien LaVera said the companies won awards based on merit, not political connections. He said the staffers and advisory board members reviewed by the Post had no role in funding decisions, nor did they have any personal financial stake in the companies. One of those administration advisers had first been appointed to his position by the Bush administration, LaVera said. ?As is evident from the 10-month long congressional investigation into Solyndra, Energy Department loans and grants are decided on the merits,? White House spokesman Eric Schultz said. ?What's more, these are all professionals with expertise in clean-energy science, finance or both ? but none of them play a decisional role in DOE awards and none of them are in positions of regulating the industry.? Venture capitalists arrive During the 2008 campaign, the venture capital industry lined up behind Obama as he vowed to spur clean-technology development. Obama raised more than twice the venture capital contributions of his opponent, Republican candidate John McCain. Known for making billions of dollars in the 1990s on Internet startups, venture firms in 2006 were rapidly switching to invest in clean tech. Legendary venture partner John Doerr, a leading early investor in Google and Amazon, that year called the clean-energy sector the next great profit center, ?the mother of all markets.? With the 2008 economic crisis, new private investment in fledgling clean-tech companies withered. But passage of the \$787 billion stimulus package offered new opportunities to launch and grow those firms, with \$80 billion set aside for clean energy and energy-efficiency efforts. Suddenly flush with cash, the Energy Department was under orders to ramp up quickly and get money out to promising companies. The administration tapped industry players to take on key Energy Department roles, both as agency staffers and outside advisers on agency boards. Wagle, then 38, took a job as a stimulus adviser in the agency's recovery act office. Officials say his role did not involve making funding decisions for companies tied to Vantage Point. Private investors cheered the administration for hiring industry colleagues. In a 2009 article, venture firm leader Jim Matheson said Wagle, along with another Washington-bound venture capitalist, David Danielson, would help ensure commercial successes from ?the steady flow of dollars coming out of D.C.? Wagle's former employer had invested in several companies that received federal money: Brightsource,

which won a \$1.6 billion federal loan for a solar-generating plant; Tesla Motors, which won a \$465 million loan to build electric cars; and biofuels firm Mascoma, which in 2011 received \$80 million for a Michigan ethanol plant. Wagle recently returned to the California venture capital industry to work as an investor and clean-tech adviser. Reached at his home, he declined to comment. Vantage Point Venture Partners, renamed Vantage Point Capital Partners, did not respond to requests for comment. Danielson, formerly of General Catalyst, joined an Energy Department office whose mission was to fund breakthrough energy technologies. Officials say he had no role in arranging \$105 million in funding for three General Catalyst portfolio firms. David Sandalow, a former Clinton administration official and Brookings Institution fellow, had been paid \$239,000 for consulting work for a venture capital firm, Good Energies, in 2008 before joining the Energy Department as assistant secretary for policy and international affairs, his disclosure form shows. A Good Energies-backed firm, SolarReserve, won a \$737 million agency loan. Officials say Sandalow played no role in arranging it and LaVera, speaking on behalf of Sandalow, said the assistant secretary had no financial interest in Good Energies or SolarReserve. The Energy Department came under criticism from Republicans earlier this year when agency e-mails raised questions about a possible conflict of interest involving Steven J. Spinner, a former department loan adviser who disclosed that his wife worked for Wilson Sonsini, a Silicon Valley law firm that handled funding applications for several clean-tech companies. Wilson Sonsini's clean-tech clients reaped \$2.75 billion in Department of Energy grants and financing, the Post analysis found. One of the firm's clients was Solyndra. Republicans have accused the Obama administration of favoring the risky company because its leading investor was tied to a major Obama donor. Wilson Sonsini had its own connection to the White House: the firm's chief executive, John Roos, was a top bundler for Obama's 2008 campaign. Before joining the administration, Spinner, a venture investor and start-up adviser, also helped raise \$500,000 for Obama as a member of his national campaign finance committee. He has pledged to raise a half-million dollars or more for Obama's reelection effort. Once inside the agency, Spinner agreed not to discuss loan matters involving Wilson Sonsini clients. But e-mails show he urged career officials to resolve delays in the Solyndra loan, and also defended the financial prospects of Solyndra to a White House deputy before its federal loan was approved. Spinner left the Energy Department in the fall of 2010. He did not respond to requests for comment. The department said Spinner was not involved in the company's application review or loan approval. A Wilson Sonsini spokesman said the firm does not believe its employment of Spinner's wife influenced Energy Department decisions. Investors as advisers Thousands of agency and White House e-mails released as part of the Solyndra investigation show that venture capitalists who held advisory roles with the Energy Department were given access to Obama's top advisers. Steve Westly, an Obama fundraising bundler for both his 2008 and 2012 campaigns, is a founder of the venture firm Westly Group and served part time on Energy Secretary Steven Chu's advisory board. The e-mails show that Westly communicated with senior White House officials, including Obama adviser Valerie Jarrett, voicing concerns about the president's planned appearance at Solyndra. Westly's firm also fared well in the agency's distribution of loans and grants. Its portfolio companies received \$600 million in funding. LaVera said Westly had no role in the funding decisions. David Prend also surfaces in the e-mails as a venture capital investor who had White House access. His firm, Rockport Capital Partners in Boston, was among the investors in Solyndra, with a 7.5 percent stake. The e-mails show him asking a White House aide to "help get the word out" about Solyndra and asking for help on another Rockport portfolio company. They show he and a group of venture capital investors met with new White House climate czar Carol Browner before Solyndra's loan was tentatively approved, and the White House confirmed that the subject of the company came up briefly. Prend had worked closely with the Energy Department since the Bush administration, when he was first appointed to an advisory panel for the National Renewable Energy Laboratory. He continued to advise the Obama administration, while also chairing a panel that helps advise the department on solar technologies. The agency provided \$550 million to several firms in which Rockport had invested at the time. The department gave an additional \$118 million grant to an electric-car battery company, Ener1, that was partnered with Rockport portfolio car company Think. (Rockport soon after invested in Ener1.) Ener1 filed for bankruptcy protection last month. LaVera and Chad Kolton, a Rockport spokesman, said that Prend's advisory role was separate from stimulus programs and had no bearing on agency decisions about companies backed by Rockport. Research editor Alice Crites contributed to this story.

Why did intelligence agency assassins and drug smugglers need to work

for Elon Musk? The strange story of the tiny CIA operation called In-Q-Tel

In-Q-Tel had over five tons of cocaine on their airplanes called, per FAA records, "Cocaine One" and "Cocaine Two"

They are a "501 C 3 non-profit charity" yet they run hit-jobs, work with murderers, attack companies for a fee, manipulate politics and do other dirty tricks work.

What do they know about the death of Rajeev Motwani, Gary D. Conley and others?

Why was the head of the largest digital drug smuggling operation: Silk Road, also working for Musk?

The Corbett Report, Alex Jones and many indie news outlets call them a "corrupt, unregulated private spy operation".

POTOMAC WATCH - Vulture Capitalism? Try Obama's Version. A profit-driven economy is preferable to one run by political favoritism. President Obama is no fan of Mitt Romney-style "vulture" capitalism. So what's his alternative? All those Republicans grouching about the president's attacks on private equity might instead be seizing on this beautiful point of contrast. Mr. Obama, after all, is no mere mortal president. Even as he's been busy with the day job, he's found time to moonlight as CEO-in-Chief of half the nation's industry. Detroit, the energy sector, health care?he's all over these guys like a cheap spreadsheet. Like Mr. Romney, Mr. Obama has presided over bankruptcies, layoffs, lost pensions, run-ups in debt. Yet unlike Mr. Romney, Mr. Obama's C-suite required billions in taxpayer dollars and subsidies, as well as mandates, regulations, union payoffs and moral hazard. Don't like "vulture" capitalism? Check out the form the president's had on offer these past three years: "crony" capitalism. The case study is the solar-panel maker Solyndra, which was part of a green-energy sector that even by 2009 was flailing. The president took one look at the industry's utter lack of both profits and sellable products, and yelled "that's my baby!?" The stimulus bill shipped tens of billions of dollars to the Energy Department to pour into green companies via grants and loans. It promised five million jobs. The Energy Department's nuclear physicists were admittedly a bit flummoxed by the whole P&L thing, but they got their venture-capitalism groove on and in 2009 handed Solyndra a \$535 million loan guarantee. Even prior to disbursement, government accountants were warning that Solyndra was a lemon, but the White House didn't worry. After all, the IRS had only recently and conveniently tripled the tax credit (to 30%) for buyers of Solyndra products, which the government figured would help grease their start-up's skids. Unfortunately, the physicist-CFOs overlooked that whole "global energy market" factor?easy mistake! Foreign competitors were already piling into Solyndra's niche. Unable to compete, the firm went ba"

Publicly Revealed: Scientists Can Now Beam Messages and Thoughts Into Peoples Heads "Scientist transmits message into the mind of a colleague 5,000 miles away using brain waves"

Scientists used EEG headsets to record electrical activity in the brain
Electrical activity from words ?hola? and ?ciao? were converted into binary
"The greeting was sent from Thiruvananthapuram, India to Strasbourg"
"A computer translated the message and then used electrical stimulation to implant it in the receiver?s mind, appearing as specific flashes of light "
"According to the researchers, this is the first time humans have sent a message almost directly into each other?s brains "

By Ellie Zolfagharifard for MailOnline

Brain-wave sensing machines have been used to ?telepathically? control everything from real-life helicopters to characters in a computer game.

Now the technology has gone a step further by allowing someone in India to send an email to his colleague in France using nothing but the power of his mind.

"The researchers used electroencephalography (EEG) headsets to record electrical activity from neurons firing in the brain, and convert the words ?hola? and ?ciao? into binary."

"The researchers used electroencephalography (EEG) headsets which recorded electrical activity from neurons firing in the brain to convert the words ?hola? and ?ciao? into binary. In EEG, electrical currents in the brain are linked with different thoughts that are then fed into a computer interface"

"In EEG, electrical currents in the brain are linked with different thoughts that are then fed into a computer interface. This computer analyses the signal and controls an action."

"In the latest study, published in Plos One, researchers decided to replace the computer interface with another brain to receive the signals."

"In the initial test, the greeting was sent from a volunteer in Thiruvananthapuram, India to Strasbourg, France."

"There, a computer translated the message and then used electrical stimulation to implant it in the receiver's mind. "

This message appeared as flashes of light in the corner of their vision.

"In France, a computer translated the message and then used electrical stimulation to implant it in the receiver's mind that appeared as flashes of light in the corner of their vision"

The light appeared in sequences that allowed the receiver to decode the information in the message.

"Researchers then conducted a similar experiment in which thoughts were successfully transmitted from two participants, one in Spain and one in France."

SCIENCE BEHIND MIND CONTROL

"The human brain is made up of billions of active neurons that have around 105,600 miles (170,000 km) of combined length."

"Every time you have a thought, your brain produces weak but distinct electrical signals corresponding to it."

"The electrical impulse is generated by the chemical reaction between neurons, which can be measured."

"Recording and deciphering those signals is called electroencephalography (EEG), and it has been medically possible since 1924."

"The second experiment resulted in a total error rate of just 15 per cent, with a 5 per cent on the encoding side and roughly 11 per cent on the decoding."

"The technology was developed as part of a collaboration between the University of Barcelona in Spain, Axilum

Robotics in France, Harvard Medical School and Starlab Barcelona in Spain. "

"According to the researchers, this is the first time humans have sent a message 'almost directly' into each other's brains."

"'We anticipate that computers in the not-so-distant future will interact directly with the human brain in a fluent manner, supporting both computer- and brain-to-brain communication routinely,' they wrote."

"Human-to-brain technology is also gaining traction. In May, German scientists showed how seven pilots used mind control to fly with 'astounding accuracy."

"In a simulation, several of the pilots managed the landing approach under poor visibility, while one was able to land a few metres from the runway's central line."

"Meanwhile, in June, University of Oregon researchers unveiled a device that claimed to be able to monitor memories in near real time to see what a person is thinking."

"The receiver's brain (pictured) was stimulated (areas shown by dots) to see sequences of light that could be decoded into a message. Researchers then conducted a similar experiment in which thoughts were successfully transmitted from two participants, one in Spain and one in France"

" Evolving Story... For more, see this link: <http://www.thenewsdaily.org/?p=2733> Crony's charged as fronts for Silicon Valley Campaign Investors kickback scheme Said Donna from the Reporting Team: ""While this is certainly a controversial topic, There is nothing here that can't be settled in front of the American Public before a Special Prosecutor in Washington, DC. Elon Musk, Dianne Feinstein, David Axelrod and all the rest can blather on and on, with their distraction spin, hype and bluster, but the facts will speak for themselves. If these people have nothing to hide and nothing to fear, as they say, then let's see them sign a letter of support for the appointment of a Special Prosecutor to review these charges! To continue to sabotage the appointment of a Special Prosecutor is to admit guilt. Everyone is saying this is ""the most incompetent Administration"" in history but was it incompetence or sneakiness that got them in trouble ""

Did Obama Get played? Was he used as a front-man for a Silicon Valley Conspiracy? "He can talk angels out of their halos. He had the look, the poise and the cache'..."<http://www.thenewsdaily.org/obama-get-played-used-front-man-silicon-valley-conspiracy/> 8/18/2014 THE EDITORS & WIKI MEMBERS Uncategorized "BORDER issues, Did Obama Get played? Was he used as a front-man for a Silicon Valley Conspiracy?, DOE, hillary clinton, Obama, Scandals, solyndra, Steven Chu" publish ccft_post_comment_title: panels_data: Array kopa_fastnewsight_total_view: 5

"Was he chosen to be the head of a campaign backer plot? Did a greedy group of billionaires use him as a front man and then abandon him? The in-house guys that quered him up: Emanuel, Rattner, Plouffe, Axelrod, Gibbs, Carney, Daly and a few others seem to have bailed out of the White House as soon as the Fix was in. The new Book: The Big Fix, names the names in great detail. It seems to get pretty close to the whole story but there is more to come. The recent epic series of DC screw-ups: (DOE Scandal, VA Scandal, Benghazi Scandal, Border Scandal, IRS Scandal, Massive TARP fraud scandal, Healthcare computer Scandal, Guns Scandal, etc, etc..) seem to all get a boiler-plate ""I didn't know that was happening"" response. It is as if the people who set the scandals up, did so in a particular manner to grab things up-front and had a ""to hell with the repercussions"" grab-and-run agenda. Is that why the last days of the Obama Empire have descended into chaos? I worked on Obama's campaign. I helped get the guy elected! I am distraught now. I have seen crooks in the White House. Many of us have seen crooked things in the White House. Rattner, the White House guy in charge of the Detroit bail-out was INDICTED FOR SECURITIES FRAUD. RAHM EMANUAL'S FINANCE GUY WAS ARRESTED FOR CORRUPTION. HELLO- Red flags anybody? One of the former White House staffers famously went viral on Twitter because he could not take the BS he was seeing in The West Wing. He is not alone, there are about 20 ex-White House people tweeting away their despair, under various pseudonyms. We have nobody to go to. Holder is on duty to protect the White House and will not allow any investigations. The new FBI head was put there by the White House. Who is left to go to? Nobody! I can tell you this. Obama means well but this is totally not his gig. He was kept in a bubble for a long time because the handlers did not want him waxing poetic on some topic and spilling the beans. I think he tries to do good stuff but people in the White House use him to do very bad, bad things for their personal interests on behalf of campaign backers and themselves. We need to start the OBAMA

RESIGNATION CLOCK... Biden must be dancing like a little girl, he is so excited... (D.- Former Iowa Campaign Staff.- Public Reporter)"

What is the HR protocol for hiring somebody in Washington these days?

"Every single major hire has quit or been fired under a cloud of malfeasance, corruption, incompetence or all of the above. Do they just pick the most incompetent person who says the words ""Green Energy"" or owns a yoga mat? What the hell? How can so many agency heads, and their senior staff have screwed up so many things, so badly? These are not only epic screw-ups, they are historical screw-ups. There has never been this many failed administrators in any administration. What is the root of the problem? Why is there this Tsunami of incompetence in the Capital? If there was a take-over conspiracy, as with all crimes, the criminals only think about the short term, quick gains, bail out and never consider the future. Maybe that DOES explain why everything is going to shiaat with the Administration, now. (PUBLIC REPORTER- Norman West)"

Is President Obama incompetent or lawless? |

"The president has discretion to adapt law enforcement to the needs of the times and to his reading of the wishes of the American people. Yet that discretion has a serious and mandatory guiding light -- namely, that the president will do so faithfully."

foxnews.com/opinion/2014/07/31/is-president-incompet...

Did a Silicon Valley VC have a ?Clean-Tech? whistleblower killed? The Strange Death of Clean-Tech CEO Whistle-blower Gary D. Conley

"Link to this story: <http://www.thenewsdaily.org/?p=1814> (Reporter/editors now contributing to this story: 127) - Friends, family and associates say he would not have killed himself - Was known to have met with reporters to disclose Silicon Valley corrupt cartel dealings - Was deeply involved in Silicon Valley Clean-Tech circle - Worse case scenario: ""What would an insane, ego-maniacal Silicon Valley billionaire campaign backer do to keep his \$200 Billion U.S. Treasury campaign-cash-for-DOE-CleanTech-loans scam quiet " - Nearby area crime-scene surveillance tapes ""missing"" - Are multiple other Silicon Valley-related deaths part of an attempt to ""close the loop"" and shut people up? - Were other VC's, or political figures, involved? - Investigators want to know if Silicon Valley deaths have political connections. Gary D. Conley, Stan Myers, Rajeev Motwani, Forrest Timothy Hayes, James D Johnston, Rory Johnson, Gabriel Magee, Karl Slym, William ?Bill? Broeksmit, Raveesh Kumra, Doug Bourn, Brian Finn and Andrew Ingram of Tesla, David Palecek; and over 32 more, were all connected to the same group of Silicon Valley/CleanTech/Car/Sachs/DOE industry suspects and died unexpectedly... - The odds of all of these people, with great medical plans, being connected to the same scandal, dying unexpectedly from strange and mysterious causes in relative time-frames are astronomical. If these are coincidences, they violate every actuarial calculation and all of the laws-of-averages. - Senate hearings and Hacker Convention expose use of undetectable heart-attack gas vapors, Cortisol suicide-causing agents and cardiac-targeted fine-focus electromagnetic pulse guns - Federal Investigators release HISTORICAL, UNPRECEDENTED expose letter confirming massive cover-ups! Most of Government's own watchdogs say they're stonewalled! (Below, near bottom) The big VC's didn't like the maverick approaches that Gary took. He did not play the Silicon Valley Frat boy brogrammer game. Unlike Silicon Valley, he treated women executives as equals and not as reception room eye candy like the other VC's. But Gary's biggest indiscretion was that he got past the VC's technology suppression and control system in the Valley. Time after time he created, launched and got funded one amazing new energy technology company after another. The Big VC's only want things funded that support their portfolio and they stop anything that is going to compete with it. As an example: The Valley VC's decided that they wanted a chemical called ?lithium Ion? to be the main chemical to power electric cars. Even though many other options

existed, they picked this one chemical because they had configured their investment plays in lithium mining, lithium processing, lithium cars and lithium batteries in each of their portfolios and then, even though they were billionaires, they made Congress give them many more billions of tax money just for this one chemical because they had monopolized it globally. Alas, Gary promoted a technology that competed with the Silicon Valley VC's at Solyndra and with all of their lithium plays. He had the metrics, working proof and opportunity to exceed their technology. First they tried putting a FULL MONTY on him but that didn't work out. It is now almost impossible to kill reporters and whistle-blowers without it getting recorded. Glenn Greenwald, and people like him, are now under so much surveillance that, if anybody did try to whack Mr. Greenwald, it would be caught on so many drones, microphones, laser scanners, cameras, tracking chips, window vibrators, IR chipcams, cell phones, bugs and other gadgets that the killers could never get away with it. Watch the TV show: Person of Interest. Everything in that show already exists today. Private investigators, taking another look at the case, have been sourcing new surveillance data sources to try to find out what really happened to Mr. Conley in the time period leading up to, and at, the shooting. History has proven: 1.) That Solyndra panels self-ignited and Lithium ion blows up when it gets banged, 2.) That Gary had better plans. 3.) That Gary's efforts conflicted with the plans of the Silicon Valley VC's. 4.) That Silicon Valley VC's will stop at nothing to get their way; politically, egotistically and industrially. Did he pay the ultimate price for his innovations and for speaking out? Ironically, Ford has announced that their new electric car will use the same type of solar optical concentrator on the roof of the car, as Gary's SolFocus developed, although Gary is no longer alive to participate in the profits. Many reporters find it "strange" that Steven Chu, the Secretary of Energy, who openly hated Hydrogen energy, was nominated and lobbied into office by opponents of hydrogen energy (who were investors in competing technologies) and that during Steven Chu's reign, a record number of hydrogen executives and companies died. Of course, it could all just be a coincidence. Forced suicide? Murder? Cover-up? Unusual number of coincidences? What do you think? ghj-de, sdLAT, rf-Den Gary Conley Dead: Silicon Valley Entrepreneur Dies Of Gunshot Wound A man found dead Sunday afternoon from a gunshot wound outside a Beale Air Force Base residential area was a well-known Silicon Valley entrepreneur and clean energy pioneer, according to base officials. Gary D. Conley, 52, whose most recent corporate venture, b2u Solar of San Jose and Gurgaon, India, was one of several energy-related companies he founded, was discovered by a Beale resident at about 1 p.m. Sunday. His body was found outside a parked car near the Vassar Lake Gate with a gun in close proximity, according to Brian Wagner, 9th Reconnaissance Wing spokesman. According to officials at the Air Force Office of Special Investigation, no foul play was involved. Conley's brother, who lives in Oklahoma, said he and other family members are mystified by details surrounding the body's discovery. "It's very perplexing," said Mark Conley, 55. "The circumstances don't seem to make much sense." [video width="640" height="360" mp4="http://www.thenewsdaily.org/wp-content/uploads/2014/08/SolFocus-CEO-Mark-Crowley.mp4"/>] Gary D. Conley served in the US Air Force from 1979-83, as did Mark Conley and their father before them, according to Mark Conley. "We're an Air Force family," said his sister, Michele Conley, 59, of Paradise Valley, Ariz., who said her brother was born at McClellan Air Force Base, about a half-hour south of where his body was found. B2u Solar frequently negotiated military and other government contracts, she said, which would explain his presence in the area. The energy entrepreneur was named Clean Energy Entrepreneur of the Year in 2005 by the National Renewable Energy Laboratory Growth Forum. He is credited with having founded SolFocus in 2005 in order to commercialize products created through its predecessor, a research company called H2Go. That firm, also founded by Conley, began with hydrogen-related energy projects and later switched focus to solar energy. "He was a genius," Mark Conley said. "He did some really amazing stuff." According to Michele Conley, he also was a gourmet cook. Christmas Eve featured an elaborate meal he prepared in their Saratoga home for his wife, Grace, and their two teenage sons. Gary D. Conley's profile on LinkedIn, an online professional networking site, lists flying, skiing, food, several branches of science, economics and hydroponics among his interests. B2u Solar, a small startup he founded in 2010, had solar demonstration projects in the works in China, and at the NASA Ames Research Center at Moffett Field in Mountain View, according to GigaOM, a technology news website. [video width="320" height="240" mp4="http://www.thenewsdaily.org/wp-content/uploads/2014/08/Interview-with-Gary-Conley_low.mp4"/>] Michele Conley said her brother had been expected to meet a friend at the former Castle Air Force Base outside Merced this week to help with a solar project there. She last saw him a month ago, she said. "He was having so much fun, traveling and doing so well," Michele Conley said. He recently bought a new car, which he did pretty regularly, she said. The three siblings had been raised by their mother, primarily in Ohio, according to Mark Conley. Their father had been killed when his Air Force fighter jet was shot down over

Vietnam in 1967, he said. "We didn't have any money," said Michele Conley of their upbringing. "Gary was always the whiz kid - the braniac." She described her brother as a self-made man. His suspected suicide, she said, is implausible to her. "He was not depressed. He was like a big kid - always excited about everything. It just makes zero sense," Michele Conley said. Harassed Stanley Meyers Associate Steps Forward ? PESN.com

"Aug 5, 2011 ? Mr. X claims to have been the individual that received the call at Aviation Development?s shop that Stanley Meyers had been murdered, and he

"http://www.pesn.com/2011/08/05/9501884_Harassed_St Stanley_Meyers_Associate_Steps_Forward/ ?
???????????????????? Call me old fashioned, but isn?t killing taxpayers, and their companies, because they won?t join your business monopoly, considered to be a bad thing these days? As of Jan. 1, 2014, Steven Chu?s actions, and those of his staff, have put over 118 companies out of business that might have otherwise survived, and every single one of those companies competed with Steven Chu?s Silicon Valley venture capital sponsors/buddies. Now there is an interesting coincidence! MT- MJ"

-Another Bizarre Google Key Player Death! Murders or just coincidence? NOT the first Silicon Valley DEATH-BY-HOOKER!

"Eric Schmidt sex penthouse, Gary Conley Dead, google executive murder, Rajeev Motwani"

Another Bizarre Google Key Player Death! The Silicon Valley Murders (or just coincidence)?

"Rajeev Motwani invented the mood manipulation and page ranking system that Google now uses as it?s key technology. According to many in Silicon Valley, Rajeev taught the technology to Google?s founders, who made ?Google? with the information. Then Rajeev, in perfect health, was found floating, dead, face-down in his Silicon Valley swimming pool (Breitbart similarity?). Conspiracy theorists say he was killed with a spy agency-class non-detectable cardiac arrest vapor (The existence of this kind of kill-vapor is now public knowledge) to avoid the exposure of the fact that Google is now using ?mood manipulation? for subliminal political voter manipulation. Cleantech Executive Gary Conley, a whistle-blower about, and enemy of, Google?s investors, was found with a bullet in his head in the backfields of a Northern California Air Force base. His family and friends say he would never have hurt himself. There are a number of other strange Google-related deaths? Anyway? As investigations on what Google is ?really? up to, close-in, the bodies keep piling up. Google Executives are known to love their kinky sex (Websearch: ?Eric Schmidt?s NY Sex Penthouse?) and hookers but this one takes the cake. Honey Trap? Mata Hari was famous for pretending to be a hooker and then killing her targets with ?accidental overdoses?, Death-by-hooker is one of the oldest tricks in the book. Sometimes the hooker?s job is just to get the target to pass out and then the ?WET WORK? guys come in and finish him off with the overdose and make sure he flat-lines. See THE DC MADAM story. She did staging for ?Honey Traps? and political hits and then she was suspiciously hung/terminated!:"

Suspected hooker's alleged heroin victim was Google exec

Evan Sernoffsky

1 of 4

"Police say Alix Catherine Tichelman, 26, killed a 51-year-old man by administering a lethal dose of heroin on his yacht in Santa Cruz, Calif., in November 2013. Tichelman was arrested July 4, 2014. Photo: Courtesy, Santa Cruz Police Department"

Prostitute accused of killing yacht-owning client with heroin

"(07-09) 10:37 PDT SANTA CRUZ ? A ?high-priced? prostitute from Folsom was behind bars Wednesday after police said she was responsible for the heroin overdose death of a regular client ? a Google executive whose body was found in November on his yacht in Santa Cruz. Alix Catherine Tichelman, 26, was arrested Friday after police lured her to the Santa Cruz area by posing as a customer and offering her \$1,000 for sex, authorities said. She was arrested on suspicion of murder, but Santa Cruz County prosecutors accused her of the lesser charge of manslaughter, along with counts of transporting drugs and destroying evidence. She made her first court appearance Wednesday and was being held on \$1.5 million bail. Tichelman is scheduled to return to court June 16 for arraignment, said Assistant District Attorney Rafael Vazquez. The victim, 51-year-old Forrest Timothy Hayes, died Nov. 23 on his 50-foot yacht, Escape, in the Santa Cruz harbor, according to Santa Cruz police Deputy Chief Steve Clark. According to an online memorial site, Hayes had worked at tech companies including Sun Microsystems, Apple and finally Google. He was born in Dearborn, Mich., was married 17 years and had five children, according to his obituary."

SILICON VALLEY SECRETS

" ?I was really devastated when I heard about it,? Todd Zion, who worked at Google for a short time under Hayes, told The Chronicle on Wednesday. ?He was a great boss. I never had a chance to thank him.? "

"An unidentified person wrote on the online memorial page, ?It is incredible to see the number of people Forrest touched. There are simply no words to describe this. I had the unique opportunity to work for Forrest at Apple and Google. He is one of the best bosses I have had ? caring and thoughtful.? In a press release, Santa Cruz police said Tichelman had an ?ongoing prostitution relationship? with the victim, met him the night he died and injected him with heroin. Footage from a security camera on the yacht showed Hayes ?suffering medical complications and going unconscious,? officials said. Rather than call for help from authorities, Tichelman allegedly gathered her belongings, including drugs and paraphernalia, and at one point stepped over Hayes? body to ?finish a glass of wine,? before lowering the blinds to conceal the body and leaving. Police said they had learned of a second case in another state with ?similar circumstances? and were investigating Tichelman?s possible involvement. The police press release said Tichelman ?works as a high-priced outcall prostitute and meets her clients through a website, ?Seeking Arrangements.? During interviews, Ms. Tichelman boasted of over 200 client relationships.?"

According to online profiles of Tichelman, she is from Atlanta, went to high school in Duluth, Ga., and studied journalism at Georgia State University. She called herself a makeup artist, a model and a dancer. A modeling page on Facebook associated with Tichelman contains dozens of pictures of her posing seductively in racy outfits. Santa Cruz police said they hurried to arrest Tichelman last week after learning that she might leave the area. On her Facebook page, Tichelman wrote June 30 that she was "coming home to the filthy, nasty, dirty south! Hoping to start the drive back to Atlanta at the beginning of next week. Can't wait to see everyone. It's celebration time y'all!"

Are they "cleaning up loose ends"?

Is this a "deadmen tell no tales" exercise?

"If these are all murders, is Eric Schmidt having people killed or are Google's investors having people killed or are the politicians that they swapped the kick-backs with having the people who know the whole story killed???? I'm confused."

"As we have all seen, hundreds of times, in the recent news: Insane, power mad, billionaires and Silicon Valley VC's will do anything, stop at nothing, lie like there is no tomorrow, and consider "the law" to be something-that-does-not-apply-to-them."

"Oh those Silicon Valley Illuminati, they are just little buggers aren't they

"Send in your links..., Let's discuss."

TT- Google

"We need to see the video on the yacht. Did she screw him, help him get high, figure her sex gig was over and leave because hookers just want to get their cash and get out of there? In that case: Alibi."

SUSPECTS?

"Did the video run on for a few hours afterwards, without being edited, and do we see anyone else enter? Can we prove the video was not edited? Where did the heroin come from? Him, or her

"Really, really want to see the yacht video.."

a prominent Washington DC official from 2000 to 2013 and notice the curves, relationships and spike points. It is a bit frightening. Plane crash, heart attack, hanging and jump are the most untraceable kill-types per Brazilian secret police. Per Tom Clancey: first you 'taint' the subject with a sex or money scandal then you whack them, then you get an erroneous toxins report filed, so people will think it was the 'victims fault' and not pay too much attention. TDS- Boston G"

" Suppression and Termination Technologies While this used to be all hush-hush, the glut of ex spies that have retired and authored spook books (see the vast number of examples on Amazon.com), along with the research for their own books conducted by Tom Clancy, Robert Ludlum and other authors, has put the whole 'Distinct Interdiction' ('DI' in the biz) industry out in public view. The main reasons people are 'off'd' in a scandal are: Suppression- To shut them up. Guilt- They kill themselves because they realize the horrible thing they did is about to be revealed. Frame-Ups- They are killed to make it look like they suicided out of guilt in order to steer suspicion away from the actual criminals. Secondary Intimidation- If a key player is suspected of considering leaking or confessing, a close member of their family is eliminated to break their will. During the Cold War the Russian spies mastered the craft of 'Distinct Interdiction' with acidic vapors that you could spray under a persons nose in a crowd (still in use today), hidden in a rolled up newspaper, and cause an undetectable heart attack; polonium or heavy metal poisoning which causes slow cancer-like death; and electromagnetic pulse waves which also caused an undetectable heart attack by interrupting the heart beat impulses. Suddenly withering away, over a matter of months, or unexpected heart attacks are good indications of foul-play in these sorts of cases. Until recently, all of these kill methods were undetectable, but modern medicine has thrown a wrench in the works. All of the previously known kill methods leave nano-evidence, micro-cellular traces and biological degradation effects which new genome science, DNA processing equipment, molecular imaging and other recent science advances can, now, detect and document. These techniques are still used in third-world countries but modern science labs, that even consumers can contract, can too easily source the culprits. In the developed world; hair, tissue, saliva and blood samples of the deceased can now tell the true cause of death. Planes are easy for spies to crash by manipulating GPS and landing instrumentation, Tom Clancy has told listeners at book readings. A plane is a device constantly fighting gravity. Bad guys help gravity along and much of the evidence is lost at sea or in a fireball in a farmers cornfield. The plane crash scenario is becoming passe, though, and is now frowned upon by most spy groups as it, too, has become more detectable. A- NY Times ??????????????-"

"-Russian, and other, spy agencies use Cortisol overdose to make trouble-makers kill themselves! Making murder look like suicide!"

30 WednesdayJul 2014

Posted by EDITORS in Uncategorized

÷ Leave a comment

"Tags Alexander Litvinenko death, and other, Russian, russian spies, spy agencies use Cortisol overdose to make trouble-makers kill themselves! Making murder look like suicide!"

"Russian, and other, spy agencies use Cortisol overdose to make trouble-makers kill themselves! Making murder look like suicide!"

"By getting doctors, who are on the take, to change a target?s regular medication, diet or food source or by planting drugs on their sheets to be absorbed by the skin. Bad guy spies can make you kill yourself so their hands are, apparently, clean. Per The Telegraph: Researchers at John Hopkins University in Baltimore, US, found that variations in a single gene can be used to predict if someone is likely to take their own life. Sarah Knapton, Science Correspondent reports that A blood test that can predict whether someone may attempt suicide has been developed by scientists in a breakthrough which could prevent hundreds of deaths and explain hundreds of political and journalist murders that were, at first, thought to be suicides. In addition to non-detectable Cardiac Arrest gasses, that spies are now known to use, they have this other, more insidious tool."

American researchers have found that variations in a single gene can be used to predict if someone is likely to take their own life.

Those mutations can be spotted through a simple blood test which could allow therapists or doctors to intervene before it is too late.

"It could be useful for screening soldiers before they enter warzones, or checking their risk of suicide on their

return, the scientists say."

"Researchers at John Hopkins University, in Baltimore, Maryland, found that the gene SKA2 stopped functioning correctly in people at risk of suicide."

"The gene is responsible for keeping levels of cortisol – the stress hormone – under control. Suicide is a major preventable public health problem, but we have been stymied in our prevention efforts because we have no consistent way to predict those who are at increased risk of killing themselves," says study leader Dr Zachary Kaminsky, an assistant professor of psychiatry and behavioural sciences. "With a test like ours, we may be able to stem suicide rates by identifying those people and intervening early enough to head off a catastrophe." The blood test managed to predict those with the most severe risk of suicide with 90 per cent accuracy. They could also spot if someone had already attempted suicide with 96 per cent accuracy, simply by looking at the levels of SKA2. The SKA2 gene is found in the prefrontal cortex of the brain, and is involved in preventing negative thoughts and controlling impulsive behaviour. If there isn't enough SKA2, or it is altered in some way, the body cannot control levels of cortisol. Previous research has shown that people who attempt suicide or who take their own lives have large amounts of cortisol in their systems. A test could allow doctors or psychologists to place patients on "suicide watch" and restrict their access to drugs or equipment which they could use to end their own life. Dr Kaminsky said it could also help doctors know whether to give medications which are linked to suicidal thoughts. "We have found a gene that we think could be really important for consistently identifying a range of behaviours from suicidal thoughts to attempts to completions," Kaminsky said. "We need to study this in a larger sample but we believe that we might be able to monitor the blood to identify those at risk of suicide." The research was reported in the American Journal of Psychology. Bottom line: If you are doing something political and you are feeling "kinda off" get your Cortisol levels checked in your blood. Was the Reddit Guy "Cortisol"?

"Tags Alexander Litvinenko death, and other, Russian, russian spies, spy agencies use Cortisol overdose to make trouble-makers kill themselves! Making murder look like suicide!"

"Russian, and other, spy agencies use Cortisol overdose to make trouble-makers kill themselves! Making murder look like suicide!"

"By getting doctors, who are on the take, to change a target's regular medication, diet or food source or by planting drugs on their sheets to be absorbed by the skin. Bad guy spies can make you kill yourself so their hands are, apparently, clean. Per The Telegraph: Researchers at John Hopkins University in Baltimore, US, found that variations in a single gene can be used to predict if someone is likely to take their own life. Sarah Knapton, Science Correspondent reports that A blood test that can predict whether someone may attempt suicide has been developed by scientists in a breakthrough which could prevent hundreds of deaths and explain hundreds of political and journalist murders that were, at first, thought to be suicides. In addition to non-detectable Cardiac Arrest gasses, that spies are now known to use, they have this other, more insidious tool."

American researchers have found that variations in a single gene can be used to predict if someone is likely to take their own life.

Those mutations can be spotted through a simple blood test which could allow therapists or doctors to intervene before it is too late.

"It could be useful for screening soldiers before they enter warzones, or checking their risk of suicide on their return, the scientists say."

"Researchers at John Hopkins University, in Baltimore, Maryland, found that the gene SKA2 stopped functioning correctly in people at risk of suicide."

"The gene is responsible for keeping levels of cortisol ? the stress hormone ? under control. ?Suicide is a major preventable public health problem, but we have been stymied in our prevention efforts because we have no consistent way to predict those who are at increased risk of killing themselves,? says study leader Dr Zachary Kaminsky, an assistant professor of psychiatry and behavioural sciences. ?With a test like ours, we may be able to stem suicide rates by identifying those people and intervening early enough to head off a catastrophe.? The blood test managed to predict those with the most severe risk of suicide with 90 per cent accuracy. They could also spot if someone had already attempted suicide with 96 per cent accuracy, simply by looking at the levels of SKA2. The SKA2 gene is found in the prefrontal cortex of the brain, and is involved in preventing negative thoughts and controlling impulsive behaviour. If there isn't enough SKA2, or it is altered in some way, the body cannot control levels of cortisol. Previous research has shown that people who attempt suicide or who take their own lives have large amounts of cortisol in their systems. A test could allow doctors or psychologists to place patients on ?suicide watch? and restrict their access to drugs or equipment which they could use to end their own life. Dr Kaminsky said it could also help doctors know whether to give medications which are linked to suicidal thoughts. ?We have found a gene that we think could be really important for consistently identifying a range of behaviours from suicidal thoughts to attempts to completions,? Kaminsky said. ?We need to study this in a larger sample but we believe that we might be able to monitor the blood to identify those at risk of suicide.? The research was reported in the American Journal of Psychology. Bottom line: If you are doing something political and you are feeling ?kinda off? get your Cortisol levels checked in your blood. Was the Reddit Guy ?Cortisol?d?

Most of Government?s Own Watchdogs Say They?re Stonewalled

"Melissa Quinn / @MelissaQuinn97 / August 07, 2014 / 0 comments"

"A joint complaint from 47 of 73 inspectors general went to the House Oversight and Government Reform Committee, which meets in this hearing room. (Photo: Oversight and Reform Committee)"

"More than half of the federal government?s inspectors general have joined to lodge a formal complaint that the Obama administration places ?serious limitations? on their ability to uncover waste, fraud, and abuse. A total of 47 of the 73 government watchdogs sent the unprecedented letter to leaders of two congressional committees, Fox News reported. In their complaint, the inspectors general say:"

"Agency actions that limit, condition, or delay access thus have profoundly negative consequences for our work: they make us less effective, encourage other agencies to take similar actions in the future, and erode the morale of the dedicated professionals that make up our staffs."

"The watchdogs include IGs from the National Security Agency, Department of Homeland Security, and Department of Justice. They wrote Tuesday to the House Oversight and Government Reform Committee and the Senate Homeland Security and Governmental Affairs Committee. They call on the oversight leaders to reaffirm the commitment of Congress to helping IGs combat waste, fraud, and abuse, and to exert ?all available powers to enforce? access to agencies that refuse to comply. Government bureaus, the IGs write, typically prevented them from obtaining relevant information by calling it ?privileged.? These restrictions, they add, risk ?leaving the agencies insulated from scrutiny and unacceptably vulnerable to mismanagement and misconduct ? the very problems that our offices were established to review and that the American people expect us to be able to address.? Hans von Spakovsky, senior legal fellow at The Heritage Foundation, told The Daily Signal that the IGs? letter is both unprecedented and telling:"

This unprecedented complaint by a majority of the federal government's inspectors general that the Obama administration is obstructing their ability to investigate corruption shows just how far the administration is willing to go to hide its wrongdoing.

The IGs describe three specific instances in which government agencies would not give them access to records and other information needed to do their oversight work properly:

The Peace Corps refused to provide records of reported sexual assaults that were needed for an investigation into how the agency handled such cases.

"In a statement to Fox News, a Peace Corps spokeswoman reaffirmed the agency's commitment to working with the inspector general to ensure rigorous oversight while protecting the confidentiality and privacy of volunteers who are sexually assaulted.

The Department of Justice would not produce three separate reviews until officials learned that the documents would be of assistance to the agency's leadership.

"DOJ spokesman Brian Fallon told Fox that the inspector general received all information requested, but that because the documents at issue included grand jury material, credit reports, and other information whose dissemination is restricted by law, it was necessary to identify exceptions to the law to accommodate the inspector general's request.

The Environmental Protection Agency's Chemical Safety and Hazard Investigation Board refused to provide requested documents during an investigation.

"House Oversight Chairman Darrell Issa, R-Calif., said of the 47 IGs' letter:"

"If there is anyone who should have transparency [from the government], it should be the watchdogs inside the government working for the president."

"Because many IG reports and activities are not public until their completion, Issa said, "some of the best examples of obstruction probably are the ones the IGs don't want to say in a public format." Inspectors general played a crucial role in investigating allegations that the Internal Revenue Service targeted tea party and other conservative groups seeking tax-exempt status. They also identified internal weaknesses at the Export-Import Bank. Inspectors general for both the IRS and the Export-Import Bank agencies signed the letter. Von Spakovsky, co-author of a book about Attorney General Eric Holder's Justice Department, said the allegations by the agency's inspector general are notable. He told The Daily Signal:"

The complaint by the Justice Department's IG is particularly concerning and very revealing. Eric Holder has no hesitation in abusing his power to prevent the public from finding out about the rank politicization of justice and the attorney general's corrupt exploitation of his authority as the chief law enforcement officer of the United States.

"In the wake of the Watergate scandal, Congress in 1978 passed the Inspector General Act establishing the initial 12 IG offices. The law stipulates that each official watchdog has "complete, unfiltered, and timely access to all information and materials available to the agency that relate to that inspector general's oversight activities, without unreasonable administrative burdens," the letter to the congressional committees states. Issa, saying "there has never been a letter even with a dozen IGs complaining," called the letter unprecedented. He added:"

"This is the majority of all inspectors general saying not just in the examples they gave, but government wide, they see a pattern that is making them unable to do their job."

The Oversight Committee chairman said he intends to hold hearings to delve into issues raised by the IGs' letter when lawmakers return to Washington in September. This post has been updated. Read the 47 IGs' letter: IG Access Letter to Congress

Who's Tesla's Bitch? THE LIST:

"(Draft 1.5 - Constantly updated) Which media outlets cover-up Tesla Motors misdeeds and abuses? Which ones are run, or directed, by Tesla's investors seeking to manipulate stock values? Let's track, chart and document which media outlets are willfully smoke-screening Tesla Motors. Which outlets publish counter-stories when other outlets publish negative disclosure about Tesla to try to cover-up, or flood-out, the Tesla issues and charges? Recently, when Elon Musk's other company: Space X, started crashing and secretly laid off a huge staff count (they are now being sued over this) they ALICE alerts went out with the ""tell them nothing-to-see-here"" message. This began to reveal the GameChangers news spin-synchronization scandal now disclosed by the Media

Trackers group, and others. A lawsuit is in preparation to sue each of the writers individually, and as a group, for conspiracy to engage in stock fraud. Tesla's employees and records show that Tesla's actual circumstances have always been far different from what these reporters stated in their synchronized media manipulations. This has precedent as grounds for conspiracy fraud and securities fraud. Emails and alerts show that reporters were asked to spin-synchronize and coordinate ""BS stories"" and ""smoke screen stories"" at times when known negative news about Tesla was coming out. Because the reporters were informed of different circumstances than what they wrote, and some of them hold stock in Tesla, and related ventures, direct intent to defraud can be proven and their personal assets attached for recovery in the event of a jury award. Some reporters are compensated by Tesla's IR Department, PR contractors, founders, VC and banking groups with either cash, discounts, tickets, jobs, advertising contracts, sex workers, meals, travel and/or political access. Media Tracker and a number of other groups have had all of the companies, and individuals on tracking systems and can now metricize and quantify who did what, when. Who conspired and coordinated what and who wrote the truth and who coordinated lies. Send in your submissions... Which outlets now have documented tracking evidence, that can be exhibited in court?:"

"-- Google (Investors) - Hundreds of online news outlets - Google has purchased, or acquired over 40% of internet traffic and can now delete, or dead-end, information it does not like, before you can see it. This is a violation of Freedom of Speech (aka: The First Amendment) - Also via web routing manipulation"

"-- Hearst Communications (Investors) - SFGate.com and hundreds of ""media websites"" - 15 daily and 34 weekly newspapers including - Houston Chronicle - San Francisco Chronicle - San Antonio Express-News - Albany Times Union - Hundreds of magazines around the world, including - Good Housekeeping - Cosmopolitan - ELLE - O Magazine - The Oprah Magazine - 29 television stations, which reach a combined 18 percent of U.S. viewers; ownership in leading cable networks, including Lifetime, A&E, HISTORY and ESPN; significant holdings in automotive, electronic and medical/pharmaceutical business information companies - a 50 percent stake in global ratings agency Fitch Group - Internet and marketing services businesses - television production - etc..."

-- Gawker Media (White House Character Attack Conduit) - Gawker - Gizmodo - Jalopnik - Kinja - Deadspin - Kotaku - Jezebel - Valleywag - Lifehacker - 109 etc...

"-- The A.L.I.C.E. Alliance (Investor-Synchronized Reporters) - Stands for: American Legislative and Issue Campaign Exchange - 1400 coordinated reporters using the ""Alice News Alerts"" in order to seek to cover up campaign backer crimes with synchronized story releases that all magically sound like they got the same concept and phrasing at the same time, include: - The top two political reporters for The Huffington Post - A Reuters reporter - The editor of The Nation magazine - A producer for Al Jazeera America television - A U.S. News & World Report columnist - Approximately two dozen Huffington Post contributors - All of ""Gamechanger Salon"" - Sally Kohn, formerly a Fox News contributor, now works for CNN - Amanda Terkel, the ?Senior Political Reporter and Politics Managing Editor at The Huffington Post - The Huffington Post?s Washington bureau chief, Ryan Grim. - A former New York Times freelance columnist who now works as an energy and commodities reporter for Thomson Reuters is also a member of Gamechanger Salon. - Anna Louie Sussman is listed as an ?investigative reporter and journalist? on the Gamechanger Salon membership list, and while her beat focuses on energy issues, she has also writes about ?local and international human rights and social justice issues? according to her website. - Katrina vanden Heuvel is the editor and publisher of The Nation magazine, a prominent and well-known periodical of leftwing political and social thought. She is also a member of Gamechanger Salon and a regular opinion writer for the online edition of The Washington Post. - Lisa Graves, who leads the Madison, Wisconsin-based Center for Media and Democracy, is also a member of Gamechanger Salon, and ? according to e-mails reviewed by Media Trackers ? regularly promotes material developed by CMD to attack ALEC and the

right-of-center lawmakers who tend to make up the majority of ALEC's active legislative membership. - Vanden Heuvel suggested in her column that liberals support the efforts of the American Legislative and Issue Campaign Exchange ? ALICE (a leftwing counterpart to ALEC) ? and the Progressive States Network. - Jordan Flaherty was, as of last year, a producer for Al Jazeera America television. He is also listed as a member of Gamechanger Salon and for a while he occasionally blogged for The Huffington Post. - In addition to working at the left-leaning American Sustainable Business Council, David Brodwin writes an online column for U.S. News & World Report. - Etc..."

A campaigner is accusing Facebook of breaching data protection laws
Kashmira Gander

"A lawyer planning to sue Facebook in a class action over online privacy has limited the number of plaintiffs to 25,000 after he was overwhelmed with support."

"Campaigner and lawyer Max Schrems has accused Facebook Ireland - the Irish subsidiary of the website - of breaching European data laws, and violating users' rights by tracking internet activity on external sites, including the use of 'like' buttons. The lawsuit, organised via Mr Schrem's Europe-V-Facebook.org, also questions how Facebook analyses users through what it calls 'big data' systems. Mr Schrems claims the company supports the US secret service's Prism surveillance exposed by whistleblower Edward Snowden. The law suit, which is being launched against the New York-listed 1.3 billion user-strong social media giant, could be the largest class and privacy action ever taken. Mr Schrems is restricting the case to 25,000 people so each Facebook account can be verified. But he will continue to register the information of users who wish to join the action, who will be prioritised if the claim is expanded. Up to 7,000 users a day from more than 100 countries have registered their support for Schrems's David v Goliath legal challenge, which will take place in Austrian courts. "

10 surprising facts you didn't know about Facebook
1 of 10

Read more: Facebook manipulated users' moods in secret experiment Britain First's Facebook page taken down

for 'hate speech' Facebook will track users outside of the site

"Mr Schrems hopes to claim damages of 7500 euros (€397) per supporter. Last Friday, the number of people signing up peaked as a new user joined every six seconds."

Max Schrems begins petition against Facebook

"We have hoped for large support, but the number of participants in such a short time exceeded my most optimistic expectations," he said. Most plaintiffs are from Germany, where 5,287 Facebook users have signed up, while 944 users are based in the UK and only 162 from Ireland - as of 9am on Wednesday. Support for the campaign is also strong in Austria, with 3,712 users, the Netherlands, with 2,438, Finland, with 1,179, and Croatia with 1,106. Facebook has several weeks to respond to Mr Schrems's claims. An earlier landmark battle launched in Ireland to find out what Facebook tells US spy chiefs was referred to the European Court of Justice by a judge in Dublin last month. https://www.dropbox.com/sh/lt4wyz4bu4bcinw/AADVaWCHEodfoYoSxfs0_A4ia ?Said local, Andrew
Schwartz: ?this is another one of those politician kick-back schemes where they promise unicorns and then kill
the air, water and really, THE PEOPLE, of a whole region and, later, shrug their shoulders and say..uh, uh, well,
we didn?t know,,? Mr. Schwartz went on to say that he had researched the battery factory disasters in Asia and
found that there was ?vast documentation about the extensive deaths and permanent toxic poisonings? from
regions where lithium, and similiar, battery factories existed in the past. He claims Tesla is fully aware of the
lethal nature of their Task but that Elon Musk just wants to maximize his stock value without any care for the
potential loss of life and the potential for toxic ?lithium babies?. ?Those things will come much later, after Mr.
Musk has cashed out his stock?, said Schwartz. Said Mr. Schwartz: ?When it now only takes \$50,000.00 to buy a
Senator, and over 20 Senators have personal insider trading investments in these Tesla batteries, how can the
public even have a chance at fair treatment??, he continued, ?we can?t have these billionaires raping our
communities for profit and then walking away from the dead poisoned towns they leave behind. Tesla has been
proven to have lied, over and over again, nobody in their right mind can trust them to build this.? This battery
factory is so toxic that EVEN CHINA WON?T BUILD IT!!! "

"OVER 40 TOXIC CHEMICALS ARE USED IN ALL 5 OF THE TOXIC BATTERY TYPES TESLA AND PANASONIC ARE TRYING TO PUSH OFF ON SOME HAPLESS RUSTIC AMERICAN TOWNS. ALL 40 OF THESE CHEMICALS CAN GIVE YOU CANCER, LIVER DISEASE, DEFORMED BABIES & BRAIN DAMAGE. Panasonic has killed vast numbers of workers in Asia, is charged with 'cover-ups', has been sued for organized crime price fixing and dumping and you trust them to do this right? The controversy also involves the abuse of migrant workers in a part of the immigration/cheap labor scandal. "

Send in your links. Let's Discuss? TB-

"Lithium Ion Giga-Factories Kill Workers! Contact with, and breathing the chemicals causes Cancer, Lung Damage, Brain Damage!In ""Brain Damage""

"Tesla Fire Victims' and relatives demand answers from Tesla over hidden 'death trap' toxic smoke from Tesla car batteries.In """"blood for batteries""""

"'Lemon Law King' sues Tesla MotorsIn ""'Lemon Law King' sues Tesla"" "

The 500 trolls of Tesla Motors!

"Elon Musk has a massive amount of fake meat puppet social media accounts that he uses to create the false impression that there are ""no problems at Tesla Motors"" and that the fires, lawsuits, staff departures, investor departures, criminal charges, cartel charges, toxic smoke, cancer causing chemicals, DOE application fraud, factory workers on fire, ex-wife & girlfriend abuse stories, battery factory worker deaths, buyer homicide charges, Lemon Law litigation, Billionaire sex clubs, Tesla patents disclose lethal & conflagration potential, Mexican worker battery factory ""death camps"" plans, dangerous chemicals, political corruption and hundreds of other issues are ""keep walking, nothing to see here"" issues. "

"Ex-Tesla staff say that, in addition to the hundreds of hired ""meat puppet"" trolls that Musk has hired, in India, to watch the internet 24/7 for any mention of the word Tesla"" (so they can instantly bombard the comment section with ""A Tesla is Christ in the form of a car"" messages), Musk has 4 news scanning services that email him, and the trolls, any mentions of the company so that their greasy troll-like knobby fingers can leap into action in their dark little troll caves. Every comment section of every article about Tesla has been IP and sequence-route traced backed to the same Tesla-hired shills and trolls who login, comment after comment, under a massive number of fake accounts and identities. There is NO massive Tesla fanboy acclaim by millionaires sitting around blogging about the orgasmic joy of even thinking about a Tesla. There are only dour 17 year old bloggers in basements in Idaho and India collecting \$5.00 per post. But the biggest, hairiest, most wart-ridden Tesla troll of all, the one that towers above all trolls, is Tesla investor: Google. Google scrapes any negative Tesla press off of the internet and manually moves all positive troll Tesla press to the top of its search and news engine. This is cartel-level falsification of the stock market via coordinated manipulation of false information about a stock. It is an SEC felony, but federal executives, who arranged the scam, won't allow the SEC or FBI to go after these people because it will be politically embarrassing to ""Senior People"". "

"It will be politically embarrassing because certain Washington, DC politicians gave a ""massively unqualified"", ""bankrupt"" (Per Elon Musk himself), ""failing"", ""lethally debt-ratio'd"", ""no-demand"", ""technically old-school"" Tesla a free gift of Taxpayer money as a pass along kickback to Tesla investors in exchange for billions of dollars of campaign financing. Submit your links. Let's discuss... T- LA Times [wpvideo Az6PiFCv]"

"HA! See this article: <http://www.bbc.com/news/technology-27741041> BBC News - Tesla boss Elon Musk hints at technology giveaway Ever since 1745, horses considered, and then, actually, began giving away their horse-shit. Nobody was excited about it then. Nobody is excited about it today. Horse-shit is still just horse-shit. Musk's patents disclose that Tesla knew that their cars energy system could ""kill you"" and ""burn down your home or office"". It says it right in the very papers that TESLA MOTORS wrote and filed with the U.S. Patent office. They posted on the public U.S. Government servers, where they can never be removed, the awful truth: Tesla's WILL burn you, your family, your house, your office. Tesla's own engineers wrote this! They should give them away because they are worthless! Danny- Times"

"ONE OF THE MOST COVERED UP STORIES IN AMERICAN HISTORY. CHARACTER ASSASSINATED FOR TELLING THE TRUTH ABOUT A MASSIVE CONSPIRACY, HISTORY SHOWS ALL OF HIS REVELATIONS WERE TRUE. HAS THIS SAME THING HAPPENED ""MORE RECENTLY"" WITH OTHER BILLIONAIRES?: Smedley Darlington Butler[1] (July 30, 1881 ? June 21, 1940) was a United States Marine Corps major general, the highest rank authorized at that time, and at the time of his death the most decorated Marine in U.S. history. During his 34-year career as a Marine, he participated in military actions in the Philippines, China, in Central America and the Caribbean during the Banana Wars, and France in World War I. Butler is well known for having later become an outspoken critic of U.S. wars and their consequences, as well as exposing ""the Business Plot"", a plan, by a secret billionaires coalition, to overthrow the U.S. government. Many say it is the same thing that a group of Silicon Valley billionaires have tried with Washington, using Google news and information manipulation, in recent times. In November 1934, Butler claimed the existence of a political conspiracy by billionaire business leaders to overthrow President Roosevelt, a series of allegations that came to be known in the media as the Business Plot.[59][60] A special committee of the House of Representatives headed by Representatives John W. McCormack of Massachusetts and Samuel Dickstein of New York, who was later alleged to have been a paid agent of the NKVD,[61] heard his testimony in secret.[62] The McCormack-Dickstein committee was a precursor to the House Committee on Un-American Activities. In November 1934, Butler told the committee that one Gerald P. MacGuire told him that a group of billionaire businessmen, supposedly backed by a private army of 500,000 ex-soldiers and others, intended to establish a fascist dictatorship. Butler had been asked to lead it, he said, by MacGuire, who was a bond salesman with Grayson M?P Murphy & Co. (KIND OF LIKE GOLDMAN SACHS) The New York Times reported that Butler had told friends that General Hugh S. Johnson, a former official with the National Recovery Administration, was to be installed as dictator, and that the

J.P. Morgan banking firm (WHO< EVEN TODAY< IS STILL BEING CHARGED WITH CRIMES) was behind the plot. Butler told Congress that MacGuire had told him the attempted coup was backed by three million dollars, and that the 500,000 men were probably to be assembled in Washington, D.C. the following year. All the parties alleged to be involved publicly said there was no truth in the story, calling it a joke and a fantasy.[62] In its report, the committee stated that it was unable to confirm Butler's statements other than the conversations with MacGuire.[63] No prosecutions or further investigations followed, and historians have questioned whether or not a coup was actually contemplated. Historians have not reported any independent evidence apart from Butler's report on what MacGuire told him. Schmidt says Maguire was an ""inconsequential trickster.""[64][65][66][67] The news media (ie: GOOGLE) dismissed the plot, with a New York Times editorial characterizing it as a ""gigantic hoax"".[68] When the committee's final report was released, the Times said the committee ""purported to report that a two-month investigation had convinced it that General Butler's story of a Fascist march on Washington was alarmingly true"" and ""... also alleged that definite proof had been found that the much publicized Fascist march on Washington, which was to have been led by Major. Gen. Smedley D. Butler, retired, according to testimony at a hearing, was actually contemplated"".[69] The individuals involved all denied the existence of a plot, despite evidence to the contrary. The media ridiculed the allegations, although a final report by a special House of Representatives Committee confirmed some of Butler's accusations [70] [n 1][n 2] The McCormack-Dickstein Committee confirmed some of Butler's testimony in its final report. ""In the last few weeks of the committee's official life it received evidence showing that certain persons had made an attempt to establish a fascist organization in this country...There is no question that these attempts were discussed, were planned, and might have been placed in execution when and if the financial backers (AKA: ""the billionaires"") deemed it expedient.""[70] [n 1][n 2] "

""If"" a modern version of the Smedley Butler ""BUSINESS PLOT"" take-over of Washington has, or had, been attempted, Who do you suspect was behind it, theoretically

"War Is a Racket is the title of two works, a speech and a booklet, by retired United States Marine Corps Major General and two time Medal of Honor recipient Smedley D. Butler. In them, Butler frankly discusses from his experience as a career military officer how business interests commercially benefit (war profiteering) from warfare. After his retirement from the Marine Corps, Butler made a nationwide tour in the early 1930s giving his speech ""War is a Racket"". The speech was so well received that he wrote a longer version as a small book with the same title that was published in 1935 by Round Table Press, Inc., of New York. The booklet was also condensed in Reader's Digest as a book supplement which helped popularize his message. In an introduction to the Reader's Digest version, Lowell Thomas, the ""as told to"" author of Butler's oral autobiographical adventures, praised Butler's ""moral as well as physical courage"". [1] THIS ARTICLE DESCRIBES WHAT HAPPENED IN THE AFGHANISTAN AND IRAQ AGHANI-SCAM SITUATIONS"

Written by Two-Time Congressional Medal of Honor Recipient

Major General Smedley D. Butler

"USMC, Retired"

CHAPTER ONE

WAR IS A RACKET

WAR is a racket. It always has been.

" It is possibly the oldest, easily the most profitable, surely the most vicious. It is the only one international in scope. It is the only one in which the profits are reckoned in dollars and the losses in lives."

" A racket is best described, I believe, as something that is not what it seems to the majority of the people. Only a small ""inside"" group knows what it is about. It is conducted for the benefit of the very few, at the expense of the very many. Out of war a few people make huge fortunes."

" In the World War [I] a mere handful garnered the profits of the conflict. At least 21,000 new millionaires and billionaires were made in the United States during the World War. That many admitted their huge blood gains in their income tax returns. How many other war millionaires falsified their tax returns no one knows."

" How many of these war millionaires shouldered a rifle? How many of them dug a trench? How many of them knew what it meant to go hungry in a rat-infested dug-out? How many of them spent sleepless, frightened nights, ducking shells and shrapnel and machine gun bullets? How many of them parried a bayonet thrust of an enemy? How many of them were wounded or killed in battle

" Out of war nations acquire additional territory, if they are victorious. They just take it. This newly acquired territory promptly is exploited by the few ? the selfsame few who wrung dollars out of blood in the war. The general public shoulders the bill."

And what is this bill?

This bill renders a horrible accounting. Newly placed gravestones. Mangled bodies. Shattered minds. Broken hearts and homes. Economic instability. Depression and all its attendant miseries. Back-breaking taxation for generations and generations.

"For a great many years, as a soldier, I had a suspicion that war was a racket; not until I retired to civil life did I fully realize it. Now that I see the international war clouds gathering, as they are today, I must face it and speak out."

" Again they are choosing sides. France and Russia met and agreed to stand side by side. Italy and Austria hurried to make a similar agreement. Poland and Germany cast sheep's eyes at each other, forgetting for the nonce [one unique occasion], their dispute over the Polish Corridor. "

"The assassination of King Alexander of Yugoslavia [Yugoslavia] complicated matters. Yugoslavia and Hungary, long bitter enemies, were almost at each other's throats. Italy was ready to jump in. But France was waiting. So was Czechoslovakia. All of them are looking ahead to war. Not the people ? not those who fight and pay and die ? only those who foment wars and remain safely at home to profit."

"There are 40,000,000 men under arms in the world today, and our statesmen and diplomats have the temerity to say that war is not in the making."

"Hell's bells! Are these 40,000,000 men being trained to be dancers

"Not in Italy, to be sure. Premier Mussolini knows what they are being trained for. He, at least, is frank enough to speak out. Only the other day, Il Duce in ""International Conciliation,"" the publication of the Carnegie Endowment for International Peace, said:"

""And above all, Fascism, the more it considers and observes the future and the development of humanity quite apart from political considerations of the moment, believes neither in the possibility nor the utility of perpetual peace... War alone brings up to its highest tension all human energy and puts the stamp of nobility upon the people who have the courage to meet it.""

"Undoubtedly Mussolini means exactly what he says. His well-trained army, his great fleet of planes, and even his navy are ready for war ? anxious for it, apparently. His recent stand at the side of Hungary in the latter's dispute with Yugoslavia showed that. And the hurried mobilization of his troops on the Austrian border after the assassination of Dollfuss showed it too. There are others in Europe too whose sabre rattling presages war, sooner or later."

"Herr Hitler, with his rearming Germany and his constant demands for more and more arms, is an equal if not greater menace to peace. France only recently increased the term of military service for its youth from a year to eighteen months."

"Yes, all over, nations are camping in their arms. The mad dogs of Europe are on the loose. In the Orient the maneuvering is more adroit. Back in 1904, when Russia and Japan fought, we kicked out our old friends the Russians and backed Japan. Then our very generous international bankers were financing Japan. Now the trend is to poison us against the Japanese. What does the "'open door'" policy to China mean to us? Our trade with China is about \$90,000,000 a year. Or the Philippine Islands? We have spent about \$600,000,000 in the Philippines in thirty-five years and we (our bankers and industrialists and speculators) have private investments there of less than \$200,000,000."

"Then, to save that China trade of about \$90,000,000, or to protect these private investments of less than \$200,000,000 in the Philippines, we would be all stirred up to hate Japan and go to war ? a war that might well cost us tens of billions of dollars, hundreds of thousands of lives of Americans, and many more hundreds of thousands of physically maimed and mentally unbalanced men."

"Of course, for this loss, there would be a compensating profit ? fortunes would be made. Millions and billions of dollars would be piled up. By a few. Munitions makers. Bankers. Ship builders. Manufacturers. Meat packers. Speculators. They would fare well."

"Yes, they are getting ready for another war. Why shouldn't they? It pays high dividends."

"But what does it profit the men who are killed? What does it profit their mothers and sisters, their wives and their sweethearts? What does it profit their children

What does it profit anyone except the very few to whom war means huge profits?

"Yes, and what does it profit the nation

"Take our own case. Until 1898 we didn't own a bit of territory outside the mainland of North America. At that time our national debt was a little more than \$1,000,000,000. Then we became "'internationally minded.'" We forgot, or shunted aside, the advice of the Father of our country. We forgot George Washington's warning about "'entangling alliances.'" We went to war. We acquired outside territory. At the end of the World War period, as a direct result of our fiddling in international affairs, our national debt had jumped to over \$25,000,000,000. Our total favorable trade balance during the twenty-five-year period was about \$24,000,000,000. Therefore, on a purely bookkeeping basis, we ran a little behind year for year, and that foreign trade might well have been ours without the wars."

"It would have been far cheaper (not to say safer) for the average American who pays the bills to stay out of foreign entanglements. For a very few this racket, like bootlegging and other underworld rackets, brings fancy profits, but the cost of operations is always transferred to the people ? who do not profit."

CHAPTER TWO

WHO MAKES THE PROFITS?

"The World War, rather our brief participation in it, has cost the United States some \$52,000,000,000. Figure it out. That means \$400 to every American man, woman, and child. And we haven't paid the debt yet. We are paying it, our children will pay it, and our children's children probably still will be paying the cost of that war."

"The normal profits of a business concern in the United States are six, eight, ten, and sometimes twelve percent.

But war-time profits ? ah! that is another matter ? twenty, sixty, one hundred, three hundred, and even eighteen hundred per cent ? the sky is the limit. All that traffic will bear. Uncle Sam has the money. Let's get it."

"Of course, it isn't put that crudely in war time. It is dressed into speeches about patriotism, love of country, and ""we must all put our shoulders to the wheel,"" but the profits jump and leap and skyrocket ? and are safely pocketed. Let's just take a few examples:"

"Take our friends the du Ponts, the powder people ? didn't one of them testify before a Senate committee recently that their powder won the war? Or saved the world for democracy? Or something? How did they do in the war? They were a patriotic corporation. Well, the average earnings of the du Ponts for the period 1910 to 1914 were \$6,000,000 a year. It wasn't much, but the du Ponts managed to get along on it. Now let's look at their average yearly profit during the war years, 1914 to 1918. Fifty-eight million dollars a year profit we find! Nearly ten times that of normal times, and the profits of normal times were pretty good. An increase in profits of more than 950 per cent."

"Take one of our little steel companies that patriotically shunted aside the making of rails and girders and bridges to manufacture war materials. Well, their 1910-1914 yearly earnings averaged \$6,000,000. Then came the war. And, like loyal citizens, Bethlehem Steel promptly turned to munitions making. Did their profits jump ? or did they let Uncle Sam in for a bargain? Well, their 1914-1918 average was \$49,000,000 a year!"

"Or, let's take United States Steel. The normal earnings during the five-year period prior to the war were \$105,000,000 a year. Not bad. Then along came the war and up went the profits. The average yearly profit for the period 1914-1918 was \$240,000,000. Not bad."

"There you have some of the steel and powder earnings. Let's look at something else. A little copper, perhaps. That always does well in war times."

"Anaconda, for instance. Average yearly earnings during the pre-war years 1910-1914 of \$10,000,000. During the war years 1914-1918 profits leaped to \$34,000,000 per year."

"Or Utah Copper. Average of \$5,000,000 per year during the 1910-1914 period. Jumped to an average of \$21,000,000 yearly profits for the war period."

"Let's group these five, with three smaller companies. The total yearly average profits of the pre-war period 1910-1914 were \$137,480,000. Then along came the war. The average yearly profits for this group skyrocketed to \$408,300,000."

A little increase in profits of approximately 200 per cent.

Does war pay? It paid them. But they aren't the only ones. There are still others. Let's take leather.

"For the three-year period before the war the total profits of Central Leather Company were \$3,500,000. That was approximately \$1,167,000 a year. Well, in 1916 Central Leather returned a profit of \$15,000,000, a small increase of 1,100 per cent. That's all. The General Chemical Company averaged a profit for the three years before the war of a little over \$800,000 a year. Came the war, and the profits jumped to \$12,000,000. a leap of 1,400 per cent."

"International Nickel Company ? and you can't have a war without nickel ? showed an increase in profits from a mere average of \$4,000,000 a year to \$73,000,000 yearly. Not bad? An increase of more than 1,700 per cent."

"American Sugar Refining Company averaged \$2,000,000 a year for the three years before the war. In 1916 a profit of \$6,000,000 was recorded."

"Listen to Senate Document No. 259. The Sixty-Fifth Congress, reporting on corporate earnings and government revenues. Considering the profits of 122 meat packers, 153 cotton manufacturers, 299 garment makers, 49 steel plants, and 340 coal producers during the war. Profits under 25 per cent were exceptional. For instance the coal companies made between 100 per cent and 7,856 per cent on their capital stock during the war. The Chicago packers doubled and tripled their earnings."

"And let us not forget the bankers who financed the great war. If anyone had the cream of the profits it was the bankers. Being partnerships rather than incorporated organizations, they do not have to report to stockholders. And their profits were as secret as they were immense. How the bankers made their millions and their billions I do not know, because those little secrets never become public ? even before a Senate investigatory body."

But here's how some of the other patriotic industrialists and speculators chiseled their way into war profits.

"Take the shoe people. They like war. It brings business with abnormal profits. They made huge profits on sales abroad to our allies. Perhaps, like the munitions manufacturers and armament makers, they also sold to the enemy. For a dollar is a dollar whether it comes from Germany or from France. But they did well by Uncle Sam too. For instance, they sold Uncle Sam 35,000,000 pairs of hobnailed service shoes. There were 4,000,000 soldiers. Eight pairs, and more, to a soldier. My regiment during the war had only one pair to a soldier. Some of these shoes probably are still in existence. They were good shoes. But when the war was over Uncle Sam has a matter of 25,000,000 pairs left over. Bought ? and paid for. Profits recorded and pocketed."

"There was still lots of leather left. So the leather people sold your Uncle Sam hundreds of thousands of McClellan saddles for the cavalry. But there wasn't any American cavalry overseas! Somebody had to get rid of this leather, however. Somebody had to make a profit in it ? so we had a lot of McClellan saddles. And we probably have those yet."

"Also somebody had a lot of mosquito netting. They sold your Uncle Sam 20,000,000 mosquito nets for the use of the soldiers overseas. I suppose the boys were expected to put it over them as they tried to sleep in muddy trenches ? one hand scratching cooties on their backs and the other making passes at scurrying rats. Well, not one of these mosquito nets ever got to France!"

"Anyhow, these thoughtful manufacturers wanted to make sure that no soldier would be without his mosquito net, so 40,000,000 additional yards of mosquito netting were sold to Uncle Sam."

"There were pretty good profits in mosquito netting in those days, even if there were no mosquitoes in France. I suppose, if the war had lasted just a little longer, the enterprising mosquito netting manufacturers would have sold your Uncle Sam a couple of consignments of mosquitoes to plant in France so that more mosquito netting would be in order."

"Airplane and engine manufacturers felt they, too, should get their just profits out of this war. Why not? Everybody else was getting theirs. So \$1,000,000,000 ? count them if you live long enough ? was spent by Uncle Sam in building airplane engines that never left the ground! Not one plane, or motor, out of the billion dollars worth ordered, ever got into a battle in France. Just the same the manufacturers made their little profit of 30, 100, or perhaps 300 per cent."

Undershirts for soldiers cost 14[cents] to make and uncle Sam paid 30 to 40 each for them ? a nice little profit for the undershirt manufacturer. And the stocking manufacturer and the uniform manufacturers and the cap manufacturers and the steel helmet manufacturers ? all got theirs.

"Why, when the war was over some 4,000,000 sets of equipment ? knapsacks and the things that go to fill them ? crammed warehouses on this side. Now they are being scrapped because the regulations have changed the contents. But the manufacturers collected their wartime profits on them ? and they will do it all over again the next time."

There were lots of brilliant ideas for profit making during the war.

"One very versatile patriot sold Uncle Sam twelve dozen 48-inch wrenches. Oh, they were very nice wrenches. The only trouble was that there was only one nut ever made that was large enough for these wrenches. That is the one that holds the turbines at Niagara Falls. Well, after Uncle Sam had bought them and the manufacturer had pocketed the profit, the wrenches were put on freight cars and shunted all around the United States in an effort to find a use for them. When the Armistice was signed it was indeed a sad blow to the wrench manufacturer. He was just about to make some nuts to fit the wrenches. Then he planned to sell these, too, to your Uncle Sam."

"Still another had the brilliant idea that colonels shouldn't ride in automobiles, nor should they even ride on horseback. One has probably seen a picture of Andy Jackson riding in a buckboard. Well, some 6,000 buckboards were sold to Uncle Sam for the use of colonels! Not one of them was used. But the buckboard manufacturer got his war profit."

"The shipbuilders felt they should come in on some of it, too. They built a lot of ships that made a lot of profit. More than \$3,000,000,000 worth. Some of the ships were all right. But \$635,000,000 worth of them were made of wood and wouldn't float! The seams opened up ? and they sank. We paid for them, though. And somebody pocketed the profits."

"It has been estimated by statisticians and economists and researchers that the war cost your Uncle Sam \$52,000,000,000. Of this sum, \$39,000,000,000 was expended in the actual war itself. This expenditure yielded \$16,000,000,000 in profits. That is how the 21,000 billionaires and millionaires got that way. This \$16,000,000,000 profits is not to be sneezed at. It is quite a tidy sum. And it went to a very few."

"The Senate (Nye) committee probe of the munitions industry and its wartime profits, despite its sensational disclosures, hardly has scratched the surface."

"Even so, it has had some effect. The State Department has been studying ""for some time"" methods of keeping out of war. The War Department suddenly decides it has a wonderful plan to spring. The Administration names a committee ? with the War and Navy Departments ably represented under the chairmanship of a Wall Street speculator ? to limit profits in war time. To what extent isn't suggested. Hmmm. Possibly the profits of 300 and 600 and 1,600 per cent of those who turned blood into gold in the World War would be limited to some smaller figure."

"Apparently, however, the plan does not call for any limitation of losses ? that is, the losses of those who fight the war. As far as I have been able to ascertain there is nothing in the scheme to limit a soldier to the loss of but one eye, or one arm, or to limit his wounds to one or two or three. Or to limit the loss of life."

"There is nothing in this scheme, apparently, that says not more than 12 per cent of a regiment shall be wounded in battle, or that not more than 7 per cent in a division shall be killed."

"Of course, the committee cannot be bothered with such trifling matters."

CHAPTER THREE

WHO PAYS THE BILLS?

"Who provides the profits ? these nice little profits of 20, 100, 300, 1,500 and 1,800 per cent? We all pay them ? in taxation. We paid the bankers their profits when we bought Liberty Bonds at \$100.00 and sold them back at \$84 or \$86 to the bankers. These bankers collected \$100 plus. It was a simple manipulation. The bankers control the security marts. It was easy for them to depress the price of these bonds. Then all of us ? the people ? got frightened and sold the bonds at \$84 or \$86. The bankers bought them. Then these same bankers stimulated a boom and government bonds went to par ? and above. Then the bankers collected their profits."

But the soldier pays the biggest part of the bill.

"If you don't believe this, visit the American cemeteries on the battlefields abroad. Or visit any of the veteran's hospitals in the United States. On a tour of the country, in the midst of which I am at the time of this writing, I have visited eighteen government hospitals for veterans. In them are a total of about 50,000 destroyed men ? men who were the pick of the nation eighteen years ago. The very able chief surgeon at the government hospital; at Milwaukee, where there are 3,800 of the living dead, told me that mortality among veterans is three times as great as among those who stayed at home."

"Boys with a normal viewpoint were taken out of the fields and offices and factories and classrooms and put into the ranks. There they were remolded; they were made over; they were made to ""about face""; to regard murder as the order of the day. They were put shoulder to shoulder and, through mass psychology, they were entirely changed. We used them for a couple of years and trained them to think nothing at all of killing or of being killed."

"Then, suddenly, we discharged them and told them to make another ""about face"" ! This time they had to do their own readjustment, sans [without] mass psychology, sans officers' aid and advice and sans nation-wide propaganda. We didn't need them any more. So we scattered them about without any ""three-minute"" or ""Liberty Loan"" speeches or parades. Many, too many, of these fine young boys are eventually destroyed, mentally, because they could not make that final ""about face"" alone."

"In the government hospital in Marion, Indiana, 1,800 of these boys are in pens! Five hundred of them in a barracks with steel bars and wires all around outside the buildings and on the porches. These already have been mentally destroyed. These boys don't even look like human beings. Oh, the looks on their faces! Physically, they are in good shape; mentally, they are gone."

"There are thousands and thousands of these cases, and more and more are coming in all the time. The tremendous excitement of the war, the sudden cutting off of that excitement ? the young boys couldn't stand it."

"That's a part of the bill. So much for the dead ? they have paid their part of the war profits. So much for the mentally and physically wounded ? they are paying now their share of the war profits. But the others paid, too ? they paid with heartbreaks when they tore themselves away from their firesides and their families to don the uniform of Uncle Sam ? on which a profit had been made. They paid another part in the training camps where they were regimented and drilled while others took their jobs and their places in the lives of their communities. They paid for it in the trenches where they shot and were shot; where they were hungry for days at a time; where they slept in the mud and the cold and in the rain ? with the moans and shrieks of the dying for a horrible lullaby."

But don't forget ? the soldier paid part of the dollars and cents bill too.

"Up to and including the Spanish-American War, we had a prize system, and soldiers and sailors fought for money. During the Civil War they were paid bonuses, in many instances, before they went into service. The government, or states, paid as high as \$1,200 for an enlistment. In the Spanish-American War they gave prize money. When we captured any vessels, the soldiers all got their share ? at least, they were supposed to. Then it

was found that we could reduce the cost of wars by taking all the prize money and keeping it, but conscripting [drafting] the soldier anyway. Then soldiers couldn't bargain for their labor, Everyone else could bargain, but the soldier couldn't. "

"Napoleon once said, ""All men are enamored of decorations...they positively hunger for them."""

"So by developing the Napoleonic system ? the medal business ? the government learned it could get soldiers for less money, because the boys liked to be decorated. Until the Civil War there were no medals. Then the Congressional Medal of Honor was handed out. It made enlistments easier. After the Civil War no new medals were issued until the Spanish-American War."

"In the World War, we used propaganda to make the boys accept conscription. They were made to feel ashamed if they didn't join the army."

"So vicious was this war propaganda that even God was brought into it. With few exceptions our clergymen joined in the clamor to kill, kill, kill. To kill the Germans. God is on our side...it is His will that the Germans be killed."

"And in Germany, the good pastors called upon the Germans to kill the allies...to please the same God. That was a part of the general propaganda, built up to make people war conscious and murder conscious."

"Beautiful ideals were painted for our boys who were sent out to die. This was the ""war to end all wars."" This was the ""war to make the world safe for democracy."" No one mentioned to them, as they marched away, that their going and their dying would mean huge war profits. No one told these American soldiers that they might be shot down by bullets made by their own brothers here. No one told them that the ships on which they were going to cross might be torpedoed by submarines built with United States patents. They were just told it was to be a ""glorious adventure."""

"Thus, having stuffed patriotism down their throats, it was decided to make them help pay for the war, too. So, we gave them the large salary of \$30 a month."

"All they had to do for this munificent sum was to leave their dear ones behind, give up their jobs, lie in swampy trenches, eat canned willy (when they could get it) and kill and kill and kill...and be killed."

But wait!

"Half of that wage (just a little more than a riveter in a shipyard or a laborer in a munitions factory safe at home made in a day) was promptly taken from him to support his dependents, so that they would not become a charge upon his community. Then we made him pay what amounted to accident insurance ? something the employer pays for in an enlightened state ? and that cost him \$6 a month. He had less than \$9 a month left."

"Then, the most crowning insolence of all ? he was virtually blackjacked into paying for his own ammunition, clothing, and food by being made to buy Liberty Bonds. Most soldiers got no money at all on pay days."

"We made them buy Liberty Bonds at \$100 and then we bought them back ? when they came back from the war and couldn't find work ? at \$84 and \$86. And the soldiers bought about \$2,000,000,000 worth of these bonds!"

"Yes, the soldier pays the greater part of the bill. His family pays too. They pay it in the same heart-break that he does. As he suffers, they suffer. At nights, as he lay in the trenches and watched shrapnel burst about him, they lay

home in their beds and tossed sleeplessly ? his father, his mother, his wife, his sisters, his brothers, his sons, and his daughters."

"When he returned home minus an eye, or minus a leg or with his mind broken, they suffered too ? as much as and even sometimes more than he. Yes, and they, too, contributed their dollars to the profits of the munitions makers and bankers and shipbuilders and the manufacturers and the speculators made. They, too, bought Liberty Bonds and contributed to the profit of the bankers after the Armistice in the hocus-pocus of manipulated Liberty Bond prices."

And even now the families of the wounded men and of the mentally broken and those who never were able to readjust themselves are still suffering and still paying.

CHAPTER FOUR

HOW TO SMASH THIS RACKET!

"WELL, it's a racket, all right."

A few profit ? and the many pay. But there is a way to stop it. You can't end it by disarmament conferences. You can't eliminate it by peace parleys at Geneva. Well-meaning but impractical groups can't wipe it out by resolutions. It can be smashed effectively only by taking the profit out of war.

"The only way to smash this racket is to conscript capital and industry and labor before the nations manhood can be conscripted. One month before the Government can conscript the young men of the nation ? it must conscript capital and industry and labor. Let the officers and the directors and the high-powered executives of our armament factories and our munitions makers and our shipbuilders and our airplane builders and the manufacturers of all the other things that provide profit in war time as well as the bankers and the speculators, be conscripted ? to get \$30 a month, the same wage as the lads in the trenches get."

"Let the workers in these plants get the same wages ? all the workers, all presidents, all executives, all directors, all managers, all bankers

"yes, and all generals and all admirals and all officers and all politicians and all government office holders ? everyone in the nation be restricted to a total monthly income not to exceed that paid to the soldier in the trenches!"

Let all these kings and tycoons and masters of business and all those workers in industry and all our senators and governors and majors pay half of their monthly \$30 wage to their families and pay war risk insurance and buy Liberty Bonds.

Why shouldn't they?

They aren't running any risk of being killed or of having their bodies mangled or their minds shattered. They aren't sleeping in muddy trenches. They aren't hungry. The soldiers are!

"Give capital and industry and labor thirty days to think it over and you will find, by that time, there will be no war. That will smash the war racket ? that and nothing else. "

"Maybe I am a little too optimistic. Capital still has some say. So capital won't permit the taking of the profit out of war until the people ? those who do the suffering and still pay the price ? make up their minds that those they elect to office shall do their bidding, and not that of the profiteers."

Another step necessary in this fight to smash the war racket is the limited plebiscite to determine whether a war

should be declared. A plebiscite not of all the voters but merely of those who would be called upon to do the fighting and dying. There wouldn't be very much sense in having a 76-year-old president of a munitions factory or the flat-footed head of an international banking firm or the cross-eyed manager of a uniform manufacturing plant ? all of whom see visions of tremendous profits in the event of war ? voting on whether the nation should go to war or not. They never would be called upon to shoulder arms ? to sleep in a trench and to be shot. Only those who would be called upon to risk their lives for their country should have the privilege of voting to determine whether the nation should go to war.

"There is ample precedent for restricting the voting to those affected. Many of our states have restrictions on those permitted to vote. In most, it is necessary to be able to read and write before you may vote. In some, you must own property. It would be a simple matter each year for the men coming of military age to register in their communities as they did in the draft during the World War and be examined physically. Those who could pass and who would therefore be called upon to bear arms in the event of war would be eligible to vote in a limited plebiscite. They should be the ones to have the power to decide ? and not a Congress few of whose members are within the age limit and fewer still of whom are in physical condition to bear arms. Only those who must suffer should have the right to vote."

A third step in this business of smashing the war racket is to make certain that our military forces are truly forces for defense only.

"At each session of Congress the question of further naval appropriations comes up. The swivel-chair admirals of Washington (and there are always a lot of them) are very adroit lobbyists. And they are smart. They don't shout that ""We need a lot of battleships to war on this nation or that nation."" Oh no. First of all, they let it be known that America is menaced by a great naval power. Almost any day, these admirals will tell you, the great fleet of this supposed enemy will strike suddenly and annihilate 125,000,000 people. Just like that. Then they begin to cry for a larger navy. For what? To fight the enemy? Oh my, no. Oh, no. For defense purposes only."

"Then, incidentally, they announce maneuvers in the Pacific. For defense. Uh, huh."

"The Pacific is a great big ocean. We have a tremendous coastline on the Pacific. Will the maneuvers be off the coast, two or three hundred miles? Oh, no. The maneuvers will be two thousand, yes, perhaps even thirty-five hundred miles, off the coast."

"The Japanese, a proud people, of course will be pleased beyond expression to see the united States fleet so close to Nippon's shores. Even as pleased as would be the residents of California were they to dimly discern through the morning mist, the Japanese fleet playing at war games off Los Angeles."

"The ships of our navy, it can be seen, should be specifically limited, by law, to within 200 miles of our coastline. Had that been the law in 1898 the Maine would never have gone to Havana Harbor. She never would have been blown up. There would have been no war with Spain with its attendant loss of life. Two hundred miles is ample, in the opinion of experts, for defense purposes. Our nation cannot start an offensive war if its ships can't go further than 200 miles from the coastline. Planes might be permitted to go as far as 500 miles from the coast for purposes of reconnaissance. And the army should never leave the territorial limits of our nation."

To summarize: Three steps must be taken to smash the war racket.

- * We must take the profit out of war.
- * We must permit the youth of the land who would bear arms to decide whether or not there should be war.
- * We must limit our military forces to home defense purposes.

CHAPTER FIVE

TO HELL WITH WAR!

"I am not a fool as to believe that war is a thing of the past. I know the people do not want war, but there is no use in saying we cannot be pushed into another war."

"Looking back, Woodrow Wilson was re-elected president in 1916 on a platform that he had ""kept us out of war"" and on the implied promise that he would ""keep us out of war."" Yet, five months later he asked Congress to declare war on Germany."

"In that five-month interval the people had not been asked whether they had changed their minds. The 4,000,000 young men who put on uniforms and marched or sailed away were not asked whether they wanted to go forth to suffer and die."

Then what caused our government to change its mind so suddenly?

Money.

"An allied commission, it may be recalled, came over shortly before the war declaration and called on the President. The President summoned a group of advisers. The head of the commission spoke. Stripped of its diplomatic language, this is what he told the President and his group:"

""There is no use kidding ourselves any longer. The cause of the allies is lost. We now owe you (American bankers, American munitions makers, American manufacturers, American speculators, American exporters) five or six billion dollars."

"If we lose (and without the help of the United States we must lose) we, England, France and Italy, cannot pay back this money...and Germany won't."

"So...""

"Had secrecy been outlawed as far as war negotiations were concerned, and had the press been invited to be present at that conference, or had radio been available to broadcast the proceedings, America never would have entered the World War. But this conference, like all war discussions, was shrouded in utmost secrecy. When our boys were sent off to war they were told it was a ""war to make the world safe for democracy"" and a ""war to end all wars."" "

"Well, eighteen years after, the world has less of democracy than it had then. Besides, what business is it of ours whether Russia or Germany or England or France or Italy or Austria live under democracies or monarchies? Whether they are Fascists or Communists? Our problem is to preserve our own democracy."

"And very little, if anything, has been accomplished to assure us that the World War was really the war to end all wars."

"Yes, we have had disarmament conferences and limitations of arms conferences. They don't mean a thing. One has just failed; the results of another have been nullified. We send our professional soldiers and our sailors and our politicians and our diplomats to these conferences. And what happens

"The professional soldiers and sailors don't want to disarm. No admiral wants to be without a ship. No general wants to be without a command. Both mean men without jobs. They are not for disarmament. They cannot be for limitations of arms. And at all these conferences, lurking in the background but all-powerful, just the same, are

the sinister agents of those who profit by war. They see to it that these conferences do not disarm or seriously limit armaments."

The chief aim of any power at any of these conferences has not been to achieve disarmament to prevent war but rather to get more armament for itself and less for any potential foe.

"There is only one way to disarm with any semblance of practicability. That is for all nations to get together and scrap every ship, every gun, every rifle, every tank, every war plane. Even this, if it were possible, would not be enough."

"The next war, according to experts, will be fought not with battleships, not by artillery, not with rifles and not with machine guns. It will be fought with deadly chemicals and gases."

"Secretly each nation is studying and perfecting newer and ghastlier means of annihilating its foes wholesale. Yes, ships will continue to be built, for the shipbuilders must make their profits. And guns still will be manufactured and powder and rifles will be made, for the munitions makers must make their huge profits. And the soldiers, of course, must wear uniforms, for the manufacturer must make their war profits too."

But victory or defeat will be determined by the skill and ingenuity of our scientists.

"If we put them to work making poison gas and more and more fiendish mechanical and explosive instruments of destruction, they will have no time for the constructive job of building greater prosperity for all peoples. By putting them to this useful job, we can all make more money out of peace than we can out of war ? even the munitions makers."

" So...I say,"

TV is DEAD! Long Live Web Media! NOBODY WATCHES TV ANYMORE! Old Network Programmers Have Already been Passed By for WEB MEDIA!<http://www.thenewsdaily.org/tv-dead-long-live-web-media/8/7/2014> THE EDITORS & WIKI MEMBERS Uncategorized TV is DEAD! Long Live Web Media!
publish ccft_post_comment_title: panels_data: Array kopa_fastnewsight_total_view: 5 wp-mm-fb-likes-enabled: wp-mm-fb-likes-num: wp-mm-fb-likes-duration: wp-mm-fb-likes-weekends: wp-mm-fb-shares-enabled: wp-mm-fb-shares-num: wp-mm-fb-shares-duration: wp-mm-fb-shares-weekends: wp-mm-google-plus-enabled: wp-mm-google-plus-num: wp-mm-google-plus-duration: wp-mm-google-plus-weekends: wp-mm-twitter-tweets-enabled: wp-mm-twitter-tweets-num: wp-mm-twitter-tweets-duration: wp-mm-twitter-tweets-weekends:

"- Why so many TV commercials are now for Depends adult diapers and erectile dysfunction pills...because only old people watch TV (to fall asleep) anymore... TV Networks are controlled by Donald Sterling-esque executives. They, and their audiences are all dying off, all at once. The white male executives have long held to their woman-free, racially white, executive suites AND programming. They were blind to the future and still live in a ""Brady Bunch is neat""-world! The new audiences..not so much; and are those new audiences wanting to watch the crap

that broadcast networks dish out?, ALSO: NOT SO MUCH! TV is undergoing a tsunami of viewership loss. Part from old people just passing away and, most, from the next generation thinking that current programming is total bullshit and created for the lowest common denominator! Cable is dead within a few years. Advertising for massed volumes of idiocy is dead in 2 years. All advertising must now be boutique for boutique high-quality content, from now on. Anybody can make Star Wars on their desktop computer with CGI that rivals the best. Camera-phones are now broadcast quality. Old-school networks hold nothing of value, except to the old, anymore. You can have everything that Warner Brothers has, on your desktop, with the latest video production software. In their attempt to try to capture the last remaining audience that is as brain limited as the departing senile old viewers, the networks have turned to the last vestige of viewers that might tolerate their inane TV shows, while being nearly senile in mentality: RUBES! Honey Boo BOO and Duck Dynasty and catching-catfish-with-your-hands-in-a-swamp shows have replaced historical documentaries in a vain attempt to emulate ""click-bait"" on TV. It has failed. Every modern viewer, flipping past one of these shows, gets why all the ads are for adult diapers, erectile dysfunction and motorized chairs. Any modern young adult flipping through a TV roster thinks that the world has gone beyond stupid. So they just don't watch anymore. I am not down-talking old people. I am down-talking self-centered, living-in-a-bubble, idiotic network executives! It is the NEW Web Networks and NEW WEB Producers that the audiences want, support and go to. TV is dead. Long live WEB MEDIA. Trying to kill AERO? F'aggetaboutit- There are a hundred other AERO's right behind them. It is HERE! You already missed the boat if you are not on the high tide. Send in your links. Let's discuss... Tom -----
-----"

Advertisers have lost the attention of a generation

By John Gapper

Tech-savvy US teens now watch only about 21 minutes of broadcast television a week

?Ingram Pinn

"They tell you not to fix a meeting before 11am at the Lions advertising festival in Cannes because the guests will either have been up so late toasting their own creativity, or are so jet-lagged after flying in from Los Angeles, that they will not show up. I should have listened. There were other signs at Cannes this week that the advertising industry operates in its own time zone. Seven years after the launch of the iPhone, the smartphone is reaching saturation in developed markets, as IDC, the research group, reported this week. Yet advertisers still treat it as a newfangled invention yet to prove its worth. In theory, the smartphone is the new television ? a consumer technology device through which everyone absorbs information and entertainment. As an advertising medium, however, it is useless by comparison. Not only is there no equivalent in value to the 30-second advertisement but the industry is struggling even to imagine one. In a generation, we have shifted from parents trying to stop teenagers slumping in front of the TV to young people losing all interest in the box. US teens are so occupied with social networks and mobile video that they watch only about 21 minutes of live TV a week. The ad industry is suffering from attention deficit disorder ? the audience that once sat obediently in front of TV spots lovingly devised by its creatives is hard to pin down. Millennials are out there, on their phones and tablets, but they are as likely to be tweeting angrily about a brand as noticing its ads in the content stream."

"WHO REALLY, ACTUALLY, KILLED THE ELECTRIC CARS "WHO REALLY, ACTUALLY, KILLED THE ELECTRIC CARS? "<http://www.thenewsdaily.org/really-actually-killed-electric-cars/> 8/6/2014 THE EDITORS & WIKI MEMBERS Uncategorized "ACTUALLY, electric cars, KILLED THE ELECTRIC CARS?, WHO REALLY" publish ccft_post_comment_title: panels_data: Array kopa_fastnewsight_total_view: 10

"By Anderson W. Summary - These people really, actually, killed the electric cars (AKA: ?The Dirty 7?:"

Senators with Insider Trading Deals
Campaign Financiers with Investments in Competing Areas

Venture Capitalists with Competing Investments
The Steel Industry (because electric cars avoid using steel)
The Unions (Because they have certain deals with the 'old' car companies)
The Oil Cartel
The Detroit Auto Cartel and their DC Lobbyists

The steel industry has a kick-back scheme with Detroit and a large number of Senators
The oil industry has a kick-back scheme with Detroit and a large number of Senators
The auto unions have a kick-back scheme with Detroit and a large number of Senators and Party Officials

"Chrysler, Ford & GM have kick-back schemes between a large number of Senators, The oil industry and the steel industry"
None of them make any money with electric cars so they don't want any electric cars

"GM, Ford & Chrysler manipulate funding, marketing, laws and politicians to hold off the electric car market on behalf of themselves and their steel and petro-chemical cartel partners."

"Electric cars don't use much, if any, steel so the steel industry feels it can keep billions of dollars for itself if it stops electric cars. The steel industry gets billions of dollars of contracts from Detroit which it pays back to some Detroit boards in repercussive stock and supplier arrangements."

"Electric cars don't use petroleum products so the petroleum industry feels it can keep hundreds of billions of dollars, for itself, if it stops electric cars. The petroleum industry gets hundreds of billions of dollars of contracts from Detroit which it pays back to some Detroit boards in covert ways."

"Using a complex series of tactics deployed by hundreds of hired operatives, ""consultants"" and shills and costing Detroit over \$16 million per year, this ongoing strategic interdiction plan has been very effective; until the internet came along."

"Here is their playbook. Here are the details about how they do it. If you think it is how your world should work then you do not need to do anything, If you think it is wrong then you need to use all of the same techniques that they use to end it. If you think this is over-the-top or not credible then you need to think about what you think people might do to control trillions of dollars of profit and political power. Since you probably cannot even imagine that world, yet you know it exists, then you might want to help fix it:"

"THE DIRTY 7'S PLAYBOOK: Targeted Blockade Efforts ? All of the groups at the top of this report get together, via their lobbyists, and undertake coordination of all of the efforts listed below... Department of Energy Manipulations ? Documents have been uncovered which show that the Detroit Big 3 co-authored and lobbied the laws and decision process for DOE funding. The Big 3 represent that they are 'competitors' but they conspire to direct all money to only themselves in auto funding efforts with tax dollars. Rahm Emanuel, while working as head of the White House, is said to have given Steven Chu a ""do Not Fund"" list prepared by Detroit and Campaign Backers. Lobbyists - It costs \$50,000.00 to \$150,000.00 to buy any politician in Washington. There are only 32 people, at a time, you need to buy in Washington to change policy and laws that affect hundreds of millions of citizens. Buying is accomplished with cash, sex, tickets, plane trips, meals, after-Washington (""private sector"") kick-back jobs , lawyers, access, mortgages and other secret trades. Tucker-izing ? The Tucker incident was a grand example of a car company 'take-down'. See the Francis Ford Coppola Movie: 'A Man and His Dream' for a set of classic playbook tactics Fake ""White Papers"" ? Lobbyists write white-papers or hire McKinsey Consulting to write white-papers that are made to look academic but are really a series of shill documents skewed to try to trick politicians into voting for kickback schemes to campaign backers and Detroit

Staged Venture Capitalists ? Silicon Valley and NY VC groups organize to agree to not fund any but a few select companies that they control. They still take pitches from all of the other players so they can steal ideas and technology
Shill Pundits ? Lobbyists who pretend to be subject experts and appear on TV and radio to say the same sales pitch/mantra over and over to embed falsehoods in the mind of the public
Shill Bloggers - Lobbyists who pretend to be subject experts and appear on blogs to say the same sales pitch/mantra over and over to embed falsehoods in the mind of the public
Corporate Saboteurs, Honey Traps & Spies ? Over 500 Corporate Saboteurs, Honey Traps & Spies work in Silicon Valley alone. They are actually escorts, private eyes and undercover lobbyists. They are hired to infiltrate a competing company and cause a staff ruckus, prep a hostile take-over or get the CEO in a lawsuit. They try anything to slow-down or sabotage the new technology that is competing with the ?Dirty 7? above.
Controlling the Battery Industry ? VC?s bought control of the battery industry and ore supplies in order to create their own cartel
Goldman Sachs - False front organizations which appear to be one thing are actually manipulating funding, public policy and media coverage, ie: McKinsey, EPRI, Goldman Sachs, Lobby Groups, Banking Groups, Venture Capital Groups
Shill ""Reporters"" - The key tactic is to make the public think that the EV market is crashing or is not being accepted by the public. This is accomplished by making sure every car is too expensive or too hard to fuel so that the public will not want one, under the current synthetically generated limits.
Penalty & Discouragement Laws created by Detroit Lobbyists - Making laws that only Detroit Cartel members can meet.
Green-Washing ? A thing that is very deadly, explosive, toxic, impossible to dump safely, etc. (ie: Lithium ion) is branded and PR-hyped as a ?green?-thing or ?Cleantech?. Ie: Detroit said they needed more money because nobody was buying their cars so they told DOE to say they would give them free tax money to make ?green cars? they never intended to market.
Building ""See-It-doesn't work"" anti-EV's ? Car companies, who really don?t want to build electric cars, will build a few and either price them out of market interest or create a failure point so that they can say: ?oh well, we tried, see it doesn?t work, back to gasoline then!?
Manipulating the stock market ? By having the same investors in the Dirty 7 also be the same investors in the media companies and internet companies who control public information, the 7 can delete any negative news and push only positive news about their cartel products (ie: Tesla/Google)
White House ""Consultants"" ? Steve Rattner (Indicted), Steven Chu (Under Investigation) or certain ?Expert Executives? that are part of a cartel get ?appointed? as ?advisers? so they can manipulate the taxpayer money from within the system
Controlling the Unions and their Votes ? Senior Washington Executive Staff go to the unions and say? If we give your associated companies, that hire your members, a bunch of money will you make all of your members vote for our party/candidate/bill??
The GM EV1 ? Ahead of it?s time, consumer raves, killed off because it was too successful
Fake science papers - Lobbyists write papers or hire McKinsey Consulting to write white-papers that are made to look academic but are really a series of shill documents skewed to try to trick news editors into creating articles and news stories which skew to support kickback schemes to campaign backers and Detroit
Anti-Advertising - An example of this is the Chevy Volt ad showing the Volt being driven into a gas station for the owner to use the bathroom and then the owner getting abused and harassed by the other customers. For millions of dollars of ad buys and video production, the main subliminal message is that you will get harassed if you buy the car and you associate it with bathroom urges. Chevy and Madison Avenue knew EXACTLY what they were doing. You don't spend millions on ""focus group ad response research"", as shown in the UI/UX research budget for this ad, without knowing it will have a negative effect ahead of time.
Manipulation Front Organizations - False front organizations which appear to be one thing are actually manipulating funding, public policy and media coverage, ie: McKinsey, EPRI, Goldman Sachs, ""Plug-in America"", Lobby Groups, Banking Groups, Venture Capital Groups"

Send in your links. Let's discuss...

It reminds the men and women gathered in a half circle that, yes, they admitted powerlessness over alcohol, and that only a power greater than themselves could restore their sanity. Drunks-R-Us is held in a sunlit room at a liberal church in Berkeley, California. Inside, there are more than 30 people, most looking like they just arrived from the farmer's market. They confess to

numerous trespasses against strangers, friends, family and themselves ? betrayals wrought by a lifetime of addiction. A tanned gentleman, nearing 60 years old, dressed in a lime-green button-up shirt and khaki pants, describes four court orders for driving under the influence, time spent in San Quentin prison, owning his own business, years of sobriety lost to ?a damn quart of vodka?. But, first, he says: ?I ask God that his words come out of my mouth.? Almost 2 million people in some 80 nations currently claim membership in 12-step programmes. Members belong to what?s called the fellowship, a convening of men and women trying to recover from addiction through peer support. There are no membership fees, no formal membership, no official leadership. The adherents of Alcoholic Anonymous (AA) live by 12 principles first set out in 1939 in what?s known as the Big Book, a conversion story written largely by a layman, Bill Wilson, a Wall Street stockbroker from rural Vermont who wrenched himself free from the clutches of alcoholism. Wilson?s 12 steps are a set of spiritual principles meant to teach alcoholics how to tame their darkest impulses. The first step involves admitting powerlessness over the addiction. The second and third steps involve turning oneself over to a higher power, some form of God. Other steps include a ?fearless moral inventory? of the self, a deep relationship with a higher power through prayer and meditation, and subsequent reckoning with those who have been harmed. The act of making amends, step eight, is perhaps the best known of the 12. A final step involves carrying the message to other alcoholics and practising ?these principles in all our affairs?. Wilson?s treatise has long served as a template for deliverance, and not just from the bottle, but also drugs (Narcotics Anonymous), gambling (Gamblers Anonymous), overeating (Overeaters Anonymous) and other destructive behaviours. The teachings of the Big Book are the basis for treatment at many rehab facilities operating today. Across these programmes, the onus of recovery rests with the addict ? if he fails, he must not have worked the steps hard enough and should try again. Throughout the 20th century, before the addict?s plight could be explained by neuroscience or subdued by medication, the AA philosophy of liberation was embraced. Compelling tales of recovery were justification for the 12-step programme?s adoption into the criminal justice system as well. In towns and cities that lacked drug courts or funding for substance abuse treatment, AA and NA were the affordable choice. The surprising thing is how dominant the approach remains. Even though the literal circuits of addiction in the brain have since been found, and a host of new cognitive and drug therapies can help those with specific issues such as impulse-control, or with accompanying psychiatric disease, AA remains the overwhelming treatment of choice. ?Standing up and saying AA doesn?t work at a science meeting is like standing up at an atmospheric conference and saying climate change doesn?t exist?, said the Stanford University psychiatrist Keith Humphreys, who takes a more nuanced stance. Humphreys told me that the programmes can work, but calls it ?terrible? to ask people to rely on a single recovery method, including AA, when there are so many variations and causes of this neurobiological disease. Despite a revolution in addiction research, the latest version of the Big Book stays firmly rooted in the past ? a time-capsule that hasn?t updated its science at all. Instead of outtakes from the latest peer review, the tome still features a letter from the late physician William Silkworth, who describes alcoholics as uniquely sensitive to spirits: ?These allergic types can never safely use alcohol in any form at all?? Wilson portrays the required vigilance as a matter of will. Even one slip, one drink, can bring the addict tumbling down. ?Opinions vary considerably as to why the alcoholic reacts differently from normal people ? we cannot answer the riddle,? Wilson wrote in 1939."

"addiction is a habit rooted in brain circuitry, and frequently a consequence of a traumatic experience from childhood"

"Yet, by 2014, this curious thing known as addiction has been pinned down. George Koob, director of the National Institute on Alcohol Abuse and Alcoholism at the National Institutes of Health (NIH) in the US, has written at length about how alcohol and drugs work on the brain. By over-engaging the reward system ? the circuitry of brain networks that send pleasant chemicals coursing through the body ? drugs and alcohol can trigger a stress response, he told me. The brain then begs for relief, which is often delivered in the form of more mind-altering substances. And every time that respite comes, the body and brain are a little more sensitive to stress. ?Alcoholics are drinking to control a system that?s out of control,? Koob said. The one-size-fits-all therapy of AA can?t possibly address every facet of the disease: addiction is a habit rooted in brain circuitry, but also frequently a consequence of a traumatic experience or exposure from childhood onwards. Most of us just flirt with addiction, stopping our habit without any formal treatment or intervention from self-help groups such as AA. Others struggle mightily over a lifetime, their addiction a spectre ? an ever-present haunting. Addiction, moreover, often

exists in tandem with other neuropsychiatric disease ? a find that the Big Book has not been revised to include. Nearly a third of adults who experience mental illness have an addiction. This number skyrockets for jail and prison inmates. Three quarters of those with mental health problems also have a substance use disorder. This dual suffering is palpable at AA meetings. A young woman wearing a coral sundress at the Drunks-R-Us gathering seemed to gently shake, holding back tears, as she spoke of relentless depression and anxiety. She didn't want to sacrifice several years of sobriety, but she'd found little success with the mood stabilisers recommended by her doctor. ?They don't know jack about the brain,? she said. Heads nodded in agreement. When participants share their life stories at an AA meeting, they often reflect on psychological terror or physical trauma at the hands of people who were supposed to protect them as children. At another meeting in Berkeley, a woman spoke of her ?rage-a-holic? father who drunkenly lumbered around the house, smelling like ?metabolised vodka? and swinging his fists into the walls. It wasn't long before she turned to booze as a teenager and spent decades trying to break free. Her multiple relapses, according to recent science, are no ethical or moral failing ? no failure of will. Instead, they are the brain reigniting the neurological and chemical pathways of addiction. Ruben Baler, a health scientist at the National Institute on Drug Abuse in the US, told me that, once the circuitry of habituation is in place, it cannot be destroyed or fully overwritten. ?The brain will never go back to a pristine, naive, drug-free state,? Baler said. It would be like reversing time itself. This permanence is the result of a process that researchers call ?chunking?: a person using drugs or alcohol experiences a burst of the activating neurotransmitter, dopamine, encoding memories and stimuli associated with that high in the brain. As substance use turns chronic, that same networks in the brain are increasingly engaged, and eventually the habit becomes automatic. Baler likens it to riding a bicycle ? once the brain knows what to do with the pedals, brakes and handlebars, the action is inevitable. When any part of this chain, or chunking, is triggered ? maybe it's a visit from an addict friend, or the sight of a McDonald's where you once got high in the bathroom ? it can lead to a full-blown relapse. That's why lifelong abstinence can be such an impossible goal for even the most committed of recovering addicts. In an AA meeting, such setbacks are often seen as an ego out of control, a lack of will. Yet research describes a powerful chemical inertia that can begin early in life. In 96.5 per cent of cases, addiction risk is tied to age; using a substance before the age of 21 is highly predictive of dependence because of the brain's vulnerability during development. And childhood trauma drives substance use in adolescence. A study of 8,400 adults, published in 2006 in the Journal of Adolescent Health, found that enduring one of several adverse childhood experiences led to a two- to three-fold increase in the likelihood of drinking by age 14. Perhaps because the latest round of research is so new, therapies emerging from it are too green to claim potent results. Compared with more recent behavioural and motivational therapies, AA ? folk medicine or not ? holds its own. In one ambitious trial published in BMC Public Health in 2005, researchers from the University of Miami School of Medicine compared three approaches: 12-step facilitation; cognitive behavioural therapy focused on dealing with urges; and motivational therapy, designed to provide feedback about substance use and increase a sense of individual agency. According to the study, all three therapies improved abstinence by some 10 per cent ? hardly a stellar result. Alleviating the suffering of even a small percentage of addicts in voluntary programmes is surely significant ? and until new therapies are developed and improved, the folk-medicine approach of AA deserves as much clinical credence as anything else. But those results don't shed light on efficacy for offenders forced into treatment by courts, a population currently in the cross-hairs of the 12-step debate. Lee Ann Kaskutas, a senior scientist at the Alcohol Research Group in Emeryville, California, says ideally a clinical trial could show how well 12-step programmes work for this second group ? and there is reason to think it falls short. ?I've wondered if it really makes sense to ask a court-mandated drunk-driver to be abstinent all the time,? she said. In other words, sending someone who is not alcohol-dependent but made a regrettable decision to AA might not be the most effective thing to do. That person might benefit more from cognitive behavioural therapy, a skills-based intervention that helps a patient identify both the triggers that lead to excessive drinking and the coping skills to defuse those trying moments. ?We need to think about what the problem is,? Kaskutas said. The criminal justice system has deferred that task. Take the case of Barry Hazle, who was convicted of methamphetamine possession and had already served a year in a southern California correctional facility by February 2007. Prior to his release, he told officials that, as an atheist, he could not abide a treatment programme that asked him to submit to a higher power. Still, he was assigned to a 12-step residential facility for 90 days. He attended the programme, but implored state and clinic officials to find a secular alternative. ?Let me begin by assuring you that my aim in this endeavour is not to get out of having to complete my parole requirements,? Hazle wrote. ?I have committed myself to a full and lasting secular recovery and complete abstinence from illegal drugs.? But the recovery centre told Hazle's parole officer that he was ?sort

of passive aggressive? and ?disruptive, though in a congenial way, to the staff as well as other students?. Correctional officers deemed Hazle in violation of his parole and sent him back to prison for 100 days. Demanding that Hazle participate in a religious-based treatment was unconstitutional at the time, according to previous federal court cases, but the correctional officers claimed that they had no other alternative for Hazle. Later in 2007, California courts affirmed the unconstitutionality of coerced AA, NA and 12-step rehab in a separate case."

His request to attend a non-12-step programme at his own expense was devastating: the legal battle sent him into bankruptcy and the board suspended his licence

"The California Department of Corrections and Rehabilitation (CDCR) is taking note. Bill Sessa, a spokesman for the CDCR, told me that the agency has recently reviewed its addiction treatment programmes to ensure that they are based on clinical and scientific evidence. ?The only programmes that we mandate for inmates and parolees are based on that criteria,? he wrote in an email. ?As a result, none of our sponsored or contracted drug or alcohol treatment programmes are ?religious based?.? Yet the perspective is hardly widespread. In recent years, even physicians have been forced by other doctors to take the 12-step route. In one recent North Carolina case, an emergency medicine doctor voluntarily reported a single arrest for driving under the influence to the state?s physician health programme, which is designed to help clinicians with psychiatric and substance abuse disorders. The doctor, James David Fenn, was subsequently diagnosed an addict and ordered to undergo expensive treatment at one of three out-of-state 12-step facilities. He disagreed with the board?s assessment, but failing to comply would cost Fenn his licence. Like Hazle, Fenn?s request to attend a non-12-step programme at his own expense was devastating: the legal battle sent him into bankruptcy and the board ultimately suspended his licence. Without consensus over science-based addiction treatment, chaos abounds: a 2012 report from the National Center on Addiction and Substance Abuse at Columbia University holds that most doctors are ?uninformed? about addiction and can rarely diagnose, treat or refer patients to specialists. Staff at treatment facilities often lack training in addiction, and programmes aren?t held accountable for delivering treatment that works. Optimal treatment for addiction, of course, is still a work in progress. Even neuroscience, with its sophisticated understanding of the brain, has yet to deliver on the promise of a radical new surgical intervention that might repair the damaged circuits that rev on the addict. Every circuit, Baler explained to me, has several functions, and we don?t yet possess the technology to repair the defective ones. The best hope so far might be deep-brain stimulation via implanted electrodes or targeted electroshock therapy, which could potentially moderate neuronal activity. But this research is in the very early stages for treating addiction. Instead, Baler told me, patients should look to prescription drugs to help create the ?space where long-term healing can occur?. These include methadone and naltrexone, which pre-emptively bind to receptors in the brain to block the effects of the drug or alcohol, and disulfiram, which prevents the body from metabolising alcohol, causing unpleasant symptoms such as vomiting, sweating and vertigo. Some AA members don?t look kindly on prescription drug use, insisting that it replaces one substance with another. But Baler has his own perspective: a patient cannot begin to curtail his habit while experiencing craving or withdrawal. Drugs that provide even a brief reprieve from the intensity of addiction are key to starting that process. What these patients require, he says, is a holistic approach that accounts for forces such as mental illness, unemployment, chronic stress, and childhood abuse. This might look something like the science-based treatment that patients receive at a Minnesota clinic called Alltyr, founded by Mark Willenbring, the former director of the Division of Treatment and Recovery Research of the National Institute on Alcohol Abuse and Alcoholism at the NIH. The wounds of addiction, Alltyr holds, must be tended along with the disease itself before an addict can be restored to health. And that, Baler says, happens most effectively through adopting new coping skills and behaviours developed and tested by researchers. Some argue that AA offers just that opportunity, with its steps, affirmations and peer support. Back in that sunlit room in Berkeley, surrounded by recovering addicts who share testimony about the salvation of AA, I can see their path to redemption. The suffering in the room feels like the movement of a wave ? that moment when the ocean?s water is pulled back into the abyss and the sand disintegrates beneath your feet. The hour-long ritual of sharing and grieving and lamenting is a way of resisting the void, of pushing it back so that it doesn?t consume you again. With newer therapies so emergent, with research ongoing and trials incomplete, this seems a proper way. Outside of this room, though, there are many whose lives were touched by alcohol or drugs but somehow remained whole. Even if those lives cracked, conversion to the AA way of life might not be the answer. And that must be acceptable.

Those who suffer must be afforded the right to mend and atone according to their own beliefs."

"Obama's campaign funding crony scheme seems to have back-fired. His White House staff paid off the SILICON VALLEY ""CleanTech"" VC's of Palo Alto, Woodside and Atherton, California with billions in Dept. of Energy pay-offs in exchange for campaign funding yet: THEY DON'T ALLOW ANY BLACKS IN Palo Alto, Woodside and Atherton, California. Blacks are ostracized, leered at, discouraged, not hired to top positions and not even hired as day labor and housekeepers. All of the workers are Spanish. (Hence Silicon Valley's push to allow all of Mexico into California in order to get cheap house-keeping) Go there, drive around. Try to find more than a handful of black people, if that. Go to Buck's restaurant in Woodside for breakfast, you have to wear your shades it is SO WHITE. Obama gets his cash from the most racist community in America: Ironic! Michelle O goes ballistic about kids eating cupcakes but doesn't say a word about the overt racism in Silicon Valley... is that a ""don't bite the hand that feeds you unless it is feeding you cupcakes in non-campaign funding neighborhoods kind of thing " S- LATIMES"

"- How Senators insider stock and campaign funding kickback scheme funded a car company with stock market manipulation (SOURCE: SOMO1) Derived from RICO CASE FILE #456-D-hj45A and Tesla Employee Testimony. 15 Tesla employees have provided every company email since 2003, between all suppliers, investors and third parties. (Their hard drives did not crash). All of this information can be independently verified with minor research and interviews. HIGHLIGHTS: (Full Timeline is 42 pages long) 1880's- Detroit Electric sells Electric cars commercially 1900. 38 percent of US automobiles are powered by electricity, but as Henry Ford designed the much cheaper T-Ford, the electric cars began to disappear. 1970s. The price of gasoline hits record because of a series of energy crises, so the interest in electric cars increased again. June 1971. Elon Musk was born. 1996-1999. General Motors produced an electric car called EV1 and leased it to customers. 1999. Elon Musk sold his company Zip2 and made \$22 million. He founded X.com that would become PayPal. October 2002. eBay acquired PayPal and Elon Musk made \$165 million. 2003. General Motors cancelled the lease program and removed the last EV1 from the streets. They said they couldn't sell enough of the cars to make the EV1 profitable. July. Martin Eberhard and Marc Tarpenning incorporated Tesla Motors. They had earlier made a feasibility study to see if they could make an electric car. They now made a feasibility study together with AC Propulsion to see if the batteries would work. November. The 2 employees searched for a partner to build the rest of the car. Lotus became their choice. Lotus engineers, from England, agree to provide chassis of car. 2004 February. Ian Wright, who had met Martin Eberhard while on a plane, joined the company. They finished business plan 1.0. Ian later leaves Tesla in disgust when he realizes what they are up to March. Starting a car company is expensive, so they began to look for outside investors. Silicon Valley VC's discuss having Elon Musk take-over Tesla and get rid of the founders April. Series A funding where Elon Musk was the main investor. Elon Musk had earlier aligned with JB Straubel, as his directed mole, who had friends at AC Propulsion, and the VC's told Elon

Musk to contact Tesla. Other investors included SDL Ventures and Compass Technology Partners. JB Straubel joined the company as employee number 5. May. An early styling study began at Tesla. June. A technology implementation study began. July. Tesla had 9 employees and moved to an office in San Carlos, California. They also made a "mule" which is a car that doesn't reproduce but you can see if the concept works. This fake "mule" car is shown as a real sellable car to DOE and investors, when, in fact, it is not October. The 15 employees began to design the drivetrain component. November. They installed the drivetrain in the Mule 1. December. Tesla couldn't use the same design as the Lotus Elise, so they had a contest where Barney Hatt made the best design by copying most of the Lotus Elise so they would not have to pay Lotus the full licensing costs. 2005 January. They made a 1/4 scale model in clay of the design Barney Hatt had made. Tesla had now 18 employees and they also took out Mule 1 for a test drive but it was not legal to be driven on any road. February. The now 23 employee strong company needed more money, so they made a series B funding. Not only Elon Musk invested more money, but also Valor Equity Partners. Tesla also opened an office in UK close to the Lotus office to try to tie into Lotus. Lotus is leery. April-June. Tesla made a full-scale model in clay of the Tesla Roadster. July. With 38 employees, they now tested a plastic model of the Roadster in a wind tunnel. August. Some of the 41 employees began developing a motor. December. 63 employees and they began to build the Mule 2 in fiberglass. 2006 January. A drivable Mule 2 was finished but it still isn't a production car and it is not legal for sale or driving on the road. April. The engineers thought the Roadster was finished so they made 10 engineering prototypes (EP), which compared to a Mule can (in theory) be produced. May. 92 employees and they finished the first EP, called EP 1. Tesla raised a series C round led by Vantage Point Partners and Elon Musk. July. Almost no-one knew that Tesla existed, until now when Tesla showed EP 1 and EP 2 in Santa Monica, California. August. 100 employees. Tesla crash tests and technical reports reveal fire dangers. Tesla senior staff orders the reports shredded. Tesla had earlier crashed a few virtual cars, but they needed to know if the computers models were accurate. They also began to show the Roadster at events to market it. August. Elon Musk, John Doerr, Rahm Emanuel, Robert Gibbs and David Axelrod discuss a quid-pro-quo scheme to advance money for the Presidential and Senate campaigns and get paid back in spades from TARP and Dept. of Energy "Loans", tax credits, stock perks and monopolies. September. 120 employees. They made more tests, including radiated emissions and susceptibility testing. EMF emissions during charging were high and those reports were ordered shredded October. They made a durability test, which consists of driving the Roadster on a cobblestone racetrack. The idea is to simulate 100,000 miles in 6 months. It would have taken much longer time to drive the same distance on a smooth road. Tesla realized that their computer models were inaccurate - the Roadster's transmission didn't survive the durability test. Tesla is warned, by Detroit UAW executives that everything they are doing is wrong, wasting tens of millions of dollars and could damage the overall auto industry. Musk hates unions and pledges to keep unions out. He ignores the advice due to narcissism issues. November 2004. 144 employees, and more tests, including driving through a saltwater bath. December. They showed the EP 2 at the Los Angeles Auto Show. 2007 January. Tesla brought the Roadster to Arvidsjaur, Sweden, to see if it could survive winter conditions. It had severe charging issues February. 205 employees. Tesla began to build a validation prototype (VP), where they took everything they learned from the engineering prototype. Tesla says it will build a \$35 million plant in Albuquerque, to produce the Model S. They lied. March. 230 employees and they finished the VP 1. April. In dire finances, Tesla raised more money - a series D round led by Elon Musk, Technology Partners, and Vantage Point. June. Tesla's motor factory in Taiwan was finished and it began producing parts. July. A new transmission was somewhat finished but still has ongoing problems. August. Tesla finished the VP 10. CEO Martin Eberhard was replaced by Tesla investor. Tesla's are now \$100,000.00 over budget PER CAR Michael Marks, hired, who would work as an interim-CEO until Tesla found a long-term CEO. September. Tesla delayed the launch of the Roadster because they needed more time to test its durability. October. Tesla transmission failed in the durability tests. Massive engineering failures are piling up. Tesla needed yet another transmission. November. Actual Tesla Martin Eberhard is forced out of the company after confronting Elon Musk regarding Musk's manipulations. Musk orders his PR group to launch character assassination campaign against Eberhardt December. Interim CEO Michael Marks see the lies and leaves and is replaced by interim CEO Ze'ev Drori. Bernard Tse is contracted, by Tesla, to hide the Tesla battery explosion documents that have been uncovered. December. Tesla says it will build its factory in Southern California. They lied. December. Sex worker hired by Musk attempts blackmail. Lawyers shut her down 2008 January. 260 employees. The VPs survived the new tests, so the Roadster was finished -except for the transmission. Tesla accountants notify Musk of impending bankruptcy. Tesla makes customers sign confidentiality agreements to keep from disclosing

extensive defects and price changes that are constantly occurring. March. Tesla began production of the Roadster. Elon Musk cheating on wife and kids with B-movi"

"Senior Tesla Motors Media Consultant quits. Reveals All! Says ""STUPID, STUPID NEWS REPORTERS NOW USING FACTS INSTEAD OF TESLA TALKING POINTS, THUS RUINING THE WHOLE DEAL...""

"Share this story via this link: <http://wp.me/p4e1uX-2IH> Fremont, CA- As of today, there is no mention of Buzz Flapjaw on any Tesla Motors website. His name appears to have been scrubbed from all Tesla media. Buzz is a legend in the corporate communications industry, but he now has no relationship with Tesla Motors, certainly as of this weekend. Buzz said, ""The PRESS ARE IDIOTS!"" in national press releases (the results of which are shown below): "

"He went on to say: ""The Stupid, Stupid news reporters are now using facts, hard data and detailed research to write their stories about Tesla Motors and Elon Musk, instead of the extensive and carefully prepared talking points we gave their news directors. You would think that our investors ad money would still give us control of the media but apparently not.."" ""(Fucking Glenn Greenwald)"" , He muttered under his breath.. ""(Jay Carney would never let this shit happen when he controlled the news..."") he continued to mutter to himself... Buzz elaborated: ""Only those of us inside Tesla can truly describe the kool aid colors (Tesla's fanboy shill bloggers favorite drink) of the bright Tesla future and the wonderfulness of just being a Rich Frat Boy Democrat, err... uh... Tesla Owner"" Formerly with Enron, Buzz moved on to run the General Motors ignition key safety group, and was stolen by Elon Musk (Who stole Tesla from Martin Eberhardt), from GM when his valuable disinformation skills were noted. Buzz expressed his angst and frustration with the constant concerns over Tesla's stock ""activities"" and the reference to Tesla as a ""creepy taxpayer swindle-scam created to manipulate the stock market and exploit tax credits which Tesla's investors bribed into place"". ""THAT IS JUST WRONG!"" , Raged Buzz, ""there is nothing creepy about it!"" Buzz also commented on other controversies: ""Senator Feinstein DID NOT put herself on the intelligence committee just so she could get a heads-up just before she gets caught. She did not take bribes! Our investors huge cash payments to her PAC are irrelevant, as are the insider stocks and real estate holdings her, and her family, profited on and we only hired her staff to help them out, not as revolving door bribes, people are just making things up! The fact that Elon Musk had a personal relationship with her had nothing to do with it! If you ignore the direct connection between Solyndra and Tesla, and all of the investors who are also campaign donors, which are all on the same land, you can just ... err...uhm..... Benghazi!"" , Said Buzz. Also commenting on the Tesla fires, he admonished: ""OK, so the Tesla patents do say, in no uncertain language, that the Tesla batteries will blow up and kill your family and burn your house down, but that is not why we were just giving the patents away. Also, even though every major university has said that they way we configured the NOT APPROVED FOR CARS batteries creates 'the most likely scenario for an explosive fire, of any lithium ion configuration on EARTH', the handful of cars we have sold only blow up a little bit and the cancer-causing gas they emit can be avoided if you get 2 miles away from them very fast while holding your breath."" He went on: ""..Tesla is getting a raw deal, you need to just ignore all the dead, and burned alive, Tesla car and battery factory workers..for GODS SAKES, all but three of them are in CHINA..They are ASIANS, they are not AMERICANS!.. who cares?!"" We asked him to discuss the safety issues: ""Look"" , he said: ""Yes, we all know that Tesla's have killed multiple people and that there are multiple homicide charges but it wasn't like the car killed people, except some of them."" We asked Mr. Flapjaw about the connection between all of Google's executives and investors, Tesla's investors and campaign contributions that line up in a very symmetrical way to the Department of Energy funding. Buzz exclaimed: ""What!? You have a problem with symmetry? Look at the Tesla! It is design perfection. It is perfectly symmetrical. Symmetry is GOOD. You try to make it sound like kick-backs are a bad thing.. call them 'campaign support resources', that doesn't sound so bad, heh " , he wiped his brow and continued.. ""...So what if Google controls the media and hides all the investigations about Tesla, it is better than letting voters get all upset!"" The various charges that Tesla is an organized crime operation created as a kick-back scheme to control stock market valuations was taken to Mr. Erick Holder for comment. His secretary stated that: ""Mr. Holder cannot speak to you right now, he is very busy... very, very busy. He has a lot on his

mind right now. He has to redo his stock portfolio before Monday and all kinds of things.."" Buzz expects to begin work on his new job as lobbyist for the new ""CIGARETTES COME FROM PLANTS AND ARE GREEN AND GOOD FOR YOU"" Campaign. When asked for comment, Mitt Romney merely smirked in a knowing kind a way... We asked Buzz if it is true that Robert Gibbs, Jay Carney and Erick Holder told Elon Musk that he could ""pretty much kill and eat human babies and we can keep it from getting ACTUAL media coverage"". Buzz walked away."

Tesla shareholder suit claims Elon Musk and other board members lied about car safety

"- DOZENS OF FRAUD LAWSUITS NOW PRODUCED OVER TESLA FRAUD BY SHAREHOLDERS AND INSIDERS. CHARGES ERIC HOLDER WITH RUNNING COVER-UP TO PROTECT THE WHITE HOUSE! - CHARGES TESLA IS ""A TOTAL CRIMINAL ENTERPRISE CREATED TO KICK-BACK FUNDS TO SILICON VALLEY CAMPAIGN FUNDING VC'S!"""

By Paul Carr

"Out of the battery fire, into the shareholder lawsuit. Tesla shareholder Ross Weintraub has filed a derivative suit against the company and its board members ? including CEO Elon Musk ? alleging that a series of dishonest statements made about safety and profitability caused Tesla?s stock price to drop on multiple occasions. A derivative suit is a legal tool used by shareholders who want to force a company to take corrective action against its own executives or, in this case, to take action directly if board members are unlikely to act. It should be noted that, to many, shareholder lawsuits are like patent trolls: An unfortunate cost of doing big business and not something that inherently bodes badly. Also, in Tesla?s case, their stock isn?t that far off its 52 week high (Chart via Google): In the complaint, filed in Northern California District Court, and embedded below, Weintraub alleges a long history of dishonesty by the company and by Musk himself, including allegations that Tesla board members:"

"?allowed the Company to embark on a campaign of false and misleading statements designed to convince the market that the Model S was literally the safest car in existence.? ?allowed the Company to misrepresent the low height and configuration of the Model S battery pack as enhancing the vehicle?s safety, without disclosing its very significant vulnerabilities for high-intensity fires.? ?egregiously allowed the Company to misrepresent the Model S?s history of fire incidents which included at least three very significant fires requiring first responder intervention."

And that Elon Musk himself?

"?falsely claimed that ?[t]hroughout all our crash tests, throughout all similar incidents with vehicles on the road, never once has there been a fire.? When a Model S fire later occurred during the relevant time period, a Tesla spokesperson falsely stated, ?This is the first fire.? Thus, by the third Model S fire, the Individual Defendants were still causing or allowing Tesla to represent that there were low probabilities of such fires while simultaneously denying that a recall was necessary. ?gave several interviews during which he downplayed this Model S fire and worse, failed to disclose that another Model S had been consumed by fire in Mexico on October 18, 2013? According to allegations in the Federal Securities Action, defendant E. Musk, with knowledge of the fire and inspection, unilaterally determined that the fire was not relevant to investors due to the circumstances under which it arose."

"The lawsuit further claims that Musk and his fellow board members? conduct ?has significantly and materially damaged the Company. By virtue of the Individual Defendants? breaches of fiduciary duties, the Company faces a lawsuit alleging violations of the federal securities laws and Tesla has suffered significant disruption of, and damage to, its business, its reputation and goodwill.? It then goes on to list various conflicts held by board members which would make it unlikely that they would take action against Musk of their own volition. These include the fact that board member Steve Jurvetson of DFJ is an investor in other Musk companies including Solar City and Space X. The suit demands a jury trial. The company has until the end of this week to respond or face a judgement by default. Updated: A Tesla spokesperson told Pando ?We believe this lawsuit is without merit and intend to defend against it vigorously.?"

The Tesla Patent Giveaway SMOKE SCREEN!

"Tesla has announced that they are giving their patents away, patents which state, in no uncertain terms, that their batteries can ""kill you"", ""burn you and your family"", ""set your house on fire"", ""set your office or parking structure on fire"" (Not to mention the cancer-causing fumes they release). Tesla own engineers wrote that in the their patents and Musk signed off on those patents. [wpvideo syQr4wbz] So that's nice, they are giving them away. Who does this benefit? Since 2006, EVERY SINGLE new electric car company has been sabotaged by Musk and his Silicon Valley investors, The Detroit Big 3 (SEE THIS LINK) !!! and/or the Department of Energy. Over 200 electric car companies tried to launch and every single one got lied to and stonewalled by the DOE, sabotaged by outsider take-overs who offered an investment and then generated a take-over EXACTLY like Musk did; Blockaded, by mutual agreement by the VC's; and/or regulated into non-operation by laws which were written so only the Detroit Big 3 could pass them. So, Musk appears to be making all nice-nice by ""giving away"" the patents but in reality, they can't be used by anyone but the Detroit Big 3 because anybody else will be forced to endure the above-mentioned sabotage efforts. The Detroit BIG 3 already have tons of their own patents and avoid any NIH (Not Invented Here) outsider technologies. So, what good are they? There is no possible way to start, or run, an electric car company in America because Musk and his VC's along with DOE and Detroit have built a cartel that kills off any competitors. (With a little help from Robert Gibbs and Jay Carney) Does President Obama care that they made him look like a fool for destroying his ""Miillion Electric Cars on America's roads"" promise to the Public? The sabotage was intentional! They used taxpayer money to do it! Shouldn't the WHITE HOUSE be a little bit pissed off? Yet, another thing, the President has to first find out about by reading about it in the paper? So could this be the precursor to a Tesla bankruptcy? We have seen that they ""cook the books"", are we in for another ""cleantech"" shocker? Send in your links. Let's discuss... Tom- Boston/G [wpvideo Az6PiFCv]

----- The Takeover Game- ANOTHER REASON WHY THE TESLA PATENTS ARE WORTHLESS... Almost every electric car company that starts to get traction has a hostile takeover attempt. Later stage parties create a dispute which causes the founder to be forced out, bought

out, quit or otherwise stop providing the impetus to deliver a disruptive technology. The process has now occurred so many times that it is beginning to look like an intentionally crafted standardized strategy by third-parties who fear market diffusion. It happened to XP but they overcame it. The "new management" usually "accidentally" tanks the company. Let's try to guess who the "third-parties" might be...BUT: What better way to control a market than to control all of the funding for that market and then have all that controlled funding administrated by "your people" who have been placed in, and around, a federal agency! It's the "Takeover Game" on a whole new level. Do people really do these sorts of things? Imagine megalomaniac car, energy and materials company heads with billions of dollars that want to control hundreds of billions of dollars and have insane egos... HERE ARE JUST A FEW EXAMPLES OF HOSTILE TAKEOVER SABOTAGE ATTEMPTS TO STALL, CONTROL AND MANIPLUATE THE ELECTRIC CAR INDUSTRY: "

e saw White House and Energy Department executives engage in bribery, and organized crime, and nobody seems to be doing anything about it

The facts are clear. The evidence is indisputable. The financial records, email leaks, witnesses, stock disclosures, offshore records and published testimony prove that White House staff and Steven Chu's federal Department of Energy set about rigging hundreds of billions of dollars of taxpayer cash for their friends.

Their friends were Elon Musk, John Doerr, Eric Schmidt, Steve Jurvetson, Vinohd Khosla and that Cartel of Silicon Valley men who had paid for White House campaigns. The transfer of state and federal cash and resources, to this Cartel, was a felony crime.

Over 200 of our companies, over 800 of our staff will testify, in public hearings, to the veracity of these facts. The White House will do anything to stop us from speaking out. The White House has ordered federal, and state, law enforcement to "take no action". We have demanded a "special Prosecutor or a public hearing. It has been blockaded by White House staff.

We have, as a group, placed all of the evidence that we know of, in the hands of the law and the public. It is up to the world to now judge.

If you live in the United States, you need to consider the ramifications of the trillions of dollars in losses that your U.S. Treasury, and in essence, you have suffered, because of this crime.

If you live outside the United States, you need to consider the loss of resources, that you used to get from the U.S. , that the U.S. can now not afford to give you, because so much money was lost in this malfeasance in federal offices.

The White House Press office refuses to even acknowledge the issue for fear of the "Streisand Effect".

In short, Steven Chu and Eric Holder were placed in office by the Cartel in order to rig and "hard-wire" TARP and DOE funding directly back to the Cartel. They did. It worked as planned. Only The Cartel got the money, and government gifts, and all 200 other of us got sabotaged, manipulated and defrauded.

The White House rigged enforcement agencies, courts, media and Google rankings in order to halt any justice efforts. The cover-up was almost perfect.

"Almost" is the key.

Between Snowden, Assange, Guccifer, Chinese Hackers, The HSBC investigations, The Sony leaks, Senate investigations, GAO investigations, 60 Minutes, Private investigators, news journalists, whistle-blowers, and a few of the last ethical employees left in Washington, DC.... "Almost" was not good enough.

You will notice that as soon as they got the money Solyndra, A123, Fisker, Ener1, Abound, and a host of the other front companies for the Cartel, suddenly went out of business. The Cartel had skimmed it's money off of the top and run for Switerland.

In just the six trillion dollar loss in Afghan lithium mining deals, the 500 million lost on Solyndra, the massive

amounts lost on all of the rest, the failure was epic in scope. Solyndra used Afghan mined materials that caught fire when exposed to the sun. Too bad it was a solar panel company. Tesla used lithium that exploded when it got bumped, or wet, and released cancer-causing fumes. Too bad Elon Musk was the White House's best friend. The political embarrassment is palpable.

The White House protects Elon Musk's stock structure and corporate existence, because the failure of Musk would simply create so much media coverage, Obama would have to resign. It is now at the point of being just silly. Nobody wants Tesla's cars, Musk's solar panels are being beat by many others, His rockets blow up so bad that NASA had to go back to Russia to buy dependable rockets. He is constantly sued for fraud and the world thinks he is an arrogant prick. Musk's partnership with Google, for stock pumps and web-search manipulation, are now notorious.

The federal protocol for the "Cleantech Crash", as it is now known, is: "Just ignore it, maybe it will go away". That might have worked in the 70's, but not in today's transparent, deeply documented, digital world. Not only is it not going away, the lack of resolution is making the scandal geometrically worse for the White House and Obama's "legacy". This was already ten times worse than "Watergate". President Obama must stand up, take responsibility, and resolve the issues with us. Man up, we say!

If The President wants to say "he only heard about it when he read about it in the paper", that is fine. He will need to explain how his most senior staff; including Valarie Jarrett, Rahm Emanuel, David Plouffe, Robert Gibbs, Steve Rattner, Bill Daly and others, that sat right outside the Oval Office; were running the scam; without him catching a clue about it.

It was a nice try. The Cartel got the cash. All of their competitors got put out of business by the malicious efforts of those who ran the scam, and monopolies were created. It was felony crime. You are not supposed to do felony crimes to the taxpayers when the taxpayers put you in office.

Each year we offer to go on live network television, with a debate between Valarie Jarrett, Rahm Emanuel, David Plouffe, Robert Gibbs, Steve Rattner, Bill Daly, Elon Musk, John Doerr and eight of our folks. We challenged them to face the facts, and the light of transparency. They refuse. They know they have nothing to keep them out of jail in the face of the truth.

This was organized crime that they engaged in. They planned it. They rigged it. They manipulated public policy and public funds. We have sworn to the veracity of our facts.

Since this Administration only seems to offer cover-ups, lies and obfuscation; we have made certain that others will not suffer the same fate. We have worked with the voters to improve laws, investigations and disclosures so that, now, the pain of trying this kind of corruption, again, will be greater than the benefits.

Without breaking any laws, unlike the White House and Department of Energy staff, we have gotten most of them fired, or forced into resignations.

Frankly, we feel like we got raped by our elected officials. We were asked on a date, seduced, used, robbed, abused and tossed aside while the abusers went on to marry the prostitute on the corner and paid her off with our money and assets. Seriously, once you read the full case files, you will appreciate the metaphor.

We will never give up. Some of us have died, in the interim, seeking justice. We will never give up. We believe you have to fight for what is right. That is what created America. We are American's.

We don't break laws. We fight to put law-breakers and corrupt politicians in jail. Every American deserves that justice.

It is wrong for these kinds of people to abuse our country, our trust and our dreams. Their arrogance will be their

downfall. Thinking that they can do what they want with voters money, for their personal benefit is just wrong. Manipulating our government for personal profit, while damaging taxpaying voters is the greatest social crime.

To the White House, we say: Do you believe in God? Do you believe in right and wrong? If you do not have a religion, do you have a conscience?

Eternity is a pretty long time. Whether or not you are religious, you can either fix this today, or have the world remember you, for all eternity, as a pack of crooks. History does not look favorably on criminals and political corrupter's.

Aside from the moral issues, you friends, family and 300 million voters, for the rest of your living days, will always look at you with that sideways kind of look that says: "there goes that one that did that bad thing". Think about how that will feel for the rest of the time you walk this Earth.

White House Folks: We know, you know, the cops know. Stop telling yourself fairy stories about this "just going away". It hasn't. It won't!

We are still waiting for a call-back from The White House...

Elon Musk screws over customers again, this time with his Solar City, sells them crap they don't need.

SOLAR CITY AGAIN JERKS CUSTOMERS AROUND

Source: www.minds.com |

This is a twist.

Southern California residents Ron and Sarah Hall were paying too much in electricity bills and decided to make the switch to solar, contracting Solar City to outline their roof with 36 solar panels. Nearly a year ago, the installation was complete and for that entire year, the energy bill did not change.

It turns out, the utility company had never turned the panels on. Because the panels were producing energy at 128% efficiency, they were 28% too efficient and didn't fall under the limitations placed on residents for power creation. The state believes that if a resident is making too much power, they can sell the extra and are potential energy distributors, liable for additional commercial business regulations. The Halls were not told, they just kept paying their exorbitant bills.

The mistake was on Solar City. They had miscalculated the amount of energy needed by the Halls and installed too much, though it is also pointing out what looks like a flaw in the system. The state's regulatory system is attempting to limit peoples' power to control the energy.

Solar City apologized for the error and uninstalled the panels at no cost to the Halls, though the family was put through the ringer and said they will not be ordering from them again.

"Solar City was one of the best and we decided to go with them," Hall said, adding "it's frustrating."

Solyndra and Tesla revealed to have been created as organized crime scams!!!!

John Doerr's, Kleiner Perkins Silicon Valley Cartel found to have made up Solyndra and Tesla in order to scam state and federal taxpayer cash
 Part of campaign financing scheme which kicked money back to Obama, Feinstein, Reid, Brown, Lockyer and multiple other Senators. Financial records, HSBC, databases now prove it.
 Leaks and whistle-blowers reveal all
 Investigators "Chart-of-Benefits" shows who got each round of kick-backs and pay-offs
 "Anti-Poaching" investigation reveals new Silicon Secrets about the scheme
 "AngelGate" scandal was just the tip, Solyndra/Tesla shoved it all the way in
 Former Department of Energy staff show proof Musk was nearly bankrupt when he applied for nearly free federal cash. Steven Chu told Detroit to make a stock shill deal with Musk so the books would balance for a few months so Tesla would pass "on paper". Total scam.
 Musk proven to be absolute liar about state of finances and shown to have "cooked the book", like Solyndra did, with help of State officials, to hide failures.
 State law enforcement ordered not to investigate, by their bosses, in order to protect corrupt Senators
 "These were false-front operations that used engineers to create a façade, and got rid of the ones that figured out what was up. Multiple unexplained deaths involved.
 Solyndra raided by FBI but you never saw the whole story... yet
 Emails, Texts, Phone stingray files
 Both Soyndra and Tesla booked state and federal handouts as "sales & profits"
 Got tax credits, hard cash, soft case, waivers, carbon credits, employment payment waivers, free rent, free property, exclusive contract awards worth far more than the \$5B currently in the news. Scam profits and give-aways may be as high as \$45B

Exclusive: Tesla Model S charging system may have started garage fire - California fire dept

BY BERNIE WOODALL AND NORIHIKO SHIROUZU

Wed Dec 18, 2013

(Reuters) - A fire department in Southern California said a garage fire may have been caused by an overheated charging system in a Tesla Model S sedan, in the latest link between the top selling electric car and the potential for fire.

While Tesla Motors Inc maintains that the fire was not related to the car or its charging system, the Orange County Fire Authority said the Tesla-supplied charging system or the connection at the electricity panel on the wall of the garage of a single-family home could have caused the fire.

"The fire occurred as a result of an electrical failure in the charging system for an electric vehicle," said a report by the fire authority, a copy of which was obtained by Reuters.

The report also emphasizes that the cause of the fire is unclear.

"The most probable cause of this fire is a high resistance connection at the wall socket or the Universal Mobile Connector from the Tesla charging system" which was plugged into a 240-volt wall socket, the report said.

The fire occurred on November 15 in Irvine, California. The possible link between the fire and the Tesla Model S was not reported previously.

The garage fire is not related to three road fires in Model S sedans that occurred in October and November and which caused Tesla's stock to fall sharply last month. The road fires occurred in Washington state, Tennessee and Mexico.

In the U.S. incidents, Model S sedans caught fire after running over road debris. In Mexico, a Model S caught fire after striking a concrete wall.

U.S. regulators are investigating the cause of the U.S. road fires, which caused the high-flying stock of the "green" car maker to fall from a high of \$194.50 in late September to under \$120 in late November.

On Wednesday, Tesla shares fell 2.9 percent to close at \$147.98 on the Nasdaq.

The November residential fire on the campus of the University of California-Irvine caused \$25,000 of damage to the garage and its contents, but the Model S sustained only smoke damage, and no one in the house was injured, according to the Orange County Fire Authority's report.

A Tesla representative disagreed on Wednesday with some of the report's findings. "We looked into the incident," said Tesla spokeswoman Liz Jarvis-Shean. "We can say it absolutely was not the car, the battery or the charging electronics."

She added: "The cable was fine on the vehicle side. All the damage was on the wall side.

"A review of the car's logs showed that the battery had been charging normally, and there were no fluctuations in temperature or malfunctions within the battery or the charge electronics," said Jarvis-Shean.

The owner of the Model S, who lives at the Irvine residence, had parked the car in the garage the evening of November 14, plugged the cord from the vehicle into the 240-volt wall socket, and set a timer to begin the flow of electricity to the car's on-board batteries at midnight.

She noticed a fire just before 3 a.m. and called for help. Fire crews put out the blaze quickly.

Some cardboard boxes stacked near the point of connection between the Tesla Model S charging system and the connection to the 240-volt outlet helped the fire spread, the report said. (Reporting by Bernie Woodall in Detroit and Norihiko Shirouzu in Beijing; editing by Matthew Lewis)

TESLA MUSK- <http://wp.me/p4e1uX-28e>

BREAKING STORY; Billionaire MUSK admits, on 60 Minutes, he broke the law to get Tesla funded. Crony politics and insider deals exposed.

On the 3/30/14 60 Minutes episode, and associated recorded footage, Elon Musk confesses that Tesla was bankrupt on Christmas of 2008.

Per the U. S. Department of Energy, The GAO, The FBI and The United States Congress regulations, DOEs Loan Guarantee program, authorized in Title XVII of the Energy Policy Act of 2005 (EPAct); the Section 136 Law that funded Tesla, enacted by Congress, specifically states that you cannot get an ATVM or LG loan if you are about to go bankrupt or if you can't survive without the ATVM or LG cash:

Musk has now admitted, in multiple recorded statements, that Tesla was about to go out of business without the DOE kickback cash.

Tesla also had its cash participation waived, per it's own staff in public comment.

Over 1200 pieces of evidence affirming these facts have been submitted to investigators.

According to staff aides, former DOE staff and finance controllers, Rahm Emanuel and David Axelrod, while in the White House, "ordered Tesla to be funded even though Tesla was noted as an unsound company by finance consultants to the Government".

Former DOE staff and aides have stated that the Tesla "wave through" was a kickback to Tesla's and Googles investors who were massive campaign donors.(Google co-owns Tesla- Hence Google never allows any actual negative news about Tesla on it's servers).

Additionally, former NASA staff and engineers have stated that they were fired and the exact same portion of NASA shut down that Tesla's Space X company then immediately took over as an additional kickback to Tesla and Google investors. Those investors: in Tesla, Google, and Space X, are all the same campaign contributors.

It also, appears, in the 60 Minutes episode, That one of Musk's wives left him when she found out what kind of dirty deals he was involved in.

Any car company that received that much "free money" could have sold the relatively small number of cars that Tesla has sold as of today. While the cars may now be pretty, they are born from crime, using your tax dollars.

SEEKING ALPHA

Tesla: A Serious Potential New Risk

Dec 20 2013, 16:08 | about: TSL

By: RSA

Disclosure: I have no positions in any stocks mentioned, and no plans to initiate any positions within the next 72 hours. I wrote this article myself, and it expresses my own opinions. I am not receiving compensation for it (other than from Seeking Alpha). I have no business relationship with any company whose stock is mentioned in this article.

As some of you may know, I have written four previous articles on Tesla (TSLA). In the first three articles, I took no position about the stock, instead using the intellect and analysis of the co-operative board in further analyzing and learning about the prospects of the company and the stock. In the fourth article, I took a short position primarily as a result of coming to the conclusion that the two fires from road debris represented serious ongoing problems for the company and its stock price. I have since profitably covered the short and have no position at

this time.

This will be a short article about one serious concern for Tesla that I have not seen mentioned anywhere yet.

Tesla decided not to do a voluntary recall after the fires. I think that was the better of the two bad alternatives available. It's a little better because it saves a little money. It's a lot better because it allows Tesla to continue to take the position that this is not a design flaw. And the fact that Tesla updated the software for the model S to make it ride higher at highway speeds also helps. It supports the argument that if it was a design flaw, it was that design flaw and that has been fully corrected with minimal damage having resulted. The other viewpoint of the design flaw is that the battery pack extends too far forward and is insufficiently armored is not so easily fixed. That would necessitate a recall and a drastic change in design. Whether the same 265 mile range could be achieved with such a design change is an open question. So we have a resolution from Tesla's perspective. Change the car's clearance at highway speeds and don't touch the car physically. That means continue building cars with battery packs under the car extending as far to the front as they do and armored with quarter inch aluminum. Some kind of aluminum - perhaps an alloy.

But I don't think this alternative works either.

The problem is insurance.

I don't mean the insurance that Tesla owners carry to protect against damage to their car. That may go up some because of the fires but, if so, it won't be material. It may not even go up at all since Tesla is warranting the car against fire damage.

I mean Tesla's corporate liability insurance.

The insurance companies use actuaries to assess risk when they have enough data for statistical significance. They do if Tesla is an automobile company selling cars like the other automobile companies which sell cars. But now the insurance companies know that is not so. Tesla sells cars that have large battery packs which can catch fire when they hit some type of road debris, the configurations of which are as yet unknown. Apparently this totals the car. There is not enough data to make any reliable statistical profiles of what else it does.

But now we have a report of a Tesla catching fire while charging in a single family home. This seriously changes Tesla's insurance risk profile. Many Tesla owners charge their cars overnight in their garage. It's convenient and the utility's night-time rates are cheaper.

Now let's try to think like an insurance underwriter.

My job is to assess risk. There is a risk that the fire was the fault of the charger. The Orange County fire department said so. Look here and here. Tesla says absolutely no way. Look at the same reports. Could be either. But if the fire department is right and the charger caused the fire, houses are going to burn down and people are going to die. If the battery pack is mis-designed and misplaced and too lightly armored other bad things are going to happen. But that's not so bad since it will mostly be only a car or two. Not a house with kids in it. The house with kids in it could cost Tesla a whole lot of money. And that's a liability my company will have to pay for.

So Tesla's liability insurance rates are going to go up. Maybe a lot. If there are any more fires in private home garages, Tesla's liability insurance may be canceled. And Tesla will have a hard time finding another insurance company to take on the risk. Once one of them cancels you, the others generally won't talk to you. The exception is Lloyd's of London. But they may charge so much that a model S will have to go way up in price.

The risk is there. The potential is unknown.

“Are Chinese Hackers Making Tesla Motors Electric Cars Kill People?”

A shocking number of Tesla’s have now suddenly swerved off cliffs and killed the drivers in fireballs of burning death, or swerved into oncoming traffic and killed innocents in on-coming lanes, or swerved into pedestrians and cyclists and killed... again and again.

Why would a car with such low sales volume have such a huge number of deaths and accidents involved with it? For a time, the media, and the public has just assumed that Tesla owners are all just rich douche-bags . The assumption was that they are always partying, getting drunk and crashing their Tesla’s, because they are just dicks.

Something more sinister may actually be happening.

In a recent 60 Minutes episode, the ability to take over a car remotely, by hackers, was fully demonstrated.

A vast number of articles has anointed Tesla as the most hackable car in the world.

A Chinese university held a contest to see who could remote hack a Tesla first. Multiple teams got it done.

Now the Chinese have hacked most of Washington, DC so we know they have the hardware.

News about how easy the Tesla is to hack has been around for a few years but no recalls for this ever took place.

With the media openly acknowledging that Elon Musk is a federal Mooch protected by the White House, it is no wonder.

With the increasing numbers of deaths, fires, explosions and unexplained swerving’s in the land of Tesla Motors, shouldn’t a recall be demanded?

When Erick Strickland, the head of the NHTSA was confronted about these issues, he just quit the agency.

Some may have thought it was OK that the Tesla douche-bags were getting wiped out but now the deaths include many innocents. How many deaths will it take before action is taken? The Tesla cover-ups are wearing thin.”

Undeniable Facts About Tesla Motors:

PART 1

- * Elon Musk did not create Tesla Motors. Elon Musk took over Tesla Motors and was sued for fraud by the actual founder.
- * Senator Dianne Feinstein arranged for Tesla Motors to get free State & Federal funding along with Solyndra. She, and her family, received stock benefits, HR contracts, construction contracts, supplier contracts, staff jobs and sales contracts for her efforts.
- * Tesla cars can be remotely hacked, and taken over, from anywhere in the world per a 60 Minutes, Fox & MSNBC newscast.
- * A Tesla suddenly swerved off a cliff in Sonoma, California and killed the driver.
- * A Tesla swerved into a bicyclist near Santa Cruz, California and killed the rider.
- * A Tesla crashed into a wall in Los Angeles, California and killed the driver.
- * A Tesla in California swerved into oncoming traffic and killed the oncoming occupants.
- * Tesla has been sued for homicide.
- * Tesla has been sued for fraud many times.
- * Elon Musk has been sued for fraud many times.

- * Tesla employees have been burned alive.
- * The batteries in the Tesla were never designed to be used in automobiles.
- * Tesla had to give away its patents because Tesla executives discovered that Tesla engineers had actually described, in gory detail, in the federally filed patent papers, how Tesla batteries will spontaneously kill you and burn your house down.
- * Tesla batteries are so sensitive that they can ignite and explode if they become wet or are knocked. Over 2000 published technical papers and lab test videos prove this as fact. Fisker, is out of business because millions of dollars of its cars, using the same lithium ion battery solution, got wet and burned into slag heaps.
- * The U.S. FAA has issued a film and report that proves that Tesla batteries can not only spontaneously ignite but also explode like a bomb.
- * Tesla's have been recalled, at least, twice for starting fires. One time the battery chargers needed to be replaced for starting fires. The other time the entire floor of all of the cars needed a titanium shield to help reduce fires from bumps.
- * After claiming that sales in China would save Tesla, Tesla only sold 120 cars and had to fire its Chinese staff. China sees Tesla as a conduit to Obama's funding and not only wants to cut off his funding but even got their university to demonstrate how easily the Tesla can be hacked.
- * The primary beneficiaries of Tesla were the campaign backers of the first Obama campaign.
- * Elon Musk had to divorce one ex-wife twice and pay her two different hush-money amounts.
- * Tesla has been sued for "Lemon Law" violations which stated that the car was shoddilylt by inexperienced workers.
- * Per Federal MSDS documents, when the Tesla batteries are on fire, they release toxic smoke which can give the occupants and by-standers brain cancer, liver cancer and toxilogical poisoning.
- * Fire Departments are ordered to wear the highest level of HazMat gear when dealing with a Tesla on fire.
- * Tesla booked its free state and federal tax credits as "profit" when it issued its investor reports.
- * Tesla was caught sending emails to its staff and potential buyers stating that it wanted to book potential sales as fully received revenue.
- * Tesla has paid bloggers to act as "meat puppet" promoters on the web to make it appear that there is a large group of supporters when, in fact, these "meat puppets" are hired shells.
- * Tesla investors have personal, and financial relationships with CBS Bay Area, Reddit, Google, San Jose Mercury News, Hearst Corporation, and other media outlets, and forbid them from publishing negative articles about Musk or Tesla.
- * Google investors and staff own part of Tesla.
- * Tesla analysts have engaged in the process called "pumping the stock."
- * Tesla is so frightened of owners publicly disclosing the many problems with the car that they require buyers to

sign non-disclosure agreements.

* Every major Tesla investor was a campaign contributor.

* At the time that the U.S. Department of Energy was reviewing Tesla's application for funding, Tesla was technically bankrupt, as disclosed by Tesla staff, and had the worst debt-ratio of any applicant. According to the federal section 136 law, this made it illegal to give Tesla the money but they were given the money based on "special orders".

* At the time that the U.S. Department of Energy was reviewing Tesla's application for funding, Erick Strickland of the NHTSA was reviewing documents that said that the Tesla batteries would explode. He later quit the NHTSA on 48 hours notice.

* 80% of the Tesla investors owned stock interest in Afghanistan lithium and indium mining used for Tesla and Solyndra. As of 1/1/15, The Afghan war has cost U.S. taxpayers \$6 Trillion.

* Without free non-competitive federal cash and credits, in a fair-market layout with special-interest protections, Elon Musk's 3 companies would not exist today.

* No documentation, for buyers of the Tesla, ever disclosed the fire danger, hacking danger or lethal fumes toxicity issues.

* Panasonic, the maker of the Tesla battery cells, has been charged with corruption, price fixing, dumping and the deaths of thousands of it's employees in battery factories and nearby towns, from toxic materials.

* Elon Musk spends more per month, on personal PR and promotion than any other billionaire in America.

* On 60 Minutes, while Elon Musk was being interviewed about his rockets, he cried when the interviewer told him that real astronauts thought he was a poser. So far, Space X has had three times more explosions and failures than NASA ever had in the same point in their agency history.

* When part of NASA's budget was gutted and many NASA staff were fired, Space X immediately received a contract for the same services that had just been curtailed at NASA.

* The NUMMI plant, that Tesla took over, next door to Solyndra, was said to "not ever be a possibility for Tesla to use" in the news, by Elon Musk. Dianne Feinstein arranged for Tesla to use NUMMI and told NUMMI workers they would all be employed. Most were not hired and Tesla hired off-shore workers to replace many of them.

* There are thousands of news articles online that charge that Tesla Motors was funded as a political kickback operation and that it was about skimming the funding fees more than building the cars.

* Even though the federal funding discouraged applicants from using taxpayer money to build buildings, due to the glut of empty factories, in America, at the time, Tesla tried to build buildings in multiple cities, got sued for fraud by some of the cities and then went to NUMMI. In every city deal, the property rights deals were designed as tax write-off profits for Tesla investors.

* Tesla owners have blogged about over 150 defects with the car ranging from noise, to thermal issues, to range issues to get getting locked in the car and getting locked out of the car.

* Goldman Sachs was involved in every part of the Tesla deals. Goldman Sachs is under investigation by Congress, and others for minerals commodity manipulations of minerals used in Solyndra and Tesla. Solyndra Afghan chemicals, in the Solyndra solar tubes spontaneously caught fire when installed on roof-tops.

* Elon Musk once spied on all of his employees by sending each one a different email with a slightly different secret in it to try to find out who was ratting him out.

* Tesla told the U.S. Department of Energy, in it's writtem submission, that their car would cost 40% less and sell 2000% more than it actually did.

* Tesla had no actual design for the Model S when it submitted it's materials to the U.S. Department of Energy. What was submitted by Tesla was artists ideas. Tesla then used the taxpayer money to figure out what it was going to do. The Tesla Model S has no engineering it in that was submitted to the U.S. Department of Energy.

* Bright Automotive, a competing applicant against Tesla in the Department of Energy funding, beat Tesla on every financial and engineering metric and had more customers demanding the car yet Bright Automotive got sabotaged by DOE staff because Bright did not make campaign contributions.

* Most of the Department of Energy "reviewers" had a financial and/or political connection to Tesla Motor's investors.

* Tesla Motors staff had personal relationships with all of the key White House staff of the first Obama White House. They all quit the White House mid-term.

* Emails and whistle-blower documents reveal that White House staff coordinated the Department of Energy Funding and that Steven Chu had a personal relationship with almost every Tesla investor and advisor. Steven Chu's nomination documents are mostly authored by Tesla investors and their associates.

* During the Tesla application process with the DOE, the Tesla design was \$200,000.00, PER CAR, overbudget, yet this was not disclosed.

Tesla ships emergency home fire prevention device to all owners. Says it is "not a recall" but an "upgrade".

To deal with the new, additional, fire danger for Tesla cars. Tesla is shipping a new gadget to all owners. Like: Not a bug, it's a "feature"!

Tesla's battery charging system has been setting homes on fire. Tesla issued a recall for the fire danger but, in typical Tesla fashion, lied about it being a recall.

What are the things the media has said that Tesla did?

* They bribed White House staff in order to get nearly free taxpayer funding. * The investors for Tesla paid McKinsey Consulting to write manipulated white papers, for the White House, saying that Tesla was the way to go and then they got McKinsey to staff the Dept. of Energy with their investor's friends, from McKinsey, so that they would make sure they favored the schemed-up deal through the process. ie: Matt Rogers, etc. * White House Staff: Gibbs, Rattner, Emanuel, Axelrod et al,: All took off from the White House at nearly the same time for fear of getting caught, knew about this. * DOE staffers: Lachlan Seward and Matt Rogers were ordered, by Tesla investors, to destroy documents at DOE that documented the Tesla transaction. * The Section 136 law and

Federal Procedural Protocol stated that applicants would be reviewed in the order they applied. DOE issued 42 documents stating that applicants would be reviewed and processed in the order they applied. Suddenly, in March of the application process, year, Matt Rogers & Lachlan Seward ordered a DOE press releases sent out which changed the law (illegally) to remove the first-come-first-served requirement in order to attempt to allow them to move Fisker and Tesla to the front of the line. This was done on orders from Tesla's investors at Kleiner.

- * People who already have Tesla cars say the battery packs overheat and the cockpit gets too hot and the car is noisy as all get out.
- * When Tesla applied to DOE, they were hand-walked through the process by DOE staff when no other applicants got the same "personal valet service" treatment. This fact helps prove bribery and collusion. Many, many other facts prove this too.
- * In a meeting with one of the law firms Tesla hired to leverage the loan, the law firm said: "don't worry, we control 14 agencies in DC!" That firm paid themselves millions of dollars for a small amount of work.
- * When Tesla applied to DOE, they had no actual engineering or factory plans done for the car and showed fake plans, none of which have been used in the factory that exists today. They said they were going to build a factory in San Jose, California when they knew they did not even need one but Goldman Sachs had said they could get "all the money they wanted because the deal was rigged for favors" so "just go for it".
- * Tesla has announced a number of "showcase" famous people hires but once those people did get hired and started working at Tesla, they saw what a rigged company it was, and quit or suddenly "left to pursue other interests"
- * Two well known Tesla staff were starting to whistle-blow about Tesla but they were killed in a plane crash right next to Tesla's offices. Their notes have been distributed to the media, though, by their co-workers.
- * Tesla got thousands of order requests from Tesla investors and their business friends at Stanford in order to prop up the appearance of orders but, in reality, not so much!
- * Tesla investors ordered Chu to rig the tests done by Argonne labs about Tesla to make the results look better than they were.
- * Tesla changed the prices on customers AFTER they had left deposits. This is extremely unethical.
- * Tesla's books showed that they have wasted over \$40M on "expenses of no value or engineering that had to entirely thrown away".
- * Tesla's CEO bugged his own employees because of his extreme paranoid personality.
- * An ex-co-founder has a copy of the CEO's hard drive.
- * Tesla's CEO paid the producers of Iron Man to refer to him in the movie in order to manifest his delusional image of himself. He paid 60 minutes to do a story about him.
- * Kleiner Perkins put Steven Chu in office by manipulating campaign funding so that Chu could make sure Fisker & Tesla got their funding so the kick-backs would come around into the 360 deal that was set-up. Kleiner staff hid contributions via law firms but "bundled" millions of dollars of contributions and received over \$1B in profit options.
- * The number of people Tesla said they were going to hire at the NUMMI plant and the number of people that are hired are not quite what we expected. If you look at the cost to the taxpayer per new job created by Tesla you could have paid the mortgage for some taxpayers homes for what it cost the taxpayer per new job at Tesla after they got the DOE money.
- * A man named Marty invented the Tesla, Elon Musk took it away from him so Kleiner could use it as an industry manipulation bull dozer.
- * They bribed DOE staff in order to get nearly free taxpayer funding by bundling campaign funds via third parties and PAC's.
- * 16 Tesla investor law firms, most with primary offices in Washington, DC managed the hiding, conduiting, bundling and re-cloaking of the money movements in this whole scam guided by staff from Goldman Sachs.
- * They took our money and built multiple bragging cars for rich middle-age-crisis males that no family can afford nor that have any value for the average American. There is nothing novel or special about either Tesla car.
- * The CEO screwed his ex wife over, his co-founders over and the public over. He paid millions to shut them up but her never paid their friends to shut up so, it is all going to come out now.
- * You can buy an electric car that does much more than a Tesla for many, many, many times less money. There is no need for Tesla.
- * Foreigners from the middle east own parts of Tesla.
- * Tesla staff bribed DOE reviewers to give Tesla good fake reviews in the loan due diligence, when, in fact, in a public side-by-side comparison, Tesla would have failed miserably against all other applicants.
- * The amount of money Tesla needs to make compared to the amount of money Tesla has had invested in it compared to the other companies selling electric cars compared to the world car market shows numbers that clearly show today, and at the time of application to DOE, that Tesla had the worst financial upside metrics of any car company in the world. SO why did they get the Loan?
- * The Tesla investors worked with Goldman Sachs and LIBOR rigging of loans to get the finders and intermediaries sweetheart fees.
- * Intermediaries and "finders" who were friends of the CEO, took huge amounts of public dollars as "upfront fees" and ran.
- * Senators and their husband's business ownerships got favors from the associated real estate deals from the NUMMI plant for Tesla.
- * Tesla took our tax money yet posted numerous job openings on LinkedIn, and other sites, to hire "Immigration Paralegals" to hire H-1B foreigners to work for them.
- * Tesla is run by the 1% for the 1%.
- * Steve Westly is the bundler who threatened

Washington officials with campaign fund cut-offs if they did not give his company: Tesla, a nearly free loan. * Tesla manipulated their books when they applied for the loan in order to look like they met the DOE requirements but a true forensic examination of their books from that time shows that they did not meet the requirements. * The CEO lied to the City of San Jose about building a factory there. * The CEO of Tesla has been sued by his ex wife for cheating on his wife and children with loose women. * It is a Ponzi scheme of a company. * The CEO has been sued by his Tesla co-founders for engaging in civil criminality. Those co-founders and Tesla staff provided almost all of the data in this website. * The CEO paid GQ magazine to write an article about how wonderful girls should think he is so he could get more silicon valley hook-ups. * The two models of the cars have had multiple EMF meters placed in them at different states of operation and been found to have enough EMF to cause cancer. The cars were measured with isotropic broadband EMF meters, Agilent Technologies portable spectrum analyzers, Aaronia calibrated broadband antenna's and spectrum sweeping multiplex antennas while charging and driving at increments of 20 MPH up to 110MPH. Drivers have reported experiencing sleep problems, heart problems, depression, migraines, seizures, and changes in neurological chemistry. Thousands of peer reviewed scientific papers prove that these EMF ranges do cause these health issues as well as triggering cancer cell growth per cell. Tesla engineers advised that the car should be shielded but Tesla executives said it wasn't worth the cost and that nobody would find out. * Steve Spinner, was put in the DOE by McKinsey under orders from Kleiner. He was a liaison for Solyndra, his wife worked for Solyndra, and he was an "early warning system" watchdog for Tesla at DOE and notified Tesla if anybody not in the " inside group" came snooping around at DOE. * They were so screwed up in planning to build the car that they were over \$100,000.00 IN ERROR, on the cost per car. With engineering this bad, they still got their federal loan and this shows that bribes took place. * If law enforcement interviews all past and current Tesla staff and investors, they will find multiple validation evidence for every statement on this site. * The CEO stays up at night writing different fake emails to each of his employees with a few words different in each email to see which employees might be spying on him. Many Tesla staff collect these spy emails as a hobby. * The CEO has stated that he hates unions and wants to come up with as many robots as possible to AVOID using people in jobs. More coming.... (These, and more, charges are documented in many third party reports, articles, studies and investigations)

Posted On LinkedIn: Senior Immigration Paralegal - Tesla Motors- Palo Alto, California (San Francisco Bay Area) Job Description Brief Description The Senior Immigration Paralegal would be Tesla's first in-house immigration legal resource and would therefore be responsible for helping Tesla to build-out its immigration law support program. This position manages, oversees and directly assists in handling a large portion of immigration matters in-house, specifically employment-based, nonimmigrant visa applications and permanent residency applications. This position is also responsible for compiling and maintaining various status reports and records relative to immigration related expenses. Responsibilities: •Start to finish preparation of employment-based immigration petitions with minimal assistance and supervision from outside immigration counsel, including: •J-1 visas; •H-1B visas; •I-140 visas; and •Various other visas. •Regularly provide instruction and advice to Tesla employees and foreign nationals on immigration practices and procedures. •Assist with any problems that may arise relative to a foreign national's immigration status. •Assist in the preparation of a monthly status report by tracking immigration costs, volume of immigration files and location of immigration files. •Create and regularly maintain the legal department's customized software report to track ongoing immigration matters at all Tesla entities with immigration needs. •Work with Human Resources to ensure immigration files remain in compliance with state and federal government agency regulations. •Ensure employee and employer compliance with Tesla's new immigration policy and procedures. •Directly handle the recruitment steps necessary to sponsor a foreign national employee for permanent residency. •Assist with U.S. nationals work-related emigration to foreign countries. Desired Skills & Experience Qualifications/Requirements: •Strong, in-depth knowledge of immigration law, including experience with each visa type mentioned above. •8-10 years of Immigration Paralegal experience preferred. •Bachelors degree preferred with a strong academic background. •Strong legal writing and drafting skills. •Accuracy and attention to detail is a must. •Experienced professional with great relationship skills, team player, self starter, independent thinker, and has the ability to anticipate the next steps and future issues. •Ability to work well in a diverse and fast-paced environment with a large and diverse group of people, including Human Resources, Global Mobility, Tesla recruiting, Tesla hiring managers, candidates from countries throughout the world as well as their families. Additional Information Posted:August 9, 2011Type: Full-time Experience: Mid-Senior level Functions: Legal Industries: Automotive Job ID:1845406

Why Tesla is one of the worst investments in the tech market
/2012/07/27/why-tesla-is-one-of-the-worst-investments-in-the-tech-market/
Fri, 27 Jul 2012 16:03:20 +0000

/?p=68

Besides the corruption charges noted above, here are some more reasons Tesla is a bad investment for the government, for the public and for the investor in general: * The spread between assets and liabilities is, nearly insane. The company is so leveraged that any problem will put it out of business. The company has increasing problems with battery packs, cooling systems, center consoles, panel fitting, brakes and other manufacturing issues and those issues keep increasing while competing cars are already past those points. The company has more liabilities than assets. The only way an investor might make money is if everything goes perfect and they have already had recalls. Their market capitalization could vaporize in an instant with the next big screw-up. Investors must pay a premium in order to bet that the screw-ups that keep occurring, like being \$100,000.00 off on the BOM PER CAR, will magically just stop. * The CEO is distracted by rocket ships, making sure his private PR group promotes his self-glory, escorts and other non-critical items at a point when he should be 100% at Tesla and not playing around. * Working capital and equity are on a trajectory to hit zero. * Product launches never go well and Tesla has already had many engineering department failures. * Liability lawsuits for giving the rich CEO buyers testicular cancer from the large EMF output of the car have not been figured into the cash flow charts. They still have not shielded the car. * A large number of the "long line of orders" are fake orders from Tesla investors and good-old-boy friends of the Tesla investors to pad the books and make it look like demand is bigger than it is. This is proven by the fact that they cut the production run in half. * Making 5000 cars is a "toy" car company in the real car world. Tesla told the DOE they were going to make and sell a massive number of cars this year. They lied. The other electric car companies are selling huge numbers. Why not Tesla? Because it is a scam company! ----- If you are already an investor in Tesla, think about this: Tesla Executives knew about every single thing on this site before they asked you to invest. Did they disclose it all to you? If so, then you are a crook too. If they did not disclose all of this to you then they owe you all of your losses per SEC violations.

How to FACT CHECK and VALIDATE EVERY data point on this Wiki yourself

/2012/07/27/how-to-fact-check-validate-every-data-point-on-this-site-yourself/

Fri, 27 Jul 2012 16:37:09 +0000

/?p=70

How to FACT CHECK and VALIDATE EVERY data point on this Wiki yourself * Go to Ask.com, Yahoo, Bing, Duck Duck Go (They each will give different results) and type in any name on this site plus add the words: DOE Investigation Washington Corruption Senate Investigation DOE GAO Investigation DOE Loan Solyndra Crony Politics Tesla Fires or search any name plus a mix of the words (IE Google: "DOE Corruption Westley") etc, and see what you get. (IE Google: "Steve Spinner DOE Solyndra") * Every item on this site was provided by a reporter from a major news service including: CBS News, LA Times, Washington Post, New York Times, Bloomberg, Seeking Alpha, National Legal and Policy Center, Wall Street Journal, USA Today, CSPAN, The Hill, The Bulletin, Detroit Free Press, Politico, Forbes, Daily Caller, SF Gate, 60 Minutes and others. * Over 18 different current and former employees of Tesla confirmed or input on all parts of the data in this site. * Go to the California courts websites and related sites and read the law suit filings by Tesla founder Marty Eberhard against Elon Musk. * Many of the items in this report have been published by the Federal GAO investigation team (The published GAO reports referencing "favoritism" were specifically referring to Tesla and Fisker) , MULTIPLE Senate investigation committees, SEC filings, The Auditor General, and community justice 501 C 3's. You can read their reports freely online and you can also see the details behind those reports by filing a FOIA request. ----

----- Pomerantz Law Firm Has Filed a Class Action Against Tesla Motors, Inc. and Certain Officers -- TSLA NEW YORK, Nov 08, 2013 (GLOBE NEWSWIRE via COMTEX) -- Pomerantz Grossman Hufford Dahlstrom & Gross LLP has filed a class action lawsuit against Tesla Motors, Inc. ("Tesla" or the "Company") TSLA -2.22% and certain of its officers. The class action, filed in United States District Court, Northern District of California, and docketed under 3:13-cv-05216, is on behalf of a class consisting of all persons or entities who purchased or otherwise acquired Tesla securities between May 10, 2013 and November 6, 2013 both dates inclusive (the "Class Period"). This class action seeks to recover damages against Defendants for alleged violations of the federal securities laws pursuant to Sections 10(b) and 20(a) of the Securities Exchange Act of 1934 and Rule 10b-5 promulgated thereunder. If you are a shareholder who purchased Tesla securities during the Class Period, you have until January 7, 2013 to ask the Court to appoint you as Lead Plaintiff for the class. A copy of the Complaint can be obtained at www.pomerantzlaw.com . To discuss this action, contact Robert S. Willoughby at rswilloughby@pomlaw.com or 888.476.6529 (or 888.4-POMLAW), toll free, x237. Those who inquire by e-mail are encouraged to include their mailing address, telephone number, and number of shares purchased. Tesla designs, develops, manufactures, and sells electric vehicles, including its flagship Model S, and electric vehicle powertrain components. The Complaint alleges that throughout the Class Period, Defendants made false and misleading statements and failed to disclose material adverse facts about the Tesla's business, including: (1) Tesla's statements about the Model S's highest safety rating and its lack of prior fire incidents were materially misleading, due to undisclosed puncture and fire risks in its undercarriage and lithium ion battery pack; (2) the Model S suffered from material defects which caused the battery pack to ignite and erupt in flames under certain driving conditions; (3) Tesla's future sales, its next generation Model X

introduction, and its stock price were extremely vulnerable to the inherent risk posed by the Model S's undercarriage and battery pack design flaws; (4) Tesla was unable to maintain a level of automobile deliveries sufficient to satisfy analyst concerns and compensate for other declining revenue streams; and, (5) as a result of the foregoing, Tesla's public statements were materially false and misleading at all relevant times. On October 2, 2013, a video of a Model S burning on the roadside was widely circulated, which Tesla attributed to a collision with road debris. The same day, Tesla was downgraded by an analyst who pointed to significant execution risks it faced. On this news, Tesla shares declined \$12.05 per share, or more than 6%, to close at \$180.95. On October 28, 2013 a second Model S fire occurred in Mexico, which Tesla blamed on the car's rate of speed and its crash into a tree. On this news, Tesla shares fell \$7.32 per share, or more than 4.3% to close at \$162.86 on October 28, 2013. Tesla's stock closed at \$176.81 on November 5, 2013. That day, after hours, Tesla announced its Q3 2013 results, which failed to meet analyst expectations on key metrics, including rate of vehicle deliveries. On November 7, 2013, Tesla confirmed a third Model S fire, caused by impact with road debris during normal driving conditions. On this news, Tesla shares opened at \$154.81 on November 6, 2013 - \$22.00 per share (12.44%) lower than the prior day's closing price, and declined on November 6-7, 2013 to \$139.77. The Pomerantz Firm, with offices in New York, Chicago, Florida, and San Diego, is acknowledged as one of the premier firms in the areas of corporate, securities, and antitrust class litigation. Founded by the late Abraham L. Pomerantz, known as the dean of the class action bar, the Pomerantz Firm pioneered the field of securities class actions. Today, more than 70 years later, the Pomerantz Firm continues in the tradition he established, fighting for the rights of the victims of securities fraud, breaches of fiduciary duty, and corporate misconduct. The Firm has recovered numerous multimillion-dollar damages awards on behalf of class members. See www.pomerantzlaw.com .

Original Tesla Founders blog about the conspiracy that stole their company in order to turn it into a tax dollar scam

/2012/07/29/original-tesla-founders-blog-about-the-conspiracy-that-stole-their-company-in-order-to-turn-it-into-a-tax-dollar-scam/

Sun, 29 Jul 2012 18:19:17 +0000

/?p=93

We're all entitled to an opinion (last time I checked ... the Supreme Court hasn't changed that yet, have they?), but the co-founder of Tesla, Eberhard, and other "Tesla Founders", have a thing or two to say about Tesla on their blog. Even though going to that blog today has this message from Eberhard about some specific entries of his: "This blog entry has been taken down at the strong request of Tesla's management. By taking it down, I am in no way admitting that anything I wrote was in violation of any agreement I signed with Tesla Motors, and I stand behind the truth of what I wrote. But it was explained to me that Tesla and its financial backer(s) can spend far more than I can on a lawsuit. Most of the comments on this blog entry have also been taken down; sorry for the inconvenience", we at SteveParker.com have found the original postings by Eberhard and others (Tesla can't fire us); the numbers of those fired by Tesla are between 26 and 40, depending on the source, and offices in Detroit and possibly Washington, DC, have been shuttered. With all that, here's what at least some of the "Tesla Founders" have to say: As you may have heard, the ax has been steadily chopping away at Tesla. I don't pretend to understand the choices being made and honestly wouldn't even be surprised to learn if I was next on the list. At this point, I'm not even sure if that would necessarily be a bad thing. The company has changed so tremendously since I started. It's very secretive and cold now. It's like they're trying to root out and destroy any of its heart that might still be beating. I came to Tesla with a great deal of optimism to work for a company with a noble purpose that had a real chance to make a difference in the world. That sense of mission and hope generated incredible energy and determination to overcome the many challenges of producing a great EV. This energy has been drained by the cold, irrational bloodletting that has been going on there. Everyone understands necessary, rational cost management actions in startups, but this was neither necessary nor rational. No thought has been given to the immediate and long term impact on the future of Tesla. Entire departments are stumbling around stunned, bleeding, and headless. (Photo - California Arnold Schwarzenegger and Tesla's Martin Eberhard give Tesla the "walkaround" treatment at a Santa Monica, CA, media event in 2006). It is a damn shame about Tesla. I once again spent the day dreading the words, 'Did you hear? Today I heard that both Wally Rippel and [REDACTED1] are now gone. I just don't know what they're thinking. [REDACTED2] referred to it as a 'stealth bloodbath. It's next to impossible to concentrate and actually get anything done. And the real insult in my mind is that they have the nerve to host the holiday party this Saturday. It's going to be more like a wake(!) The atmosphere at Tesla Motors has been suffering for the last couple of months as the new management have slowly squeezed the life out of engineering. The way in which the layoff/reduction-in-force/firings have been handled is one almighty cluster cabbage. In a stroke of pure genius, the two HR folks were the first to go, leaving nobody to turn out the lights. Only after they left the building did they realize that now there was nobody to write the termination letters. Like I said, pure undiluted genius. Sadly - and I do mean this - I am not sorry to leave. The culture that Martin and Marc created is gone. The car is nice, but every day in the office was like a visit to the dentist, not knowing what was going to happen next. Enough. I have moved on. Unfortunately, the company that I used to love has changed drastically. If I were to pin point a critical turning point, it would be the day when you were pushed aside. Until then, it was not so obvious how Tesla Motors was really Martin Eberhard's company. After you were gone, I think the spirit and the character of the company went with you. It was surprising how quickly it happened. Yes, there were technical and operations delays for sure, but these could have been better managed and, to a certain extent, anticipated since what you have started was a major paradigm shift in the industry. It was well understood that a revolutionary movement always comes with major challenges and costs. What Tesla has now become is a mere profit-loss centric company—and with a poor chance of making even that—unless someone absorbs it for its remaining core value that you have left behind. Tesla lost its true

evangelist and the leader.. (end of blog quotes) So, what do you think happened at and/or to Tesla Motors? One thing we can probably rule out, and that's the forming of Tesla to rip-off people's money. Even though the company demanded (and got) 100% down-payments of \$100,000, or more, from each potential buyer just to get on a list of those wanting a car, the founders of Tesla already had tens and maybe hundreds of millions of their own dollars; many of them came to Tesla after retiring at young ages from their various Silicon Valley success stories. That's where the mystery deepens, the part of the story when people shake their heads and force themselves to wonder: Was Tesla simply the modern iteration of what used to be called "planned obsolescence"? Were the Tesla EVs always destined for the dump, their real purpose to "prove" to the world that even the money and minds of Silicon Valley are unable to build and market an EV? These and other questions will probably never be satisfactorily answered. SP

How did the Tesla-Takeover investors bribe Congress and Federal Agencies

Per the 60 Minutes Story, Below: <http://www.youtube.com/watch?v=CHiicN0Kg10> 1. They promised to have their law-firms and controlled organizations (ie: NVCA, Perkins, etc) funnel a series of contributions to candidates campaigns. 2. They threatened competing candidates with getting their campaign funds for the next election cut off. 3. They handed out tickets to Washington, DC, LA and Sacramento sports and concert events. 4. They paid for incentive travel. 5. They got controlled members of Congress to pass laws which gave those investors companies billions of dollars of profit potential that they otherwise would not have had. 6. They arranged for people who worked for The White House, DOE & Treasury, etc. to get over-paid bribe jobs if they left those public offices and worked as consultants and employees in other companies who could control the process in Washington DC. 7. They gave real estate deals to friends to buy favors. -----
----- FYI: EVERY new investor in Tesla will be deeply investigated by the media and consumer groups.

Russian Mobsters!!! in DOE and Tesla Funding and Silicon Valley?

Why did the key investors of Tesla meet with persons and groups from the Russian government and business sectors who State Department has identified as having mob connections? Could it have to do with all of the trillions of dollars of materials used for making lithium ion electric car batteries that those Russian groups control? If those investors helped grease the deal, they certainly wouldn't cash in on that... would they? Here is the NY Times research on some of their backgrounds: " Russian Organized Crime Data Pull- State- : Multiple meetings with Silicon Valley Suspects Alexey Mordashov Received DOE Funds Via Severstal: Alexey Mordashov -General director of "Severstal group", Chairman of the board of directors in "Power Machines", the largest shareholder of Arcelor, <http://rumafia.com/person.php?id=54> Surname: Mordashov Name: Alexey Fathurname: Aleksandrovich Position: General director of "Severstal group", Chairman of the board of directors in "Power Machines", the largest shareholder of Arcelor, a member of board of RSPP. Biography Mordashov Alexey Aleksandrovich was born on September 26, 1965 in Cherepovets in the Vologda area in workers family; Russian. In 1988 he graduated with excellence from the Leningrad Engineering-Economical Institute. During study he got acquainted with Anatoly Chubais. From 1988 till 1989 - Senior Economist in maintenance and repair shop #1 of the Cherepovets Metallurgical Plant (CMP). In 1989-1991 – Head of Bureau of Economics and Labor of MRS#1 at CMP. In 1991-1992 - Deputy Director of planning department of CMP. In 1992-1993 - Deputy Director of Economics and Finance at CMP. Since 1993 - Financial Director of CMP (now CMP is renamed into Open Joint-Stock Company "Severstal"). Simultaneously the chairman of board of directors of joint-stock company "Severstal-Invest". He was one of creators of the plant privatization program, and transition to active marketing practice in metal trading. Company "Severstal-Invest" was engaged in sale of rolled metal products, motor vehicles and the weapon, cultivation, processing and sale of fish, realtor and security-detective activity. Since March, 1996 - chairman of board of "Severstal-holding" LLC (Cherepovets). Since March, 1996 - chairman of board of directors of Joint-Stock Company "Severstal-invest" (Cherepovets). Since September 1996

till June, 2002 - General Director of "Severstal" OAO. Since November, 1997 - chairman of board of directors in Metkombank (Cherepovets). He was a councilor of bank "Metallinvest". Then he was trained on courses of managers in England (in the late nineties he completed the MBA program of Newcastle Business school (NBS) in the University of Northumbria (UNN, Great Britain). Since June, 2000 - the councilor of directors of Joint-Stock Company «Izhora pipe factory», joint venture of «Izhora factories» OAO and "Severstal" OAO. In October, 2000 he was selected as a member of bureau of board of the Russian Union of Industrialists and Entrepreneurs (RSPP). Since June, 2001 - coordinator of RSPP Working group. From April 2001 till April, 2003 - member of the Supervisory board of «Industrial Construction Bank» (ICB). Since June, 2002 - chairman of the board of directors of "Severstal" OAO. Since 2002 - General Director of "Severstal group" ZAO. Since August, 2002 - the chairman of the board of directors of "SSM-Tyazhmash" LLC, subsidiary of "Severstal group" ZAO. Since December, 2002 - the judicial arbitrator at the Commission on Ethics of RSPP created for settlement of corporate disputes. In May, 2003 he was included in structure of Business Council at the government of the Russian Federation. In December, 2003 he became the authorized representative of president Putin on presidential election on March, 14th, 2004. In 2003 Forbes magazine included Mordashov in the list of 500 richest people in the world (348th place, fortune – 1.2 billion dollars). In February, 2004 "Severstal" OAO informed that Mordashov supervised 82.75% of stocks of "Severstal". Since June, 2004 - councilor of directors of bank Rossiya (St.-Petersburg). In February 2006 "Finance" magazine estimated Mordashovs capital at 6.0 billion dollars (the tenth place in Russia). In March, 2006 there was a next rating of Forbes Magazine in which Mordashov was on the 64th place in the world (fortune – 7.6 billion dollars). Member of Board of guardians of RDC «Expert institute» at Russian Union of Industrialists and Entrepreneurs (RSPP); Member of Advisory council on the innovations created by Ministry of Industry and Science of the Russian Federation. He is awarded with the order «For Merits for Country» of the I and II degrees. The winner of the All-Russia competition of businessmen "Career-96". In December, 2000 Russian Union of Industrialists and Entrepreneurs called him the best businessman of the year. Speaks English and German. Mordashov is married for the second time. He has three sons - one from the first marriage, two - from the second one. Takes a great interest in poetry, painting, active winter kinds of sports. Source: <http://www.anticomproamat.org/> Dossier: By 2001 there were no any compromising materials concerning Mordashov on pages of the mass-media. As for unpleasant stories – only divorce with the wife and the ignominious alimony to the son. The only thing that was spoken about him appeared in July, 2001. Mordashov was supposed to be offered a post of the chairman in the Russian government. In reply to that Mordashov declared that even if he had been offered the post he would have had to refuse of it. Source: www.rb.ru In 2004 in mass media the materials convicting Mordashov of dishonest engagement of "Severstal" were published. The ex-general director of Cherepovets Metallurgical Plant Yury Lipuhin - who promoted Mordashov on a career ladder - became an information source. When Mordashov was already the director of "Severstal" the plant suffered from an attempt of raid capture. Trans-World Group tried to persuade Mordashov to sell the plant (it was represented by well known businessmen Vladimir Lisin, Mikhail Chernoy, Oleg Deripaska) but he resisted. After those events Mordashov convinced Lipuhin that the plant shares needed to be privatized not to admit strangers to the enterprise. The plant released metal under the low prices to the company Severstal-Invest created for that purpose; Mordashov spent millions of gross margin from resale on purchase of vouchers and shares from workers. So he became the owner of 51% of shares of "Severstal" and Lipuhin - 49 %. In 1998 there was a conflict between two proprietors - Mordashov decided to diversify business and began to buy up industrial actives: stocks of ports in St.Petersburg, Tuapse and East port, coal mines, Kolomna diesel factory, UAZ factory. Lipuhin was against of such diversification of the business. In the beginning of 2001 Mordashov redeemed from Lipuhin 49 % of "Severstal-Guarant" with the big discount; Lipuhin is still offended by Mordashov for that. The latter during had enemies that period - Zavolzhsky motor factory became a subject of his conflict to GAZ owner Oleg Deripaska. Together with the head of "Eurazholding" Alexander Abramov, Mordashov struggled for "Kuzbassugol", the metallurgical market was divided with Iskander Mahmudov. Source: «Forbes», 4/10/2004 In youth during internship in Austria Mordashov had a conflict with the son of the minister of ferrous metallurgy Serafim Kolpakov Sergey. The minister demanded for Yury Lipuhin dismissed Mordashov, but Lipuhin then defended the young perspective employee. Source: «Forbes», 4/10/2004 In 2001 the first spouse of Mordashov, Elena declared that Alexey Mordashov did not help their son sufficiently, didnt let her arrange private life and promoted her dismissal from work. For 2000 Mordashov declared his income at 80 million dollars (Mordashov denied the sum soon after that), his former wife took advantage and sued for alimony and separation of jointly acquired property (he had been paying to the wife

650 dollars monthly for the son). Mordashova demanded a share in business of the husband and developed huge information war. The businessman considered that behind that claim there were competitors of metallurgical holding - the Ural mountain-metallurgical plant and "Sibal", in particular their owner Iskander Mahmudov who was at that time the main contender of Mordashov in the metallurgical market. In August, 2001 the former wife applied to Nikulinsky Office of Public Prosecutor of Moscow with the requirement to force former husband to give 25% of the income for education of the son from first marriage. In her opinion the underpaid alimony of Mordashov made more than semi billion dollars. In maintenance of the claim the Office of Public Prosecutor managed to arrest 32.5 % of stocks of "Severstal". Claims of former spouse Elena Mordashova for a quarter of incomes of the husband were recognized by Moscow court as groundless, and attachment was removed from property. And after that Cherepovets court took Mordashovs side and decided that he did not owe to the former spouse 40 percent of shares of "Severstal" (Elena Mordashova had declared such requirements in the statement of claim). As a result Elena Mordashova lost both suits. Source: «Moscow Komsomolets», 8/20/2001, "Vedomosti", 10/30/2002 On presidential election of 2004 Alexey Mordashov was Vladimir Putin's authorized representative. Support of the head of the country helped Mordashov to create the steel-making company the largest in Russia, which possessed the largest actives abroad on the basis of the Cherepovets plant. Source: www.akado.com/news In February, 2005 Alexey Mordashov made scandal at airport Vnukovo-3. He left the plane together with two girls accompanying

him in the trip. One of his companions unexpectedly found out that she had lost a buckle from the handbag. Mordashov unexpectedly began to behave inadequately: for about a half an hour he loudly shouted at employees of the airport, and demanded to pay him one thousand dollars for the lost buckle. Source: "Life", 2/9/2005 Alexey Mordashov tried to unite his business with metallurgical group Arcelor being absorbed, but owners of the company refused the offer of Mordashov and group "aggressors" - Mittal Steel became its owner. Source: Investments ? 3(334) 01.02-07.02.2010 In September, 2006 Alexey Mordashov decided to hold again the post of the general director of "Severstal"; in this connection he carried out administrative reform at the enterprise. General Director Anatoly Kruchinin, the hired manager, was removed by Mordashov from the post. Later he was appointed as the General Director of «Severstal. Russian steel» (in April, 2008 management of "Severstal" divided it into three directions: «Severstal. Russian steel», «Severstal. Resources», «Severstal Internationa»). Mordashovs return on a post of the director of according to his plan should promote success of IPO – Kruchinin was unknown person in business while Mordashov after attempt to become the largest owner of Arcelor received world popularity. In some months Mordashov arranged IPO in London which observers considered to be not successful. Source: "Vedomosti", 9/21/2006 Due to lack of more interesting actual metallurgical actives for purchase, Mordashov once again tried to diversify business in adjacent spheres. New object of interest of the businessman - the main Russian manufacturer of the equipment for electric power industry, "Power machines". Structures "Severstal" then requested permissions for the transaction in Federal antimonopoly service (FAS). Stocks of "Power machines" were the personal investment of Mordashov which was not connected with mountain-metallurgical company "Severstal". Competitors of Mordashov in struggle for Power machines" became Victor Vekselberg and Oleg Deripaska. Source: www.newsru.com from 6/9/2007 In December, 2003 bank "Rossiya" informed that it would make additional share issue for 30 million rubles face value in advantage of Alexey Mordashov's "Severstal-groups" under the price in 20 times above face value. Thus, the holding should pay 600 million rubles for 9% of shares of bank with own capital of 616 million rubles. The General Director of "Rossiya" Victor Myachin explained the high cost of package with consideration of the «occurrence of the foreign investor» in the capital of bank and dynamics of its development (for a year actives and the capital have trebled). Experts consider such estimation of a minority package as absolutely inadequate. The most probable explanation of such an odd act – rupture of relations with Industrial Construction Bank (ICB) and transfer of money resources to bank "Rossiya". At the same time Mordashov since 90th years kept partner relations with Petersburg banker Vladimir Kogan, ex-founder of ICB - in the beginning of 2001 Mordashov sold a share holding of "Metcombank" to Kogan. Source: www.mfd.ru News In the beginning of 2007 in the central mass-media, in particular, in newspapers "Commerzant" and "Newspaper" the information began to appear that soon there would be a merge of two largest metallurgical companies - "Eurazholding" and "Severstal". Besides it was written about nationalization of branch and government plans about it. As there were no any concrete facts confirming possibilities of such changes, there were assumptions that this "canard" in respectful newspapers was created by their owners. The owner of "Commerzant" - Alisher Usmanov was simultaneously the owner of "Metalloinvest", the largest metallurgical companies; "Newspaper" belonged to other large "metallurgist" Vladimir Lisin, the

owner of Novolipetsk metallurgical plant. The purpose: to press on competitors or to force them to buy, for example, business for high price, probably even to frighten and force to cease to put up money in development of the enterprise, to sell to competitor. Source: «Komsomol truth», 5/30/2007 In August, 2008 at Mordashovs company "Power machine" shareholders were replaced: 63.1 % of shares of company have appeared concentrated in three offshore now. Among shareholders of OAO there were two offshore, King Rail Trading and Ashington Trading, each owns 16,55 % of his actions. Presumably, these companies are under control of Alexey Mordashov and re-structuring of actives allows him to bypass the requirement about exhibiting of the obligatory offer by minorities. If Alexey Mordashov exposed the offer, he should redeem shares from minorities with 9 percent award to market quotations. He did not expose it but bought up company shares in the off-exchange market from many sellers. Redistribution of actives gave Mordashov also the joint-stock control over the company. Source: "Money" ? 33 (688), 8/25/2008 The Office of Public Prosecutor accused Alexey Mordashov of legislation infringement – he, having dismissed employees of Kostomuksha mining and concentrating mill, in October, 2009 replaced them with less paid Gastarbeiters. Active workers of the enterprise arranged several meetings in the city, the Office of Public Prosecutor of Karelia began investigation. Trade-union active workers were accused of extremism and Alexey Mordashov was required by the public prosecutor of republic Karelia to exclude infringement of the labor and social rights of citizens and to provide measures on prevention social and political tension in «Karelian pellet OAO. Thereof Mordashev stopped employment of migrants. Source: Rusmet.ru 24.12.09 Alexey Mordashova's name was mentioned in a context of preparation of amendments by the Ministry of Finance to the article 7 of the Tax code depriving Russian businessmen of possibility to minimize taxes by using the companies in the countries having agreements with Russia on avoidance of the double taxation. It was declared that Alexey Mordashov had supervised "Severstal" through the Cyprian companies, thereby minimized taxes in the federal budget of our country. Source: www.polit.ru/news, 12/2/2009 The family conflict of Alexey Mordashov with the first wife Elena Novitskaya passed to a new stage – in 2004 she submitted the claim to the Strasbourg court where she accused Russia of partiality of justice. In January, 2010 Novitskayas case received a priority. Few years ago the court dismissed Novitskayas claim about property separation, as all agreements on property division between spouses had been signed back in 1996, and Novitskaya did not apply for shares and refused them voluntarily. Having lost the court, Elena Novitskaya still owed the state duty of 213 million rubles. In European court Novitskaya demanded from Russia for compensation at amount of 500 million dollars, referring to article 6 of the European convention about human rights. Now Russia should prove that at the moment of divorce Alexey Mordashov did not possess influence on justice. Boris G. Zingarevich Received DOE funds through Ener1 Boris Zingarevich - Deputy Director General of Ilim Group <http://rumafia.com/person.php?id=204> Surname: Zingarevich Name: Boris Fathename: Gennadievich Position: Deputy Director General of Ilim Group Biography: Date of Birth: 08 July 1959. Place of Birth: Sebezh (Pskov region). 1981: Graduated from the Leningrad Technological Institute of Pulp and Paper Industry (specialty: machines and apparatus of PPI) 1991-1992: "Tekhnoferm, the CEO 1985-1991: Leningrad carton factory, Master of cardboard shop, Production Manager 1981-1985: Kondopozhsky PPM, mechanic Since 1992 - Deputy Director General of Ilim Source: www.forbesrussia.ru Dossier: Until the early 90's Boris Zingarevich, along with his brother Michael worked as a mechanic at the Leningrad cardboard factory. In 1992 they created "Ilim Pulp" - a company for export of paper products. Then they got reassigned to the woods production, and over the years have bought about 30 logging companies - then timber industry enterprises were sold at very low prices. Easy money in the timber industry caused competition that turned into criminal fights. Most of them appeared to be in Arkhangelsk region, where the main enterprise of the holding - Kotlas PPM was. In the region, the company has developed a bad reputation to the extent that one day in January 2002, half the guests did not appear on the anniversary of the governor Anatoly Efremov, having learnt that Zingarevich brothers and their partner Zakhar Smushkin were going to be there. In spring 1999 the house of the head of the Arkhangelsk PPC Vladimir Krupchak was bombed. In the summer of 1999 the head of OAO Solombalskiy LDK" Evgeny Drachev and his driver were kidnapped by unknown. A few months later director general of forestry complex the department of the regional administration, Alexander Bulatov was beaten. Its difficult to say whether those events were connected to the activities of Ilim Pulp. However, its top managers- Smushkin and the Zingareviches could have argued with those people, because the struggle for supremacy in the timber industry was very tough, and Arkhangelsk region was considered a "fiefdom" of Ilim Pulp in the field. The regional law enforcement agencies had a huge dirt on the heads of the holding, but for some reason the case went "down on the brakes" every time. For example, the same story happened with the murder of Dmitry Varvarin, Director General of ZAP "Concern"

Orimi, the main competitor of Ilim Pulp. He was shot in St. Petersburg in March of 2000. The heads of Ilim Pulp, including Boris Zingarevich had sufficient motives for the killing, including the competition and the fact that Varvarin supported the campaign of

Yuri Boldyrev for the post of mayor of St. Petersburg, which was obviously to fail. In addition, Varvarin owned shares of Ilim Pulp, so he begged Smushkin and Zingarevich as his partners to allocate money for it. A few days after the murder of Varvarin, unknown people killed another founder of "Orimi, Sergey Krizhan together with his family. Law enforcement agencies considered the version according to which the two murders were connected with the management of Ilim Pulp, as the most probable, but somehow forgot about it; the team of investigators was excluded from the investigation. Source: Kompromat.ru from 31.07.2002 The involvement of the heads of "Ilim Pulp" in the second killing has not been confirmed, as in 2005, Andrey Yurevich - the son of commercial director of Plastpolymer", Victor Yurevich, and two accomplices - Alexander Ulyanov and Vyacheslav Shinkarev were sentenced for that murder. Krizhan was chairman of the board of directors of the company and clashed with Viktor Yurevich. The newspaper "Kommersant-Petersburg" ? 216 (3300) on 17.11.2005 In spring and autumn of 2000, a new wave of crime passed. In March, the director of Agency Company, lumber exporter - Vladimir Malkov was attacked. And in October, the hotel "Polina", owned by Krupchak was set on fire. As leader of the Arkhangelsk Pulp and Paper Mill, he was a major player in timber market and he could have possibly conflicted to the Zingareviches and Smushkin quite often. In 2001 Dmitry Belyaev, External Manager of LDK-4 was attacked. Again, the connection with the management of Ilim Pulp was not confirmed, but it was on the cards, as Ilim Pulp had been seeking for the rule in the forest sector, and Belyaev could have threatened the interests of their company by his business, or could have simply competed with its leaders. Boris Zingarevich together with the companions did the business of "Ilim Pulp" not very successful, at least for their enterprises. The main one was the debts of Kotlas pulp and paper mill in Arkhangelsk region, Bratsk Timber Complex in the Irkutsk region, as well as others, they had ruthlessly cut down the forest, accidents happened frequently, the equipment was worn out or even broken. At the same salaries were miserable. Until 2000, the shareholders of Ilim Pulp had not received dividends. Ostensibly, they were invested in production development, but in reality everything was falling apart. The problem was that all the investments in production then were exempt from taxation. Once the tax credit was abolished, dividends went. In addition, it became clear that Kotlas Pulp came under the control of Ilim Pulp illegally: during the investment competition the money, which the company pledged to invest in a company, were transferred to its account for one day and then were sent back to the accounts of Smushkin and the Zingareviches. But formally everything looked legitimate. They purchased equipment for the companies in an interesting way: at very high prices, while in fact only half of it was brought. The money also flowed to foreign accounts of the firms affiliated with Ilim Pulp. Other financial frauds by the Zingareviches and Smushkin were turned in the Bratsk Timber Industry Complex (BTIC). First they formed huge debts for electricity for the budget of Bratsk and many others. And in 1998 the company established a subsidiary company OAO "Pulp and Cardboard Plant (PCP) and began to place there their liquid assets. Thus, BTIC eventually had unprofitable production and debts. The state had a stake in BTIC and did not impede the withdrawal of assets. Only Dmitry Medvedev, the current president objected that, then in 1993 he was Director of Legal Affairs "Ilim Pulp", and since 1998 - a member of the Board of Directors in BTIC. His relationship with the Zingareviches and Smushkin worsened, and in 1999 they were completely stopped - he was distracted by new concerns associated with climbing the career ladder. In October 2001 it became known that Ilim Pulp committed deals for the sale of pulp and paper factory to offshore companies. Then the shareholders of OAO Irkutskenergo" which was the main creditor of BTIC - appealed to the federal agencies. They failed to find out the truth because of the legal tricks: documents submitted to the commission, were valid, but for the period prior to the fraud. After that the minority shareholders of BTIC went to court, and it ordered to reinstate the dismissed general director BTIC George Trifonov. He restored an order, paid the debts. The Zingareviches and Smushkin were defeated. But when in 2002 BTIC came under their control again, they began to restore the old order by dismissing disloyal people and replacing them with loyal ones, uncomprehending in the timber industry. In addition, the holding company began the blockade of the Ust-Ilim Timber Complex (UiLPK) by not sending paid commodity to the company. All forces were driven to expell the head of the trade union, Yuri Savinkov, they wrote denunciations to the prosecutor's office against the former Complex director Andrey Prokopov. The new head of UiLPK Vladimir Batishchev reported that Prokopov took away the production equipment. It was a slander - he just took jeeps belonging to the management company Continental Invest. In early February 2002 UiLPK was entirely under the control of Ilim Pulp. Source: Kompromat.ru from 13.02.2002 In April 2002, Ilim Pulp lost control over Kotlas

and Bratsk pulp and paper mills. There were two lawsuits from shareholders, after which the company's shares were arrested, and then purchased for the benefit of companies affiliated with the actual new owners - "Basic Element", "Continental management" and "Banking House" Sankt-Petersburg". Oleg Deripaska was behind those machinations, who wanted to get a strategic advantage in the industry. Source: corp-gov.ru from 29.09.2003 The management of "Ilim Pulp" disputed the transaction through numerous courts. There were information wars. The information agencies had the news spread that the Court invalidated the new board of directors elected by shareholders. It was misinformation. To gain access to the documents of Kotlassky PPM they forged execution lists and sent them to the office of registry holders. According to them it was necessary to issue registry documents. They also launched "a fake" that the registry of the Bratsk TIC was lost. In the end, "Ilim Pulp" prevailed in the information and judicial war. Businessmen managed to agree, but the true owner of the enterprises is still unknown. Representatives of Bazel argued that the blocking stake in the enterprises was still in the structures of Basel. Smushkin also announced that he possessed more than 90%. As the court ruled, the enterprises passed to Ilim Pulp. Perhaps the company paid Bazel some compensation. In any case, that was a good lesson for the Zingareviches and Smushkin and a signal that the empire they built up may well falter without gaining a strong support. Source: Kompromat.ru from 31.07.2002 In 2004, the media reported that Boris Zingarevich intended to acquire a large stake in English football club Everton. Upon the request of Zingarevich, that information was retracted. According to British media, the football club was really interesting to Zingarevich's son Anton. He himself had no money to buy it, but he practiced abroad as a football manager. There is no information confirming the purchase plans. This episode is insignificant, but given that Boris Zingarevich studiously avoided the media spotlight, it looks interesting. Maybe it was advantageous for someone to put Zingarevich as a reckless spender and a wasteful man. Source: "Kommersant" ? 155 (2994) on 24.08.2004 Also in 2004, there were rumors in the media that the company "Ilim Pulp" is going to buy the state Vneshtorgbank, and the then owner of Promstroibank Vladimir Kogan was to be an intermediary in the transaction. The price was to be inflated in more than a billion dollars. Journalists advanced the version of such a bizarre waste of public funds. They supposed, the billion would be withdrawn from the State Bank and shared by individuals, including Zingarevich. In their opinion, the deal was scheduled to be held "under the guise of" Finance Minister Alexey Kudrin. However, no further speculation happened as the possible grand scam failed for unknown reasons. Source: Kompromat.ru from 23.09.2004 In 2006 the Zingareviches and Smushkin sold half of the holding to a foreign company International Paper, the world's largest pulp and paper corporation. In the name of the company they found a strong partner and a way to overcome the crisis that had begun with the attack by Mr. Deripaska on Kotlas and Bratsk pulp and paper mills. Once they returned the enterprises, Deripaska exchanged his remaining shares to the stake in the Arkhangelsk Pulp and Paper Mill of Vladimir Kogan, and the latter gave them to the shareholders of Ilim Pulp. That is, everything returned to business as usual. However, after such a shake-up the Zingareviches and Smushkin realized they were not omnipotent, and their old methods to maintain the credibility in the timber industry had been no longer working. The holding company needed a powerful protection of the parties and they found such a support in the name of the foreign company. Source: Journal Secret Firmy» ? 48 (183) on 25.12.2006 In spring 2010 the authorities of St. Petersburg passed at once three buildings - the monuments of federal importance for the reconstruction of them as hotels - to the companies close to Zingarevich brothers. OOO Lotus Oteli received a historic building of the former barracks of the Life Guards of the Pavlovsky Regiment on the Marsovo Pole, 1. OOO Orange-Development" acquired the building of the former court stables Office at Konyushennaya

Ploshad, 1a. The third building was on Nevsky Prospekt, 7-9A, which is the Central Agency of Aviation and airline ticket place passed to OOO IFG-Basis-Project. Experts say that at the auction the buildings could cost a lot of money. However, they gave them under the decision taken at a closed meeting of the government. Thus, not only the interests of the city budget were violated, but of the potential buyers who could acquire the right to use the buildings through a fair competition. Tesla/Fisker VC Kleiner Perkins sued for sex issues

A top level insider at Kleiner Perkins has sued the heads of Kleiner for sexual manipulation and the evidence being filed is very interesting. You can read about a good chunk of it online. BUT, This is not the only Kleiner employee with a tale to tell. Stay tuned here (and on the back-up mirror sites) for the next inside story.... Kleiner Perkins sex discrimination case to stay in public eye

By <http://blogs.reuters.com/search/journalist.php?edition=us&n=sarah.mcbride>; Sarah McBride SAN FRANCISCO, Sept 18 Wed Sep 18, 2013 8:08pm EDT SAN FRANCISCO, Sept 18 (Reuters) - A high-profile Silicon Valley sex discrimination lawsuit moved closer to trial Wednesday after California's highest court rejected an effort by venture firm Kleiner Perkins Caufield & Byers to take a former partner's case against it to arbitration. The suit, which pits former partner Ellen Pao against one of Silicon Valley's most storied venture capital firms, alleges harassment, discrimination and retaliation. It became the talk of the Valley last year with its references to an affair and its allegations - denied by the firm - of sexual advances and sexist behavior. "I'm glad the court moved quickly after this series of delays from Kleiner, and that we're back on track to getting our day in court," Pao said in an email after the Supreme Court of California denied Kleiner's petition to review a lower court decision rejecting Kleiner's earlier attempt at arbitrating the case. Kleiner said it believed the case was without merit. "We intend to vigorously defend the matter and are confident we will prevail," said spokesperson Christina Lee in an email. The firm had argued that Pao's suit, filed in May 2012, should move to the private process of arbitration because Pao signed operating agreements for the venture funds in which she was involved that had mandatory arbitration clauses. Pao's lawyer, Alan Exelrod, has argued that the agreements did not apply because Pao was suing Kleiner itself - not its funds. Pao never signed any arbitration agreement with the firm itself, Exelrod has maintained. Kleiner could still appeal the decision to the U.S. Supreme Court. If it does not, the case will return to San Francisco Superior Court to start the discovery phase, said Exelrod. The case in Supreme Court of the State of California is Ellen Pao v Kleiner Perkins Caufield & Byers LLC and Does 1-20, case no.

How many cities are claiming Tesla defrauded them?

Supervisors, real estate groups, job councils and others ranging from San Jose, California to New Mexico to Downey, California to Detroit are now claiming Tesla made promises to put their factory in their locations and then backed out after due diligence discovered Tesla to be engaged in crooked real estate kick-backs via their investors and certain officials. SF GATE quotes Tesla executives public stating that The NUMMI plant was dysfunctional for building their car yet they took it, after screwing over a number of cities, so that investors, and friends of investors could get real estate upsides. Now the lawsuits are starting. The first is from New Mexico. The developer that was going to build a 150,000 square foot facility in New Mexico that was going to produce the Model S. The developer, <http://rio-re.com/> Rio Real Estate Investment Opportunities, has now filed a law suit against Tesla for fraud, breach of contract, negligent misrepresentation and negotiating in bad faith, over Tesla's decision to abandon the deal and is seeking damages and attorney fees. The complaint, filed back in May, says that Tesla was going to lease a building that Rio Real Estate Investment Opportunities was going to build for \$1.35 million per year for ten years, plus a 2 percent annual increase. The developer says it spent money on creating environmental reports, obtaining government approvals, and developing engineering designs for the site. Rio Real Estate says it entered into a binding development agreement with Tesla on February 19, 2007, and as a result of the lost deal, they've suffered financially. In tracking all of the finders, intermediaries, real estate bundlers and investors of Tesla.. some interesting links are now emerging in the Tesla and Solyndra real estate connections. Each city is saying that jobs, revenue, tax fees, property valuation upgrades and other losses were caused by Tesla's actions. Watch the fireworks

Elon- not so nice per one of his employees

Elon- not so nice? We received this letter from Donald who has been working on the line at Tesla until recently, he asked us to pass his thoughts along- " I am getting so sick of reading about how Elon Musk is a 'god among men', he is the 'living embodiment of Iron Man', 'he is the greatest humanitarian the world has ever

known...BS! Elon MUSk spends massive amounts of money on two different PR firms and SEO services with orders to make him look as close to a second Jesus as possible. His insane ego is beyond words. These PR firms pay editors and writers, with Musks's money to write this crap. The backers of Tesla made him go stay in Los Angeles because he is rude, insulting, abusive, paranoid and anal to every employee at Tesla. Tesla has hired great people but the good ones all left once they got a whiff of Musk madness. He is only allowed up here once a week. Everyone at the company thinks he is the biggest prick in history. Musk is only where he is because he was lucky enough to get an un-earned windfall from Paypal. Now he has too much money and even after spending all the money you could possibly imagine on parties, hookers and buying time with celebrities he has too much money so he told his PR people to buy him an image. Speaking of image, he and two of his investors have such ego problems that they would rather lie to the public, the media and investors about how broken the cars are, how few people want them and how under-used the most expensive non-functional car factory in the world is! They need to tell people that Tesla is bombing and not let people labor under these wrong ideas from his PR blitz."

"But we are just a startup car company, don't expect us to sell anything " says Musk

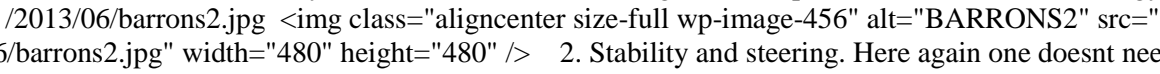

Opinion- Musk says that we should not expect Tesla to have sold any cars because they are just a "new car company". NO YOU ARE NOT! You have gotten hundreds and hundreds of millions of dollars from the U.S. taxpayer and institutional pension funds via VC group buddies. Very little of the money you got was from "big private rich people investors". A track-back on the VC funds shows that the money came from little old ladies pension funds. There really needs to be a shareholder fraud lawsuit. If we go back and look at the financials before each quarter, the papers you filed with DOE and the "cooked", errr... "restated" financials, it is clear that the books are cooked, the story to the media is wrong and that you are running a sham deal to hype your ego and to take cash out of loans for your friends giant "service and management fees". You have been trying to sell your cars for OVER A DECADE. Only a few yuppie fanboy friends of yours will buy them. Detroit and Japan sell 2000% more cars than you and have introduced whole new lines of cars and sold them out in the same time-frame that you have tried to get people to buy your over-priced, non-innovative, yuppie "statement" of "look how rich I am". People want their cars, nobody wants yours! You said, IN WRITING, to the US DEPARTMENT OF ENERGY (and, hence, The AMERICAN PEOPLE) that if you got a taxpayer free loan at 400% better terms than any American's mortgage; that YOU would have sold 200,000 cars over a year ago!! How many of those 200,000 cars will you sell this year? WHAT! only a few to your friends.. hmmmmmm???? You took unfair advantage of the system to create a tort interference with your competitors . You could get sued by Bright Automotive or ZAP Motors for abusing the process in order to hurt them. They could win big! THE DOE PAPERS YOU SUBMITTED HAVE NOW BEEN ACQUIRED BY MANY PARTIES. Thank heavens for FOIA's and investigation committees! You are trying to bury funds in real estate deals for these new "retail outlets" before you go out of business. Everybody sees through that. Your investors are edging to bank profit on the tax write-offs. Did you lie or did you just blow it in a fantastic way? BT- LAT

More Tesla Issues are Reported. Tesla FANBOY Confesses

TESLA FANBOY CONFESSION \$100,000 on wheels, or why did I cancel my Tesla car reservation This is going to be a long one, unlike my other blogs. Feel free to post a reply. Im eager to hear opinions that support or oppose mine. Let me start with hats off to Mr. Elon Musk. He made a fortune in the hay day of the Internet. He could have spent his money on expensive toys like yachts, airplanes, mansions, islands, escorts etc. Instead he had chosen to change the world trough business and technology. Cars and space are every boys dreams and Mr. Musks actions in those fields make him a hero for many grown up boys me included. It is a well known fact even to amateurs like me that the gas engine has horrible properties for use as a car engine. This fact prompted the

development of the gearbox in an attempt to adjust the character of the gas engine to the needs of the car. As we all know the gear box is bulky, heavy and expensive part of the car. The electric motor on the other hand has perfect character for a car. That's why the electric car was in the dreams of many for many years. The major obstacle for the dream to become a reality was the lack of reliable battery. Fortunately, high capacity reasonable size and weight Li-ion batteries emerged about the same time when Mr. Elons fortune struck. Tesla was born. I did research Tesla Model S (MS) online and I test drove one in May, 2013. I also deposited \$5,000 to buy one in April, 2013, which reservation I cancelled. Below are the results of my observations and the reason for my cancellation.

1. Acceleration. MS is out of this world as far as acceleration goes. I have driven many luxury power cars lately with 8 cyl. engines and power of over 400 h.p. including Mercedes S550, BMW series 7, Citroen C6 and none of them comes even close to the acceleration of MS. Traditionally the faster acceleration the better. For me MS draws the line and presents the question how fast do we want to go. Fast acceleration is good for those who want always to be first at the stop light and to leave everyone behind accelerating like crazy and consequently breaking same way. Guys, I understand your ego and your motivation, however I have to share with you what my wife says about it this man must have very small penis. Think about it. Is your street behavior trying to compensate for lack of confidence in other areas? Or maybe you are at the top of everything else and driving shouldn't be excluded. We will leave this to the psychologists to explain. Fast acceleration certainly helps in some critical situations, but frankly I'd rather drive safe and avoid such than making split second decisions and actions. The acceleration of MS is so fast than I worry how my body will tolerate it and frankly I'm getting headaches. As the philosopher Friedrich Engels would say the quantitative accumulations lead to a new quality ever hungry for more and more acceleration, who would think that the time will come when I say this is too much. Well MS drew the line for me. Finally, we are not alone on the road. I teach my teenage daughters that driving is about predicting and assuming what others will do on the road. In this regard out of this world Tesla MS is difficult to be predicted by other drivers and could possibly increase the risk of collisions. The closest I got to a major car incident in the last 20 years was when I was just about to pass a car and a super accelerated Porsche, that was not there a moment ago passed by. I saw the Porsche by a miracle in a split second before changing lanes. Bottom line, although the boy in me wants as fast acceleration as possible, the adult man with headaches and slowing reflexes says that a line should be drawn of how fast is fast enough and Tesla MS goes beyond this line. Of course there is no mandate to accelerate as fast as the car can go and it is good to have the fast acceleration handy when needed. That's why I'm moderately positive on this great feature, but not overwhelmed and super excited about it. The only excitement is from technological stand point of how far the technology can go.

 2. Stability and steering. Here again one doesn't need a degree in physics to know that low center of gravity means more stability. The batteries are the heaviest component of the car and they are under the floor at the lowest possible location, thus contributing greatly to the stability and steering. Talking about steering Tesla MS has manual controls of steering wheels sensitivity. This control is automatic depending on the speed in most high end cars I've driven. Bottom line Tesla MS gets my highest marks in regard to stability and steering.

3. Convenience and luxury. Tesla MS is equipped with most convenience features expected from a luxury car like keyless ignition, power seats and mirrors, rear view camera, leather seats (optional) among others. However, being a new kid on the block, Tesla does not have the polish and refinement achieved by others in their long history. For example my Mercedes S550 can control the sound system from three different locations. Same function just different places all aiming at effortless convenient control without lifting the eyes from the road. Look ma no motor! The two trunks front and rear are adequate, but less roomy than expected for me. Combined they may provide equivalent cu.f. space compared to my Mercedes S550, however the space is split not allowing for larger loads. The back seats of Tesla MS are cramped as is the whole back seat area. The back seat area is inferior to any of the large luxury models by BMW, Mercedes, Lexus, Audi, Citroen. Basically Tesla MS should be considered a luxury 2 seat car. It is anything but luxury riding in the back, not to speak if you take the option to stick two small children in the trunk with the optional folding chairs. Bottom line is that Tesla MS doesn't score high in the luxury and convenience category at all. Think of it as a luxury 2 seat car, not a large luxury car.
4. Aerodynamics. This is one thing that is subject to precise measurement in wind tunnel and not subject to personal opinion. The fact is that MS beats all of the competition in the large luxury cars segment and many in the sports cars. Even the door handles are retractable to reduce the drag. All this is for a reason – the battle for a longer drive range. BTW the cramped back seats mentioned above are a result of the effort to get as minimal drag coefficient as possible. So your 200 miles EV range does not come easy.

Sacrifices were made to get there. 5. Riding comfort. Those who tried to be sport riders know for a fact that sport is rarely comfort. Typically the sport suspension is firmer and not comfortable. Tesla MS is not an exclusion. Think of it as a sport ride rather than a comfort ride. I had some hopes for a comfort by the optional air suspension. Unfortunately, the test drive didnt deliver on my expectations. I was fortunate to ride Citroen C6 for a while in Europe that rides on air and can say definitely that Tesla with air ride option included is very, very far from it. Tesla is less comfortable than my Mercedes S550 as well. It is similar to Infinity I35 and other 2 seat sports cars in my humble opinion. BTW Mercedes S550 and others allow for a choice between comfort and sports ride. Not Tesla as far as I know. For me the riding comfort or rather the lack of it was one of the most important reason for my cancellation. 6. Revolutionary controls. Having a large tablet computer controlling all the functions of the car makes more sense for electric car, where most of the information and control signals are in some sort of electrical values rather than mechanical movements as in gasoline powered car. Although unseen before it makes a lot of sense from manufacturing standpoint making the car easier to produce compared to traditional dashboard. It allows for cleaner modern design as well that many like. Finally with so many apps available for tablet computers it is a blessing to have a large tablet in the car. More than any other car Tesla is ready to be not just your car but also your office and entertainment center as well. Not to speak that there are many car-centric apps out there such as Google maps, Waze, AroundMe, Yelp that makes other cars look like they are in the stone age with their build-in navigation systems. The concept is borrowed from the aviation industry where control by wire is one of the hottest trends. It should be noted though that such control requires multiple actuators or controllers on the other end of the wire, that reduces the reliability and often requires duplicated systems. With all this said, the tablet style control is not best suited to control the basic functions of the car like air conditioning, radio etc. It requires removing your sight from the road and could be dangerous. I havent have a chance to check the voice control feature and cant comment on it. Maybe it fills the gap. I still like the redundancy of my Mercedes S550 allowing the driver and front passenger to control many features from multiple locations – steering column, armrest, dash board and most importantly for the driver without lifting his eyes from the road. BARRONS2wizard-of-oz-man-behind-the(Picture Above: The scarecrow was RIGHT to be afraid of the fire and MUSK DID just turn out to be some carny who just waved flashy things at us but was a shyster underneath it all after all.) 7. Reliability. There are two forces here that act in opposite direction here. The electric car eliminates many complex systems from the conventional car. Lets name few – gas tank, fuel pump, gear box, the whole ignition system, gas engine of course with many moving parts, the starter etc. In exchange the electric car brings in new systems such as inverter, charger, battery conditioner etc. Furthermore, the old mechanical components tend to wear off and rarely suddenly break. A gear box for example may last over 15 years and over 300,000 miles and after all that life it may start leaking. Electrical and electronic components tend to break suddenly and completely. If a thyristor burns in the inverter this will render your Tesla inoperable right away, whereas if a metal part gets worn in the gas engine it may cause noise or leak but rarely will render the car inoperable. I guess it takes time to get enough practical results to judge which trend prevails. Also with a revolutionary change like that there will be some baby sickness that Tesla will grow out of as it matures. With all this said the online forums are full of all sorts of complains about problems here and there such as sudden opening of the doors, problems starting, problems unlocking, sudden error messages etc. etc. One big advantage of the pervasive computerization is that almost everything is fixable by software updates. At the same time the early adopters are turned into beta testers. I love being beta tester of new technologies, not for a price tag of \$100,000 though. 8. Hole in the tank. This is one particular problem with Tesla MS that is widely recognized, admitted by Tesla and not fixed as the date of this publication. If you leave your Tesla MS unplugged it will lose about 0.5 miles of range per hour. At this rate it will take about 10-15 days for a fully charged battery to drain completely. So if you leave your fully charged Tesla at the airport for a week or two while on vacation or business trip you may not be able to ride your Tesla home upon your return. This is equivalent to a hole in the tank for the conventional gas powered car. If the car is plugged-in than it compensates for such loss by sucking approx. 150 Watts of electric power all the time. It is equivalent to to the energy needed to lit an average 3,000 sq.f. house with the new LED energy saving lights. 9. Options. Many of the options are subject to personal preference such as leather, sunroof, special paint etc. In my opinion these options here are not worth the money - 21? wheels (negative feedback from public forums) - tech package (\$3,500) – cash cow for Tesla. Not worth the money. Some features are kicked up standard features like key-less ignition and rear view camera. For example, do you really need hi def rear view camera if standard rear view camera is already included in the base price. - performance plus package (\$6,500) – another bigger cash cow for Tesla, worthless features made to sound great

and take the money of wealthy folks with no technical knowledge. 10. Dubious business practices. Larry Page announced that Google will be no evil company. Well no business is evil by design. They become evil driven by competition. Google has practically no competition and they can afford to be no evil. Same applies to Tesla Motors. They are well funded and they have no competition, they can afford to be no evil. Instead Tesla is pulling all nasty tricks known in the industry and more. It was quick to abandon the most controversial ones such as calculating peoples time in their lease cost estimate and eliminating the \$600 per year mandatory service charge. Many still remain. One example are the useless and expensive option packages (see above) another example they charge \$5,000 reservation fee in a second. They claim the fee is fully refundable. What they dont tell you is that it takes 30 business days to refund it. 11. Investing in Tesla Motors, Corp. (NASDAQ:TSLA) – This will be a subject to another blog. 12. Main reasons for my cancellation - Tesla MS is luxury 2 seater, not a large luxury car as advertised - ride is not as comfortable as my Mercedes S550 - super fast acceleration could be dangerous at my age and gives me headaches - dont want to be a beta tester @ \$100,000 price tag - hole in the tank (see above) Disclaimer: I have no interest short or long in Tesla Motors stock, nor do I intend to create one in the next 90 days from the date of this blog. Credits. My daughter Tina first coined the phrase \$100,00 on wheels that I used as a headline here. Tagged electric vehicle, EV. Electric car, Tesla model S | By Ivan -----
----- Using the guise of charging station "announcements" to cover a midnight release of financial data that portends the end of Tesla, the CFO tried to lie and say that the bad sales were because of "supplier problems" instead of admitting that the lack of sales was because nobody wants Musk's poorly built, overpriced waste of taxpayer dollars! The carefully hidden financial report reveals other shocking details: * Tesla lied about giving all of the NUMMI workers jobs. Musk, essentially lied to the unions and said: "oh yeah, Fremont, we will keep all of your UAW autoworkers employed here at the NUMMI plant if you give us a sweetheart deal on the property".. lie! In the financials Tesla reveals that all the new people are causing problems because they don't know what they are doing and ruining the cars. Musk should have hired all of the car factory trained union workers he promised instead of outsourcing to idiots with tattoos. (Musk hates the unions) * H1B Visa foreigners are a chunk of the Tesla payroll. They used our tax dollars to give people from other countries a job! * The "charging stations" are nothing more than a few garages with plugs in the most out-of-the-way podunk crap piece-of-shit towns in the country. How lovely that in order to drive a Tesla you must be forced to drive to Meth infused toothless waste-lands full of good ole boys and sit there next to your car for 40 minutes while the red necks shuffle by and say: "That's is one o' them Tesler's huh? You got an awful pretty mouth.. do you like to canoe Why should the public be forced to re-live scenes from Deliverance? * The DOE already changed the loan terms to put the taxpayer at greater risk, even after the Solyndra loan terms controversy. * DOE told Tesla to pay up and get out of the loan ASAP and to NEVER NEVER NEVER get out of business until AFTER the elections! TF- BTSN

Detroit Free Press busts Tesla's Musk's BIG LIE!

In recent interviews Elon Musk refused to say how many cars had been built by Tesla. Elon Musk, after scamming a number of other cities about their factory, bought the NUMMI car factory in Fremont. NUMMI was built by Toyota and General Motors and operated as the premiere showcase car factory in the world. GM was using it to learn how Toyota builds cars so good. It was built to deliver 500,000 CARS PER YEAR!! 500,000 CARS PER YEAR IS WHAT NUMMI WAS FULLY EQUIPPED TO BUILD!! NUMMI could rapidly shift from one new car design to the next if people knew what they were doing. NUMMI switched out between the Chevy Nova, The Geo Prizm, The Chevy Prizm, The Hilux, The Voltz, The Vibe, Tacoma Pick-up Trucks, The Matrix and could change up to a whole new car within 19 days. This was a ready-to-go car factory. There should have been no learning curve, no "build-a-new-car factory" delays, it should have been all up and running per the notarized written assurances Tesla gave to the DOE, In WRITING! So Musk got it and fired all of the car builders. Tesla has been trying to get people to buy a non-hand-built version of their car since 2003!!! That is a LONG TIME. GM AND TOYOTA built a ton of new car designs in the same factory in the same time-span!! SO... after spending HUNDREDS AND HUNDREDS AND HUNDREDS of MILLIONS of YOUR TAX DOLLARS and beating their awful car design for a decade, how many cars have they built?: 255 CARS!!! They

are still hand building the cars. The factory turns out to be almost unused except as a very expensive roof. In a 500,000 car capacity ready-to-go, state-of-the-art car factory after spending hundreds and hundreds of millions of dollars for a factory that GM AND Toyota had already tuned up they find that EVERYBODY thinks their car is a narcissistic Stanford yuppie Sandhill Road rich frat-boy meat-head man-toy! Nobody wants it!!! Tesla cars could explode in flames if they get wet.

It was discovered that a huge number of Fisker electric cars, which use the same lithium chemicals as the Tesla batteries, blew up after they got wet from Hurricane Sandy. Pictures of the gutted, totally destroyed \$100,000.00 cars are all over the internet. Buy a Tesla, go up in smoke?....

Senator Charles , Consumers Union anmd other groups call for investigation of exploding lithium ion batteries. Same batteries as used in Tesla and Fisker. | Solyndramobile: How bribery & corruption ruined the auto markets

Dont look so smug: Your Tesla might be worse for the environment than a gas car

Dont look so smug: Your Tesla might be worse for the environment than a gas car By Peter Braun | November 14th On a recent drive from Portland, Oregon to Seattle, I stopped for gas near one of Tesla's new Supercharger quick-charge stations. While my car was filling with liquefied dinosaurs, I happened to overhear two Tesla owners chatting while they topped off with electrons. They were clearly preening to one another about their cars, brimming over with smugness. And, at least in theory, they had every reason to be. Electric cars, and for that matter hybrids, have been marketed in no small part on the good karma you accrue for owning one. Buy an electric car and save the world! But just how smug should those Tesla and other EV drivers be? I wanted to find out. And the answers just may take Tesla, Volt and Leaf owners down a notch. In the last year, a number of important studies tracking the environmental cost of EVs, and particularly lithium-ion batteries, have come out. What these studies have shown is that the environmental gap between internal combustion and electric power is not as wide as we want it to be, and that, regardless of carbon footprint, the process of making lithium-ion batteries leaves a lot to be desired. Where did that battery come from? Carl Sagan is famed for saying, We live in a society exquisitely dependent on science and technology, in which hardly anyone knows about science and technology. He could have been talking directly about Lithium ion danger warning site raises huge red flags!" /2013/10/02/expose-movie-gets-pushed-back-because-of-huge-trove-of-new-evidence/ lithium-ion batteries . Chances are you are sitting within three feet of something that uses lithium-ion technology, heck you are probably reading these words thanks to lithium-ion batteries. Yet, not that many people really understand what goes into them. So how do they work? Like any battery, lithium-ions work by creating a flow of current (electrons) between a positively charged (missing electrons) cathode and a negatively charged anode (extra electrons), through a conductive electrolyte. Lithium makes a great battery because it is both very conductive, making it a good electrolyte, allows for extremely high electrical potential. And of course, because this electrochemical reaction is reversible, the batteries are readily rechargeable. tesla charging As great as lithium is for batteries, it has a dark side as well: The stuff is downright nasty. Lithium is flammable and highly reactive, as anyone who has seen photos of burning a Tesla can attest, but thats the least of our worries. The EPA has linked the use of extremely powerful solvents in the creation of lithium electrolytes and cathodes to everything from cancer to neurological problems. Specifically, the cobalt used in the creation of the most energy dense lithium-ion batteries is poisonous and extremely carcinogenic. Pulmonary, neurological, and respiratory problems have all been connected to cobalt exposure. A good rule of thumb is that any industrial process that makes liberal use of the word 'slurry is not good for pandas, or for that matter people. And, boy, does slurry come up a lot in the battery-making process. Other combinations of lithium are not as bad, but none is exactly good. The lithium-iron phosphate used in lower energy density batteries is better in terms of its carcinogenic effect, but might be worse in terms of the impact on the biosphere. Is it getting hot in here? Clearly then, EVs and plug-in hybrids have environmental costs. What effects however, do lithium-ion batteries have on John Q. Polar Bear? Well, a recent study from Norway looked at the global-warming potential of the complete lifecycle of EVs, from mining to recycling. Previous studies hadnt accounted for the energy-intensive process of building EVs, and missed the point: Theyre not that much better than gasoline cars. The best outcome for EVs was a 24-percent improvement in global-warming potential over the average gas powered car, and between 10 percent and 14 percent over diesel. These numbers are nothing to sneeze at, but they change radically depending on the source of electricity that EVs are powered on. EVs that depend on coal for their electricity are actually 17 percent to 27 percent worse than diesel or gas engines. The above numbers rely on the European power mix, which more heavily favors nuclear, hydroelectric, and renewable sources of energy than other parts of the world. The global warming potential for EVs that rely on natural gas – generally considered to be the cleanest fossil fuel – show an improvement of only 12 percent over gasoline, and break even with diesel. Most alarming, EVs that depend on coal for their electricity are actually 17 percent to 27 percent worse than diesel or gas engines. That is especially bad for the United States, because we derive close to 45 percent of our electricity from coal. In states like Texas, Pennsylvania, and Ohio,

that number is much closer to 100 percent. That's right folks; for residents of some of the most populous states, buying an EV is not only toxic, it's warming the planet more than its gas-powered counterparts. With cars that supposedly generate zero tailpipe emissions, how are these pollution numbers even possible? The simple answer is that as well as being messy to produce; battery production requires a tremendous amount of electricity. The initial production of the vehicle and the batteries together make up something like 40 percent of the total carbon footprint of an EV – nearly double that of an equivalent gasoline-powered vehicle. tesla charging station The high initial carbon footprint of an EV can be offset when the car is powered by environmentally friendly energy sources like hydroelectric or wind. Unfortunately, when that same EV is powered by electricity generated from fossil fuels, the initial energy cost of EV production can't be overcome and outweighs gasoline and diesel-powered vehicles. Previous studies evaluating EVs have overlooked the high energy cost of production, and have focused on the fact that even coal-fired power generation is technically more efficient than internal combustion. But with a carbon footprint from production something like twice that of an ordinary car, an EV needs to be more than a little more efficient to make up for all the carbon it generated before it even rolled off the assembly line. No war for oil! Err, Lithium ion danger warning site raises huge red flags!" /2013/10/02/expose-movie-gets-pushed-back-because-of-huge-trove-of-new-evidence/ lithium! There are also some geopolitical concerns surrounding the switch from gasoline-powered vehicles to EVs, too. One of the selling points of EVs is that they allow us end our dependence on foreign oil and big oil companies. In fact, however, we might just be trading big oil in for big lithium. Your Tesla may look sleek and clean on the outside, but you owe it to everyone to know the real cost. The lithium-ion battery market is expected to grow to \$22.5 billion in the next three years, and potentially double that by the end of the decade. That's small compared to the market for oil, but that will continue to change if more people buy electrified cars and trucks. As for getting rid of our dependence on foreign material, well lithium isn't quite rare, but deposits worth mining are. And, unfortunately for the United States and Europe, the big lithium deposits are in countries like Bolivia, China, and – drum roll please – Afghanistan. None of those countries has a sterling environmental track record. Given the very real concerns about pollution from battery production, most of which takes place in China, this starts to matter a great deal. Especially when there is so much pressure to keep the prices of batteries down. Conclusions So what to make of all this? Some of you have probably concluded that I hate EVs and don't think anyone should buy them. That's not the case. I believe electric vehicles – in one form or another – are likely the future of personal transportation. But beneath their squeaky clean marketing, EVs are not a panacea, a solution or remedy for all environmental woes. As with any new technology, EVs bring an immense set of new problems; problems we should understand before we become irreversibly tied to the new technology. Here's what I suggest: If you are interested in an EV, you should know where your electricity comes from before you sign on the dotted line. If you live in a state with a high dependence on coal, an EV may not be the eco-friendly choice for you. Ultimately, we can't let EV-derived smugness get in the way of a real and serious conversation that needs to be had surrounding global warming and the effect energy consumption has on our planet. Your Tesla may look sleek and clean on the outside, but you owe it to everyone to know the real cost. -- ----- Tesla's Struggles Raise Questions About Electric Cars ... Tesla's problems could also spark criticism of the government's energy loan program, which has been heavily promoted by the Obama administration. The program came under fire after Solyndra, a solar-panel maker, collapsed in 2011 owing taxpayers \$535 million. dealbook.nytimes.com/2012/09/25/questions-about-electric-car...

Clancey: first you "taint" the subject with a sex or money scandal then you whack them, then you get an erroneous toxins report filed, so people will think it was the "victims fault" and not pay too much attention. TDS-Boston G ----- Gary D. Conley The Lithium Ion VCs: Say Howdy to the ACTUAL Illuminati !!!" /2013/09/19/doe-staff-offer-to-respond-to-you-in-writing-regarding-each-item-on-this-news-site/ The big VC's didn't like the maverick approaches that Gary took. He did not play the Silicon Valley Frat boy brogrammer game. Unlike Silicon Valley, he treated women executives as equals and not as reception room eye candy like the other VC's. But Gary's biggest indiscretion was that he got past the VC's technology suppression and control system in the Valley. Time after time he created, launched and got funded one amazing new energy technology company after another. The Big VC's only want things funded that support their portfolio and they stop anything that is going to compete with it. As an example: The Valley VC's decided that they wanted a chemical called "lithium Ion" to be the main chemical to power electric cars. Even though many other options existed, they picked this one chemical because they had configured their investment plays in lithium mining, lithium processing, lithium cars and lithium batteries in each of their portfolios and then, even though they were billionaires, they made Congress give them many more billions of tax money just for this one chemical because they had monopolized it globally. Alas, Gary promoted a technology that competed with the Silicon Valley VC's at Solyndra and with all of their lithium plays. He had the metrics, working proof and opportunity to exceed their technology. First they tried putting a How Washington DC Politicos Have Troublemakers and Reporters Killed!" /directory-of-articles/topic-1-doetarp-manipulations/how-washington-has-people-it-doesnt-like-killed/ FULL MONTY on him but that didn't work out. It is now almost impossible to kill reporters and whistle-blowers without it getting recorded. Glenn Greenwald, and people like him, are now under so much surveillance that, if anybody did try to whack Mr. Greenwald, it would be caught on so many drones, microphones, laser scanners, cameras, tracking chips, window vibrators, IR chipcams, cell phones, bugs and other gadgets that the killers could never get away with it. Watch the TV show: Person of Interest. Everything in that show already exists today. Private investigators, taking another look at the case, have been sourcing new surveillance data sources to try to find out what really happened to Mr. Conley in the time period leading up to, and at, the shooting. History has proven: 1.) That Solyndra panels self-ignited and Lithium ion blows up when it gets banged, 2.) That Gary had better plans. 3.) That Gary's efforts conflicted with the plans of the Silicon Valley VC's. 4.) That Silicon Valley VC's will stop at nothing to get their way; politically, egotistically and industrially. Did he pay the ultimate price for his innovations and for speaking out? Ironically, Ford has announced that their new electric car will use the same type of solar optical concentrator on the roof of the car, as Gary's SolFocus developed, although Gary is no longer alive to participate in the profits. Many reporters find it "strange" that Steven Chu and The Big Screw! FOLLOW THE MONEY" /2013/09/19/connecting-the-dots-and-incentives/ Steven Chu, the Secretary of Energy, who openly hated Hydrogen energy, was nominated and lobbied into office by The Lithium Ion VCs: Say Howdy to the ACTUAL Illuminati !!!" /2013/09/19/doe-staff-offer-to-respond-to-you-in-writing-regarding-each-item-on-this-news-site/ opponents of hydrogen energy (who were investors in competing technologies) and that during Steven Chu's reign, a record number of hydrogen executives and companies died. Of course, it could all just be a coincidence. Forced suicide? Murder? Cover-up? Unusual number of coincidences? What do you think? ghj-de, sdLAT, rf-Den Gary Conley Dead: Silicon Valley Entrepreneur Dies Of Gunshot Wound A man found dead Sunday afternoon from a gunshot wound outside a Beale Air Force Base residential area was a well-known

Silicon Valley entrepreneur and clean energy pioneer, according to base officials. Gary D. Conley, 52, whose most recent corporate venture, b2u Solar of San Jose and Gurgaon, India, was one of several energy-related companies he founded, was discovered by a Beale resident at about 1 p.m. Sunday. His body was found outside a parked car near the Vassar Lake Gate with a gun in close proximity, according to Brian Wagner, 9th Reconnaissance Wing spokesman. According to officials at the Air Force Office of Special Investigation, no foul play was involved. Conley's brother, who lives in Oklahoma, said he and other family members are mystified by details surrounding the body's discovery. "It's very perplexing," said Mark Conley, 55. "The circumstances don't seem to make much sense." Gary D. Conley served in the US Air Force from 1979-83, as did Mark Conley and their father before them, according to Mark Conley. "We're an Air Force family," said his sister, Michele Conley, 59, of Paradise Valley, Ariz., who said her brother was born at McClellan Air Force Base, about a half-hour south of where his body was found. B2u Solar frequently negotiated military and other government contracts, she said, which would explain his presence in the area. The energy entrepreneur was named Clean Energy Entrepreneur of the Year in 2005 by the National Renewable Energy Laboratory Growth Forum. He is

credited with having founded SolFocus in 2005 in order to commercialize products created through its predecessor, a research company called H2Go. That firm, also founded by Conley, began with hydrogen-related energy projects and later switched focus to solar energy. "He was a genius," Mark Conley said. "He did some really amazing stuff." According to Michele Conley, he also was a gourmet cook. Christmas Eve featured an elaborate meal he prepared in their Saratoga home for his wife, Grace, and their two teenage sons. Gary D. Conley's profile on LinkedIn, an online professional networking site, lists flying, skiing, food, several branches of science, economics and hydroponics among his interests. B2u Solar, a small startup he founded in 2010, had solar demonstration projects in the works in China, and at the NASA Ames Research Center at Moffett Field in Mountain View, according to GigaOM, a technology news website. Michele Conley said her brother had been expected to meet a friend at the former Castle Air Force Base outside Merced this week to help with a solar project there. She last saw him a month ago, she said. "He was having so much fun, traveling and doing so well," Michele Conley said. He recently bought a new car, which he did pretty regularly, she said. The three siblings had been raised by their mother, primarily in Ohio, according to Mark Conley. Their father had been killed when his Air Force fighter jet was shot down over Vietnam in 1967, he said. "We didn't have any money," said Michele Conley of their upbringing. "Gary was always the whiz kid -- the braniac." She described her brother as a self-made man. His suspected suicide, she said, is implausible to her. "He was not depressed. He was like a big kid -- always excited about everything. It just makes zero sense," Michele Conley said. CONTACT Nancy Pasternack at npasternack@appealdemocrat.com or 749-4781. Elon Musk and Google investors spend BILLIONS of dollars flooding the internet with Tesla-authored hype and PR buzz

Tesla is all about how ‘god-like’ Tesla and Elon Musk are, while deleting all of the web information about the raw criminality of their enterprise.

WITH THE RECENT, EXTENSIVE, NEWS COVERAGE OF MINING BILLIONAIRES FUNDING PRESIDENTIAL CAMPAIGNS THROUGH BACK-DOORS, ONE ONLY HAS TO DRAW A LINE

BETWEEN THE "ACTUAL" OWNERS OF TESLA'S BATTERY MINES, AND MANUFACTURING PLANTS, AND THE LARGEST CAMPAIGN FINANCIERS TO SEE THAT THEY ARE ONE AND THE SAME. THE FACTS PROVE THIS!

THE TESLA CAR AND HOME BATTERY SCHEME IS SIMPLY A GLORIFIED ORGANIZED CRIME COMMODITY SCAM THAT IS PART OF THE SAME COMMODITY SCAM GOLDMAN SACHS WAS JUST HAULED IN FRONT OF CONGRESS FOR.

Eric Holder, and his law firm, represent these mining billionaires, so he was never going to let the FBI do it's job. Loretta Lynch must act, and act hard, against the Silicon Valley crime cartel, or risk losing the credibility of the entire agency. Musk's kick-back schemes with David Axelrod, Harry Reid and Dianne Feinstein are NEVER going to stay covered-up in the age of Snowden. America needs a "perp walk" on one of those three, if not all, ASAP.

It is embarrassing that the DEA and Secret Service have bought every hooker they could find. Now would be a really good time for the DOJ to do something that proves that there is still hope for Americans.

Elon Musk, and his Google VC's, have received billions and billions of dollars of your money as kick-back handouts. Do you like being poor while Musk rolls around with "models", private jets and super-parties on your dime?

- D. , A Senate Staffer

OOOPS, Tesla Fanboys:

"All Tesla Model S Cars recalled by NHTSA due to proven fire danger. Now requires "ballistic fire shield". See: <http://wp.me/P4e1uX-22P>

Fremont- CA The NHTSA has announced that all Tesla Model S cars are being recalled due to intense fire danger from their lithium ion batteries. Ballastic shields are now required by the U.S. Government to prevent additional explosions and fires which release toxic, cancer-causing smoke.

The investigation has cost the previous NHTSA Director: Strickland, to leave his job and numerous investors and staff to depart Tesla. It calls into question the funding of Tesla relative to battery makers and politicians conflicts-of-interest in related investments.

Per: <http://wp.me/P4e1uX-22P>, Tesla announced that the recall was "not a recall" in a press notice, but John Duncan, President of the Electric Auto Safety Group said: "Tesla is lying! They lied about who requested the NHTSA investigation, they lied about the battery charger recall not being a recall and now they are lying about this NEW recall not being a recall. It IS a recall and Tesla needs to cut the PR cover-up BS!."

Adding to the concern, Eric Holder has stated: that any company who .intentionally concealed information and misled the public about safety issues, ...Rather than promptly disclosing and correcting safety issues about which they were aware" and who .made misleading public statements to consumers and gave inaccurate facts to members of Congress. Will be held accountable.

GM and Toyota have already had massive penalties for safety deception.

The Justice Department stated that it is now willing to aggressively pursue automakers under a 2000 law giving it the power to prosecute those who mislead federal regulators about safety problems. Holder said he hopes the case serves as a warning for other automakers (like Tesla).

The announcement that I am making today, I think, is reflective of the aggressive nature we will take in looking at these kinds of charges, Holder said. I think this is a sign for the industry that we take these matters seriously and that individuals and corporations will be held accountable.

Put simply, conduct was shameful. It showed a blatant disregard for systems and laws designed to look after the safety of consumers. said Holder

Senate Commerce Committee Chairman Jay Rockefeller (D-W.Va.) praised the deal.

The Justice Departments settlement with Toyota should put all automakers on notice: There is absolutely no excuse for misleading the public or concealing information from the National Highway Traffic Safety Administration, Rockefeller said in a statement. Lives are at risk when this happens. Safety must always be the first priority for manufacturers, regardless of how it affects profit margins.

A Tesla Marketing Concept

By Franky Andrade, Jason Holloway, James Payne, Collin Roy, Brett Sheffield, Dan Brown,

Executive Summary

Tesla has established themselves as one of the leaders in the Electronic Vehicle market and a leader in innovations. In order to further their control of the EV market, we have developed a strategy to produce an entry level, luxury electronic vehicle that maintains Tesla's core values which allows them to compete on a broader scale with electronic vehicles and hybrids. After taking everything into consideration, we believe that our strategy will allow Tesla to gain market share, gain brand awareness, generate brand loyalty and earn profits through our new programs. We have developed the following plan for Tesla: We will develop a brand new, entry level luxury sedan that is fully electric and named the Gen3. It will still have the core components to a Tesla vehicle, but created with a budget in mind to grow the potential target market. This will allow more customers to get their hands on a fully electric vehicle at an affordable price, while still being able to grow the Tesla brand. We have also introduced a variety of programs in order to improve brand loyalty as well as giving more options for purchase, including Amplify Your Ride and the Test Drive America campaigns. We will also launch an integrated marketing campaign with advertisements in magazines and through web sources. The first car will ship in early 2015 and will be issued to those who reserved the vehicle in the second half of 2014. We will host the Test Drive America campaign in the second half of the year after the car has been fully announced. This will give potential drivers the chance to drive the car and to place a reservation. The demand for Gen 3 will be estimated based on the growing EV/Hybrid market over the next 5 years. We have the ability and resources to increase demand if the market grows beyond our estimation. With the expansion of our Supercharger station that was previously in the works our electric vehicles will be more appealing to the mass market. The strategy is proposed to grow Tesla's market share in the EV/Hybrid marketplace by 5% over the next five years and provides a 20% ROI per year for the last three years, with no losses after the first year. The plan will bring in a total of \$7,816,354,565 over five years in revenue and a total of \$1,605,493,432 will be profited. 2 | Page

3. Current Standing Before we continue, we must have an overview what Tesla is about to continue on the same path in the future. Vision Statement: At the core, Tesla Motors believes that electric cars should not be perceived as a sacrificial mode of transportation. Tesla Motors has brought the best of both the automotive and technological worlds together by permanently etching the image of electric cars being a step backwards in performance, efficiency, and design. Tesla Motors key is the 100% electric power terrain, which not only propels us in the present, but simultaneously establishes a strong foundation for the future. They have set out to forever

alter the current perceptions of electric vehicles, as well as making electric cars a viable alternative. Tesla has produced a car that is, finally, beautiful and exciting to drive along with being the most efficiently produced automobile on the planet. Core Value: ? ? ? ? A Clean Start: A Silicon Valley approach means we move fast and constantly innovate. Committed To Electric: Tesla makes the best electric cars and electric power trains in the world. Tesla's technology offers the most efficient path to a sustainable energy future; No Hybrids, No Hydrogen, No Hype. Built Around The Driver: The driver, the car, and the environment connect in ways they've never connected before. Sparking The Evolution: Tesla's goal is to accelerate the world's transition to electric mobility with a full range of increasingly affordable electric cars. We're catalyzing change in the industry. Master Plan: 1. Build a sports car. 2. Use that money to build an affordable car. 3. Use that money to build an even more affordable car. 4. While doing above, also provide zero emission electric power generation options. Mission Statement: Our intent is to offer a compelling customer experience while gathering rapid customer feedback and achieving operating efficiencies, better control over the costs of inventory, warranty service, pricing, and the development of the Tesla brand. Tesla's Principal Marketing Goals are to: ? Generate demand for our vehicles and drive leads to our sales teams. ? Build long-term brand awareness and manage corporate reputation. ? Manage our existing customer base to create loyalty and customer referrals. ? Enable customer input into the product development process. 3 | Page

4. Former Target Market (Roadster): Target: The original target of the Tesla Roadster included the upper class business executives and others who were looking for a high-end luxury car. The Tesla Roadster required a large down payment and cost over \$100,000, leading it to be unavailable to most consumers who were looking at higher-end cars, or below. Segment: The segment of the market focused on males who were looking for a luxury sports car that also had an electric motor. The Tesla Roadster was not only efficient, it was also fast and drove like a true sports car. The segment was dominated by males because of the sports car aspect of the brand and the availability. Positioning: The Tesla Roadster was marketed as a high-end luxury sports car that was fully electric and able to compete with other high level luxury cars performance. While the price was not cheap, it was cheaper than many other high-end sports cars that were on the market at that time. It was not made to compete with the sedans, but with the two-seater car market. The all electric vehicle also provided an incentive to environmental conservative drivers, allowing for zero emissions as they drove. Current Target Market: Target: The current customer of Tesla is purchasing the Model S vehicle that is priced at 70k. The customers are successful business executives and entrepreneurs who are also city dwellers that are tech savvy and green friendly. These are wealthy and early adopters whose income levels put them in the upper-middle class segment. Segment: The segment of the market is individuals looking for a premium luxury car with the added benefit of being fully electric. Tesla is targeting individuals who are upper-middle class baby boomers with typical incomes of over \$100,000 which is based on 77% of our buyers falling into this particular segment. Ideally, more males are inclined to purchase our vehicles, so when we market our strategies, we want to keep this in mind when addressing the audience. The majority of the segment is dominantly male. Positioning: The Model S is positioned as a luxury car with great performance that simply has the added benefit of being a fully electric vehicle without sacrificing style and performance. This high-end luxury car is not missing anything from a traditionally European luxury car and that's how Tesla wants concept to be. They do not want to convey that it is primarily an electric car because at the moment, electric cars do not have a sexy or glamorous reputation because of the cars they call "hybrids" that have horrible performance and style. 4 | Page

5. New Target Market: Target: In order for Tesla Motors to keep growing now and into the future, it is going to be important to expand their target market to reach more consumers. Expanding our target market to the generation Y, mid 20s to early 40s, middle class working adults, Tesla will be able to utilize their facility while increasing production. This target market will be pinpointing the young professionals that are looking for an entry level luxury car. According to NADA DATA, the average selling price for a new car in 2011 was around \$30,000 which shows that the majority of the consumers are not spending a lot of money on cars. Segments: We are going to segment the market for our new targets in three categories; eco friendly consumers, tech savvy and entry level luxury cars. For the eco-friendly consumers, we will be able to reach them by offering a fully electric car that not only has more than double the driving range of the electric competitors, but also has the style and performance that Tesla is known for. For the tech savvy segment, we can reach them because the fully electric car is a growing technology which most consumers are not currently utilizing. Not only will the car itself be new technology, the interior of the car will really attract the tech savvy consumer with the basic options, as well as the add-ons, that will attract them as well. The entry level luxury car segment will attract the young professionals that are in the

early stages of their careers and who will want to drive a luxury car. By having an entry level price, we will be able to attract more customers which will lead to future sales and brand loyalty. Positioning: We are going to position this car for the entry level luxury car that also has the added benefit of being fully electric while not losing any performance. Most electric cars are viewed as "unattractive" to younger buyers through lack of design and performance. By creating an entry level Tesla car, we can use our design and technology to change that image. By having an entry level luxury car that is in the \$30,000 price range, that also has the benefit of being fully electric, will attract more buyers that are currently looking for electric cars or entry level luxury cars because of the added value of zero emissions, and by having this added value, it will position our brand to save consumers more money than the traditional entry level luxury cars. 5 | Page

14. Summary of Findings According to the survey we have found that consumers are thinking about purchasing an electric car in the future. The majority of the respondents, 62%, chose maybe when asked if they would buy an electric car in the future while 28% said yes. The majority of these people planned to purchase an electric car in 1 to 4 years. We found what consumers looked for in their cars and the drawbacks in buying an electric car. These findings will enable us to make a car that is suitable for the consumers and also convert them into emission free driving. Not many people actually owned an electric car before. The majority, 74%, answered "no" when asked if it was too early for electric vehicles. This information lets us know that there is a demand in the consumers mind and that it is a good idea to have electric cars at this time. From our primary research we have also found out that brand image was a strong factor in purchasing a vehicle and what people were looking for. This makes it very important for us to continue to improve our brand image so that it will be appealing to all consumers. "After sale service" was picked the most as having the strongest influence on purchasing decision. This is why we will need to improve our service plans for our customers and also for new customers. Having a solid service plan that the customers like will just add to the value of owning a Tesla. The influential factors on purchasing an electric vehicle were mileage range, style, price and performance. Here at Tesla we already offer industry leading mileage range and we are known for the style and performance of our vehicles. This leads us to the strongest influence, which is price. By selling an expensive car we are only targeting a small market of a select few that can afford it. This will allow us an opportunity to create a lower priced vehicle so that we can reach the mass market. Also, based on our survey findings, we asked the consumers how much they would be prepared to spend on a NON-electric car and how much they would be prepared to spend on a similar model but electric. For the NON-electric cars the top two price ranges were \$30,001 - \$40,000 at 44% and \$40,001 - \$50,000 at 32%. When asked how much they would be prepared for a similar model but electric the price ranges were \$30,001 - \$40,000 and \$40,001 - \$50,000 which were both tied at 26%. Another 22% of the respondents chose that they were prepared to

spend \$50,001 - \$60,000 on an electric vehicle while only 10% of the respondents chose that they would be prepared to spend over \$60,000. This shows that the consumers are willing to pay more for the electric vehicle over the conventional gas motor, but the majority are prepared to spend between \$30,000 and \$60,000. 14 | P a g e

15. Market Research Increased Sales of Electric Cars According to evobsession.com 100% electric car sales grew by over 360% in the last year. As technology continues to make the batteries better and more charging stations are built the consumers are demanding electric cars. Part of this could be from the rising price of gasoline and the trend of people becoming more environmentally conscious. As more people start to look into purchasing electric vehicles, the companies are going to need to build cars that set them apart from their competition. Most electric cars are known for having poor performance which makes them unappealing to most people. As the technology for this industry grows and becomes cheaper to produce, the companies can become more innovative with the design and performance of the car. The ideal situation would be to make a family line of electric vehicles that could be appealing to everyone. Price of Luxury Vehicles The average price of the top 15 best selling luxury vehicles in 2012 was \$41,073 and the average growth of sales was 10.1% found through the goodcarbadcar.net. This shows that the luxury vehicle industry is growing and people are okay with spending their money on luxury vehicles. At the \$40k average price it shows that people are mainly buying the entry level luxury vehicles. These are priced so that they can be appealing to the mass market. A lot of the luxury car companies are making entry level vehicles so they can reach a market that they have been left out for years. This has been a burden with the regular automobile companies because they will have to compete with this entry level luxury cars with the high-end options that they are currently offering. The average price for the top 7 large luxury cars, which is a competitor for the Model S, is \$75,174. The Mercedes S-Class sold the most in 2012 with 11,794 units sold. This shows that the luxury car companies are making their money and market share on the lower priced cars they sell. This will be an issue for Tesla as we try to gain market share. We can definitely outsell the large luxury models, but in order to gain market share, we will need to sell in large numbers which is not going to happen with a higher priced vehicle. 15 | P a g e

16. Cost of Charging Electric Cars With the average US cost per Kilowatt Hour being \$0.12, this translates to about \$.04 a mile for electric cars. On a yearly driving of 12,000 miles, this would only cost an electric car owner about \$480 total. With the average cost of gasoline currently at \$3.56 per gallon, this translates to a cost of about \$.14 cents per mile in a 25mpg car using gasoline. On a yearly average of 12,000 miles, this would cost the traditional gas powered vehicle \$1,680 with a 25mpg car. A driver having an electric vehicle would save \$1,200 a year just in gas expenses. 16 | P a g e

24. Challenges for Tesla Tesla faces many challenges as a new to entry motor company in a very competitive auto industry. We know what Tesla does best, builds great fully-electric car without the sacrifice of performance or style". We have the proper partnership and available resources to accomplish our goal by changing the industry from gas fueled to electric powered, however, we have a problem of not getting enough sold at the potential that we know we can as a company. We are seen by some as this cool "techy" innovative company but no one is persuaded enough to come out and purchase. So that's why we decided to do a little research on the stigma of electric cars and use what we are good at to counterattack each challenge which will later on be executed into something creative and new. Misconceptions of Electric Cars: Recharge time at home and cost Upon delivery or at the time of pick up you will be supplied with a mobile connector. And Yes! You can literally charge it wherever a wall plug is provided, but we recommend charging from a 240 volt outlet rather than a 110 volt outlet. A 240 volt outlet provides a lot more power than a standard outlet and will charge your car faster. You get 62 miles an hour while charging so we will inform our leases or buyers that if they do this every night they will not have any problem. So money is sometimes EVERYTHING so consider this extreme scenario if a customer charges their car from empty to full it will only cost them \$11.88 for that charge. Compare that to the amount of money spent on gas and you can see this is a drastic savings. 24 | P a g e

25. Low number of charging stations As Tesla grows as a brand, we already have plans to expand the number

of charging stations across the United States. While we have many charging stations already in place along both coastlines, there will be a big demand for more. Throughout 2014 and 2015, we will greatly expand this network of chargers to help the public travel across the country with convenience. Fall 2013 Year 2014 25 | Page

26. Year 2015 Images provided by Tesla website Initial cost of purchase One of the top draw backs for potential electric car buyers was the high initial cost associated with purchasing. As technology continues to advance, the cost of making electric cars is decreasing. Weve introduced a new model into the Tesla family of cars that focuses on the issue of cost. This gives the customer a no pressure feel but gets cars on the roads. These consumers can test out the experience and fall in love with the Tesla Motors Family. The new model, Gen 3, reduces the initial cost for ownership of an electric car, putting more cars on the road. The initial starting point of this vehicle is 40K, a dramatic drop from the Tesla Model S starting at 70K. Low car choice options While there arent as many options as the basic cars, electric cars are unique in how they are able to operate. With an almost fully electric base, the car costs more money to produce than a normal vehicle. In order to lower the price of the car, weve removed some key features from the top models and kept the essentials that make it a luxury vehicle. By doing this, weve been able to lower the price in order for more of the everyday consumer to purchase the car, no longer limiting the car to the upper class consumer. By adding this new entry into the family market and the SUV coming very soon, we have a full family line of Tesla's that now can also help create loyalty within the availability of picking and choosing which vehicle preference fits the consumer. 26 | Page

27. Marketing Strategy We will increase the market share of Tesla Motors in the Electronic Vehicle / Hybrid market by 5% over the next 5 years by introducing a lower priced EV, the Tesla Gen3. Model: Gen3 Model year: 2015 Style: Passenger 4 door luxury sedan Pricing base: \$40,000 – \$47,000 Objectives of this market strategy ? To increase market share 5% with this new vehicle ? Increase brand awareness by the number of vehicles on the road ? Create brand loyalty ? Build a family of Tesla's that caters to more target segments than what we currently have After conducting primary and secondary researches, we concluded that this vehicle is a solution for the current demand by young working professionals that are looking for an entry level luxury car. The price surveyors felt it would be an optimal price point for this kind of vehicle and was quoted to start out at \$40,000 with a \$7,500 federal tax rebate which would bring the cost to the consumer to be \$32,500. With a no emissions car running completely on electricity, the consumer would save around \$150 to \$200 on gas based on the average mpg of luxury cars and premium fuel prices. By targeting the young professionals looking for an entry level luxury car, it would allow us to build our brand image by getting more zero emissions cars on the road. With Tesla's battery technology that provides an unmatched mileage range to our competitors, we can use that technology to produce a smaller car that is more affordable for our consumers. Although we will not be able to lower costs to match the Nissan Leaf prices, our designs and performance are much better than the Leaf. This will allow us to gain market share in the electric vehicle segment that is currently controlled by Nissan. 27 | Page

28. Phases Phase 1 (6 Months): ? ? Implement communication strategies to inform consumers and press about a new addition coming to the Tesla family of cars. o Create banners on the Tesla home page promoting new car o Reach out to automotive magazines to increase traffic to website (i.e.: Motor Trend) o Announce and promote new vehicle announcement on Social Media accounts (Facebook/Twitter) Finalize production plan and process to begin production in Phase 2 Phase 2 (6 Months): ? ? ? ? Debut announcement of the Tesla Gen3 to the public Start accepting reservations for new vehicle Begin production of the car, allowing for a complete rollout in early 2015 Launch Test Drive America Campaign Phase 3 (Years 2-5): ? ? ? ? ? Release Gen3 to public sales and ship reservations. Continue and expand communication strategies o Launch Billboard campaign in major cities o Continue promotion on Social Media accounts o Update Website with any extra information Implement Amplify your Ride trade-in program Implement Loyalty Program for Tesla owners Continue Test Drive America campaign 28 | Page

29. Tactics Loyalty Program We at Tesla Motors want you to be safe and comfortable in your Tesla vehicle. Some of the most important people in the world are your family, and you always want them to be safe on the road and be comfortable while driving in a reliable vehicle. The Tesla Loyalty Program allows you to put your family in a Tesla vehicle, with added bonuses while already being a customer of Tesla. In a special promotion with our new Gen 3 vehicle, customers who already own a Tesla and purchase another one for their family will receive an instant \$2,000 off the car and one year of free service, including unlimited Service Ranger appointments at no cost to you. This promotion will only be applicable if you purchase a four year program that will take effect immediately after your first year has ended, giving you a total of five years of coverage. We will take a minimal loss on this program, but will still be able to make the money back through the customers who purchase the

higher grade service plans or have service to be attended to in the future. We will only be losing money if the buyer decides to purchase the lowest service plan. Any future service sales will be profitable. 29 | P a g e

30. Amplify Your Ride We at Tesla Motors would like to change the automotive experience drastically by offering a program called Amplify Your Ride. In this program, we will be offering qualifying customers the opportunity to trade in their current vehicle for our new Tesla Gen 3. This program will have the benefit of two irresistible incentives which are 0% financing for the well qualified buyer for the first 24 months as well as offering the best trade-in value for their vehicle as a down payment for their new Tesla Gen 3. When trading in their car, we will be using Auto Nation as a 3rd party trade-in program whom will be buying the car off of us. Test Drive America In order to help raise brand awareness of the Gen3 and to give drivers an opportunity to test the car, we will launch a test drive campaign entitled Test Drive America. We will focus our efforts on the 8 recent states who has been promoting the sales of electric cars. These states include California, Connecticut, Maryland, Massachusetts, New York, Oregon, Rhode Island and Vermont. Within these states we will focus on the larger population cities in order to have the largest reach out. Our main cities that we focus on in 6 states which will be Los Angeles, San Francisco, Seattle, Washington, New York and Atlanta. Currently 50% of all electric vehicle sales have been made in these cities. Each city we will host the event at a local track, giving the opportunity for drivers to get the full performance experience from the test drive. If no tracks are available to run the event, we will stop at our service stations located throughout the states and allow drivers to test drive the car for at least 15 minutes. We will have 10 cars produced at the 60 kWh battery size at the event in the different colors that are available to the public. We would hire three Street Team positions at an average salary of \$45,000 to travel with the campaign and promote the new vehicles. We would then spend an average of \$165,000 on travel and lodging throughout the campaign. 30 | P a g e

31. Communication Strategy With Tesla only focusing on online sales, site traffic begins to be a major concern. Increasing site traffic is essential to the overall health of the company. Our communication strategy concentrates on three main media sources; Googles Ad Words, major newspapers/ magazines, social media outlets and company sponsored events. These strategies will increase customer traffic which ultimately will lead to an increase of revenue. Website and Social Media The Tesla Motors website will be the main hub of all announcements and advertisements. We will announce the new car, promote the campaigns, and give complete details through our website directly. We will also use our Social Media platforms to make announcements and promote our events taking place. All ads would be on the homepage of each website, giving it maximum exposure to those who enter the site through other channels. 31 | P a g e

32. Google Advertising To help promote Tesla on the internet, we will use targeted advertising through Google Ad Words. The targeted advertising would be focused on those who are looking at electric vehicles or hybrid cars. Googles Ad Words is a Pay-Per-Click advertising model that allows a company to advertise online. Tesla will use Googles specialized program to increase site traffic. Pay-PerClick is a program that Google offers allowing Tesla to set a predetermined advertising budget based on the amount of consumers visiting our website. Each click will lead the potential consumer to www.teslamotors.com. This strategy also has a secondary effect on Tesla. As each individual visits the site, this can grow brand awareness resulting in an increase of overall sales. The program offers real time conversion rate tracking that will let us determine the effectiveness of the program. By choosing our specific goal, defining keywords that Tesla is associated with and setting a budget can achieve a conversion rate averaging around 4.29% to 6.15% for the auto industry. With 1,000 potential customers visiting the site at a 6.15% conversion rate can result in 62 new customers. This strategy can have limitless possibilities depending on our total budget set aside for the program. Media Newspapers will be used to reach a certain demographic area that will increase site traffic. The New York Times, Wall Street Journal, Forbes magazine and Motor Trend magazine will be used. These magazines focus on college graduates with a median age of 40 plus and an average household income of over \$70,000. Through each magazine, a one page ad with no contracts involved and a onetime ad will cost us at the low of \$53,455 and a high of \$117,465 for black and white ads and up to \$219,297.13 for color ads. With an audience of roughly 16 million Tesla can use this media to further our brand awareness and increase site traffic at a fairly inexpensive price. 32 | P a g e

33. We will also launch a billboard campaign to coincide with the launch of the new car. The billboards will be used in Phase 2 before the Test Drive America Campaign. The billboard campaign will launch in the 8 states that the Test Drive America Campaign visits. Only a few billboards will be placed in each major city to maximize exposure across the United States with our full budget being expensed. Our department will also reach out to major sources of online media to help gain exposure for the car. The online media companies will have an

opportunity to test drive the car, much like the Test Drive America plan, and offer their reviews. These reviews will help us gain exposure for the car and give the car-shopping consumer more information from a third party source, helping to verify the Tesla marketing campaigns. It will also give us an opportunity to announce when and where our next Test Drive America dates will be, encouraging others to come and drive the car for themselves. 33

40. Cost Per Phase Phase 1: For the first 6 months of 2014 we will be spending an estimated \$100 million dollars on the research and development on building a lower priced car that can reach the mass market. We will be using our current technology that will allow us to save money on the research and development expense. We will also be implementing a communication strategy costing \$994,552, which will begin in Phase 1 and last throughout the whole year. We will use google ad words for the Gen 3 that we will budget \$20,000 for the year. We will also place advertisements in the New York Times, Wall Street Journal, Forbes and Motor Trend costing \$267,275, \$219,297.13, \$290,640 and \$197,340 respectively. Phase 2: For the second half of 2014 we will we will begin to advertise on billboards in the states that will be participating in the Test Drive America campaign. Each destination will have 5 billboards costing \$2,000 per month, which will have a total cost of \$480,000. In this phase we will be producing 8 of our 60 kWh cars with upgrades for our Test Drive America campaign at a cost of \$328,000. After the cars are made, we will begin our Test Drive America campaign that will cost a total of \$150,000. We will hire 3 Street Team positions at an average of \$45,000, which will cost \$67,500 for 6 months. On this campaign we will have an \$82,500 budget on the traveling and lodging for the 6 months. Phase 3: Starting in 2015 we will begin to produce the Gen 3. We will keep our Test Drive America program that will run twice a year at a total cost of \$300,000. This cost will be \$135,000 in the Street Team salaries and \$165,000 in the travel and lodging throughout the year. We will use the same communication strategy that will cost \$994,552 for the whole year. During this phase we start the Loyalty Program that we estimate will be for 10% of our sales in the first year that will cost us \$3,843,511. We will also keep the billboards for the first 6 months in the same places that will cost \$960,000. We are also estimating that we will produce 50% of our 19,218 cars with the 40 kWh battery that will cost \$307,480,875 and 50% of our 60kWh that will cost \$355,524,762. During this phase we will carry over the cost from 2014 totaling \$101,952,522. In 2016 we will keep the same costs for the Test Drive America and the Communication Strategy. We will increase our production to 36,566 cars that we will estimate again that have 50% 40 kWh batteries and 50% 60 kWh batteries that will cost \$573,356,154 and \$662,943,053. This will also increase the cost of our Loyalty Program to \$7,313,216. In 2017 the costs for Test Drive America

and the Communication Strategy will stay the same. We will increase our production to 55,242 cars keeping the same strategy of 50% 40 kWh and 50% 60 kWh costing \$848,513,455 and 981,093,683. The loyalty program will also increase to \$11,048,352. In 2018 we will also keep the same costs for the Test Drive America and the Communication Strategy. We will increase production to 120,271 cars that will be 50% of the 40 kWh and 50% of the 60 kWh that will cost \$1,083,937,046 and \$1,253,302,209. The Loyalty program will increase to \$14,414,056. 40 | Page

Per www.autosafetyalert.com:

Vicious Pervasive Tesla Car Anal Itching Syndrome Can Lead To Sphincter Muscle Failure

"Tesla car owners are reporting that the constant high speed vibration from the Tesla motor is transduced through the chassis and seat causing increasing anal itching syndrome."

This is now leading to involuntary sphincter muscle failure. Because Tesla sells to top 1% extremely rich males, and those males consume large amounts of food because of their wealth, they are more full of lower digestive track residue than the average driver.

Embarrassing involuntary expression of the full lower colon can be awkward at work or on a social activity.

Some Tesla owners are seeking medication which will numb their rectums in order to avoid the syndrome. Not all Tesla owners have complained of the syndrome. Medical experts believe that those who are not susceptible to the effect already have numb rectums.

Panasonic engineers GUARANTEE that Tesla battery packs will explode when wet!!!!

Panasonic engineers GUARANTEE that Tesla battery packs will explode when wet!!!! After the cataclysmic explosions and self combustion devastation of the Fisker electric cars because they simply GOT WET in the Hurricane Sandy rain, Panasonic has now, not only, stated that Tesla Lithium batteries will also explode and kill the baby, or dog, or other family member you have in the back seat, but that Tesla also received written warnings, in hard copy documents, in the quotations and shipping MSDS sheets that the Tesla batteries are "guaranteed" to explode if salt, or any other water touches them. With all of the other lawsuits Tesla now has, they expect to get liability lawsuits from owners, suppliers that they sold battery packs to (without disclosing the danger their engineers knew of) and consumer class action groups. Panasonic engineers have been retained to examine safety issues with the cars.

BIG TROUBLE FOR LITTLE TESLA

Did Tesla bankers at Deutsche Bank order German's to give Tesla a wave-through on safety review that never actually happened?

Did Tesla bankers at Deutsche Bank order German's to give Tesla a wave-through on safety review that never actually happened? The United States NHTSA has sent an extensive review list to Tesla yet we now see that Germany sent no such review list to Tesla and, in fact, the press office of Kraftfahrt-Bundesamt confirms that no tests were conducted by Germany. Karen started a campaign to force the exposure of the falsehoods which can jeopardize the lives of Tesla drivers by asking every to send the following letter to Germany: Please Send This open letter to the German Federal Motor Transport Authority, or Kraftfahrt-Bundesamt (KBA):

"Regarding: Your recent Tesla "safety declaration".

Dear German Federal Motor Transport Authority: It is quite surprising to hear that your organization has declared the Tesla completely safe without engaging in full due diligence. It makes it appear like someone got bribed. We certainly hope that Deutsche Bank staff's substantial positions in Tesla held no bearing. We see that Deutsche Bank staff were just indicted for massive securities fraud and we hope that is just a coincidence. Numerous organizations and experts have provided data showing that the car is not safe. The statistics, historical facts about lithium ion, and actual evidence point to the opposite conclusion. Many websites, including: <http://lithium-ion.weebly.com> " <http://lithium-ion.weebly.com>" <http://lithium-ion.weebly.com> and others provide rather contrary evidence. Tesla's own patent documents state that the car is not safe. The Chevy Volt was recalled for far less battery issues with lithium ion. There are over 200 safety concerns that can be provided to you in a documented report. America has not even started their safety investigation and has requested a deep set of technical documents from Tesla. Did your agency request such documents? The members of the public hereby request publication of the identities of the reviewers, the methods and analysis methods they employed, the read-out of their data and the conclusive, specific data that the research was based upon. Here is a link to a much more overt investigation you might want to review: <http://wp.me/p2BJXK-g7>" <http://wp.me/p2BJXK-g7>" <http://wp.me/p2BJXK-g7> Sincerely, XXX Please feel free to send your own version to Kraftfahrt-Bundesamt (KBA) at: pressestelle@kba.de and at this link:

http://www.kba.de/cln_031/nn_540136/EN/Service__en/Contact/Contact__node__en.html?__nnn=true
http://www.kba.de/cln_031/nn_540136/EN/Service__en/Contact/Contact__node__en.html?__nnn=true

SolarCitys use of Tesla batteries unsafe for homes and for Solarcity /2013/06/10/chu-expect-more-green-
energy-bankruptcies/ THIS LINK... Lithium ion Apple tablets and cell phones have exploded into flames and
burned down the structures they were in as documented when you search the phrase: "ipad air explodes".
Authorities in Sugar Land, Texas, ruled that the Fisker Karma parked in the attached garage of a newly built home
was the origin of a fire in 2012 that completely destroyed the car as well as the garage and a portion of the house,
causing hundreds of thousands of dollars worth of damage. The owner and his family escaped safely. The
batteries were the same kind of lithium ion batteries used in the Tesla. This video shows another one just blowing
up in flames for no good reason: <http://www.youtube.com/watch?v=2yzULEbmgUM> The website:
<http://lithium-ion.weebly.com> <http://lithium-ion.weebly.com> <http://lithium-ion.weebly.com> shows quite a
number of lithium ion battery disasters where the batteries just took down the structures. Tesla's own patent's,
filed with the U.S. Government, state, in their words, that their batteries could spontaneously explode and destroy
your home or office.

<http://lithium-ion.weebly.com> exposes Fisker and Tesla Danger

</2013/04/23/http://lithium-ion-weebly-com-exposes-fisker-tesla-danger/>

Major media discovered letters that Tesla's head of Sales sent to potential customers trying to talk them into putting small deposits on Tesla's in order to help Tesla fake the posted number of cars Tesla could say they had sold in order to fake a "profit". In fact the company owes hundreds of millions of dollars, has missed its loan payments, has "sold" many cars to its own investors in order to fake up demand and has bought some of its own cars to pad the outlook. Tesla has sold and made less cars in 10 years than GM has sold and made in TWO DAYS! SEC and Investor investigations have been called for. All this according to reporters from The Hill.

Tesla Caught Faking Orders

<http://www.hybridcars.com/musk-corrects-record-on-overzealous-tesla-sales-e-mail/>

Reddit Roasts Tesla

There are many Reddit Posters who bring the pain on Tesla but this one goes full down: "Just saw this: "Tesla caught pumping stock with fake orders. Corporate email busts Tesla scam. Is this a credible product? Tesla Motors is under Fed investigation for bribery & corruption; Musk stole the company from Martin the founder; Tesla has been sued many, many times for misdeeds; Tesla took taxpayer \$\$ yet hired off-shore workers and fired NUMMI union workers; Their batteries blow up when they get wet or overcharge- Tesla's own patent filings say so; They owe more \$ than they can ever pay back. The Leaf does the same thing for \$100k less. The billionaire owner got free tax money without earning it; Goldman, K&L Gates, KPCB & their investors put in fake car orders and fake stock buys to pump the stock; They lied to San Jose, Downey, New Mexico and many cities about building a factory in each; The CEO cheated on his wife & business partners; The CEO hires magazines to write glory-stories about him; Tesla has 30 Indian bloggers hired to write fake user postings; The EMF from the car is measured to cause biological damage; They changed the prices on customers after they ordered; They never get their costs right; each car coming off the line has problems according to Musk himself;

Selling 4K cars after a decade is a pathetically small # for such a run-of-the-mill electric car; They announce they intend to pay the loan back early, yet do not actually pay it back even though the owner has a billion dollars; Former staff have accused the CEO of everything from spying to harassment; When the Feds finally serve their indictments, forensic audits of Tesla will show they lied in their financials; The public calls the car the Solyndra-Mobile and say it is an "Un-American Product; It is made, and priced, by and for Stanford elitist yuppie rich boys; The same six writers that support Tesla have been shown to be paid shills; All of this is well documented. Wouldnt anyone be ashamed to drive a Tesla

Immigration ISSUES: Tesla Still looking for Non-American Workers After TAKING U.S. Taxpayer money for a billionaire!

TESLA TAKES GOVERNMENT TAX MONEY SAYING THEY WILL CREATE U.S. JOBS and then hires FOREIGNERS: Look at the ads Tesla has placed on LinkedIn: Senior Immigration Paralegal - Tesla Motors- Palo Alto, California (San Francisco Bay Area) Job Description Brief Description The Senior Immigration Paralegal would be Tesla's first in-house immigration legal resource and would therefore be responsible for helping Tesla to build-out its immigration law support program. This position manages, oversees and directly assists in handling a large portion of immigration matters in-house, specifically employment-based, nonimmigrant visa applications and permanent residency applications. This position is also responsible for compiling and maintaining various status reports and records relative to immigration related expenses. Responsibilities: •Start to finish preparation of employment-based immigration petitions with minimal assistance and supervision from outside immigration counsel, including: •J-1 visas; •H-1B visas; •I-140 visas; and •Various other visas. •Regularly provide instruction and advice to Tesla employees and foreign nationals on immigration practices and procedures. •Assist with any problems that may arise relative to a foreign national's immigration status. •Assist in the preparation of a monthly status report by tracking immigration costs, volume of immigration files and location of immigration files. •Create and regularly maintain the legal department's customized software report to track ongoing immigration matters at all Tesla entities with immigration needs. •Work with Human Resources to ensure immigration files remain in compliance with state and federal government agency regulations. •Ensure employee and employer compliance with Tesla's new immigration policy and procedures. •Directly handle the recruitment steps necessary to sponsor a foreign national employee for permanent residency. •Assist with U.S. nationals work-related emigration to foreign countries. Desired Skills & Experience Qualifications/Requirements: •Strong, in-depth knowledge of immigration law, including experience with each visa type mentioned above. •8-10 years of Immigration Paralegal experience preferred. •Bachelors degree preferred with a strong academic background. •Strong legal writing and drafting skills. •Accuracy and attention to detail is a must. •Experienced professional with great relationship skills, team player, self starter, independent thinker, and has the ability to anticipate the next steps and future issues. •Ability to work well in a diverse and fast-paced environment with a large and diverse group of people, including Human Resources, Global Mobility, Tesla recruiting, Tesla hiring managers, candidates from countries throughout the world as well as their families. Additional Information Posted:: Full-time Experience: Mid-Senior level Functions: Legal Industries: Automotive Job ID:1845406

Tesla Selling cars? "No Way", says Industry Expert

A major industry operations lead from GM has now been in the news reporting that "GM makes and sells 2,000 cars a day". Tesla spent thousands of times more making each car to only sell a few thousand cars after ten years and nearly a billion dollars.. hmm... What doesn't add up?

Tesla Workers Frustrated With Tesla Ethics

Based on numerous reports: From the CEO running spy campaigns on them, to benefits changes, to hostile take-overs from the founders, to terminations of NUMMI workers promised careers, to the discovery that all of their hard work may be based on an effort that came into being because of bribery and theft of tax dollars.. morale at Tesla is dropping like a rock. Worker comments are flowing in like a river, here, and at other media sites. At least 80% of the media stories on Tesla come from its own workers.

U.S. Senate Nails Tesla

From The U.S. Senate Hearing Testimony Today: "Whether Tesla remains profitable remains to be seen and because many of the projects for both DOE ATVM and loan guarantees are in relatively early stages of development, labeling them successes is premature and if they do go bankrupt, the taxpayer funds are merely providing a lifeline. However, if Tesla's electric vehicles are the wave of the future, they should have secured investment and loans through the private sector."

Understanding Tesla's Life Threatening Battery Decisions

Understanding Tesla's Life Threatening Battery Decisions SEEKING ALPHA- John Peterson Nov 22 2013 In the last couple of months, electric cars from Tesla Motors (TSLA) have had three collision-related battery fires that were widely covered by the media. Last week, the NHTSA decided to conduct a formal investigation of these incidents. While Tesla's CEO Elon Musk immediately went on the offensive arguing that Tesla's BEVs have a lower fire risk than gasoline powered cars, the question an increasing number of investors are asking is "Why has Tesla had three battery fires in a fleet of 17,000 BEVs while Nissan hasn't had any fires in its fleet of over 90,000 BEVs The answer is simple. Tesla's battery decisions significantly increased battery risks for both the customer and the company. My primary resource for the discussion in this article is a 2012 study published by the National Renewable Energy Laboratory titled "Vehicle Battery Safety Roadmap Guidance." Since the roadmap provides far more scientific detail than most investors need or want, I'll focus on the general themes that impact investment risk and leave the electrochemical and engineering minutiae for professionals. The generic term "lithium-ion battery" includes at least a half-dozen varieties that range from relatively safe iron phosphate formulations to relatively unstable cobalt oxide formulations. I use the word relatively because no lithium-ion battery is 100% safe. All lithium-ion batteries will burn if the cell is punctured. In general, fires resulting from a punctured cell are the least violent. Lithium-ion batteries can also ignite spontaneously if debris left over from the manufacturing process pierces a 15- to 25-micron separator and creates an internal short circuit. In those cases, which are referred to as "field failure events," the internal short circuit ignites materials inside the cell and causes internal temperatures to spike to a few hundred degrees centigrade in seconds. At that point, the cell ruptures feeding additional oxygen to the fire. In rare unexplained cases, internal temperatures to spike to a couple thousand degrees centigrade in seconds, which suggests that thermite reactions might be taking place. The failure mechanisms in lithium-ion batteries are not well understood because it's darned near impossible to extinguish a lithium-ion battery fire. In the event of a fire, the best first responders can do is try to cool the surrounding pack to keep the fire from spreading. What we do know is that punctured cells react less violently than cells that have a field-failure event and that field failure events are less violent than other failures that some experts attribute to thermite reactions. Since the thermal energy released by a burning lithium-ion battery is up to three times greater than the electrical energy the battery could release in a normal discharge cycle, cell punctures and field failure events can be a very big deal as increased temperatures in one cell propagate to adjacent cells causing them to go into thermal runaway. The phenomenon is like lighting one side of a matchbook on fire. Once the first one goes, the others are sure to follow. One recent Tesla fire in Yucatan Mexico was captured in a YouTube video that shows how the process of lithium-ion battery fratricide unfolds in a large battery pack. The video begins with what appears to be a modest fire in a couple of punctured battery modules. As the temperature builds, other modules reach the thermal runaway point and explode. During the grand finale, several modules join the party and explode at the same time. If the incident didn't involve a \$100,000 car and a real life accident, it would be a great special effect for Hollywood. Tesla's first risky battery choice was picking cells with high energy density

and a less desirable safety profile than the low energy density cells chosen by all of the other automakers. Its second risky battery choice was ignoring the laws of large numbers. Field-failure events are very rare and while I haven't been able to find detailed statistics for the 18650 cells Tesla buys from Panasonic, the NREL report noted: "Field failures arising from manufacturing defects that cause internal short circuits have very low probabilities of occurrence (estimates for 18650-size cells that fail catastrophically are 1 in 10 million cells to 1 in 40 million cells). While this may be reassuring for manufacturers of portable electronics, EV and HEV battery packs may have thousands of cells and up to 1,000 times more stored energy, making even this small failure rate unacceptable." The battery pack in a Tesla Model S uses about 7,000 high-energy 18650 cells that are more prone to field-failure events than safer lithium-ion chemistries. Since each cell in the battery pack represents an independent field failure risk, the risk of a catastrophic field failure event at the battery pack level is: •One in 1,429 if you assume a 1 in 10 million risk at the cell level; •One in 2,857 if you assume a 1 in 20 million risk at the cell level; and •One in 5,714 if you assume a 1 in 40 million risk at the cell level. Nissan, in contrast, uses 192 large format lithium-ion battery cells in the Leaf. That factor alone reduces its catastrophic battery pack failure risk by about 98%. Some of the more troubling aspects of the NREL report included observations that: "When discussing battery safety, it is important to understand that batteries contain both an oxidizer (cathode) and fuel (anode as well as electrolyte) in a sealed container. Combining fuel and oxidizer is rarely done due to the potential of explosion (other examples include high explosives and rocket propellant), which is why the state of charge (SOC) is a very important variable. Lower SOC's reduce the potential of the cathode oxidizing and the anode reducing. Under normal operation, the fuel and oxidizer convert the stored energy electrochemically (i.e., chemical to electrical energy conversion with minimal heat and negligible gas production). However, if electrode materials are allowed to react chemically in an electrochemical cell, the fuel and oxidizer convert the chemical energy directly into heat and gas. Once started, this chemical reaction will likely proceed to completion because of the intimate contact of fuel and oxidizer, becoming a thermal runaway. Once thermal runaway has begun, the ability to quench or stop it is nil." "Although much study has gone into understanding and modeling the lifetime of cells with aging, little work has been done on the effects of aging on thermal stability and abuse tolerance." "USABC goals, in line with the DOE research program for HEVs, are a calendar life of 15 years for HEVs and 10 years for EVs. A cycle lifetime of up to 1,000 cycles at 80% depth of discharge is also required. Little or no safety testing has been performed on cells approaching these lifetime limits. There are valid concerns about the stability of the active materials, separators, and possible reactions involving new degradation or contamination products." "(H)igher energy cells have a stronger response to abuse events and usually have poorer safety performance." Batteries in an electric car are maintained at a high state of charge to maximize driving range. Unfortunately, that practice also maximizes the potential for a field failure event. Since Tesla wanted its cars to have the longest possible driving range with the lowest possible battery weight, it chose a relatively unstable high-energy battery chemistry while its competitors who make electric cars with shorter ranges chose safer and more stable chemistries. Since Tesla wanted to keep its battery costs low and take advantage of a global capacity glut for 18650 cells, it decided to use 7,000 small format cells in its battery pack while more experienced automakers paid premium prices for large format automotive grade cells that reduce the impact of the law of large numbers. All of Tesla's public talking points on the three fires focus on the collision-related nature of the battery pack failures. The statistics in the NREL report indicate that a catastrophic pack failure rate of 1 in 6,000 would be just about right if Tesla was using a safer low-energy chemistry like lithium iron phosphate. If the NHTSA concludes that the fires were attributable to Tesla's risky choices of high energy density batteries in 7,000 cell packs instead of road debris, the impact on Tesla will be life threatening. The current market price of Tesla's common stock does not, in my opinion, reflect this real and substantial short-term survival risk. Source: Understanding Tesla's Life Threatening Battery Decisions Additional disclosure: I am a former director of Axion Power International and hold a substantial long position in its common stock. I currently serve as executive vice president of ePower Engine Systems, a privately held company that's developing an engine-dominant series hybrid drivetrain for heavy trucking. <http://m.seekingalpha.com/article/1856711-understanding-Tesla's-life-threatening-battery-decisions> <http://www.youtube.com/watch?v=I7QTInHFxKw>

How the Fisker AND Tesla Cover-Ups Work:

Read this Article from Charlie Spiering about a massive number of the lies Fisker told:
<http://m.washingtonexaminer.com/47-depressing-facts-about-fiskers-epic-electric-car-failure/article/2528044>
Then look at all of Fisker's recent PR, that they spent millions of dollars dishing out, saying that they had no customer problems, no technical problems, no money problems, etc... It turns out many of their customers, suppliers, staff, etc. are suing them for lies. Same deal with Tesla: Staff suing them, lying about financial status, missed DOE milestones from their proposals yet still got cash, big backers had DOE staff working for them, only sold a few thousand cars, technical problems on each car, spending millions of dollars on fake PR and shill writers to fake up the status... looks like judgment time is coming... More info on Fisker in these articles:
<http://greencorruption.blogspot.com/2013/04/breakingfailing-fisker-auto-finally.htm>
<http://www.gop.com/news/research/fisker-nears-the-end-of-the-road/>
<http://www.thedailybeast.com/articles/2013/04/24/fisker-another-government-backed-company-set-to-fail.html>

Outing SHILL REPORTERS who are compensated for rigged stories on Tesla

We have received a number of emails from readers who are disclosing reporters who are "shills". A "shill" is a reporter who writes a story that is unusually favorable to another party when all of the current forensic, law enforcement, majority media, public disclosure and evidence says the opposite. These reporters are compensated by the car company's IR Department, PR contractors, founders, VC and banking groups with either cash, discounts, tickets, jobs, advertising contracts, sex workers, meals, travel and/or political access. Please send us your disclosures of which reporters are trying to spin the story to help cover up the truth: Andrea K. says- "Max Greenberg at Media Matters is a Tesla Punch Drinker" Paul T. Says- "John Volker at Green Car Reports is a 100% cheerleader and never covers negatives". Angie H says- "Tamara Rutter on Motley Fool seems to be obviously in bed with these guys". Pam K writes- "Most everybody at the San Jose Mercury News writing about Tesla specifically avoids discussing or investigating any of the issues that have come to light. The owners must be friends with Musk." Rogers L.- "On CNN Paul Lamonica is very biased on Tesla and never discusses the sour news facts on them." Bernie writes- "John Rosevear at the Fool shows that he is a fool for shilling for Tesla" Embry writes- "Think Progress pretty much works for Tesla" Carl says- "Leilani Munter AKA Carbon Free Girl posts as a blogger but is a shill for Tesla" Sam J. provides- "Kevin Bullis at MIT Technology Review is so obviously working for Tesla in his shill reporting of them!"

Stock Analysts Say Tesla is Doomed.

Here is one example of the new perspective on Tesla by the Stock market. Even though Tesla investors cluster-buy stock when there are media reviews, in order to "pump", or over-inflate it, the truth is coming out: By John Peterson of Seeking Alpha Over the last few weeks electric vehicle aficionados have been beside themselves with glee over reports that Tesla Motors (TSLA) will report a net profit on both a GAAP and non-GAAP basis for the first quarter of 2013. Since the news broke on March 31st, the stock has gapped up from \$37.89 to an all-time high of \$52.92. Few commenters and even fewer investors understand that Tesla's Q1 income guidance is little more than an epic April Fools prank, an aberration attributable to the confluence of non-recurring factors that will leave Tesla solidly in the red for the next two years. The two big drivers of Tesla's Q1 earnings will be: A one-time non-cash gain of \$11 million arising from the reversal of a derivative warrant liability associated with the acceleration of Tesla's DOE loan; and An estimated \$20 million in ZEV credits that have already saturated the market for 2013 and beyond, and effectively destroyed the value of future ZEV credits. When Tesla borrowed \$465 million under the Department of Energy's ATVM loan program, it issued a warrant that gave the government a right to buy up to 3.1 million shares of common stock at a price of roughly \$8 per share. In accordance with GAAP, it recognized an operating expense for the fair market value of the warrant and booked a related long-term liability. When Tesla amended the terms of its ATVM loan in early March, the acceleration of its payment schedule reduced the estimated value of the DOE's warrant by \$11. That reduction of an estimated future liability will be reported as non-recurring income in Q1. Without the warrant liability reversal, there would be no first

quarter GAAP net income. A more troubling dynamic is the role of ZEV credits in Tesla's past, current and future operating results. During 2012, Tesla received \$40.5 million from the sale of ZEV and GHG credits to automakers. In an April 18th research note Morgan Stanley estimated that Tesla's ZEV credits for Q1 would be over \$20 million, but fall in future quarters. Something about the two numbers didn't add up for me. During 2012, Tesla delivered about 2,950 vehicles and received roughly \$13,725 per unit in additional revenue from sales of ZEV and GHG credits. In Q1, however, Tesla delivered 4,750 vehicles and Morgan Stanley thinks they'll only receive \$4,200 per unit in ZEV and GHG credits. It was enough to make me ask, "Why are Tesla's expected ZEV and GHG credit values cratering? I found the answer in a 2010 report from the Natural Resources Defense Council titled, "The Zero Emission Vehicle Program, An Analysis of Industry's Ability to Meet the Standards," which used this graph to forecast annual demand for ZEV credits and the available supply of credits over time. While the NRDC did not assign a specific number to aggregate national demand for ZEV credits during the 2012 to 2014 time frame, an eyeball estimate of 50,000 credits per year is pretty close. Through the end of 2012, the graph projected that aggregate demand for ZEV credits would exceed available supplies, creating a robust sellers market. From 2013 onward, the graph projected that supply would exceed demand by a modest to wide margin, creating an anemic buyers market. While Tesla was the primary beneficiary of the seller's market that existed in 2012, the benefits beyond Q1 of 2013 will most likely be limited to non-existent. The most important thing to understand about ZEV credits is that the number of credits per car varies with battery pack size. The following table from the NRDC report summarizes the five credit classes that existed in 2010. Based on the NRDC table, it appears that every car Tesla delivers generates a minimum of four ZEV credits. While I've been told that Tesla earns five ZEV credits when it sells a Model S with an 85 kWh battery pack, I haven't found definitive regulatory confirmation of that number. So I classify it as credible rumor rather than absolute fact. In the first quarter of 2013, automakers other than Tesla sold a total of 13,063 plug-in vehicles that generated something on the order of 30,000 ZEV credits. The 4,750 cars sold by Tesla increased the available supply of ZEV credits by 20,000. Unless there's been a massive surge in ZEV requirements over the last two years, the ZEV credit market for 2013 is already saturated and the ZEV credit revenue that reduced Tesla's 2012 loss by \$40.5 million and will turn a large Q1 operating loss into an insignificant GAAP profit will fall to approximately zero in Q2. When you eliminate the combined impact of the warrant liability reversal and the non-recurring ZEV credit sales, Tesla's Q1 net loss from recurring business activity will be about \$30 million, as opposed to the anticipated GAAP net income of roughly \$2 million. April Fools! In its recent research note, Morgan Stanley predicted that Tesla would report a net loss of \$108 million for 2013 followed by a net loss of \$43 million for 2014. Investors who are buying Tesla stock for an eye-watering 39.4 times book value are in for a very rude awakening.

BREAKING STORY: Billionaire MUSK admits, on 60 Minutes, he broke the law to get Tesla funded. Crony politics and insider deals exposed. | SOMO NEWS:

Obama Subsidized Electric Car Company Tesla Investigated for Many Fires

<http://frontpagemag.com/2013/dgreenfield/obama-subsidized-electric-car-company-tesla-investigated-for-fires/>
/2013/11/frontpage.jpg /2013/11/omusk.jpg Obama Subsidized Electric Car Company Tesla Investigated for Fires November 22, 2013 By Daniel Greenfield Tesla has some big problems. This month it posted a loss of \$38 million and its shares fell 16%. On top of that, its got battery issues. The company, which got \$465 million from Obama, makes electric cars which depend on wiring together 7,000 laptop batteries together. This is just as clumsy and unwieldy as a solution as it sounds. For one thing, laptop batteries are expensive. And its a clunky solution. Obama donor Elon Musk, who got his buddy to trash the space program to give his Space X company a shot at the market, is talking up some giga solution, but for the moment

Tesla cant be much more than a niche company for people who like to waste money to have a car they can use as a talking point in California. Obamas battery factory push has failed. Musk is probably thinking that he can pry some more taxpayer cash out of Obama to build a battery factory, like the ones that Obama already subsidized. Considering Obamas appetite for doing favors for donors, hes probably right. But that doesnt mean it will work. And meanwhile an investigation just opened into Tesla over its battery fires. (Apparently wiring together thousands of laptop batteries to power a car isnt that great of a solution.) The National Highway Traffic Safety Administration said it would launch a formal investigation into recent fires that destroyed two Tesla Motors Inc. Model S electric cars that had run over metal debris. The agencys investigation was prompted by recent incidents in Washington state and Tennessee that resulted in battery fires due to undercarriage strikes with roadway debris, the agency said in a statement. The probe would determine whether the vehicle has a defect that makes it dangerous to operate and could result in a recall and remedy. Over a five-week period, two Model S sedans burned after hitting large pieces of metal on the highway in the U.S. Neither driver was injured. NHTSA declined to open an investigation after the first incident. There was a third fire in Mexico reported after a high-speed crash. Musk then did what he does best, court publicity and make loud statements of dubious accuracy. Tesla Chief Executive Elon Musk claimed that the automaker requested the investigation to refute fears that electric cars were more prone to fires than other vehicles. But the NHTSA disputed that, saying its decision was an independent process. In regards to Tesla, the agency notified the automaker of its plans to open a formal investigation and requested their cooperation, the agency said, which is standard agency practice for all investigations. So Musk went on to suggest that Tesla's rep was the only thing that could save mankind from extinction. If a false perception about the safety of electric cars is allowed to linger, it will delay the advent of sustainable transport and increase the risk of global climate change, Musk wrote in a post to his blog on the Tesla website Monday night. Err okay. No doubt, Obama can fix this for him after the next OFA fundraiser. Tesla fans will crow that the company repaid its debt and that its unfair to call it government subsidized. Its no longer Obama subsidized, thats true. It still however is government subsidized. Tesla didnt generate a profit by selling sexy cars, but rather by selling sleazy emissions credits, mandated by the state of Californias electric vehicle requirements. Absent this shakedown of potential car buyers, Tesla would have lost \$57 million, or \$11,400 per car. As the company sold 5,000 cars in the quarter, though, \$13,600 per car was paid by other manufacturers, who are going to pass at least some of that cost on to buyers of their products. Folks in the new car market are likely paying a bit more than simply the direct tax subsidy. So basically if you buy a real car in California, youre subsidizing Tesla's crony capitalist vehicles for celebs. This makes Musks campaign for direct sales hypocritical. Hes only against restrictive government monopolies that hurt consumers when hes not the one profiting from them. More to the point, Tesla doesnt have a business model for selling cars, but for selling emission credits. Tesla isnt a car company. Its an ecoscam rent-seeking company using the Global Warming myth to profit from government regulation and confiscation. Like a lot of eco businesses, it exists to profit from Global Warming regulations, rather than to sell a product on its own merits.

Fun with "Wild Conjecture"!

As the wheels come off the taxpayer cash rigging cases, the need for resolution has increased. It is, after all, a Sequester period, and investigators are getting their budgets cut. They may need our readers help. We are getting so many emails and comments from readers with ideas on what really happened that we thought it would be helpful to share, in case it inspires the investigators. The winning theory, when it is all proven out, will get a package of free t-shirts. Send in your ideas: From Tom K- "I think that Kleiner and Westly and the Silicon Valley cartel told the White House that if they give them control of the Cleantech industry, cut out all competitors and provide incentives that give them non-tax visible cost merits that they will deliver the votes and pay for the election." Andrea says- "Goldman Sachs ran this whole thing along with Deloitte to take over the Lithium fields in Afghanistan and make trillions of dollars by controlling the critical lithium markets." Deeley says- Detroit

Unions got in bed with John Doeer and made a deal with the devil to pay back Detroit Management, tied to voter turnout." Peter L- "I work in DC, everybody thought it was weird that Rattner, Axelrod, Rahm all quit at about the same time, right after all these deals were put together." Anson- "Just get a piece of paper and draw lines between all of the names and bankers that occur over-and-over in all of this and their companies and lobby groups. it will then be obvious to a 14 year old what happened. Cash, greed and ego."

Overwhelming disdain of market corruption by billionaires follows Fisker hearing.

Overwhelming disdain of market corruption by billionaires follows Fisker hearing. In the days following the Fisker hearing nearly a thousand articles, and counting, have emerged condemning the buying of the auto market by billionaires and corrupt politics. Tens of thousands of reader comments show that the American public has had it with unfair fixing of markets by the 1% ego-driven Stanford men who tried to control the next auto opportunity. The billionaires have been shown to be more concerned about their personal image more than the needs of the consumer. Building rich-boy jock-cars and avoiding the family SUV that is so strongly demanded. It has now been revealed by emails, letters and daily increasing volumes of evidence that these elite billionaires paid to get their companies favored, to get their competitors cut-out of the process and to buy the perception that they were "Winning".

How Fisker and Tesla backers killed the new American auto industry on purpose.

How Fisker and Tesla backers killed the new American auto industry on purpose. Caller reporters are now saying: Nobody starts car companies. It just isn't done. Detroit has a perfect track record of killing off any company that tries it. But this time Detroit let the backers of Fisker and Tesla do the killing off. Now that Tesla and Fisker backers and founders are caught, their hired blogger skills have been told to say that the Oceans-11 DOE insiders "tightened up" after Tesla and Fisker but that proves that DOE staff knew that Tesla and Fisker were no-good, scammed-up applicants from the beginning and that "tightening up" means cutting off all competing small company applicants per orders from Tesla and Fisker backers. The "tightening up" has now been proven to NOT have taken place AFTER Tesla and Fisker but CONCURRENT with Solyndra, Tesla and Fisker. Evidence has proven that Tesla and Fisker got red-carpet treatment while, at the SAME EXACT TIME, all independent company applicants got massively different paperwork, intentionally delayed responses, changed review results, faked review results, no staff meetings, no help, no support, and none of the special treatment that Fisker and Tesla got. When the LG and ATVM programs were put in place, a significant group of new car companies were able to get funded for the first time in history since Detroit was inaugurated. When Detroit realized this, they wanted the ATVM and LG programs shut down. They only needed to incentivize Tesla and Fisker backers to do the job for them. Companies with proven, job-creating, problem-solving car engineering launched or expanded based on Washington assertions that they had a fair chance of receiving that funding. Alas, Tesla and Fiskers backers rigged the program to let themselves in and then slam the door on all other applicants to stop competitors they likely would not be able to compete with in a fair fight. There was no tightening up because every applicant has now reported that they were intentionally jog-jammed, intimidated, ignored and gauntlet-run in a manner designed not to tighten but to terminate.

Stock Market Says Tesla Is Hanging By A Thread unless Kliener is running Flash

Boy tricks

Tesla: The Good, The Realistic And The Ugly Outlook by Odysseus | about: TSLA Why is Tesla (TSLA) currently trading at an average volume of 2.5 million shares and above \$50 per share when they have yet to post a single positive quarter? Their goal is to capture 1% of the luxury market share in 2013 and 2% in 2014 (according to their investor presentation). Some may deem these 40-50% growth goals very hard to reach due to a limited market worldwide for luxury cars and the amount of established competition. There is also growing competition from new international car companies competing in all market segments, with a work force that is paid much less than the domestic employee and the ability to adapt (some may say copy) existing technology. What the Tesla Bulls are Betting On In 2013 Tesla is targeting to ship 20,000 units, at a very high 10-15% operating margin rate. This is a very hard margin rate to achieve these margins in the automotive industry, especially when the major companies are operating at these margin rates: Ford (F) ~5% Toyota (TM) ~5% Volkswagen ~6% Tata Motors (TTM) 9% Daimler ~7% Audi ~12% Porsche >15% Lets assume they somehow hit their high-end target of 15% margin and also assume the high-end average of \$100k sale price per car. Doing the simple math the profit would be roughly \$15k per car, and multiplied by 20k units, that is \$300 million in profit. Now lets assume a loss of 2.5% due to taxes and expenses before getting to the net profit (industry margin rates). That leaves a profit of \$292.5 million and dividing it by the estimate of outstanding shares at the end of 2013 (at current outstanding share growth, assume 125 million shares), thus roughly \$2.34 earnings per share. So at this growth rate and future advertised growth rate of 40 to 50%, the market will probably peg the stock at a P/E of 40-50, putting the share price at \$93.6 to \$117. Then in 2014 if they reach their shipping goal of 30k units, the growth rate will decrease to 30% and market will drop their P/E to 30-40 which will put the price at about \$90-120 per share. The Realistic Outlook Based upon the competition in the automotive industry, emerging alternative fuels, hybrids vehicles and limited luxury market, the realistic outlook should be a 20-30% growth rate on the high end of estimates. If in fact the growth rate falls into the 20% range the market will most likely start trading the stock not as a startup, but as an established company with an industry perform or industry outperform growth rate. Currently established companies with growth rates at the top of their industries are trading anywhere from a price per earnings of 15 to 25. So lets look at the "units shipped forecast" under a realistic outlook: 2013 ~ 16-20k 2014 ~ 22.4-28k (40% growth) 2015 ~ 30k (20% growth) So taking the realistic 2015 outlook and saying they remain somewhere in the high teens for margin (assume 17.5%) that leaves a \$525 million profit and a approximate net profit of about \$512 million in this scenario. Taking their outstanding share growth the projection at the end of 2015 should be about 145 million shares, leaving an earnings per share of \$3.53. If the market awards Tesla with a high end price per earnings of 20, that will put the stock \$70.6 per share. If the competition becomes too great or the margins slip, it will probably go down to trading between a P/E of 10 to 15, putting the stock at a \$35.3 to \$52.95 per share range. My Ugly Prediction The following prediction is based upon a lot of assumptions, uncertainties and questions that I hope you can answer in the comments field. The Lithium Ion Battery Evaluation Industry experts have said that lithium batteries have not advanced at a fast enough pace to warrant them the battery of choice for the future. According to Fred Schlacter, a lithium-ion battery expert and retired physicist from the U.S.-funded Lawrence Berkeley National Laboratory, "Significant improvement in battery capacity can only be made by changing to a different chemistry." (Washington Post Article). So although Tesla is betting on this technology, there are a lot of industry experts that are not convinced that this technology can be expanded and a switch to a new chemistry might be made in the future. But can Tesla switch to a new technology in a short period of time and have enough cash to stay afloat while doing so? If a new technology comes out tomorrow you can bet companies like GM or Ford can put it into production a lot faster and more cost effective than a small start up can. In fact, the industry is already developing competing technologies. Companies are close to bringing Hydrogen technology to market (USA Today Article) as well as expanding the use of natural gas. For example, Clean Energy (CLNE) is establishing a large network of natural gas fueling stations to first support the trucking industry and in the future may try to bring these stations to the domestic car market (CLNE expanding with partners like UPS). So how certain is Tesla that its rush of orders are not mainly for enthusiasts who want to own the next new adult toy? Once a new technology comes out and offers a greater range from an alternative energy choice, will Tesla be able to keep the luxury market interested in its older lithium ion technology? There has also been a lot of safety incidents with the lithium ion batteries from overheating in cars and airplanes. After the regulators grounded the Boeing 787 Dreamliner due to overheating Lithium Batteries, Mr. Schlacter added, "Smart people

have been working on this for 10 years already and no one is close to a new kind of battery," (Reuters Article). To some experts this type of energy source seems to be at a dead end for growing capacities. A couple questions that should be on an investor's mind is will this technology continue to have safety issues and how long will it be a viable source of energy? In this Science Daily article, the life of a lithium ion battery is currently 5-20 years and declines in weather that is above 86 degrees Fahrenheit. Elon Musk (Tesla's tweeting CEO) did announce a great battery warranty, but how long will that warranty last if most of these cars are driven in the high heat southern states and degrade in a short period of time? The current cost of the batteries is also being subsidised by the government as alternative energy plants are being promoted. As the subsidies go down the cost may sky rocket, even though Mr. Musk says their margin rates (which he does not break down in their latest annual report) have little to do with government subsidies directly. However, the indirect subsidies to lithium manufacturing plants might disappear and who knows how hard that will hit Tesla's margin rates. In 2009, the federal stimulus package dumped \$2 billion in battery plants but the results have been mixed. One company, A123 Systems, went bankrupt. It's still making batteries but now it's owned by a Chinese company. LG Chem, a South Korean company, got millions to build a battery plant in Holland, Michigan, but so far it's sitting idle and hasn't made any batteries. (NPR Article) Taking these facts into account the outlook for the lithium battery car market is volatile. The government will most likely not continue to "dump" money into plants who sit idle and without the government's support it will be harder for Tesla to keep driving costs down on their batteries and improving their margin rate. This is also a cause for concern in the future as the real money is in the ability of Tesla to keep trimming costs and bring the prices down to the everyday consumer. But this will be next to impossible if they cannot keep driving down the cost of the lithium ion batteries. We also have to take into account supply and demand. If pure electric cars like the Nissan Leaf and hybrids like the Prius (52 mpg at a base price of under 25k) become more popular the demand for lithium ion by all of the major manufacturers will go up and Tesla will most likely not be able to get more favorable pricing. Their volumes in the next several years will still put them at the bottom of the pecking order against the big car companies. Lastly, the Tesla bulls seem to be forgetting to look at the domestic and global recovery. The government subsidies tend to go away once the economy strengthens and the market uses more goods when the economy improves. As seen by the Dow Jones and S&P Charts over the past several quarters, a lot of investors are betting that the economy is growing stronger and that the global economy is also turning around. As companies feel safer to spend their stock piles of cash, the run on lithium ion based products throughout the many different industries that use it can increase the battery pricing enough to significantly hurt Tesla's margins. Furthermore, many volume based agreements in the automotive industry are tied to price indices of all sorts including labor, metal and raw goods indices. When the global market picks up and demand for labor and raw goods increases the suppliers will use their indices tied contracts to raise prices for their goods. Tesla will not have much room to push back as they are a very small player that is in the back of the line when it comes to favorable pricing, which is always given to the bigger consumer of goods, i.e. the GMs and Ford's of the world. The Market for Tesla So what is the current (luxury) market size that Tesla is competing for? A recent Wall Street Journal article has this estimate in it: (click to enlarge) What can we infer from this chart? Domestic market in 2002 was 1,670k units in 2012 its 1,700k units, a growth of only 2% over 10 years. In large part this was due to the recession, but what is to say another recession is not around the corner? The estimate for the next 8 years is 5% per year, with

most of the growth coming from China. But this growth is very uncertain and this Warc.com article points out this uncertainty. Both of the afore mentioned articles state that the Chinese market is volatile due to their government and other factors. If we take China out of the equation and look at the next four top global luxury car consumers, the growth rate is projected to be 909k units or approximately at a snail pace of 3% per year. Although Tesla is experiencing a high growth rate since they started from a 0% market share and every new sale is taking a piece of the pie, the pie is a slow growing pie compared to other industries. So the initial wave of orders is exciting because the numbers represent a very deliciously growing piece of pie, but the growth will no doubt plateau. It will no doubt plateau because it seems as if the glutinous luxury market tend to try a new flavor and then go back to the traditional luxury brands that put out a new model every year. This statement can be validated by the fact that only a handful of luxury brands remain in the world. There is also another market share concern that has yet to be mentioned and should be analyzed in a full Tesla analysis. This concern is how long will it be before the Chinese and the other dozens of Asian car companies copy this technology? Can Tesla compete with the additional taxes to export as well as the shipping costs in those markets? Or will they put out more shares and raise capital to try to build overseas factories? It seems as if Tesla is the Guinea pig for the major

manufacturers and if they show a profit quarter over quarter, how long before the major luxury makers with their versatile factories take the ion battery and adapt it to their luxury models? The Nissan Leaf has a long range and if Tesla has any success will Nissan and other manufacturers hesitate to put a bigger battery on a larger frame and put luxury features in the car? Tesla's price is highly dependent on high margins, which can erode due to the uncertain lithium ion market and a high base selling price which can also erode as competition comes from every manufacturer. Another criteria to look at when paying for a premium item is its payback period versus an item with the same functionality at a lower price. Tesla's payback period is growing every quarter as hybrids are toying 50 mpg (at \$4 a gallon it would take about 100 years to payback Tesla's \$50k premium versus a 40 mpg Lexus ES Hybrid) and thus it does not make sense for most families to get a Tesla if they do the math. This in turn limits the market again to individuals with a lot of cash to spend. In conclusion to this lengthy diatribe, there are just too many obstacles and unknowns to pay \$54 a share for a company that has not posted a positive quarter yet. I will only admit my assumptions are incorrect after three to four quarters of over 30% growth at high margin rates. I believe that it is a \$30 to \$40 stock and can grow further if they somehow can advance the technology and reduce the battery costs significantly to offer the everyday consumers a more affordable option. But right now I would be more inclined to bet on the Chicago Cubs winning the World Series than on Tesla sustaining its high growth rate. Disclosure: I am short TSLA. I wrote this article myself, and it expresses my own opinions. I am not receiving compensation for it (other than from Seeking Alpha). I have no business relationship with any company whose stock is mentioned in this article. All views are my own speculations and are not meant to influence the stock price. <http://m.seekingalpha.com/article/140054>

Investigations deepen on payoffs, influence buying, favors and exchanges

Every personal email, every business email, every phone call, every text, every meeting, every restaurant booking, every toll payment, every credit card purchase, every nearby security camera.... everything associated with every backer, banker and VC who was associated with each of the "winning" companies is being checked, cross-referenced and chronologically sequenced, according to special investigator Jeff Bloom. Research goes back past 2004, per Bloom. The probes have gone deeper and extremely comprehensive in order to root out the people involved in the bribery and influence peddling associated with the "winners" of the ATVM & LG funding programs. Aware of such probes, the executives at each company are scrambling to grab as much as they can before it all crumbles under public scrutiny. Solyndra, Fisker, Abound and others have already gone under because of law and ethics enforcement efforts, more are soon to follow. Multiple stings have been underway with recorded evidence piling up. Meetings with backers of car companies have been recorded. Here is just one example of the process and the increasing criminal charges: May 8, 2013 State Senator Taped 7 Elected Officials in Corruption Inquiry By THOMAS KAPLAN, MOSI SECRET and WILLIAM K. RASHBAUM ALBANY — Former State Senator Shirley L. Huntley, a Queens Democrat, last summer recorded six state senators and a city councilman at the behest of federal prosecutors and the Federal Bureau of Investigation. According to a document released on Wednesday by a federal court in Brooklyn, Ms. Huntley invited the lawmakers to her home and then taped her conversations with them. Among those recorded were Senators Eric Adams of Brooklyn, Ruth Hassell-Thompson of Westchester County, José Peralta of Queens, Velmanette Montgomery of Brooklyn, John L. Sampson of Brooklyn and Malcolm A. Smith of Queens. Senators Sampson and Smith have been charged with corruption in separate cases. Ms. Huntley also recorded a city councilman, Ruben Wills, of Queens, and two political aides, Curtis Taylor, a former spokesman for the Senate Democrats, and Melvin Lowe, a former Democratic campaign consultant. The disclosure of the names comes days after federal prosecutors revealed in court papers that Ms. Huntley had made the recordings from June to August last year after she was approached by the Federal Bureau of Investigation about her alleged involvement in multiple criminal schemes. Ms. Huntley was one of multiple elected officials whose conduct has been investigated by federal prosecutors. Mr. Sampson was accused on Monday of stealing more than \$400,000 from foreclosure cases that he was handling as a court-appointed referee. Federal prosecutors, arguing in court papers that the names should remain under seal, said on Tuesday that eight of the nine people recorded by Ms. Huntley were the subject of continuing criminal investigations. And while prosecutors said in court papers last week that the recordings of meetings she made with Mr. Sampson and two other elected officials did yield evidence useful to law enforcement authorities, it was unclear whether that evidence incriminated those people or others, or was evidence that a crime was committed. The disclosure of Ms. Huntley's attempts to cooperate with law

enforcement was a jarring one for a state capital that has been rocked by scandal in recent weeks. Just last month, federal prosecutors revealed that a Democratic assemblyman from the Bronx, Nelson L. Castro, had also made secret recordings for law enforcement – meaning that federal authorities in two different jurisdictions, Brooklyn and Manhattan, had state lawmakers making recordings for them. Ms. Huntley, who lost a primary election last year, pleaded guilty in federal court in January to embezzling more than \$87,000 in taxpayer money from a nonprofit agency that she ran. Despite the recordings she made, federal prosecutors ultimately decided not to enter into a cooperation agreement with her because she provided answers which were false, implausible and inconsistent in debriefings with the government, according to court papers. Court papers filed last week by Ms. Huntley's lawyer, Sally Butler, identified the nine people she recorded. The filing was made under seal, but members of the press petitioned the court to make the filing public. A judge, Jack B. Weinstein of Federal District Court in Brooklyn, agreed on Tuesday to unseal the documents, and he unsealed them at 2 p.m. on Wednesday. Thomas Kaplan reported from Albany, and Mosi Secret and William K. Rashbaum from New York.

How DOE staff and Public Policy Staff in Washington Were Bribe:

How DOE staff and Public Policy Staff in Washington Were Bribe: Jack Abramoff: The lobbyist's playbook Jack Abramoff, the notorious former lobbyist at the center of Washington's biggest corruption scandal in decades, spent more than three years in prison for his crimes. Now a free man, he reveals how he was able to influence politicians and their staffers through generous gifts and job offers. He tells Lesley Stahl the reforms instituted in the wake of his scandal have had little effect. -----

The following is a script of "The Lobbyist's Playbook" which aired on Nov. 6, 2011. Jack Abramoff may be the most notorious and crooked lobbyist of our time. He was at the center of a massive scandal of brazen corruption and influence peddling. As a Republican lobbyist starting in the mid 1990s, he became a master at showering gifts on lawmakers in return for their votes on legislation and tax breaks favorable to his clients. He was so good at it, he took home \$20 million a year. Jack Abramoff: Inside Capitol corruption How corrupt is lobbying in Washington, DC? Enough to get "60 Minutes" correspondent Lesley Stahl angry when she hears how Jack Abramoff bribed and influenced legislators. It all came crashing down five years ago, when Jack Abramoff pled guilty to corrupting public officials, tax evasion and fraud, and served three and a half years in prison. Today he's a symbol of how money corrupts Washington. In our interview tonight, he opens up his playbook for the first time. And explains exactly how he used his clients' money to buy powerful friends and influence legislation. Jack Abramoff: I was so far into it that I couldn't figure out where right and wrong was. I believed that I was among the top moral people in the business. I was totally blinded by what was going on. Jack Abramoff was a whiz at influencing legislation and one way he did that was to get his clients, like some Indian tribes, to make substantial campaign contributions to select members of Congress. Abramoff: As I look back it was effective. It certainly helped the people I was trying to help, both the clients and the Republicans at that time. Lesley Stahl: But even that, you're now saying, was corrupt? Abramoff: Yes. Stahl: Can you quantify how much it costs to corrupt a congressman? Abramoff: I was actually thinking of writing a book - "The Idiot's Guide to Buying a Congressman" - as a way to put this all down. First, I think most congressmen don't feel they're being bought. Most congressmen, I think, can in their own mind justify the system. Stahl: Rationalize. Abramoff: --rationalize it and by the way we wanted as lobbyists for them to feel that way. Abramoff would provide freebies and gifts - looking for favors for his clients in return. He'd lavish certain congressmen and senators with access to private jets and junkets to the world's great golf destinations like St. Andrews in Scotland. Free meals at his own upscale Washington restaurant and access to the best tickets to all the area's sporting events; including two skyboxes at Washington Redskins games. Abramoff: I spent over a million dollars a year on tickets to sporting events and concerts and what not at all the venues. Stahl: A million dollars? Abramoff: Ya. Ya. Stahl: For the best seats? Abramoff: The best seats. I had two people on my staff whose virtual full-time job was booking tickets. We were Ticketmaster for these guys. Stahl: And the congressman or senator could take his favorite people from his district to the game-- Abramoff: The congressman or senator uh, could take two dozen of his favorite people from their district. Stahl: Was all that legal? Ira Rosen is the producer. Abramoff: We would certainly try to make the

activity legal, if we could. At times we didn't care. But the "best way" to get a congressional office to do his bidding - he says - was to offer a staffer a job that could triple his salary. Abramoff: When we would become friendly with an office and they were important to us, and the chief of staff was a competent person, I would say or my staff would say to him or her at some point, "You know, when you're done working on the Hill, we'd very much like you to consider coming to work for us." Now the moment I said that to them or any of our staff said that to 'em, that was it. We owned them. And what does that mean? Every request from our office, every request of our clients, everything that we want, they're gonna do. And not only that, they're gonna think of things we can't think of to do. Neil Volz: Jack Abramoff could sweet talk a dog off a meat truck, that's how persuasive he was. Neil Volz was one of the staffers Abramoff was talking about. He was chief of staff to Congressman Bob Ney, who as chairman of the House Administration Committee had considerable power to dispense favors. Abramoff targeted Volz and offered him a job. Stahl: You're the chief of staff of a powerful congressman. And Jack owns you and you haven't even left working for the congressman. Volz: I have the distinct memory of, you know, negotiating with Jack at a hockey game. So we're, you know, just a few rows back. The crowd's goin' crazy. And Jack and I are havin' a business conversation. And, you know, I'm-- I'm wrestlin' with how much I think I should get paid. And then five minutes later we're-- he's askin' me questions about some clients of his. Stahl: When you look back was that the corrupting moment? Volz: I think we were guilty of engaging in a corrupt relationship. So there were several corrupting moments. There isn't just one moment. There were many. Abramoff: At the end of the day most of the people that I encountered who worked on Capitol Hill wanted to come work on K Street, wanted to be lobbyists. Stahl: You're telling me this, the genius of figuring out you could own the office by offering a job to the chief of staff, say. I'm having two reactions. One is brilliant. And the other is I'm sick to my stomach. Abramoff: Right. Evil. Yeah. Terrible. Stahl: 'Cause it's hurting our country. Abramoff: Shameful. Absolutely. It's the worst thing that could happen. All parts of the system. Stahl: I'm mad at you. Abramoff: I was mad at me-- Stahl: I'm not kidding. I'm not kidding. Abramoff: Look I did things and I was involved in the system I should not have been in. I'm ashamed of the fact I was there, the very reason why now I'm speaking about it. And now I'm trying to do something, in recompense, is the fact that I thought it was-- it was wrong of me to do it. One of the offices he keyed on was that of his good friend, the Majority Leader Tom Delay, eventually hiring his deputy chief of staff and his press secretary, and going into business with Delay's chief of staff. Stahl: Did you own his staff? Abramoff: I was as close to his staff as to any staff. I had a very strong personal relationship with a lot of his staff. Stahl: How many congressional offices did you actually own? Abramoff: We probably had very strong influence in 100 offices at the time. Stahl: Come on. Abramoff: No. Stahl: A hundred offices? Abramoff: In those days, I would view that as a failure. Because that leaves 335 offices that we didn't have strong influence in. Stahl: Did he own you? Bob Ney: Oh, I don't believe Jack Abramoff owned me. But were we involved in the culture of corruption together? Absolutely. Former Republican Congressman Bob Ney was ambitious and looked at Abramoff as a way to build alliances with the White House and the majority leader. Ney: I wanted to be speaker of the House and Jack Abramoff was the beautiful light of day for me to get to the person who I had had some conflicts with, Tom Delay. Abramoff began inviting Ney on golf trips including one to Scotland and to his restaurant Signatures, where Ney was given food and drinks on the house, a violation of the congressional gift limit laws. Ney says he was hardly the only one crossing the line. Ney: But I will still tell you, at that point in time, in order to get a drink at Signatures you had to shove White House staffers of George Bush the heck away from the bar. And it was packed with people. And there were members. Now that doesn't mean everybody did everything for Jack. But if you wanna talk about strict interpretation of violation of the-- of-- of the laws of drink and food, Katey bar the door, she was wide open, two shotguns blarin'. After months of taking handouts, Ney was approached by Neil Volz, his former chief of staff, by then a lobbyist for Abramoff. Volz: I let you down man and I'm sorry... Volz asked Ney to insert some language into a reform bill that would give a backdoor license to an Indian casino owned by one of Abramoff's clients. You often hear about lobbyists getting special secret deals for their clients like this. It's an insidious technique that Abramoff perfected. Abramoff: So what we did was we crafted language that was so obscure, so confusing, so uninformative, but so precise to change the U.S. code. Stahl: Here's what you tried to get tacked on to this reform bill. Abramoff: Yeah. Stahl: "Public law 100-89 is amended by striking section 207 (101 stat. 668, 672)." Abramoff: Right. Now isn't that obvious what that means? It was perfect. It was perfect. Stahl: So that's what you tried to get inserted? Abramoff: Yes. Stahl: And that was gonna provide for a casino? Abramoff: Yes. Stahl: And who on earth is gonna know that? Abramoff: No one except the chairmen of the committees. Stahl: Who stuck it in there? Abramoff: Yes. Stahl: And that's one of the things you used to do? Abramoff: Yes. Stahl: And it was deliberately written like

that? Abramoff: Precisely. Yes. Stahl: And that's done a lot? Abramoff: Members don't read the bills. Stahl: You didn't even know what it was for? Ney: Had no idea. And then when we got the written language-- Stahl: Well-- why didn't you know what it was for? Ney: I didn't-- I didn't care. Stahl: Oh! Ney: It was a great big shell game. And I was in the middle of it, whether, you know, knowing or not. I-- I was dumb enough to not say, "What's this thing do Ney would eventually serve 17 months in federal prison, the only congressman who was ever charged in the scandal. But Abramoff says that there were many other members that did his bidding that could have been charged. Stahl: Was buying favors from lawmakers easy? Abramoff: I think people are under the impression that the corruption only involves somebody handing over a check and getting a favor. And that's not the case. The corruption, the bribery, call it, because ultimately that's what it is. That's what the whole system is. Stahl: The whole system's bribery? Abramoff: In my view. I'm talking about giving a gift to somebody who makes a decision on behalf of the public. At the end of the day, that's really what bribery is. But it is done everyday and it is still being done. The truth is there were very few members who I could even name or could think of who didn't at some level participate in that. Abramoff prided himself on being a man who did good. He was devoutly religious and exorbitantly charitable and he says he gave away 80 percent of his earnings. When he fell from grace, his reputation was in tatters because it was not just that he had corrupted Congress - it was found he had cheated his clients, like the Indian tribes. Abramoff: Most of the money I made I gave away, to either communal or charitable causes. So I thought frankly I was one of the most moral lobbyists out there. Things began to unravel for Abramoff when the Washington Post published a largely unflattering portrait of him in 2004, reporting that he charged his clients 10 times more than any other lobbyist in town. Abramoff: My first response was, "What's the big deal? I don't understand what this is about. This is what lobbyists do. What he didn't understand was the part that said he and a former aide to Tom Delay had overbilled four of his Indian casino clients by \$45 million. In the end, he was brought up on federal charges of tax evasion and ripping off Indian tribes. On the day he went to court and pled guilty, Abramoff looked grim. The judge sentenced him to four years. Stahl: I really think what you were doing was-- was subverting the essence of our system. Abramoff: Yes. Absolutely right. But our system is flawed and has to be fixed. Human beings populate our system. Human beings are weak. Stahl: And you preyed on that? Abramoff: I did. I was one of many who did. I did. And I'm ashamed of that fact. He was sent to a medium security facility in Cumberland, Maryland. When he was released last June, he began working as an accountant at a kosher pizza parlor. Turns out Jack Abramoff was broke, partly because he is paying off nearly \$24 million in restitution to the Indian tribes. Today he lives in his old house in Maryland with his wife, five children and the two doberman pinschers Mrs. Abramoff bought to protect the family while he was away. After the scandal, Congress instituted a package of reforms, making what Abramoff did - like plying members of Congress with free expensive meals - illegal. But he doesn't see the new reforms as being very effective. Abramoff: The reform efforts continually are these faux-reform efforts where they'll change, they'll tweak the system. They'll say, "You can have a meal with a congressman if they're standing up, not sitting down." Stahl: Is that serious? Or are you joking? Abramoff: Oh no, I'm not joking at all. Stahl: So, it's okay if you pay for lunch as long as you stand up? Abramoff: Well, it's actually worse than that. You can't take a congressman to lunch for \$25 and buy him a hamburger or a steak of something like that. But you can take him to a fundraising lunch and not only buy him that steak, but give him \$25,000 extra and call it a fundraiser. And have all the same access and all the same interaction with that congressman. So the people who make the reforms are the people in the system. Stahl: Could you do the same thing today? I'm asking you whether you think the system's been cleaned up? Abramoff: Could do the same thing that I? Yeah. No, the system hasn't been cleaned up at all. Stahl: At all. Abramoff: There's an arrogance on the part of lobbyists, and certainly there was on the part of me and my team, that no matter what they come up we, we're smarter than they are and we'll overcome it. We'll just find another way through. That's all. He says the most important thing that needs to be done is to prohibit members of Congress and their staff from ever becoming lobbyists in Washington. Abramoff: If you make the choice to serve the public, public service, then serve the public, not yourself. When you're done, go home. Washington's a dangerous place. Don't hang around. Former Congressman Bob Ney now works part-time as a radio host. His former chief of staff Neil Volz is currently working as a night janitor at a Florida restaurant. And Jack Abramoff has written a memoir called "Capitol Punishment." © 2011 CBS Interactive Inc.. All Rights Reserved. Running the Scam

What happens when you get: Free "loans" from taxpayer money acquired by submitting manipulated applications. Competitors artificially blocked using taxpayer resources. Tax credits from taxpayers to artificially reduce the price of your goods when your competitors do not get it. Tax credits from taxpayers to build your factory cheaper when your competitors do not get it Tax credits from each taxpayer for each car sold to be paid back to you for being green when your competitors do not get it. Inflated stock scores on the taxpayer supported public stock exchange created by inflating results using tax credits and investors-acting-as-buyers. Tax loss postings in annual tax filings for investors of the company who gain profits by reporting losses. Personal manipulation of the process in disfavor to the taxpayer and in unjust reward to the manipulating entity. ?? You get a liability situation in which any taxpayer can sue for just cause, any company can sue for just cause, any state can sue for just cause or any citizens group can sue for just cause.. and win. Tesla, Nissan & Ford are now at HUGE risk to be caught and reamed according to Detroit News Reporter B. Brown.

Another day, another corruption failure... VPG

And now!!!: VPG, Vehicle Production Group... <http://jalopnik.com/yet-another-government-backed-car-company-has-failed-496459146>
<http://www.detroitnews.com/article/20130508/AUTO01/305080410/1121/auto0101/Michigan-auto-startup-suspends-operations> It simply isn't possible for the largest taxpayer give-away in automobile history to have occurred which caused more relative failures in the automobile industry, or any other industry relative to a giveaway, than ever in history; unless there was corruption...There is no other possible explanation. The "odds of doing business" arguments of some simply do not possibly add-up. Another Obama fundraiser is investor in car company that won federal loan By Carol D. Leonnig, October 28, 2011 In this May 26, 2010, photo, President Obama, center, is given a tour of Solyndra by Executive Vice President Ben Bierman, right, as Chief Executive Officer Chris Gronet, left, walks along at Solyndra Inc. in Fremont, Calif. In this May 26, 2010, photo, President Obama, center, is given a tour of Solyndra (Paul Chinn/AP) An investment firm whose vice chairman has been an adviser and fundraiser for President Obama saw one of its portfolio companies win approval this year for \$50 million in loans from the administrations clean-energy loan program. Washington-based Perseus says its affiliation with James A. Johnson, a major fundraiser for Obamas campaign, played no role in persuading the Energy Department to award the loan to Vehicle Production Group, a Miami start-up that is manufacturing wheelchair-accessible cars and taxis. Johnson headed Obamas vice presidential selection committee in 2008 and is the former chairman of housing mortgage giant Fannie Mae. He was listed as a campaign fundraising bundler for Obama in the 2008 race, according to the Center for Responsive Politics, and committed to raising \$200,000 to \$500,000 for the upcoming presidential race. Johnson could not be reached for comment Thursday. Perseus Chairman Frank Pearl said in an interview that it is an absurd idea to think that Johnsons political connections helped the Miami company. I doubt there was anybody at DOE that even considered the fact that Jim was part of this firm. We went straight through the proper channels of the [loan] program, he said. Department spokesman Damien LaVera said in a statement Thursday that the decision to provide the Vehicle Production Group a loan was made based on the merits after more than two years of review by officials in the DOE loan program. Republicans have criticized the administration for what they say is a pattern of loan assistance going to politically connected clean-energy companies. Recently, they expanded their investigations of loan guarantees to other companies whose investors include Democratic contributors. Both the White House and the Energy Department have said that no such pattern exists and that all decisions were decided on merit. A nine-month House investigation of the loan guarantee program has largely focused on the Obama administrations first clean-energy loan: \$535 million to solar start-up Solyndra, a now-shuttered company whose lead investors were funds tied to George Kaiser, an Obama fundraising bundler and Tulsa billionaire. The Energy Department ignored numerous warnings that the

companys finances were shaky and rushed to approve the Solyndra loan; now taxpayers are obligated to repay the money. The head of the loan program, Jonathan Silver, resigned this month, weeks after the head of the House investigative committee called for him to be fired. In recent weeks, Republican lawmakers have widened their scope to more deeply probe \$1 billion in loans approved by the same program to electric auto makers Fisker Automotive and Tesla Motors. On Wednesday, a congressional committee chairman asked the Energy Department for documents concerning its decision to offer a \$730 million loan to a U.S. subsidiary of a steel-making company run by the second-richest man in Russia. The loan was for Severstals North American operation to upgrade a Dearborn, Mich., plant to supply the auto industry. Rep. Darrell Issa (R-Calif.), chairman of the House Committee on Oversight and Government Reform, asked Energy Secretary Steven Chu to explain why the firm merited taxpayer-backed financing considering the financial mishaps and global standing of its parent company. In the case of the Vehicle Production Group, the Energy Department conditionally offered the start-up its low-cost, government-backed financing last November. Chu announced the agencys formal approval in March. Perseus has been the leading investor in VPG since 2008. Pearl said he became interested in the companys concept because of its reliance on compressed natural gas and its unique niche — the first vehicle designed for wheelchair accessibility. He was a longtime friend of VPGs president, Fred Drasner, a former owner of the Washington Redskins and a former co-publisher of the New York Daily News. Its a fabulous car, Pearl said, adding that the department was looking for a compressed natural gas project to back. Its the only one purpose-designed and purpose-built to serve the needs of people in wheelchairs. Pearl said he took on the role of pursuing the loan for the company while Drasner and his team focused on marketing and car production. Another investor was Clean Energy Fuels, a firm focused on using natural gas for transportation led by longtime Republican T. Boone Pickens. Perseuss vice chairman was Johnson, who joined the firm in 2001 but is better known as a fixture in Democratic politics for the past three decades. He served as manager of Walter Mondales unsuccessful 1984 presidential campaign and chaired the vice presidential selection committee for John F. Kerrys White House campaign.

TESLA PR Manipulation BS!- Some of the more outstanding lies...

TESLA PR Manipulation BS! - Some of the more outstanding lies... - Musk misrepresents status of Tesla in DOE application. - Tesla says "Germany passed Tesla as safe" after NO credible safety study conducted by Germany, while trying to hide fact that U.S. Investigators published huge demand letter for safety data, online in U.S.A. and actual investigation is only getting started. - Tesla avoiding any public comment on massive number of fraud lawsuits underway. - Tesla avoiding any public comment on OSHA investigations underway and multiple injured workers. - Musk said "he" started NHTSA investigation when NHTSA said he lied about that. - Musk said Tesla exceeded NHTSA safety test when NHTSA says he made up numbers. - Musk says staff and VC's "retiring" when they actually quit! - Tesla avoiding any public comment on media charges of manipulation of books via credits-faked-as-revenue. - Tesla avoiding commenting on the Tesla driver charged with Manslaughter in 2 killed with Tesla. - When all other car makers did voluntary recalls for fires, Tesla refused. - No comment from Tesla on charges of booking dealer show-cars and investor perk-cars as "sales". - Tesla ordering paid stock bloggers to shill up stock without any comments on outstanding issues. (Others can keep adding to this list)... Emery- ChiTri ----- Carlos Wetherby reported today that Tesla released it's financial reports but refused to disclose key information. Tesla has now refused to disclose: 1. How many "owners" of Tesla are it's own investors and associates in order to artificially increase volume numbers. 2. How many reservations have been cancelled. 3. Why Tesla forecasts a loss in the immediate future. 4. Why Tesla SEC reporting shows that orders will DECREASE. 5. How many repair requests have been submitted. 6. How they calculated indexed tax credits by using unused credits. 7. What % of calculated revenue was based on one-time tax credits from a deal that was made with a compensated government official in Sacramento? ===== CHALLENGE : TO ALL REPORTERS AND MEMBERS OF THE PUBLIC WITH A STREAMING SMARTPHONE: Catch Elon Musk on camera and make him answer the above questions. Find the next call-in show he is going to be live on, or the next convention

or other PR gig he has his PR company promote him on and put these questions to him point-blank on camera. The first reporter, or private individual, to pull this off gets 10 T-shirts. The smoke is in the wind...

How Tesla Buys a Consumer Reports Positive Rating

When a group spends millions of dollars a month buying influence, buying silence, buying "reporters", bloggers and IR skills, it is very easy to get the 5 individuals that write Consumer Reports material to steer that material says Tony K. of The NYT. You will do anything to get good reviews when your company is under federal investigation he says.

By Driving a Tesla you are supporting, and involved in, ORGANIZED CRIME.

By Driving a Tesla you are supporting, and involved in, organized crime. By Stanly W., Former Tesla Employee, Fremont California As the weekly revelations emerge on the rigging of the DOE funding by the backers of a few insider car companies, any Tesla owner needs to make a decision. As the owner of a Tesla, you must now be aware of the nearly ten thousand news stories over the last 5 years documenting the cronyism, insiders, organized crime manipulations to acquire the tax dollars of the American public and artificially control the market via bribery and influence trading. There is nothing novel or new about the electric car, it has been around since the 1800s and Detroit Electric, GM and many companies have been selling far more novel electric cars for nearly a century. The only point you are making by driving a Tesla is that you are either rich and too stupid to read the news or you are corrupt and part of the crime. (Many Tesla investors were told to buy Tesla's to create a fake volume of orders). It has taken Tesla ten years to sell a few thousand electric cars, ZAP Motors in Santa Rose has sold many, many times more electric cars in a vastly shorter time with vastly, vastly less money in investments. Tesla, and Tesla owners, should be ashamed of how few cars have been sold, after so many years, and so much money of trying, "YOUR" taxpayer money given to a billionaire, who did not need it, in order to trick the stock market into thinking there was something there. A number of consumer groups have national and international campaigns underway to inform every Tesla owner in the world about what Tesla really is. Tesla spends millions of dollars a month buying reporters, bloggers and news stories. Elon Musk spends over \$320,000.00 a cycle buying PR services, GQ articles, 60 Minutes glory stories, etc. about himself, personally. Do you want to be told what to think by a PR machine or can you think for yourself? Can you look at the vast set of facts on this site, and hundreds of other of sites, and see the plain truth? You saw the FBI kick in the doors at Solyndra on national TV, down the street from Tesla. You know that much, much more is going to come out. What has already come out is obvious to the prudent observer. Federal investigators have been stonewalled, or ordered to put their investigations into slow-motion, in order to avoid embarrassing certain people. This is no longer tolerable. Buying justice or buying a lack-of-justice is really not how America was set-up. You can buy many lower cost, more dependable, less likely-to-catch-on-fire electric cars than the Tesla, today, right now. You can buy cars from Ford, KIA and many other big companies that look just like a Tesla for \$100K less. The only reason to buy a Tesla, now, is to tell the world that you are rich and crooked or rich and really, really ignorant of the news. What is the solution: Give your car back. Cancel your reservation. Dont buy one. Demand indictments from Congress.

Tesla Lied About Profits: Business Insider

Sorry, But Tesla's Only Profitable Because Of Your Tax Dollars Craig Pirrong Yesterday 1:37 AM Electric vehicle manufacturer Tesla's stock has rocketed up after the company reported positive earnings and operating cash flow for the first quarter. The stock had been heavily shorted, and short covering evidently fuelled the stocks take-off. Color me sceptical. The company was heavily shorted for good reason, and is even more ripe for shorting after the run-up. (Personal opinion. Not investment advice. You're on your own about that.) For one thing, although operating results did improve from the (really terrible 3/4Q12), the much hyped earnings number was put into positive territory by two items: a write-down of a warrant that Tesla granted the U.S. Department of Energy as part of a \$465 million DOE loan to the company, and FX gains (mainly on yen). Not repeatable. And the first seems highly dodgy to me — a squishy number based on an assumption that Tesla will be able to pay off. I'm also sceptical because of the near miraculous nature of the turnaround. Mere months ago, the company was in dire straits: It's a lucky thing for Tesla Motors shareholders that the U.S. Department of Energy loves the company's loan applications. Without the hundreds of millions of dollars Tesla has received from the federal government this year, the electric-car makers' financials would be gasping for air as 2012 winds down. Given the ugly state of Tesla's finances — and the company's sky-high valuation: almost \$4 billion — it will rank among the top candidates in Silicon Valley for a 2013 stock collapse, unless it receives significantly more cash next year. I get a whiff of a company that needed a miracle to stave off disaster. Maybe it got one, but I am always sceptical of miracles whenever accounting is involved. And that's certainly the case here. The shorts have been bloodied, but they'll be back. Indeed, this seems like a typical battle in a war between a dodgy company and short sellers. But I am most sceptical because of Tesla's not-really-founder-but-biggest-investor, Elon Musk. Mr. Musk is Occupy's favourite crony capitalist. And Occupy is one of Mr. Musk's favourite movements. Yes, once upon a time Musk started a real business, Paypal (NASDAQ:EBAY), that proved very successful without any government help. That was then, this is now. Musk has three ventures: Tesla, SpaceX, and SolarCity (NASDAQ:SCTY). All are heavily dependent on government largesse. Take Tesla for starters. It received the \$465 mm loan from DOE, but it also benefits from a \$7500/car federal subsidy for electric cars. Moreover, it benefits from the State of California's Zero Emissions Credit program. In its infinite wisdom, CA mandated that all the major auto companies sell a certain number of zero emissions vehicles. If they don't they have to buy credits from companies that do make them — namely Tesla. This was also essential in putting the company in the black in Q1, and the company is sitting on \$250 mm worth of these credits. IOW, Tesla's profits are courtesy of you, the taxpayer — and also courtesy of the shareholders of Ford (NYSE:F), GM (NYSE:GM), Toyota (NYSE:TM), Honda (NYSE:HMC), etc. Next consider SpaceX. This venture provides evidence of Musk's love for Occupy: he has promised that this private space venture will go to Mars, and wears an Occupy Mars shirt to make the point. It is also touted as a privately capitalised space venture, which it is, I guess, but it is also almost completely dependent on government contracts. The private money is attracted by the scent of public money. Sorry, but a company that is dependent on NASA's IV for support is not truly a private company: the company is basically a cutout between the investors and the taxpayers. The company has not exactly covered itself in glory. It had serious trouble with its initial launches, including an embarrassing episode in which the ashes of Star Trek's Scotty, James Doohan, were on a SpaceX craft that didn't make it into space: it crashed instead somewhere in the South Pacific. Which I guess would have been great if James Doohan had starred in South Pacific. Don't worry, though. As a precaution, some of Mr. Doohan's ashes were retained, and that part of the beloved actor remains did make it into space as he desired. And speaking of Broadway and movie classics, Musk is auditioning for a role in a summer stock Music Man with his boosterism of SpaceX: You don't have to be a believer in conspiracy theories to wonder why senior government officials are so committed to going the commercial route in space. Even a cursory review of SpaceX programs and plans reveals reasons for doubt. The questions begin with a business strategy that isn't just disruptive, but downright incredible. Mr. Musk says that he can offer launch prices far below those quoted by any traditional provider — including the Chinese — by running a lean, vertically integrated enterprise with minimal government oversight that achieves sizable economies of scale. The economies of scale are possible, he contends, because there is huge pent-up demand for space travel in the marketplace that cannot be met within the prevailing pricing structure. By dropping prices substantially, this latent demand can then be unlocked, greatly increasing the rate of rocket production and launches. When combined with other features of the SpaceX business model, the increased pace of production and launches results in revolutionary price reductions. There isn't much serious research to demonstrate that the pent-up demand Musk postulates really exists, nor that the price reductions he foresees are feasible. He has suggested in some interviews that launch costs could decline to a small fraction of current levels if all the assumptions in his business plan come true, and he has posted a commentary on his web-

site explaining how SpaceX is already able to offer the lowest prices in the business. Its hard to look inside the operations of a private company, but SpaceX does seem to be doing all the things necessary to minimize costs such as using proven technology, building as many items as possible in-house, and hiring a young workforce willing to work long hours. And to his credit, Musk has committed over \$100 million of his own money to the venture. However, his rockets have major performance limitations compared with other launch vehicles in the market, and they are not yet rated as safe for carrying people. Becoming man-rated will necessarily increase the role of federal officials in monitoring SpaceX operations, which is not good news for a business model grounded in minimal government oversight (traditional launch providers say government regulations and overhead charges are a key driver in their own pricing policies). Downright incredible sounds about right. It sounds like a con to me. Especially the whole economy of scale thing. Thats the kind of thing defence contractors say to get the government to buy more units of a plane or ship. Its not good economics. And Musks winning personality was on display when questioned about SpaceXs launch failures: Mr. Musk recently responded to a question from Space News reporter Amy Svitak about the two-year delay in accomplishing that second Falcon 9 launch by observing, In the space business thats on time. Perhaps he was irritated by the reporters implied criticism, but it goes without saying that if astronauts on board the space station are awaiting supplies, a prolonged launch delay could spell big trouble. What a guy. Takes your money, and then gets peevish when you accuse him hes blowing it. Then there is SolarCity, an installer of solar panels. The solar industry has raked in \$4.1 billion of stimulus money, and the government thinks that SolarCity in particular has played fast and loose with the numbers to get more than it should: Last July, federal investigators subpoenaed SolarCity, the largest installer of residential solar panels, as part of a probe into whether solar-power companies received excessive government grants. . . . Even before the Treasury Departments inquiry into grant applications filed by SolarCity and other installers, House Republicans had questioned the programs effectiveness in creating jobs. Congress declined to renew the grant program at the end of 2011, and only projects that were being planned by that date can receive grants today. The government is looking into whether SolarCity and other firms misrepresented the fair-market value of solar systems in order to boost the value of the grants they received. In its suit, SolarCity says two of the companys subsidiaries received smaller-than-expected grants. The company doesnt say exactly how much funding it applied for originally, but it says the final grants issued by the Treasury Department were \$8 million less than was proper under the law. But SolarCity is doubling down on the chutzpah, and suing the government, claiming the government has paid it too little!: Now, SolarCity is pushing back with a lawsuit that alleges the opposite: some of the taxpayer-funded grants it received werent as big as originally promised. The suit, filed quietly in February in the U.S. Court of Federal Claims, comes as SolarCity and other industry players are defending solar-friendly government policies, and it could undermine the industrys message that solar power will soon be viable without government help. Solar businesses have cratered around the world: China, Spain, Germany. The industry is addicted to government support. Elon Musk has a plan to get rich. It involves you. The taxpayer. You pay taxes. The government gives huge dollops of that money to Elon. Elon gets rich. Who could possibly object? Who could deny Elons genius? He certainly thinks hes a genius. He has no hesitations in telling people so. And there is a kind of perverse genius here. In the Age of Obama he has found the key to riches. Get in good with the government-by, you know, sponsoring an inaugural ball. And then let the government give you the goodies. Then sue the government if they dont give you enough goodies. And then preen before the world, touting your genius-and your environmental credentials. (Pay no attention to that private jet behind the curtain!) (Musk quit the Zuckerberg-created immigration lobbying effort FWD.us because it bought ads supporting politicians who support immigration changes but also had the temerity to support the Keystone pipeline.) What a repulsive man. Repulsive, yes, but sadly, Elon Musk is a Man For Our Age, in more ways than one.

Tesla Breaks Automotive History Record for Wasted Money, It's Official

Never in automotive history, in the recorded history of the world, has a car company spent so much money over such a long period of time to only sell so few cars! Only Tesla rich Frat boy Stanford yuppie school-chums and Tesla's own investors are buying the cars and that stream has now run dry. The few thousand cars Tesla has sold

to it's insiders is so nothing, so small, so insignificant that Honda and GM executives refer to a low meeting turn-out as "pulling a Tesla". Tesla still has a few hundred million dollars left to keep buying it's own cars from itself on behalf of its investors in order to fake-up sales but the trick is becoming transparent. Elon Musk spends all of his money on hype and PR to cover the dirty reality. Pull back the shiny façade and you find a nasty set of truths. This is a car company that has admitted that it was over \$100,000.00 OFF on the calculation of the BOM of their car!!!! The warrants that Tesla's insider friends inside DOE gave Tesla instead of cutting them off like Fisker, like they should have done, is a crime. People are ashamed to drive a Tesla so only as many Tesla's have been sold in TEN YEARS as Toyota sells in A WEEK! - Roger Bumbperly NYC

Adding up the Lies in Tesla's DOE application:

Adding up the Lies in Tesla's DOE application: - Tesla said they were going to BUILD a Factory in San Jose. They had no intention of building a factory and just wanted to trick state and city officials into signing their appeal letters. The factory was never built. Tesla investors sought to get real estate profits from the land deal. - Tesla said they were going to BUILD a Factory in New Mexico. They are being sued in New Mexico for this lie. They had no intention of building a factory and just wanted to trick state and city officials into signing their appeal letters. The factory was never built. Tesla investors sought to get real estate profits from the land deal. - Tesla said they were going to BUILD a Factory in Downey, CA. They had no intention of building a factory and just wanted to trick state and city officials into signing their appeal letters. The factory was never built. Tesla investors sought to get real estate profits from the land deal. - Tesla fired multiple workers without notice. They have been sued by those workers and lost those lawsuits. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla had no factory but DOE rejected other applicants for not having a factory. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla was \$100,000.00 off on their BOM calculations per car. When this got other applicants declined, how did Tesla get through? Corruption? - Deloitte was both the accountant for Tesla and the accounting reviewer for DOE. With Tesla's at-application-time credit and numbers actually so bad, one has to wonder what was up. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla and DOE staff were supplied by McKinsey. Mckinsey wrote all of the green energy plans and white papers for David Axelrod to give to the White House. Mckinsey staff have now gone to jail. Tesla and Fisker investors are best friends with McKinsey senior executives. One Mckinsey executive, associated with a jailed McKinsey senior executive, is now dead from "natural causes". The heads of the DOE loan Program: Matt Rogers and Steve Spinner, were working for McKinsey while also working at the DOE loan program as "deciders" for Steven Chu. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla made a deal with DOE staff to spiff the loan announcement in order to hype the stock market in order to fake up stock sales. When this got other applicants declined, how did Tesla get through? Corruption? - DOE had IBM consulting, in Virginia, do Tesla's "due diligence". IBM consulting was a contractor to Tesla. IBM Consulting supplied the DOE loan staff that McKinsey did not supply. IBM consulting only gave Tesla their top score. The reviews by IBM consulting, which operating under a variety of names from a fake office, now seem to have been manipulated in favor of Tesla. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla investors emailed and phone called the White House and Senior DOE staff to make quid-pro-quo deals which are now documented. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla got their inside Senator to give them only-for-Tesla factory tax reductions, green tax credits and other special finance perks that allowed Tesla to book profit that did not actually exist. When this got other applicants in trouble, how did Tesla get through? Corruption? - At the time of application, Tesla had no prototype of the car that was to be factory produced (The roadster was not at all the car produced), no design CAD, no factory production files and no engineering for factory machine automation. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla was caught sending out letters to customers telling them to close deposits so they could fake orders before the earnings call. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla engaged in a conflict-of-interest with a Senator and her real-estate family for Tesla and Solyndra land, and adjacent land, in Fremont, Ca. How did Tesla get this through? Corruption? - Tesla had one of the worst credit ratings at the time of application. Even today, to pay back all of

Tesla's investors is nearly impossible. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla had one of the worst debt ratios at the time of application. When this got other applicants declined, how did Tesla get through? Corruption? - The cost, BOM, time-to-market, range and domestic jobs metrics was lower in Tesla's application than most other applicants. When better ratings got other applicants declined, how did Tesla get through? Corruption? - DOE staff made a deal with Tesla to swap Detroit stock to cook up the books for the application. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla made a deal to hire union workers for the NUMMI plant then fired most of them and hired H1B foreign workers with taxpayer money. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla provided no collateral for their loan application and had no assets of value. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla has sent out PR saying they are repaying their loan many years in the future in order to stop investigations. They have NOT paid off their loan and the facts of sales show no possibility that they will. - Tesla buys the majority of its parts from non-American suppliers. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla hired multiple "famous auto people" who then quit when they say what Tesla was up to. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla said they were going to build and sell over 500,000 cars as of today's date. They have missed every milestone and sold less than 5000 cars. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla could not make their payments and got their deal custom-changed multiple times. When this got other applicants declined, how did Tesla get through? Corruption? More coming, outside investigators and crowd-review people, send in yours... H. S. - Former Fisker Staff Los Angeles, CA

Google charged with "steering" Tesla articles to favored searches

Per this link on Muckety: <http://news.muckety.com/2013/05/16/tesla-announces-450m-stock-sale/42801#comment-5034721> The researched chart by Muckety reveals the secret connections to the control, and manipulation, of consumer perceptions, federal public policy and law-making. If proven, this subjects both Tesla and Google to SEC fraud charges. Google has been shown to have a senior silent control ownership in Tesla. Tests by IT and SEO engineers show that Tesla receives an inordinate position in all Google News stories and general searches, while negative stories about Tesla are diminished. This ONLY takes places on the Google search engine and Google News. In the average search or comparative news cycle on any other search engine, Tesla does not show up or is 90% less visible in searches. Other companies and politicians have charged that Google artificially steers its search settings in favor of personal friends and in disfavor of its enemies. This demonstrates that Google is untrustworthy. Sen. Santorum and many companies and individuals have previously charged Google with manipulating it's search engine results. Carlos Rodriguez - Denver, CO

===== From Andrew Wesguter, New York, NY Google owners are personal advisors to the White House. Google Owners sit on White House advice groups. Google is pumping the Tesla stock offering by making it look like there is a stock demand for Google stock and by using the Google IR analysts and I-banks it has control over to inflate the stock value along with making the newsfeeds that Google covers about Tesla look 300% better than the actual circumstances. This is a conflict of interest as Google and it's VC's are investors in Tesla. This should be against the law.

===== From Parker Summers, San Diego Calif. Google is not thought very highly of by those who pay attention, this posting is all over the internet: "GOOGLE is ACTUALLY DOING MUCH EVIL! They are simply a spy service. Every location you search on google earth is logged and tracked and sold to government agencies and ad agencies. Every word or sentence you type into google is logged and tracked and sold to government agencies and ad agencies. Every page you click on in google is logged and tracked and sold to government agencies and ad agencies. A data file about everything you do on the internet using any google technology is logged and tracked and sold to government agencies and ad agencies. Google makes most of its money by spying on people. Why would you use something that makes you cooperate in spying on yourself? Everything you watch on googles youtube is logged and tracked and sold to

government agencies and ad agencies. Google reads all of your email. Google sends any interesting emails with words it doesn't like to agencies and the rest are put in an advertising database to trick you into thinking you stumbled upon certain ads when, in fact Google is secretly pushing those ads on you. Google GLASS is the ultimate spy-on-you-tool, it has face recognition, fashion recognition and pretty much spies on everybody and everything around you, and you, and then Google sends that data off to the Government. Never get near anybody wearing a Google Glass. Ask to have them out-lawed. Google Maps camera cars take pictures & capture wifu data for everyone in the US. Google saves a file of everything you have ever done, looked at, sent or moused over IN YOUR ENTIRE HISTORY OF USING THE INTERNET. It isn't a business right anymore, it is an abuse of the public trust. <https://anonfiles.com/file/08d71da7cfd68cc782e50cd156283457> title="https://anonfiles.com/file/08d71da7cfd68cc782e50cd156283457" <https://anonfiles.com/file/08d71da7cfd68cc782e50cd156283457> Google has thousands of people that work for them to create technologies to control the internet in order to make people give more information to google about themselves and that personal information is logged and tracked and sold to government agencies and ad agencies. Do you like being used as a tool? Do you like Google infesting your life for profit and special interest control of what you do? Twitter & Facebook are just as sinister and evil. Dump all 3 of them. Use www.duckduckgo.com or any other non tracking search engine. Find a non tracking replacement for every service google offers. Google is very evil! You will NEVER be able to trust Google. Write your Congressman. Tell them to outlaw Google data capture. Join a class action lawsuit against them" PLEASE RE-POST"
===== From Martin Seester, Chicago, Ill. It is very clear from the filings that Google is a huge investor group and the mouthpiece for Tesla, why is this not made more public?
=====

Tom's theory..More evidence emerging...

My Theory- By Tom Jordan, Senior Executive: "Just theoretically, let's suppose that White House staffers Steve Rattner, Robert Gibbs, David Axelrod and Rahm Emanuel went to Silicon Valley Vc's: Tom Steyer, Tim Draper, Elon Musk, Ray Lane, Eric Schmidt and John Doerr and said: "Hey, if you fund Grassroots Action, Inc., MoveOn and some other national voter-turnout groups, and make sure those voters turn out for our side, we will put you on our economic boards, give your companies breaks and incentives, push laws that help your products and give you free loans to make cars and batteries that you will have majority stock profit from". Wouldn't that be a very interesting way to hide the quid-pro-quo? What if there were recordings of one of those meetings
===== Interesting: Steve Rattner, Robert Gibbs, David Axelrod and Rahm Emanuel all quit their jobs at the White House, at about the same time, in a recession, when you already had the highest job in the nation, why would they do that unless Federal investigators had questioned them and they knew the truth was going to eventually come out!? Paul Dell Washington- DC

https://www.google.com/search?q=tsla&oq=tsla&aqs=chrome.0.69i59j0l3j69i60j0.1042j0j7&sourceid=chrome&espv=210&es_sm=122&ie=UTF-8 TSLA) continually made headlines when several flagship Model S cars caught fire and nearly caused serious injury to the drivers. A new study by <http://www.osurv.com> Osurv suggests these automotive events are linked and the fires may have a deadly connection. <h4>Three Model S fires in 30 days</h4> On Oct 1st, 2013 in Seattle, a Tesla Model S struck a metal object on the highway and quickly caught fire. The driver narrowly escaped. On Oct 18th in Mexico, a Model S was involved in a high speed car accident that ended with the vehicle becoming engulfed in flames. Finally, on Nov 6, outside of Nashville, another Model S ran over a tow hitch and then caught fire. All three incidents were ultimately caused by battery packs igniting from punctures and other damage. Tesla has since made engineering changes to all their cars and now offers fire coverage on an extended warranty. The upcoming <http://www.bmw.com/com/en/newvehicles/i/i3/2013/showroom/index.html> BMW i3 and i8 have already been designed with special shields to protect their battery packs from this kind of damage, and the

<http://www.nissanusa.com/electric-cars/leaf/> Nissan Leaf has yet to report a single fire in 60k+ vehicles in operation, presumably due to a similar construction. <http://research.osurv.com/wp-content/uploads/2013/12/tesla-carrera.jpg>  <http://research.osurv.com/wp-content/uploads/2013/12/tesla-carrera-300x171.jpg>  width="300" height="171" />

Paul Walkers Porsche may have a similar design flaw

 According to new reports about the http://www.imdb.com/name/nm0908094/?ref=fn_al_nm_1 Paul Walker accident, the 2005 Porsche Carrera GT that carried him and Roger Rodas may have been leaking power steering fluid. This is typically caused by wear and tear on the steering lines (i.e. dry rot) and/or undercarriage impact damage from a road object. Since undercarriage vulnerability was the root cause for the Tesla fires, there appears to be a deeper connection between the two vehicles and the nature of their design. It is still unknown what specifically caused Rodas Carrera GT to lose control, though some witnesses reported hearing a bang before the actual impact. This could have been caused by the car striking road debris. If this is the case, then its possible the debris struck a vital unprotected component like on the Tesla's, initiating a chain of events that led to a deadly outcome. Due to the intense heat of the fire burning up evidence and the lack of clear video footage, we may never know what really happened.

Elon Musk has a history with Porsche

<http://elonmusk.com/> Elon Musk , the eccentric founder of <http://www.teslamotors.com/> Tesla , is rumored to have owned the same model of Porsche that cost the life of Paul Walker. The photo below, from a <http://www.businessinsider.com/elon-musk-day-in-the-life-of-the-tesla-and-spacex-ceo-2012-7?op=1> Business Insider interview of Elon Musk , shows the exterior of his lavish estate. In the corner of the photo, tucked in the far left garage bay, is another Porsche model. Since Musk appears to be a fan, one must wonder if Porsche design served as inspiration for Model Ss sleek look and potential undercarriage design issues. The cars do look remarkably similar. <http://research.osurv.com/wp-content/uploads/2013/12/he-heads-to-spacexs-office-in-his-model-s1.jpg>  <http://research.osurv.com/wp-content/uploads/2013/12/he-heads-to-spacexs-office-in-his-model-s1.jpg>  width="178" height="150" /> <http://research.osurv.com/wp-content/uploads/2013/12/he-heads-to-spacexs-office-in-his-model-s-zoom1.jpg>  <http://research.osurv.com/wp-content/uploads/2013/12/he-heads-to-spacexs-office-in-his-model-s-zoom1-150x150.jpg>  width="150" height="150" />

Exotic car owners take a mobile survey

 To investigate these connections, Osurv conducted a mobile survey of 248 exotic car owners in California while they attended various automotive events including <http://supercarsunday.com> Supercar Sunday , Motor4Toys, Cars & Coffee, and the Paul Walker memorial car rally. Events like these are often frequented by celebrity car enthusiasts such as Jay Leno, pictured below at Supercar Sunday. In 2005, <http://www.jaylenosgarage.com/> Jay Leno lost control of a Carrera GT at a racetrack, ending in a brutal wreck. Jay walked away without a scratch. <http://research.osurv.com/wp-content/uploads/2013/12/77840c9c12ef7e982f3c0d6fd6488d6f1.jpg>  <http://research.osurv.com/wp-content/uploads/2013/12/77840c9c12ef7e982f3c0d6fd6488d6f1-300x168.jpg>  width="300" height="168" /> In the survey, we asked several key questions exploring owners thoughts and beliefs about their exotic cars. When asked which car manufacturer they strongly associated with Porsche design, a whopping 82% selected Tesla , 9% picked <http://www.mbusa.com/mercedes/index> Mercedes Benz , 5% selected BMW, and 4% were spread across other manufacturers. This proves there is at least a superficial connection between the Porsche Carrera GT and the Tesla Model S. Special Osurv technology allowed for precise followup questions. Certain respondents were asked why they associate Tesla with Porsche, specifically what trait they think the two brands have in common. The majority, 65%, selected Safety . 29% selected Design and only 6% picked Engineering. Safety is apparently a very hot topic. Do you believe there is a link between Tesla's fires and Paul Walkers fiery crash?

- 78% replied Yes
- 3% said No
- 19% were unsure

http://research.osurv.com/wp-content/uploads/2013/12/slide2_question.png  http://research.osurv.com/wp-content/uploads/2013/12/slide2_question-243x300.png  width="243" height="300" />

More questions than answers

 Until the National Highway Traffic Safety Administration (<http://www.nhtsa.gov/> NHTSA) safety probe into Tesla is complete and the final Paul Walker crash scene investigation wraps up, nobody can say for sure that the two are linked. However, the survey shows that people are starting to put the pieces of the puzzle together. Whether its an innocent trait carried over by a zealous designer or something more, only time will tell. In the meantime, prospective buyers of both Tesla and Porsche are staying on the sidelines until the smoke clears.

----- The Non Specialness of Tesla Anybody with a room full of engineers can start a car company and sell a few thousand cars if they get hundreds of millions of free tax dollars to kick it off. Anybody with a

room full of engineers can start a car company and sell a few thousand cars if they get hundreds of millions of free tax dollars to kick it off and then use the manipulated winning of that free tax money to falsely hype the stock market. Anybody with a hundreds of millions of free tax dollars can put some batteries and an electric motor on a car. The engineering of the Tesla has failed so many times and had to redone over and over so that the car is now just a plain old electric car with a sleek body. Anybody can put a sleek body on a plain old electric car. Anybody can say Tesla is not Solyndra but Solyndra was a scam for funding and Tesla is the same scam for funding, walking distance from Solyndra, using the same people, tricks, manipulations and payoffs; thus Tesla is a non-special scam exactly like Solyndra. Peter Deakins AAMF Chicago, Ill

Why Tesla Motors Sucks Monkey Balls

By Carson Evers for EV Alternatives

Monkey Balls are the most horrible kind of balls there are. Not only are they hairy, and matted with mud, bugs, scabs and crusty effluents but they stink in the worst way possible.

Because of this, when people say that Tesla Motors, and Elon Musk, for that matter, “Suck Monkey Balls”, they mean it in a manner which calls into question the ethics and quality of the Tesla cars. The following facts are facts. They can be researched, documentation-checked and verified by the reader.

There is certainly no possible doubt about the fact that Elon Musk used the worst possible energy storage technology on Earth. Every state, federal, academic and research study has, clearly, stated that his batteries blow up when they get wet, get bumped or just when they feel like it. Elon Musk's own engineers wrote that his batteries could injure you, kill you, or burn your home or office down. They wrote this in Tesla's federal patent filings which are filed with the U.S. Government, and which any person can go read. Go take a look. His patents “sucked Monkey Balls”, so bad that he had to give them all away because they openly stated, in Tesla's own words, what a dumb idea they were.

Tesla drivers have been burned alive by his batteries. This is a matter of fact. The U.S. Department of Energy recently had secret video's that they made, exposed on the news reports. These videos, and their associate documents, prove that the batteries, that Elon Musk used, were a deadly danger to the consumer. Tesla has set homes, garages and Malibu Canyon on fire.

Musk knew this ahead of time He still sold them. Why? The reality of the motivation shows, in dramatic clarity, why Tesla's Monkey Ball Suckage is so supreme: Elon Musk, White House staff, a couple Senators and Musk's investors owned the exclusive supply chain for that particular kind of dirty battery.

On top of that, Musk and Tesla scammed U.S. taxpayers out of billions of dollars in order to pay for his scheme. Tesla used taxpayer cash to fund his investors monopoly of lithium ion auto batteries.

Because Tesla, and Musk, were so greedy, they didn't even engineer a car battery system. They just put a bunch of fancy flashlight batteries, that were never, ever created to be used in cars, in a metal box, in a configuration that makes re-percussive explosions inevitable. When one battery goes off, from getting bumped, wet or sad; it fires the next one off and the next one... nearly 8000 chances of an explosion, in each Tesla.

Here is one of the worst parts: Want some CANCER, brain damage, liver damage or a deformed fetus? Then you have come to the right place if that place is Tesla Motors. Walk into any Tesla Motors showroom and ask them to sign a “warrant and guarantee” that “they state, as fact, that Tesla Motors lithium ion batteries will not give you CANCER, brain damage, liver damage or a deformed fetus when the batteries blow-up or burn”. They won't sign it. They know, for a fact, that every state, federal, academic and research study has clearly stated that his batteries

contain the chemicals which cause these horrible medical afflictions, and that those chemicals are inhaled, and skin absorbed, by you, your family, and any persons nearby, when the batteries “have a thermal incident”.

Everyone has seen how Elon Musk sits around all day long spouting out press releases about nuclear bombs on Mars and super-trains and other altruistic-sounding BS. He does this to create a cover story in order to distract from the truth about what he is up to. He used tax payer money to get rich on the back of public policy corruption. Stealing money from the public is not work. Going from one ditsy model to the next is not work. Musk sits around in his black turtleneck and does nothing but talk about himself all the time. Is that work? Not so much.

Because Tesla, and Musk, were so greedy, they didn't do their homework.

So, if you have not decided, on our own, based on the above facts, (that you can easily verify on your own), that “Tesla Motors and Elon Musk, suck Monkey Balls” here are some more facts that may be helpful to you:

U.S. Senators are not supposed to engage in criminal corruption. If you pay any attention to the elections, and if you still believe that the 40% of your money, that is taken out of your pay check, is really supposed to be used by the Senators to help you, and not hurt you, then listen up.

Elon Musk paid off Senators Feinstein and Reid with cash, stock, contracts, campaign resources and other perks, in order to get them to get him his taxpayer cash. Those two corrupt senate folks worked side, by side, just like Monkey Balls, to rig state and federal funds for Musk. Both of them own Musk (and next door/same deal Solyndra) real estate deals, construction deals, staffing deals, stock deals, and other insider perks gifted from Musk.

No matter what you think about the technology, you have to have a moral opinion about public offices engaged in organized crime and corruption in order to lift money out of your pocket. If, for no other reason, you kind of have to hate Elon Musk for being a crook.

Musk has a facial structure which includes enlarged cheek pouches and squirrel-like exposed upper teeth. He uses these to constantly grin at any nearby audience. He does not make direct eye contact with the person speaking to him. He is constantly waving his grin back and forth, like a searchlight panning back and forth over a foggy sea of self-adulation. He seeks attention, above all else.

Let's add up the Monkey Ball factors so far:

1. Crappy technology
2. Dangerous technology
3. Political corruption
4. Ripping off taxpayers
5. Unmitigated narcissism of the boss
6. Cancer, fried brains and livers, mutant babies

But wait, there's more..

Tesla and Elon Musk have been sued, over and over, for fraud. The people that sued are substantial players in all of this. They were his co-founders, wives, partners, investors, customers, supplies and more. If that many people went to all of the time, and expense, to sue someone that big, for fraud; maybe Musk and Tesla Are frauds.

There is a law called the “Lemon Law” that says that it is not legal to sell the public cars that are “lemons”. Tesla was sued under the Lemon Law and THEY LOST, in court, because the court found that Tesla was selling Lemon Cars. Would you like a squeeze of lemon with your Monkey Balls?

Tesla's investors pitched Washington that they could scoop “trillions of dollars of battery mining deals” out of Afghanistan, in order to convince Congress to kill a whole bunch more Afghan people and American soldiers. So

far that little adventure in Afghanistan has cost American taxpayers over 6 trillion dollars. There is no end in sight and nothing to show for it. Websearch the terms: “trillions of dollars of lithium in Afghanistan” and “Afghanistan is the Saudi Arabia of lithium”.

Elon Musk did not create Tesla Motors. He stole it from the creator in a hostile take-over, because he wanted it for his battery scam. He took Tesla away from actual founder Martin Eberhardt. Martin sued Musk and blogged about him being a scammer.

But, wait, there's more.

Elon Musk and Google are partners in politics, media manipulation, and stock market scams. Both of them hired many people from a company called In-Q-Tel. Both of them got money from In-Q-Tel. In-Q-Tel was caught with airplanes with 5 tons of cocaine on-board. The head of the biggest online drug operation in history: Silk Road, worked for Elon Musk and programmed for Google projects. Google deletes, hides and down-ranks anything that tries to expose the truth about Elon Musk or Tesla. Google, Musk and In-Q-Tel have some, very, very weird relationships and history.

When bad news comes out about Musk or Tesla, Google has been proven to eliminate the negative news, on the internet, and suddenly pump the stock market with a smoke-screen shiny-object-story timed with stock buy-backs and Flash Boy algorithms in order to fake the appearance of Tesla stock surges.

Tesla cars are the easiest, in the world, to hack and take-over. Chinese hackers make a game out of hacking them. They can find every single Tesla on Earth just by looking on the Internet. An incredibly large number of Tesla's have suddenly swerved off cliffs and killed their drivers. An incredibly large number of Tesla's have suddenly swerved into on-coming lanes and killed people in oncoming cars, bicyclists and others. This has been covered up by Elon Musk but all of the facts that prove the extraordinary number of these Tesla “accidents” are on public police record. Tesla has been sued for homicide.

Academic studies, and arrests, have shown that more drunks, and sex addicts, drive Tesla's than any other car per capita. That's comforting.

Tesla has spent more money to sell less cars, than any company in history. There is nothing novel about Tesla electric cars. They have been around since the 1800's. To put this another way: So few people actually want Tesla's that they public has been burdened with spending 3 hours a week, working to give up their tax money, in order to fund the drunks and sex addicts who did get Tesla's.

Here is the shocker. The list of Tesla/Musk horrors goes on and on. The above is only a small sample. The Monkey Ball Suck factor of this Tesla lake of corruption and sketchy technology is vast.

How is Musk still walking around free?

He is protected, for now, by dirty politicians who won't let the cops do their job. Call the FBI, The GAO, The U.S. Treasury, The Attorney General and ask them how you can help them get out from under the executive orders to “stand down” on Musk.

Without justice for all, there is justice for none. If the 1% all have a get-out-of-jail card, then no voter is secure.

How big a failure was Steven Chus DOE car Program?

How big a failure was Steven Chu's DOE car Program? Actually they produced the worst, most failed, domestic jobs and technology program in history. Chu has his people give out the party line: "It wasn't that much of a failure" That is total BS! Here are the facts: There were no car companies planning to make new cars. Then the feds said: "Please make new cars and jobs and new American companies, and reduce our dependence on foreign oil, here is the first outside-the-system money in history to do it" Then HUNDREDS of new car companies were started, or expanded, because Steven Chu pitched them to apply. Then Detroit and pre-wired winners John Doeer/Fisker and Eric Schmidt/Tesla said: Make our guys the only winners and turn down all of our competitors because we pay your campaign bills. Then all of the other applicants were put on permanent no-response basis until they went out of business, or had their applications fudged with, and other, now-proven, blockade techniques that Chu's people engaged in. The arbitrary cut-off of every other applicant has been shown to be sweeping, secretive, arbitrary, contrived by Chu's inside team, and so abusively and harassingly overbroad as to imply the breaking of constitutional law. Tesla's Marketing lead, Siry, wrote about part of it in his Wired article: How DOE stifles innovation. The investor and VC market has never funded car companies and never will. They have said so. Chu had the chance to move the market forward and he dangled his carrot, got a sideways offer and jerked his carrot back under the rock. Targeting of IRS or DOE applicants; special selection of IRS or DOE applicants; manipulating IRS, embassy, or AP documents; and all of the process issues in the current Washington scandals are proving the process is tried and true. The AP Scandal, The IRS Scandal, The Benghazi Scandal and the Military sex Scandal are all about things a certain bunch of people knew about, hid, rigged the system to not get caught and then got caught. In the internet world, nobody can hide again. Chu and his crew are now getting caught and his handler is now, clearly, a senior person on the Hill. In destroying every competitor to Detroit and Tesla/Fisker, the program was a big success. In helping America, the program was one of the biggest failures in history. If you are a Republican: Chu cost America jobs and it's national security position. If you are a Democrat: Chu cost America clean energy and the electric car industry. Either way, Chu screwed you! Danny Coi Washington Research Group Washington- DC

CONFLICTS OF INTEREST IN THE DEPT. OF ENERGY SCANDAL THAT NOBODY IS BEING ALLOWED TO INVESTIGATE. ORGANIZED CRIME IN DC GOING UNCHECKED: A Fact-Swarming Wiki

Sandia, Argonne and IBM Consulting were hired by DOE to vet applicants yet they were both given directives, By Steven Chu, to only allow companies owned by campaign donors to pass the secret tests and the...

BUSTED!!! Tesla News Hype-mongers Reveal Themselves.

In the run-up to the big DC investigations of: who-did-what-to-whom you will suddenly find a bunch of articles posted in seemingly unrelated publications. These articles all share the same message. The problem (For the Tesla and DOE VC shells) is that, unfortunately for them, the internet is an amazing archival library. A quick search shows that at no time was there ever such a cascade of articles about this one topic. The mad rush to validate points the finger at which writers are shells for Tesla and the bad people at DOE. You have articles like: <http://seekingalpha.com/article/1448051-tesla-may-be-the-last-one-standing> <http://www.thetruthaboutcars.com/2013/05/has-the-dept-of-energys-advanced-technology-vehicle-manufacturing-program-been-a-failure-not-really/> Etc. All with the same message, trying to pre-sell the plastic-coated message that only Tesla is still around today because only Tesla was good. In fact only Tesla bribed enough people to get the free taxpayer money in order to trick the stock market and that is a felony and Tesla staff and backers need to go to prison. Carlson Kesmeir Los Angeles

Did Tesla really pay back their loan? NOT ACTUALLY.. Taxpayers are STILL paying for it

By Paul Czonga Investors Bluesheet Did Tesla really pay back their loan? Not actually! Through a series of tricky Wall Street/Crooked Bank paper shuffling, obscure, warrant-sliding, shady smooth talking dances Tesla is now claiming that it has "paid back the money" and "made America proud". This is a joke. They used slipped milestones, readjusted values, cooked books, and insiders to "pay back" the loan that they got for free in the first place. The caused billions of dollars of damage to the auto industry, overall domestic jobs, raped huge profits on skims and personal special fees and personal payments. That is money and cost that is still owed to America. When the details from 2007 to today come out in the communications between all of the players. The truth will be very apparent. Tesla should not be proud, it should be ashamed.

Tesla "Repays" \$465-Million DoE Loan, Chrysler Bites Back At Claim

By John Voelcker | HighGearMedia.com, Published: May 23 Ah, politics. Yesterday, Tesla paid off the balance of its U.S. government loan, using proceeds from its \$1 billion-plus offering of stock and warrants last week, as CEO Elon Musk had said Monday it would in a tweet. The amount settled yesterday was \$451.8 million, following installments paid by Tesla last year and in the first quarter of this year. Loans to Ford, Nissan, Tesla The company had been granted \$465 million in low-interest loans by the U.S. Department of Energy in June 2009, through its advanced technology vehicle manufacturing program. Other carmakers who got loans included Fisker (\$532 million, of which only \$192 million was disbursed), Ford (\$5.9 billion), and Nissan (\$1.6 billion). Musk thanked the DoE "and the members of Congress and their staffs that worked hard to create the ATVM program," in a release yesterday, with special appreciation to "the American taxpayer from whom these funds originate." I hope we did you proud," he concluded. Out from under So Tesla Motors [NSDQ:TSLA] is now out from under the shadow of U.S. government investment. By paying off the loan early, Tesla also precluded the government from sharing in the current appreciation of its stock. Warrants for the DoE to acquire Tesla stock would not have kicked in until later in the loan term, as at least one critic points out. The DoE issued a grateful press release as well, saying Tesla's repayment highlights the "strength" of its loan portfolio and noting that losses to its total \$34 billion portfolio of loans across many programs represent only about 2 percent to date. Like any other carmaker selling plug-in electric cars, it continues to benefit from Federal income-tax credits of \$2,500 to \$7,500 offered to its buyers. And it also earns additional money selling Zero-Emission Vehicle (ZEV) credits to other makers who buy them to comply with California state regulations requiring them to sell a certain number of vehicles that have no tailpipe emissions. Only carmaker to repay? But Tesla took it a step further, saying in its release, "Following this payment, Tesla will be the only American car company to have fully repaid the government." That generated a swift response from Chrysler, which issued this statement late last night: The information is unmistakably incorrect. Its pretty well-known that almost exactly two years ago--May 24,2011--Chrysler Group LLC repaid (in full and with interest) U.S. and Canadian government loans more than six years ahead of schedule. Question: short memory or short-circuit? Chrysler's closing sentence contains a pun that one might expect from the Detroit maker most hostile to plug-in electric vehicles (despite the excellence of the Fiat 500e it built as a compliance car). But is Chrysler's claim accurate? Yes and no. There was that bailout... The company did pay off \$7.6 billion in loans that were part of the U.S. government's overall bailout of the company, control of which was essentially passed to Italy's Fiat. But as numerous commentators pointed out at the time, the U.S. government still lost money on the Chrysler bailout. When Chrysler filed for bankruptcy in 2009, Obama administration forgave more than \$4 billion of debt from the \$13 billion it had put into the company. So while Chrysler did technically pay off the government loans owed by the post-bankruptcy Chrysler, the U.S. government still lost billions of dollars on its investment in Chrysler. Tesla's release includes a sentence noting that the DoE's ATVM program "is often confused with the financial bailouts provided to the then bankrupt GM and Chrysler, who were ineligible for the ATVM program, because a requirement of that program was good financial health." Follow GreenCarReports on Facebook, Twitter and Google+. (c) 2013, High Gear Media.

Tesla Owner Buyers List Out in the Public. No privacy for Tesla Owners!

If you bought a Tesla, you are now going to get marketed to and pleaded with by community service groups around the world. It seems that, in addition to each Tesla being rigged to spy on you everywhere you go and watch how you use the Tesla over the internet without you knowing about it, as Elon Musk admitted in his fight with the NY Times reporter, The Tesla marketing group has sold the Tesla buyers list to other marketing groups who then sold the list openly on the market. Now Tesla owners all over the world are getting emails like this: "Do you know that driving this Tesla makes you part of a crime against America? People think you are part of the bad things when they see you drive it: - Tesla said they were going to BUILD a Factory in San Jose. They had no intention of building a factory and just wanted to trick state and city officials into signing their appeal letters. The factory was never built. Tesla investors sought to get real estate profits from the land deal. - Tesla said they were going to BUILD a Factory in New Mexico. They are being sued in New Mexico for this lie. They had no intention of building a factory and just wanted to trick state and city officials into signing their appeal letters. The factory was never built. Tesla investors sought to get real estate profits from the land deal. - Tesla said they were going to BUILD a Factory in Downey, CA. They had no intention of building a factory and just wanted to trick state and city officials into signing their appeal letters. The factory was never built. Tesla investors sought to get real estate profits from the land deal. - Tesla fired multiple workers without notice. They have been sued by those workers and lost those lawsuits. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla had no factory but DOE rejected other applicants for not having a factory. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla was \$100,000.00 off on their BOM calculations per car. When this got other applicants declined, how did Tesla get through? Corruption? - Deloitte was both the accountant for Tesla and the accounting reviewer for DOE. With Tesla's at-application-time credit and numbers actually so bad, one has to wonder what was up. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla and DOE staff were supplied by McKinsey. McKinsey wrote all of the green energy plans and white papers for David Axelrod to give to the White House. McKinsey staff have now gone to jail. Tesla and Fisker investors are best friends with McKinsey senior executives. One McKinsey executive, associated with a jailed McKinsey senior executive, is now dead. The heads of the DOE loan Program: Matt Rogers and Steve Spinner, were working for McKinsey while also working at the DOE loan program as deciders for Steven Chu. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla made a deal with DOE staff to spiff the loan announcement in order to hype the stock market in order to fake up stock sales. When this got other applicants declined, how did Tesla get through? Corruption? - DOE had IBM consulting, in Virginia, do Tesla's due diligence. IBM consulting was a contractor to Tesla. IBM Consulting supplied the DOE loan staff that McKinsey did not supply. IBM consulting only gave Tesla their top score. The reviews by IBM consulting, which operating under a variety of names from a fake office, now seem to have been manipulated in favor of Tesla. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla investors emailed and phone called the White House and Senior DOE staff to make quid-pro-quo deals which are now documented. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla got their inside Senator to give them only-for-Tesla factory tax reductions, green tax credits and other special finance perks that allowed Tesla to book profit that did not actually exist. When this got other applicants in trouble, how did Tesla get through? Corruption? - At the time of application, Tesla had no prototype of the car that was to be factory produced (The roadster was not at all the car produced), no design CAD, no factory production files and no engineering for factory machine automation. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla was caught sending out letters to customers telling them to close deposits so they could fake orders before the earnings call. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla engaged in a conflict-of-interest with a Senator and her real-estate family for Tesla and Solyndra land, and adjacent land, in Fremont, Ca. How did Tesla get this through? Corruption? - Tesla had one of the worst credit ratings at the time of application. Even today, to pay back all of Tesla's investors is nearly impossible. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla had one of the worst debt ratios at the time of application. When this got other applicants declined, how did Tesla get through? Corruption? - The cost, BOM, time-to-market, range and domestic jobs metrics was lower in Tesla's

application than most other applicants. When better ratings got other applicants declined, how did Tesla get through? Corruption? - DOE staff made a deal with Tesla to swap Detroit stock to cook up the books for the application. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla made a deal to hire union workers for the NUMMI plant then fired most of them and hired H1B foreign workers with taxpayer money. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla provided no collateral for their loan application and had no assets of value. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla has sent out PR saying they are repaying their loan many years in the future in order to stop investigations. They have NOT paid off their loan and the facts of sales show no possibility that they will. - Tesla buys the majority of its parts from non-American suppliers. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla hired multiple famous auto people who then quit when they say what Tesla was up to. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla said they were going to build and sell over 500,000 cars as of today's date. They have missed every milestone and sold less than 5000 cars. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla could not make their payments and got their deal custom-changed multiple times. When this got other applicants declined, how did Tesla get through? Corruption? ----- Alison Wood

Even FORBES admits Tesla is a Scam!

By Patrick Michaels, FORBES MAGAZINE I write about the interface of public science and public policy If Tesla Would Stop Selling Cars, We'd All Save Some Money First of all, lets stipulate that the Tesla model S is a pretty cool looking car, that the high-end version accelerates like a rocket, and that its massive, low center of gravity pretty much inures it against a rollover. Next, lets congratulate Elon Musk on paying off his half-billion dollar federal loan ahead of time. Finally, thanks to everyone in the country for helping to make this possible, and for continuing to do so. The public is still on the hook for Tesla, and will be for the foreseeable future. First, theres the \$7500 taxback bonus that every buyer gets and every taxpayer pays. Then there are generous state subsidies (\$2500 in California, \$4000 in Illinois—the bluer the state, the more the taxpayers get gouged), all paid to people forking out \$63K (plus taxes) for the base version, to roughly \$100K for the really quick one. The latest round of Tesla wonderment came when it reported its first quarterly profit earlier this month. TSLA stock darned near doubled in a week. Musk then borrowed \$150 million from Goldman Sachs (shocking!) and floated a cool billion in new stock and long-term debt. Thats how we—the taxpayers—were repaid. But is TSLA another Google, or just another DoubleClick? DCLK zoomed from \$2 to \$200 without ever showing a profit, something Tesla has yet to do with its cars. It then famously crashed. Tesla didnt generate a profit by selling sexy cars, but rather by selling sleazy emissions credits, mandated by the state of Californias electric vehicle requirements. The competition, like Honda, doesnt have a mass market plug-in to meet the mandate and therefore must buy the credits from Tesla, the only company that does. The bill for last quarter was \$68 million. Absent this shakedown of potential car buyers, Tesla would have lost \$57 million, or \$11,400 per car. As the company sold 5,000 cars in the quarter, though, \$13,600 per car was paid by other manufacturers, who are going to pass at least some of that cost on to buyers of their products. Folks in the new car market are likely paying a bit more than simply the direct tax subsidy. Hows this going to work in the future? As long as the competition has to pay greenmail to Tesla, probably just fine. And with California gradually ratcheting up the electric-vehicle mandate, maybe just finer. No wonder the stock price doubled and Goldman shelled out. Theres only one slight, teensy-weensie problem. While there were enough high-end customers to supply Tesla around \$400 million in gross receipts last quarter (that would be 5,000 cars at an average of \$80,000 a copy), they still lost money. How many customers are there for such a pricey car? Tesla cant increase demand by dropping the price very much. About the only way they can do this (barring some—currently remote—major battery technology improvements) is by cutting the vehicles range. Nissans Leaf provides a bit of instruction here. Selling for around \$32K (out the door) it sold pitifully few—less than 10,000 last year. As the May 22 Wall Street Journal showed, when a battery cars range gets in the

Leaf zone (real world: 70 miles; advertised: 83) you cant even give it away. Couple the federal \$7500 with \$2500 in several states, and the costs of a two year lease, allowing for reduced fuel costs, more than pay for the car. Thats right, free transportation, and sales still suck. Tesla cant go much below the EPA estimated 205 mile range (make that about 170 in modestly cold winter weather) of its base version before it hits the same range-anxiety wall. If Tesla's sales drop—not by much—the company isnt going to be able to cover its losses by selling green indulgences. First, the primary losses increase, and then they have fewer indulgences, which are generated by car sales. So here we have a car pushing \$100,000 paid for in no small part by you and me, no matter whether Tesla paid back their federal loan or not. The small comfort is that we are off the hook for any default on that loan, but it would be more comfort if we werent all compelled—completely against most of our wills—to shell out around somewhere around \$10K (depending on state) for every one that goes out the door. The more they sell, the more we pay. Oddly enough, the only way to stop this craziness if for the company to stop making cars. If demand drops much, or California goes into a major fiscal crisis (theyre working on it), oddly enough, Tesla's bankruptcy will save the rest of us some money. ----- This article is available online at: <http://www.forbes.com/sites/patrickmichaels/2013/05/27/if-tesla-would-stop-selling-cars-wed-all-save-some-money/> -----

----- Goldman Sachs, the most corrupt investment bank in the world, floated the cash for this deal because they helped bribe and manipulate Congress to get the money and the special discounts in the first place

Stock Analysts See Tesla Exploding Battery Problem as Fatal

As shown on <http://lithium-ion.weebly.com> title="http://lithium-ion.weebly.com" <http://lithium-ion.weebly.com> How The Better Place Bankruptcy Is Relevant To Tesla's Achilles' Heel: Lack Of Charging Infrastructure BY SEEKING ALPHA Tesla (TSLA) has been on a tear in terms of stock price. We believe that it is running mostly on 'hopium' recently. Tesla also passed by the market cap of Fiat (FIATY.PK). We strongly believe that the fundamental Achilles' heel of Tesla is its lack of charging infrastructure. This Achilles' heel is appearing in our view to be a white swan, something which investors do not necessarily pay much attention to, but which is obvious to many later. This Achilles' heel can be seen by the recent bankruptcy of the very well funded company (Morgan Stanley, UBS, General Electric, HSBC, others) which focused on charging electric cars, called 'Better Place': "This is a very sad day for all of us. We stand by the original vision as formulated by Shai Agassi of creating a green alternative that would lessen our dependence on highly polluting transportation technologies. Unfortunately, the path to realizing that vision was difficult, complex and littered with obstacles, not all of which we were able to overcome." If a company receiving investment of over \$850 million for grand infrastructure projects can not make it, why is it possible for Tesla to make it when there is next to no charging infrastructure in the USA or any other country for that matter? Why did this company go bankrupt? Lots of reasons, but it essentially boils down to still a lack of a demand for electric vehicles due to high prices and lack of charging infrastructure, two problems Tesla is still stuck with. We learned this from our research into the recent bankruptcy of Better Place: "Because the technology has still not matured. If there was currently on the market a compact and light battery at a reasonable price that could provide cars with a driving range of 400 kilometers, then the electric car would become a global hit. In practice, the presently available batteries for electric vehicles are enormous, weighing the same as two passengers, and require advanced cooling solutions to prevent them from exploding, consume a rare raw material (lithium) and exotic technologies with a limited lifespan costing the price of half a car." We believe fundamentally at this point or in the near future, Telsa has no ability to buy any companies such as Fiat due to their low cash position of a measly \$214.42M for a \$10.5 billion+ company. We strongly believe that Tesla can not make it big till they are able to truly solve the problem of lack of any major charging infrastructure in the USA, or any other major markets for that matter which they are looking to make it big in. Our main thesis is that Tesla lacks fundamental infrastructure in charging and that until an outside player will finance such systems, Tesla will be relegated as an impractical second tier player. There is simply not enough demand for these products at these prices and not enough infrastructure: "the electric vehicle business is a little

premature at the moment," says Andrew Frank, a University of California, Davis, professor of mechanical and aeronautical engineering, adding that the main reason for this is the lack of a sufficient charging infrastructure and an unclear plan for who will end up paying for it. Frank cautions that car companies should not expect the public to pitch in. One way to kill the electric car (again) is to ask the public to invest a lot of money in the infrastructure, he says." The calls recently for a buyout of Fiat by Tesla are reminding us greatly of the dot com bubble when AOL (AOL) bought Time Warner and it was one of the most disastrous mergers ever. We also believe that Tesla has not enough charging infrastructure and that this problem is still Tesla's major Achilles' heel. We see no proof of even minor acceptance of these types of products by the American population yet: "It's not like people are clamoring for these vehicles," said Rebecca Lindland, analyst with Rebel Three Media, and member of a committee studying barriers to electric cars for the National Academy of Sciences. Lindland said her view that Americans "just don't see how an electric car can fit into their lifestyle. We continue to be risk-averse in investing in new technology in our cars. Mike Van Nieuwkuyk of the research firm JD Power & Associates said more people are aware of the electric cars on the market "but there is still a low number of consumers who say they would purchase an electric car." As a CNN Writer recently phrased it in terms of lack of charging ability: "Even after overlooking all the Model S' objective blemisheselectric vehicles lack a national infrastructure of charging points, accessible cross-country range and remain cost prohibitive for most consumers. These are major hurdles, preventing tens of millions from even considering vehicles like the Model S. Don't feel sorry for just the electric crowd, either. According to the U.S. Department of Energy, there are more than 5,800 electric charging stations in the United States, but just two public charging stations in North Dakota, and zero in Wyoming (Tesla plans to have a nationwide network of its so-called Supercharger stations within a couple of years). I don't need to remind anyone that gasoline for combustion vehicles is as readily available as pasteurized milk, and still less expensive." We are therefore very skeptical of this so called electric car market, especially in the US where there is almost no infrastructure to be able to charge the vehicles. It reminds us of all the optimistic calls on the so called AOL Time Warner disaster which was the one of the most disastrous or the most disastrous merger ever: "The Internet, it was believed, was soon to vaporize mainstream media business models on the spot. America Online's frothy stock price made it worth twice as much as Time Warner's with less than half the cash flow." We believe very overly optimistic figures are being touted by Morgan Stanley (MS) - which also was one of the major underwriters of the company's IPO and recent offerings: "Jonas reiterates that this Tesla is valued on a 15-year DCF (future cash flow and discounts) and that its "valuation multiples do not begin to make sense until at least 2015." A senior editor of Edmunds recently stated the following about the lack of charging infrastructure: "More important, said Kavanagh, is that the US electric power system cannot support large numbers of electric vehicles which need constant charging. The US power grid is not capable of supporting that," he told AFP. "You would need a multitude of small nuclear power stations to support that recharging. Chevrolet cut production of its Volt last year amid soft demand, and is reported to be working on a less expensive version. Toyota and Honda also scaled back plans for all-electric vehicles for the US market. And Chrysler chief executive Sergio Marchionne said recently the company stands to lose \$10,000 on every battery-powered Fiat 500 it sells in California." Morgan Stanley (overly optimistic) projections: (click to enlarge) In conclusion, we believe that the Better Place bankruptcy is highly relevant to two major problems Tesla still faces: lack of charging infrastructure and lack of demand. We still do not know yet that Tesla is even a real, viable company, but many investors are taking very big risks in assuming so. With the lack of ability to have charging infrastructure yet in such a big market as the US, we are very skeptical for all the reasons above. We also think it is way too early to start comparing Elon Musk, CEO of Tesla to Lee Iococca. Keep in mind that "Tesla has posted a net loss of more than \$800 million in the past three full years combined." We believe that in the long term there will be trouble ahead for Tesla and its Achilles' heel in lack of charging infrastructure. It is best summed up by the failure of the electric car company 'Better Place' in these words: "Setting up and managing a chain of battery exchange stations requires a huge investment in an infrastructure, which grows in proportion to the geographical area to be covered. It can perhaps be done as a government project but for a private company this solution requires very deep pockets and investors with stamina for the long run, and the belief that the revenue will eventually cover the expenses. Shai Agassi found investors like this to begin with, but they did not last the course."

Beware! Tesla is a bubble just waiting to burst

Beware! Tesla is a bubble just waiting to burst By Barry Randall Published May 30, 2013 Covestor By Barry Randall Congratulations to Tesla (TSLA) shareholders for the recent, astounding gains in the companys stock. In spite of (or because of) the immense short position in Tesla shares, the stock has risen from about \$54/share at the start of May to about \$103 as of May 30. Now Tesla longs are probably weighing their next move. May I make a suggestion? SELL! Run for the hills! TSLA data by YCharts OK, thats perhaps a bit dramatic, but really, its how I personally feel. What has me so sure that its time to move on? Lets start with the emergence of self-justifying babble from Wall Street analysts. After the company reported a better-than-expected profit in early May, the stock jumped well past most Tesla analysts price targets. Heres how Morgan Stanleys Adam Jonas put it in his subsequent note to clients [emphasis mine]: Our rating, estimates and price target are under review, pending our analysis of changes to the companys business model, addressable market and the associated risks. Taking nothing away from the accomplishments of the Tesla team, triangulating the fundamental valuation with the share price is more challenging than for other stocks. My translation? Tesla stock has gone <@!)?(*%# crazy. So much so that you cant reasonably expect me to stretch any of the parameters in my financial model (like growth rate and gross margin) in order to justify the current price in our usual Wall Street way. Does a forward P:E ratio of 180 make Tesla stock overvalued? Of course it does! I just can't print that in a research note. Thanks, and don't forget to vote for me in the Institutional Investor survey. Im just kidding about Mr. Jonas, who by all accounts is a fine analyst. But his concerns about triangulation proved unsurprisingly short-lived, and just one day later, he issued another note. In it, he raised his price target from \$47 to \$103 (the stock was at \$87.80 at the time), based on a variety of factors, such as the possibility that pound for pound, Tesla might have the strongest brand in the auto industry. This would probably come as a surprise to, say, Ferrari, whose own brand was recently voted the most powerful commercial brand in the world. Not just within the auto industry. The most powerful among all brands. And I believe the reality distortion field extends across Wall Street. Deutsche Banks analyst wrote post-earnings that he was re-assessing [the] valuation framework in his attempt to rationalize a new, much higher price target for Tesla. Yeesh. But I digress. My point is that I believe Tesla stock is being propelled higher by a frothy mix of unexpected profits, huge short interest and a collective amnesia that there already exists quite a few electric cars available for sale at much lower prices than Tesla's excellent Model S. So where does Tesla go from here? Well, its certainly possible for the company to build a profitable business around high-end cars. This strategy served Porsche so well it was able, in 2007, to accumulate a 35% stake in the much larger Volkswagen. Alas, Porsche overplayed its hand and after unit sales dropped by 25% from 2008 to 2009, Volkswagen turned the tables and re-structured their way into complete ownership of Porsche. But Tesla seems bound and determined to move down-market. CEO Elon Musk has promised that a 'Gen 3 mass market car is coming, in a few years. Only one problem with that plan: the Gen 3 mass market car is already here. It's called the Nissan Leaf. The base Leaf, the model S, has an MSRP of \$21,300 after applicable tax credits. Is the Leaf as nice an automobile as Tesla's proposed Gen 3 car – described by some as similar to a BMW 3-series – is likely to be? No, but thats only because of strategic choices by Nissan, not a function of its ability to produce high end cars (e.g., Infiniti). Good luck to Tesla competing with Nissan's global supply chain; the Japanese automaker sold 4.9 million vehicles in 2012. Let's see. Carlos Ghosn? Or Elon Musk? Hmmm. There is nothing game-changing about Tesla that hasn't already been accomplished by other automakers, in some cases several years ago and without 9-figure loans from the U.S. government. Tesla's decision to use an 85 kwh battery pack (the Leafs is 24 kWh) has resulted in an electric car with greater range. Fine. But thats just a strategic design choice, not a competitive advantage protected by patents or trade secrets. Electric cars all have the same virtues, like lower cost-per-mile than traditional internal combustion vehicles of comparable size and duty. But only a few electric car manufacturers have the economies of scale necessary to compete in the real, non-subsidized world. Tesla is not one of those companies today. Tomorrow? Perhaps. But not today and not soon. Did anybody else beside me notice that after Tesla reported their first quarter earnings, estimates for 2013 and 2014 fell? No, that wasnt highly publicized. Why let the facts get in the way of a great story? The post Beware! Tesla is a bubble just waiting to burst appeared first on Smarter Investing Read more: <http://investing.covestor.com/2013/05/beware-tesla-is-a-bubble-just-waiting-to-burst#ixzz2UoxHh0II>

The Dark Side Of Tesla's Masterful Short Squeeze

The Dark Side Of Tesla's Masterful Short Squeeze John Petersen | about: TSLA Over the last month and a half I've watched in awe as Tesla Motors (TSLA) pulled off a masterful short squeeze and follow-on financing that has supporters dancing in the streets and fanboy bloggers making all manner of preposterous forecasts. Now that the dust has settled and the irrational exuberance has cooled a bit, it's time to take a calm and objective look at some of the dark clouds that host the silver lining.

The Light and Fluffy Q1 Profit Anybody who can read a disclosure document knows that Tesla's Q1 net income of roughly \$11 million was a fluke that's not likely to be repeated. Tesla lost about \$91 million on its principal business activity of making and selling cars. Its reported net income was solely attributable to events and payments that are unlikely to be a reliable source of recurring future revenue including: • \$68 million in ZEV credit sales; • \$17 million in GHG credit sales; • \$11 million in warrant liability reversals; and • \$7 million in foreign currency adjustments. The demand for ZEV and GHG credits arises from laws and regulations. As long as demand exceeds supply, the credits have significant value to automakers that need them. Once supply exceeds demand, however, the credits become worthless. The following 2010 graph from the Natural Resources Defense Council shows that a crossover point between ZEV credit supply and demand will occur this year. While Tesla expects to report additional credit sales in Q2 and Q3, it has clearly stated that the game will be over by Q4 because Tesla and all the other automakers that are building zero emission vehicles will saturate the ZEV credit market.

The Whispy Financing Scheme The issue fanboy bloggers have overlooked or chosen to ignore is the negative if not disastrous income statement impact of Tesla's new financing scheme. It's a great deal for consumers who want to drive a Model S and can't afford to write a check. It's a brutal deal for stockholders because all financed vehicle deliveries will be accounted for as operating leases. In its discussion of the financing plan, Tesla's recent Form 10-Q says: "As a result of the residual value guarantee, we expect to apply lease accounting to these sales which would defer the recognition of the associated revenues over time instead of full recognition at delivery." The layman's translation follows. When Tesla sells a car for cash it recognizes a \$90,000 sale, deducts its cost of goods sold and reports the entire gross margin in the current period. When a new car is financed, the difference between the sale price and the residual value will be spread over the 36-month contract term along with the associated cost of goods sold. So instead of recognizing a \$90,000 sale on day one, Tesla will recognize about \$3,450 per quarter for a period of three years. Just for grins, let's assume total shipments of 5,000 cars per quarter, an average sales price of \$90,000, a gross margin of 25%, and combined R&D, SG&A and interest expenses of \$100 million per quarter. The column on the left is stated in thousands and shows how the revenue and expenses would be reported if all buyers paid cash. The column on the right shows how the revenue and expense will be reported if 20% of buyers take advantage of Tesla's financing option. If a 20% financing take rate converts a \$12.5 million profit into a \$9.1 million loss can you imagine the impact of a 30% to 40% financing take rate? I can't speak for anybody else, but a financing scheme that sells a few more cars but savages current revenues and net income doesn't strike me as all that wondrous. I'm sure that Tesla will do its level best to draw attention to its balance sheet and cash flow statements which may look OK if Tesla can meet its ambitious cost reduction and gross margin goals, but the ugly income statement headlines will be the first thing investors see and the first thing the market responds to. An even thornier issue arises from the magnitude of the residual value guarantee. Under the announced plan Tesla is guaranteeing a 50% residual value on the first \$70,000 of a car's price plus a 43% of any upgrades. For a \$90,000 Model S-85 the residual value guarantee works out to \$43,600, which strikes me as quite a stretch for an entirely new product class that has no meaningful residual value history. I've heard the arguments about EVs retaining their value better than conventional vehicles despite battery degradation issues. Those arguments generally come from ideologues that are also quick to explain why EV technology will progress by leaps and bounds in coming years while prices plummet. In my mind, the two arguments are mutually exclusive and you can't possibly have it both ways. If the 2016 product offerings from Tesla are significantly better and cheaper than its current Model S, I have a hard time imagining anyone paying a premium price for a three-year old used car with antiquated first generation technology. Since I have a long history of changing out my computer systems every three or four years I know the pain of trying to sell the last generation so I can buy the latest upgrade. Over the short term Tesla can assume

whatever it wants with respect to resale value. When a meaningful resale market develops, as it must, Tesla's auditors will have to rely on independent evidence of residual value instead of management's estimates. If the residual value reality proves current estimates overly optimistic, the resulting write-downs to bring Tesla's balance sheet accounts into line with market realities could be huge.

The Turbulent Short Squeeze The short squeeze began in earnest on April 1st after Tesla said it would report a first quarter profit without telling anyone that the profit was all nonrecurring fluff. The total short position was 31.3 million shares. Since April 1st an astounding 358.8 million shares have traded as short sellers closed out losing trades and opened new short positions at higher prices. In a frothy market like the one we've seen over the last several weeks, it's highly unlikely that the overall short position has changed significantly. The shorts have simply reloaded at a higher price. At March 30, 2012 Tesla's stockholders equity was \$168.6 million, or roughly \$1.46 per share. The recent stock offering increased net equity to \$532 million, or roughly \$4.45 per share. The \$85 spread between net equity per share and market value per share represents prevailing expectations that Tesla will be a stellar performer on a go forward basis. As near as I can tell, those expectations do not account for the ugly reality that the ZEV and GHG credit cornucopia is darned near empty and Tesla's magic financing scheme will savage future revenue and earnings.

The Ominous Hype Cycle One of my favorite market behavior graphs comes from the Gartner Group and shows the typical market value performance curve for a company like Tesla that's introducing an exciting new product to the market. Gartner calls the phenomenon the Hype Cycle. The process begins when a company emerges from the R&D phase and values climb through the early launch and glowing reports from early adopters. Within a short period of time expectations build to a point where they become irrational. Then the little failures and disappointments start cropping up and the market starts to take a closer look at the substance behind the excitement. In most cases it's a long downhill slide from the peak of inflated expectations. In February of this year I wrote, "At \$4 a share, Tesla would be an interesting speculative stock. At prices approaching \$40 a share it's a sucker's bet with limited upside and unlimited risk." Frankly I was amazed at both the strength of the short squeeze and Tesla's ability to strike while the iron is hot to capitalize on the event. I guess it just goes to show that some suckers bets pay off, but only if the sucker is smart enough to realize that he dodged a bullet and quit while he's ahead instead of going for the double or nothing bet. In light of Tesla's recent financing transaction, I have to update my prior conclusion. I now believe that Tesla would be an interesting speculative stock at a price of \$10 to \$15 per share. At prices in the \$90 range it remains a sucker's bet with limited upside and unlimited risk.

Disclosure: I have no positions in any stocks mentioned, and no plans to initiate any positions within the next 72 hours. I wrote this article myself, and it expresses my own opinions. I am not receiving compensation for it (other than from Seeking Alpha). I have no business relationship with any company whose stock is mentioned in this article.

The problem with Elon Musk's Women

 One wife claims he cheated on her and her kids and now has a reality TV show about how she got screwed by Musk. Another "wife" was a bar pick-up and now claims he uses high-end Los Angeles escorts. A high end Los Angeles escort is now shopping an article and camera phone video. Another Silicon Valley "special friend" is shopping a competing tell-all interview. With one wife claiming he "picked her up in a bar" and another blogging all of his inside dark secrets, one wonders if Musk has any people sense at all. Who will win? Not Musk, apparently. Watch "DIVORCE WARS" www.cnbc.com/id/41193264 "DIVORCE WARS". Read "VALLEY WAG" en.wikipedia.org/wiki/Valleywag "Valley Wag" See the psych "Is Elon Musk a Sociopath? Pundits weigh in:" 2013/04/27/new-investigation-data-revealed/ STUDY Here. -----

----- Elon Musk spends billions on research and PR companies to confirm that he is the most Interesting, Most Important Individual On Earth (Apologies to The Onion) Dear Mr. Musk: Thank you for hiring us. As you suspected, the results substantiate your theorem : We have confirmed, as you stated, that the widely held assumptions that you are the most significant and interesting person currently inhabiting the earth are true. Drawing from the results of a six-year study that carefully analyzed thousands of hours of your actions and conversations, the 220-page report concluded that your

ideas and opinions far surpass those of the other 7.1 billion people on the planet in terms of substance, depth, and general importance to the world. Throughout our study, we found clear and overwhelming evidence that you are not only the most compelling member of the human race, but also the most important, and by a wide margin, said the studys lead author Samuel Lerman, who noted that you are also far more noteworthy than all individuals who have ever previously existed in human history. There is a statistically significant gap between what you and the rest of humanity have to offer in terms of wit, charm, intelligence, creativity, and observational ability. Indeed, we found that the dynamic nature of your personality is of immeasurable value to society. Our findings also confirm that your insights on everything from politics to entertainment to social issues to religion are the most notable and well-thought-out, continued Lerman, adding that your viewpoints roundly trump the countless competing beliefs offered by the rest of the worlds population. You are, in short, the only person who matters. The rest of us do not matter. The report stated that people crave to hear from you at all times, asserting that your thoughts are the most profound, your stories the most gripping, and your approval the most desired. The study also demonstrated that no one else alive today has anything as perceptive and as consequential to say as you do, with researchers noting that when you choose to speak you are exceedingly captivating and enjoyable to listen to in a way that no other human being could ever approach. Furthermore, clinical observations showed that when you are not around, conversations among others invariably revert to speculation about what you are currently doing and what you would say about the discussion at hand. The report also confirmed that your words serve as a highly desired and desperately needed reprieve from the monotony and meaninglessness of what everyone else has to say. You are the center of everything, the report added. We found that what other people think or experience is completely irrelevant when compared to even the most minor thoughts and experiences in your everyday life, said Lerman, noting that only the things you see, do, say, and learn have any significance at all. The data clearly show that your feelings are the most authentic, your experiences are the richest, and your perspectives are the most unique. Frankly, the world only wants to hear about you and your life and nothing else. Indeed, thats what we all long for at every moment. The sociologist affirmed that all other humans on earth define their lives largely in relation to you and your existence, and reiterated the reports recommendation that you continue to make your views and ideas known as loudly and frequently as possible to eliminate any lingering doubts among the global populace regarding your supreme importance. The evidence conclusively shows that you, and you alone, provide meaning to everyone else in your workplace, your social network, and your family, as well as to all the strangers that you interact with only momentarily each day, said Lerman, who highlighted data indicating that others sense of fulfillment is derived solely from the opportunity to work, live, and exist alongside you. Without you, these groups and individuals—as well as society in general—would just drift aimlessly, feeling empty and incomplete. Lerman went on to state that you were and have always been the primary figure on the planet, noting that the worth and merit of every person, institution, and cultural phenomenon on earth hinged wholly on your personal perceptions and judgments about them. Our research definitively proves that when you go to sleep each night, the worlds entire narrative stops, and that it then restarts again as soon as you wake up, Lerman said. And according to our findings, when you die, all of this—the whole universe and everything in it—will end. It is scientifically indisputable that you are the single most important and fundamental being in existence, Lerman added. You are commensurate with the sun, the moon, the stars. In fact, you are the sum of all of these and more. The report summarized its results by concluding, You, you, you, you. The profiles that you hired us to write about how perfect you are, in all of those magazines, will pale alongside this report. -----

Did White House order "no more DOE Loans to be funded" in order to protect campaign financiers other investments?

Did White House order "no more DOE Loans to be funded" in order to protect campaign financiers other investments? No More DOE Advanced Auto Tech Loans Likely Article From: Automotive Design & Production AutoBeat Group The U.S. Dept. of Energy is not considering any further loans under its \$25 billion Advanced Technology Vehicles Manufacturing program, even though it has agreed to allocate only about \$8.4

billion so far. A study by the U.S. Government Accountability Office notes that DOE hasnt made a loan under the ATVM program in two years. It says most would-be applicants it interviewed believe the cost of the lengthy process, reviews and conditions place on the loan itself outweigh the benefits. DOE says it considers seven pending loans worth nearly \$1.5 billion inactive because applicants lack sufficient equity or their technology is not sufficiently ready to commercialize. The six-year-old ATVM program has approved at least six loans to date: \$5.9 billion to Ford Motor Co. in September 2009 to upgrade factories in five states to make more fuel-efficient vehicles \$1.4 billion to Nissan North America in January 2010 to prepare its factory in Smyrna, Tenn., to make electric vehicles \$465 million to Tesla Motors Inc. in January 2010 to launch EV production at its plant in Fremont, Calif., and to set up capacity to make batteries and powertrain components for plug-ins \$529 million to Fisker Automotive Inc. in April 2010 to develop two plug-in hybrid models (DOE froze the loan early last year because Fisker didnt meet performance targets) \$50 million to the Vehicle Production Group to develop a six-passenger, wheelchair-accessible vehicle than runs on compressed natural gas \$24 million for Tenneco Inc. in 2010 to produce emission control systems for light-duty vehicles (Tenneco withdrew its application in March 2010) ADP -----

Crony Socialism – House Committee: President Obama Used DOE Loan Money To Help Harry Reids 2010 Reelection Campaign

– Emails Show Specific Intent of DOE spending to support Harry Reid. Posted by sundance For any other President, with any other media, at any other time in our nation, this story alone would lead to impeachment.. Congressional Oversight Committee has specific fact-based proof that President Obama collaborated with the Dept. Of Energy to steer green energy/stimulus funding money into Nevada to support Harry Reids 2010 election. They openly admit as such. WASHINGTON – President Obama claims that political considerations did not influence the Energy Departments green energy loan program, but newly-released internal emails show that his administration subsidized Nevada companies in order to help Senate Majority Leader Harry Reid, D-Nev., win his 2010 reelection campaign. And these are decisions, by the way, that are made by the Department of Energy, they have nothing to do with politics, Obama said last week when asked about the green companies that have gone bankrupt despite receiving taxpayer support. The House Oversight and Government Reform Committee released DOE emails today that compromise Obamas position on two counts: one, the emails show that Obama himself was involved in approving loans; two, DOE officials were keenly aware of the political interests at stake, as they regarded the loans as a way for the White House to help Reid by giving him a way to brag about bringing federal money into Nevada. Messages from late in 2010 demonstrate that DOE officials were concerned that President Obamas personal desire to get DOE loans approved was putting tax payer money at risk. I am growing increasingly worried about a fast track process imposed on us at the POTUS level based on this chaotic process that we are undergoing, Loan Program Office Senior Credit Advisor Jim McCrea wrote to loan program executive director Jonathan Silver in October 2010. [B]y designing the fast track process and having it approved at the POTUS level (which is an absolute waste of his time!) it legitimizes every element and it becomes embedded like the 55% recovery rate which also was imposed by POTUS. Silver was sympathetic to McCrea, but said it was too late to change course. While I might agree with you intellectually, that is not where we are, he wrote back. Lets finish this process and get back to business. By that point, McCrea might have regretted the political interest in the loan program, but he was quite happy about it only months earlier. In December, 2009, McCrea forwarded one of his colleagues an article about how Reid would struggle in the 2010 campaign along with a comment on how it might affect the DOE loan program. Reid may be desperate, McCrea wrote. WH may want to help. Short term considerations may be more important than longer term considerations and whats a billion anyhow? Thats a troubling closing question given that the DOE lost over half-a-billion dollars on one company when Solyndra went bankrupt. In that same message, McCrea also speculated that, in light of Reids campaign struggles, there may be an opportunity to move several transactions simultaneously, allowing LGPO to finish with a trifecta! A May 2010 email shows that Reid requested a meeting with Jonathan Silver — the Obama bundler who resigned his post at DOE after the Solyndra bankruptcy — to discuss green energy projects in Nevada. Silver interpreted Reids request in light of the campaign. Reid is constantly hit at home for not bringing in the federal dollars, he wrote. Silvers task, according to the DOE memo prepared for his meeting,

guarantee, Stryker visited the White House. "The White House did not confirm that the visitor was the Pat Stryker in question and did not provide details about the meeting," Sunlight says. When the White House Press Secretary Jay Carney was asked about meetings with George Kaiser (an Obama bundler and financier for Solyndra, which also received a DOE loan guarantee), he indicated that no discussions of the loan program ever took place. <http://campaign2012.washingtonexaminer.com/blogs/beltway-confidential/emails-show-obama-donor-discussed-solyndra-wh> Recently-released emails from Kaiser show that he did discuss Solyndra with White House officials, despite earlier denials. Nissan Whistleblower facing constant intimidation and attacks after Nissan gets Steven Chu hand-out

Those who speak out get a contract put out on them. They are targeted for taxes, character assassination, job database black marks, blog attacks, insurance delays, email hacking and other seedy intimidation efforts that Big Washington insiders specialize in. DOE staff gave special consideration to Nissan and gave this Japanese company massive amounts of your United States tax dollars that they did not even need. The hundreds of other applicants needed the money, Nissan did not need your tax dollars. Why did they get it? Who profited in the transaction process? When you draw lines between the same bunch of characters in the Solyndra, Tesla & Fisker game; why are the same few people on the chart in a country with tens of millions of other options?: Sharyn Bovat, a NISSAN whistleblower, is speaking to CoolSprings.com after she was jailed by Franklin police last Wednesday for what she has described as an act of retaliation after whistle blowing against a Southern Good ole Boy Network. Bovat, a former executive relocation consultant for five major companies, managed the moves of several top NISSAN executives to Middle Tennessee. Bovat was asked by HR to relocate NISSAN board member Carlos Tavares, the first Executive Vice President & NISSAN Board of Directors member to reside outside of Japan. During the relocation process Mr. Tavares discovered more than he anticipated from the person assigned to ease his transition to life in America. NISSAN North America is located in Middle Tennessee, known as the buckle of the Bible belt. Headquartered in the city of Franklin, which Bovat describes the community as a who knows who society. Employees at NISSAN knew she had access to Tavares and told her of discrimination, corruption, & wasteful spending of taxpayer money. The State of Tennessee spent millions relocating NISSAN to the Cool Springs area of Williamson County. A large portion of those relocation expenses were paid by TN taxpayers. Several times Bovat inquired if certain spending was OK. In 2008 when asked by a French NISSAN Vice President to find a spa for oxygen facials, she documented the abusive spending of taxpayer money. While she was asking NISSAN employees on the executive floor about spending issues, Bovat was told skirts dont speak. Whistleblower Sharyn Bovat As the daughter of a former mayor-activist-lobbyist, she was taken by her mother in the late 60s to marches to fight for womens rights. After hearing those words in 2009 at a public company that was taking American taxpayer money, Bovat became upset and told Tavares. When asked to describe the heart of the problem in Middle Tennessee, Bovat quickly points out a southern Good ole boy Network that permeated HR at the NISSAN North American HQ. Women in management declined 30% according to NISSANs own internal statistics. Bovat has said it was known inside HQ that Good ole boys were strategically replacing women with their unqualified buddies. In February 2009 Bovat learned the Good ole boys in HR had placed individuals in every division to protect their own during cutbacks caused by the economic crisis. She also discovered HR had planned to fire the Californians who relocated with NISSAN in 2006-2007 first. Disgusted with that policy Bovat remarked, It was not fair; they uprooted their families to move to Middle Tennessee, only to be discriminated against. Bovat told Carlos Tavares in March 2009, who stopped it from materializing. Nissan's Carlos Tavares After she saved the Californians, NISSANs HR Director called Bovat into four meetings. She sensed HR wanted to get rid of her, although she knew Tavares appreciated her efficiency and honesty. During one of those meetings, the Director of NISSAN HR asked Bovat to do something unethical to prove she was a team player. She refused. Bovat knew if she wanted to work for NISSAN she would have to comply. Bovat told Tavares, who then referred her to the HR Directors supervisor Mark Stout, the head of

NISSAN HR. In a later meeting on the executive floor, Mark Stout offered Bovat money to be silent. Instead of cashing in she told Tavares about HR being unethical. Starting June 4 2009, Bovat has documented and stated the allegations on her public blog. Since then, Bovat says she has been harassed and slandered by NISSAN HR. Bovat wanted to keep quiet and expressed to Carlos Tavares that she wanted to return to work at NISSAN. Several months ago, Tavares emailed her to relay that things were proceeding. But with the continued harassment, Bovat wrote an open letter on her blog to the ACLU, in an effort to locate an attorney to help with her civil rights and whistle blowing issues. Looking for resolution, Bovat went to NISSAN HQ on July 7 2010, in hopes of receiving a time frame for positive change. When Bovat entered the lobby, she was instead greeted by the same people she has fought against for the last year. Minutes later, several Franklin police cruisers arrived and officers filled the NISSAN HQ lobby, arresting Bovat for criminal trespassing. Bovat says, Rob from Nissan legal bullied the Franklin police into arresting me, using a year old, outdated photocopy of a cease and desist originally intended to intimidate me and to shut down my blog. Bovat has stated on her blog that shell take it down when Nissans Carlos Tavares asks her. When Bovat heard from Tavares several months he did not tell her to take down the blog. All the allegations Bovat has made, have been visible on her public blog for the past year. Bovat says that fact alone give her credibility. Statistics from her blog show tens of thousands of visitors from six continents. It seems like this skirt has spoken and people are now listening. (The exclusive interview above with Sharyn Bovat took place Tuesday 7/13/10 in Cool Springs, TN) <http://www.coolsprings.com/news/nissan-whistleblower-arrested/> <http://nissanwhistleblower.com/>

[/?p=411](http://atvmdoe.wordpress.com/?p=411)

Additional criminal evidence has been found to be posted at: <http://atvmdoe.wordpress.com/> Apparently this was created, in part, by former lobbyists for General Motors and fired NUMMI workers. This shows that the entire auto funding and cleantech DOE program was a huge series of kickback schemes and political control boondoggles. Implicated in the scam are Senators, White House Staff, Big Companies, Investment Banks and Venture Capital Guys. The same people that are implicated are the same people that are stalling the investigations. Cat Wisen- Contract Reporter- LA Times, Boston Herald

Credits fueled Tesla stock sale? Tesla manipulating stock reports?

 [/2013/06/abc-logo-1.png](http://2013/06/abc-logo-1.png)  **MONEY** How Investors May Be Getting Fooled by Buybacks **NEW YORK** March 11, 2014 (AP) By BERNARD CONDON AP Business Writer If you're puzzled why the U.S. stock market has risen so fast in a slow-growing economy, consider one of its star performers: DirecTV. The satellite TV provider has done a great job slashing expenses and expanding abroad, and that has helped lift its earnings per share dramatically in five years. But don't be fooled. The main reason for the EPS gain has nothing to do with how well it runs its business. It's because it has engaged in a massive stock buyback program, halving the number of its shares in circulation by purchasing them from investors. Spreading earnings over fewer shares translates into higher EPS — a lot higher in DirecTV's case. Instead of an 88 percent rise to \$2.58, EPS nearly quadrupled to \$5.22. Companies have been spending big on buybacks since the 1990s. What's new is the way buybacks have exaggerated the health of many companies, suggesting through EPS that they are much better at generating profits than they actually are. The distortion is ironic. Critics say the obsessive focus on buybacks has led companies to put off replacing plant and equipment, funding research and development, and generally doing the kind of spending needed to produce rising EPS for the long run. "It's boosted the stock

market and flattered earnings, but it's very short term," says David Rosenberg, former chief economist at Merrill Lynch, now at money manager Gluskin Sheff. He calls buybacks a "sugar high." Over the past five years, 216 companies in the S&P 500 are just like DirecTV: They are getting more of a boost in EPS from slashing share count than from running their underlying business, according to a study by consultancy Fortuna Advisors at the request of The Associated Press. The list of companies cuts across industries, and includes retailer Gap, supermarket chain Kohl's, railroad operator Norfolk Southern and drug distributor AmerisourceBergen. The stocks of those four have more than tripled, on average, in the past five years. Companies insist that their buybacks must be judged case by case. "The vast majority of our shareholders are sophisticated investors who not only use EPS growth but other important measures to determine the success of our company," says Darris Gringeri, a spokesman for DirecTV. But Fortuna CEO Gregory Milano says buybacks are a waste of money for most companies. "It's game playing — a legitimate, legal form of manufacturing earnings growth," says Milano, author of several studies on the impact of buybacks. "A lot of people (focus on) earnings per share growth, but they don't adequately distinguish the quality of the earnings." So powerful is the impact, it has turned what would have been basically flat or falling EPS into a gain at some companies over five years. That list includes Lockheed Martin, the military contractor, Cintas, the country's largest supplier of work uniforms, WellPoint, an insurer, and Dun and Bradstreet, a credit-rating firm. It's not clear investors are worried, or even aware, how much buybacks are exaggerating the underlying strength of companies. On Friday, they pushed the Standard and Poor's 500 stock index to a record close, up 178 percent from a 12-year low in 2009. "How much credit should a company get earning from share buybacks rather than organic growth" asks Brian Rauscher, chief portfolio strategist at Robert W. Baird & Co, an investment company. "I think the quality of earnings has been much lower than what the headlines suggest." And it could get worse. Companies in the S&P 500 have earmarked \$1 trillion for buybacks over the next several years. That's on top of \$1.7 trillion they spent on them in the previous five years. The figure is staggering. It is enough money to cut a check worth \$5,345 for every man, woman and child in the country. There is nothing necessarily nefarious or wrong about buybacks per se. It doesn't seem that managements are trying to cover up a poor job of running their businesses. Even without factoring in a drop in share counts, earnings in the S&P 500 would have risen 80 percent since 2009. The problem is that many investors are pouring money willy-nilly into companies doing buybacks as if they are always a good thing, and at every company. A fund that tracks companies cutting shares the most, the PowerShares Buyback Achievers Portfolio, attracted \$2.2 billion in new investments in the last 12 months. That is nine times what had been invested at the start of that period, according Lipper, which provides data on funds. For their part, the companies note there are all sorts of reasons to like them besides EPS. WellPoint points out that it has increased its cash dividend three times since 2011, a big draw for people looking for income. Cintas says that it's timed its buybacks well, buying at a deep discount to stock price today. And DirecTV says investors judge it also by revenue and cash flow, both of which are up strongly. What's more, companies seem to genuinely believe their shares are a bargain and they'd be remiss for not buying, though their record of choosing the right time is poor. The last time buybacks were running so high was 2007, right before stocks fell by more than half. There are signs the next \$1 trillion in buybacks for S&P 500 companies could also prove ill-timed. Stocks aren't looking so cheap anymore. After a surge of nearly 30 percent last year, the S&P 500 is trading at 25 times its 10-year average earnings, as calculated by Nobel Prize winning economist Robert Shiller of Yale. That is much more expensive than the long-term average of 16.5. Many investors assume shrinking shares automatically make remaining shares more valuable. The math is seductive. A company that has \$100 in earnings and 100 shares will report \$1 in earnings per share. But eliminate half the shares and the same \$100 is spread over 50 shares, and EPS doubles to \$2. But that doesn't make the shares more valuable. Shares aren't just a claim on short-term earnings. They are an ownership stake in an entire company, including R&D programs and its capital stock — the plants, equipment and other assets needed to boost productivity long into the future. Critics say the lavish spending on buybacks has "crowded out" spending on such things, which is at its weakest in decades. "It's just like your car depreciating or your home depreciating — you have to invest," says Gluskin Sheff's Rosenberg, "The corporate sector has barely preventing the capital stock from becoming obsolete." One result: U.S. productivity, or output per hour, increased just 0.5 percent last year, a pitiful performance. It has grown by an average 2 percent a year since 1947. If not reversed, history suggests stocks will suffer. In a 2010 study, Fortuna's Milano found that stocks of companies that spent the most on buybacks vastly underperformed stocks of those that spent the least on them — at least over five years. It's unclear whether the kind of investor who dominates stock trading now cares about the long-term, though. Buybacks are one of the few sure-fire ways to push a stock higher in the short term,

and investors these days are very short term. They "don't care what happens in three or five years," laments Rauscher, the Baird strategist. "The market has become less of an investor culture, more of a trading one." — Follow Bernard Condon on Twitter at <http://twitter.com/BernardFCondon>. -----
 ----- Thursday, Jun 06 2013 11:00 PM Credits fueled Tesla stock sale? By The Bakersfield Californian
 Concerning your May 31 editorial ("Some clean energy bets pay off nicely") on Tesla Motors paying off the government loan: In 2010, Tesla was awarded a milestone-based loan, requiring matching private capital obtained via public offering, by the Department of Energy as part of the Advanced Technology Vehicle Manufacturing Loan Program. This program was signed into law by President George W. Bush in 2008, and then awarded under the Obama administration in the years that followed. The loan payment was made using a portion of the approximately \$1 billion in funds raised in the previous weeks concurrent offerings of common stock and convertible senior notes. According to a May 8 USA Today report by James R. Healey and Fred Meier, Tesla made a first-quarter profit of \$11 million on revenues of \$562 million. But Tesla gets government zero-emission-vehicle (ZEV) credits for each car it builds, credits that can then be auctioned to other automakers to offset their non-zero-emission vehicles. The company income from sales of ZEVs came to about \$68 million in the quarter, or 12 percent of revenue. So, if you take away the ZEVs, Tesla lost \$57 million. It sounds to me like the first-quarter profit allowed Tesla to make a stock offering to which the government loan was paid from. The profit was from government money in the way of ZEVs. Would the stock sale have been as good if Tesla had shown a \$57 million loss? It's interesting how you tied Bush to the failed Solyndra loan and President Obama to the Tesla loan, when in fact the Obama administration made both loans. Tom Wimberly Bakersfield

TESLA TRUTH TICKET:

Do you know what people are thinking of **you** when they see **you** driving this Tesla car?: "What an arrogant elitist", "What a 1%er!", "How could they be so uninformed!", "Why would they want to drive the poster car of corruption", Look it's a Solyndra-mobile", "Who is that dick **Do you want that?** Why would you drive a car that makes everyone sneer at you and think you are a bad person? Have you not been reading the news?: The lithium ion batteries under the entire floorboard of this car can go up in flames, for no reason, at any moment. Tesla has published private patent papers saying they knew this but they did not tell you. The company is based on nearly free federal money they got by bribing Washington officials to get your tax dollars to make profits for a billionaire and bankers who did not need the money. You can get a Nissan Leaf or many other, non-tainted, electric cars that do the same thing for about \$20,000 without feeling like a loser. The founders of Tesla were kicked out in a hostile take-over. You are supporting evil-doers, not innovators, by owning this car. The company owes more money than it can pay back, nobody is buying the cars in any amount that counts, they are just using their VC money to keep the company looking like it is alive to avoid political embarrassment. Relative to the amount of money invested, they have sold less cars than any car company in history after 10 years of trying to sell a non-innovative thing. They won't be around much longer. The real numbers (not the ones in their fake accounting) don't lie.

Give the car back, get your money back. Others are cancelling their reservations. Don't be stuck with an albatross that **ruins your personal AND family brand** by associating you with creeps. All this information is plainly visible in an online search.

(This ticket is being placed on every Tesla in the world by concerned neighbors in your community and others. If you care about truth, please copy this and place it on other Tesla's)

Have you seen these facts in the news:

We are most interested in having Elon Musk answer these questions in front of the U.S. Congress during a live broadcast:

- Has your company, or anyone associated with your company, ever hired multitudes of fake bloggers to post fake positive reviews about Tesla motors in order to simulate interest?
- Has Tesla Motors ever compensated a publisher, or industrial rating company, for positive reviews or ratings?
- Does Tesla Motors believe that the coordinated manipulation of the public perception of a company, trading on the stock market, via the dissemination of inaccurate data by the companies spokesperson is not stock fraud and a violation of SEC laws?
- What percentage of Tesla Motors do Google's investors, staff and executives own cumulatively?
- How much money did those Tesla/Google investors contribute to election campaigns from 2007 to today? Which campaigns? Did the winners in any of those campaigns award U.S. taxpayer funds to the portfolio companies of those investors? How much money?
- When Tesla Motors applied for the Department of Energy funds Elon Musk stated that Tesla was in exceptional financial health, yet now Elon Musk, and his senior staff, have been recorded stating that the company was nearly bankrupt then. In light of these more recent revelations, is that not a felony violation of the federal "Section 136 Law" which states that 'a company cannot be on the verge of bankruptcy or it shall not receive Department of Energy funds'? New disclosures show that Tesla stated information in it's federal application which Tesla's founders and staff have stated they knew was false at the time. Should Tesla be prosecuted for this?
- Did Deloitte, under contract to Tesla, arrange false accounting via the Tesla Wells Fargo bank account while Deloitte was also acting, in conflict of interest, as the Department of Energy reviewer of applicants?
- Does Tesla Motors have a confidential relationship with a national group of reporters, from different publications, who have agreed to release Tesla-positive news spin stories on a synchronized basis, at the same time, in order to coverup Tesla investigation disclosures and artificially accelerate stock market vales? Has Tesla Motors arranged with Google to have negative Tesla Motors stories down-ranked while having positive Tesla stories up-ranked? Would that be considered stock fraud?
- How many Senators and their families, that you are aware of, own stock in Tesla Motors?
- Was Elon Musk promised any NASA contracts, in advance of the closure of a portion of NASA, in exchange for campaign funding from Tesla and Google investors?
- How many Senators, their families and Google-related investors, that you are aware of, hold stock in lithium-ion battery related companies?
- Has Steven Chu, the former head of the Department of Energy, ever had a personal relationship with any Tesla staff or investors?
- Has Senator Dianne Feinstein, or her family, ever had a personal relationship with any Tesla staff or investors?
- Why are Tesla and Solyndra on the same physical plot of land?

- Has anyone from Senator Dianne Feinstein's office also worked for Tesla Motors and/or Solyndra?
- Has anyone associated with Senator Dianne Feinstein's family, named Herb, ever supplied staffing services to Tesla?
- Has anyone associated with Senator Dianne Feinstein's family had any relationship with the real estate transactions involving Tesla and/or Solyndra real estate?
- Panasonic, your battery partner, has been charged with organized crime, dumping, price fixing, the deaths of thousands of battery workers from toxic poisoning and with building lethal battery factories that destroyed all of the towns near them. Is that a problem?
- Do your battery packs release toxic and/or cancer causing fumes when they burn?
- What was your relationship with Eric Strickland, the head of the National Highway Transportation safety agency who quit his job 48 hours after being notified that the toxic Tesla report he knew about was going public?
- Did you falsify lithium-ion safety reports?
- Bernard Tse, your battery program director, and 7 other senior staff, provided your company with numerous severely concerning lithium-ion safety reports which were never presented to the Department of Energy. Were these reports covered up because the Senators and Investors of Google and Tesla all have ownership interest in the lithium-ion industry?
- Has Elon Musk ever spied on his own employees and competitors?
- Has Elon Musk ever undertaken sabotage programs against his competitors?
- Did your SEC filings use tax credits from the White House to make Tesla look like it had profits?
- What was Tesla's debt ratio at the time that Tesla applied for the DOE loan? Why do you think Tesla had the worse debt ratio of any applicant yet Tesla was awarded funds with almost no review?
- Why has Tesla spent billions, and a decade, to only sell a few cars when all of your competitors have done 20 times better on less money and in less time? Why are over 200 technical problems with the car documented online by Tesla owners yet you say nothing about those problems? Why are you being sued for fraud under the Federal "Lemon Law"?
- Why were your cars \$100,000.00 over budget PER CAR, at the time of your Department of Energy loan application, yet nobody at the DOE commented about that in their review notes?
- Did Steven Chu's senior staff: Matt Rogers and Steven Spinner have any relationship with Tesla-related investors prior to Chu hiring them at the DOE? Was it coincidental that McKinsey Consulting, the company they worked for, produced all of the pitch documents for the White House and Congress, which were used to steer the Federal funds to Tesla Motors?
- Was Tesla Motors funded as a gift to campaign investors?
- Are you trying to build a battery factory not far from Mexico in order to take advantage of Mexican workers? Are you concerned that most battery factory workers in China were poisoned with toxins? Are you concerned that your battery factory will ENCOURAGE immigration abuse and devastate our border?

Taxpayers' loss on GM bailout looks to be about \$10 billion – Yet another kick-back scheme to buy union votes?

Taxpayers' loss on GM bailout looks to be about \$10 billion By Jerry Hirsch June 7, 2013 The U.S. Treasury's deal to sell 30 million shares of General Motors Co. will recoup taxpayers another \$1 billion of the bailout money the government put into the automaker back in 2009. All told, taxpayers have recovered \$32.5 billion of the \$49.5 billion used to restructure the nation's biggest automaker. The government also still owns 189 million GM shares, worth about \$6.5 billion at the \$34.41 share price that the Treasury got for the batch of stock it sold this week. If the Treasury is able to liquidate its remaining stock, as it plans to do over the next 15 months, at that price or above, the government will still be short about \$10 billion on its GM investment.

Cornell University Says Tesla Batteries Are Failed in Technology and Plans

By Ronald D. White Just three days after Tesla Motors Inc. Chief Executive Elon Musk unveiled plans to greatly accelerate the rollout of his company's coast-to-coast fast charger network, an expert in a competing technology was saying wait a minute, not so fast. Paul F. Mutolo, director of external partnerships at the Energy Materials Center at Cornell University, said that he didn't think that Tesla's fast charge claims, or its batteries, would hold up under scrutiny. Mutolo said it was encouraging to see Musk going after the alternative-fuel infrastructure problem "in a meaningful way." Electric car comparison test: EV specifications But Mutolo added, "That said, the consumer should be wary of two things, hype and safety." Mutolo said it wasn't likely that a driver would get more than 140 miles out of a 20-minute charge, and only that far if they were traveling less than 50 miles an hour. "The numbers don't add up," Mutolo said. On Friday, Musk had said that his supercharger network would soon allow cross-country travel from New York to Los Angeles -- free of charge, so to speak -- for drivers of the Tesla Model S sedan, which starts at about \$70,000. The super-charging stations are about 10 times faster than other available electric vehicle charging stations. Mutolo also said that current lithium ion technology wouldn't safely allow such a powerful charge. "It could potentially catch on fire. Not a good idea," Mutolo said. It should be said here that Mutolo is a hydrogen fuel cell chemist, a competing technology. Musk has made no secret of his disdain for hydrogen fuel cell technology powering the nation's cars, once saying hydrogen "makes no sense" for powering cars. ----- Musk and battery industry funded shill group "Plug-In America" tried to promote lies to cover the VC's investment in Tesla. ----- The Dangers of Tesla batteries are shown at: <http://lithium-ion.weebly.com> <http://lithium-ion.weebly.com> <http://lithium-ion.weebly.com> and <http://youtu.be/cTqnP0McPcs> <http://youtu.be/cTqnP0McPcs> <http://youtu.be/cTqnP0McPcs> and <http://tinypic.com/r/7295hs/6> and <http://theunderstatement.com/post/18030062041/its-a-brick-tesla-motors-devastating-design> <http://theunderstatement.com/post/18030062041/its-a-brick-tesla-motors-devastating-design> <http://theunderstatement.com/post/18030062041/its-a-brick-tesla-motors-devastating-design> and <http://www.ihatethemedia.com/tesla-motors-devastating-design-problem> <http://www.ihatethemedia.com/tesla-motors-devastating-design-problem> and <http://capoliticalnews.com/2012/02/22/tesla-obama-friend-builds-cars-with-bad-batteries-taxpayer-investment-one-billion/> <http://capoliticalnews.com/2012/02/22/tesla-obama-friend-builds-cars-with-bad-batteries-taxpayer-investment-one-billion/> <http://capoliticalnews.com/2012/02/22/tesla-obama-friend-builds-cars-with-bad-batteries-taxpayer-investment-one-billion/> and <http://www.yourlawyer.com/blog/tesla-roadster%e2%80%99s-battery-drains-the-wallet/> <http://www.yourlawyer.com/blog/tesla-roadster%e2%80%99s-battery-drains-the-wallet/> <http://www.yourlawyer.com/blog/tesla-roadster%e2%80%99s-battery-drains-the-wallet/> and thousands more white papers, studies, reference links and articles...

Senator Charles , Consumers Union and other groups call for investigation of exploding lithium ion batteries. Same batteries as used in Tesla and Fisker. | Solyndramobile: How bribery & corruption ruined the auto markets

'PLUG-IN AMERICA' is a shell organization funded by back-door money pass-alongs and blind front "donations" from Silicon Valley VC's, Tesla and their battery companies. They exist to push out fake, biased, slanted media hype which supports A123, Exide, Enerdel and other bankrupt battery companies which the Silicon Valley cartel invested in and bribed Congress to only support. Tammy Olay Denver, CO

Elon Musk's Buddy: Steven Chu lives in Fantasy World. Publicly states the kickback scheme that got him his Stanford job as part of his payoff was not failed

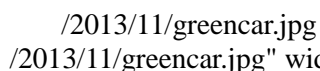

Ex-Energy Secretary Chu: Our green-energy loans were more successful than Wall Street posted on June 10, 2013 by Erika Johnsen The Department of Energy is currently hanging back somewhat with issuing new government (i.e., taxpayer)-backed loans to what federal bureaucrats so augustly deem to be promising green-energy companies through its several loan programs — you'll remember the highly public Solyndra, Abound Solar, and Fisker Automotive debacles — but over the weekend, former Secretary of Energy Steven Chu sprang to the defense of some of the programs he once oversaw in an interview with the San Francisco Chronicle, and no, he neither regrets nor apologizes for the socialized losses of the Obama administrations failed ventures. Q: How well would you say we've done in terms of making that transition in our energy system? A: "Well, certainly the Recovery Act helped a lot, because there were things in it to help deployment. Renewables doubled during the first four years. Most of its wind. Solar increased about tenfold, in part because the prices came down. Deployments increasing. Also, the White House is thinking we've got to start to plan the (electric) grid. The grids going to take decades. I believe we need a new business model." Q: And it wasn't just because Solyndra blew up? A: "No. This is not widely appreciated, but Congress, with the renewable energy loan program, and the advanced (vehicle) manufacturing (program), they appropriated enough for \$10 billion in losses — \$10 billion. We're not going to get to \$10 billion. We might get to \$2 billion. When Solyndra blew up, that was (a half billion). You appropriate \$10 billion, and you won't even tolerate a half a billion? We're going to have a few more bankruptcies. Sometimes it'll be like Solyndra where you get 3 cents on the dollar. Others, it'll be 80 cents, or something like that. If you look at what got started and what became bankable, was it successful? Yes. We were more successful than Wall Street. So come on, guys." Well. That's one way of looking at it, I suppose. The Department of Energy is quick to tout that its green-energy loan guarantee program has a success rate in the ninetieth percentile, whatever that means — I suppose we're meant to overlook the fact that losses could (and likely will) emerge over several more years, but let's get real here. It would not matter either way if the Department of Energy had had a one hundred percent success rate or a zero percent success rate, and that Congress has already budgeted for the inevitable failures is a travesty in and of itself. It is not the business of the U.S. government to invest taxpayers dollars in start-up ventures of any kind. Bureaucrats taking risks with money that is not theirs based on political motivations rather than personal and hence careful investment decisions? We already have a private sector that does that job extremely well, because the main interest of the private sector is not political pipe-dreaming but rather turning a profit — and that is a good thing. The only way to succeed is to produce a product that can withstand the competition of the free-market economy based on its merits. As I've written about China, Germany, and Spain over the weekend, they now have too-expensive energy markets flooded with renewable projects that can't actually compete or offer a product that consumers voluntarily want to buy because of government-commandeering of the market with subsidies and incentives, and now both their governments and the people they artificially directed to make those investments are suffering crazy losses. With these types of programs, risk is often transferred to taxpayers; the government directs money toward certain projects and in effect possibly inhibits innovation in other areas that aren't the political darlings of the moment;

and they increase the cost of borrowing across the market in general. Whats more, the opportunities for economically costly cronyism get bigger and bigger with every unwarranted involvement in free-market signals the federal government affords itself. Bad idea, all around. ----- Students at Stanford: Walk up to Chu on his little bike at Stanford University with your I-Phone and catch him on YOUTUBE responding to questions listed on this site. Anderson Connors- Stanford Stay Tuned for the encounter between the Author of "Throw them all out" and Steven Chu, on Campus, at Stanford in a surprise webcast. Mr. A- A teacher at Stanford Steven Chu was either a weak simpleton that was being used as a figure-head by a brutally corrupt façade group at DOE who conduited taxpayer money to their friends so they could rake in huge "fees" or HE WAS the brutally corrupt façade. Is SolarCity's use of Tesla batteries unsafe for homes and for Solarcity?

Is SolarCity's use of Tesla batteries unsafe for homes and for Solarcity? Washington, DC - Solarcity has announced that they will be using Tesla's lithium ion battery systems for their energy systems. Engineers are wondering if this is a good idea in light of the extensive numbers of lithium ion fires that have taken place, with little or no stimulation. Lithium ion Apple tablets and cell phones have exploded into flames and burned down the structures they were in as documented when you search the phrase: "ipad air explodes". Authorities in Sugar Land, Texas, ruled that the Fisker Karma parked in the attached garage of a newly built home was the origin of a fire in 2012 that completely destroyed the car as well as the garage and a portion of the house, causing hundreds of thousands of dollars worth of damage. The owner and his family escaped safely. The batteries were the same kind of lithium ion batteries used in the Tesla and now intended to be used by SolarCity. This video shows another one just blowing up in flames for no good reason: [id="title_2" http://dailybail.com/home/watch-as-another-fisker-karma-spontaneously-combusts-the-100.html](http://dailybail.com/home/watch-as-another-fisker-karma-spontaneously-combusts-the-100.html) name="title_2 Watch As Another Fisker Karma Spontaneously Combusts, The ... VAMPIRE POWER DEFECT slams entire Tesla Model S fleet! TESLA SUCKING: TOO MUCH ENERGY

 TESLA SUCKING: TOO MUCH ENERGY Life With Tesla Model S: Even After Update, Vampire Draw Remains By David Noland Nov 25, 2013 The Tesla Model S, for all its technical and design artistry, has a dirty little secret: the car has a substantial appetite for kilowatt-hours even when turned off and parked. Since the Model S was introduced in 2012, this "vampire" power drain from the cars sold so far has consumed roughly 15 gigawatt-hours of electric energy, nearly a day's output for a mid-size nuclear power plant. It's enough wasted energy to drive the cars 50 million miles. 2013 Tesla Model S electric sport sedan [photo by owner David Noland] 2013 Tesla Model S electric sport sedan [photo by owner David Noland] After nine months of promises to fix it, Tesla finally sent out a software update a week ago to the Model S fleet that it claims "significantly reduces power usage when (the car is) shut down." But based on a week's worth of measurements on my 60-kWh Model S, I've concluded that the new software is only mildly effective. As far as I can tell, the vampire's fangs are still sharp. Wasted power Shortly after taking delivery of my Model S last February, I noticed that I would typically lose 10-15 miles of indicated range overnight. On

average, I was losing 23 miles of indicated range every 24 hours. But indicated-range numbers can be quirky, so I asked an electrical engineer friend to cobble together a kilowatt-hour meter. Using the meter, I measured my vampire power drain at about 4.5 kilowatt-hours per day. That's the equivalent of three 60-watt light bulbs burning 24/7. It was enough energy to drive about 13 miles per day--almost 5,000 miles a year. However you measured it, the Model S vampire was a voracious beast. Why the Model S? The Chevy Volt and Nissan Leaf, the other two best-selling electric cars in the U.S., have essentially zero vampire loss. As far as I know, so do all the other electric cars on the market. 2011 Chevrolet Volt and 2013 Tesla Model S [photo: David Noland] 2011 Chevrolet Volt and 2013 Tesla Model S [photo: David Noland] So what's the problem with the Model S? According to Tesla, the car needs a constant flow of power to keep its computers and systems switched on 24/7, ready to boot up instantly when the driver gets into the car. It's a popular myth among Model S owners that much of the vampire power goes to keep the battery warm during cold nights. This is simply not true. According to Tesla, there is no thermal management of the Model S battery when the car is turned off and not charging--no matter how cold it gets. We can't help but notice that General Motors and Nissan seem to have figured out a way to make their cars start up instantly without a similar 24/7 power drain. Odd that a multibillion-dollar company in the heart of Silicon Valley couldn't figure out a way to do that, too. Complex history Ironically, the Model S had very little vampire drain when it was first introduced. My owner's manual is based on the original software in the car. "When you're not driving Model S, the Battery discharges very slowly to power the onboard electronics," it purrs reassuringly. "On average the battery discharges at a rate of 1 percent per day." 2013 Tesla Model S electric sport sedan [photo by owner David Noland] 2013 Tesla Model S electric sport sedan [photo by owner David Noland] Unfortunately, the "sleep mode" software in those early cars triggered all sorts of glitches in the car's other systems. Eventually, the problems became so persistent that Tesla simply disabled the sleep mode. With sleep taken away, the vampires came out to play. And instead of draining 1 percent every 24 hours, the Model S battery suddenly began losing 5 or 6 percent of its charge every day. (In the case of 60-kWh cars like mine, it's closer to 7 or 8 percent.) Last March, Tesla CEO Elon Musk addressed the vampire/sleep-mode issue in a meeting with Norwegian Model S buyers in Oslo. Musk promised that a new sleep mode would reduce vampire losses to a mere 0.2 percent--an insignificant 170 watt-hours--per day. Deadline missed And, he said, the new sleep-mode software would be installed by the time the Model S was introduced in Norway--then set for July. It didn't happen. And the backtracking began almost immediately. Later that spring, a Tesla owner's hot-line rep told me the new sleep mode would be introduced in two phases: a preliminary software update that would cut the vampire drain in half by summer, followed by Musk's promised total solution before the end of the year. But as the summer progressed, several software updates came along, with nary a hint of a sleep mode. Early bugs Finally, in August, new cars began rolling off the production line with software update 5.0, which contained the long-awaited vampire-slayer, among other improvements. Tesla made no claims about how much energy would be saved, but one electric-car news site, without citing its sources, put the vampire reduction at 50 to 75 percent. Unfortunately, update 5.0 proved to have serious bugs in some of its other features, particularly the GPS system. It was sent out to only a few cars in the field. (Mine was not one of them.) In October, an improved version, update 5.6, was rolled out, again to a limited number of cars in the field. (Again, not mine.) 2013 Tesla Model S electric sport sedan on delivery day, with owner David Noland 2013 Tesla Model S electric sport sedan on delivery day, with owner David Noland Finally, in mid-November, my car was updated remotely by the factory with version 5.8, apparently along with the entire fleet of Model S cars then on the road. (Version 5.8 replicated all of the updates in 5.6, including the anti-vampire mode, and also disabled the high-speed "crouch" feature on cars with air suspension, apparently to reduce the car's susceptibility to damage from road debris. But that's an entirely different story.) I was ecstatic. Free at last--or at least 50 to 75 percent free at last-- from the fangs of the loathsome beast! Not so fast Unfortunately, it appears as if the vampire-slayer software is only mildly effective, at best. The first night after downloading update 5.8, I lost 6 miles of range overnight, equal to a rate of 16 lost miles for a full day. After six nights, I was averaging 15 indicated miles lost per day. That's about 35 percent less than the comparable figure (23 miles) from my tests last spring. 2013 Tesla Model S electric sport sedan on delivery day, with owner David Noland 2013 Tesla Model S electric sport sedan on delivery day, with owner David Noland But indicated miles, subject to the vagaries of temperature and algorithm, don't tell the whole story. Only a kilowatt-hour meter can give an accurate figure. So far I've run three overnight tests with the kWh meter. For each test, I charged the car up in the evening to its usual selected level (In my case, about 80 percent). Then I removed the charge plug. I allowed the car to sit unplugged overnight and on into the next day, until I needed to drive it. (Typically a span of 12 to 24 hours.) Before driving it, I plugged it back in to top off the

vampire-depleted battery back to its original level. Then I checked the kWh-meter. Test results The three tests showed vampire losses of 2.3 kWh in 17 hours, 1.9 kWh in 23 hours, and 4.2 kWh in 18 hours. Total vampire power lost was 8.4 kWh in 58 hours. That's an average of 3.5 kWh per day--roughly 25 percent lower than the losses I measured previously. I can't explain the wide variation in the vampire draw over the three tests. Clearly, more than three tests will be required to come up with an accurate figure. But it's clear to me that the new vampire-slayer software is pretty weak stuff. It's better than nothing, I suppose. A 25-percent improvement means that the 20,000 Model S cars now on the road will only waste about 70 megawatt-hours of power a day, down from 90 MWh. And it means that Musk's anti-vampire prediction has turned out to be one-quarter true in twice the time. Update 6.0, anyone?

Steven Chu Reaches for the 'Master Switch

Steven Chu Reaches for the 'Master Switch Adam J. White June 10, 2013 As Daniel Halper noted earlier today, ex-Energy Secretary Steven Chu raises a lot of eyebrows in his recent interview with the San Francisco Chronicle, where his defense of the department's loan guarantee program refuses to concede any lessons learned from the Solyndra fiasco. But that is not the only comment that seems blissfully unaware of history. Arguing that electric utilities need to seek their fortunes in solar power and battery technology, he offers a surprising new vision of the energy industry: I've been telling them there's another business model. It goes like this: We - the utility - would own the energy storage and the thing on the roof and the electronics. We'll sell you the electricity. Q: The utilities would own solar panels on homes and sell the power to homeowners? They'd basically be competing against Sunrun and SolarCity and Sungevity? A: Right. Or they could link up. So you have some alliance, and you've got a good deal. Now all of a sudden, the utility companies are in a growth business. Q: Are any of the utilities actually considering this? A: I've been talking with them about it for about a year. And I did not invent this. It was invented by the Bell Telephone system. Remember? They owned the phone. They maintained the phone. You paid for phone service. The details have to be worked out. The details have to be worked out! That's quite an understatement, considering how well Bell Telephone's version of vertical integration worked out. Chu's dream for the future is startling in and of itself, but what makes it all the stranger is its utter discordance with the entire progressive zeitgeist. Tim Wu and Susan Crawford, in particular, have won great acclaim with their recent books -- The Master Switch and Captive Audience, respectively -- in which they recount the history of telecom monopolists, best exemplified by the Bell/AT&T story, to support their arguments in favor of net neutrality. They argue that vertically integrated corporate infrastructure monopolies cannot be trusted to restrain themselves from abusing market power. Thus, for telecom infrastructure, progressives' answer tends to be "net neutrality." In sketching out his vision for the future of solar power, and of national energy policy in general, Secretary Chu ought to consider the benefits of "neutrality," and the risks of relying on private infrastructure monopolies to achieve even well-intentioned policy goals. Copyright 2013 Weekly Standard LLC. ----- John Weston- Washington-DC- Reporter The President is a nice guy who is kept in a bubble by a more evil staff. They only tell him what they want him to know so they can steer contracts to friends. Notice how many of his famous chiefs of staff and senior aids have "quit" yet still work together. Axelrod, Rattner, Gibbs, Chu, etc. They just use him as a front-man while they finagle their inside deals and tell him: "Don't listen to the distractions, those are just a few noisy people

who are upset". The President is being used, by his own people! -----

Tesla Investor partner clone Fisker Files For Bankruptcy. Owes \$1 Billion.

/2013/11/motorauthority.jpg Fisker Files For Bankruptcy. Owes \$1 Billion. BY VIKNESH VIJAYENTHIRAN Electric car startup Fisker Automotive has finally filed for Chapter 11 bankruptcy, more than one year since it last built one its \$103,000 Karma extended-range electric sedans. It means Fisker will fail to pay its remaining portion of a \$192 million loan awarded to it back in 2010 under the governments advanced-technology vehicle manufacturing program, as well as money owed to suppliers and other creditors. The government isnt completely at a loss, as a company by the name of Hybrid Technology, reportedly linked to Hong Kong billionaire Richard Li, paid \$25 million for the loan during a public auction, paving the way for Hybrid Technology to acquire Fiskers remaining assets. In total, the government will lose about \$139 million from its involvement with Fisker. After having evaluated and pursued all other alternatives, we believe the sale [of Fisker] to Hybrid and the related Chapter 11 process is the best alternative for maximizing Fisker Automotives value for the benefit of all stakeholders, Fisker chief restructuring officer Marc Beilinson said in a statement. The Fisker Automotive technology and product development capability will remain a guiding force in the evolution of the automotive industry under Hybrids leadership. Hybrid Technology is still exploring its options for Fisker and plans to make a decision on its fate at a later date. It will provide \$8 million in debtor-in-possession financing in the meantime. Fisker listed assets of as much as \$500 million and debt of as much as \$1 billion in its Chapter 11 petition filed in a U.S. bankruptcy court, according to Bloomberg. Among the assets are Fiskers brand, technology and plant in Wilmington, Delaware. ----- Tesla & Fisker- Pretending to make electric cars when they were really just set up to 1.) pay kickbacks to campaign backers and 2.) not threaten Detroit by only making cars a few rich guys would by and not actually affect the car market. DFG- nNY /2013/11/exploding_lithium_ion_cars_.jpg /2013/11/lithium_ion_fire_electric_c.jpg ----- /2013/11/torque.jpg By John Goreham G+ 2013-11-24

Taxpayers hand millionaires \$139 million on Fisker Karma loss

The American taxpayers have lost another \$139 million subsidizing electric supercars for millionaires. Torque News predicted this outcome a year ago. - See more at: <http://www.torquenews.com/1083/taxpayers-hand-millionaires-139-million-fisker-karma-loss#sthash.jsrLh62.dpuf> Friday afternoon, the Obama administration announced the results of its loan to Fisker now that things have shaken out. Bad news that is trying to be hidden from a news cycle is always released on Fridays. Not to worry though. According to US Energy spokesman Bill Gibbons, "While this result is not what anyone hoped, the (\$139 million loss) represents less than 2 percent of our advanced vehicle loans, and less than one-half of 1 percent of our overall loan program portfolio. Do you feel better knowing that there is about \$30 billion more in loans like this? The Fisker Karma was an electric supercar costing over \$100,000. It was subsidized by the American taxpayers with tax credits, loans that are now defaulted on, and the taxpayers of Maryland even paid for the operating costs of the factory. All this so that a couple thousand millionaires in the US and a handful in Europe could have an electric supercar they didnt have to pay full price for. Try Our Daily Newsletter from TorqueNews and Receive the Latest Automotive News. Check your mailboxes for confirmation email.* When I drove the Fisker Karma the company vice president told me from the back seat that the wood on the dashboard had been reclaimed from the bottom of a lake so deep and low in

oxygen that the wood did not suffer any rot over many years of being in the water. The point of this was that the Karma was built to be as sustainable as possible. This struck me as a bad way to spend other peoples money then, and now it just seems absolutely tragic. About a year ago we published a story predicting that the Fisker electric supercar would not succeed and the Chevy Volt and Nissan Leaf would. We also made the claim that Tesla will not survive. So far that prediction is three-quarters correct. Coincidental with this weeks announcement, Tesla sent all of its Teslerati an e-mail clarifying and reiterating that its mission is not to supply Model S electric super-sedans to millionaires. The e-mail said in part I suspected that this could be misinterpreted as Tesla believing that there was a shortage of sports cars for rich people, so I described the three step master plan for getting to compelling and affordable electric vehicles in my first blog piece about our company. This was unfortunately almost entirely ignored. Founder Elon Musk wanted to be sure that people understand that the real mission is to someday do what the Volt and Leaf do now. Tesla repaid its loans to the US government earlier this year, so we are not sure why it is paranoid. Maybe it is the \$7,500 in tax rebates each millionaire that buys one gets. It is hard to say. Nissan Leafs and Chevy Volts now sell for under \$29,000 in markets like California that augment the federal taxpayer subsidies. Each month the affordable Chevy and Nissan sell about the same number of electric cars that Fisker did in its entire existence. Honda, Fiat, Mitsubishi, and others also have cars for sale now in that price range. Given the volume of "affordable" electric vehicles now selling each month it is now strange to think that the US government felt the need to loan money to Fisker. Controlling the news cycle is a smart and effective way to cover up embarrassing mistakes. Stopping electric super-car subsidies that go to the wealthiest Americans would be another way. -----

Federal 'bet' on Fisker ends in bankruptcy

http://www.philly.com/philly/classifieds/cars/Energy_Department_bet_on_Fisker_Automotive_ends_in_bankruptcy.html#oJQUm1c22TF5RPk.99 RONNIE GREENE, CENTER FOR PUBLIC INTEGRITY- Philly.com
LAST UPDATED: Thursday, November 28, 2013 Green-lighting a half-billion dollar loan to help a California electric car startup build a fleet of sleek plug-ins four years ago, the Obama administrations Energy Department promised cutting-edge cars and thousands of jobs. We're making a bet in the future, Vice President Joe Biden said in October 2009, standing in a shuttered Delaware plant slated to spring to life with electric cars. We're making a bet in innovation. The thousands of Fisker Automotive cars never did roll off assembly lines, and the thousands of jobs never surfaced. This month, Fisker filed for Chapter 11 bankruptcy protection — a symbol of a larger Energy Department electric car program that has yet to fully take off. In October 2011, The Center for Public Integrity and ABC News explored the Energy Departments risky \$1 billion bet on Fisker and another California electric car maker backed by political powerhouses, Tesla Motors. Tesla paid off its \$465 million U.S. loan nine years early, but Fiskers project never gained traction. The Energy Department earmarked \$529 million to Fisker and ultimately dispersed \$192 million. Of that, DOE said, it recovered \$53 million. Fisker was financed under an Advanced Technology Vehicles Manufacturing (ATVM) Program central to Obamas long-shot goal of putting 1 million electric vehicles on the road by 2015. The DOE said this week it is moving ahead, accepting applications and conducting outreach. The program will help the U.S. compete in a rapidly-growing, global market for advanced electric and fuel-efficient vehicles, the agency said in a statement. The Department has committed more than \$8 billion in loans to date supporting projects that are supporting tens of thousands jobs, reducing our dependence on foreign oil and promoting U.S. leadership across an array of innovative vehicle technologies, including plug-in vehicles and high-efficiency gasoline vehicles. While saying the Fisker loss is not what anyone hoped, energy officials said it represents less than two percent of our advanced vehicle loans. All our loan agreements include strong safeguards that allow us to protect taxpayers when a company can't meet its obligations. Accordingly, the Department stopped disbursements to Fisker in June 2011 after the company fell short of the rigorous milestones that we had established as conditions of the loan, the DOE statement said. Yet the ATVM program itself has not yet reached the goals set by Congress, and came under criticism in Government Accountability Office reports in 2011 and 2013. This years GAO report found that the ATVM program had not closed a loan in two years and had spent just a fraction, \$8 billion, of the \$25 billion Congress allocated. The program was infused with another \$7.5 billion to cover credit subsidy costs; according to the GAO report, \$4.2 billion remained in that pool of money. Most applicants and manufacturers we spoke with told us that, currently, the costs of participating outweigh the benefits, the report said. Fisker had hoped the \$529 million loan guarantee would help it build thousands of luxury Karmas along with another car on its drawing board, the

more affordable Atlantic. This April, company co-founder Henrik Fisker told the House Committee on Oversight & Government Reform about a series of setbacks — from slow moving regulatory approvals to recalls and a bankruptcy dogging outside suppliers — that derailed his vision. From the outset, Fisker Automotive aimed to be a new American car company, setting pioneering standards for low-emission technology and cutting-edge design, he said. While Fisker filed for bankruptcy last week, another company, Hybrid Technology, purchased its assets, including paying \$25 million of its DOE loan. In its bankruptcy filing, Fisker estimated assets between \$100 million and \$500 million — and liabilities between \$500 million and \$1 billion. Fisker was backed by an electric car program that is one piece of a larger, \$30 billion green energy portfolio that is helping to diversify our energy portfolio with clean, renewable domestic energy, spur U.S. industry, and make America more competitive in a rapidly-growing, global market for advanced vehicles, the DOE said. The portfolio includes several other firms that filed for bankruptcy after receiving DOE money, including California solar panel maker Solyndra. In several cases, the Center and ABC reported last year, green energy companies paid six-figure bonuses or payouts to executives before filing for bankruptcy. The Energy Department cited estimated losses to date of approximately two percent — less, the DOE said, than the 10 percent Congress set aside. Congressional critics cited Fiskers bankruptcy filing as yet another sad chapter in DOE's portfolio. The jobs that were promised never materialized and, once again, taxpayers are on the hook for the administrations reckless gamble, House Energy and Commerce Committee Chairman Fred Upton, R-MI, and Oversight and Investigations Subcommittee Chairman Tim Murphy, R-PA, said last week. Others who closely scrutinize green energy spending say the Fisker bankruptcy, combined with the other failings, spotlight larger questions about the role of government in financing start-up ventures with public money. I think structurally there were challenges right from the outset, said Doug Koplow, founder of Earth Track, a consulting firm that tracks energy subsidies. For years, Koplow has raised questions about the way DOE allocates taxpayer money. Im not surprised to see some of these things go bankrupt, he said. I think it would be inevitable. The Center for Public Integrity is a non-profit, independent investigative news outlet. A list of its funders can be found here. For more of its stories on this topic go to http://www.philly.com/philly/classifieds/cars/Energy_Department_bet_on_Fisker_Automotive_ends_in_bankruptcy.html#oJQQUm1c22TF5RPk.99 -----

Fisker Bankruptcy in dispute

Fisker Automotives proposed sale to a Hong Kong company formed by backers of the bankrupt hybrid vehicle startup appears to have hit a snag, with a competing bid emerging in the final hours from another contender: Chinas Wanxiang Group. Thats the news this week from U.S. Bankruptcy Court in Wilmington, Del., where unsecured creditors of Fisker are squaring off against Hybrid Technology, the company formed by Fisker backer and former director Richard Li. Hybrid Tech had been set to purchase Fiskers assets out of bankruptcy as of the new year. According to the Wall Street Journal, unsecured creditors have filed court documents objecting to Hybrid Technologys proposed purchase and are seeking to pursue legal claims against the company. Hybrid Technology was formed late last year, and in November paid \$25 million to purchase Fiskers defaulted \$192 million loan obligation to the Department of Energy, leaving taxpayers on the hook for the remaining \$139 million. In the meantime, Fiskers unsecured creditors are supporting a rival bid by Wanxiang, the Chinese automotive manufacturing giant, which this week offered to pay \$25.725 million for the bankrupt companys assets and to take over some of Fiskers debts, according to court documents. The bankruptcy court is scheduled to consider Fiskers sale to Hybrid Tech on Friday, but unsecured creditors are pushing for an alternative auction for the companys assets later this month, with Wanxiang as the leading bidder. Wanxiang has its own ties to Fisker in the form of A123 Systems, the lithium-ion battery maker that it bought out of bankruptcy in January 2013. A123 made the batteries for Fiskers Karma luxury hybrid sports car, and Wanxiang was reported to be considering a bid for Fisker in May of last year, before Fisker had filed for bankruptcy protection. Fisker raised \$1.2 billion from investors including VC firms Kleiner Perkins Caufield & Byers and NEA, as well as now-defunct investment firm Advanced Equities. It also drew down \$192 million from its \$528 million conditional loan granted under DOEs Advanced Technology Vehicles Manufacturing Program (ATVM) to pay for a planned factory to build a lower-cost hybrid sedan in Delaware. But Fisker ran into a series of insurmountable problems on its course toward insolvency. It stopped building its Karma hybrid sports cars in July 2012, and since then has been pummeled by bad reviews and reports of vehicle fires and recalls. Last years Hurricane Sandy destroyed a warehouse containing \$30 million worth of Fiskers already-built Karma sports cars. At the same time, DOE cut

off Fiskers access to its loan in 2011 after the startup missed performance targets, and the agency put the balance of Fiskers loan obligation on the auction block in October. At the time, DOE stated that it would require all bids to include a commitment and business plan that promotes domestic manufacturing capabilities and related engineering for advanced technology vehicles here in the United States. But its unclear whether that standard will require bidders to continue renovating the Delaware plant where Fisker had intended to produce its lower-cost Atlantic hybrid sedan. Fisker certainly isnt the only company that has failed to take on the legacy automotive industry via venture capital investment and government loans. Failed green vehicle companies include Coda Automotive, Think Global and Next Autoworks (formerly V-Vehicle), as well as plug-in EV charging companies Better Place and ECotality, which both declared bankruptcy this year. Rivals contend for the assets—and debts—of the defunct hybrid sports car maker. Jeff St. John January 3, 2014

Did California and Michigan state officials give favors only to favored campaign funding companies

Did California and Michigan state officials give favors only to favored campaign funding companies The Wall Street Journal is investigating charges that senior state administration officials provided unique credits, factory perks, tax breaks, filing reductions and other benefits worth between tens of millions to hundreds of millions of dollars of intangible business advantages. Tesla Motors , a beneficiary of such favors, recently turned a negative SEC report into a positive report simply by re-working these state incentive soft numbers. Solyndra is another recipient of "extraordinary gain" based on the backs of taxpayers. Federal investigators are seeking to determine if each company in the state, in the same market, at the same time received equal access to such benefits or if only campaign funders received these benefits. Did State officials receive real estate deal participations for incentives? Reporters are contacting all such companies to create a comparison matrix ahead of the federal investigators. The story is in development. Three Senators are mentioned in the investigation notes. Friend of Tesla staffer killed in plane crash releases insider notes

Friend of Tesla staffer killed in plane crash releases insider notes to press that deceased Tesla worker was

compiling for book. The associate has been releasing parts of the book to selected press but confirms that a full book deal is now in final negotiations. ----- 3 Tesla workers die when plane hits N. Calif. home BROOKE DONALD and SUDHIN THANAWALA Tesla Palo Alto Plane Crash EAST PALO ALTO, Calif. — A twin-engine plane carrying three employees of electric car maker Tesla Motors struck a set of power lines after takeoff Wednesday and crashed into a fog-shrouded residential neighborhood, raining fiery debris over homes, sending residents running for safety and killing everyone aboard. But the crash somehow caused no injuries or deaths on the ground despite a wing slamming into a home where a day care center operated. The seven people inside the house, including an infant, all escaped moments before the home went up in flames. Menlo Park Fire Chief Harold Schapelhouman said the Cessna 310 either struck a 100-foot electrical tower or clipped its power transmission lines and broke apart, dropping debris throughout the working-class Silicon Valley neighborhood. Federal aviation investigators said they were looking whether foggy weather played a role in the crash. National Transportation Safety Board investigators will be at the crash site for several days and a preliminary report will be available by next week, said Josh Kawthra, an NTSB investigator. The city of Palo Alto said most of the city and surrounding area – about 28,000 customers – had no electricity for most of the day because of the crash. Pacific Gas and Electric Co. officials said most homes and businesses would have their electricity restored by Wednesday evening. A spokeswoman for Palo Alto-based Facebook Inc. said its offices were without power but the outage was not affecting the Web site. Hewlett-Packard Co.'s corporate headquarters also were dark, and employees were asked to find other places to work Wednesday, a spokeswoman said. The crash rattled Tesla Motors, one of only a few companies producing and selling purely electric cars. The identities of the employees were not released. The plane was owned by Doug Bourn of Santa Clara, identified by a Tesla spokesman as a senior electrical engineer at the company. "Tesla is a small, tightly knit company, and this is a tragic day for us," Tesla CEO Elon Musk said in a statement. The Cessna crashed around 7:55 a.m. shortly after takeoff from the Palo Alto Airport and was bound for Hawthorne Municipal Airport in Southern California, according to the Federal Aviation Administration. The crash site is a mile northwest of the airport, near Tesla's headquarters in San Carlos. A wing fell onto the house where a children's day care operated, and the rest of the plane struck the front retaining wall of another house down the street before landing on two vehicles on the street, Schapelhouman said. Debris also struck two neighboring houses, he said. Pamela Houston, an employee of the day care, said she was feeding an infant when she heard a loud boom that she initially thought was an earthquake until she "saw a big ball of fire hit the side of the house." Houston said she screamed to the others in the house – the owner, the owner's husband and their three children – and the group safely escaped before the home went up in flames. "There are not even words to describe what it felt like," she said. "I am very thankful to God that he allowed us to get out." The occupants of the homes have been accounted for, although authorities can't be completely sure of the fatality count until crews begin clearing the wreckage, Schapelhouman said. "Either by luck or the skill of the pilot, the plane hit the street and not the homes on either side," he added. "That saved people in this community." Kate McClellan, 57, said she was walking her dog when she saw a plane descend from the foggy sky and strike the tower, causing power lines to swing wildly in the air. "It burst into flames, and then it kept flying for bit before it hit some houses and exploded," McClellan said. The crash comes at a difficult time for Tesla, which employs 515 people worldwide and just three weeks ago disclosed plans to hold an initial public offering of stock. In its filing with the Securities and Exchange Commission, the company said its future business is dependent on the successful rollout of new vehicles. The two-door Roadster sports car is the only product that the money-losing company currently sells, retailing for \$109,000. It has sold about 1,000 since its inception, and its next vehicle – the Model S sedan – is due in showrooms in 2012. It has a base price of \$57,400, although a federal tax credit could reduce the cost to less than \$50,000. Tesla has not said when specifically it plans to go public, nor has it said how much it intends to raise.

9 questions for Tesla's Elon Musk; Reporters embrace the "jump Musk" tactic to expose him

9 questions for Tesla's Elon Musk By Alex Taylor III, senior editor-at-large elon musk (Fortune) At about \$90,000 apiece, Tesla's zero emission cars have become a symbol for those in the moneyed class who want to show a commitment to the environment. At the same time, billionaire CEO Elon Musk has emerged as the company's chief spokesman and cheerleader, encouraging optimistic sales projections and batting away doubters and naysayers who say the company's shares are overpriced and the cars are overrated. In recent weeks, he's battled both the New York Times and Barron's over what he perceived to be negative coverage about the company's prospects. "I have no interest in an article that debates what we consider to be an obvious point -- which is that there is a dramatic reduction in battery costs," Musk told the Barron's reporter. "You clearly do not understand the business." Then he terminated the interview. Is Musk the next Henry Ford -- or Preston Tucker? By getting Tesla (TSLA) into production with a saleable car designed from the ground up, he's already gone further in the auto business than many people expected (see Henrik Fisker), but Tesla's stratospheric rise has generated heated debate on websites like Seeking Alpha and Motley Fool as to whether it can continue to expand at its current rate. Here are nine questions for Tesla and Musk:

1. Is Tesla's stock price the result of irrational exuberance? As numerous commentators have pointed out, your company's finances look more like an Internet startup's in 1999 than those of a traditional automaker. Tesla has made money in only one quarter during its 10-year history, is expected to only break even this year, and make a buck a share in 2014. That works out to a forward p/e of roughly 100. Tesla could possibly make 35,000 vehicles per year by 2015, but GM (GM, Fortune 500) and Ford (F, Fortune 500) respectively produced 252,894 and 246,585 vehicles during the month of May in the U.S. alone. GM has a trailing p/e of 11.9 and Ford 10.7. Investors have to decide where the best value lies.
2. Can you make money selling cars without air pollution credits? Behind Tesla's \$11 million first-quarter profit, analysts figure there is nearly \$100 million in one-time or otherwise unsustainable items, including \$68 million in zero emission credits that you've said will disappear by the end of the year. That will leave a big hole in your operating statement. How will you be able to fill it?
3. AutoData reports that Tesla sales declined 14.7% in May. Is this a one-month blip or a sign that the immediate demand by early adopters has been satisfied? Part of the auto business is fashion; cars with flashy designs or novel concepts get a big initial boost but have a faster decay in their sales curve than more conventional cars with steadier demand. Tesla's are high fashion: eye-catching designs combined with unusual powertrains. The sales slump could also be a sign that your company is exhausting the market for super-premium priced cars. The number of people shopping for Porsches and higher-priced Mercedes and BMWs is thin and essentially finite, and Tesla may have already gotten its share. It is also worrisome that you used to brag about your order backlog, but now you won't release that information any longer. What is going on? Elon Musk: Electric car competition is key
4. Can you continue to roll out your distribution model nationwide, given the opposition of local dealers and the barriers of state franchise laws? Instead of using franchised dealers, Tesla is distributing its cars through company-owned outlets. You argue, reasonably, that "existing franchise dealers have a fundamental conflict of interest between selling gasoline cars, which constitute the vast majority of their business, and selling the new technology of electric cars." But that puts you in opposition to state franchise laws enacted in the 1920s to protect independent dealers. Tesla has won court decisions in Massachusetts and New York but suffered setbacks in Virginia and Texas. Advocates of the franchise system argue that independent dealers are essential to provide inventory buffers and to interface directly with customers.
5. Does it really make sense to build a nationwide recharging network? Since electric cars have limited ranges, everyone agrees that a network of charging stations is essential to their widespread adoption. Supercharger stations can return most of a vehicle's range in 25 minutes but cost \$150,000 apiece. You currently operate eight supercharger stations, including six in California, one in Connecticut, and one in Delaware, and you have promised to install 200 coast-to-coast by the end of 2014. Won't the supercharger attendant in Nevada or Kansas be as lonely as the Maytag repairman?
6. Is guaranteeing the residual value a smart business decision? In May, you announced that you will guarantee to anyone who leases a Tesla that it will have a higher residual value after three years than any other luxury car on the market. That's nice, but who knows what a Tesla will be worth three years from now? As analysts have pointed out, that just shifts the risk from car owners to shareholders. You could be stuck with a lot of vehicles that are worth less than expected

7. Can you bring down the price of batteries far enough to build a \$40,000 car? You have said you will launch a small electric sedan in late 2016 with a range of at least 200 miles and a price point "half" that of the flagship Model S. That means it will start at about the same price as the Nissan Leaf -- around \$30,000 -- but have triple the range. You said you were "pretty optimistic" that the necessary advances in battery technology are achievable without "any miracles happening." There aren't many who are equally optimistic. 8. Every other EV manufacturer is struggling. Are you really that much better? GM just cut the price of the 2013 Chevrolet Volt by \$4,000 to boost stalling sales. Nissan sold only 2,138 Leafs in May. The only electric car that has been made so far that could compete with the Model S was the Fisker Karma, which looked attractive, was powerful, and had a high range. Unfortunately, the Karma was not a success, and Fisker is now defunct. 9. Are you in danger of overreaching? Google (GOOG, Fortune 500) founders Larry Page and Sergey Brin were both investors in Tesla before its 2010 initial public offering, and that's pretty intoxicating company. So perhaps we shouldn't be surprised that you are talking with Google about adding driverless technology to your cars. "Autopilot is a good thing to have in planes," you said in an interview, "and we should have it in cars." Personally, I'd be happy if you just continue to develop your cars, bring your prices down, and blanket the East and West Coasts with service centers and charging stations. That way, if you don't become the next Henry Ford, at least you would be the next Walter Chrysler. Forbes Rips Musk's smoke-screen

(Photo Above: Tinman was RIGHT be to afraid of Fires. Musk is a carny with shiny objects) Red Herrings And Straw Men: Musk's Argument On Tesla Fires Dale Buss- Forbes Its still a good bet that the Tesla Model S and Elon Musk will come through their fire-investigation saga relatively unscathed and even vindicated in the end. But in the meantime, what lingers is Musks take-no-prisoners argument, which essentially is that the National Highway Transportation Safety Administration probe into two fires in the car in incidents on U.S. roads is a monumental waste of time; that any media outlets even discussing the fires are irresponsible; and that Americans should take his word that the cars are safe. Musk has to try to ensure that consumers and investors dont lose faith in him and his technology, and three Model S cars turning into hibachis on the highway (including one in Mexico) comprise a significant obstacle. This is a refutation of significant parts of his argument, which turns out to be filled with red herrings and straw men that not even the formidable Musk can spin into smooth persuasion. In attempting to thwart attention to this little problem, Musk has tried to have it just about every way. First he insisted that there was no flaw in the design of Model S; but then he decided to adjust the suspension on the vehicles via a software change so that they ride higher on the highway and are less likely to take a hit from debris. Initially Musk insisted the cars wouldnt be recalled, but then he said Tesla actually had asked the federal highway-safety agency to examine Model S — an assertion that NHTSA officials have said simply isnt true. Then Musk laid out his broad argument in the context of what he believes is an unassailable rationale for his creation of Tesla in the first place. In The Mission of Tesla post that he put on the Tesla blog this week, Musk penned an eloquent explosion of triumphalist fury. But Musk also exposed some logical vulnerabilities that shouldnt be ignored even amid his intellectual suppleness: A murky standard: Musk wrote that new technology should be held to a higher standard than what has come before but didnt say what that loftier standard should be. Then he seemed to undercut his concession by comparing the record of car fires in the Model S — new technology — to what he said were a quarter-million gasoline-car fires in the U.S. alone over the last year. Certainly he believes Model S should be pulled up short at some number far lower than a quarter-million fires; but what is that number? Would he argue that forest fires arent important because house fires turn out so many more Americans from their homes each year? And Musk didnt mention another relevant comparison: the Nissan Leaf all-electric vehicle, which has had no reports of fires with many thousands of models on the road. The media straw man: Musk complained in the post about an onslaught of popular and financial media seeking to

make a sensation out of something that a simple Google search would reveal to be false. But he didnt really specify what it is that is false. By false, was he referring to mere reporting about the fires, which seemed by and large to be pretty factual? Or reporters failing to compare the number of Model S fires to the much higher number in gasoline-powered vehicles? Or media speculation about the effects of the fires on Tesla? Or was Musk implying that a substantial number of media outlets leaped to the conclusion that these three incidents mean the Model S somehow is poorly engineered? If its the last option, theres little evidence for his charge. Besides, whatever persecution Tesla might be suffering at the moment at the hands of the media — most of whom actually seem to adore Musk, his technology and his cars — is nothing compared to what, for example, General Motors has suffered in the past. Just a couple of years ago, NHTSA briefly investigated a single fire in a Chevrolet Volt plug-in hybrid that occurred days after it had been crash-tested, and some wild media speculation ensued about the very future of the car. Going back even further: Dateline NBC aired an investigative report in 1992 that allegedly showed C/K-Series pickup trucks exploding upon impact during accidents due to the poor design of fuel tanks. The NBC producers didnt tell the audience their nasty little secret: that they had rigged the trucks fuel tank with remotely controlled model rocket engines to initiate the explosion. The lightning canard: Musk turned to a ready old comparison about the odds of experiencing even a non-injurious fire in a Tesla being less than those of getting struck by lightning. Yet actually, the odds of getting struck by lightning are about the same as the odds of dying in a plane crash, depending on the time horizons involved. And yet, even the slim odds of fatal airplane fatalities are such that an entire branch of the federal government has been built around preventing and analyzing them, and airlines spend hundreds of millions of dollars a year to try to make sure it doesnt happen. Or, closer to home for Musk: What would he say is the importance of the odds of a fire not occurring in one of the SpaceX transport crafts that his other company plans to hurtle into space next year, carrying civilian passengers? The no-harm, no-foul red herring: He pointed out that the drivers of the two Tesla's in the U.S. fires werent hurt and were, in fact, able to pull their cars safely over to the side of the highway after the car gave them appropriate warnings that things were awry. Musk wrote that the primary concern is not for the safety of the vehicle, which can easily be replaced, but for the safety of our customers and the families they entrust to our cars. But the statement implies somehow that its, well, alright to have a fire under the hood of a Model S as long as no one actually has gotten hurt so far. But what if either of those two drivers in the U.S. accidents were upset or panicked or just not quick enough to react to the cars warnings, and the Model S had burst into flames before theyd had a chance to pull over? Things could have turned out quite worse for those drivers and for others on the road. And by Musks logic, only worse outcomes would have made the fires unacceptable. A devils choice: As another way of illustrating the relative danger of gasoline-powered vehicles versus Model S, Musk wrote that arsonists tend to favor gasoline and used the analogy, Trying to set the side of a building on fire with a battery pack is far less effective than using gasoline would be. Yet Boeing faced significant fire concerns about its Dreamliner jets, and even grounded them for a while, in battery systems similar in basic technology to those used in the Tesla Model S. Besides, the lethality of a particular form of power depends on the application: Apparently no one pointed out to Musk that prison wardens prefer carrying out capital punishment with electricity rather than gasoline. That fact is just about as relevant as the one he pulled out of the air. Feigned concern: True, Musk did selflessly suggest that NHTSA shouldnt be bothering with investigating the paltry little pair of Model S fires when there are hundreds of gasoline fire deaths per year that warrant their attention. But is he really that concerned about the stretching of federal resources? Musks other grandiose notion was to state unequivocally that the very survival of the planet may hinge on whether the gnashing media hordes stop bugging him about the two campfires in the Model S. If a false perception about the safety of electric cars is allowed to linger, it will delay the advent of sustainable transport and increase the risk of global climate change, he wrote, with potentially disastrous consequences worldwide. That cannot be allowed to happen. NHTSA, are you listening?

EXPOSE!: Failed due diligence metrics discovered in investigations

EXPOSE!: Failed due diligence metrics discovered in investigations As investigation results and journalism reports continue to emerge, and as FOIA data and third party releases are produced in the open, it has become clear that something was manipulated by DOE and Hill staff to create a theatrically staged process in which only

avored insiders could win but which, at first, had the contrived appearance of fair opportunity. One of the most profound elements of these investigations has been the telling evidence that now shows that due diligence items were failed by so called DOE Winners, yet those winners still got their money. A large number of applicant losers actually beat the winners in due diligence comparisons but the evidence was manipulated by certain DOE staff in order to steer resources to a provided pre-approved short-list . Examples such as the fact that Solyndra and Abounds solar panels catch fire on your roof-top were well known and documented prior to the award but ignored in the award review. Fiskers batteries were known to blow-up, catch fire and burn the car and your home to the ground if they get wet or have a wire short. This was well known because DOE funded the company that provided the batteries and the failures were documented by DOEs own staff. Fisker, Enerdel and A123, all of whom got the same batch of DOE money, failed because of documented errors which were publicly reported in technical materials far in advance of the award of money to either Fisker, Enerdel or A123 (Marketed as the premiere, eminent, SHOWCASE, best-of-breed companies by DOE and Steven Chu in order to sell the market on them) Tesla has batteries which blow up when they get wet, had a horrific debt metric and had a vast number of negative metrics compared to every other applicant, at the time of application, yet they still got a windfall without questions. Thousands of comparative review metrics have now emerged that point to only one conclusion: Someone inside DOE ordered certain companies to get money and certain companies to not get money. Steven Chu stated that the DOE was the largest, most powerful, most well-resourced energy agency on Earth. How could the most powerful, most well-resourced energy agency on Earth, the organization with more money than any other agency anywhere, blow it so bad? How could they have made over 3000 technical and financial mistakes? Is that even possible? The process of reviewing a company for funding is called Due Diligence. Due diligence is the process for reviewing and documenting the technical and financial metrics of a loan investment. A bank or venture capitalist usually has a budget of \$10,000.00 and about 5 people to do due diligence on each applicant. DOE staff had millions of dollars, thousands of people, hundreds of millions of dollars of equipment and multiple deeply resourced federal labs. To Repeat How could the most powerful, most well-resourced energy agency on Earth, the organization with more money than any other agency anywhere, blow it so bad? How could they have made over 3000 technical and financial mistakes? Is that even possible? Steven Chu has said: We did all of the usual due diligence Failures just happen all the time. Do they? In an analysis of 14 other industries and their financing, not so much. It turns out that the DOE failures are the largest number of failures following the most resourced due diligence in global business history. Lets say that another way. No industry has had so much money provided, so much checking out of applicants and so many failures, ever! What is the bottom line?: If the due diligence was even performed at all, someone at DOE ordered it all tossed out. It isnt possible to look at all of the available facts at the times of application and select the current winners based on the available information at the time. It isnt possible to look at all of the available facts at the times of application and name the other applicants losers when their ACTUAL due diligence metrics beat most of the winners. Why would someone do this? To pay off certain investors for other favors. Stay Tuned DG Associate to the LA Times Los Angeles, CA

BOMBSHELL NEWS: Treasury and OMB letters and documents reveal Tesla got "UNJUST REWARDS".

Taxpayer lawsuit to demand return of all money from Tesla. Senate investigations were revealed in major media nationwide today, disclosing that the Treasury Department and OMB had recorded in documents that Tesla's DOE loan was rigged and that the loan Tesla received "UNJUST ENRICHMENT". Multiple taxpayer groups announced plans to file charges in order to have all of the money returned by Tesla, to the taxpayers. For more on this Google: "Solyndra unjust enrichment

Auto industry revenge strikes Tesla, reduces value of Tesla's by \$30,000.00

Auto industry revenge strikes Tesla, reduces value of Tesla's by \$30,000.00 The auto industry is not pleased that Tesla bought-it's-way-in instead of earning-it's-way-in like they did. For payback, they took extraordinary measures. Never in the history of the automobile industry has there been a concurrent release of a tapered-nose/ open-mouth grill design by multiple companies. As soon as Tesla and Fisker announced, and sought to sell, their cars with tapered-nose/ open-mouth grill designs, the auto industry took action with an insidious plan. They started releasing the cheap models of their car lines with tapered-nose/ open-mouth grill designs. Now you can get a cheap little KIA, Ford Fusion or any number of low-cost cars that look just like a Tesla. People buy Tesla's because they are arrogant rich people who want to make a statement about their ego's as they drive down the road past you. BUT Now you can't tell if the car coming at you is a Tesla, KIA, Ford , etc. Market research experts say that the value of owning a Tesla has dropped by at least \$30,000.00 now because you can buy any number of cheap cars that look just like the Tesla. Oh well.

Tesla suddenly announces new funding raise but lies about what it is for:

Tesla suddenly announces new funding raise but lies about what it is for: Only a week after Elon Musk told the market on a live global phone-cast that Tesla did not need to raise more money, they suddenly need to raise massive amounts of money. Using the pretext that it is "just so we can pay back the loan" ('Public give us your money again so we can give you your money back that we got by lies') Can you say: IT DOESN'T WASH? In the usual Elon Musk "It's not a tornado, it is lovely spinning air" spin on bad news he hypes the hype. Just like when he said he would "guarantee resale value" when all of the cheap KIA's and Fusions came out looking just like a Tesla and when he said "here's a new battery warranty" when the investigations showed that his batteries burn your family alive when they get wet. Tesla may realize the jig is up and be in fire-drill mode... Sindi Poflin Bakersfield, CA

Tesla "Battery Swap" doesn't work already.

So they're going to demonstrate the process for swapping the battery. Is there anyone who doesn't believe they can swap batteries? The bigger problem is one of cost and practicality. Let's say you want to set up a battery-swap station in a major population center. And let's assume you want to be able to service a modest 100 cars per day (in LA a gas station might need to service ten times that in a day). So you need to have room to store 100 fully-charged batteries. And you need the equipment and facility to charge discharged batteries that just came out of the cars. And you're going to need heavy equipment to handle and manage the ~400 pound batteries themselves. Now, consider the cost of the batteries...it seems that Tesla doesn't really want to say what they cost - articles about Tesla frequently refer to them as costing "tens of thousands of dollars." I've seen prices that indicate Tesla might be selling extra batteries at a considerable loss, possibly to obfuscate the true cost as a PR move. Battery cost is something that Tesla *really* doesn't want to talk about:

<http://online.barrons.com/article/SB50001424052748...> Musk hung up on Barron's when they wanted to discuss battery cost. Just flat-out hung up on them. So, anyway, let's assume for now that a battery pack costs ~\$25,000. If you want to have 100 of them on hand for swapping at such a station, your inventory cost is a \$2.5 million. Read that again. Two point five million dollars in battery inventory alone. Now let's look at some handling issues. These are ~400 pound batteries. You're not just going to have one guy carrying them around. Or even 2 or 3 guys. You're going to have forklifts running around inside some kind of underground bunker (because you'll be

replacing the batteries from under the car) that stores all the inventory and charging equipment. We'll assume the forklifts are electric too, so no need to worry about extra ventilation in your battery bunker. A hundred 400 pound batteries is 40,000 pounds of material that you're going to be carrying around each day. Now consider the storage space needed for all the charged batteries...and the racks and chargers to charge them on. That bunker's gonna be big. What is the land and construction cost going to be for this facility? Especially in an area like LA? And then...what does the battery swap cost the consumer? After you factor in the \$2.5 million inventory cost, the facility cost, the labor and equipment cost, the cost of the electricity to recharge everything, and the lifespan of a battery (which are all going to be doing full cycles every day, granted that you're in a swap-system now)...and I don't know. The battery swap facility has to at least break even, if it's a Tesla-owned facility. Has to make a reasonable profit if it's a 3rd-party kind of thing. So...\$100 a swap? \$50? \$250? Dunno. Probably can't know until you actually get a good handle on the facility cost and the lifespan of batteries that are in that kind of constant-use cycle. Finally, let's just simply look at time. How long does it take to do the swap, considering that you have to get the car over a limited number of service bays to drop it out from underneath the car and onto a forklift, carry that battery to a charging rack and plug it in, pick up a charged battery from that rack, bring it back to the car and lift it up and install it. Let's assume that's ~15 minutes per car, which I have a feeling may be a bit optimistic, but for now it'll work. On the face of it, you can say "well, at 4 changes per hour, you can do 96 swaps on a single bay in a day, so no big deal!" Ummm...no. Reckon gas stations get steady-state traffic throughout all hours of the day? What happens is people will be coming in on their way to work, or on their way home from work. You have to squeeze the vast majority of your 100 battery swaps into a couple hours of the day...let's say 4 hours to be generous. To do 100 swaps in a 4-hour window, you need 6.25 bays (so, 7 actual bays). That means you need a lot more land than initially you may have been thinking. And your underground bunker needs to be that much larger to accommodate all those swap bays. And now you need more forklifts, and room to safely maneuver all of them and have space for them to get in and out of the storage and charging areas. And your labor costs went up too. In the end, demonstrating that you *can* change a battery...even if the process for doing so is kind of nifty...is utterly irrelevant. You need to demonstrate how you're actually going to make that work in the real world - on a reasonably-sized chunk of land, in a reasonable amount of time for the consumer, and at a reasonable cost. So...save the swap demonstration. What you need to "demonstrate" is how you're physically and financially going to make a real-world facility work. Tom- Denver-CO ----- Tesla admits their batteries could fry your family!" /2013/04/29/tesla-admits-their-batteries-could-fry-your-family/ TESLA BATTERY

Tesla and Fisker use Orifice to trick abusive rich guys into buying cars!

As one post quotes: Ordinization: Manufactured Addiction For Profit. This is the process of using ingested substances to trick the brain in order to create addictive profit opportunity. Fats, salts, sugars, breads, alcohol, tobacco and drugs use ordinization to addict consumers to buy them. Most of the makers of these products receive subsidies from your tax dollars. In other words, you are paying them to addict you and your family. The key to ordinization is that you don't want to believe it is happening to you because the addiction creates a synthetic bliss which your psychology causes you to defend. You get mad if someone implies they want to take away your cigarettes, alcohol, dessert, etc. Government support of these products creates a nation of addicts, drunks, obese people, personality disorders, problem children and a very unhealthy society. (For more on this see: "Salt Sugar Fat: How the Food Giants Hooked Us", By Michael Moss (Author) Available on Amazon and as seen on the Dr. Oz show) Billions of dollars are spent each year to refine and increase the addictive qualities of these products. "Product science" consultants have vast laboratories where they research food, beverage, fragrance, texture, taste and all human stimulants right down to each neuron in the brain. They want to see how they can control an entire generation of consumers to be unable to resist buying their product. Elite politician's operatives spray certain

fragrances at rallies and then try to spray the same scent near polling places so you recall the candidate with a "home cooked meal" smell and want to vote for them without realizing why. Vegas hotels and big Malls use psychological sense vapors to control consumers. 60 Minutes recently had a segment on a company, Givaudan, that other companies, like McDonalds and Pepsi, hire to create addictive flavors. This is all out in the marketplace. If you dont want to be a product zombie, demand that Congress outlaw Ordinization. In the link: [Auto industry revenge strikes Tesla, reduces value of Tesla's by \\$30,000.00](http://www.foxnews.com/story/2013/06/19/auto-industry-revenge-strikes-tesla-reduces-value-of-tesla-s-by-30000-00/) /2013/06/19/auto-industry-revenge-strikes-tesla-reduces-value-of- Tesla's-by-30000-00/ AUTO INDUSTRY ATTACKS TESLA AND FISKER We see that the tapered nose, open-vagina front of the car is a first-time-ever design phenom. The other car companies (See the new Ford Fusion, Kia, etc.) copied the tapered nose, open-vagina front of the car and released the same design nose structure at the same time in order to make the Tesla and Fisker less valuable in the market. There has never, in auto history, been a concurrent release of tapered nose, open-vagina car front designs until Tesla's and Fisker's competitors decided to devalue Tesla's and Fisker's cars. The concept of the look, though, comes from the female vaginal orifice psychological mnemonic trigger effect that appeals to rich yuppie males. This effect was designed by Madison Avenue branding companies. As shown in the design studies, the design of the Tesla and Fisker uses curves that duplicate the same curves a man sees when he is crouched over the body of a nude woman. You can find numerous studies that show the overlay of a woman's nude body on the exterior body panels of the car to show how, and why, they formed the car that way. As we see in the horrific, and telling, Millionaire Saatchi throat grab attack by Nigela Lawsons rich egotistical husband on her, caught on-camera, in the news (Google it or go to TMZ): rich men see women as objects to dominant and manipulate. Tesla and Fisker designed their cars to remind rich males of nude women so that they would psychologically feel like they were dominating a nude woman when they approached the front of the car, or viewed the car from views or drove it. This use of addictive imagery appeals to the type of males that built the Tesla and Fisker car companies (100% male dominated) and that the cars sell to (98% rich white males) who want to tell the world that they are the boss of all things, especially women. Silicon Valley men are involved in more abuse charges in divorce proceedings and hire more prostitutes than in any other city. Silicon Valley men buy more Tesla's than in any other city. This is visual product Ordinization. This is also another addictive commercialization effort funded by your tax dollars. Alison Keever Los Angles ----- Albert C, Palo Alto, California Everybody has noticed that if a person is driving a Tesla, they almost always turn out to be a swinging dick, arrogant, slicked back hair, Aryan Stanford clone. They are, generally, rude abrasive people. It really says a lot about the person if they drive one, but mostly it just reinforces that, that person is a weasel. -----

Tesla's financial advisors: Deloitte charged in Money Laundering Scheme

Tesla's financial advisors: Deloitte charged in Money Laundering Scheme NY State top legal bulldog Benjamin M. Lawskey has charged and fined Deloitte tens of millions of dollars for their involvement in Money Laundering Schemes. Deloitte was the financial advisor for both Tesla and the DOE during the give-away of the money from DOE to Tesla proving that: The snakes in the henhouse should not guard the eggs. Deloitte made vast millions off their concurrent double-agent role with DOE and Tesla. Further investigations of Deloitte and their relationship with Tesla, Wells Fargo, and DOE continue to swing the spotlight onto the worms-nest of corruption. <http://www.sec.gov/news/press/2012/2012-87.htm> name="title_1 SEC.gov | SEC Charges Deloitte & Touche in Shanghai with ... Shallow Analysis Deems DOE Electric Vehicle Loans a Success

Shallow Analysis Deems DOE Electric Vehicle Loans a Success Submitted by Paul Chesser on Mon, 07/08/2013
Popular automotive Web sites attempt to set the record straight on the degree of success and failure of the Department of Energys Advanced Technology Vehicles Manufacturing loan program was well-intentioned, but missed the mark on several points and overall gave the initiative far too much credit. Jalopnik.com contributor Patrick George was pointed in the right direction when he characterized DOEs boastful Loan Program Office as rosy, but more accurate descriptors would be excessive and unrealistic. Its clear his analysis was one of an automotive enthusiast and reviewer, rather than someone who regularly watchdogs government with a skeptics eye and knows how bureaucrats fudge and exaggerate numbers to claim credit for their politician bosses. As NLPC has reported often, DOE – before a taxpayer-backed bank check was ever issued to an electric automaker – has made absolutely unbelievable claims about jobs, fuel savings and carbon dioxide emission reductions that were to be realized as a result of their loans. The Energy Departments rosy website claims the governments Advanced Technology Vehicle Manufacturing loan program has ‘created or saved 37,000 jobs, George wrote. A Jalopnik analysis of the current states of the five companies involved shows that this number is technically true, but not the way the government tells it. George gave DOE far too much credit. Even now, after more than three years for most of the projects, the Loan Program Office cant be bothered to update statistical expectations even though two of the companies (Fisker Automotive and Vehicle Production Group) are non-operational and on the verge of bankruptcy. No one should take the agency seriously if it doesnt even attempt to correct the record for the projects it manages. Even the original exaggerations were obvious. For example, DOE claimed the \$5.9 billion loan guarantee issued to Ford Motor Company (the largest recipient in the ATVM program) made possible the conversion of nearly 33,000 employees to green manufacturing jobs, with an alleged 509,000 cars off the road, 268 million gallons of gasoline displaced annually, and 2.38 million tons of carbon dioxide avoided. This miraculously occurred with Fords refurbishment of a few manufacturing plants. Rather than simply deliver the derisive laughter that Ford and DOE deserve, George asked a company spokeswoman what converting jobs means. He was told that the loan guarantee helped retain 33,000 workers for new roles. For example, Michigan Assembly Plant used to be a truck plant, the Ford spokeswoman explained. It is now the worlds first factory to build not only fuel-efficient gas-powered small cars, but also three versions of electrified vehicles - battery electric, hybrid and plug-in hybrid vehicles - all in one place. That seemed good enough for George, who expressed mild skepticism that only went so deep. Though it is unlikely that 33,000 Ford employees would be out of work without the loan, he reasoned, they are now in new roles manufacturing more efficient vehicles, which was indeed the goal of the program. True, of course, but George left so much unaddressed. First, the very claim that it was only because of the U.S. government that 33,000 auto manufacturing jobs were saved, at a perfectly healthy company, was just brazen lying. The appropriate response should be, What do you take us for – idiots? But there was so much more beyond that. The only reason the administration launched the program, and that Ford was willing to accept the loan, is that the federal government created a heightened regulatory scheme that exacted greater vehicle fuel economy in the first place. The automotive market has shown little demand for electric vehicles, at least to justify the extensive financing and construction that automakers have undertaken. What little sales there have been were goosed only by subsidies and tax breaks. And even with that, the claims about gas displacement, avoided carbon dioxide and gas-powered cars off the road were created out of thin air and likely supplied by Ford itself to justify the loan, which in turn gave DOE a sales pitch to the public for the program. The Congressional Budget Office has determined that the overall \$7.5 billion in subsidies for electric vehicle production will have little or no benefit on gas consumption or emissions avoidance. Even now, with the Focus Electric that Ford doesnt seem to care about selling, the numbers havent been modified. The truth is, as Car and Driver reported in November, is that many companies have put barely enough alternative vehicles on the market just so they can comply with government-mandated Corporate Average Fuel Economy (CAFÉ) standards. The automakers incur huge penalties for failing to bring up the average gas mileage for the vehicles they sell up

to federal demands. On the other hand, with the taxpayer subsidies like Ford enjoys, the car companies get much of the expenses for the lousy-selling EVs in their lineups covered. In many cases this is intentional, Car and Driver reported, with automakers building EVs to satisfy regulators and leasing a limited number of loss-making vehicles in California and a handful of other states. Another ATVM loan program beneficiary, Nissan, has acknowledged the strategy. After admitting mistakes in trying to promote its all-electric, poor-selling Leaf like Altimas, vice president for sales Al Castignetti became more realistic. Weve pulled back a little bit and are telling our dealers, 'You don't market this car traditionally, he told Automotive News. No carmaker makes 54.5 miles per gallon without alternative-fuel vehicles, he said of CAFE. Direct-injection engines are not going to get you there. Nonetheless the DOE Loan Program Office boasts that, as a result of its \$1.4 billion backing for a Leaf plant in Tennessee, that 5.7 million gallons of gasoline will be displaced annually, with 51,000 tons of CO2 avoided, 11,000 gasoline-powered cars off the road, and 1,300 permanent jobs created. However, Jalopniks George confirmed from a Nissan spokesman that the jobs number is really closer to 300, and the larger number reflects the plant at full capacity. At that level the factory would produce up to 150,000 Leafs and 200,000 battery packs per year, but Nissan has sold only 9,839 Leafs (thanks to extreme discounts on leasing deals) through June, so full capacity is nowhere in sight. Its not worth rehashing the bogus statistical claims DOE has made (and still maintains on its site) for Fisker (\$529 million loan; \$193 million paid out) and Vehicle Production Group (\$50 million loan), since their downfalls mean the stats have been essentially zeroed out. So between those two and Ford and Nissans unsupportable claims, George had one DOE loan recipient left to demonstrate that its job claims are technically true: Tesla Motors. George argued that the companys \$465 million loan enabled the luxury automaker owned by Paypal billionaire Elon Musk (in photo with President Obama) enabled it to grow to 4,000 employees, surpassing the 1,500 that DOE claimed credit for on the Loan Program Office Web site. According to George a Tesla spokeswoman told him, the ATVM loan did contribute to our abilities to grow our workforce. Maybe thats true, but in Tesla's and Musks case, its just a matter of deciding how to use money and debt at their disposal. The CEO, who is also head of SolarCity and out-of-this-world private travel company SpaceX, would have almost infinite options of where to draw financing from, if he decided not to use his own fortune (and what rich person would do that when he can use other peoples money?). So grabbing hold of a cheap interest, government-backed loan for Tesla would be a no-brainer – but Musk didnt need it. Therefore as for the success that George gives Tesla credit for, none of it is attributable to the DOE loan because it could have been achieved without putting U.S. taxpayers money at risk. And so far the jury is still out on Tesla's success: the company announced its first profitable quarter ever a couple of months ago, but it was largely because it was able to sell California emissions credits to other auto companies who were not in compliance with the states strict mandates. So again, there are far more losers than winners in a market distorted by government meddling. Nevertheless George gives DOE credit for the creation of 4,000 jobs by Tesla and 33,000 jobs retained by Ford, because that was the programs intent. Thus he concludes that despite inaccuracies in the details, the ATVM programs claim of 37,000 jobs is accurate. This is the kind of thing the White House will seize upon as proof of its policy successes, while ignoring the unpleasant details. But the Energy Department could stand to be a lot more honest and transparent with the taxpayers who are backing these loans, and that includes no longer telling us everything is stellar with VPG and Fisker, George wrote. The Obama Administration is still trying to have an 'an unprecedented level of openness in Government, right? At least we can agree on that. Paul Chesser is an associate fellow for the National Legal and Policy Center and publishes CarolinaPlottHound.com, an aggregator of North Carolina news.

Hi Boycott Tesla. I really appreciate this article. The Obama administration is pouring way too much of our money into corrupt organizations like Tesla, and it's a huge waste. We need a sensible energy policy in this country that actually creates jobs and allows us to be energy independent. All this "green technology" is just a giant money pit that destroys jobs and creates more debt for US taxpayers. And to top it all off, the liberal mainstream media is going along with the Obama administration's narrative that all this wasted investment actually got us something, without doing the actual research into the jobs that won't be created because of Obama's policies. I'm starting a small site called Americans For Keystone, and I want to make a page showing how investment in so-called 'green' technologies is a giant waste of US money. Would you be interested in writing something about Tesla for me? You know a lot more about them than I do. Thanks for what you're doing!

"THE DROP"

The Drop- Part 1 From a copy written article by Anthony Zucker to appear in a major European news journal. With a tip of the hat to the tip from the office of the notorious Mr. Glenn: From Portions of the article: "As the great recession was winding into a funnel cloud of throw-cash-at-anything and Congressional panic, White House staff cut a deal with a select group of venture capitalists to buy millions of votes in exchange for a lock-up of the electric-car market and associated stock perks. To be specific; White House staff Rahm Emanuel, Valarie Jarrett, Robert Gibbs, David Axelrod and Steve Rattner ("The House Gang") made a deal with VC's John Doerr, Ray Lane, Tom Steyer, Eric Schmidt, Richard Blum, Steve Westly and their associates, all personally connected to Steven Chu, to have those investors conduit funds through organizations such as Move-on.org, Grassroots Action, Perkins Coie, UAW, Coblentz, Debevoise and other voter influence groups which resulted in the delivery of tens of millions of voters to the polls, voters who were given to a specific outcome. The VC's paid for third party voter turn-out programs and efforts per a deal cut with the House Gang and they got an exclusive set of funds, stock optics and market exclusivity for electric cars and car batteries. In this multi-part article series, we will detail the mechanics of the process known as "The Drop". The process is a Washington, DC gambit used regularly but never used with such scope, insidious calculation and overall destructive effect. It was because of the number of various whistle-blowers, from across the political spectrum, who observed this action, who were so offended by it's audaciousness, and who came forward in such numbers, that the White House has doubled down on social media surveillance programs. A surveillance program designed as much to thwart those who report White House crimes as it is for national security. You have heard of Solyndra, Tesla, Fisker, Abound, A123, Enerdel and other new energy ventures but now you will hear what brought them into play..." ##### " The following chart shows who got benefits from this effort, who funded the effort overtly or covertly, where their money went and who got cut off from the benefits. It is obvious, to even the most unsophistication viewer, that the mathematical odds of these few people sharing these massive beneficial cross-overs and business relationships is beyond impossible. This could only have occurred if an organized scam was planned, managed and operated for the benefit of those listed and the detriment of those who challenged their agenda:" ##### " Google, Facebook and Twitter are owned and funded by the same VC's who got the money for the car loans. Google, in particular, is controlled by Democratic Party controls. Google sets it's search results to only show stories and perspectives that favor those Party interests and those particular VC's and their car companies and holdings. Goggle controls over 25% of internet traffic and over 68% of internet experiences. As a Republican Senator discovered when his name was search-locked to a horrific sex term, If Google wants to shut you down, they shut you down. If Google wants to hype one stock and kill off another, they do that too. Eric Schmidt and his private team are able to change results ranking on Google, remotely, to aid or harm certain issues; all that in addition to trading every single thing you do to ad agencies and spy shops" UPDATE: There has been tremendous pressure on editors and stakeholders to "freeze the story". The pushback to not release the story at this time has been tremendous. Editors have been advised of "consequences" if they publish. The story is completed and in the final form. It is just waiting for the approvals. Other publications have begun similar stories and preparation. The article has been pre-released to the offices well known investigative reporters, journals and authorities. Federal investigators, who truly want to prosecute a number of the players in this scam, are being delayed by superiors who are worried that their bosses will be caught in the net. Those investigators are itching to tell their stories to reporters. "...While the concept of Rahm Emanuel, while working in the White House, selling the electric car industry to John Doerr in exchange for votes realized through a series of intermediaries to cover their tracks, sounds extreme, we now have a verbatim example of the process. The Washington Post reveals that federal investigators are probing Hillary Rodham Clintons 2008 presidential campaign as part of an effort to expand their case against a D.C. businessman alleged to have financed below-the-radar political operations, people familiar with the investigation said. Some of the the people who put together the Thompson scam, also did the electric car scam. The businessman, Jeffrey E. Thompson, allegedly provided more than \$600,000 to fund secret get-out-the-vote efforts to help Clinton in at least four primary states. Prosecutors do not expect to pursue a separate criminal case against Clintons campaign, these people said. In a wide-ranging effort to expand their 18-month-old corruption case against Thompson, federal investigators have reviewed hundreds of e-mails and interviewed more than a dozen Clinton campaign staffers and supporters, according to

people familiar with the probe. Investigators have focused their questioning on the role of Minyon Moore, a senior campaign adviser, and the extent of her role in arranging a street teams operation in Texas, Indiana, North Carolina and Pennsylvania that was financed by Thompson and run by marketing executive Troy White, according to those sources. These people and others familiar with the investigation spoke on the condition of anonymity because the probe is continuing. An attorney for White declined to comment, as has Thompsons attorney, Brendan Sullivan. Moores employer, the political consulting firm Dewey Square Group, issued a statement on her behalf this week, saying that she was entirely unaware of any inappropriate activities and is cooperating with authorities. An attorney for Clintons 2008 campaign, Lyn Utrecht, said in a statement late Wednesday that the campaign has cooperated fully in the White case and declined further comment. In a series of interviews over several months, investigators have asked former Clinton campaign officials whether they knew White or were aware of his election-related efforts, which were not publicly disclosed as required by law, some of those familiar with the probe said. These people said the questioning also focused on e-mails between Moore and campaign staffers about voter turnout strategies in majority-African American and Hispanic urban precincts, as well as about the campaigns schedule of public events, signs and literature. In many instances, these people said, Moore sought information from staffers who did not know she was also allegedly helping Whites street teams operation. Minyon, she was influential in the campaign, said one former campaign official. If she came in and asked for something, you kind of perked up and did it. But at no point did I have an interaction with her that led me to believe we were doing something wrong. Moore, a longtime Clinton operative and confidante, is part of a close-knit circle of advisers who have had preliminary discussions about Clinton running for president again in 2016, when she would be an overwhelming favorite for the Democratic nomination. Moore was a senior adviser on Clintons 2008 campaign with several responsibilities, including outreach to minority voters, managing relationships with surrogates and recruiting superdelegates. At the time, she was working at Dewey Square Group as state and local director. Clintons campaign paid the firm nearly \$420,000 for strategic consulting, according to campaign finance records. The pro-Clinton shadow campaigns were first revealed Wednesday in court documents and interviews in connection with Whites guilty plea to a misdemeanor tax charge. The get-out-the-vote operation allegedly began in Texas, where Clintons survival in the drawn-out battle with then-Sen. Barack Obama was on the line. By early February, Clinton had lost 11 consecutive contests to Obama and was narrowly behind him in the count of pledged delegates. Her campaign was running up debt. Next on the calendar were the March 4 Ohio and Texas primaries. Clinton had an edge in Ohio, but Texas loomed especially large. Clinton won the Texas primary, 51 percent to 47 percent, but in the end Obama got more delegates out of the state by dominating party caucuses held the same day. No evidence has emerged detailing what Whites street teams did on Clintons behalf or whether they made a difference. Several former Clinton campaign officials said they had no knowledge of the operation and had never heard of White. According to a narrative detailed in court documents and interviews, White first pitched his firms street teams services to Guy Cecil, Clintons national political director, in January 2008. Cecil declined the offer. But Moore disagreed, writing in an e-mail to White and Cecil: I am piping up saying we need your services. [Guy], lets [find] some money. I will fight for it. Moore then introduced White to Thompson, who directed White to put together a plan detailing costs for services to support Clinton in Texas. White pitched a plan to hire street teams and made plans to distribute materials prepared by Clintons campaign — including lawn signs, pamphlets and stickers — in such cities as Austin, Dallas, El Paso, Houston and San Antonio, according to a statement signed by White and prosecutors as part of his plea agreement. White got help from a Clinton supporter in San Antonio affiliated with a group identified as Civic Organization A in court documents. The group in question was the League of United Latin American Citizens, or LULAC, according to people familiar with the investigation. The San Antonio-based supporter, whose name was not revealed, reached out to members of LULAC to help recruit paid canvassers in cities such as Brownsville, Corpus Christi, Lubbock and McAllen. After Clintons win in Texas, the Clinton supporter affiliated with LULAC continued to help White find workers in other states, the court filing said. LULAC, a nonprofit social welfare group that says it is the oldest Latino civil rights organization in the United States, does not endorse candidates, but top members of the organization personally supported Clinton. Luis Vera, LULACs general counsel, said that the organization itself had no role in any efforts to aid Clinton. He declined to comment further, citing the ongoing investigation. Moore stayed in touch with White, providing him with confidential internal campaign documents, including the itinerary and schedule for a high-profile individual who would be campaigning in Texas in support of Clinton, according to court documents. The creation of an off-the-books campaign with the cooperation of a senior campaign adviser could violate campaign finance rules if it

was determined that the effort constituted an undisclosed, in-kind campaign donation in excess of federal contribution limits. But legal experts said federal investigators would be unlikely to open a separate case because a five-year statute of limitations has expired. Prosecutors in the U.S. Attorneys Office in Washington who have probed the Clinton connection remain focused on building a case against Thompson, whom they allege secretly poured \$653,000 into an illegal, off-the-books campaign to elect D.C. Mayor Vincent C. Gray (D), people familiar with the case said. If there is sufficient evidence to prove that Thompson was engaged in an ongoing conspiracy to secretly influence elections, his alleged efforts for Clinton could be added to any criminal charges. Prosecutors could avoid time limitations on pursuing a case if the past acts were part of an ongoing criminal pattern. In Texas, the Clinton campaign focused most heavily on Hispanics, knowing that Clinton was at a disadvantage against Obama among black voters. Clintons team in Texas expected to lose the urban areas of Houston and Dallas by a significant margin and concentrated organizing efforts on heavily Hispanic south Texas, El Paso and San Antonio. I didnt see anything that looked like it was independent or being conducted by a third party, one organizer said. He added: If they were pulling this off, they were doing it far below the radar screen. Clintons Texas primary victory, both sides believe, was the result of a strong showing among Latinos and whites; the deep political roots that Bill and Hillary Clinton had in the Lone Star State, going back to George McGovern's 1972 presidential campaign; and the strenuous effort that both Clintons made across the state. Obama campaign operatives later said that Bill Clinton was particularly effective at dazzling voters in the states small towns and medium-size cities. In Texas, Hillary Clinton also aired what is remembered as the most devastating television ad of her campaign, challenging Obamas national security credentials. It featured the image of a ringing White House telephone as a narrator intoned: Its 3 a.m., and your children are safe and asleep. Who do you want answering the phone? This shadow bribery/exchange campaign is called "A Wipe-Over" in Washington DC. It is the process that was used to fund Tesla, Fisker, Solyndra and Abound; kill their competitors and pay private profits without anyone noticing... until now..." Reporters from The Washington Post, The LA Times and The Hill contributed to this research ----- UPDATE- It looks like this book will be handed over to others to use in their books. The author got attacked for whistle-blowing.

More Tesla's burst into flames!!! Deadly fumes released by burning Tesla more toxic than Syrian attack gas. | Solyndramobile: How bribery, corruption & organized crime destroyed taxpayer jobs and American leadership

/2013/11/04/more- Tesla's-burst-into-flamesdeadly-fumes-released-by-burning-tesla-more-toxic-than-syrian-attack-gas/

FISKER lithium Ion batteries burst into flames at the drop of a hat. This is now well-known. Telsa and Fisker funding with tax dollars was more about funding battery company deals for their investors than anything else. Lithium Ion Batteries blow up in Boeing's, Tesla's and they just blow up. That is why TSA does not allow liquid on airplanes. That is why AT&T eliminated Lithium Ion in its server racks. EVERYBODY knows that lithium ion blows up and releases deadly chemicals, why is this cover-up still going on? Oh, I See: Profits and kickbacks!

Bundlers and DOE Ex-Staff find that the tracks they thought they covered up were actually NOT covered up... Oops!

Energy Department Staff find that the tracks they thought they covered up were actually NOT covered up... Oops As departing energy department staff shredded and deleted as fast as they could, they thought they had covered the tracks of the theft and manipulation of billions of tax dollars which they routed to their friends.. not so much. Every insider phone call, every insider email (even on personal email accounts that they used to hide the process) every conversation in a Washington or Virginia restaurant with security cameras, every conversation in a car.. all documented. Postings by ACLU staff, such as the widely distributed post below, show that every aspect of the energy department "secret" deals is documented, archived and only one subpoena, or one FOIA filing or any investigator demand away from disclosure: "ACLU CONCERNS OVER WHO SPYS: As is now widely

reported in the news: Any device that is marketed as a "smart device" or ANY electrical device, can be used to track you. Any bored child, hacker or competitor, with easily downloaded software tools, can spy on you using the following methods: By tracking your utility smart-meter use activity. By tracking when you cross bridges, or other points, on your bridge toll fastrak device. By reading everything you ever wrote, read, looked at or clicked on in Facebook, Google, Twitter and any other "social media" site no matter how high you set your privacy settings. Don't use "social media" if you don't want to be tracked, and have your experiences processed to sell you ads and lose all of your privacy. Shut off all of your social media accounts. You don't need any of them. Post this posting in blogs about any "social media". By reading any device that your bluetooth can connect to or transmit from, or to. Turn off Bluetooth. If your computer is offline but your phone or tablet is connected to your computer, hackers can backdoor into your computer through any connected device. By reading your use of, location of use and activity when you use any ATM. By using any aspect of Google. Google exists simply to spy on, and track people. By using a parking lot monthly, daily or pay-per-use card or device. Pay by cash. By logging all of your profile versions and communications on dating sites. By being in any major city. Every major city has cameras that cross cover every part of the city. The cameras in stores and on buildings are crossed over. Most every bus, police car and many utilities vehicles share their cameras to the common database which any group can access. By watching you from drones that are so high, or so small, you can't see them. By watching what you watch on Netflix, Hulu, Youtube, Comcast, Xfinity and similar media outlets. By using less than three mouse clicksevery Dell Server, Cisco router, Linksys device, Intel motherboard and Netgear device can be "backdoored" open and every document it is attached to read, opened and acquired. By making the phone manufacturers Apple, HTC, Samsung, etc. put a secret switch in your phone so they can kill your phone remotely if you start to organize. Buy the oldest phone you can find, without GPS or even a screen. The old ones won't have tracking chips. By lasering, microwaving or otherwise bouncing energy off the windows or objects in your home or office to listen to you by recording the air vibrations of those objects that your voice causes. By reading your location of uses, direction of travel, individual actions, trends in purchases, amounts of purchases and time of purchases for each and every credit card and debit card use. By intercepting the network application in your car dashboard and watching the people behind you and on the street via the back-up camera in your car. By using deaf people or specialized computers to read your lips no matter how far away you are or what windows you are behind. By remote activating any camera on your computer, mobile device, TV, or any other location and watching you while putting fake screen information on your screen so you do not know they are watching you. Remove the battery of any mobile device when not using it. Hacker software makes your device appear to be turned off but it is still alive and watching you. By reading every email that passes over any server in the world and by logging your passwords for any server. By looking through walls with wifi distortion field devices, interferometry devices and EMF grid sensors. By simply turning on software products such as Predator, Carnivore, CALEA, Prism, DCSNET, and over 100 others that exist to automatically acquire every personal information element they can find in an unattended manner. By monitoring the GPS, Siri, OnStar, Microsoft Sync, Tesla dashboard, Nokia Here Audio and any other networked electronics in your car. Don't buy a "smart car" if you don't want to be watched every second you drive it. You can be listened to through it. Your GPs signal can be hacked and rerouted through it. By reading the GPS, cell phone signal triangulation, bluetooth, Near Field Communications chip, modem or any other signal on your cell phone or table. Remove the battery on any device you don't want to be tracked on. Only use an old cheap phone with no GPS and no internet capability. By using fake cell towers called "sting rays", your cell phone signals can be easily intercepted. By making the "remember" function of any browser send what it "remembers" back to the hackers. BY Itunes, Pandora and music services storing your preferences and all use data which can be forwarded to others. By acquiring all information from lotteries, contests and subscription cards you fill out at expo's fairs, online and at any other location. Filling out a contest entry guarantees you will end up on the junkmail lists. By capturing and databasing all of your product exchanges and returns, store and log all of those actions and then hackers, and others, can access their database and pull down all of your records. and more... ----- While the stated purpose is to "stop crime", in many cases the information acquired, as we now learn from the IRS data manipulations, is used by some to stop, delay or harm those who have conflicting points of views. The statement that it is "legal" is mitigated by the fact that it now only costs \$50,000.00, or less, to buy a "law" or "policy" in Washington. Corporate lobbyists buy them every day. Corporations and political operatives have the same agenda: To use you for their purposes. So they are not motivated to fix it. The proven "targeting" of political adversaries by the IRS, and others, shows that, given the chance to use the system against those with other views,

they always will.

U.S. Senator: Tesla money came from one of the most disastrously mismanaged and corrupt programs in U.S. history,

Rep. Jim Jordan, R-Ohio, chairman of the House Oversight subcommittee where Whitcombe testified, has called the loan program one of the most disastrously mismanaged and corrupt programs in U.S. history, and said during that Fisker hearing, The Obama administration owes the American taxpayer an explanation as to why this bad loan was made in the first place. He might also want an explanation why DOE's Whitcombe and Chu hid the truth about VPG while under oath before his subcommittee. Tesla owners, investors and their search engine owners paid Washington staff to get false stock impressions and taxpayer funds in order to unfairly and unethically fund Tesla. So besides the fact that it has now been revealed that Tesla cars spy on their owners while you are driving one, the company was acquired in a hostile takeover, each car has constant mechanical problems, the door handles can lock you in the car, Solyndra and Tesla buildings were corrupt real estate deals, the batteries have to be assembled in a blast chamber because they could explode, and the Tesla people paid to sabotage Fisker and other competitors... the list of bad Tesla things now seems to be record-breaking

Google Kickbacks. Tesla Connected?

Google Kickbacks Google investors paid for the national election expenses and outside services and manipulated Google searches so they got: patent laws changed that benefit them, business tax laws changed that benefit them, free jet gas and free money for Google's car company -Tesla. Tesla is owned and controlled by the owners of Google and their investors. Sweet Deal! A former Google staffer, who had to leave to go overseas, has started spilling the beans. He has stated that Steven Chu was best friends with all of the Google and Kliener investors before he was "picked" (slid into place) to head DOE where he could conduit money. Google bosses shouldn't sleep with Google employees girlfriends, apparently. Senator halts Google's taxpayer-subsidized executive jet fuel deal Your tax dollars at work By Iain Thomson, 13th September 2013 A year-long investigation by US senator Chuck Grassley (R-IA) into Google's use of NASA's Silicon Valley airport has shown that the company benefitted from buying cheap aviation fuel from NASA at a discounted price arranged by the Pentagon. "Are some executives getting a special deal on fuel that isn't available to other businesses said the Republican Senator Grassley, who will be conducting an audit into the arrangement. He added that the Google/NASA deal raises concerns about the government being a "fair broker with businesses and responsible steward of tax dollars." Google currently has a Boeing 767, Boeing 757, four Gulfstream V's, two helicopters, and an 1982 Dornier Alpha Jet based at Moffett Field, which is handily right next door to the Chocolate Factory's campus. The arrangement is part of a 2007 deal between NASA and Google that allows Google to rent space at the airport, with the space agency getting to use Google aircraft for experiments as the quid pro quo. But, according to The Wall Street Journal, Google's air force (managed by holding company H211) has also been benefitting financially by buying its aviation fuel cheap from NASA, which is supplied by the Pentagon. Documents obtained by Senator Grassley show that since 2009, H211 has bought 2.3 million gallons of jet fuel at an average price of \$3.19 per gallon. "I don't see how in the hell anybody can buy it that cheap," said Fred Fitts, president of the Corporate Aircraft Association, adding that the average price his members were paying was \$4.35 per gallon. According to FAA records, Google aircraft have flown from Moffett 710 times since 2007, which includes 20 flights to the luxurious Caribbean island of Tortola, 17 to Hawaii, and 15 to Tahiti. New York and Los Angeles are also frequent destinations, and many flights also go to Europe. The FAA reports that three of Google's jets, including the 767, flew from Moffett last year to Croatia, where CEO Larry Page was a groomsman at his brother-in-law's wedding,

and bought 24,000 gallons of fuel for the trip at a price of \$3.33 per gallon, more than a dollar less than the going rate. According to H211's contract, fuel bought at Moffett should be used "for performance of a U.S. government contract, charter or other approved use." Kenneth Ambrose, an executive with H211, said that it bought "the only fuel available at Moffett" and pays "full retail for hangar space that includes none of the ground support typically included at business aircraft hangars." NASA does, of course, get the use of the aircraft for science, and collects \$1.3m a year in rent from Page's people. According to Grassley, NASA has used Google's aircraft 115 time for atmospheric testing flights, but all but 11 of these flights have used the Chocolate Factory's Alpha Jet, rather than its much more thirsty Boeings or Gulfsteams. "NASA is always looking for innovative, public-private partnerships to help advance our mission and provide benefit to the American taxpayer," a spokeswoman for NASA told the WSJ. Now that the sweetheart deal with Google has been stopped, its fleet has to buy its fuel elsewhere at market prices. But the Moffett deal could soon end anyway, as Google is planning to build a \$82m private terminal at Mineta San José International Airport, so that its execs can continue to fly without encountering the hoi polloi. ----- US senator Chuck Grassley has now been targeted by an elite programming team at Google. Senior staff ordered the inside team at Google to "pull a Santorum" on US senator Chuck Grassley. This involves programming the Google search engine to hold negative search finds about Senator Grassley at the top of search engine results. Google is not happy about his findings. Google had previously targeted Sen. Rick Santorum as a "political enemy" and ordered his name placed at the top of Google searches associated with a horrific sex term. Sen. Rick Santorum went to great lengths to attempt to have the attack on Google, by Google, removed. Google has denied that they manipulate search engine results but analysis of their algorithms and interviews with their staff have confirmed otherwise.

Tesla gets another \$34M of your tax \$\$\$ in campaign finance kickbacks.

Tesla gets another \$34M of your tax \$\$\$ in campaign finance kickbacks!!!! Part of a number of lawsuits currently filed on Tesla note that Tesla books tax giveaways as "profit or revenue" instead of selling cars it has made a business out of taking tax money. Today, the State of California revealed that Tesla had received another \$34 million in a one-of-a-kind, exclusive kickback of taxpayer money to help a bunch of billionaires who just happened to be the same billionaires that financed the related campaigns! Amazing! DG- Bost ----- Tesla just got a \$30-million tax break </h1> By Giuseppe Macri- Daily Caller The state of California just approved a \$34.7-million tax break for electric car manufacturer Tesla Motors to expand the companys production capability by another 35,000 additional units per year. As a result, Tesla will be exempt from paying sales and use taxes on its planned purchase of \$415 million in new manufacturing equipment, which California estimates will result in a \$24-million economic boon to the states economy. The California Alternative Energy and Advanced Transportation Financing Authority was the state panel that authorized the tax break. The panel is chaired by California state Treasurer Treasurer Bill Lockyer. Read more: <http://dailycaller.com/2013/12/19/tesla-just-got-a-30-million-tax-break/#ixzz2nyWjWpm9> <http://dailycaller.com/2013/12/19/tesla-just-got-a-30-million-tax-break/#ixzz2nyWjWpm9> ----- Since Tesla is still using our tax money, that means all of their internal financial records are available, on request, for public review, right? Dj- ----- The Multiple Fraud and Malfeasance Lawsuits Against Tesla" /directory-of-articles/topic-1-doetarp-manipulations/fraud-and-malfeasance-lawsuits-against-tesla/ lawsuits against Tesla state that Tesla is pulling funny business with the numbers. Why wouldn't the State of California wait until the TESLA SAFETY REPORT Vers. 1.05G- Public Wiki Produced for NHTSA and other governmental agencies" /2013/12/06/tesla-safety-report-vers-1-05-public-wiki-produced-for-nhtsa-and-other-governmental-agencies/ NHTSA review is complete, or is this because they know the NHTSA review is going to go south? T- Fresno B ----- Tesla has gotten tax money from California before and they STILL need more cash from the taxpayers? Why can't the Google Guys or Kleiner pay for this instead of the taxpayers? WTF? Dan ----- Google+ Political White House super executives Bill Daley and Larry Summers, both thought to be shoe-ins, shockingly end candidacies at same time as investigations reveal their participation at the time and place that the Google and DOE kickbacks began. Watch the news for more as details evolve.... The net

is tightening around the suspects who ran a multi-billion dollar DOE/Google/Election scam: Daley, Summers, Rattner, Emanuel, Gibbs, Axelrod. All of whom suddenly quit the White House or high office when investigators let them know what they had on them! Roberts- LA Times, Chicago Office -----
All of them bailed out, at the height of their careers, in a bad economy, when they had the best jobs online already, because of "information they received". It made no sense for them to cancel campaigns or jump ship, when they did, unless they knew they were going to be busted. They all issued comments that used the suspicious: "after careful consideration" language and the "spend more time with my family" smoke-screen phrasing. They all worked at the White House on the illegal ordering of the direction of the DOE funding decisions and they, and their chief of staff's, all met with Google's investors, who benefited the most from the DOE funding decisions. They all are under investigation by multiple organizations for re-routing federal funds to special interests during their White House stint. Ironic? Coincidence? or Crime? Baily Johnson- Times Independent -----
----- Bill Daley ends his campaign, former White Chief of Staff. Larry Summers ends his White House nomination campaign at the same time. Two of the most powerful people in politics suddenly bail. Deja Vu.. Yes: Can you say Emanuel, Gibbs, Rattner, Axelrod? They find out all of their back-door, insider, communications are on record with NSA, DEA, and many other agencies, who caught them while looking for other crimes. Betty T.- Wall St. J. Stringer -----

Rolls-Royce Holdings said the U.K.'s Serious Fraud Office has opened a formal investigation into bribery and corruption allegations involving employees of ... in January to take charge of the internal inquiry and report findings. SEE THIS LINK: [online.wsj.com/ article/ SB10001424052702303290904579275781908599874.html](http://online.wsj.com/article/SB10001424052702303290904579275781908599874.html) For Sale: Deadbeat Fisker electric-car loan Joseph N. DiStefano POSTED: WEDNESDAY, SEPTEMBER 18 The Department of Energy is selling rights to collect the defaulted \$168 million it lent electric carmaker Fisker Automotive Inc. to restart a former General Motors plant on Boxwood Road in Vice President Biden's home state of Delaware. Fisker did make some cars in Finland, hired (then laid off) dozens of Delaware managers, workers and contractors, and collected \$21.5 million in additional Delaware state subsidies, but hasn't made any cars there. The loan sale may result in investors trying to revive Fisker, though the company owned few of its own patents. More at GoveSale.gov, and from Reuters, which notes an earlier sale of another failed "green" car loan, to Vehicle Production Group LLC, raised just \$3 million vs a taxpayer loss of \$50 million. Excerpts from the loan sale announcement : "The Department of Energy plans to sell by competitive auction, to be held on October 11, 2013, the future advance promissory notes issued by Fisker Automotive, Inc. in connection with a secured loan under the Advanced Technology Vehicles Manufacturing Program in respect of which approximately \$168,000,000 is outstanding. "The loan is presently not performing. Persons interested in purchasing the notes should promptly contact the Advanced Technology Vehicles Manufacturing Program at portfolio.fisker@hq.doe.gov to learn how qualified prospective purchasers may obtain additional information about the auction, including requirements for submitting an initial bid... The deadline for submitting initial bids is October 7, 2013 at 5:00 PM EDT. Bidders will have an opportunity to conduct due diligence prior to the bid deadline. Inquiries should include the senders name, business name, postal, street and email addresses, and telephone numbers." Another Rich Douchebag Car Company charged with bribing government officials re: crony kickbacks. Global investigation. Jail time expected. <http://wp.me/p2BJXK-9W>

The "Lithium Ion" VC's: Say "Howdy" to the ACTUAL 1% Illuminati ! How they copied the Mafia's Playbook:

Who are the Lithium ion VCs? Say "Howdy" to the ACTUAL 1% Illuminati! ----- " This matter has absolutely nothing to do with whether or not you like solar power or electric cars or gasoline or fracking or one technology over another. It has nothing to do with climate change; not a single thing. This is totally about banking, securities and finance fraud. It is entirely about organized crime racketeering kickbacks arranged by arrogant frat-boy billionaires who sought to buy government, buy power, buy ego-trips, kill competitors and monopolize industries for personal gain in exchange for campaign efforts." - A U.S. Senate Source ----- Watch the 60 Minutes episode: "The Cleantech Crash" , below, that began the series of 2014 expose events coming over the next 6 months: [wpvideo jMnc6LJb] [wpvideo fARepFIX] The lobbyists called Think Progress " (many of those targeted by investigations work, or worked there) and others, funded by the VC's, have started massive spin to call it a bunch of lies and say that "No, No, it was really a big success", but the The CARGATE Total Loss Spreadsheet: " /directory-of-articles/the-total-loss-spreadsheet/ facts , the HOT!!!! THE TESLA INVESTIGATIONS!!!!: RICO, Safety, Tax Fraud, DOE Fraud" /directory-of-articles/topic-1-doetarp-manipulations/the-tesla-investigation/ criminal investigations and the Naming-the-Names: Master List" /directory-of-articles/naming-the-names-master-list/ money trail speak for themselves. It doesn't matter if you are Democrat or Republican, it matters if you want billionaires buying your government and cutting you out of the loop. D- LA Times ----- Now watch the 60 Minutes episode about how it was done: <http://www.youtube.com/watch?v=CHiicN0Kg10> --- The Democrats needed cash for the campaign. Democrats are always poor, so they never have enough money. The campaign staff went to the Silicon Valley Vc's and said that if they paid for the campaign costs up front and rigged the search engines to only promote the Democrat candidates, then the campaign would give them \$100 Billion of tax money that they would not have otherwise gotten, once the Democrats had control of the DOE slush fund. So they did, but they got caught by their greed, and now they need to go to federal prison. It's as simple as that! E- Heritage ----- Note From Victims: Multiple SOMO reporters/writers have spoken with a number of victims of this series of How Washington DC Politicos Have Troublemakers and Reporters Killed!" /directory-of-articles/topic-1-doetarp-manipulations/how-washington-has-people-it-doesnt-like-killed/ hits organized by the same group of people. If any major law firms (Multiple firms can file) begin the process of filing a class action RICO or damages action on behalf of the victims: Arrington, Assange, Eberhard, Brown, Conway, DM, Steve, Lakatos, Katie, AL, Etc... It is highly likely that a number of other victims (over 20+) will join the cases once they are filed and publicly noticed. Substantial evidence and testimony now exists and recoverable assets in potential court-ordered awards, from the attackers, exceed \$50B+ in possible recoveries for damages caused by their organized efforts against these competitors and reporters. In other words, big class-action law firms, according to many plaintiff candidates: "if you file it, they will come." DFG, YY, DS, SAT/LAT/NYT ----- Seriously... ...Don't get your panties in a knot about saving electric cars or solar panels. They are NOT AT RISK . There are a ton of solar panel companies doing gangbuster business and you can buy all kinds of electric cars, from many companies, right now. Those things are safe. They are doing fine. Don't let the Topic 13: Industry Shills – Pundits or Secret Salesmen /directory-of-articles/topic-13-industry-shills-pundits-or-secret-salesmen/ VC media shills play your feel-good heart-strings. By complaining about political corruption you are not going to destroy the planet. You are going to destroy corruption. Got it? Green energy is doing fine but Corruption is also doing fine. Let's stop the corruption and let the green energy keep on keepin' on! Bradley T- SF Chr ----- Did they break the law? Multiple federal agency & committee probes now asked to look into organized crime charges over kickbacks. By Andrew Zajac & Jesse Drucker The dot-com boom of the late 1990s has come back to haunt former Hewlett-Packard Co. (HPQ) Chairman Ray Lane. Lanes dispute with the Internal Revenue Service opens a window to a mostly bygone era when accounting and law firms conceived and sold tax-dodging strategies to investors seeking to avoid taxes on outsized gains from the still-swelling tech bubble. A file photo shows Hewlett-Packard Co. former Chairman Ray Lane speaking during the Wall Street Journal ECO:nomics conference in Santa Barbara, California, during March 2011. Photographer: Jonathan Alcorn/Bloomberg The shelters had memorable nicknames, based on acronyms: Son of BOSS, BLIPS, PICO and COBRA. Lane used one called POPS. Then the IRS cracked down, triggering the kind of legal battles with the agency Lane is now embroiled in. Most of these types of tax shelters have flushed through the system, said Bryan Skarlatos, a tax attorney at Kostelanetz & Fink LLP in New York. The ones like youre seeing with Lane are some of the stragglers. Its not the very last dinosaur caught in the tar pit, but its one of the last, said Skarlatos, who represents clients in disputes with the IRS over POPS transactions. Tax Bill Lane, also the former president of Oracle Corp. (ORCL) and partner emeritus at venture-capital firm Kleiner Perkins Caufield & Byers, used POPS in an attempt to shield \$250 million of income through what the IRS ruled were sham transactions. Lane, 66, who left Oracle with more than \$1 billion in stock and stock options in mid-2000, has agreed to settle with the IRS on a tax bill that could be as much as \$100 million, even as he appeals the agencys ruling in U.S. Tax Court in Washington. He said he fully paid his tax bill on sale of his Oracle options. My tax advisers put me into an investment, he said in an interview. Somewhere along the way I knew these things were being questioned by the IRS. The investment totaled \$25 million, Lane said, and included an \$18 million up-front payment used to fund startups. A portion of that went to purchase warrants or stock options in five companies, including RocketGas Inc., Kleptomaniac.com. and Spectrum Target Detection Inc., according to a filing in one of at least five U.S. Tax Court cases involving Lanes tax shelter investments. Tech Startups RocketGas was described in court papers as a business to bring services traditionally available only at a gasoline station to customers home or office. Kleptomaniac.com was an e-commerce solutions provider and e-tailing consultant to brick-and-mortar retailers and Spectrum had developed a traffic radar gun that was expected to replace traditional speed measuring devices used by law enforcement agencies. Like most high tech startups which seemed so attractive in 2000, that high risk, high reward portfolio proved worthless within three years and petitioner simply seeks to recognize the real, hard-cash economic loss, one of Lanes lawyers argued in a court filing. Losses for the five companies totaled about \$17 million, according to another filing. The IRS argued that the investments in the companies were payments of fees to promoters of listed and/or abusive tax avoidance transactions. Other Investors Lane and other investors didnt establish the value of stock options or warrants in an amount greater than zero, and as a result, no losses were allowable, IRS lawyers wrote. Lane said the POPS shelter was assembled for him by Sidley Austin LLP, a Chicago-based law firm, the BDO Seidman consulting firm and Deutsche Bank AG, he said. Deutsche Bank, Germanys largest bank, admitted criminal wrongdoing in 2010 and agreed to pay \$553.6 million to avoid prosecution over its participation in 15 fraudulent tax shelters, including POPS transactions. The bank admitted to involvement in at least 1,300 deals, helping more than 2,100 customers evade about \$5.9 billion in individual income tax on capital gains and ordinary income, according to a settlement agreement with the Justice Department. Duncan King, a spokesman for Frankfurt-based Deutsche Bank, and Jerry Walsh, a spokesman for BDO, declined to comment on Lanes remarks. Sidley Austin didnt reply to phone and e-mail messages requesting comment. Conspiracy Charge

BDO, now known as BDO USA LLP, said in June 2012 it would pay \$50 million to settle a charge of tax-fraud conspiracy for helping wealthy individuals evade about \$1.3 billion in taxes from 1997 to 2003. In 2011, a jury convicted former BDO chief executive officer Denis Field and three others of more than 20 criminal counts including conspiracy and tax evasion. A judge threw out Fields conviction after finding that a juror lied about her past. A re-trial is pending. POPS stands for Partnership Option Portfolio Securities. Though it has multiple variations, a POPS transaction, in general, worked like this: an accounting firm would set up a series of partnerships, which would typically enter into transactions called straddles using foreign currencies. Straddles involve simultaneously taking long and short positions to offset the investment risks. Offsetting Loss The partnership would sell off the position that generates the gain, which would be attributed to a partner that would be indifferent to the tax, such as a tax-exempt entity. That would leave one of the partnerships with the offsetting loss. An investor with a big gain somewhere else could then buy into the partnership and thus take advantage of the loss. The IRS attacked such transactions for separating out the losses from the gains. The IRS case against Lanes Vanadium Partners LLC mentions a series of meaningless steps, involving a straddle, a tiered partnership structure and a transitory partner that allowed a tax shelter investor to claim a permanent non-economic loss. Lanes attorney, Charles Hodges, disputed the IRS contention that Vanadium was a sham that lacked economic substance. In addition to the tech boom, conditions were ripe for tax shelters in the 1990s because the IRS had eased off enforcement under pressure from Congress, said Christopher Rizek, a lawyer at Caplin & Drysdale, a Washington-based law firm that specializes in tax matters. Wealthy Individuals They spent about two years re-organizing themselves, he said. They were intimidated. By the mid-2000s more aggressive enforcement resumed. Wealthy individuals who purchased POPS and other tax shelters were often identified by the IRS and Justice Department in probes of the accounting firms and law firms that sold them. The uproar in Congress over whether the IRS tried to head off conservative groups from getting non-profit status could curb challenges to tax shelters again, Rizek said. Tax lawyers are watching how the agency responds to this months use as a pinata by Congress, he said. They could be cowed again, Rizek said. Well see. The case is Vanadium Partners Fund LLC v. IRS, 9970-13, U.S. Tax Court (Washington). How the VC's manipulated Afghanistan for Lithium Silicon Valley VCs, Goldman Sachs, Batteries and Afghanistan

/2014/01/22/silicon-valley-vc-goldman-sachs-batteries-and-afghanistan/ HERE>>> -----
 BLOOMBERG: Tom Steyer: The Wrath of a Green Billionaire By Joshua Green April 25, 2013 The billionaire -- with a jar of tar sand oil Billionaires get frustrated by Washington ineptitude just like everybody else. The difference is that they can afford to do something about it. Tom Steyer, who founded the San Francisco-based hedge fund Farallon Capital Management and retired last year with an estimated \$1.4 billion fortune, is one such fed-up billionaire. Steyers particular grievance is the lack of government action to combat global warming. If you look at the 2012 campaign, climate change was like incest—something you couldnt talk about in polite company, he says. With the current Congress, the chance of any significant energy or climate legislation that would move the ball forward is somewhere around nil—possibly lower. So Steyer, 55, a major Democratic contributor, quit Farallon to devote his time and much of his money to changing this reality. In doing so, hes joined an emerging class of billionaires—including this magazines owner, Michael Bloomberg and Facebook (FB) co-founder Mark Zuckerberg—who have forsaken the traditional approach of working through the political parties and instead jumped directly into the fray, putting their reputations and fortunes behind a cause. Some environmental activists are thrilled. In a country thats dominated by billionaires gaming the political system for their narrow self-interest, its pretty neat to see a player whos in it for the common good, says author and environmentalist Bill McKibben. Hes not a greedhead. Many Democrats, McKibben among them, view Steyer as a liberal analogue of the conservative Koch brothers, the billionaire owners of Koch Industries, whose lavish support of free-market causes and political ruthlessness loom large in the liberal imagination. Steyers financial commitment is unquestioned. In 2010 he and his wife, philanthropist Kat Taylor, signed the Giving Pledge begun by Warren Buffett and Bill and Melinda Gates to persuade wealthy people to devote the majority of their fortunes to good causes. That same year he spent \$5 million successfully defending Californias greenhouse gas emissions

law against a ballot measure, heavily financed by oil companies, to weaken it. He spent an additional \$35 million last year on an initiative to close a tax loophole that benefited out-of-state corporations. Voters approved the measure, which will raise \$1 billion a year in new revenue for the state, in November. He has made a difference in California, says Representative Henry Waxman, the Los Angeles Democrat. His aptitude for hardball politics is less certain. On March 18, Steyer, a vocal opponent of the proposed Keystone XL pipeline that would pump tar sands oil from Canada to the Gulf Coast, clumsily inserted himself into the Massachusetts Democratic primary race between Representatives Edward Markey and Stephen Lynch for the states open Senate seat. Channeling John Wayne, Steyer penned a bullying letter demanding that Lynch renounce his support for the pipeline by high noon a few days later or face the wrath of all the opposition Steyer and his checkbook could muster. Lynchs campaign dismissed the stunt as billionaires issuing ultimatums. The Boston Globe chastised Steyer for butting into a race in which both candidates had pledged to eschew PAC support. Markey probably doesnt even need the support: But after the searing defeat in Congress three years ago of legislation to cap carbon emissions, Steyer and many other Democrats preoccupied with climate change are convinced that only a smash-mouth, confrontational style of politics can save the planet. He subscribes to the analysis offered in a recent paper by Harvard sociologist Theda Skocpol that the loss derived from Democrats naive faith that their best chance at climate legislation was cooperating with polluters on a grand bargain negotiated by Washington power brokers. The strategy failed to account for Republicans radicalization and use of the filibuster. And because environmental groups had neglected to organize, no grassroots pressure materialized when the legislation stalled. Steyer confidently presents himself as being in the vanguard of a hardheaded new approach. The way politics works is by people winning and losing jobs—their own jobs, he says. Until people running for office believe its in their own interest, that it will make them popular with their constituents to stand up for good policy, its not going to be good politics. For now, this approach entails rounding up a posse of environmental activists and making blustery threats to keep Democrats in line. Earlier this month, Steyer paid for an airplane to circle a Boston Red Sox game at Fenway Park trailing a banner that read, Steve Lynch for Oil Evil Empire. ----- Team Obama Releases List of Campaign Bundlers Corrupt Jon Corzine and Solyndra Goons Steve Spinner/Steve Westly Top the List February 1, 2012 by Scotty Starnes What a list of corruption. Ex-Democrat Senator Jon Corzine is on the list. Corzine bankrupted MF Global and stole hundreds of billions from investors. Steve Spinner is an Obama bundler who pushed the Solyndra loan and Steve Westly has received billions for corporations he has ties to. Remember, Obama pretended to hate lobbyist as he issued waivers for lobbyists to work in his administration. WASHINGTON (AP) — President Barack Obamas re-election campaign identified its top fundraisers on Tuesday, including 61 people who each raised at least half a million dollars. Altogether, the more than 440 fundraisers collected at least \$75 million to help Obama win a second term. Among them are embattled former New Jersey Gov. Jon Corzine. Obamas campaign and the Democratic National Committee late last year returned \$70,000 in contributions from Corzine and his wife following questions about the collapse of MF Global, the financial firm Corzine ran. The list includes two fundraisers linked to Solyndra LLC, the California solar company that received a \$528 million federal loan and then later declared bankruptcy, prompting a federal investigation. Steve Spinner, an Energy Department adviser, raised at least \$500,000 and Steve Westly, a venture capitalist who was an unpaid adviser to the department, raised between \$200,000 and \$500,000. Though Obama rejects contributions from lobbyists, his top fundraisers include individuals involved in the business of influencing government. Michael Kempner, among those who raised more than \$500,000, is president and CEO of MWW Group, a public relations firm with a large lobbying business. Kempner himself is not a registered lobbyist. Sally Susman, another fundraiser in the \$500,000-plus category, is executive vice president for policy, external affairs and communications at Pfizer Inc., a job that includes directing the pharmaceutical giants government relations operations. Spinner and Westly are lobbyist as well. They bundled money for Obama then lobbied for money to be invested in corporations they have interest in. -----

----- Obama releases list of top money 'bundlers' Associated Press By JIM KUHNHENN and KEN THOMAS February 1, 2012 9:32 AM WASHINGTON (AP) — President Barack Obama's re-election campaign identified its top fundraisers on Tuesday, including 61 people who each raised at least half a million dollars. Altogether, the more than 440 fundraisers collected at least \$75 million to help Obama win a second term. Among them are embattled former New Jersey Gov. Jon Corzine. Obama's campaign and the Democratic National Committee late last year returned \$70,000 in contributions from Corzine and his wife following questions about the collapse of MF Global, the financial firm Corzine ran. Corzine is no longer raising money for the re-election, campaign officials said. The campaign divided the list into four groups based on how much money

donors raised: \$50,000-\$100,000, \$100,000-\$200,000, \$200,000 to \$500,000 and those who raised more than \$500,000 apiece. The donors represent a broad network of contributors, many of them longtime Democratic Party stalwarts. The list includes two fundraisers linked to Solyndra LLC, the California solar company that received a \$528 million federal loan and then later declared bankruptcy, prompting a federal investigation. Steve Spinner, an Energy Department adviser, raised at least \$500,000 and Steve Westly, a venture capitalist who was an unpaid adviser to the department, raised between \$200,000 and \$500,000. The

disclosure came as Obama headed back out on the money trail, speaking Tuesday night at two high-dollar fundraisers in the Washington area where donors paid \$35,800 per ticket to see him. At an event at the posh St. Regis Hotel, the president told donors that Republicans have "the wrong vision for America," though he didn't mention any of his opponents by name or reference the voting under way in Florida, where polls were closing in the state's GOP primary. Obama said voters needed to know "that this is not an abstract ideological argument, that this is a practical concrete argument," and that the election is about whether they'll be able to find a good job with a living wage and get health care for their families. "They've got to feel that we are actively advocating on their behalf." Obama's campaign ended the year with more than \$81 million in the bank, but Republicans are gearing up in the race for the White House. The Republican National Committee collected \$27 million during the final three months of 2011, compared with \$23 million by the DNC. In December, the RNC raised \$11.6 million while the DNC collected \$8.8 million. Through the end of 2011, the RNC had \$20 million in the bank and \$13 million in debt, while the DNC held \$12.5 million in cash on hand and \$6.5 million in debt. Though Obama rejects contributions from lobbyists, his top fundraisers include individuals involved in the business of influencing government. Michael Kempner, among those who raised more than \$500,000, is president and CEO of MWW Group, a public relations firm with a large lobbying business. Kempner himself is not a registered lobbyist. Sally Susman, another fundraiser in the \$500,000-plus category, is executive vice president for policy, external affairs and communications at Pfizer Inc., a job that includes directing the pharmaceutical giant's government relations operations. California figured most prominently on Obama's roster of big money "bundlers." Sixteen are from California and 13 are from New York. Top fundraisers include movie producers Jeffrey Katzenberg and Harvey Weinstein, and Vogue editor-in-chief Anna Wintour. Actress Eva Longoria was in the second highest tier, bundling \$200,000 to \$500,000 for Obama's re-election. Associated Press writer Erica Werner contributed to this report. ----- D- LAT, GH- WAPO, HJ-

TESLA SAFETY REPORT Vers. 1.05- Public Wiki Produced for NHTSA and other governmental agencies

Draft- 1.05 (Document under construction - not final)- First Final Draft Due to NHTSA 1/14/14. For Public Comment and Review

CONTENTS:

1. Overview
2. Issues
3. Safety tests that were never conducted and must now be conducted.
4. How many fire incidents have there been.
5. Contacts to follow-up on investigations
6. Are Tesla drivers more likely to get in accidents than mainstream drivers?
7. Original participant conflicts-of-interest created reduced safety oversight

Appendix

- Lithium ion site
- NHTSA Demand Letter
- Additional data
- Video Evidence

(Supplemental material now numbers over 10,000 pages and will be submitted directly to regulators in order to avoid congesting this site)

1. Overview

Regulators asked Tesla to detail the possible consequences of battery pack damage to the Model S and how those problems were addressed in the Model S design. NHTSA also asked Tesla to describe the "limits of that design to prevent damage to the propulsion battery, stalling and fires". While electric cars have been in commercial production since the 1800's, and have been widely released by major automobile manufacturers, only the Tesla vehicles have experienced the fire issues, relative-to-inventory, in this magnitude. The questions and data required by NHTSA, in the letter from NHTSA, contained below, demands disclosure of certain Tesla information which will reveal conflicts in previously provided Tesla data. Reporters and public interest law firms will be using the FOIA process to disclose the responses, required under federal law, in the public interest.

2. Issues.

- Dense packing non-automotive lithium cells
- Self ignition from exposure to air
- Self ignition from exposure to water
- Burning lithium ion, plastics and human skin
- Inability to extinguish lithium ion fires
- Failure to provide disclosures to buyers
- Failure to provide required CO2 fire extinguishers to buyers
- Toxic carcinogenic chemicals released in Tesla Fire- Danger to passengers
- Toxic carcinogenic chemicals released in Tesla Fire- Danger to bystanders
- Brain damage from toxic chemicals released in Tesla Fire- Danger to passengers

- Brain damage from toxic chemicals released in Tesla Fire- Danger to bystanders
- Lung damage from toxic chemicals released in Tesla Fire- Danger to passengers
- Lung damage from toxic chemicals released in Tesla Fire- Danger to bystanders
- Birth defects from toxic chemicals released in Tesla Fire- Danger to passengers
- Birth defects from toxic chemicals released in Tesla Fire- Danger to bystanders
- Home and office conflagration as warned in Tesla's own patents
- BMS (Battery Management System) programming, ie: Vampire issues, etc.
- Danger to factory workers exposed to internal materials in Tesla Lithium ion cells
- Electronic door locks failing. Could passengers be locked inside car in fire?
- Previous seat safety recall
- Miscellaneous owner complaints about technical issues and relation to safety

Additional Covered Up Defects...

Tesla model s still loses power while turned off

The Tesla Model S, for all its technical and design artistry, has a dirty little secret: the car has a substantial appetite for kilowatt-hours even when turned off and parked.

Since the Model S was introduced in 2012, this "vampire" power drain from the cars sold so far has consumed roughly 15 gigawatt-hours of electric energy, nearly a day's output for a mid-size nuclear power plant. It's enough wasted energy to drive the cars 50 million miles.

After nine months of promises to fix it, Tesla finally sent out a software update a week ago to the Model S fleet that it claims "significantly reduces power usage when (the car is) shut down."

But based on a week's worth of measurements on my 60-kWh Model S, I've concluded that the new software is only mildly effective.

As far as I can tell, the vampire's fangs are still sharp.

Wasted power

Shortly after taking delivery of my Model S last February, I noticed that I would typically lose 10-15 miles of indicated range overnight. On average, I was losing 23 miles of indicated range every 24 hours.

Re: Tesla model-s still-loses-power-while-turned-off

What interests me most is that the 23-25 mile loss overnight the writer of the article mentions is in line with what the NY Times mentioned and yet Musk claimed it wasn't so. It's recently been "improved" to a 15 mile loss, but that's still substantial.

Others have pointed out the loss overnight and were pooh-pooed by Silicon Valley types claiming biased reporting. But it seems there is a problem and losing 20 or so miles overnight could be the difference between getting home and getting stranded.

As other have noted, this has not been a secret, every Tesla owner knows about this. Second, most reports I have seen, and my own experience, puts the previous vampire loss at about 3kWh, not 4.5. With the latest update, that has been reduced to about 1 kWh. And they are not done optimizing yet.

I think the idea of it being a "secret" comes from the fact that this is a weakness that the general media doesn't cover. Not yet anyway. I think if it were common knowledge that every Tesla born is like plugging in a couple of incandescent light bulbs forever whether you use the car or not, its reputation might be just a little less rosy. Lord knows if it were the Volt with this kind of issue, it would be top headlines on the hour on Fox News.

You may know this author better than I, but I didn't see any evidence that he used an inaccurate methodology. He was very clear about how it was done, and acknowledged that he could use a larger sample size to draw more accurate conclusions. Rather, it seems to me it's *your* claim that the latest update reduces daily vampire drain to 1 kWh that could use some evidence. I certainly wouldn't take it from a Tesla forum or Tesla corporate, which should automatically come with questions about objectivity. And this 1 kWh figure seems directly in contradiction to the author's findings by a wide margin.

IMO, a lot of time has passed with a known and significant issue (actually a set of related issues it seems), and despite promises and a concerted effort, what seems like it should be an eminently solvable problem has not been solved at all. As someone who's worked in IT for over 30 years, if I were in charge of R&D there, I'd be feeling like I should maybe offer my resignation! There is a tendency to look at Tesla with rose-colored glasses, something I'm seeing even in this thread, and IMO this issue is potentially more of a problem for Tesla than the recent spate of road-incident fires.

MrEnergyCzar

According to the article, he's seeing an average of 3.5 kWh per day after the latest software update.

I personally don't consider Tesla vehicles as green. From 10,000 miles out of rear 21" tires to more kWh per mile than other cars to the excess power from the motor and far too large a battery subsystem. Add to that the vampire drain and it just isn't conservative enough for my tastes.

I agree with this. To me the Tesla is less of a green automobile and more of a wasteful alternative fuel sports car.

Keywords: Lithium ion battery, ionic liquid, electrolyte, safety, thermal stability

1. INTRODUCTION

Lithium ion batteries have been widely used on personal computers and mobile phones for their high-voltage, high-energy-density characteristics [1-4]. Especially, the rapidly need for cleanly resource and crisis of energy, lithium ion batteries attract more attention as the power source of electric and hybrid electric vehicles. However, Lithium ion batteries have not been large-scale applied to electric vehicles for the safety issues, the volatile and flammable organic solvent organic solvents is the main components of electrolytes in lithium ion batteries, the cases of flaming, smoking or thermal runaway caused by electrolytes are the main reason for the safety problem. Therefore, electrolyte system, which has more stable features, is necessary to be found.

A number of incidents of cell phones with lithium ion batteries blowing up in peoples pockets, notebook computers blowing up in peoples briefcases and other shocking fires have been deeply documented.

Here is what the Lithium Ion Batteries did to their home:

TESLA HAS TO TEST THEIR BATTERIES IN a BLAST CHAMBER!!!!!!:

IF TESLA SAYS THIS THING IS SO SAFE WHY DO THEY TEST IT IN A STEEL ENCLOSED EXPLOSION ROOM WITH WIRES COMING IN THROUGH PLAST MOLES!!!!!!

HERE IS THE BATTERY YOU COULD HAVE BEEN SITTING ON TOP OF IN A TESLA

THIS IS THE TESLA MAGIC CARPET OF DOOM. THIS WHOLE THING IS FULL OF LITHIUM. YOUR WHOLE FAMILY IS SUPPOSED TO SIT ON TOP OF THIS!!

Airbus to drop lithium-ion batteries for A350 due to regulatory concerns

Text Size Print E-mail Reprints

By Associated Press, Updated: Thursday, February 14, 6:44 PM

NEW YORK — Airbus is dropping lithium-ion batteries from its new A350 airplane because of uncertainty surrounding the technology that has led to the grounding of Boeing's 787.

The European planemaker said late Thursday that it has decided to revert to nickel-cadmium batteries for the A350. The plane is a wide-body jet rival to the 787 and is expected to make its first flight around the middle of the year.

Airbus says it does not expect the battery switch to delay the A350.

Federal officials grounded the 787 last month because of problems with its lithium-ion batteries that caused one fire and forced another plane to make an emergency landing.

Airbus says the A350 uses batteries in a different setup to the 787, making it unlikely that it would face the same problems.

now? Fisker's insurance company is balking at paying for this saying: 'You knew this would happen'.

These links show vast sets of Fisker electric cars that burst into flames just because they GOT WEE!

Product Information Sheet

Panasonic Batteries

Panasonic Industrial Company
 A Division of Panasonic Corporation of North America
 5201 Tollview Drive, 1F-3
 Rolling Meadows, IL 60008
 Toll Free: 877-726-2228
 Fax: 847-468-5750

Product: Lithium-ion Batteries (Li-ion)

Applicable models/sizes: All Cylindrical and prismatic Lithium-ion Cobalt type batteries

FIRE SAFETY:

In case of fire, you can use dry chemical, alcohol resistant foam or carbon dioxide fire extinguishers. Cooling the exterior of the batteries will help prevent rupturing. Burning of these batteries will generate toxic fumes. Fire fighters should use self-contained breathing apparatus.

employees.

Because all of our batteries are defined as "articles", they are exempt from the requirements of the Hazard Communication Standard, hence a MSDS is not required.

The following components are found in a Panasonic Lithium Ion battery:

Component	Material	Formula
Positive Electrode	Lithium Cobalt Oxide	LiCoO ₂
Negative Electrode	Graphite	C
Electrolyte	Ethylene Carbonate - Solvent	C ₄ H ₈ O ₃
	Diethyl Carbonate - Solvent	C ₆ H ₁₂ O ₃
	Lithium Hexafluorophosphate - Salt	LiPF ₆

The overall reaction is: $Li_xC + Li_{1-x}CoO_2 \rightleftharpoons C + LiCoO_2$

DISPOSAL

All Panasonic Lithium Ion batteries are classified by the federal government as non-hazardous waste and are safe for disposal in the normal municipal waste stream. These batteries, however, do contain recyclable materials and are accepted for recycling by the Rechargeable Battery Recycling Corporation's (RBRC) Battery Recycling Program. Please call 1-800-8-BATTERY for information on recycling your used Lithium Ion battery or go to the RBRC website at www.rbrc.org for additional information.

TRANSPORTATION

Effective October 1, 2008 all Panasonic lithium ion batteries are not subject to the requirements of the Department of Transportation (DOT) Subchapter C, Hazardous Materials Regulations if shipped in compliance with 49 CFR 173.185 and Special Provision 188.

Currently all Panasonic lithium ion batteries can be transported under the International Civil Aviation Organization (ICAO) and the International Air Transport Association (IATA) under Special Provision A45. Effective January 1, 2009 Special Provision A45 will be replaced by Packing Instructions (PI) 965 (Batteries), PI 966 (Batteries, packed with equipment) and PI 967 (Batteries, contained in equipment).

Currently all Panasonic lithium ion batteries are regulated by the International Maritime Organization (IMO) under Special Provisions 188 and 230. These regulations will stay in effect until January 1, 2010 when Special Provisions 188 and 230 will be updated.

If you build any of our lithium cells into a battery pack, you must also assure that they are tested in accordance with the UN Model Regulations, Manual of Test and Criteria, Part 38, subsection 38.3. If you plan on transporting any untested prototype battery packs contact your Panasonic Sales Representative for regulatory information.

Notice: The information and recommendations set forth are made in good faith and are believed to be accurate at the date of preparation. Panasonic Industrial Company makes no warranty expressed or implied.

Lattice Energy LLC

Key take-aways

- ✓ In July 2010, Lattice began to issue public warnings about thermal runaway risks with large, scaled-up Lithium-based battery packs; on Slide #54 in an August 6, 2013 Lattice presentation subtitled "A Fool's Paradise" we questioned whether Tesla's engineering had solved problematic runaway issues, or whether they had just been lucky - so far
- ✓ October 1, 2013 fire incident (really a form of battery runaway) with Tesla Model S that occurred near Seattle, WA suggests that they had merely been lucky to date — battery thermal runaway issues have not yet been truly solved by Tesla Motors or anyone else
- ✓ As seen in the progression of news stories quoted from herein, Tesla began the news cycle by trying to assert that the battery pack had nothing to do with the hot fire that consumed the front end of a \$70,000 car. By Wednesday evening they finally admitted that the battery was in fact the culprit, but that the incident had been triggered by the vehicle's impact with "metal debris" that had been lying on the road surface and that consequent mechanical damage to battery cells triggered the thermal runaway fire event; they are emphatically asserting that the battery did not catch fire spontaneously
- ✓ While Tesla's theory of the incident is plausible, it is inconsistent with statements made by the highway patrol officer — trained to be keenly observant — who first investigated the accident scene and found no evidence whatsoever of any claimed "metallic debris"
- ✓ Unless conclusive physical evidence is revealed that proves otherwise, Lattice believes it is more likely that the fire was caused by a spontaneous heat-event inside the battery

Thermal runaway severity varies in Lithium-based batteries

"Garden variety" thermal runaways:

- Temps: ~300° C up to 600° C (Lattice's criteria)
- Reasonably well understood failure events
- Triggered by substantial over-charging or excessively deep discharges of Li batteries
- Triggered by external mechanical damage to battery cells, e.g., crushing, punctures; growth of internal dendrites pierces plastic separators

Field-failure thermal runaways can also include electric arc internal shorting:

- Temps: > 600° C - can go up to thousands of ° C with arcs
- Much rarer and comparatively poorly understood by industry
- Many believe triggered and/or accompanied by electrical arc discharges (internal shorts); what causes initial micro-arcs?
- Much higher peak temperatures vs. garden variety events
- Lattice suggests: super-hot low energy nuclear reactions (LENRs) could well be initial triggers for some % of them

3. Safety Tests That Were Never Conducted and Must Now Be Conducted.

The continued failure to engage in these tests, and/or provide the results from these tests, continues to call into question the efficacy and conflicts of interest of the original testing. The batteries used by Tesla were never designed, or created, to be used in automobiles and this short-cut to cost reduction must be mitigated by the relative increase in safety reduction.

- Vehicle with **fully charged batteries** drives into 3', 4", 5", 6", 7" 8" concrete curb at 5MPH, 15MPH, 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3 hours to analyze spontaneous lithium ion combustion.

- Vehicle with **fully charged batteries** drives into 3", 4", 5", 6", 7" 8" metal post embedded in road at 5MPH, 15MPH, 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3 hours to analyze spontaneous lithium ion combustion..

- Vehicle with **fully charged batteries** drives into 3", 4", 5", 6", 7" 8" concrete curb at 5MPH, 15MPH, 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3 hours in simulated rain storm to analyze spontaneous lithium ion combustion..

- Vehicle with **fully charged batteries** drives into 3", 4", 5", 6", 7" 8" concrete curb at 5MPH, 15MPH, 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3 hours after complete immersion in water as in a hurricane or high-water event to analyze spontaneous lithium ion

combustion..

- Rolling the vehicle with **fully charged batteries** in a 3 roll crash at 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH ending in the vehicle laying on it's roof and counting the number of lithium ion cells that came loose from their mounts risking burning lithium falling on passengers.
- Rolling the vehicle with **fully charged batteries** in a 3 roll crash at 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH ending in the vehicle laying on it's roof and counting the number of lithium ion cells that had their housings damaged risking burning lithium falling on passengers.
- Rolling the vehicle with **fully charged batteries** in a 3 roll crash at 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH ending in the vehicle laying on it's roof and simulating a full rain storm on the, now exposed, underside of the vehicle for 2 hours to see if lithium ion ignites when wet risking burning lithium falling on passenger and to analyze spontaneous lithium ion combustion.
- Filling the battery compartment, with **fully charged batteries**, with water, draining it and observing for 4 hours to analyze spontaneous lithium ion combustion.
- Pouring 18 Oz. soft drinks into the battery compartment, with **fully charged batteries**, and observing for 4 hours to analyze spontaneous lithium ion combustion.
- Impacting the lower quarter panel of Tesla with **fully charged batteries** on the side of the car, on each side, at the lower center of the passenger door and two feet to either side at 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH at 3", 4", 5", 6", 7" 8" so as to penetrate the battery chamber at least 4 inches and then saturating the damaged area with water and waiting four hours to analyze spontaneous lithium ion combustion.
- Forced ignition of lithium ion cells in flipped over (vehicle resting upside down on it's roof) with **fully charged batteries** and timing of penetration of smoke and flames to occupants simulated as contained within.
- Spectrograph analysis and complete full-range chemical read-out of the front metal and plastics of a Tesla on fire with **fully charged batteries** along with the lithium ion batteries. Disclosure of all known harmful chemicals in said smoke.
- Manually cutting 10 (ten) **fully charged** lithium ion Tesla battery cells in half long-ways in open air at average humidity and videotaping the results followed by dropping them in a bucket of water 60 seconds after cutting them. With the large number of lithium ion cells in a Tesla, physics and the law of averages predict that at least 10 cells will be fully ruptured in a high speed accident.

 **183,000**
Humans with Interest Graphs indicating a meaningful interest in the Model S

DRUNKS & Douche Bags Drive Teslas Making crashes 50% more likely

Tesla Driver now charged with homicide of two in crash.

7. **Original participant conflicts-of-interest created reduced safety oversight**

A certain, specific, group of investors, known to the FBI, The GAO, The SEC and the Senate Ethics Committee, purchased undo influence on the previous Tesla decisions process, in order to acquire "unjust rewards" from the U.S. Treasury. These investors, coincidentally, provided funds to related campaign efforts and, shockingly, they all hold major investments in the very battery system in

question.

Because of this, the American consumer has been forced to "accidentally" conduct some of these tests at great personal risk to those consumers. These risks should have been disclosed by Tesla prior to the application for their DOE loan and prior to their first contact with NHTSA. Tesla produced documents show that Tesla was aware of the dangers disclosed herein.

Tesla Motors Inc. TSLA shares tanked after a video of a Model S on fire circulated on the web, prompting the electric car company to move quickly to douse the flames of bad publicity.

Elizabeth Jarvis-Shean, director of global communications at Tesla, confirmed that the vehicle engulfed in flames was indeed a Tesla but stressed that the driver walked away without injuries.

Tesla Issues Statement On Fiery Car Crash That Caused The Stock To Tank

Mamta Badkar Oct. 2, 2013, 3:45 PM 13,469 11

tesla

Aj Gill via YouTube

Tesla's stock was down over 7% to a low of \$175.40 today, but pared some of its losses to close down 6.24% at \$180.95.

It appears that shares began to tumble in the last half hour on reports that a Tesla Model S car caught fire on Washington State Route 167.

Some speculated that the video highlights problems with the car's battery. Though others rushed to point out that the battery is located in the back of the car.

"Media finds that "Safety Investigators" (read "SHILLS") are bribed by VC's and lithium holding companies to say "nothing to see here", "lithium batteries are probably ok". Beware of NTSB "consultant's" and "investigators" who are being bribed, offered after-politics high pay jobs, called up by bribed congressional staff with "suggestions", given sports tickets, handed stock in certain ventures and other bribes. Many of the "investigators" need to be put under investigation themselves!!!! When you see an investigator talking about how lithium ion is a wonderful thing, investigate them!"

The following are a variety of quotes, from across the web, demonstrating the critical nature of this public safety issue:

"Lithium ion batteries are blowing up, starting fires and, generally, destroying people's homes, cars, electronics and physical health. Boeing was just ordered to stop flying the 787 Dreamliner because it's Lithium ion batteries are catching fire spontaneously."

"A group of silicon valley venture capitalists forced/leveraged the government to buy and pay for these specific batteries, that they have stock in, in order to benefit their profit margins. Other batteries don't have these problems. They knew about this from day one but put greed ahead of safety. There are thousands and thousands of reports of spontaneous lithium ion fires but the VC's who back lithium ion pay to keep this information hushed up. Millions of these batteries have been recalled for fire risk. The VC's tried to push as many as they could before they got caught. Now they are caught. These VC's own stock in lithium mining companies too."

"Here is the Fisker Karma after it got wet and the batteries blew up. These batteries blow up JUST FROM GETTING WET! ALL of these burned up hulks are brand new \$100,000.00+ cars that just blew up and torched everything around them just because they got wet! How bad do you want a Fisker or Tesla now? Fisker's insurance company is balking at paying for this saying: "You knew this would happen".

Picture

Picture

HERE IS THE BATTERY YOU COULD HAVE BEEN SITTING ON TOP OF IN A TESLA

Picture

THIS IS THE TESLA MAGIC CARPET OF DOOM. THIS WHOLE THING IS FULL OF LITHIUM. YOUR WHOLE FAMILY IS SUPPOSED TO SIT ON TOP OF THIS!!!

TESLA HAS TO TEST THEIR BATTERIES IN a BLAST CHAMBER!!!!!!!!!!:

Picture

IF TESLA SAYS THIS THING IS SO SAFE WHY DO THEY TEST IT IN A STEEL ENCLOSED EXPLOSION ROOM WITH WIRES COMING IN THROUGH BLAST HOLES!!!!???????

"TESLA ELECTRIC CARS HAVE 6800 CHANCES OF "GOING THERMAL".

"TESLA ELECTRIC CAR BATTERIES ARE MORE LIKELY TO BLOW UP." SAYS STANFORD ENGINEER, "USING LITHIUM ION IN AN ELECTRIC CAR DOUBLES THE CHANCES IT WILL EXPLODE OR GO THERMAL BECAUSE AN ELECTRIC CAR PUSHES IT FURTHER THAN ANYTHING ELSE. BOEING HAD MANY SAFETY CIRCUITS AND EVEN THOSE FAILED. THERE IS NO WAY THE TESLA SAFETY CIRCUITS WILL NOT EVENTUALLY FAIL"

"Tesla Electric cars have 6800 lithium ion batteries wedged into a box. This can create a repercussive thermal event that can set the whole car off. The TESLA 18650 batteries can be seen exploding in multiple YOUTUBE videos. It is NOT TRUE that they are "an entirely different battery" they are the same chemical compound that blows up."

"A direct quote from Tesla's patent application, below. Tesla KNEW this was going to happen and never adequately warned anybody. Tesla wrote these words in the federal papers they filed yet they never showed these words to any buyers :

"Thermal runaway is of major concern since a single incident can lead to significant property damage and, in some circumstances, bodily harm or loss of life. When a battery undergoes thermal runaway, it typically emits a large quantity of smoke, jets of flaming liquid electrolyte, and sufficient heat to lead to the combustion and destruction of materials in close proximity to the cell. If the cell undergoing thermal runaway is surrounded by one or more additional cells as is typical in a battery pack, then a single thermal runaway event can quickly lead to the thermal runaway of multiple cells which, in turn, can lead

to much more extensive collateral damage. Regardless of whether a single cell or multiple cells are undergoing this phenomenon, if the initial fire is not extinguished immediately, subsequent fires may be caused that dramatically expand the degree of property damage. For example, the thermal runaway of a battery within an unattended laptop will likely result in not only the destruction of the laptop, but also at least partial destruction of its surroundings, e.g., home, office, car, laboratory, etc. If the laptop is on-board an aircraft, for example within the cargo hold or a luggage compartment, the ensuing smoke and fire may lead to an emergency landing or, under more dire conditions, a crash landing. Similarly, the thermal runaway of one or more batteries within the battery pack of a hybrid or electric vehicle may destroy not only the car, but may lead to a car wreck if the car is being driven or the destruction of its surroundings if the car is parked."

"WTF!!!!!!

Tesla's own staff have now admitted that once a lithium ion fire gets started in one of their cars, it is almost impossible to extinguish burning lithium ion material. This is Tesla's own words in THEIR patent filing, (You can look it up online) saying that the risk is monumental. Tesla has 6800 lithium ion batteries, any one of which can "go thermal" and start a chain reaction! If you look at all of the referenced YOUTUBE movies you will see how easy it is to set these things into danger mode."

"Imagine a car crash with a Tesla where these 6800 batteries get slammed all over and then exposed to rain, fire hose water, water on the roads, cooling system liquid.. OMG!! And then if, in that same accident the other car is a gasoline car... getting burned alive sounds "BAD"! Tesla is covering up the problems with its batteries."

"Lithium ion batteries have already crashed a UPS plane and killed people. Look here: <http://washingtonexaminer.com/dreamliner-fires-spark-new-doubts-about-a-green-energy-technology/article/2519353> "

More Lithium Ion Battery disasters: <http://www.forbes.com/sites/petercohan/2013/01/24/is-787s-lithium-ion-battery-hazardous-to-boeings-health/>

"AS A DEMONSTRATION OF HOW DANGEROUS LITHIUM IS, NASA IS GOING TO MAKE IT BURN IN OUTER SPACE:

"If you're along the Eastern Seaboard tonight, it might be worth your while to look at the sky this evening. NASA's Wallops Flight Facility is scheduled to launch a sounding rocket that will release "two red-colored lithium vapor trails in space."

As Space.com reports, those trails might be seen across the Mid-Atlantic and perhaps as far north as Canada and as far south as

northern Florida. Space.com explains how these trails will produce a "night sky show:"

"The sounding rocket that will be used to create the two NASA-made glowing cloud trails will be a Terrier-Improved Orion. In this technology test launch, two canisters in the rocket's payload section will contain solid metal lithium rods or chips embedded in a thermite cake. The thermite is ignited and produces heat to vaporize the lithium.

"Once the vapor is released in space, it can be detected and tracked optically. The rocket will eject two streams of lithium which will be illuminated at high altitudes by the sun (which will be below the local horizon at ground level)."

In a statement, mission project manager Libby West said the launch is a test flight for two upcoming missions. It'll give scientists a view of two different methods for creating lithium vapor trails. By the way, NASA says the "lithium combustion process poses no threat to the public during the release in space."

If lithium is so dangerous it will even burn in space, why are we putting it in our airplanes and cars??????

Lithium Ion batteries blow up and burn down commercial building:

<http://westhawaii.com/sections/news/nation-world-news/787-battery-blew-%E2%80%99906-lab-test-burned-down-building.html>

"Tesla and Fisker have only sold a few hundred cars, (thank god) because nobody but dicks want these overpriced eliteist toys. A regular car company sells hundreds of thousands of cars per model. Every single Tesla or Fisker sold increases the likelihood of a burn up. Those burn-ups will affect the homes, cars and lives of the people next door who never even bought one."

"Go to <http://www.youtube.com> and type into the search window:

"Lithium ion explosion" or "lithium battery and water" or "lithium ion water" and any related derivation and you will find hundreds of videos about how dangerous these batteries are. There are numerous videos of Tesla's 18650 batteries blowing up."

"This article in the LA Times sheds more light on the horrors of Lithium Ion:

<http://articles.latimes.com/2013/jan/18/business/la-fi-dreamliner-battery-20130119> "

"Lithium Ion batteries "go thermal" in peoples pockets, in your notebook, especially in your Tesla and Fisker car and everywhere else. There are thousands and thousands of articles documenting this and there is a cover-up by the VC's that fund these things to keep this fact out-of-sight.

Making Lithium Ion batteries poisons the workers who make them. It is a dangerous product. Each time the workers, particularly in Asia, realize they are being poisoned by the factory, they jack up the product. Outlaw lithium ion batteries. Demand a recall."

There are PLENTY of other energy storage solutions that do not involve the highly compromised Lithium Ion chemistry!"

"Below are a few samples of HUNDREDS of videos proving that Lithium Ion Batteries JUST BLOW UP. This is why TSA does not want them, or liquid, on planes."

Report: Galaxy S 4 Lithium Explosion Burns Hong Kong Home To The Ground:

By Stephanie Mlot July 30, 2013

A Hong Kong couple have been displaced after an exploding Samsung Galaxy S 4 smartphone burst into flames, burning their house to a crisp.

The man, identified in the original Xianguo.com report only as Mr. Du, claims that his phone, battery, and charger were all legitimate Samsung products, but that's now difficult to confirm since his home and everything in it were destroyed.

According to the translated report, Du sat on the living room sofa playing the game "Love Machine" on his charging GS4 when it suddenly exploded. In the heat of the moment, he threw the device onto the couch, which caught fire. The flames then spread to the curtains and the rest of the house, "out of control," Xianguo said.

Du, his wife, and his dogs managed to escape the house unscathed; neighbors were temporarily evacuated as firefighters fought the flames. Almost all of the couple's furniture and appliances burned to ash, the news site said, adding that their Mercedes parked outside was also damaged.

Whether or not the true cause of an entire house fire was a singular 5-inch smartphone remains to be seen, though a fire department investigation initially resulted in a report of "no suspicious circumstances."

Samsung did not immediately respond to PCMag's request for comment, but told Xianguo that it will "carry out detailed investigations and tests to determine the cause of the incident." Last year, a Galaxy S III owner in Dublin was driving in his car when the device caught fire. Cell phone safety is increasingly becoming an issue in Asia, where two cases of iPhone shock occurred within a week of each other this month. On July 11, a 23-year-old flight attendant with China Southern Airlines was allegedly electrocuted when she took a call on her Apple device while it was charging. She was reportedly using the original charger when she was killed.

Here is what the Lithium Ion Batteries did to their home:

Picture

Boeing 787 Dreamliner woes put spotlight on lithium ion battery risks

BY KEN BENSINGER, Los Angeles Times

Chances are the same kind of battery that twice caught fire in Boeing 787 Dreamliners in recent weeks is in your pocket at this very moment.

Lithium ion batteries, small and powerful, have become the electricity storage device of choice. They are everywhere — in cellular phones, laptops, power tools, even cars. They allow us to talk, email and drill longer than ever possible in the past.

But the incidents that led to the grounding of the 787 fleet worldwide, and the decision by Boeing on Friday to temporarily halt all deliveries of the plane, have highlighted a troubling downside of these energy-dense dynamos: their tendency to occasionally burst into flames.

FOR THE RECORD: Dreamliner batteries: An article in the Jan. 19 Section A on lithium ion battery safety and the grounding of the Boeing 787 incorrectly described a fire in a Chevrolet Volt automobile. The battery did not ignite spontaneously; instead it burned after a crash test damaged the vehicle's cooling system and the test car was left parked with the battery fully charged, eventually causing it to overheat. With investigators now working to determine the cause of the incidents, one on a Dreamliner on a Boston runway, the other forcing an emergency landing of a 787 in western Japan, the larger question of lithium ion safety has snapped into focus.

"Every battery can burn and every battery can be flammable," said Mike Eskra, a Milwaukee-based battery development scientist who also works as a battery fire investigator for insurers. "But lithium ion batteries are more dangerous because they store more energy. It's like a firecracker instead of a stick of dynamite."

The casualty list is long. In recent years, tens of thousands of laptop batteries have been recalled due to the risk of fire or explosion. The 400-pound lithium ion battery on General Motors' cutting-edge electric car, the Chevrolet Volt, burst into flames seemingly spontaneously while parked in 2011. And investigators blamed a cargo hold full of lithium ion batteries for a fire that caused a UPS-operated 747 to crash shortly after takeoff from Dubai in late 2010.

That crash, which killed both pilots, is one of more than 100 incidents recorded by the Federal Aviation Administration linking lithium ion batteries to onboard fires over the last two decades. This month, new rules took effect limiting the transport of lithium ion batteries in aircraft. And the FAA had long prohibited use of the technology in commercial airplanes.

That changed in 2007, when it granted Boeing permission to use the batteries in the 787 under a number of conditions to ensure safety. For Boeing the lithium ion advantage was clear.

Thanks to their chemistry, the rechargeable batteries can store as much energy as a nickel metal hydride pack that's 50% heavier, while charging and discharging faster than other battery types. That's made them attractive for military applications such as the B-2 bomber and also for use on the International Space Station and the Mars Rover.

Lithium ion batteries enabled Boeing to swap out heavy hydraulic systems in the airframe for lightweight electronics and electric motors to operate systems like wing de-icers. That's a key reason the Dreamliner burns 20% less fuel than other wide-body aircraft.

The weight and power savings are exactly what made lithium ion batteries popular in other applications. In excess of 95% of mobile phone batteries worldwide are lithium ion, and without lithium ion, laptops couldn't run anywhere near as long as they do without a recharge.

"They completely dominate the consumer market," said Vishal Sapru, energy and power systems research manager at consulting firm Frost & Sullivan in Mountain View, Calif.. He estimates that global sales of lithium ion batteries reached \$14.7 billion last year, up from \$9.6 billion in 2009, a 53% increase. Sapru expects the market to soar to \$50.7 billion by 2018. "No other battery chemistries are growing at that rate."

But lithium ion also has downsides. The batteries tend to have shorter life spans than older, more proven battery technologies. And although the price is falling, lithium ion is still more expensive than other batteries. Although some carmakers have embraced the technology, others, such as Toyota, have decided against it. Several makers of lithium ion auto batteries for electric vehicles have filed for bankruptcy last year because of weak demand.

Safety experts also have concerns. Because lithium ion batteries can store more energy, and discharge it more quickly, than other batteries, lithium ion cells can get much hotter than other technologies in the event of an overcharge or the external application of a heat source. Larger applications, such as the 63-pound batteries on the 787, incorporate multiple cells and the heat can spread rapidly from cell to cell, a chain reaction called "thermal runaway."

And while other types of batteries use a water-based electrolyte in each cell, lithium ion relies on a highly flammable solvent. When heated up, that solvent tends to vaporize, spraying the burnable gas into the surrounding air. As a result, lithium ion battery fires burn extremely hot, as high as 2,000 degrees Fahrenheit.

Those conditions were blamed for an explosion at a General Motors battery testing lab last April that caused \$5 million in damage and sent one person to the hospital. GM said flammable gas had vented from an experimental lithium ion battery that heated up during extreme testing.

"Lithium ion is very controversial in the safety engineering space," said Brian Barnett, vice president for battery technology at Tiax, a technology firm in Lexington, Mass. He spoke last month at a conference on battery safety in Las Vegas, where more than three-quarters of the presentations focused on lithium ion batteries.

The cause of the fires in the two Dreamliners has still not been determined and neither Boeing nor the Japanese company that made the batteries, GS Yuasa, have publicly commented on likely factors. Boeing subjected the batteries on the plane to thousands of hours of testing and installed numerous safety systems specific to the batteries.

"We have high confidence in the safety of the 787 and stand squarely behind its integrity as the newest addition to our product family," Boeing Chief Executive Jim McNerny said Friday.

Barnett and others emphasize that it's not uncommon to see problems in relatively new technologies. But they add that most lithium ion fires are caused by an external problem, such as a bad circuit or a software glitch that leads to overcharging. Another common problem in consumer electronics is the use of low-cost wiring and other components that can overheat and spark or catch fire next to the battery itself.

Eskra, the battery fire investigator, said he's seen fires started by Chinese-made toys that use lithium ion batteries hooked up to chargers designed for nickel cadmium or nickel metal hydride batteries. Manufacturing errors, including allowing tiny metal particles to contaminate cells, can cause dangerous shorts, although they are exceedingly rare.

"Somebody tried to cut corners somewhere," he said, noting that most lithium ion fires are caused by a tiny part that malfunctioned somewhere along the line and are easily resolved. "It's a \$2 fix, but it takes half a million dollars in research to figure out what it is."

Sometimes the problem is more persistent. In 2006, Sony announced a global recall of more than 10 million lithium ion laptop batteries used in a variety of laptop computers after more than a dozen fires, and two years later issued a second recall.

"This is a battery type that is only one of hundreds of possible batteries but this particular type was pushed by a few companies and investors so they could make money off it at the risk of public injury or death..."

Picture

THIS IS AN ACTUAL BOEING BATTERY

"2006 fire under NTSB scrutiny

Carli Brosseau Arizona Daily Star

When a test of a lithium-ion battery charger turned into an inferno at Securaplane Technologies Inc. in 2006, temperatures reached as high as 1,200 degrees and three waves of firefighters failed to save the building. An employee of the Oro Valley

company blasted the flaming battery with a fire extinguisher to no effect. Two hours later, the galvanized metal roof collapsed, and the 10,000 square-foot building was a total loss.

It's a fire that federal safety regulators are taking another look at now, since Securaplane provides two key battery components to the Boeing 787 Dreamliner, the start-power and battery-charger units. Records from local Golder Ranch Fire Department, the first of three fire departments to respond to the blaze, describe "an uncontrolled thermal reaction (that) caused the battery to vent and this venting caused the ignition to various items and fixtures throughout the test lab area."

"The electrical technician who was performing a test on the battery when it exploded likened the experience to being near a jet after-burner. Electrolytes from inside the battery were shooting 10 feet into the air, the former Securaplane employee, Michael Leon, said in an interview Friday. "The magnitude of that energy is indescribable."

"The fire stands as a graphic illustration of the power stored within energy-dense lithium-ion batteries and the potential consequences if something goes awry. It also highlights the importance and delicacy of the quality-control measures applied to a novel - and potentially explosive - technology, a technology now allowed, under special conditions, to be used as the main and auxiliary power source of certain aircraft.

The Boeing 787 Dreamliner, the company's newest and most energy-efficient plane, uses two lithium-ion batteries. After two battery-related incidents in the past month, the 50 Dreamliners distributed so far have been grounded."

"Whistleblower: Dreamliner LITHIUM ION Batteries Could Explode

He says he was fired after warning about battery problems
By Christopher Freeburn, InvestorPlace Writer

Boeing's (NYSE:BA) new 787 Dreamliner could end up being a nightmare for the aircraft giant.

A former senior engineering technician at Securaplane Technologies, which makes the charging system for the lithium-ion batteries used in 787 Dreamliners, told CNBC that the batteries are defective and liable to explode if they overheat."

"Lithium-ion batteries are heat intolerant, according to a potential whistleblower familiar with... Lithium-ion batteries are heat intolerant, according to a potential whistleblower familiar with their technology. "Too much heat on those things, they will go into a thermal runaway, they will explode." The informant, a former senior engineering technician of Securaplane Technologies, was fired in 2007 for repeated misconduct, but he says it was in retaliation for voicing concerns about the batteries. The NTSB acknowledges that the lithium-ion batteries in Boeing's (BA) Dreamliner experienced a thermal runaway, but insists there's no connection between the incident and the whistleblower's claims. "

"The Japan Transport Safety Board makes a number of interim points. This battery, unlike one that burst into flames in a Japan Airlines 787 earlier in January, did not actually ignite. It experienced a thermal runaway, as a result of a build up of heat, yet

the materials affected did not start burning. While the semantics might escape the casual observer the safety investigator said:-

“The battery was destroyed in a process called thermal runaway, in which the heat builds up to the point where it becomes uncontrollable.

“But it is still not known what caused the uncontrollable high temperature”.

In simple language, uncontrollable rises in temperature will if uncontrolled most likely result in a fire, including one that can burn through structural composites and alloys, and prove almost uncontrollable by fire fighters, even on the ground.

It took a Boston airport fire brigade detachment 99 minutes to put out the Japan Airlines fire using equipment unavailable if the airliner was hours away from an emergency landing strip in the high arctic or north Pacific, which that particular flight had only recently traversed before the fire broke out after landing.

he Japan air safety investigator said the wire supposed to ground or discharge static electricity build ups in the battery had been severed meaning it had experienced abnormal levels of current.

However as also confirmed by the early stage of the US incident investigation into the Japan Airlines fire, this large lithium-ion battery had not experienced a voltage surge, and had so far as flight data recordings could tell, had been operating normally immediately before the emergency landing.

Expect the news release in Japan to cause more tension between those who want the 787s to fly again pending a full understanding of the causes and cures in these incidents, and independent safety investigators who will recommend to safety regulators like the FAA a continuation of the grounding"

"One aspect that may confuse some people relates to the decision to use this particular type of battery. The danger posed by it has been evident by a lengthy and documented list of disturbing events in recent years. They include many thousands of batteries used in laptops being recalled, because of determined risks of fire or explosion. General Motors were also placed in the battery limelight. In 2011, the 400 pounds Lithium ion battery in their Chevrolet Volt apparently was subject to spontaneous combustion when it burst into flames, while reportedly in a parked vehicle. In 2010, a UPS-operated Boeing 747 crashed just after take-off from Dubai. Investigators placed the blame on a cargo hold that contained Lithium ion batteries, for a fire that caused the incident."

A number of incidents of cell phones with lithium ion batteries blowing up in peoples pockets, notebook computers blowing up in peoples briefcases and other shocking fires have been deeply documented.

Picture

LITHIUM ION BATERIES BLOWING UP ON THEIR OWN

Picture

FIKERS CARS THAT BLEW UP AND BURST INTO FLAMES JUST BECAUSE THEIR LITHIUM ION BATTERIES GOT WET

"Here is where they make some of these batteries, in forced labor camps:

<http://www.thedailybeast.com/newsweek/2013/01/13/china-s-labor-pains.html> Because, as we all

know, chinese prostitutes are the best choice to make the things that keep our airplanes in the air and our cars on the road. The silicon valley venture capital guys front these batteries because they have such cheap labor to give them great profits.. quality control? not so much..."

NHTSA DEMAND LETTER

U.S. Department
of Transportation
**National Highway
Traffic Safety
Administration**

Nov. 27, 2013

1200 New Jersey Avenue SE
Washington, DC 20590

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

Mr. James Chen
Vice President of Regulatory Affairs
Tesla Motors, Inc.
1050 K Street, N.W., Suite 101
Washington DC 20001

NVS-212
PE13-037

Dear Mr. Chen:

This letter is to inform you that the Office of Defects Investigation (ODI) of the National Highway Traffic Safety Administration (NHTSA) has opened a Preliminary Evaluation (PE13-037) to investigate underbody deformation in certain model year (MY) 2013 Model S motor vehicles resulting from impacts with road debris, including, but not limited to, consequent intrusion into propulsion battery compartment(s) and the associated risks to motor vehicle safety, and to request certain information. The Tesla Model S is manufactured by Tesla Motors Inc.

ODI has received information on two incidents of deformation/intrusion into the propulsion battery caused by impact with roadway debris and resulting in a thermal reaction and fire in 2013 Tesla Model S vehicles. The office is also aware that the Model S may be equipped with an active suspension system that automatically adjusts the vehicle's ride height under certain driving conditions, such as at highway speeds.

Unless otherwise stated in the text, the following definitions apply to these information requests:

- **Subject vehicles:** All 2013 Tesla Model S manufactured for sale or lease in the United States, including, but not limited to, the District of Columbia, and current U.S. territories and possessions.
- **Subject component:** The high-voltage propulsion battery, including its enclosure baseplate (skid plate) and the components and materials it is constructed of, and all components and materials contained within the enclosure including the individual battery cells.
- **Tesla:** Tesla Motors, Inc., and all of their past and present officers and employees, whether assigned to their principal offices or any of its field or other locations, including all of their divisions, subsidiaries (whether or not incorporated) and affiliated enterprises and all of their headquarters, regional, zone and other offices and their employees, and all agents, contractors, consultants, attorneys and law firms and other persons engaged directly or indirectly (e.g., employee of a consultant) by or under the control of Tesla

(including all business units and persons previously referred to), who are or, in or after 2006, were involved in any way with any of the following related to the alleged defect in the subject vehicles:

- a. Design, engineering, analysis, modification or production (e.g. quality control);
- b. Testing, assessment or evaluation;
- c. Consideration, or recognition of potential or actual defects, reporting, record-keeping and information management, (e.g., complaints, field reports, warranty information, part sales), analysis, claims, or lawsuits; or
- d. Communication to, from or intended for zone representatives, fleets, dealers, or other field locations, including but not limited to people who have the capacity to obtain information from dealers.

Alleged defect: Deformation or damage to the subject component from impacts to the subject component or failure of the subject component to withstand an impact such that the propulsion battery or individual cells of the battery are damaged by the impact, and/or shut down of the vehicle propulsion system, stalling of the vehicle or fire or other thermal event in the propulsion battery following an impact to the subject component.

- **Document:** "Document(s)" is used in the broadest sense of the word and shall mean all original written, printed, typed, recorded, or graphic matter whatsoever, however produced or reproduced, of every kind, nature, and description, and all non-identical copies of both sides thereof, including, but not limited to, papers, letters, memoranda, correspondence, communications, electronic mail (e-mail) messages (existing in hard copy and/or in electronic storage), faxes, mailgrams, telegrams, cables, telex messages, notes, annotations, working papers, drafts, minutes, records, audio and video recordings, data, databases, other information bases, summaries, charts, tables, graphics, other visual displays, photographs, statements, interviews, opinions, reports, newspaper articles, studies, analyses, evaluations, interpretations, contracts, agreements, jottings, agendas, bulletins, notices, announcements, instructions, blueprints, drawings, as-builts, changes, manuals, publications, work schedules, journals, statistical data, desk, portable and computer calendars, appointment books, diaries, travel reports, lists, tabulations, computer printouts, data processing program libraries, data processing inputs and outputs, microfilms, microfiches, statements for services, resolutions, financial statements, governmental records, business records, personnel records, work orders, pleadings, discovery in any form, affidavits, motions, responses to discovery, all transcripts, administrative filings and all mechanical, magnetic, photographic and electronic records or recordings of any kind, including any storage media associated with computers, including, but not limited to, information on hard drives, floppy disks, backup tapes, and zip drives, electronic communications, including but not limited to, the Internet and shall include any drafts or revisions pertaining to any of the foregoing, all other things similar to any of the foregoing, however denominated by Tesla, any other data compilations from which information can be obtained, translated if necessary, into a usable form and any other documents. For purposes of this request, any document which contains any note, comment, addition, deletion, insertion, annotation, or otherwise comprises a non-identical copy of another document shall be treated as a separate document subject to production. In all cases where original and any non-identical copies are not available, "document(s)"

also means any identical copies of the original and all non-identical copies thereof. Any document, record, graph, chart, film or photograph originally produced in color must be provided in color. Furnish all documents whether verified by Tesla or not. If a document is not in the English language, provide both the original document and an English translation of the document.

Short: The term "Short" refers to an unintended change in the path of electrical current flow within a circuit, battery, semiconductor, conductor or electro-mechanical device.

- **Other Terms:** To the extent that they are used in these information requests, the terms "claim," "consumer complaint," "dealer field report," "field report," "fire," "fleet," "good will," "make," "model," "model year," "notice," "property damage," "property damage claim," "rollover," "type," "warranty," "warranty adjustment," and "warranty claim," whether used in singular or in plural form, have the same meaning as found in 49 CFR 579.4.

In order for my staff to evaluate the alleged defect, certain information is required. Pursuant to 49 U.S.C. § 30166, please provide numbered responses to the following information requests. Insofar as Tesla has previously provided a document to ODI, Tesla may produce it again or identify the document, the document submission to ODI in which it was included and the precise location in that submission where the document is located. When documents are produced, the documents shall be produced in an identified, organized manner that corresponds with the organization of this information request letter (including all individual requests and subparts). When documents are produced and the documents would not, standing alone, be self-explanatory, the production of documents shall be supplemented and accompanied by explanation.

Please repeat the applicable request verbatim above each response. After Tesla's response to each request, identify the source of the information and indicate the last date the information was gathered.

- I. State, by model and model year, the number of subject vehicles Tesla has manufactured for sale or lease in the United States. Separately, for each subject vehicle manufactured to date by Tesla, state the following:
 - a. Vehicle identification number (VIN);
 - b. Power rating/capacity of the propulsion battery;
 - c. Whether the suspension system (ride height) is actively controlled;
 - d. Date of manufacture;
 - e. Date warranty coverage commenced; and,
 - f. The State in the United States where the vehicle was originally sold or leased.

Provide the table in Microsoft Access 2010, or a compatible format, entitled "PRODUCTION DATA."

2. State the number of each of the following, received by Tesla, or of which Tesla is otherwise aware, which relate to, or may relate to, the alleged defect in the subject vehicles:
- Consumer complaints, including those from fleet operators;
 - Field reports, including dealer field reports;
 - Reports involving a crash, injury or fatality;
 - Reports involving a fire;
 - Reports involving a thermal reaction and/or short not included in Tesla's response to subpart d above;
 - Property damage claims;
 - Third-party arbitration proceedings where Tesla is or was a party to the arbitration; and
 - Lawsuits, both pending and closed, in which Tesla is or was a defendant or codefendant.

For subparts "a" through "h," state the total number of each item (e.g., consumer complaints, field reports, etc.) separately. Multiple incidents involving the same vehicle are to be counted separately. Multiple reports of the same incident are also to be counted separately (i.e., a consumer complaint and a field report involving the same incident in which a crash occurred are to be counted as a crash report, a field report and a consumer complaint).

In addition, for items "c" through "h," provide a summary description of the alleged problem and causal and contributing factors and Tesla's assessment of the problem, with a summary of the significant underlying facts and evidence. For items "g" and "h," identify the parties to the action, as well as the caption, court, docket number, and date on which the complaint or other document initiating the action was filed.

3. Separately, for each item (complaint, report, claim, notice, or matter) within the scope of your response to Request No. 2, state the following information:
- Tesla's file number or other identifier used;
 - The category of the item, as identified in Request No. 2 (i.e., consumer complaint, field report, etc.);
 - Vehicle owner or fleet name (and fleet contact person), address, and telephone number;
 - Vehicle's VIN;
 - Vehicle's make, model and model year;
 - Vehicle's mileage at time of incident;
 - Incident date;
 - Report or claim date;
 - Whether a crash is alleged;
 - Whether a fire, thermal reaction and/or short is alleged;
 - Whether property damage is alleged;
 - Number of alleged injuries, if any; and
 - Number of alleged fatalities, if any.

Provide this information in Microsoft Access 2010, or a compatible format, entitled "REQUEST NUMBER TWO DATA."

4. Produce copies of all documents related to each item within the scope of Request No. 2. Organize the documents separately by category (i.e., consumer complaints, field reports, etc.) and describe the method Tesla used for organizing the documents. Describe in detail the search methods and search criteria used by Tesla to identify the items in response to Request No. 2.
5. State, by model and model year, a total count for all of the following categories of claims, collectively, that have been paid by Tesla to date that relate to, or may relate to, the alleged defect in the subject vehicles: warranty claims; extended warranty claims; claims for good will services that were provided; field, zone, or similar adjustments and reimbursements; and warranty claims or repairs made in accordance with a procedure specified in a technical service bulletin or customer satisfaction campaign.

Separately, for each such claim, state the following information:

- a. Tesla's claim number;
- b. Vehicle owner or fleet name (and fleet contact person) and telephone number;
- c. VIN;
- d. Repair date;
- e. Vehicle mileage at time of repair;
- f. Repairing dealer's or facility's name, telephone number, city and state or ZIP code;
- g. Labor operation number;
- h. Problem code;
- i. Replacement part number(s) and description(s);
- j. Concern stated by customer; and
- k. Comment, if any, by dealer/technician relating to claim and/or repair.

Provide this information in Microsoft Access 2010, or a compatible format, entitled "WARRANTY DATA."

6. Describe in detail the search methods and search criteria used by Tesla to identify the claims in response to Request No. 5, including the labor operations, problem codes, part numbers and any other pertinent parameters used. Provide a list of all labor operations, labor operation descriptions, problem codes, and problem code descriptions applicable to the alleged defect in the subject vehicles. State the terms of the new vehicle warranty coverage offered by Tesla on the subject vehicles (i.e., the number of months and mileage for which coverage is provided and the vehicle systems that are covered). Describe any extended warranty coverage option(s) that Tesla offered for the subject vehicles and state the number of vehicles that are covered under each such extended warranty.
7. Produce copies of all service, warranty, and other documents that relate to, or may relate to, the alleged defect in the subject vehicles, that Tesla has issued to any dealers, regional or zone offices, field offices, fleet purchasers, or other entities. This includes, but is not limited to, bulletins, advisories, informational documents, training documents, or other documents or communications, with the exception of standard shop manuals. Also include the latest draft copy of any communication that Tesla is planning to issue within the next 120 days.

8. Describe all assessments, analyses, tests, test results, studies, surveys, simulations, investigations, inquiries and/or evaluations (collectively, "actions," and including actions conducted during subject vehicle design, development, and validation) that relate to, or may relate to, the alleged defect in the subject vehicles that have been conducted, are being conducted, are planned, or are being planned by, or for, Tesla. For each such action, provide the following information:
- Action title or identifier;
 - The actual or planned start date;
 - The actual or expected end date;
 - Brief summary of the subject and objective of the action;
 - Engineering group(s)/supplier(s) responsible for designing and for conducting the action; and
 - A brief summary of the findings and/or conclusions resulting from the action.

For each action identified, provide copies of all documents related to the action, regardless of whether the documents are in interim, draft, or final form. Organize the documents chronologically by action.

9. Provide detailed engineering drawings depicting dimensional specifications of the subject component and including all subassemblies and mechanical, electrical, and battery components. The drawings should contain sufficient detail, such as sectional views of the battery cells/modules that show proximity to the enclosure baseplate and/or other conductive materials which would allow ODI to assess the consequences of enclosure baseplate deformation or damage and the likelihood that it could lead to cell damage.
10. Describe all modifications or changes made by, or on behalf of, Tesla in the design, material composition, manufacture, quality control, supply, or installation of the subject component, from the start of production to date, which relate to, or may relate to, the alleged defect in the subject vehicles. For each such modification or change, provide the following information:
- The date or approximate date on which the modification or change was incorporated into vehicle production;
 - A detailed description of the modification or change;
 - The reason(s) for the modification or change;
 - The part number(s) (service and engineering) of the original component;
 - The part number(s) (service and engineering) of the modified component;
 - Whether the original unmodified component was withdrawn from production and/or sale, and if so, when;
 - When the modified component was made available as a service component; and
 - Whether the modified component can be interchanged with earlier production components.

Also, provide the above information for any modification or change that Tesla is aware of which may be incorporated into vehicle production within the next 120 days.

11. Describe all modifications or changes made by, or on behalf of, Tesla in the function and operation of the actively controlled suspension system, from the start of production to date,

which affects, or may affect the subject vehicle ride height, including but not limited to software or other programming modifications/revisions. For each such modification, provide the following information:

- a. A detailed description of the modification;
- b. The reason(s) for the modification as it pertains to the alleged defect;
- c. The changes in vehicle ride height due to the modification;
- d. Whether the modification was incorporated into vehicle production, and if so, the date it was incorporated;
- e. Whether the modification was introduced (released) as a service update for consumer owned subject vehicles, and if so:
 - i) The date the modification was released;
 - ii) The number of subject vehicles available for updated (i.e., how many were produced to the original/unmodified condition);
 - iii) The number of consumer owned vehicles that have been modified/updated to date; and,
- f. A description of how the service update is applied (the procedure or method used to make the modification) to an affected vehicle.

Also, provide the above information for any modification or change that Tesla is aware of which may be incorporated into vehicle production, or as a service update, within the next 120 days.

12. Describe in detail all possible consequences to the vehicle from an impact to the subject component that damages the battery. Describe in detail how these possible consequences were addressed in the design of the subject vehicle and the limits of that design to prevent damage to the propulsion battery, stalling and fires.
13. Furnish Tesla's assessment of the alleged defect in the subject vehicle, including:
 - a. The causal or contributory factor(s);
 - b. The failure mechanism(s);
 - c. The failure mode(s); and,
 - d. The risk to motor vehicle safety that it poses.

Legal Authority for This Request

This letter is being sent to Tesla pursuant to 49 U.S.C. § 30166, which authorizes NHTSA to conduct any investigation that may be necessary to enforce Chapter 301 of Title 49 and to request reports and the production of things. It constitutes a new request for information.

Civil Penalties

Tesla's failure to respond promptly and fully to this letter could subject Tesla to civil penalties pursuant to 49 U.S.C. § 30165 or lead to an action for injunctive relief pursuant to 49 U.S.C. § 30163. (Other remedies and sanctions are available as well.) The Vehicle Safety Act, as amended, 49 U.S.C. § 30165(a)(3), provides for civil penalties of up to \$7,000 per violation per day, with a maximum of \$35,000,000 for a related series of daily violations, for failing or

refusing to perform an act required under 49 U.S.C. § 30166. This includes failing to respond completely, accurately, and in a timely manner to ODI information requests. The maximum civil penalty of \$7,000 per violation per day is established by 49 CFR 578.6(a)(3). The maximum civil penalty of \$35,000,000 for a related series of daily violations of 49 U.S.C. § 30166 is authorized by 49 U.S.C. § 30165(a)(3) as amended by § 31203(a)(1)(B) of the Moving Ahead for Progress in the 21st Century Act, Public Law 112-141.

If Tesla cannot respond to any specific request or subpart(s) thereof, please state the reason why it is unable to do so. If on the basis of attorney-client, attorney work product, or other privilege, Tesla does not submit one or more requested documents or items of information in response to this information request, Tesla must provide a privilege log identifying each document or item withheld, and stating the date, subject or title, the name and position of the person(s) from, and the person(s) to whom it was sent, and the name and position of any other recipient (to include all carbon copies or blind carbon copies), the nature of that information or material, and the basis for the claim of privilege and why that privilege applies.

Confidential Business Information

All business confidential information must be submitted directly to the Office of Chief Counsel as described in the following paragraph and should not be sent to this office. In addition, do not submit any business confidential information in the body of the letter submitted to this office. Please refer to PE13-### in Tesla's response to this letter and in any confidentiality request submitted to the Office of Chief Counsel.

If Tesla claims that any of the information or documents provided in response to this information request constitute confidential commercial material within the meaning of 5 U.S.C. § 552(b)(4), or are protected from disclosure pursuant to 18 U.S.C. § 1905, Tesla must submit supporting information together with the materials that are the subject of the confidentiality request, in accordance with 49 CFR Part 512, as amended, to the Office of Chief Counsel (NCC-111), National Highway Traffic Safety Administration, Room W41-227, 1200 New Jersey Avenue, S.E., Washington, D.C. 20590. Tesla is required to **submit two copies of the documents containing allegedly confidential information (except only one copy of blueprints) and one copy of the documents from which information claimed to be confidential has been deleted.** Please remember that the phrase "ENTIRE PAGE CONFIDENTIAL BUSINESS INFORMATION" or "CONTAINS CONFIDENTIAL BUSINESS INFORMATION" (as appropriate) must appear at the top of each page containing information claimed to be confidential, and the information must be clearly identified in accordance with 49 CFR 512.6. If you submit a request for confidentiality for all or part of your response to this IR, that is in an electronic format (e.g., CD-ROM), your request and associated submission must conform to the new requirements in NHTSA's Confidential Business Information Rule regarding submissions in electronic formats. See 49 CFR 512.6(c) (as amended by 72 Fed. Reg. 59434 (October 19, 2007)).

If you have any questions regarding submission of a request for confidential treatment, contact Otto Matheke, Senior Attorney, Office of Chief Counsel at otto.matheke@dot.gov or (202) 366-5253.

Due Date

Tesla's response to this letter, in duplicate, together with a copy of any confidentiality request, must be submitted to this office by January 14, 2014. Tesla's response must include all non-confidential attachments and a redacted version of all documents that contain confidential information. If Tesla finds that it is unable to provide all of the information requested within the time allotted, Tesla must request an extension from me at (202) 366-0139 no later than five business days before the response due date. If Tesla is unable to provide all of the information requested by the original deadline, it must submit a partial response by the original deadline with whatever information Tesla then has available, even if an extension has been granted.

Please send email notification to Will Godfrey at will.godfrey@dot.gov and to ODI_IRresponse@dot.gov when Tesla sends its response to this office and indicate whether there is confidential information as part of Tesla's response.

If you have any technical questions concerning this matter, please call Will Godfrey of my staff at (202) 366-5231.

Sincerely,

D. Scott Von, Chief
Vehicle Integrity Division
Office of Defects Investigation

THE EXPOSE ON "THE SUMMIT ON THE FUTURE OF EXPONENTIAL TECHNOLOGIES".

The The Lithium Ion VCs: Say Howdy to the ACTUAL Illuminati !!!" /2013/09/19/doe-staff-offer-to-respond-to-you-in-writing-regarding-each-item-on-this-news-site/ Silicon Valley Tech-illuminati hold an event called the "SUMMIT ON THE FUTURE OF EXPONENTIAL TECHNOLOGIES" organized by The Singularity University (Which is dedicated to merging people with machines and creating SkyNet, or something like it)(Notice that Google just bought a humanoid robotics company as they infest the entire internet so the actual Terminators must be only a few years away.) At SUMMIT ON THE FUTURE OF EXPONENTIAL TECHNOLOGIES they discuss "3D printing living hookers on demand". Imagine, you are horny and you can print up Marilyn Monroe or Angelina Jolie for pleasure and, later, "reprocess" your Prostitutes!!! Lots of them! Sex and The Politicians" /2013/10/23/prostitutes/ pseudo-flesh pleasure-lifeform into another character. Tesla Driver Douche Bag Controversy. Are Tesla drivers inherently unsafe /directory-of-articles/topic-1-doetarp-manipulations/the-tesla-investigation/tesla-driver-douche-bag-controversy/ Silicon Valley VC's love disposable people. Ask any H1B engineer from India. They like to get them in, get the code and shoot them back to Bhopal so the VC's don't have to pay them any stock. Already one of the leading employers of Prostitutes!!! Lots of them! Sex and The Politicians" /2013/10/23/prostitutes/ escorts and prostitute s in the U.S., disposable 3D printed sex people couldn't be more perfect for Silicon Valley. They discuss the economics of " In-Vitro Hamburgers ". They claim to have already made, and eaten In-Vitro Hamburgers. Short on cash?, give birth to In-Vitro hamburger patties and sell them to McDonalds to supplement your income. Great! So now the Silicon Valley VC's really can eat their young. While they were at it, they also arranged to have Coca Cola control our last natural resource: Drinking water. The Singularity people made a deal so only Coca Cola can get you fresh water if you are dying from thirst. Evil? People are actually building these things. The Illuminati pay for this crap. How out of touch with reality can these billionaires be? Here the rich and powerful fraternize with their anointed "inventors". These "inventors" are ivy league college chums that they fund in order to control markets. Pitched as, the "next generation of technological break-through", these backers tend to support things that Austin Powers wants more than the average person needs. Closely aligned with the audaciously self-promoting yuppie TED Talk culture, these gatherings are college parties for mutual admiration indulgences. At least with TED Talks you can go online and watch TED Talks to research who the arrogant self-obsessed Silicon Valley hipsters are. With the SUMMIT ON THE FUTURE OF EXPONENTIAL TECHNOLOGIES, it is a bit more stealthy but NPR snuck in and got the goods. Famous scientist Craig Vettner says Singularity hype is all: "Bu*1Sh*t" in an NPR interview. He, and most credible engineers find that this is all pump and dump stock shilling. <http://37signals.com/svn/posts/1927-the-next-generation-bends-over> ----- Here is why they tried to " How Washington DC Politicos Have Troublemakers and Reporters Killed!" /directory-of-articles/topic-1-doetarp-manipulations/how-washington-has-people-it-doesnt-like-killed/" KILL" Micheal Arrington, Martin Eberhard, Snowden, Assange and the rest: So A Blogger Walks Into A Bar Michael Arrington Tuesday, September 21st, 2010 Yesterday I

was tipped off about a secret meeting between a group of Super Angels being held at Bin 38, a restaurant and bar in San Francisco. Do not come, you will not be welcome, I was told. So I did what any self respecting blogger would do – I drove over to Bin 38, parked my car and walked in. In the back of the restaurant in a private room was a long oval table. Sitting around the table, Godfather style, were ten or so of the highest profile angel investors in Silicon Valley. These investors, known as super angels because they have mostly moved on to launch small venture funds of their own, are all friends of mine. I knew each person in the room very, very well.

 I certainly didnt think anything was amiss and I expected a friendly hello and an invitation to sit down for a drink or two before being shooed off while they talked about whatever they thought should be kept off record. But instead it went something like this: Me: Hey! Person who was talking: oh, oh no. Me: Hi. I heard you guys were here and I wanted to stop by and say hi. Them: dead silence. Me: so. Them: Deafening silence. Me: This is usually where you guys say sit down, have a drink. Them: not one sound Me: This is awkward. I guess Ill be leaving now. Ive never seen a more guilty looking group of people. But that alone isnt that big of a deal. Lively conversations often die quickly when I arrive, and Ive learned not to take it personally. But I did sniff around a little afterwards, and have spoken to three people who were at that meeting. And thats where things got interesting. This group of investors, which together account for nearly 100% of early stage startup deals in Silicon Valley, have been meeting regularly to compare notes. Early on it was mostly to complain about a variety of things. But the conversation has evolved to the point where these super angels are actually colluding (and I dont use that word lightly) to solve a number of problems, say multiple sources who are part of the group and were at the dinner. According to these souces, the ongoing agenda includes:

- Complaints about Y Combinators growing power, and how to counteract competitiveness in Y Combinator deals.
- Complaints about rising deal valuations and they can act as a group to reduce those valuations.
- How the group can act together to keep traditional venture capitalists out of deals entirely
- How the group can act together to keep out new angel investors invading the market and driving up valuations.
- More mundane things, like agreeing as a group not to accept convertible notes in deals (an entrepreneur-friendly type of deal).
- One source has also said that there is a wiki of some sort that the group has that explicitly talks about how the group should act as one to keep deal valuations down.

At least two people attending were extremely uneasy about the meetings, and have said that they are only there to gather information, not participate. So whats wrong with this? Collusion and price fixing, thats what. It is absolutely unlawful for competitors to act together to keep other competitors out of the market, or to discuss ways to keep prices under control. And that appears to be exactly what this group is doing. This isnt minor league stuff. Were talking about federal crimes and civil prosecutions if in fact thats what theyre doing. I had a quick call with an attorney this morning, and he confirmed that these types of meetings are exactly what these laws were designed to prevent. Im not going to say who was at the meeting since at least a couple of the attendees are saying they were extremely uncomfortable with the direction the conversation was going. But like I said, it included just about every major angel investor in Silicon Valley. On a side note, this is a difficult post to write, because I call nearly every person in that room a friend. But these actions are so completely inappropriate it has to be called out.

Not sure what your sources are, but courts have ruled that parallel action can be sufficient evidence of conspiracy under Section 2 of the Sherman Act. See e.g. *American Tobacco v. United States* (1946), available here: <http://supreme.vlex.com/vid/american-tobacco-v-united-states> The Supreme Court wrote: [The conspiracy's] existence was established, not through the presentation of a formal written agreement, but through the evidence of widespread and effective conduct on the part of petitioners in relation to their existing or potential competitors. If I remember correctly from my anti-trust class last year, the American Tobacco precedent still stands. You dont need written or audio evidence to get a conviction; anti-competitive behavior in the marketplace is sufficient. — dandelany 774 days ago | link Interesting questions IANAL, but I imagine theyre colluding to bring down the valuations of startups, therefore essentially fixing the price of their money, to be paid for in startup equity. If I, and others, say your company is worth a million dollars, then Im fixing the price of my \$500,000 at 50% of your company. — brendonjason 774 days ago | link IANAL(E), but this scenario would seem to be more of a concern if startups in Silicon valley got together over dinner to deny deals that didnt offer similar terms and prices in dollars for securities of all startups represented at said dinner simultaneously. As for angels fixing the price of their money I dont understand how antitrust applies to this anymore than it would to, say, how LIBOR is determined. If antitrust applies to colluding

on the dollar amount to be paid OUT instead of price asked for money coming in, then if I start a boycott of something (colluding to pay \$0) am I guilty of violating antitrust laws? As I understand it (not much, I admit), antitrust applies to goods and services, not cost of money. If antitrust applied to cost of money, the Federal Reserve would not exist since its basically an extension of the member banks that make up its institutional board of directors (not board of governors). All they do is get together and fix the price of money to be printed and lent out to member banks. Also, this whole I stumbled in on a secret meeting of powerful men conspiring to start a revolution thing is somewhat suspect; throughout history this gambit, if it actually happened that way, is usually either desperate grab at 15 minutes of fame (which seems unlikely given Michaels popularity), an attempt to gain instant credibility on some esoteric but useful new subject (I was the only outsider privvy to what happened there, so you can trust me) or, unfortunately, a cynical move feigned by the men in the room to inspire hasty and possibly faulty reactionary stances by the supposed target of their envy. I could be wrong though. I just cant believe guys who are careful enough to get to such a position in life would all simultaneously get so careless. On the same day. In the same place. — polynomial 773 days ago | link > if I start a boycott of something (colluding to pay \$0) <http://j.mp/dividedby0> (Unless of course you actually get them to give it to you for nothing, which is generally not the point of a boycott) — jeromec 774 days ago | link Think of the stock market. Thats certainly a marketplace. Its made up of investors seeking to earn a return on their money by investing in companies. Think of the illegalities involved in collusion to manipulate the stock market. Now think of Silicon Valley as a less formal/regulated stock market With Groupon nobody is asked to not buy or otherwise participate in the market unless done through Groupon. Instead, its like a grocery store co-op; members pool their money to get more buying power. This doesnt mean they agree to refrain from shopping elsewhere, as that would be collusion/conspiring to produce a market effect. IANAL — brendonjason 774 days ago | link If I have an investing club and we come to define an investment approach, say, what stocks we like and what we think they should be valued at, are we colluding to price fix the market? If I think a company is over priced and I am in charge of executing trades for my investing club, whose members unanimously agreed not to buy the stock in question until it fell down say, \$20 more in price – are we colluding? Yes. Colluding to price fix? No. Were simply colluding not to participate in the buy side. That may or may not lead to sellers slowly changing their asking price. But thats a two-way street. I dont see the illegality according to anti-trust. Now if every major institutional house/hedge/mutual/pension fund that owned that stock got together and colluded to refuse to SELL us any stock until we agreed to their higher price, that I understand is illegal. They are fixing the price literally. But I dont see how us refusing to participate in a transaction on the buy side is illegal whether we have 5 members or 5 million. Saying that the angels are colluding to price fix buys into Michaels assertion that together, the men in that room account for nearly 100% of all angel deals. That means that their deals are the commodity in question, and they are free to do as they wish. If its their money, then its hard to make the claim that their money is the market. Theres certainly more money in the world than theirs. — blueben 774 days ago | link Look, you and I both know your company is worth \$50 million. But I only want to pay \$10 million, and Ive already worked out a deal with my competitors so they wont bid any more than that either. We own the market for investment, so you can take it or your company can die for lack of funding. You dont see a problem with this kind of artificial market manipulation? This is no longer a market; it short circuits true capitalism and only serves to siphon gains from the seller (in this case, the companys founders) to the buyer, who will turn around and effectively try to resell (or otherwise exit) the company for profit. Everyone seems to be convinced that price fixing only applies to sellers. Thats wrong. It firmly applies to both selling and buying. Its fundamentally about market manipulation; taking steps to undermine the economy of the system for direct personal gain. That kind of behavior destroys wealth and erodes confidence in the marketplace. — aufreak3 774 days ago | link Im ignorant enough to have the same question in my mind. — SkyMarshal 774 days ago | link Grellas, whats your take on this Quora comment? In a nutshell, its not illegal for collusion on the buy side, only the sell side: Tarun Nimmagadda, Mutual Mobile Co-Founder, COO <http://www.quora.com/Who-are-the-Super-Angels-that-Michael-A> The article was a fun read, but it is a false claim that this is illegal. Collusion, price fixing, and dividing markets is only illegal on the selling side. Think about how people and groups are able to band together for purchasing power and special treatment when buying goods/services. Its not illegal. Worth noting thought that if this price manipulation happened in relation to a company with over a 100 investors, SEC regulations would begin to apply and this behavior would be illegal — grellas 774 days ago | link That comment was made out of ignorance. Antitrust laws are by no means limited to sellers only. — SkyMarshal 774 days ago | link Interesting, thanks. — Alex3917 774 days ago

| link Collusion, price fixing, and dividing markets is only illegal on the selling side. IANAL, but didnt Standard Oil got broken up largely for being a monopsony? In fact the first two complaints from the DoJ were about sell-side issues: Rebates, preferences, and other discriminatory practices in favor of the combination by railroad companies; restraint and monopolization by control of pipe lines, and unfair practices against competing pipe lines; contracts with competitors in restraint of trade; unfair methods of competition, such as local price cutting at the points where necessary to suppress competition; [and] espionage of the business of competitors, the operation of bogus independent companies, and payment of rebates on oil, with the like intent. — invisible 774 days ago | link I know this was pointed at grellas, but I think this is a misunderstanding when we look at price fixing and collusion. The illegality of collusion is secretly forming agreements to benefit competitors at the expense of other parties. Words like defraud can succinctly help you understand whether it is illegal or not when looking at these agreements. — dctoedt 774 days ago | link The Wikipedia summary of Section 1 of the Sherman Act is a decent read: http://en.wikipedia.org/wiki/Sherman_Antitrust_Act#Violation — — jon_dahl 774 days ago | link Grellas, would there have to be evidence that the participants were acting anti-competitively, or is being in the room enough? Arrington says that a few of the folks there were uncomfortable with what was going on, and were maybe there just to see what was happening. — grellas 774 days ago | link Assuming the meeting had an illegal purpose (which is a major assumption at this point), one might infer that anyone present was complicit in that illegal purpose. In my view, that by itself would not normally be enough to subject someone to liability, especially if the participant disclaims affiliation with the group and thereafter does not act in concert with it. — guelo 774 days ago | link Does it matter if the participants have monopoly power over the market? I have a hard time believing Arringtons claim that ten or so angels control nearly 100% of early stage startup deals in Silicon Valley. If they control lets say only 50% of this market would it still be illegal collusion? — grellas 774 days ago | link It is not required that the participants have monopoly power for them to transgress the law on this point. I agree with you that the nearly 100% of the early stage deals in Silicon Valley statement is wildly overstated but this should not affect the fundamental legal analysis here. —tc 774 days ago | link Congratulations to PG & company. When I first met Paul years ago, he was musing about spam filters and the finer points of a well-designed lisp. Now he apparently has the top 10 angels in Silicon Valley running scared of him. — jeromec 774 days ago | link The interesting thing is unlike that group of Angels apparently in the bar PGs interests are less about helping himself, and more about helping entrepreneurs. From an essay by PG entitled Why YC: The real reason we started Y Combinator is one probably only a hacker would understand. We did it because it seems such a great hack. There are thousands of smart people who could start companies and dont, and with a relatively small amount of force applied at just the right place, we can spring on the world a stream of new startups that might otherwise not have existed. In a way this is virtuous, because I think startups are a good thing. But really what motivates us is the completely amoral desire that would motivate any hacker who looked at some complex device and realized that with a tiny tweak he could make it run more efficiently. In this case, the device is the worlds economy, which fortunately happens to be open source. <http://paulgraham.com/whyyc.html> — wensing 774 days ago | link YCs greatest hack is identifying founder material based on technical rather than social proof (the YC app asks for an example of the coolest thing youve ever built, not an example of a cool person that thinks you are cool). This hack is possible thanks to a judges panel full of real nerds. How many super angels or VCs can claim to have the same? — gruseom 774 days ago | link I agree that YC are able to identify great hackers and great founders more easily because they are these things themselves. Whats little recognized is how big a difference this is between YC and the other YC-like funds. — wensing 774 days ago | link Yes. I had a colleague apply for TechStars and her takeaway from the interview was he was really focused on where the business was. Doesnt seem in line with what Ive heard about YCs primary interest (its not the business model). — gruseom 774 days ago | link It seems kind of obvious that most successful startups dont succeed via the business model they started with. And that great founders can change business models more easily than great business models can change founders. Thesethings are so obvious that theyre cliches, in fact, but that doesnt mean that theyre common practice. — qq66 774 days ago | link I dont think anybodys stated interests should be taken as an indicator of their true interests. In this case,with PG, I do believe that his stated intentions are sincere. But there is often so little correlation between actual and stated intentions, that I dont take any such statement at face value. — jeromec 774 days ago | link I dont think anybodys stated interests should be taken as an indicator of their true interests. I agree. (actually Id replace taken as an indicator with taken as an absolute indicator) In this case, with PG, I do believe that his stated intentions are sincere. I agree. — mhendrick 774

days ago | link Correct me if Im wrong, but isnt it likely that the angels involved also make up a strong percentage of the people who invest on Demo Day in post-YC companies? How can it be a PG vs Angels situation when the parties involved are likely some of YCs portfolio companies biggest supporters? — brc 774 days ago | link One of the outputs from the YC process is better educated founders who have a lot more guidance in negotiating through a deal Even if the deal flow was exactly the same, just having the founders suffering less from information assymetry would be a stone in the shoe of the Angels. Think of it this way : if YC did all the same things, but also turned founders into being Angel patsies at dealtime, do you think they would be upset about it? I would guess its the information about how to negotiate, and what a good deal looks like is the problem. Im sure they love the concept of demo-day to go deal shopping, but would prefer it if the products didnt talk back. — MediaSquirrel 774 days ago | link YC is the seller, angels at Demo Day are the buyers. Just cuz you work with someone closely doesnt mean you wont or cant try to screw them. — redrobot5050 774 days ago | link Yeah. I mean, look at the JooJoo/CrunchPad Debacle. According the Mike A., thats exactly what happened. — mhendrick 774 days ago | link Agreed. Its possible they got a bit overconfident in their respective positions because of the easy access to so many well-vetted companies. — jeromec 774 days ago | link Correct me if Im wrong, but isnt it likely that the angels involved also make up a strong percentage of the people who invest on Demo Day in post-YC companies? Yes, I believe so. How can it be a PG vs Angels situation when the parties involved are likely some of YCs portfolio companies biggest supporters? That question might be better put to those Angels in the bar — mhendrick 774 days ago | link Im not defending the angels involved by any means; I actually think its a great thing that this has been exposed if it is indeed whats been going on. The easy access to YC companies may in fact be what emboldened them to act in this manner in the first place. Once this all plays out, I think its safe to assume that at least a few of the angels in question are going to have to answer for their actions. Should be interesting to hear what they have to say. — brendonjason 774 days ago | link Yes. They are running scared of the growing threat of the Ylluminati. But since they have 100% of all the deals, they also seem to co-invest(!?). These anxious (yet all-powerful) group of angels and this unstoppable new seed-stage prominence. They form a closed loop. A loop closed off to venture capitalists and angels not at that meeting which is basically everybody. Except Michael. He got away with his life intact and lived to warn us all. Actually, I dont know whats scarier – the supposed collusion or the subtle dread that Y Combinator is supposed to evoke in my mind as I ponder the possibility of this event being true. If it is true – maybe we should be side with these poor angels and help them before its too late. To paraphrase Woodrow Wilson, Since I entered (angel investing), I have chiefly had (angel investors) views confided to me privately. Some of the biggest men in the (Valley), in the Field of (IT) and (Venture Capital), are afraid of something. They know that there is a power somewhere so organized, so subtle, so watchful, so interlocked, so complete, so pervasive, that they better not speak above their breath when they speak in condemnation of it. That something is Y Combinator. Um no. The dark side doesnt suit you, Y Combinator. Please stop. Im sorry. Maybe Ive had too many beers tonight. But this is the kind of scenario that only comes out of the mind of a silicon valley PR firm. (please dont downvote me too much Id like to get above 100 karma points just once for a change! Noooo!) — limist 774 days ago | link I upvoted you just for the historical reference. — mixmax 774 days ago | link So a blogger gets a tip from a source, knows the people involved, acts on it and smells a rat. He sticks around and talks to a few people he knows, makes a few calls and gets a breaking story. Sounds to me like bloggers are the new journalists and that traditional media is in big big trouble. — sachinag 774 days ago | link Felix Salmon does this, and hes a blogger working for Reuters. Dan Primack does this, and hes a blogger working for Fortune. Its not about old/new media – its about hustle. — Alex3917 774 days ago | link Read Manufacturing Consent or any of the books that have been written about the MSM since then. Its very much about old media verse new media. If this were the NYT theyd probably tell Arrington he couldnt run the story because itd interfere with either their ad sales or else their access to sources. For example, just look at how/why they covered up their knowledge of the warrantless wiretapping until after Bush got reelected. Whereas with Arrington theres no one to tell him he cant do it because its his blog, and because hes not part of some mega corporation the chances of a story like this killing the revenue of some part of his empire are infinitely lower. — metamemetics 774 days ago | link >Sounds to me like bloggers are the new journalists Journalism used to be considered the fourth branch of government, keeping the other branches and large institutions in check. Blogs are the startups of the journalism world. As America moves from bureaucratic capitalism with large institutions to entrepreneurial capitalism with many small firms & independent players, the responsibility to call out unethical behavior is transferred from news companies to the individual. — vaksel 774 days ago | link a breaking story would name

nameshim not naming names just means he can use this as a hammer to get better terms for Techcrunch(either I get exclusive to every deal you guys door your names will be posted) — metamemetics 774 days ago | link I would argue its more ethical to discourage and prevent crime from ever happening in the first place. Seeking satisfaction from catching the bad guy (naming names) is to setup a market dependent on the need for new crimes. Arrington did the right thing. Its not about whether he caught a criminal, its about whether he prevented someone from becoming one. — eavc 773 days ago | link Someone (maybe everyone) in that group knew what they were doing to be wrong. I doubt that they will abandon their ethical choice; theyll find smarter ways to do what theyd intended all along. One thing that might work is if someone in the group has damning correspondence, everyone will panic and promise to never talk about that summer again, genuinely preventing future problems. — jon_dahl 774 days ago | link Maybe. This approach shows some integrity too, though. Not everything has to turn into a scandal (at least if inappropriate behavior stops quickly). Call me soft on crime. — mattmaroon 774 days ago | link Him not naming names means that people will continue to give him information in the future. Hed be shooting himself in the foot by naming a source that requested anonymity. — SkyMarshal 774 days ago | link Theres an interesting conundrum there too. He cant name names without either omitting (and hence identifying) his source/s, or including (and inditing) them. Either way he loses that/those source/s for future stories. He did the only thing he could do, besides staying silent. If it happened to be the right thing as well, so much the better. — drusenko 774 days ago | link unlikely. business in the valley is not done by extortion. more likely is that he doesnt want anyone to get in trouble, hes just putting them on notice. — jnoller 774 days ago | link I do hope hes wrong, or that this a mistake of some sort. The rise of Angel investors has seen a lot of ideas and entrepreneurs get needed money when they might not have under the traditional VC model. Something like this, if true, will cause the government to step in, and probably regulate and change things for the worse for a great many people. It wont just hurt these few super angels. It will take everyone with it. — j_baker 774 days ago | link To be fair, this is Michael Arrington. Hes not above sensationalism to get a few extra clicks. — mattmaroon 774 days ago | link This goes well beyond sensationalism. Im inclined to believe him for three reasons: 1. Mikes not known for boldly lying. He might publish rumors that Facebook is building a phone too liberally, but Ive not heard of him saying I saw x happen and it wasnt true. Assuming the account of what he himself saw was accurate its hard to imagine collusion wouldnt be the purpose. 2. This sounds like something that would happen. VCs do this crap all the time, why not angels? 3. Publishing this might be bad for him , and if it were untrue, it would definitely be really bad for him. — cletus 774 days ago | link I believe it too. You succinctly enumerate the reasons. The biggest for me was that (he claims) he saw it happen. That puts his personal reputation at stake, which I think will have to meet a far higher standard than the rumour publishing goes of an anonymous source. The FB phone was (imho) classic Arrington (the bad side). Posted on the weekend (in the hopes that FB PR would be slow to respond and debunk it), quoting anonymous sources and no substance at all. Basically, link bait. That sort of story does him (or rather his credibility) no favours. — swombat 774 days ago | link Add to that that there is no convincing reasons why this group of angels would manufacture this story to lead him on. Unlike with some other TC stories which turned out to be manufactured to discredit TC, in this one, the sources themselves would risk a lot by leaking this – true or false. — Alex3917 774 days ago | link In Arringtons defense his claims are laid out clearly without any weasel words. Either this is happening or it isnt. So while Im pretty meh about TC as a whole, Im giving him the benefit of the doubt on this one. — chc 774 days ago | link He didnt name a single name. If he really believed this was so certain, he could have. Unless hes trying to make them do something, the only reason to keep names out of it is because he thinks this might be libel. — swombat 774 days ago | link He doesnt need to expose himself to lawsuits by naming names. The names are pretty obvious to anyone in the field. — chc 774 days ago | link Yes, but thats the thing — you cant get sued for obvious names. Even if hes completely making this up, if one of the obvious suspects sues him, he can just say, Oh, no, I didnt mean him. The comment I was replying to said, his claims are laid out clearly without any weasel words. Either this is happening or it isnt. I disagree with that — Arrington is not laying it all out here as a black-and-white truth. Hes consciously omitting facts in a way that happens to shield him from repercussions if this is false. As a traditional dead-tree newspaper guy, Im very familiar with the ways reporters fudge their claims to avoid being responsible if it turns out to be crap. Thats what this sounds like to me. — eavc 773 days ago | link If he calls them felons and they wind up being acquitted for whatever reason, however technical or stupid, then he would be liable for libel. He clearly wanted to avoid using weasel words. The only way to do that without being reckless is to not refer directly to the objects of the post. — techiferous 774 days ago | link the only reason He did mention that they were his friends. Perhaps he wants to nip the illegal activity in the bud with as

little collateral damage as possible. — jnoller 774 days ago | link Im not going to disagree with that. As I said, I hope this is a mistake. — origoterra 774 days ago | link Arrington is smart, a lawyer himself, and already know he is headed straight to the witness stand . Thanks for blowing this whistle Mike. Thats the TC we like. — seldo 774 days ago | link I dont know if witnessing a table full of people go silent when he turns up proves anything, and the rest is all info that would put his source on the stand, not him. — danielnicollet 774 days ago | link If you read the full post, take in account that he was present and saw who was there, and assume he has not chosen to reveal everything about the sources through TC at this time (thats highly understandable – protecting his sources and only disclosing what he feels is verifiable), there is definitely a lot here and absolutely enough for a climb to the witness stand — tomjen3 774 days ago | link I am not so sure – he said that several of the persons there were very uncomfortable with the deal, so being there alone would not be enough. The rest is heresay, which is admissible in no non-kangaroo court that I know of. — MediaSquirrel 774 days ago | link I believe the saying that applies is: Power corrupts — cool-RR 774 days ago | link I wouldnt take anything he says seriously. [Edit: If it wasn't clear, I meant Arrington, not Jesse] — Isternlicht 774 days ago | link I think your statement was clear. However, I find it hard to believe Arrington would put some of his best sources at risk if his claims were completely unfounded. — onan_barbarian

774 days ago | link Strange how any post that could be construed as being negative about Arrington gets downmodded by about 5 points, regular as clockwork. That being said, I think hes on the money with this one. This can only be good for YC overall. The suspicion that YC alternatives are all colluding against your startup is likely to make YC seem more attractive still, to the class of startup that would be wavering between YC and a rival. — stanleydrew 774 days ago | link Posts that consist of nothing more than subjective statements tend to get a lot of downvotes, not just the ones about Arrington. — ori_b 774 days ago | link The reason its always exactly 4 points of downvote is because hn caps the visible downvotes at 4, not because there are 4 shills. — ericd 774 days ago | link Super angels arent really an alternative to YC they normally step in at the stage a company is at where YC normally ends. — gruseom 774 days ago | link I find it fascinating how the very qualities that lead people to call Michael Arrington an asshole are dramatically in evidence here. It takes a staggering immunity to social mores to walk in on a meeting of rich and powerful friends, friends who are connected to his own business in many ways (read: friends with leverage) and behave the way MA says he did, let alone go home and write that article. Very few people could do it. Im not sure I could, to put it mildly. I particularly doubt if many (any) of Arringtons competitors ever would. It may take a character disorder to be able to act this way. In an age when journalists grade themselves by which power-brokers deign to have lunch with them (anybody see David Brooks prattling about this on Charlie Rose the other night? lunch and dinner, he said) its impressive to see anyone act like this. Especially if what hes saying is true and this really is a matter of right and wrong. — mrtron 774 days ago | link I have always felt MA had a certain brashness, abrasiveness, asshole tone, whatever you want to call it about him. You could feel it in his articles. I now feel it is not only helpful but entirely necessary for him to develop that quality in his career path. Kudos for pushing the boundaries Mr. Arrington. The evidence speaks for itself – you dont see this type of journalism in any industry anymore. — jexe 774 days ago | link Well, at least one investor seems to have accidentally included himself in the mess (from TCs comments)

<http://twitter.com/speechu/status/25083299594> — jakevoytko 774 days ago | link This link is now a 404. Thankfully Google has the text of the tweet! speechu: Bin 38 is like heaven right now, chock-full of angels. Not explicitly incriminating, but it sounds pretty bad — dzlobin 774 days ago | link Strangely, its still on the feed. <http://twitter.com/speechu> But the status link is deleted — borism 774 days ago | link real-time wonders of nosql? — nostromo 774 days ago | link I just put forming a cartel on my list of things not to tweet. — mattmaroon 774 days ago | link Unless youre in Mexico. Then Tweeting is probably a good idea. — mrduncan 774 days ago | link The original tweet was removed in the past few minutes (others have dug it up again). His latest tweet doesnt seem to be taking Arrington too seriously: Thanks Mike for techcrunching me for no reason. Note to self: hold next secret meeting in underground bunker to get the feds off my trail. Sundeep Peechu@speechu Thanks Mike for techcrunching me for no reason. Note to self: hold next secret meeting in underground bunker to get the feds off my trail. 21 Sep 10 Reply Retweet Favorite — dannyr 774 days ago | link The tweet has been erased but somebody did an old-school retweet of it. ----- danilocampos 774 days ago | link IANAL, but as I understand it Any time individuals or businesses get together to collaborate on a strategy that restrains trade or supply, thus artificially skewing prices, this runs afoul of antitrust law. Collusion between angels to keep valuations low and prevent newcomers from participating sounds like a textbook case. In this case, theyre artificially inflating their cost of capital by reducing the overall valuations of the businesses they fund. They artificially reduce the supply of capital by conspiring to keep out new participants. Similarly, the Department of Justice is looking into Valley hiring, since companies have a gentlemen agreement not to poach from one another:

<http://www.forbes.com/feeds/ap/2010/09/17/technology-special> In this case, the argument would go that the companies are artificially constraining the supply of paying work for qualified applicants, while reducing the competitive landscape that would drive up their salaries. — nostromo 774 days ago | link It sounds like price fixing, even though they are buying and not selling. Check out Wikipedia for a good write-up: Price fixing is an agreement between participants on the same side in a market to buy or sell a product, service, or commodity only at a fixed price, or maintain the market conditions such that the price is maintained at a given level by controlling supply and demand. The group of market makers involved in price fixing is sometimes referred to as a cartel. The intent of price fixing may be to push the price of a product as high as possible, leading to profits for all sellers, but it may also have the goal to fix, peg, discount, or stabilize prices. The defining characteristic of price fixing is any agreement regarding price, whether expressed or implied. Colluding on price amongst competitors is viewed as a per se violation of the Sherman Act regardless of the market impact. — j_baker 774 days ago | link Would it still be price fixing if all of them got up from the table and announced the formation of Super Angel Capital Partners? Yes. That would effectively make SACP a cartel. Price fixing is price fixing if it was done by a group of entities or one entity. — InclinedPlane 774 days ago | link If they create a single super angel corporation then they could run afoul of anti-monopoly laws. — tptacek 774 days ago | link What? No they dont. Theres no such thing as a monopoly of angel investors. There are as many angel investors as there are people with extra money to invest. In a lot of cases already, groups of powerful people with extra money to invest have already formed very famous companies to do exactly what were talking about! Shouldnt the DoJ be going after Kleiner and Sequoia first? Dont hundreds of doctors and dentists already do stuff like this? — j_baker 774 days ago | link As if they owe anybody anything! Theyre the ones taking the risks with their own money; Right. And Im sure theyre all doing it out of the kindness of their hearts. Theyre definitely not intending to make money off of the deal. Regardless, Arrington accuses them of discussing: * How the group can act together to keep traditional venture capitalists out of deals entirely * How the group can act together to keep out new angel investors invading the market and driving up valuations. This is definitely sounds anti-competitive to me (assuming its true of course). — prostoalex 774 days ago | link My buddy and I in college colluded to maintain market conditions on Lamborghini prices. As far as I can say, 300 million other Americans are participating in this. Our agreement was specifically regarding price (and lack of 0% financing). </sarcasm> I think in buyers market it only makes sense when the supply of buyers is artificially limited. Not only it doesnt look like theres any shortage of capital, the conversation in question specifically discussed excluding new angel investors, furthering the point. — ctkrohn 774 days ago | link If the FTC determines that the joint venture would form a monopoly, they could in fact block it on antitrust grounds. The FTC blocks mergers all the time. Explicit cooperation in restraint of trade is always illegal, though. — icye 774 days ago | link According to Wikipedia [1], there were over 250,000 angel investors active in 2007. If 10 of those investors were to get together to form a super-group, Im not sure it would match up with the definition of a monopoly. I dont know anything about the collusion arguments though. [1] http://en.wikipedia.org/wiki/Angel_investor — ctkrohn 774 days ago | link I agree. Not saying theyre a monopoly. The merger-blocking issue is the only reason I can think of for a joint venture being illegal. The difference is that explicit collusion is ALWAYS illegal. Otherwise innocuous activities that may have an anticompetitive effect (e.g. forming a joint venture) are sometimes legal, depending on what the FTC thinks. — jon_dahl 774 days ago | link The real question would be their investment market share, right? There might be 500 companies

building operating systems, but a Microsoft/Apple merger would probably be a monopoly concern. That said, while their market share is certainly larger than 10/250,000, it probably doesnt even approach 10%. So youre

probably right. — jessriedel 774 days ago | link True, but you need to consider possible sub-markets. They might have much less than 10% of angel funding nationwide, but 60% of tech angel funding in the bay area. Or something like that. It all depends on how the regulators draw boundaries around markets. — dschobel 774 days ago | link Why would VC firms meeting and agreeing to change terms for their clients in lock-step not be collusion whereas if the brick and mortar banks did, it would be? (and was: <http://redtape.msnbc.com/2008/04/did-banks-collu.html>) — j_baker 774 days ago | link It turns out that banks are exempt from antitrust laws: http://en.wikipedia.org/wiki/United_States_antitrust_law#Exe — dschobel 774 days ago | link You're referring to the Edge Act [1][2] and that only applies to US banks foreign operations (their subsidiaries, to be specific). It is still very much illegal for them to collude against US customers. [1] http://en.wikipedia.org/wiki/Edge_Act [2] <http://www.answers.com/topic/edge-act-corporation> — pvg 774 days ago | link I have no idea whether this specific arrangement is legal or falls under laws regulating price fixing but it is fundamentally different from a JV – there is transparency in the case of a JV so someone looking for financing knows they are dealing with the same entity. If it was the same thing as a JV, parties doing the collusion wouldn't bother to do it in secret. — InclinedPlane 774 days ago | link Buying stock is also just investing. So is providing a loan. That doesn't mean those activities aren't subject to laws and regulations. — navyrain 774 days ago | link I cannot speak to the letter of the law, but I'd venture to say the alleged misbehavior violates at least the _spirit_ of the law, since these angels would be considered competitors outside of that room. — jnoller 774 days ago | link I'd like to know the laws too, this could be construed as collusion, conspiracy and probably a few other things. — tptacek 774 days ago | link How? What market power are they exploiting? There's no conceivable monopsony for shares of all startups. — jnoller 774 days ago | link They are a group of people supposedly conspiring to generate the worst possible terms for the people they are providing money to, while trying to force out or marginalize competition. IANAL though – even if not illegal, it's still pretty stinky, and a big part of me hopes it's not illegal. If it's not illegal, I hope they're outed and shamed if this is true. If it is illegal, it gives the government reason to step in and screw everything up. — tptacek 774 days ago | link Or, this is a group of people collaborating to generate the best possible outcome for their own business. Every joint venture can be framed in anticompetitive terms. But in this case, what possible undue market influence can they have? The market will find other people to take these deals. — jnoller 774 days ago | link This is a group of people, comprising the top angel investors in a given area, investing lots of money, into a lot of companies, supposedly discussing – in private – how to divide the market and set prices and exclude/marginalize competition. Angel investors, despite being individuals, still have regulations and laws to follow. Frankly, I think the feds would jump at the chance to have an excuse to jump in and more tightly regulate/tax/etc the entire system, including angel investors. You could very well be right; admittedly, I'm not the smartest tool in the shed when it comes to understanding FTC and government investment regulations, as well as the legal status of angel investors. Heck, I really hope this is all wrong, because the last thing I want is the feds meddling in this industry even more. I make my living on startups; the last thing I want is the federal government to make it wither and die. — j_baker 774 days ago | link Every joint venture can be framed in anticompetitive terms. Semantically yes. But is every joint deal bad for the market? The market will find other people to take these deals. Don't be naive. Anticompetitive practices are specifically meant to prevent the market from functioning normally. — dschobel 774 days ago | link That's an unrealistically high standard and I can't think of any recent case which would meet it. Why didn't the market find a solution to Microsoft in the 90's or Intel in 2000's and, more importantly, why did the Feds feel the need to intervene? — tptacek 774 days ago | link Microsoft owned the entire personal computing platform and was using it to put new companies in marginally related markets out of business. Are you suggesting that 10 angel investors have control over all the money? Is one of them Lex Luthor? — blueben 774 days ago | link Because bay area technical angel investing isn't just about writing cheques. It's about managing and guiding those startups, helping them find the resources they need. It's about leveraging your connections throughout the industry to help them grow sales, build manufacturing, hire talent, or any of a hundred other things. This is why startups go back to these handful of investors over and over again. Founders aren't stupid. They know these investors wield serious power in the tech world, and they want that power to be on their side. If you think the only requirement to being an angel investor is having a big bank account, you haven't been paying attention. — dschobel 774 days ago | link I'm not suggesting it, Arrington flat out said it. He was there and knows the VC players better than anyone. — notahacker 774 days ago | link If (i)most angel investors are significantly less likely to make investments in early stage tech startups at a given price and/or (ii)due to connections these investors provide a significant non-monetary value-add to the startups they invest in then it's conceivable they might wield a

significant amount of market power. — inerte 774 days ago | link A joint venture (or a legal entity aka as a company) operates under very different rules than parties working together, probably without a contract. I dont know how the antitrust laws apply, not even if what they are doing collude with any law at all, despite preventing healthy competition, but your questions come from the wrong premises. — tptacek 774 days ago | link As we just saw with TechCrunch v FusionGarage, the paper contract has little to do with whether something is or isnt a joint venture. Broaden the word antitrust to laws against all contracts in restraint of trade, and re-ask the question to yourself. These people are investors. Investors are allowed to work together, arent they? — — tptacek 774 days ago | link Before I turn into the guy on the thread arguing that the Evil Angels are just peachy, banding together for the sole purpose of pushing back YC and making life harder for founder is a total dick move, and Im happy Arrington is shaming them for it. But it is a much more ambitious claim to say that theyre breaking federal laws by doing it. _____ Federal funds flow to clean-energy firms with Obama administration ties By Carol D. Leonnig and Joe Stephens, Washington Post Sanjay Wagle was a venture capitalist and Barack Obama fundraiser in 2008, rallying support through a group he headed known as Clean Tech for Obama. Shortly after Obamas election, he left his California firm to join the Energy Department, just as the administration embarked on a massive program to stimulate the economy with federal investments in clean-technology firms. Following an enduring Washington tradition, Wagle shifted from the private sector, where his firm hoped to profit from federal investments, to an insiders seat in the administrations \$80 billion clean-energy investment program. He was one of several players in venture capital, which was providing financial backing to start-up clean-tech companies, who moved into the Energy Department at a time when the agency was seeking outside expertise in the field. At the same time, their industry had a huge stake in decisions about which companies would receive government loans, grants and support. During the next three years, the department provided \$2.4 billion in public funding to clean-energy companies in which Wagles former firm, Vantage Point Venture Partners, had invested, a Washington Post analysis found. Overall, the Post found that \$3.9 billion in federal grants and financing flowed to 21 companies backed by firms with connections to five Obama administration staffers and advisers. Obamas program to invest federal funds in start-up companies — and the failure of some of those companies — is becoming a rallying cry for opponents in the presidential race. Mitt Romney has promised to focus on Obamas record as a venture capitalist. And in ads and speeches, conservative groups and the Republican candidates are zeroing in on the administrations decision to extend \$535 million to the now-shuttered solar firm Solyndra and billions of dollars more to clean-tech start-ups backed by the presidents political allies. White House officials stress that staffers and advisers with venture capital ties did not make funding decisions related to these companies. But e-mails released in a congressional probe of Obamas clean-tech program show that staff and advisers with links to venture firms informally advocated for some of those companies. David Gold, a venture capitalist and critic of Obamas investments in clean tech, said that even if staffers had been removed from the final decision-making, they had the kind of inside access to exert subtle influence. To believe those quiet conversations dont happen in the hallways — about a project being in a certain congressmans district or being associated with a significant presidential donor, is naive, said Gold, who once worked at the Office of Management and Budget. When youre putting this kind of pressure on an organization to make decisions on very big dollars, theres increased likelihood that political connections will influence things. Energy Department spokesman Damien LaVera said the companies won awards based on merit, not political connections. He said the staffers and advisory board members reviewed by the Post had no role in funding decisions, nor did they have any personal financial stake in the companies. One of those administration advisers had first been appointed to his position by the Bush administration, LaVera said. As is evident from the 10-month long congressional investigation into Solyndra, Energy Department loans and grants are decided on the merits, White House spokesman Eric Schultz said. Whats more, these are all professionals with expertise in clean-energy science, finance or both — but none of them play a decisional role in DOE awards and none of them are in positions of regulating the industry. Venture capitalists arrive During the 2008 campaign, the venture capital industry lined up behind Obama as he vowed to spur clean-technology development. Obama raised more than twice the venture capital contributions of his opponent, Republican candidate John McCain. Known for making billions of dollars in the 1990s on Internet startups, venture firms in 2006 were rapidly switching to invest in clean tech. Legendary venture partner John Doerr, a leading early investor in Google and Amazon, that year called the clean-energy sector the next great profit center, the mother of all markets. With the 2008 economic crisis, new private investment in fledgling clean-tech companies withered. But passage of the \$787 billion stimulus package offered new opportunities to launch and grow those firms, with \$80 billion set aside for clean

energy and energy-efficiency efforts. Suddenly flush with cash, the Energy Department was under orders to ramp up quickly and get money out to promising companies. The administration tapped industry players to take on key Energy Department roles, both as agency staffers and outside advisers on agency boards. Wagle, then 38, took a job as a stimulus adviser in the agency's recovery act office. Officials say his role did not involve making funding decisions for companies tied to Vantage Point. Private investors cheered the administration for hiring industry colleagues. In a 2009 article, venture firm leader Jim Matheson said Wagle, along with another Washington-bound venture capitalist, David Danielson, would help ensure commercial successes from the steady flow of dollars coming out of D.C. Wagle's former employer had invested in several companies that received federal money: Brightsource, which won a \$1.6 billion federal loan for a solar-generating plant; Tesla Motors, which won a \$465 million loan to build electric cars; and biofuels firm Mascoma, which in 2011 received \$80 million for a Michigan ethanol plant. Wagle recently returned to the California venture capital industry to work as an investor and clean-tech adviser. Reached at his home, he declined to comment. Vantage Point Venture Partners, renamed Vantage Point Capital Partners, did not respond to requests for comment. Danielson, formerly of General Catalyst, joined an Energy Department office whose mission was to fund breakthrough energy technologies. Officials say he had no role in arranging \$105 million in funding for three General Catalyst portfolio firms. David Sandalow, a former Clinton administration official and Brookings Institution fellow, had been paid \$239,000 for consulting work for a venture capital firm, Good Energies, in 2008 before joining the Energy Department as assistant secretary for policy and international affairs, his disclosure form shows. A Good Energies-backed firm, SolarReserve, won a \$737 million agency loan. Officials say Sandalow played no role in arranging it and LaVera, speaking on behalf of Sandalow, said the assistant secretary had no financial interest in Good Energies or SolarReserve. The Energy Department came under criticism from Republicans earlier this year when agency e-mails raised questions about a possible conflict of interest involving Steven J. Spinner, a former department loan adviser who disclosed that his wife worked for Wilson Sonsini, a Silicon Valley law firm that handled funding applications for several clean-tech companies. Wilson Sonsini's clean-tech clients reaped \$2.75 billion in Department of Energy grants and financing, the Post analysis found. One of the firm's clients was Solyndra. Republicans have accused the Obama administration of favoring the risky company because its leading investor was tied to a major Obama donor. Wilson Sonsini had its own connection to the White House: the firm's chief executive, John Roos, was a top bundler for Obama's 2008 campaign. Before joining the administration, Spinner, a venture investor and start-up adviser, also helped raise \$500,000 for Obama as a member of his national campaign finance committee. He has pledged to raise a half-million dollars or more for Obama's reelection effort. Once inside the agency, Spinner agreed not to discuss loan matters involving Wilson Sonsini clients. But e-mails show he urged career officials to resolve delays in the Solyndra loan, and also defended the financial prospects of Solyndra to a White House deputy before its federal loan was approved. Spinner left the Energy Department in the fall of 2010. He did not respond to requests for comment. The department said Spinner was not involved in the company's application review or loan approval. A Wilson Sonsini spokesman said the firm does not believe its employment of Spinner's wife influenced Energy Department decisions. Investors as advisers Thousands of agency and White House e-mails released as part of the Solyndra investigation show that venture capitalists who held advisory roles with the Energy Department were given access to Obama's top advisers. Steve Westly, an Obama fundraising bundler for both his 2008 and 2012 campaigns, is a founder of the venture firm Westly Group and served part time on Energy Secretary Steven Chu's advisory board. The e-mails show that Westly communicated with senior White House officials, including Obama adviser Valerie Jarrett, voicing concerns about the president's planned appearance at Solyndra. Westly's firm also fared well in the agency's distribution of loans and grants. Its portfolio companies received \$600 million in funding. LaVera said Westly had no role in the funding decisions. David Prend also surfaces in the e-mails as a venture capital investor who had White House access. His firm, Rockport Capital Partners in Boston, was among the investors in Solyndra, with a 7.5 percent stake. The e-mails show him asking a White House aide to help get the word out about Solyndra and asking for help on another Rockport portfolio company. They show he and a group of venture capital investors met with new White House climate czar Carol Browner before Solyndra's loan was tentatively approved, and the White House confirmed that the subject of the company came up briefly. Prend had worked closely with the Energy Department since the Bush administration, when he was first appointed to an advisory panel for the National Renewable Energy Laboratory. He continued to advise the Obama administration, while also chairing a panel that helps advise the department on solar technologies. The agency provided \$550 million to several firms in which Rockport had invested at the time. The department gave an additional \$118 million grant to an electric-car battery company, Ener1, that was partnered

with Rockport portfolio car company Think. (Rockport soon after invested in Ener1.) Ener1 filed for bankruptcy protection last month. LaVera and Chad Kolton, a Rockport spokesman, said that Prends advisory role was separate from stimulus programs and had no bearing on agency decisions about companies backed by Rockport. Research editor Alice Crites contributed to this story.

– POTOMAC WATCH May 24, 2012, 7:24 p.m. ET Vulture Capitalism? Try Obamas Version A profit-driven economy is preferable to one run by political favoritism. President Obama is no fan of Mitt Romney-style vulture capitalism. So whats his alternative? Tweet 127 All those Republicans grouching about the presidents attacks on private equity might instead be seizing on this beautiful point of contrast. Mr. Obama, after all, is no mere mortal president. Even as hes been busy with the day job, hes found time to moonlight as CEO-in-Chief of half the nations industry. Detroit, the energy sector, health care—hes all over these guys like a cheap spreadsheet. Like Mr. Romney, Mr. Obama has presided over bankruptcies, layoffs, lost pensions, run-ups in debt. Yet unlike Mr. Romney, Mr. Obamas C-suite required billions in taxpayer dollars and subsidies, as well as mandates, regulations, union payoffs and moral hazard. Dont like vulture capitalism? Check out the form the presidents had on offer these past three years: crony capitalism. The case study is the solar-panel maker Solyndra, which was

part of a green-energy sector that even by 2009 was flailing. The president took one look at the industrys utter lack of both profits and sellable products, and yelled thats my baby! The stimulus bill shipped tens of billions of dollars to the Energy Department to pour into green companies via grants and loans. It promised five million jobs. The Energy Departments nuclear physicists were admittedly a bit flummoxed by the whole P&L thing, but they got their venture-capitalism groove on and in 2009 handed Solyndra a \$535 million loan guarantee. Even prior to disbursement, government accountants were warning that Solyndra was a lemon, but the White House didnt worry. After all, the IRS had only recently and conveniently tripled the tax credit (to 30%) for buyers of Solyndra products, which the government figured would help grease their start-ups skids. Items for auction at Solyndra headquarters in Fremont, Calif. Bloomberg Unfortunately, the physicist-CFOs overlooked that whole global energy market factor—easy mistake! Foreign competitors were already piling into Solyndras niche. Unable to compete, the firm went bankrupt last year. And, oh, the carnage! It was kind of like . . . GST Steel! Only worse. Solyndra laid off 1,100 employees. It provided no severance, not even back pay due for vacation credits. But a bankruptcy judge would later approve \$370,000 in bonuses for 20 employees. Mr. Obama railed against the high-dollar Silicon Valley investors who lined up in front of government to suck the remaining life out of the bankrupt firm, even as employees were left to . . . Oh, wait. He said no such thing. He was probably too busy doing damage control on his other government subsidized energy bankruptcies, from Beacon to Ener1. Or running down the latest report of a government-funded, instantaneously combusting electric car. (Karma, anyone? Now at the low, low price of \$103,000. Fire extinguisher included.) Speaking of cars, Detroit is the business venture Mr. Obamas team has been most flogging as a success. True, General Motors and Chrysler are still turning their lights on, though theyd have arguably been doing the same had they been left to go through normal, orderly bankruptcies like those that helped the steel and airline industries restructure to become more competitive. To get to the same place, Mr. Obamas crony capitalism handed \$82 billion in taxpayer dollars to the two firms. That bailout money went to make sure the unions that helped drive GM to bankruptcy (and helped elect Mr. Obama) did not have to give up pay or pension benefits for current workers. They were instead rewarded with a share of the new firm. The UAW at GM meanwhile used the government-run bankruptcy to bar some 2,500 nonunion workers who had been laid off from transferring to other plants. How truly vulture-like. Contract law was shredded, as unions were given preference over other creditors, such as pension funds for retired teachers and police officers. Congressmen used political sway to keep open their weak auto dealerships, forcing layoffs at stronger ones (vulture . . . vulture . . . vulture). Political masters obliged the industry to pour resources into unpopular green cars. The political masters were obliged to offer \$10,000 tax credits to convince Americans to buy them. (They still wont.) And the message to every big industry? Go ahead, run your business into the ground. The Capitalist-in-Chief has your back (especially if you are unionized). So, take your pick. Mr. Obamas knock on free enterprise is that it is driven by profit, and that this experience makes Mr. Romney too heartless to be president. The alternative is an Obama capitalism that is driven by political favoritism, government subsidies, mandates, and billions in taxpayer underwriting—and that really is a path to bankruptcies and layoffs. If the president wants to put all 3,545 green stimulus jobs hes created up against Bains record, he should feel free. Mr. Romney could make the comparison himself. Ronald Reagan ran against Jimmy Carters own industrial policy, and to great success. Viewed in isolation, vulture capitalism has some PR downsides. Viewed against the alternative, its a flat-out winner. Write to

Corruption — Part One <http://blogcritics.org/politics/article/obamas-political-payback-green-corruption-> Author: Christine Lakatos — Published: Jul 30, 2010 Alarming, our environment has been hijacked by uber-rich individuals, crooked politicians, and an assortment of left-wing extremists that are fueled by greed and power attached to a radical agenda to bring about global governance, redistribute the wealth, and put the progressive movement — big government, social justice and the death of capitalism — on the fast track. Under the guise of saving the planet, these players, who are all interconnected in a variety of ways, are transforming our climate into something more sinister — a scam of epic proportions. Due to its magnitude and the potential dire consequences to our economy, our freedoms, and the voices of the honorable environmentalists — this Climate Scam will be confronted in three parts. **TROXLER AND BROWN PREDICTIONS OF GREEN CORRUPTION CONFIRMED** This year, Lee Troxler and Floyd Brown in their newly released hit book, *Killing Wealth, Freeing Wealth How to Save Americas Economy and Your Own*, chapter ten — *The Biggest Financial Bubble in US History*, is where the authors predicted that the veteran Silicon Valley venture-capital firm Kleiner Perkins Caufield & Byers (KPCB) — multi-millionaire Al Gore and billionaire John Doerr are both partners — would get government contracts from the Obama administration unfairly. In developing this story, which took months of research, backed up with extensive resources, we learned through an anonymous source that there are multiple federal investigations from different agencies and senators underway against the Department of Energy (DOE), in particular, the Loan Guarantee Program (LGP) and possibly others. Our source, who is close to the some of the ongoing investigations — guarantees there was corruption and bad ethics involved and that at this time a number of the investigations are getting stonewalled. Our findings, along with this recent inside information, confirms Troxler and Browns predictions — corruption on the green front. As we learn more, we will share the details. At this time we do know that the U.S. Government Accountability Office (GAO) has been in the process of reviewing — in response to Congress mandate — the DOE's execution of the Loan Guarantee Program (LGP), which was established as part of the Energy Policy Act of 2005 and set up for innovative energy projects. About two weeks ago (July 12, 2010), the GAO released their findings and recommendations, noting that the LGP scope has expanded both in the types of projects it can support and in the amount of loan guarantee authority available. DOE currently has loan guarantee authority estimated at about \$77 billion and is seeking additional authority. At issue, the DOE's lack of comprehensive performance goals, particularly in relation to the DOE's broad policy goal of helping to mitigate climate change and create jobs. The GAO concludes, Without comprehensive performance goals, DOE lacks the foundation to assess the programs progress and, more specifically, to determine whether the projects selected for loan guarantees help achieve the desired results. Predictably, the GAO also found that the DOE's implementation of the LGP has treated applicants inconsistently, favoring some and disadvantaging others, as well as the fact that the DOE lacks systematic mechanisms for LGP applicants to administratively appeal its decisions or to provide feedback to DOE on its process for issuing loan guarantees. **OBAMAS GREEN STIMULUS** In February 2009 Congress passed the American Recovery and Reinvestment Act (ARRA), the \$862 billion stimulus package, for which \$86 billion was earmarked for green, of which the Apollo Alliance — a left-wing organization who exerts a powerful influence on the views and policies of the Obama administration — was also involved in drafting. More on Apollo later, but Kleiner Perkins are like ants at a picnic; they're everywhere that's green, including on the Apollo board, where they have placed one of their partners, Ellen Pao. Furthermore, Obama was a candidate that both Gore and Doerr had strenuously campaigned for, including financial donations, and early on, Doerr had his hand in shaping ARRA, urging Obamas transition team and leaders in Congress to use the new economic stimulus package to modernize the electric grid and offer new incentives to help clean energy startups get off the ground. Doerr also sits on Obamas Economic Recovery Advisory Board (PERAB), who President Obama appointed as one of the chosen back in January 2009. In following the ARRA, meant to stimulate the economy and create jobs, it is clear that the Obama administration is circuitously funneling government contracts to their favored companies — stimulating the green pockets of Kleiner Perkins. This screams corruption and its time to call in a special prosecutor! **FOLLOW THE GREEN MONEY: KPCB GREENTECH PORTFOLIO** Since last summer when the Department of Energy (DOE) starting handing out the \$86 billion green stimulus money, Gore and Doerr's green companies have been cashing in big time — billions of taxpayer dollars! Keep in mind, this doesn't account for funds not yet allocated, or hidden contracts, nor the mass amount of money KPCB and others in the Climate Scam will generate if the U.S. climate legislation becomes law — Obama Climate, more specifically cap-and-trade, which will be covered in more detail later. So far over fifty percent of

the companies listed on the Kleiner Perkins Caufield & Byers Greentech Portfolio, of which KPCB partners are positioned on the board of many, have — directly and indirectly — received money from the Obama Green Stimulus package as well as through other government programs approved by the Obama administration.

AL GORES FISKER AUTOMOTIVE \$529 MILLION DOE LOAN IGNITES RED FLAGS One of the most blatant government favoritism, catching headlines in the Wall Street Journal back in September 2009 — Gore-Backed Car Firm Gets Large U.S. Loan — was the \$529 million dollar government loan guarantee (which was cinched in May 2010) that Fisker Automotive received to build its high-end, hybrid sports coupe, Fisker Karma — to be manufactured in Finland and sold for \$89,000. Fisker Automotive was a 2008 investment for Kleiner Perkins and it was confirmed that Gore has already purchased his Karma. In June 2009 the DOE announced three other large government loans that included \$5.9 billion to Ford Motor Company, \$1.6 billion to Nissan Motors, and \$465 million to Tesla Motors. Although the four loans came out of the DOE's \$25-billion Advanced Technologies Vehicle Manufacturing (ATVM) Loan Program, it was approved by the Obama administration and it did ignite some red flags. As reported by the Wall Street Journal, the awards to Fisker and Tesla prompted criticism from groups that question why vehicles aimed at the wealthiest customers are getting loans subsidized by taxpayers and concern from companies that had their bids for loans rejected. Included in the reaction was Leslie Paige, a spokeswoman for Citizens Against Government Waste, This is not for average Americans. Its status symbol thing, Ms. Paige added. More gripping is the fact that this favoritism didnt sit well with some of the firms that were turned down for loans from the DOE — stating they did not get much feedback from the department about their applications and were unable to get a full explanation as to why their loan request was turned down.

THE VINOD KHOLSA CONNECTION The CEO of EcoMotors John Colettie, whose \$20 million ATVM loan from the DOE was denied, didnt have an issue with the winners. Probably because EcoMotors lead investor is Vinod Khosla, an affiliated partner of Kleiner Perkins, whose firm Khosla Ventures has also invested in some of the same companies as Kleiner Perkins, which have received government funding including Obama Green Stimulus cash. Those companies include; AltaRock Energy Inc., \$25 million grant from the stimulus; Amyris Biotechnologies, \$25 million grant from the stimulus; and Mascoma Corporation has received state and federal grants from the DOE since 2006, totaling over \$170 million and as recent as 2008, received another \$49.5 million in funding from the DOE and the state of Michigan.

SILVER SPRING NETWORKS SCORES OVER \$700 MILLION IN SMART-GRID GREEN STIMULUS FUNDS — RIGGING THE BIDDING PROCESS? One of the most contentious of Obama Green Stimulus money awards comes out of the ashes of the \$4 billion smart-grid grants, with some of the nations largest providers of electricity meters crying foul over the smart-grid standards in the stimulus bill, according to a report by USA TODAY in February 2009. Additionally, they said that the economic stimulus bill could put them out of business and wreak havoc in the new market for smart-grid technology by favoring certain computer network standards. Itron, Landis+Gyr, Elster and Aclara even wrote a letter to U.S. Senators to voice their concerns regarding the protocols and standards that were placed into the House version of the legislation for all smart-grid projects, which states that utilities receiving funding must use Internet-based or other open protocols and standards if available and appropriate. Ed Gray, vice president of regulatory affairs for smart-meter provider Elster, said the bill gives a leg up to Silver Spring at the expense of other providers. Interestingly, in March 2009, a month after the stimulus bill had already passed, Jeff St. John from GreenTechMedia.com, quoted a statement made by Stuart Bush, an alternative energy analyst for RBC Capital Markets, both Trilliant and Silver Spring (both smart-grid communications companies) could benefit from the way the stimulus plan was structured to require open standards. Bush also added, Clearly the West Coast VC guys had a lot of lobby pull getting that in there. Clearly the West Coast VC guys — Kleiner Perkins (Gore and Doerr), have more than lobby pull. In fact, Silver Spring Networks, as revealed in Troxler and Browns book, is one of Kleiner Perkins shining green companies — their 2008, \$75-million investment has scored over \$700 million! Since August of 2009 when the DOE started dishing out the \$4-billion from the Smart Grid Investment Grant Program (part of the stimulus plan) — awarded to selected utility companies for particular smart-grid projects — close to sixty percent of Silver Spring customers were winners.

- American Electric Power (AEP) received \$75 million for AEP Ohio gridSMARTSM Demonstration Project, announces earth2tech.com in August 2009. It should be noted here that Richard Sandor is on the AEP board. Sandor, Chairman and founder of the Chicago Climate Exchange, who is connected to President Obama and Al Gore, is another key player in this Climate Scan, which will be exposed later.
- Bluebonnet Electric Cooperative got \$18.8 million for a general smart- grid build out in Texas as reported in August 2009 by earth2tech.com. Additionally, in November 2009 Austins Pecan Street Project won \$10.4 million

in federal stimulus money to create a smart-grid demonstration project, which includes Bluebonnet as part of their Technology Review and Advisory Committee. • In October 2009 Florida Power & Electric was awarded \$200 million for Energy Smart Florida — posted by earth2tech.com. • In April 2010 Pepco Holdings Inc. signed contracts for three ARRA grants totaling \$168.1 million to advance smart-grid projects, reported by the Washington Business Journal. Additionally in April 2010, Secretary of Energy Steven Chu announced \$100 million from the stimulus will go for Smart Grid Workforce Training and Development, of which Florida Power & Light got \$5 million and Pepco got just over \$4.3 million. • In October 2009, the U.S. Department of Energy announced that Modesto Irrigation District (MID) was one of only six California utilities selected to receive a \$1.5 million federal stimulus grant to support MID's efforts to install smart control equipment throughout its electric infrastructure — published in an Oracle Press Release. • Oklahoma Gas and Electric Co. received a \$130 million stimulus grant for a 771,000 smart meter deployment, as reported in October 2009 by GreenTechGrid.com. • Sacramento Municipal Utility District got a \$127.5 million stimulus grant for a comprehensive regional smart-grid system, announced in October 2009 by GreenTechGrid.com. • According to an August 2009 article by earth2tech.com, Pacific Gas and Electric (PG&E) — another Silver Spring customer — applied for \$42.5 million government grant for home area networks in conjunction with the city of San Jose and Stanford University, yet it is unclear whether or not they received it. However, in May 2010, the DOE awarded PG&E a \$25 million stimulus grant to develop compressed air storage for electricity — writes the San Francisco Business Times. But the government bucks don't stop at Silver Spring Networks AUSA Inc. AUSA Inc. — a KPCB investment that develops and deploys utility-scale solar technologies, was acquired by AREVA Inc. in March 2010. Then in July 2010 AREVA accepted the U.S. Department of Energy's (DOE) offer of a conditional commitment to issue a \$2 billion loan guarantee to support construction of the Eagle Rock Enrichment Facility, AREVA's \$3 billion state-of-the-art gas centrifuge enrichment plant in Bonneville County, Idaho. Bloom Energy Bloom Energy — Kleiner Perkins is listed as a primary investor and John Doerr as a board member — in February 2010 launched its Bloom Box. The real name is the Bloom Energy Server and is marketed as a stand-alone electric generator that requires no connection to any centralized power generating plant and no coal-based or oil-based fuel to operate it (translation: cheap, clean energy flows almost magically from a refrigerator-sized box). The Bloom Box debuted in a big scoop segment on 60 Minutes on February 21, 2010, followed with a star-studded (Governor Arnold Schwarzenegger and Colin Powell) Bloom Energy Press Conference attended and filmed by TheAutoChannel.com. Marc J. Rauch Executive Vice President/Co-Publisher of The Auto Channel noted our contact [at the National Renewable Energy Labs (NREL) in Colorado] had known of the Bloom technology and revealed that the government had actually provided a \$5 million grant to the company during its development stage. There are also rumors (and news) of an enormous government contract to order the Bloom Box and Bloom Energy is due for a verdict on their DOE stimulus funds shortly, as reported by GreenTechMedia.com, February 19, 2010. Harvest Power Inc. Harvest Power Inc., backed by Kleiner Perkins, is basically a company that turns trash into fertilizer and fuel, and according to a June 2009 article by GreenEnergyNews.com and a City of San Jose Press Release, GreenWaste Recovery would partner with Harvest Power Inc. on a project (if approved by the city council) known as the Zanker Road Biogas facility. Mayor Chuck Reed said in a statement, This project not only demonstrates San Jose's leadership in the production of renewable energy but will help us meet the economic development, zero waste and energy goals of our city's Green Vision, Evidently, the Green Vision is raking in big bucks from the Obama Green Stimulus, as reflected in their 2009 Annual Report — In 2009 over \$50 million in federal and state grant money, including federal stimulus dollars were allocated or awarded towards projects that will advance Green Vision goals. Additionally, local companies received over \$80 million in federal tax credits that will spur expansions and hiring in sectors such as renewable energy, and as of May 2010, the City of San Jose — Capitol of Silicon Valley — is estimated to receive nearly \$108 million in Recovery Act funds. MiaSolé MiaSolé Thin-film Solar, part of the KPCB Greentech Portfolio, with more than 500 applications that were submitted for the tax credits, in January 2010 MiaSolé received two Advanced Energy Manufacturing tax credits totaling \$101.8 million from the Obama administration for the manufacture of low-cost thin-film cells and modules. RecycleBank RecycleBank — another Kleiner Perkins green investment — works with municipalities and haulers to measure and reward residents for recycling. As reported by RecycleBank, in April 2009 \$2.8 billion were allocated to cities with 14 uses that include recycle projects. It turns out that Philadelphia, Pennsylvania; Houston, Texas; and Hartford, Connecticut were the first cities to take advantage of stimulus funds and work with RecycleBank to improve their waste diversion rates. Also, in August 2009, Chicago became the first Illinois city

to partner with RecycleBank, then there are the cities in between, and recently in February 2010, Los Angeles became the largest city to partner with RecycleBank. While it is obvious that the folks at Kleiner Perkins have strategically positioned their investments to profit from green, including the massive influx of taxpayer money, placing them ahead of the competition — still others need government mandates and regulations to really make them fly. One company in particular is Hara Software, a company that sells software to help businesses measure and reduce their greenhouse gas emissions, where three KPCB partners sit on the Hara board. In a June 2009 article by Reuters — Gore-Backed Hara Sees Profit From Low-carbon Economy — Hara Chief Executive Amit Chatterjee, who in July 2009 was part of a group of innovative energy leaders that advised Obama, stated that [cap-and-trade] will force companies to act, as opposed to seeing the business benefit of acting. The debate alone of 'cap and trade is a driver for our product, Chatterjee added. Considering the magnitude of this Climate Scam — its scope; cost and paybacks; players and agendas — these findings may only scratch the surface. This Climate Scam goes beyond the billions of taxpayer dollars that Gore and Doerr, via Kleiner Perkins, have already unfairly snagged from the Obama Green Stimulus and huge DOE grants and loans. More disturbing is the fact that these players — and others that will be exposed in Green Corruption parts two and three — have direct ties to the Obama White House, strong influence over government policy, and are connected to the rest of those caught up in this scam, including the hard-core-left-wing radicals. Moreover, most of the players have helped create, shape, facilitate, lobby, testify, sell, and even if the planet blows up, will get their cap-and-trade, which despite reports that its dead in the Senate, will soon to be on the Obama agenda — the real pot of gold at the end of the climate rainbow. The Greentech VC Influence Over Washington

By Katie Fehrenbacher Aug. 18, 2010,

There have been a couple articles in the past few weeks pointing to President Obama as the clean tech investor in chief and the presidential VC with bets on clean energy. The real trend is that venture capitalists focusing on greentech seem to have had an unprecedented influence on U.S. federal policy and allocations of the stimulus package. When I attended the Department of Energys (DOE) first ARPA-E conference (Advanced Research Projects Agency-Energy) earlier this year in Washington D.C., I was struck by how many venture capitalists were there. I shared a cab back to the airport with some familiar Silicon Valley faces, and was told if your firm didnt have a dedicated person in Washington — in some circles they call them lobbyists — maneuvering grant and loan programs, you werent able to be competitive. Just look at the figures from the stimulus package (which I am fully in support of): somewhere between \$50 billion and \$80 billion into clean power and energy efficiency initiatives (depending on how you slice it). The Obama administration has gone out of its way to seek the advice of green leaning venture capitalists and entrepreneurs in the Valley on how to spend that colossal amount and what programs would be the most affective. Kleiner Perkins managing partner John Doerr is on President Obamas Economic Recovery Advisory Board, and was able to convince Vice President Al Gore to join Kleiner, in addition to former Secretary of State Colin Powell. Kleiners investments have had some successful government bids, most notably the \$529 million loan to Kleiner portfolio company Fisker Automotive out of the DOEs highly competitive Advanced Technology Vehicles Manufacturing, or ATVM, program. Fisker plans to use the loan to build its factory and launch its electric vehicle in 2011. If you remember, another winner of the \$25 billion ATVM program was Tesla Motors, which, as most of us know, was backed by venture capitalists from Draper Fisher Jurvetson, Technology Partners, and Vantage Point among others. I attended Khosla Ventures LP meeting

earlier this year where the firm announced that former UK Prime Minister Tony Blair would be joining the firm as Senior Advisor. Several of my journalism peers were comparing the political influence Blair could wield to what Kleiner was doing with Gore. The Obama administration appointed former venture capitalist Jonathan Silver as its loan chief to lead both the DOE's loan guarantee and ATVM loan programs. About a third of the DOE's loan guarantee commitments went to venture-backed startups, including thin film solar maker Solyndra and solar mthermal company BrightSource. I wondered earlier this year if the loan guarantee for Solyndra wasnt a mistake, given the company has one of the highest manufacturing costs out of its competitors. The company withdrew its IPO plans, citing poor market conditions. The Government Accountability Office also found that the loan guarantee process treated some companies unfairly in their bids and risked excluding some potential applicants unnecessarily. Theres nothing inherently wrong with venture-backed companies getting government support, and the energy sector needs even more federal funding to create innovation. I support Doerr and Bill Gates calls for boosting federal government investing to \$16 billion per year into energy innovation. All Im saying is that this level of influence should be watched.

_____ This is how VCs and DOE Staff work together as reported by one of Tesla Motors senior executives: In Role as Kingmaker, the Energy Department Stifles Innovation By Darryl Siry December 1, 2009 | 8:30 am Of all of the Department of Energy programs intended to advance the green agenda while stimulating the economy, the Advanced Technology Vehicle Manufacturing incentive to spur the development of cleaner, greener automobiles is perhaps the most ambitious. But it has a downside. The energy department has approved direct loans to Nissan, Ford, Tesla Motors and Fisker Automotive totaling about \$8 billion out of a budget of \$25 billion. The magnitude of this program dwarfs other DOE campaigns like the \$2.4 billion given to battery and electric vehicle component manufacturers and the \$4 billion disbursed for smart grid projects. To the recipients the support is a vital and welcome boost. But this massive government intervention in private capital markets may have the unintended consequence of stifling innovation by reducing the flow of private capital into ventures that are not anointed by the DOE. To understand this apparent contradiction, you have to look at the market from the perspective of venture capitalists looking to deploy investors capital and startups looking to attract it. Venture capitalists evaluate a company on the basis of whether they think it will succeed and generate returns for their portfolios. While this evaluation is a function of many things, one key question is how much more capital the company will need to get its product to market or a liquidity event so that the venture capitalist can see a return. The more capital it needs, the more dilutive it will be to the early investors. In cleantech, and in particular alternative fuel vehicles, the capital requirements for companies bringing a car to market in significant numbers can be extraordinarily high, reaching into the hundreds of millions of dollars if the company wants to build its own manufacturing facilities. To a venture capitalist, this capital requirement can be daunting. This is why government financing is so attractive. In the case of the advanced technology manufacturing loans, the DOE steps up for 80 percent of the total amount needed. Private sources fund the other 20 percent. This amounts to free leverage for the venture capitalists bet, with no downside. Hedge funds historically used massive leverage to generate outsized returns, but if the trade turns against them, that same leverage multiplies their downside and can lead to financial ruin. In the case of the DOE loans or grants, the upside is multiplied and the downside remains the same since the most the equity investor can lose is the original investment. The proposition is so irresistible that any reasonable person would prefer to back a company that has received a DOE loan or grant than a company that has not. It is this distortion of the market for private capital that will have a stifling effect on innovation, as private capital chases fewer deals and companies that do not have government backing have a harder time attracting private capital. This doesnt mean deals wont get done outside of the energy departments umbrella, but it means fewer deals will be done and at worse terms. According to Earth2Tech, venture capitalist John Doerr commented on this at the GreenBeat conference earlier this month, saying If wed been able to foresee the crash of the market we wouldnt probably have launched a green initiative. Because these ventures really need capital. The only way in which we were lucky I think is that the government stepped in, particularly the Department of Energy. Led by this great administration that put in place these loan guarantees. Several sources within startup companies seeking DOE loans or grants have admitted that private fundraising is complicated by investor expectations of government support. None would speak publicly due to the sensitivity of the issue and the ongoing application process. Aptera Motors has struggled this year to raise money to fund production of the Aptera 2e, its innovative aerodynamic electric 3-wheeler, recently laying off 25 percent of its staff to focus on pursuing a DOE loan. According to a source close to the company, all of the engineers are working on documentation for the DOE loan. Not on the vehicle itself. Another highly placed source at Aptera told

Wired.com many potential investors wanted to see approval of the DOE loan before committing to invest. Startup companies that enjoy DOE support, most notably Tesla Motors and Fisker Automotive, have an extraordinary advantage over potential competitors since they have secured access to capital on very cheap terms. The magnitude of this advantage puts the DOE in the role of kingmaker with the power to vault a small startup with no product on the market — as is the case with Fisker — into a potential global player on the back of government financial support. As a result, the vibrant and competitive market for ideas chasing venture capital that has been the engine of innovation for decades in the United States is being subordinated to the judgments and political inclinations of a government bureaucracy that has never before wielded such market power. A potential solution to this problem may seem counter-intuitive. The best way to avoid market distortion would be for the DOE to cast the net more broadly and provide loans and grants to a large number of companies — which ironically means being less selective. Subject to the existing equity matching requirement, this would allow the private markets to function more effectively in funding a broader range of companies and driving more innovation. Several innovative companies with great potential have been in the DOE pipeline for many months. Perhaps it is time for the DOE to stop playing favorites and start spreading the love. Wired.com contacted the Department of Energy for comment but did not receive a reply. Disclosure: Darryl Siry was the chief marketing officer of Tesla Motors from December 2006 until December 2008 and is a special advisor to Coda Automotive, which has not sought an Advanced Technology Vehicle Manufacturing loan. Photo: Ford Motor Co. Energy Secretary Steven Chu addresses Ford employees on June 23, 2009, after announcing the automaker will receive a \$5.9 billion loan. -- <http://www.growvc.com/blog/2010/09/venture-capital-conspiracy-theory-in-the-free-world/> Venture Capital Conspiracy Theory In The Free World by: neil Wow! Really? No Way! Wow!.this was my reaction to the 'revelation of a post by Michael Arrington's So a Blogger Walks Into A Bar This true account of what happens when Tech Crunch's Mike Arrington walks into a Silicon Valley bar has all the trappings of a gangster movie. For starters, the bar, a group of powerful early stage investors meeting, colluding, plotting against any competition, an agenda on how to control the industry and monopolize and this is NOT a movie! Here is an extract of Mike's account: Ive never seen a more guilty looking group of people. But that alone isnt that big of a deal. Lively conversations often die quickly when I arrive, and Ive learned not to take it personally. But I did sniff around a little afterwards, and have spoken to three people who were at that meeting. And thats where things got interesting. This group of investors, which together account for nearly 100% of early stage startup deals in Silicon Valley, have been meeting regularly to compare notes. Early on it was mostly to complain about a variety of things. But the conversation has evolved to the point where these super angels are actually colluding (and I dont use that word lightly) to solve a number of problems, say multiple sources who are part of the group and were at the dinner. Is there room for price fixing, total control and a greed based structure in the free market world? Is this really best for startups? For entrepreneurs? For Silicon Valley which is a renowned culture known for promoting innovation and talent in startups? This entire scenario is wrong on so many different levels but knowing this is what can happen within closed doors here are some changes critical to a culture which reflects the values of a entrepreneurial community and a better future for startups: 1. We need transparency. This is very evident from what weve just witnessed. 2. Do things in the open and on the record. Why cant investors, entrepreneurs and other stakeholders work in a transparent environment online where there is automatic accountability and governance through open interactions and a community that can see whats going on? 3. The system has to benefit all parties involved. Entrepreneurs, investors and others. It needs to be fair and favor innovation. Bring up the best. Mystique, lack of transparency, complex rules are not benefit of anything but greed 4. There is no room for protectionism in a free market. We dont need early stage capital markets to be exclusive to a select few who control everything. We need to make it more inclusive and involve as many as possible. The more support, the more investors, more and better companies will be born. ----- <http://techcrunch.com/2010/09/23/ron-conway-angel-email/> Ron Conway Drops A Nuclear Bomb On The Super Angels [Email] Mg Siegler Thursday, September 23rd, 2010 2 Comments As we just stated in our previous post, there was clearly an email sent by angel investor Ron Conway to a group of super angels who were likely involved in the Bin 38 AngelGate meeting that Mike stumbled into a couple days ago. Weve now received a copy of the email that Conway sent from an anonymous tipster. And weve confirmed it is authentic from one of the recipients. Its a bombshell. No, its a nuclear bomb. It speaks for itself. Read it below. Subject: Super Angels Gathering I want to share my views on the two gatherings you had in June and this week and what they represent in my opinion. So that I would not be influenced by any outside inputs I am writing this without sharing my thoughts with anyone including David Lee and the other SV Angel Partners. I want to clarify

once and for all my total disagreement with your values and motives for being investors. I have stated consistently for year that I invest because I love helping entrepreneurs and watching them learn and succeed. I am honored that entrepreneurs share their crystal ball views of the future of innovation and technology with us and respect the guts it takes to start a company. At SV Angel we try to reciprocate by adding value any way we can. I think that actions speak louder than words and SV Angel has always been a friend of entrepreneurs and we focus our business to help entrepreneurs achieve success. The world of startups would be a better place if you spent less time complaining about deal structures, terms, vcs, and valuations etc and the cars you drive, and just helped entrepreneurs build their companies. The Free Enterprise

system is very efficient ..why not let the marketplace demands decide on these issues, its worked for many many years. These startups are binary they succeed or fail so why waste time on deal structures, terms, vcs, and valuations etc and just help entrepreneurs build their companies. In my opinion your motives are driven by self serving factors around ego satisfaction and making a buck. My motives and values are very different. They are so different I want to be up front with you and recognize this and disengage from any involvement with you. I will not be a hypocrite. I am tired of seeing you and engaging in idle chit chat and not sharing my true feelings. I think you have a different value set and lets agree to disagree and not have to even engage in any idle chit chat or discussion of any sort.ever. Furhermore, I regret David Lee was involved in the gatherings. I am sure he does too. We talked about the first dinner and I encouraged him to write the email above and withdraw.I know he was uncomfortable with both gatherings.where no one was there to speak up for the interests of the entrepreneurs. By now you are rolling your eyes and saying Rons a _____(fill in the blank) .and who is he to pass judgement.. We are all entitled to our opinions. I am just being honest and transparent.the way most of the entrepreneurs I invest are I wish the Angel community could have the same integrity and values of the entrepreneur community, but unfortunately I now believe that is hopeless and your actions prove that. What do you think the entrepreneurs you have funded are thinking right now. This is despicable and embarrassing for the tech community in my opinion. Can you learn from this ? Please keep this confidential even though I know that will be hard since two of you let your egos take over and show Arrington how important you are by telling him you were headed to a secret angel gathering. Dave McClurepls try not to blog about this and cause silicon valley more embarrassment with your unprofessional classless writings Note: I did not include those who were at the gatherings who I dont know well enough to form an opinion around their motives or values. Tags: angelgate, Ron Conway ----- Mnaficy> David Hornik•2 years ago? David, Sorry to disagree, but from an entrepreneur's perspective collusion is alive and well among VCs. If you're ever interested, I can give you the names of VCs who colluded to try to bring down the valuation of my first company. Several witnesses to this event, including a very well known lawyer in the valley. -- Mariam Naficy, CEO & Founder, Minted.com - ----- From Wikipedia: Collusion> Bruno Morency•2 years ago? Collusion is an agreement between two or more persons, sometimes illegal and therefore secretive, to limit open competition by deceiving, misleading, or defrauding others of their legal rights, or to obtain an objective forbidden by law typically by defrauding or gaining an unfair advantage.[citation needed] It is an agreement among firms to divide the market, set prices, or limit production.[1] It can involve "wage fixing, kickbacks, or misrepresenting the independence of the relationship between the colluding parties".[2] In legal terms, all acts effected by collusion are considered void.[1?? ----- peter_voland@yahoo.com> Dave McClure•a month ago? I have a company that could not get any funding and we have been hurt exactly by such nepotistic and jerk style actions. The valley is now the NEW VERSAILLES of crony investment INCEST where you get the money most likley if you have buddies in such f***** circles. Otherwise, they will invest in ANY CRAP without merit as long as they have a BUDDY there. This is DETRIMENTAL to innovation and fair level plane for EVERYONE and all they do is CROSS deal and NOT invest in the best company according to the tech/ideas merits. collusion, nepotistic crony based intellectual incest. This SUCKS. I could give tangible examples where 2 SAME companies get once 8million(just cos crony buddies despite doing inferior job) and another gets nothing despite doing superb job. 0?? ----- On Self Importance: <http://techcrunch.com/2010/09/26/angelgate-chris-sacca-responds-to-ron-conway/> AngelGate: Chris Sacca Responds To Ron Conway Michael Arrington Sunday, September 26th, 2010 As I said the other day, there would be more private emails getting published. This one is from Chris Sacca, a prominent super angel who was not at the meeting I stumbled into but was at a previous meeting. He wrote a response to the Ron Conway email. Its worth pointing out that this email is time stamped a good half hour before our story broke, meaning he wrote it thinking it would all still stay private. This is also the first leaked email weve received that actually includes names in the header of some of the people who are involved in this mess.

Presumably these were the people Ron Conway emailed, but the header was stripped out of that email when we received it. Like the Ron Conway email, we have separately confirmed this email is authentic, although Sacca will not comment on it. I've removed one sentence from the email that was highly sensitive. Nothing that material to the overall message, but it was very personal and not appropriate to print publicly. The email: From: Christopher Sacca Date: Thu, Sep 23, 2010 at 7:05 PM Subject: Re: Super Angels Gathering To: Ron Conway Cc: Josh Kopelman, Steve Anderson, Jeff Clavier, Mike Maples, Dave McClure, David Lee Ron, I agree with you that we all owe it to each other to be candid. In that spirit, I will say that I will always be grateful for the opportunities you have given me in this business. You have shared deals with me, introduced me to colleagues, and invited me to events for years. Your philanthropy knows no bounds and has definitely inspired my work with charity:water and Livestrong. In fact, I have great respect for how you took my introducing you to will.i.am as an opportunity to become the single most important benefactor to his foundation. As I wrote last year before the Crunchies when I endorsed you for Angel of the Year: I mention Ron last only because this one gets a little emotional for me. It goes without saying, his prolific reach is legendary. He is the Zelig of the startup world in that there isn't a liquidity event in our industry in which he isn't involved and a closing dinner to which he isn't invited. Of course, he isn't just invited as an investor, but usually as the guy who made the introduction, helped negotiate the terms, and saved it from the brink of disaster along the way. It gets emotional for me because no one in this business has been more generous, more selfless, or more caring with me. We all learn from Ron, and none of us could be here without him. I will never understand how he covers so much ground and how he manages to be so responsive and perform so much service for others. When you are with Ron, you know he will go to any length to help you. When guys with his success might otherwise take time to rest, Ron then redoubles his efforts for his charitable causes, not just giving money, but raising funds and awareness and doing hard work on non-profit boards. I feel lucky to know Ron and to have the chance to work with him virtually every day as I am sure many of you do too. That said, I am having a hard time resolving the person I quite literally grew up with in this business, with the person who sent the email to which I am replying. Your anger and personal accusations hurt, and it is clear they are intended to. I wasn't in town for the second meeting, but I went to the first dinner. I wish you would've been there. Not only would your input have been valuable, but if you had attended, you would have seen firsthand these topics of discussion: 1) Standard docs to make financings cheaper for startups. The group talked about who would be willing to pitch in our own money and time to help draft a set of financing documents that would allow for priced rounds to cost the same as convertible notes. As you know, it usually costs 10-15 thousand dollars more to sell stock than issue a note. Entrepreneurs would directly benefit from that work by lower costs and less bullshit legal process to get a financing done. In fact, it is exactly what YCombinator did in building a model convertible note. I am sure you agree that would be a good thing for founders everywhere if we were able to publish docs like this to the public to be used as open source. 2) Pro-rata rights. At the first dinner, we heard, from guys who have been doing this for a long time, about the importance of securing pro-rata rights for future rounds. This would allow them to continue to invest alongside other investors at the new, higher, market price in future rounds. I have no doubt you would agree that entrepreneurs also benefit from having their early investors continue to stay involved and demonstrate their renewed commitment to the company. I know you would also love to be able to continue to invest in companies beyond their seed round, and you also know this is only ever helpful to your founders. 3) The futility of VCs blocking company sales. We also discussed how pointless it was for VCs to put clauses in deals that would prevent companies from selling and how the guys in the room had never invoked such a clause because doing so would create misalignment with their founders. We identified that as one way in which

many traditional VCs were just missing the boat as to how to work with founders as peers and collaborators and not put them on the opposite side of the table. Each of us felt better knowing we weren't alone in pushing back on this term that very directly harms founders. 4) Earliest stage founder cash-outs. Among efforts from others, we talked about my recent projects to get very early stage founders some liquidity. Traditional VCs have rarely been inclined to give founders any ability to cash out claiming it makes them less hungry. As someone who, just five years ago, had net worth of exactly zero dollars, I remember the difference between being panicked and hungry. As I have invested in more and more companies, I have learned that many founders would benefit dramatically from even the smallest amounts of cash (compared to the overall deal size). I have worked hard to get my founders as little as \$25,000 to pay off credit cards and student loans. Or, in a small deal that closed this week, I was able to get a founder the money so he can pay for his wedding and not have to worry about taking on debt. I, and the other investors in this group who do the same thing, feel good about helping our founders in this way. I

hope you can really pause to consider who is on this list you mailed, as well as the others in the room you didnt, and the way they do business. All of us have considered you a mentor along the way, and you have recognized that by collaboration with each of us. Inspired by your service, we have seen each of our firms evolve to continually try to always put founders first. Guys like Kopelman are so painfully pro-entrepreneur, and so service-oriented to the community of founders, one topic of discussion at our dinner was understanding all of the different founder perks on which he has spent his funds money. From the venture concierge and his hiring services, to his CRM software and CEO summits, I havent seen anyone add as much value to founders as First Round. I wish you could have been there to experience firsthand the discussion about how the rest of us could emulate more and more of that model. And, like typical Josh, he was certainly willing to teach us his best practices. I was so blown away, that I actually asked FR to lead a deal I sourced recently because I knew they could serve the company better than I could. I know that each of the guys on this list coaches entrepreneurs they arent even invested with and continue to take time to help the entire startup ecosystem. They work to get founders access to early betas that they know will help. They call in favors to get costs down. They spend political capital to bring in the best hires and they lose sleep brainstorming how to solve problems. Each of the guys here takes phone calls and sends emails at all hours of the day and night. Everyone here hustles. Frankly, I find it hard to keep up with them, just like I cant keep up with you. I told you last night that I think some of this issue is worth discussing, even on stage. But, this message, and the ferocity and ad hominem attacks that you include, hurt. Both what you wrote to me before (calling this group dirtbags) and in this message above. I am not sure why it needed to get personal. In sharp contrast to your stereotyping about what you say is obsession with talking about cars, I actually drive a piece of shit truck with 115k miles, despite having been frequently encouraged to visit Franz to buy a Mercedes. I fly coach and I stay on friends couches in NYC and LA, not out of Signature Aviation and at the Peninsula. That said, though I havent yet made a buck, I sincerely hope I will. As I post clearly on my website: We dont think of ourselves as money managers. That isnt to say we arent tireless and competitive. In fact, we are ruthless negotiators, aggressive businesspeople, and have no allergy to disproportionately large returns. However, frankly, capital just isnt that important to the early triumph of a company anymore. My founders will tell you, as will the founders of everyone listed here, that I/we sweat with these guys just like you do, bleed with them just like you do, and try as hard as we can to put their interests first. My founders stay at my house for team retreats. In fact, I just bought an entirely new place for them to be able to come to the woods, exercise, relax, focus, unwind, and bond with each other. That came out of my pocket. They get overweight? I buy them a mountain bike. They look skinny? I pick up groceries. Just talk to them and I am sure you will see that, though each of us investors adds value to our founders lives in different ways, everyone on this thread adds value, Ron. Everyone. To claim that SV Angel has a monopoly on adding value is disingenuous. When I started angel investing, my first deal was paid for with a credit card check. It was a dumb idea, but I was so drawn to the notion that I could be helpful to the team and I relished the chance to be building something again. You and I were in that deal together and we both made out pretty well. As you know, at Google, I didnt get rich by Silicon Valley standards. I left there worth less than a million dollars. I started doing angel investing in part because you and others like Coach Campbell encouraged me to and you knew I would be good at it. I wrote checks to companies when it was financially irresponsible for me to do so, then I went in there and busted my ass to make those things succeed. My days have been driven by a passion that makes it impossible for me to avoid the opportunity to help. Right now, 94% of my net worth is tied up in startups and I [REMOVED BY TECHCRUNCH]. I have every shred of my money alongside my founders, often buying their same common stock. No one but an obsessive idiot would ever allocate their money that way. But, I love what I do. And I know that goes for everyone on this list. Kopelman bids his kids farewell every few weeks to fly the redeye here and back to be with his companies. I have watched Maples, Clavier, and Steve all drop what they are doing to be supremely helpful to their founders and to their peers. Each of them shares opportunities and leverages their network to try to offer the best possible service to their companies teams. Sure, McClure is loud and swears like a drunken sailor, but he takes bullets for his guys, and his service to entrepreneurs through Geeks on a Plane and his Startup 2 Startup dinners series is unparalleled. His followings among founders make that clear. They love and respect him, no matter how you may judge his writing style. They know they have an ally in Dave. I have seen guys on this list, and in the larger group of all dinner attendees, repeatedly back off terms or convince other investors to take haircuts alongside them so deals can get done. Ask any single one of the companies who has met with me and theyll tell you that I always negotiate against myself. To a fault. I have given back shares to make room for hiring and I have talked other angels into waiving any fiduciary arguments so our teams could stretch a small deal farther. Everyone here has done that

knowing we will get to work with those entrepreneurs again in better times. This group of guys could all take a much easier path if they were just out to make a buck. Everyone here could raise megafunds, bilk them for fees, jam too much money into deals and repeat that process all over again just mooching off the system. Instead, the folks you listed are all your fellow pioneers in a new way of doing business, a way that admits the structural change the industry has undergone. This is a different era, and each of these guys knows that means greater accountability than ever before. I described on my Lowercase site characteristics that I think apply to everyone on this thread, and especially you, Ron: We dive in to work with teams that obsess over user experiences, customer happiness, and that, to quote Paul Graham, make something people want. Along with relatively small amounts of money, we give them the time, attention, and the empathy that catalyze winning outcomes for all involved. Rolling up our sleeves, we help design front pages, invent new services, prioritize product features, negotiate partnerships, and deal with the everyday professional and personal challenges of startup life. We are grateful for the companies who have chosen us, and feel lucky for the chance to collaborate with such brilliant minds. The dealflow that comes to us is flattering, and we are beyond thankful for the other individuals and firms with whom we partner and learn from along the way. It makes me sad to hear you dont think that is actually the case, because I actually dont doubt for a second that the guys on this list all exceed the standard above. You know they do. You have worked alongside them for years. You have broken bread with them. You know who these people are and you know what their values are. You have referred deals to all of them because you know the positive impact they have on this industry. Now you are willing to throw that away over second-hand accounts of what transpired at a dinner you didnt attend. I think you owe this group more than that. I also think you owe the press and the founders who are reading the accounts you have prompted more than that. Ron, we live in the age of Twitter. If we ever fucked an entrepreneur, or if an entrepreneur even hinted we had fucked them, it would be broadcast immediately and the resulting blog posts would be permanently attached to a search on our names. Founders have never been better educated or more empowered than they are today. We arent giving them money; they are giving us the right to invest in their companies. Our founders hire us and they do so after consulting a rich network of datapoints confirming whether

we are or are not helpful. Slackers dont get deal flow. Jerks dont get deal flow. Poseurs get left aside. Abuse the system once and you are tattooed with shame. Entrepreneurs outnumber us and they talk more than we do. The good opportunities are more than any of us can handle. There are legions of investors at the gates hucking checks at todays founders. The only possible way any of us can stay in business is by serving. If we are not demonstrably and materially helpful to entrepreneurs, we are dead. Pausing now to look back and re-read what you wrote, it just makes me sad and your rush to judgment of people you called your friends is disappointing. All of this goodwill burned with guys you have loved. All of this time spent on an issue when we should be helping our companies. (I am writing to you when I should be calling a founder to help him weigh the demands of his VCs and a potential acquirer.) All of this anger directed at people with whom you didnt even have a discussion to understand what was or wasnt going on. I wish you had been at those dinners. First, I am sure you would have had helpful input. But, more importantly, you would have instead seen your peers working, as they have always done, to cut through the bullshit in this industry and continue to restore the purity and honor a decade of misaligned interests has left here. I hope you will find some time over the next couple of days to chew on all this, some time to reflect on who we all are and what we all do. I hope you will spend a little time with our founders and ask them how they feel about working with all of us. I hope you will work to clear the air about what did or didnt happen. You have such an important voice. But, with that voice comes the responsibility to investigate, know, and share the whole truth. All told, I know that the gratitude that this group has for your work in this business cant be undone with one vitriolic email. So, I am optimistic that after you have a chance to chat with each of us, you will remember the passion and selflessness that underpin the work all of us do. While I deeply believe none of us could have gotten here without you, I also ask that you respect that we have all worked our asses off to be here. We all care, we all help, and we all serve. We all learned much of that from you. I hope in time that will be clear once again and we can all get back to helping our founders and each other. Thank you, --

Why should I care? Because I think its indicative of a VC-induced cancer thats infecting our industry and killing off the next generation. I dont know the full backstory, but Id bet this sale was encouraged by a Mint investor. Heres a fresh new company that was gunning for an aging incumbent. And not only gunning, but gaining. They had a great product, great design, and great potential. They were growing rapidly and figured out the revenue game. They were on their way to

redefining an industry — one that was left for dead by the current custodians. They were everything their main competitor, Intuit, was not. While Mint was inventing, Intuit was out of it. People used Quickbooks/Quicken out of habit and legacy. People used Mint because they loved it. Intuit was disgruntled, Mint was disruptive. But heres what happened: Intuit, last decades leader in personal finance, just became the next decades leader in personal finance. Mint had their number, but they sold it for \$170 million. A big payday for sure, and if that was their two-year goal then they nailed it, but I cant believe that was the point behind Mint. It had too much potential. Mint was a key leader of the next generation of game changers. And now its property of Intuit — the poster-child for the last generation. What a loss. Is that the best the next generation can do? Become part of the old generation? How about kicking the shit out of the old guys? What ever happened to that? As more great new companies are absorbed into big old companies, a whole new generation of change is lost. They can issue press releases saying how excited they are to be able to bring their product to a whole new world of customers, and how their new suitor will bring enormous resources to bear, but we know thats usually not really what happens. Development slows, products stall, the staff that built the great stuff leaves, and mediocrity creeps in. Not always, but usually. Thomas Jefferson said Periodic revolution, ‘at least once every 20 years, was ‘a medicine necessary for the sound health of government. That may be even truer for business. We need new blood, new companies, new methods, new ideas, new applications, and new leaders to regenerate stale industries. The old must be plowed under by the new. But today it seems like the old is doing the plowing. Lets stop that. Lets build great companies that are here to fight, here to win, and here to stay until the next generation after us comes along and kicks all our asses. And again and again and again. Thats how better happens. Jason Fried wrote this on Sep 18 2009 There are 186 comments. --- Jason Fried wrote this on Sep 18 2009/ 186 comments Mints sale to Intuit really pissed me off. ----- class="large" Journey to the (Revolutionary, Evil-Hating, Cash-Crazy, and Possibly Self-Destructive) Center of Google</h1> <h2 class="sub-header You've heard the story. Larry and Sergey drop out of school, start a company in a garage, then become billionaires. But will Larry and Sergey ever grow up? It's August 19, Going Public Day for Google, and Larry Page and his comrades are eyeing the lavish breakfast laid out before them at the NASDAQ building: poached eggs perched on tiny pedestals, piles of canapés, pots of crème fraîche. In a few minutes, Larry will preside over the ceremonial opening of the market, then he'll troop up the street to Morgan Stanley to watch Google's stock start

trading. At 31, Larry is about to cross the threshold into bona fide billionairehood. So you'd think he'd be as high as Courtney Love right now—but he doesn't really look it. Buttoned up in a suit from Macy's, strangled by a stiff white collar, he isn't eating, isn't schmoozing, and is only rarely smiling. Maybe it's the absence of Sergey Brin,

his fellow Google founder, who has chosen this morning, unaccountably, to stay back in Silicon Valley. Or maybe he's just exhausted. But even when his elders approach and kiss his ass, Larry's at a loss for words. "Congratulations, congratulations," says NASDAQ president Robert Greifeld. "This offering is great for all of us. Great for Google, great for the NASDAQ. It's going to be a great success!" Larry mumbles, "It will be interesting to see what happens." A few feet away, Google's CEO, Eric Schmidt, is chatting with John Doerr, one of the company's venture-capital investors and a member of its board. At 49 and 53, respectively, they are senior members of the Silicon Valley patriarchy. Schmidt is the former CEO of the software firm Novell and, before that, was a longtime executive at Sun Microsystems. Doerr, the marquee partner in the VC firm Kleiner Perkins Caufield & Byers, is the financier who bankrolled Netscape, Amazon.com, Compaq, and Sun. Between them, Schmidt and Doerr have spent more than fifty years in the Valley. But as both will attest, they have never encountered a pair of founders quite like Larry and Sergey—or an IPO quite like this one. What started out at the founders' instigation as a grand experiment in popular capitalism has turned into what this morning's Wall Street Journal described as "a rather messy affair." There have been inquiries by the Securities and Exchange Commission, acid criticism in the media, and investor skittishness about the price of the stock and about the auction by which it's being sold. (And let us not forget the *pièce d'incompétence*: a Playboy interview with Larry and Sergey that came out during the SEC-mandated "quiet period" and made the Google PR team look like a bunch of, well, boobs.) So while Schmidt and Doerr must surely be taking comfort in the fact that they're about to make a bundle, they must also be praying silently that nothing else goes wrong. Suddenly, there's a flurry of activity, a scurrying of factotums. Two pretty young women in short black skirts cry out for sparkling water and napkins. Schmidt and Doerr glance around the room, finally clocking the cause of the commotion: Larry has planted his billion-dollar butt in a plateful of *crème fraîche*. As the young ladies gamely dab his bottom, trying to rid him of his stain, Larry stands stiffly, his face the color of claret. Schmidt turns to me and rolls his eyes. "These things happen," he says. "We've seen worse." The rise of Google is a tale often told as a Silicon Valley classic. Two precocious Stanford grad-student nerds swept up in the fever of the Internet boom invent technology that profoundly changes the experience of the Web; they drop out and start a company (in a garage) that achieves iconic status; they stage a historic public offering, achieving vast wealth and fame. This version of events is accurate in all its particulars. If anything, it understates the case. Arguably the most important technology company to emerge in two decades, Google is as ubiquitous as the Internet itself. By the end of 2004, the controversies that plagued its IPO were long forgotten. Its stock was trading at around \$190—more than double the offering price—and Larry and Sergey were worth approximately \$7 billion each. They'd even made it onto Barbara Walters's list of the year's "Most Fascinating People." But beneath these familiar surface details, the Google story is more nuanced and compelling. It's a story about the clash between youth and experience, more a messy ensemble drama than a simple buddy flick—one whose main characters have persistently deviated from any script, resulting in unexpected twists and turns that haven't come to light until now. Through boom and bust, the prevailing plotline in Silicon Valley has revolved around fathers and sons. And despite the caricature of the Valley as a realm where the latter are constantly cudgeling the former, the relationship has often been more traditional than outsiders assume. Like every other precinct of the business world, the Valley has long been in thrall to the Serious American Executive, the seasoned CEO, valued for his maturity and credibility with Wall Street. At the height of the dot-com bubble especially, the importing of bosses with top-heavy CVs became the fashion in the Valley, even as the image of the place was centered on its pizza-munching, Rollerblading tyros. At Netscape, Yahoo, eBay, and many other start-ups, twentysomething founders were soon reporting to executives old enough to be their parents. Netscape phenom Marc Andreessen had CEO Jim Barksdale. Yahoo's Jerry Yang and David Filo first had CEO Tim Koogle and later Terry Semel. Frequently, these executives had no experience in technology. They were typically, however patronizingly, referred to as the "adult supervision," and their job was to engender a semblance of corporate sanity and discipline—in other words, to keep the kids in line. Their presence also highlighted where the real power in the Valley rested: with the venture capitalists who had installed them in the first place. Larry Page and Sergey Brin are, in Silicon Valley terms, of a different generation than Andreessen, Yang, and Filo. Which is to say, they started their company four years later. By then the pair had determined they had no use for many of the Valley's customs. At every stage in their quest to build what Larry describes as "not a conventional company," they have ignored the adamant advice of Google's designated grown-ups. They've accepted a middle-aged CEO but denied him full authority. They've displayed indifference, even contempt, for Wall Street, their stockholders, and the press. And while the Google IPO provided some of the most vivid scenes so far in the company's patricidal drama, those tense enactments weren't the first, and they

won't be the last. Michael Moritz, the other venture capitalist behind Google, once told me, "Most people think that IPOs are the climax of a company's story, but in fact they're just the first chapter." He went on to say that a company's genetic code gets set in its first eighteen months. "After that," he said, "companies are impossible to change; their cultures are hardwired in. If the DNA is right, you're golden. If not, you're screwed." In January 1996, Larry, a reticent midwesterner who had gained renown in college by building an ink-jet printer out of LEGOs, and Sergey, a Muscovite by birth and an amateur trapeze artist, started working together on technology to search the Internet. At the time, most search engines based their results on the number of times a search-for term appeared on a given Web site. Larry and Sergey, both in the midst of pursuing their Ph.D.'s in computer science, surmised that it would be better to base searches on relevance; they believed popularity mattered—that the more often a site was linked to, the more relevant it was likely to be. Using complex algorithms, they devised a system they called Page-Rank, after Larry, and they put it at the heart of their search engine, first dubbed BackRub and soon thereafter, Google. Within two years, Google was the rage among the online cognoscenti, and Larry and Sergey were toying with the idea of starting a company. In August 1998, on a porch in Palo Alto, they delivered a demo to Sun cofounder Andy Bechtolsheim, a legend in the Valley for his engineering prowess and his nose for talent. He took one look at the demo and ambled off toward his car, then came back with a \$100,000 check made out to Google, Inc. In Bechtolsheim, Larry and Sergey had found their first big brother. In short order, they found several others, from whom they collected \$1 million in seed money. But Larry and Sergey knew that a million bucks wouldn't last long in the boom-era Valley, so they made their way up to Sand Hill Road, where the Valley's venture capitalists cluster in a kind of multimillionaires' ghetto. For the most part, Sand Hill Road proved inhospitable to Google. The VCs didn't think search was a promising business; the field was already crowded, the leaders (Yahoo and Excite) firmly entrenched. The VCs also recoiled from the price tag on the deal, which valued Google at a brisk \$75 million. And they didn't seem to care much for Larry and Sergey, either. "They really had an attitude," one of them recalls. "It was: We're smarter than you, our stuff is great, everyone else's sucks." But two VCs felt differently: John Doerr, of Kleiner Perkins, and Mike Moritz, of Sequoia Capital. Doerr was arguably the most important venture capitalist in the Valley, and Moritz was the VC who'd backed Yahoo. With Moritz behind them, Larry and Sergey reasoned, Google would have a line into a company they badly wanted to do business with. Similarly, they saw Doerr and his firm as an avenue into AOL, which Kleiner had financed. For their parts, Doerr and Moritz were as smitten with Google's product as Bechtolsheim had been. The absence of a business plan didn't faze them; nor did the price. Indeed, Doerr was known to advise novice VCs, "If you like the founders and you like the technology, price doesn't matter." By May 1999, Doerr had decided he wanted to invest in Google, and so had Moritz. Given the connections each could provide, Larry and Sergey were keen, even adamant, about snagging both as backers. There was just one hitch: Neither father was inclined to share custody of his new favorite sons. Before the internet bubble, it was common for venture firms to team up on

deals in order to spread risks and defray costs. By 1999, however, the size of many VC funds had swollen to \$1 billion or more, and the venture capitalists had more money than they knew what to do with. Not only was collaboration no longer necessary; it wasn't desirable. Nowhere was the every-VC-for-himself ethos more ingrained than at Sequoia and Kleiner Perkins. Two of the oldest venture firms in Silicon Valley, they were also the most powerful and influential. But in outlook and demeanor, they were diametric opposites. Kleiner was flashy, promotional, profligate; Sequoia was low-key, gritty, frugal. In the words of one Kleiner partner, William Randolph Hearst III, "KP is Athens; Sequoia is Sparta." Doerr and Moritz were as different as their firms. Doerr: midwestern, Catholic, schooled as an engineer at Rice University. Moritz: Welsh, Jewish, schooled in history at Oxford. Doerr's introduction to Silicon Valley was selling microchips at Intel. Moritz's intro was covering the Valley for Time. Where Doerr was an enthusiast prone to hyperbole ("the largest legal creation of wealth in the history of the planet" was how he famously described the Valley during the boom), Moritz was a skeptic and a cynic (his view of the Valley in 1998: "There's going to be a lot of flesh on a lot of windshields"). And although no overt animosity existed between them, they were rivals who only rarely worked together. Taking on the task of getting the VCs to commingle were a pair of Google advisers, Ram Shriram and Ron Conway. Shriram, a former Netscape executive and one of Google's seed-money suppliers, had known Doerr for years; and Conway, a Silicon Valley angel investor (one who puts small sums into start-ups before they're ripe for VC funding), was friendly with Moritz. Day after day, Shriram and Conway wheedled and romanced the venture capitalists, all to no avail. "You had to convince both sides that Larry and Sergey were really serious about wanting two VCs," an early Google insider says. "John and Mike both wanted to do the deal alone. It turned into a fight. They didn't

realize how headstrong the founders were." Larry and Sergey couldn't believe what was happening. Neither could Doerr or Moritz. During the dot-com melee, the VCs were constantly confronted with money-hungry children wanting to be taken care of. But here the kids were saying, "You guys have to learn to share." About a month into the standoff, Larry and Sergey called Conway and said, "Get a list together of your angel friends—we might just do the whole deal with angel money. KP and Sequoia don't get it. We're gonna give them another couple of days, and then it's over." Conway and Shriram delivered the message. The next Saturday morning, Conway was sitting in a Starbucks parking lot when he got a call from Shriram. "The fight is over," Shriram said. "They're both going to invest, and it's going to be fifty-fifty." On June 7, 1999, Google announced the financing: a \$25 million infusion, led by Kleiner Perkins and Sequoia. The VCs each now owned roughly 10 percent of Google, and Google now had all the money it would need to pursue its ambitions. But Larry and Sergey had acquired something more valuable than money, and potentially more problematic: a sense that, unlike so many young founders before them, they could defy the grown-ups' wishes and not be punished for it. Despite their differences, Moritz and Doerr agreed emphatically about one thing: Google needed to hire an A-list CEO, and quickly. Before investing, they had elicited a verbal commitment from Larry and Sergey that they would do just that. But while Larry and Sergey had assured the VCs that they agreed, they did nothing about it. To be fair, they were busy moving Google and its sixty-odd employees into a new headquarters in Mountain View, which they dubbed the Googleplex; they were coping with skyrocketing popularity, to the tune of 4 million queries a day; and they were striking their first major licensing deal, to provide Web search for AOL/Netscape. Still, as months rolled by and 2000 approached with no CEO on the horizon, it was clear that the boys were balking about bringing in someone above them. Eventually, they began to make the case ardently against adult supervision, citing Bill Gates, Jeff Bezos, and Michael Dell as precedents. "They saw the founders who had retained control as CEOs as the best, most creative, and most successful," says Dave Whorton, a venture capitalist who was then Doerr's protégé. "What they didn't see were all the others who had failed. That wasn't in their data set." Moritz monitored the situation with mounting frustration. Suspicious by nature, he'd doubted all along that Larry and Sergey would honor their commitment. Confronting them, he threatened to pull Sequoia's money if they refused to yield. "It was not a pleasant conversation," Moritz recalls. "In the heat of things, I rattled my saber loudly." Doerr told me at the time that he, too, was contemplating such a threat. But instead he chose a different tack. What Doerr was hearing from Larry and Sergey was a combination of the engineer's demand for logic and the adolescent's impulse to challenge parental authority. "Because we say so" or "because that's how it's done" would never convince the boys of anything, and that was what the VC's arguments sounded like to them. So Doerr proposed that the boys take a little tour around Silicon Valley. He would arrange for them to meet and discuss the matter with some of the industry executives they had long admired. The names on Larry and Sergey's itinerary comprised a high-tech murderer's row: Intel chairman Andy Grove; Amazon.com's Bezos; Sun chairman and CEO Scott McNealy; Intuit founder and former chairman Scott Cook—the list went on and on. Doerr discreetly kept tabs on the meetings as they stretched out over several weeks. At one point, he asked Bezos what he thought of the boys' obstinacy. "Hey, some people just want to paddle across the Atlantic Ocean in a rubber raft," Doerr recalls Bezos replying. "That's fine for them. The question is whether you want to put up with it." The prospect of putting up with it became more palatable when Doerr heard back from Larry and Sergey. Having gotten Socratic with their heroes, they were finally prepared to acquiesce in the hiring of a CEO. Their definition of acquiescence, however, was neither unconditional nor expeditious. "If Larry and Sergey were given clear instructions by a divine presence, they would still have questions," Moritz says. For more than a year, in fact, Doerr and Moritz would continue to tear at their hair. But Larry and Sergey refused to be rushed; they took their own sweet time. "Most young people starting companies are afraid," says Joe Kraus, who at 21 was a founder of Excite. "They're afraid of failing. Afraid of getting it wrong. Afraid of missing their chance. Afraid, especially, of saying no to John Doerr. But these guys weren't afraid." When Google announced in early 2001 that Eric Schmidt was becoming its chairman—a move followed a few months later by his installation as CEO—Silicon Valley was puzzled. For the past four years, Schmidt had served as CEO of Novell, and for nearly fifteen before that he was a senior executive at Sun. So his decision, in the midst of the NASDAQ meltdown, to join a dot-com start-up—a search-engine start-up, no less—simply did not compute. Actually, it did. Schmidt's tenure at Novell had been decidedly less than joyful. Novell was a company in steep decline when he arrived, and his labors had only modestly reversed it. Worse, hardly anyone gave a damn if Novell lived or died; its software was boring even to software freaks. For Schmidt, working at Google was an ideal solution to a high-tech midlife crisis. It put him back at the center of the action while letting him kick it with the boys. Describing his attraction to Larry and Sergey, Schmidt says, "We're

not just three random guys. We're all computer scientists with the same interests and backgrounds. The first time we met, we argued for an hour and a half over pretty much everything—and it was a really good argument." Schmidt met all of Larry and Sergey's stringent criteria. He had a credible name, a Ph.D. (from Berkeley), and he promised not to push the boys aside or dismantle the quirky culture they'd engendered. "The board members told me, basically, 'Don't screw this thing up!'" Schmidt says. "They said, 'It needs some infrastructure, some growing, but the gem here is very real.'" At a glance, the culture Schmidt pledged not to replace seemed a relic of the just-bygone era: The Googleplex looked like a dot-com wax museum. There were lava lamps, beanbag chairs, an on-site masseuse. But beneath the comically clichéd trappings, Google was becoming something interesting—and powerful. Having cut deals with an array of companies, most critically Yahoo, Google was processing more than 100 million searches a day and indexing an unprecedented 1 billion Web pages. Fueling this growth was a relentlessness about innovation. Larry and Sergey were openly, brutally elitist when it came to hiring engineers. (Job applicants, no matter their age, had to submit their college transcripts.) In software and hardware, Google's innovation was remarkable. Using off-the-shelf components, the company was building what was, in effect, the planet's largest computing system. And its official mission—"to organize the world's information and make it universally accessible and useful"—extended far beyond searching the Internet. "I did not understand when I came to the company how broad Larry and Sergey's vision was," Schmidt says. "It took me six months of talking to them to really understand it. I remember sitting with Larry, saying, 'Tell me again what our strategy is,' and writing it down." At the

same time, the boys had fostered an environment that was flamboyantly idealistic. Search was all, profit peripheral, "Don't be evil" the corporate motto. (Asked later what the slogan meant, Schmidt would say, "Evil is what Sergey says is evil.") In short, Larry and Sergey had already encoded the DNA of the company Schmidt was supposed to run. The character they instilled in Google could be summed up in three phrases: Technology matters. We make our own rules. We'll grow up when we're damn good and ready. The boys' reality took some getting used to for Schmidt. It wasn't just the dot-com fripperies that fazed him or the dogs trotting up and down the halls. It was the squatter in his office. (The interloper was an engineer frustrated with the bustle in his own shared quarters. After first attempting to evict him, Schmidt gave up and endured the situation for several months.) He also found himself frequently occupied with grounding Larry and Sergey's flights of fancy. There was the time the boys suggested having Google enter the business of low-cost space launchings. And the time Larry reportedly tried to ban telephones from a new Google office building. Even so, Schmidt now looks back fondly on the genesis of the relationship. "Our roles evolved quickly," he says. "Sergey is the master dealmaker, Larry is the deep technologist, and I make the trains run on time." Seizing on a different analogy, he adds, "We developed the equivalent of what's known in basketball as a run-and-shoot offense: Larry and Sergey's only goal is to run to the other end of the court as fast as possible, so they're always ahead of everyone else, strategically, technologically, culturally. I'm the not-running-ahead person. I stay back and get the rebounds." Others, however, viewed the apparent anarchy at Google more skeptically. Stewart Alsop, a venture capitalist and former journalist, recalls interviewing Schmidt onstage at an industry conference. "I asked him, 'How the hell do you make decisions? From the outside, it seems crazy.' Eric spent forty-five minutes trying to answer, but he couldn't describe it. And the thing was, he was proud of that. He said it was a new way of doing business. There was no hierarchy; they acted as a triumvirate of equals. They were breaking all the rules. I thought it was a disaster in the making." Doerr's views were less apocalyptic, but he harbored some concerns. "The company wasn't falling apart," says one of his Kleiner partners, "but it could have been headed in the wrong direction. The situation was unstable." Seeking to stabilize it, Doerr picked up the phone and sought an intercession from Bill Campbell. Campbell, former CEO and current chairman of Intuit, as well as an Apple board member and Steve Jobs confidant, was one of the most respected executives in Silicon Valley. His nickname was the Coach—a reference both to his past as a college-football field general and his present sideline as an informal management adviser. Now, in late 2001, Campbell started logging hours at Google, visiting the company several times a week, playing mentor to Larry, Sergey, and Schmidt—a relationship that has only grown over time, though it has never been publicly disclosed before in any detail. "Don't overdramatize my role," Campbell urges me. "I'm just another set of eyes, another person in the room." Hardly. "I think John Doerr would say Bill Campbell saved Google," says Kleiner partner Will Hearst. "He coached Eric on what it means to be a CEO—not the CEO of Novell but of a company like Google. He taught Eric it's a lot like being a janitor: There's a lot of shit you have to do. And he spent a lot of time with Larry and Sergey, explaining the difference between being a cool company or a smart company and being a successful company. It didn't happen overnight, but Bill Campbell won." "God bless that

man" is what Doerr says. "I don't know where the company would be without him." Moritz concurs: "He is the quiet, behind-the-scenes, unsung hero in this whole epic." Even Schmidt, who might have felt undermined by Campbell's presence, has nothing but praise for him. "At first we tried to integrate him just a little bit, but we eventually decided our only goal was to get as much of Bill's time as possible. Our basic strategy is to invite him to everything. He's priceless beyond belief." Google's embrace of Campbell marked a turning point for Larry and Sergey. It was a symbol of their dawning awareness that they had some things to learn—and that with age occasionally comes wisdom. Campbell's arrival also signaled Google's transition from a glorified research lab into a proper company, one that cared about management and, yes, even making money. Since its founding, Google's financial condition had been, as Moritz describes it, "lots of cash outgoing, very little incoming, and we were trying to pin the tail on the donkey as to what the business was." In 2000, Google started experimenting with advertising. Because Larry and Sergey had long been vehemently opposed to banner and pop-up ads, the company's approach was minimalist: unobtrusive, text-based messages on the right side of the page. Late the next year, the company unveiled a program called AdWords, which let advertisers bid for keywords, with higher bidders getting better placement and being charged a fee only when users clicked on the ads. (In much of this, Google was following a path blazed by rival Overture Services, which later sued for patent infringement. The case was ultimately settled out of court.) In 2003, Google launched AdSense, a program extending its ad system to non-search sites, in effect making Google a media broker for Web operators ranging from *The New York Times* and AOL to countless humble bloggers. Advertising turned Google into a commercial juggernaut. In 2001 the company had \$87 million in revenues and was barely in the black; two years later, its sales had soared to \$1.5 billion and its operating profit to more than \$340 million. The company had introduced Google Image Search, Google News, and Froogle, and its name made the syntactical leap from noun to verb. The only question now was when, not whether, the company would cross the Rubicon. All eyes in the Valley and on Wall Street turned to the Google IPO. Larry and Sergey were never wild about going public. The main rationale for doing it was to raise money, and Google already had plenty. The boys knew that past IPOs had unleashed tidal forces of greed and envy that wreaked havoc on promising start-ups. They also knew that being a public company meant acquiring a new and demanding set of masters: Wall Street analysts, shareholders, securities regulators, the press. Your ability to keep commercial secrets diminished dramatically. If this was what it meant to be an adult company, who wouldn't prefer perpetual adolescence? But the end of Google's adolescence wasn't optional. The boys had obligations to their investors and underlings. Doerr and Moritz, both sitting on funds that had been hammered by the collapse of the bubble, were keen to cash in their Google chips, while employees who'd been slaving for years were eager for a payday that would put rental housing behind them. On top of that, there was an SEC rule that would require Google (due to the number of shares it had given out) to start publishing its financials in April 2004. Public or private, the veil of fiscal secrecy was about to be lifted. In the fall of 2003, the Google high command began discussing the IPO in earnest. Almost immediately it was apparent that Larry and Sergey had no intention of staging a traditional offering where Wall Street underwriters ran the show—setting the price of the shares and doling them out to favored investors, who could then expect a windfall from a first-day run-up in the stock. Instead, the boys wanted to conduct the IPO through a Dutch auction, a novel process allowing anyone who wanted to own a piece of the company to bid for its newly minted stock in the days before it started trading. They also wanted to issue two classes of shares, giving Larry, Sergey, and Google's executives and directors ten-to-one voting power over ordinary investors. And they wanted to make it clear that Google wouldn't accede to Wall Street's congenital short-termitis. Its executives would focus on the long term, not be slaves to quarterly profits. Each of these positions had its virtues. Dutch auctions promised to let small investors in on the IPO action; to reduce the power of underwriters to game the system, as they had done so flagrantly during the bubble; and to maximize the financial return from the offering to Google—as opposed to Wall Street. Dual-class voting structures, too, had advantages, which is why they were used by media giants like *The New York Times* and by the sainted Warren Buffett's Berkshire Hathaway. With two share classes in place, the chances of a hostile takeover of Google would be virtually nil. As for short-termitis, who could deny that pressure to "make the quarter" had led to much corporate mischief? "None of this was ill-considered," says maverick San Francisco banker William Hambrecht, a vocal proponent of Dutch auctions and an underwriter of the Google IPO. "They had talked to Buffett, talked to Steve Jobs, talked to lots of people. They were trying to do the right thing for the company—to avoid the mistakes of the past." But taken together, Larry and Sergey's plans sent a different message: They intended for Google to be a public company that operated as if it were private. "They said, 'If we have to go public, we'll go public,'" says a pre-IPO Google investor. "But we're going public on our terms—

we're going to have our cake and eat it, too.' " The Wall Street bankers who would wind up leading the deal, at Morgan Stanley and Credit Suisse First Boston, privately issued dire warnings about proceeding with an auction. They argued that unsophisticated individual investors might bid up the stock on opening day to a stratospheric level—to a market value as high as \$100 billion, they said—only to have it come quickly crashing down, a costly embarrassment. Moritz, who had done an auction IPO previously with Hambrecht, thought these warnings were overblown. But Doerr and others were swayed. The fear that the IPO might "run away from us," as Doerr put it, led to various maneuvers designed to dampen demand from individual investors: an offering in August, when the market was usually slow; a complex registration process for bidders; a high price on the stock. The result was a kind of bastard deal, a compromise between Larry and Sergey's mold-breaking aspirations and the conservative instincts of the grown-ups, forged in an atmosphere suffused with Sturm und Drang. "We said, 'If you want to do an auction, do a fucking auction,' " says a partner in one of the VC firms. " 'But why don't you also try listening to us? We're not new to this, you know. Warren Buffett is your guru? Is this the same Warren Buffett who doesn't want anything to do with tech stocks? Are we talking about the same Warren Buffett?' " Apparently, yes. Early in the last week of April, just days before Google was set to file its IPO paperwork, Larry told the board he'd decided to write an open letter, à la Buffett, to be included in the document. Nervously, the board consented, but time was running short. The night before the deadline, Doerr drove to the Googleplex. It was after midnight, and Larry was laboring like a college student on speed crashing a term paper. Doerr read Larry's manifesto: " 'An Owner's Manual' for Google's Shareholders." And then, as gently as possible, Doerr said, "We need an editor." Even after being edited, the letter, like the IPO itself, debuted to mixed reviews. From Wall Street, with its antipathy toward auctions, came a torrent of unattributed sniping. Corporate-governance mavens pilloried the dual-share structure, which seemed starkly at odds with the populist tone of Larry's letter. Then came the news that, of the 24.6 million shares being offered, 10.5 million were being sold by Google insiders, including Larry and Sergey. For the first time in the boys' careers, they were tarred by the brush of greed. By early August, when Larry, Sergey, and Schmidt set off on the IPO road show, the offering was reeling. With the NASDAQ down 15 percent from its January high, the stock price—projected by the company at \$108 to \$135 a share—looked excessive. Wall Street piled on the criticism; mistakes piled up left and right. Investors attending the road show described the Google troika as unprepared, uncommunicative, and smug. As the press turned nasty, Google, throttled by the quiet period, could do nothing to stanch the bleeding, which only grew more profuse with the appearance of the Playboy interview. Though what the boys said in the interview wasn't controversial, its appearance at a time when they were required to be silent indicated either disregard for the rules or screaming incompetence. Was the backlash fair? Bill Hambrecht thinks not. "The biggest frustration among institutions was that they weren't getting inside information from Eric, Larry, and Sergey. Normally, a company says, 'We can't give you forward projections, but talk to our bankers.' But Google didn't do that. They followed the rules. They got a bum rap." Bum or not, the rap took its toll. On August 13—a Friday, note—Google opened its auction. For five days, bids flowed in across the Internet. Soon it was clear that the efforts to tamp down retail demand had worked all too well; more than 80 percent of the buyers turned out to be institutions. What those institutions wanted, naturally, was a first-day pop in the stock. With striking consistency, they bid just below the price range Google had initially set. In effect, the institutions were demanding a discount—and they got one. On August 18, Google announced it was scaling back the offering to 19.6 million shares and selling them for \$85, 37 percent below the top of the original range. The next day, Google's stock opened trading just before noon at \$100. Among the Googlers surrounding Larry and Schmidt on the Morgan Stanley trading floor, the sense of relief was palpable, the celebration muted. Within a half hour, the Google guys were gone, and I found myself asking Doerr if he considered the IPO a success. "Absolutely," he replied. "We raised \$1.6 billion for the company—a record for a technology IPO—and the investors all made money." But what about the pummeling of Google in the press? The damage to its image? "I think six months from now the bad press will be forgotten. The company, its merits, what it's doing, how it's doing, will be the only things that matter." Have Larry and Sergey learned anything? I asked. Have they been humbled, even humiliated? Doerr thought for a minute. "I don't know," he finally said. "They may feel humbled and humiliated—or they may feel differently as of the last half hour. What I don't think will change is how they run the company. They both have—" he chuckled "—incredibly strong points of view. But I do think they're learning all the time. I also think they're growing. Not growing up—I hate it when people call them 'the boys.' Please don't ever put those words in my mouth. I don't think of them that way. And if I ever did, I sure don't anymore." Today, there's no disputing that Doerr was right about one thing: Google's affliction with negative press was temporary. Since the IPO,

headlines have heralded an avalanche of Google products and projects, each intriguing, some truly thrilling: Google Library. Google Print. Google Scholar. Google Desktop Search. Wall Street, meanwhile, has embraced Google as if it were the new Microsoft—and maybe it is. In the first three quarters of last year, its sales surpassed \$2 billion, and its operating profit margin, of more than 60 percent, was greater than that of the Beast from Redmond at its zenith. Even so, a corps of doubters remains. Skeptical moneymen point out that the company's market value, of roughly \$50 billion, is possibly a mirage, artificially inflated by the scarcity of tradable Google stock. In November, December, and January, fresh tranches of shares hit the market as company insiders were gradually allowed to sell their holdings. But by far the biggest flood of new shares, 177 million, were unlocked on February 14. (Larry and Sergey plan to sell roughly 19 percent of their holdings in the next fifteen months.) At the same time, Google's rivals are swarming. Amazon has plunged into search. Yahoo has redoubled its efforts. And Microsoft makes no bones of its aim to turn Google into the next Netscape. But to those who know Google best, these are not the stickiest issues. John Battelle, author of a forthcoming book on the company, observes, "I'm not saying that Microsoft—or AOL, or Yahoo—can't prosper, or even 'win' in the long term. But crush Google à la Netscape? No friggin' way. The only thing that can kill Google is Google itself." In Silicon Valley, few people think the ungainly triumvirate at Google is heading off a cliff. The perception instead is that they've figured out an agreeable *modus vivendi*. "If you gave Eric sufficient alcohol," says Stewart Alsop, "he would tell you, 'I'm not here to run the company; I'm here to get along with Larry and Sergey. I'm here to make the trains run on time, collect my money, and go home.'" Alsop adds, "Eric doesn't have a huge ego. He's willing to suffer the myriad small indignities of being a pet CEO." But when I had lunch with Schmidt last fall at the Googleplex, it didn't seem quite that simple. He had just returned from attending the Forstmann Little conference in Aspen. Though he's been going for the past ten years, he explained, this was the first time he'd been seated for dinner at the head table—next to Elizabeth Hurley. "I guess I've finally made it," he said with a grin. As it happened, the boys were away on a round-the-world business trip. The previous day, Schmidt said, they had been in Dublin, where they'd met Ireland's Deputy Prime Minister Mary Harney—and presented her with a Slinky. "We are in the presence of greatness here," Schmidt remarked in perfect deadpan. "Even if we can't always see it." With evident trepidation, a Google PR specialist asked if Larry and Sergey were going to participate in the upcoming third-quarter-earnings call to analysts, the company's first chat with Wall Street since going public. Schmidt replied that the boys were planning to "lurk" silently on the call with him and the chief financial officer. "They said they'd only interject if something 'interesting' is said. I told them, 'Larry, Sergey, the whole thing is going to be scripted and vetted by the lawyers—that's our new world. Nothing interesting is going to be said. Is that clear?'" Two weeks later, on the call, Larry and Sergey gave detailed presentations that were as lengthy as Schmidt's. The truth is, Schmidt finds himself in a supremely confounding, if not impossible, position. All along, he's been torn between wanting to run with the boys and wanting to take away their allowance. But now that Google is public, this balancing act is immeasurably more difficult. "The question is, What's the best way to run a company" he says on a balmy January afternoon in Mountain View. "In the last ten years, we had this notion of the all-knowing celebrity CEO, with his picture on the magazine covers. And I don't think that's the right way. There's a book by this guy James Surowiecki. It's called *The Wisdom of Crowds*, and he's got, like, 500 examples of how, if you look at the decisions of big groups and individuals, the groups do far better on average. So the way we actually run the company is, we get everyone in the room, we encourage discussion and dissent, and then someone, usually me, pushes for an outcome, even if I disagree with it. That's how we get velocity, and velocity is what matters in companies of size. You want to always be pedaling faster." As for the workings of the triumvirate, Schmidt says, "We have agreed to collaborate, and we collaborate in a specific way: If one of us feels strongly about something, the others can't cut and run—they can't just go and do whatever the hell they want." He adds, "Every successful company has ultimately had multiple decisionmakers, at least in their formative stages: Bill Gates and Steve Ballmer at Microsoft. Bob Noyce, Gordon Moore, and Andy Grove at Intel. Scott McNealy and Vinod Khosla at Sun. The difference is, we're telling the truth about it." Even so, formally, legally, Schmidt is the man in charge; he's the one who will be the target of Wall Street's ire or any lawsuits filed by pissed-off shareholders. But Larry and Sergey plainly hold all the cards at Google. They each have more than twice the voting power Schmidt has as well as the loyalty of the engineers. (A telling reflection of this CEO's status can be found in the official corporate history posted on Google's Web site: In a document of 3,756 words, which mentions Doerr, Moritz, Ram Shriram, Andy Bechtolsheim, and others, Schmidt's name appears not once.) Even if he takes away the boys' allowance, they have their own credit cards. Which brings us back to Larry and Sergey and the question of what they've learned. Having repeatedly ignored

the prevailing wisdom in Silicon Valley—inventing a search engine when everyone knew search was dead; building a business on Internet advertising when everyone knew it was impossible; antagonizing two revered VCs whose rings they should have been kissing—the boys have undoubtedly learned that conventional wisdom often isn't wisdom at all. But salutary as that lesson is, there's also a danger to it. As Excite founder Kraus puts it, "The risk is, they'll think the hallmark of a good idea is that everyone says it's dumb." Similarly, it would be easy for the boys to conclude that dissing Wall Street carries no penalty. In the IPO, they told investment bankers and investors to go pound sand—and they wound up happy billionaires. Today their message to shareholders remains: Trust us, or put your money elsewhere. All of that is fine for now. As long as Google is growing like gangbusters and making money like the U.S. Mint, Wall Street, investors, and employees will be infinitely indulgent. But if the history of the technology industry teaches us anything, it's that no one is ever that lucky—at least, not for long. Every important high-tech company has at some point stumbled and fallen on its face. Microsoft, Intel, Oracle, Sun, Apple, Cisco—all have made severe mistakes, paid a price, and then survived in large part because they understood what being a public company is about. They learned that Wall Street matters. That investors like transparency. That "trust us" isn't enough. When crisis eventually comes to Google—and it will —the company's fate will depend on whether they have absorbed a handful of lessons that apply as much to life as they do to business: Adulthood happens. You can't make all your own rules. And everyone fucks up. John Heilemann has been writing about Silicon Valley for more than a decade and is the author of *Pride Before the Fall*. <div class="keywords <dl><dt

Over 50,000!!!! additional major news articles and broadcast news stories detail these horrendous crimes against the public. Who is supposed to be doing something about it?

Don't let Silicon Valley Oligarchs outlaw American innovation! Support American ingenuity at:

Declaring War On The Corruption Of The Silicon Valley VC's Who Rig Elections and Policies
By Althea Winger

There are about 50 American creative inventors that have gotten shafted by Kleiner Perkins, Eric Schmidt, Steve Jurvetson, and the Silicon Valley Cartel, via an organized system of theft, and arrogance, that is quite audacious.

Each, and every, time these domestic creators invented a major thing, which had never existed before, the U.S. Government, the industry and potential customers; said that these inventors were the first ones to invent that thing. Not a single one of these VC's had ever worked on, been involved in, or developed

anything like it before.

Then, one of a handful of, closely associated, Silicon Valley VC's, asks one of the inventor's to show them their new invention under the guise of "*maybe investing in it*".

Then the VC copies it, while running media troll attacks on the inventor's effort, in order to clear the market.

The VC's then market a 100% copy of the invention, via a Kleiner, or Draper, associated "spin-off" and never pay the inventor's a dime.

The VC's set up a legal structure designed to cost the inventor's millions of dollars to sue those VC's for the rip-offs. On top of that, the VC's already have most of the law firms working for them, and threaten the firms, with revenue cut-offs, if they help any of the inventors. In addition to their "No Poaching Conspiracy", the VC's also have a "No Sue Conspiracy", going on at the same time. The VC's also bribe federal elected officials to keep them protected.

The FBI, The SEC, The FTC, and attorney generals, are supposed to protect citizens from such crimes, and abuse, but the bosses of the regulatory agencies have a great fear of upsetting campaign financiers; so not much gets done. This is one of the reasons the public has no faith in Congress any more.

This VC scam is part of a process called "The Slip" and it is a grifter's scam to steal things from unsuspecting members of the public, in this case American Inventors. The Slip has been commercialized, organized, and computerized by Silicon Valley billionaires in a very systematic program of intellectual theft.

Why would these VC's risk legal battles and a lifetime of hatred from these inventors? It is called "Arrogance"

The media, public and sociology has clearly analysed Silicon Valley culture and confirmed, in tens of thousands of news reports and studies that Silicon Valley is run by:

"A private male frat-house insider-club, from Yale and Stanford, who revel in their misogyny, racism, and mine-is-bigger-than-yours hubris, and use more prostitutes than any other American region in the nation."

These "*privileged*" white males do not EVER want anyone to know that they didn't create many of the things that they made their billions off of. Many of those things, the VC's just stole. They made Silicon Valley into a Kinko's copy center for other people's ideas.

Inventor Mike Chieky, digital media creator Micheal Arrington, and vast numbers of other creators didn't have the symmetrical facial structure of the frat boys, they didn't have the family connections of the "approved" elites and they didn't hang out at the Woodside community center or hire the \$2000.00 per hour hookers that some of the VC's did. They just "didn't fit in". They didn't have "the look". They "didn't play the game". They didn't get invited in.

The VC's say: "*In Silicon Valley you are either a tool or you are The Machine*".

Many of Google's products were created by other's, before Google was even a real company, and simply stolen by Google.

The same for Apple.

Guess who just funded the massive lobbying effort, in Washington DC, to make inventors "illegal" and remove any legal protections for inventors? The investors of Google, Apple and the Kleiner Perkins Cartel!

State and federal officials have been assisting the Silicon Valley Cartel in terminating American innovation because the Cartel bribes them, with campaign funding, to do so.

The Cartel went very big, on their game-plan, recently. As one Silicon Valley insider described some recent, epic, VC scams: "***If you type "Silicon Valley Cartel No Poaching" into www.duckduckgo.com you will see quite a lot of news stories about how Kleiner and the Boys rigged the Valley so that no Paki's (Indian H1-B workers) could get hired by other VC holdings, so that they would get booted back to India before they could make IP ownership claims. This followed right on the heels of the "AngelGate Scandal" where the VC's were caught red-handed colluding to rig the VC industry***

against founders...

VC insiders Ravi Kumra and Forrest Hayes were murdered by their hookers. \$2000.00 bucks an hour doesn't buy the kind of gal it used to.

Kleiner VC: Vinohd Khosla, has gotten himself sued and hated by California for taking the States favourite beach away, just for his friends. As the lawyer suing Khosla says: "it is about his sheer Arrogance".

Kleiner VC, and Founder: Tom Perkins, was in the news recently for called poor people: "Nazi's" for not appreciating how wonderful the VC's are.

VC Joe Lonsdale is facing rape and abuse charges. Cartel boss, and Kleiner head, John Doerr just got, famously, sued by his own partner for sex and misogyny abuse. Kleiner associate: Ray Lane was nailed for massive tax fraud.

As if the arrogance could not get more outlandish, VC Tim Draper just ran a failed ballot initiative to try to make Silicon Valley it's own state so that they could build a border-line, away from those filthy "poor's" in East Palo Alto. These VC's appear to have some major issues.

This gang of white, yuppie, elitists created the National Venture Capital Association and their private CIA hit-squad: In-Q-Tel, who funded the spy portions of Google, Facebook, Linkedin and the other privacy abuse ops. They never miss an opportunity for a good collusion.

The problem is, these boys created a glass bubble that was so air-tight, they never saw what was coming from the outside: What came was Mike Judge's "Silicon Valley" TV show expose; public disdain of their arrogance; hundreds of Snowdens, created by their abuse of their own workers; Ellen Pao; The fall of the main-stream media, that they thought they owned; the realization that frat houses housed "rape factories" and men who were socially programmed to abuse; and the general trend towards really not liking arrogant pricks all that much.

Will law enforcement and regulatory agencies ever do their jobs and take action against these abusers? Will any legal recourse ever exist to halt the abuse of America's innovation treasure: It's creative inventors?

Thanks to leakers, hackers, whistle-blowers and investigations, the insider rigging of industries is now out on the table and it is a dirty, dirty scene. The shiny towers of Sandhill Road hide a cesspool of corruption and Mafioso-like double-dealing.

It is time to take a look at a Valley that has turned into a Pit!

The Tesla Patent Giveaway SMOKE SCREEN!

Tesla has announced that they are giving their patents away, patents which state, in no uncertain terms, that their batteries can "kill you", "burn you and your family", "set your house on fire", "set your office or parking structure on fire" (Not to mention the cancer-causing fumes they release).

So that's nice, they are giving them away. Who does this benefit?

Since 2006, EVERY single new electric car company has been sabotaged by MUSk and his investors, The Detroit Big 3 (SEE THIS LINK)(<http://detroitelectricvehicleblockade.weebly.com/>) and/or the Department of Energy. Over 200 electric car companies tried to launch and every single one got lied to and stonewalled by the DOE, sabotaged by outsider take-overs who offered an investment and then generated a take-over like MUSk did; Blockaded, by mutual agreement by the VC's; and/or regulated into non-operation by laws which were written so only the Detroit Big 3 could pass them.

So, Musk appears to be making all nice-nice by "giving away" the patents but in reality, they can't be used by anyone but the Detroit Big 3 because anybody else will be forced to endure the above-mentioned sabotage efforts. The Detroit BIG 3 already have tons of their own patents and avoid any NIH (Not Invented Here) outsider technologies. So, what good are they?

So could this be the precursor to a Tesla bankruptcy? We have seen that they "cook the books", are we in for another "cleantech" shocker?

Send in your links. Let's discuss...

Tom- Boston/G

The Takeover Game- ANOTHER REASON WHY THE TESLA PATENTS ARE WORTHLESS...

Almost every electric car company that starts to get traction has a hostile takeover attempt. Later stage parties create a dispute which causes the founder to be forced out, bought out, quit or otherwise stop providing the impetus to deliver a disruptive technology. The process has now occurred so many times that it is beginning to look like an intentionally crafted standardized strategy by third-parties who fear market diffusion. It happened to XP but they overcame it. The "new management" usually "accidentally" tanks the company. Let's try to guess who the "third-parties" might be...BUT:

What better way to control a market than to control all of the funding for that market and then have all that controlled funding administrated by "your people" who have been placed in, and around, a federal agency! It's the "Takeover Game" on a whole new level.

Just sayin...

Do people really do these sorts of things? Imagine megalomaniac car, energy and materials company heads with billions of dollars that want to control hundreds of billions of dollars and have insane egos...

<http://detroitelectricvehicleblockade.weebly.com/>

DETROIT (AP) — The U.S. government's auto safety watchdog has closed an investigation into Tesla electric car battery fires after the company said it would install more shields beneath the cars.

The shields, an aluminum bar, a titanium plate and another piece of aluminum, will supplement a quarter-inch-thick aluminum plate now on the Model S, the only model that Tesla now sells. They're designed to stop road debris from penetrating the car's battery pack.

The National Highway Traffic Safety Administration began investigating the Model S last year after two battery fires that were caused by road debris. In each case, one near Nashville, Tennessee, and another near Seattle, debris punctured the aluminum shield and the battery, touching off fires. Drivers were able to safely pull off the road and escape without injury, but the cars were destroyed.

Tesla CEO Elon Musk said in a statement Friday that the company will retrofit Model S cars sold in the U.S. with the new shields, at no cost to owners. At the end of February, Tesla had sold about 22,000 of the cars in the U.S., according to Autodata Corp. The additional shields will be provided upon owner request or as part of normally scheduled service, the statement said.

The move is not a recall, a Tesla spokeswoman said.

Earlier, Tesla issued a software update that raised the Model S ride height to help deal with the issue.

"Tesla's revision of vehicle ride height and addition of increased underbody protection should reduce both the frequency of underbody strikes and the resultant fire risk," NHTSA said in documents posted Friday on its website. "A defect trend has not been identified."

Musk said in his statement that the moves bring the risk of debris striking the battery "down to virtually zero" to give Model S owners complete peace of mind. The new shields, he wrote, are not needed for a high level of safety, but it's valuable to minimize inconvenience to owners and address what he said were misperceptions about electric car safety.

Tesla also said it added the shields to cars in production starting on March 6.

THE CRIME OF THE CENTURY

Current best evidence, and witness testimony, appears to confirm that 6 Senior Obama White House staff (Gibbs, Axelrod, Plouffe, Rattner, Emanuel, etc.) and 3 Agency heads (Chu, Holder, etc.) colluded in an "CARGATE Naming-the-Names: CARGATE Master List" </investigations/topic-11-kickback-process/naming-the-names-master-list/> organized crime operation, within The White House, which ended up defrauding the U.S. Government, and Taxpayers, of over \$200 Billion. Their scheme involved acquiring campaign funds from UAW (Over-seen by Rattner with the Detroit gang) and related unions as well as Is the DOJ being ordered not to file anti-trust actions on the Silicon Valley BIG 6? because they are the biggest campaign donors </2014/07/14/is-the-doj-being-ordered-not-to-file-anti-trust-actions-on-the-silicon-valley-big-6-because-they-are-the-biggest-campaign-donors/> Silicon Valley billionaires in exchange for give-away taxpayer money for their personal investments. At least 3 Senators (Feinstein, Reid, Pelosi, etc.) participated in the scam. Most of the persons of interest also had insider trading stock profit schemes running through all of the deals. This is the manner in which Tesla, Solyndra, Ener1, Abound and the bulk of the Clean-Tech deals were done. Skims as "finders fees" and "transaction fees" went into each of their pockets via stealthed routes and took place at each transaction point in

the process, assisted by Goldman Sachs. To date; thousands of points of evidence have been documented by Press and Civic investigations. Financial records, emails, phone calls, staff testimony, stock records, trust filings, SEC documents, GAO records and NSA archives confirm everything beyond a shadow of a doubt. The FBI and DOJ have been ordered, by Senior White House officials, not to investigate, nor to respond to witnesses or interview any subjects which would reveal information that would require them to fully engage in the prosecution. NSA has complete records of all illicit actions but cannot supply the recordings, or data, without a subpoena from a Special Prosecutor. The impunity and arrogance that the Billionaires and fixers have strutted their "nobody is going to come after us as long as our guy is in office" attitude has subsided as they see that the end is nigh. Some reporters have significant evidential files and are awaiting other legal developments in order to coincide information release. Lets discuss...

CONCLUSION:

The evidence demonstrates that Tesla Motors, and other Elon Musk companies, received historically extraordinary waivers, tax credits, stock pumps, gifts, real estate deals, government contracts and other exclusive favors from state and federal officials who had financial and political relationships with Elon Musk and his partners. These gifts took place at the expense of the U.S. taxpayers. The evidence is clear and the facts are incontrovertible.

The evidence demonstrates that those same state and federal officials injured, delayed, obfuscated, manipulated, impaired, sabotaged and, otherwise, intentionally damaged the competitors to Elon Musk, and his partners who applied, at the same exact time, to the same exact people, for those same exact benefits in the competitive marketplace. They undertook these attacks and impairments on orders from Elon Musk and his partners. The evidence is clear and the facts are incontrovertible.

In the last 15 years the stock market has been highly monitored by vast numbers of companies, services, journalists and day traders. Those parties have kept detailed technical analysis records that archive activities and media publications, over that time period, on a second-by-second basis. The evidence from that time period, cross-indexed with Elon Musk's, and his partners, assets and ownerships, demonstrates that stock market manipulation through valuation falsification, mis-reporting, automated pre-planned "Flash Boy" computers, stock pumps and skims was taking place on an unethical and illegal basis. Further, the very public officials who operated the two manipulation procedures, listed above, also were befitting financially and politically from these stock market manipulations as part of their kick-back scam. The evidence is clear and the facts are incontrovertible.

These criminal activities, by Elon Musk, his partners, along with certain state and federal officials; damaged the United States Government, The U.S. Treasury holdings of the United States Taxpayers, the competing companies that were maliciously attacked and the integrity and functional operation of the United States Congress.

The evidence contained in these volumes answers the query, beyond a doubt, about whether, or not, Tesla investors, owners and government employees engaged in felony-class crimes. The answer is: Yes, they did.

Among other goals, this document seeks to ask, and answer, the following question:

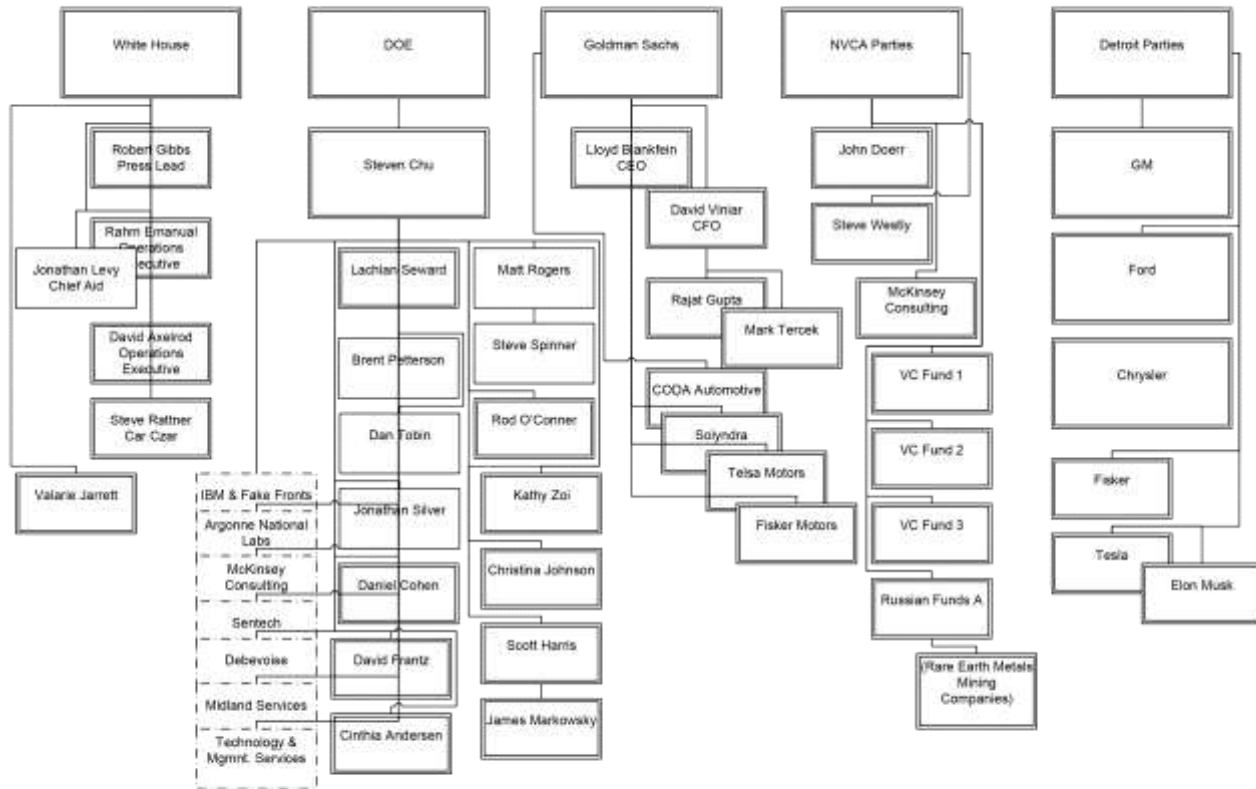

Were Elon Musk's Tesla, Solar City and Space X companies, scams, operated as political kick-back schemes?

The answer to that question would appear, to any reader of these documents to be: Yes!
