Advisories:

Copyright each original author. Fair Use, Public WIKI rights, Public Domain, U.S. First Amendment Rights, Freedom of the Press, SLAPP, EU Press rights, UN Press Rights, and associated rights, claimed and enforced.

This is a public-authored, collaboratively-edited, document; created on the Internet, by the users of the Internet, from around the world. Check download, torrent and drawstring locations, and mirrors, for the latest updates and revisions. This document is available, for free, to anyone. This is not the final edit of this book.

This book is cooperatively, interactively, collaboratively, authored by the individuals who witnessed these crimes, the reporters who documented these crimes, the public who suffered from these crimes and the investigators who investigated these crimes.

Please re-post this file on torrent sites, blogs, and your website to help additional editors get involved.

You may print your own hardbound, glossy-cover, version of this book, for you, your friends, groups, crime reports, distribution at public events and car dealers and at rally’s at these resources:

<http://www.lulu.com>

<http://www.createspace.com>

<http://www.morrispublishing.com>

<http://www.diggypod.com>

<http://www.blurb.com/book-makers>

<http://www.outskirtspress.com>

<http://www.kinkos.com>

or any other self-publishing services. Just give them the .pdf file and say “do it”.

We wish to, acknowledge, and thank the individuals from law enforcement agencies who assisted in this document production. While there are certainly law enforcement officials who are operating a cover-up, there are also very dedicated officers working to bring these individuals to justice.

This document, in many states, provides the legal basis for any individual to make a citizen’s arrest of the key suspects in this case. You must hand the suspect a printed copy of this material, along with your written statement, with the reason for the arrest, in order to protect yourself. Do not undertake a citizen’s arrest without consulting a

criminal procedures lawyer first. You must remand the party, that you arrest, to a credentialed police officer of the U.S. Department of Justice. The arriving officers must also, jointly, accept the suspect with, or on behalf of, your State Attorney General. You may need to hold the suspect until representatives from both of those agencies are on site. For your protection, have the press with you to record proper procedure. Again, do not engage in a citizen's arrest without consulting a criminal procedures lawyer to make certain that you have the proper documentation in hand to perform the arrest. Hold the suspect, at the site of arrest, for the DOJ officers, that you telephone to advise that you have made an arrest. Do not attempt to transport a subject yourself, as that could result in kidnapping charges against you.

OVERVIEW:

This is a public-authored, collaboratively-edited, document created on the Internet, by the users of the Internet, from around the world. The public is invited to check download, torrent and drawstring locations, and mirrors, for the latest updates and revisions. This document is available, for free, to anyone. This is not the final edit of this book.

Tesla Motors has been accused of being a front for economic, social, political, moral and ethical crimes masquerading under the **facade** of “an altruistic cleantech company”, in order to discourage circumsppection.

In this book, we examine the following:

- The origins of Tesla and why Elon Musk had nothing to do with creating Tesla Motors
- The relationship between Tesla owners and White House staff
- The relationship between Tesla owners and Department of Energy staff
- The relationship between Tesla owners and In-Q-Tel
- The relationship between Tesla owners and political campaign financiers
- The relationship between Tesla owners and Google, including Eric Schmidt and Google investors
- The relationship between Tesla owners and Goldman Sachs
- The relationship between Tesla owners and Russian oligarch “business men”
- The relationship between Tesla owners and media outlets such as Think Progress, New America Foundation, ALICE, Media Matters, Gawker Media, Google, and related information control consortium's
- The relationship between Tesla owners and John Doerr's Kleiner Perkins Company
- The relationship between Tesla owners, the National Venture Capitol Association, the Silicon Valley Cartel and the coordinated venture capital “Black-listing” of Tesla competitors
- The relationship between Tesla owners and Troll Farm services that provide “click-farm”, “meat-puppet”, “sock-puppet”, “fake likes” and automated contrived social media
- The deaths, and traumatic injuries, of Tesla Motor's staff, investors, investigators and customers
- The war profiteering, and lobbied invasion efforts, by Tesla investors, for Afghanistan, Bolivian and other foreign lithium mining contracts
- The details of the political campaign kick-backs, and the pay-offs of gratis taxpayer cash, tax credits, real estate, government contracts, write-offs, stock warrants, and other payola as criminally “unjust rewards”
- The known, and covered-up, dangers of toxic vapors, fires and explosions of lithium ion batteries
- The relationship between Tesla owners and Dianne Feinstein, her husband Richard Blum and Harry Reid and their blatant participation in crony kick-backs, corruption and stock market transgressions
- How specific government officials took extraordinary steps to sabotage the business competitors of their campaign financiers.
- The charges and lawsuits against Elon Musk, and Tesla Motors for Fraud, by wives, employees, founders, supplies, investors and others
- Recent leaks and disclosures
- Potential criminal charges against the suspects and the financial relationships of all suspects
- Systemized corruption and kick-back programs within state, and federal, agencies
- Covered up defects in the Tesla cars: handles, hackers crashing cars, heaters, chassis, chargers, vampire power, etc. The Lemon Law lawsuits
- Cover-ups created to protect political officials who benefited from stock, campaign support and other perks
- The planting of “Moles” and the operation of sabotage efforts against multiple competitors by Tesla staff
- Coordinated, criminal, stock market manipulations via “Flash Boy Algorithms”, “Buy Bots”, “Pumping via buybacks”, “Valuation fraud via Google ranking manipulation”, “Media cover-ups and news hiding via Google ranking manipulation”, “DOE PR Valuation boost coordination” and direct TSLA stock chart fraud
- Who, knew what, and when they knew it
- An Appendix section of investigation resources

The evidence contained in these volumes answers the query, beyond a doubt, about whether, or not, Tesla investors, owners and government employees engaged in felony-class crimes.

Among other goals, this document seeks to ask, and answer, the following question:

Were Elon Musk's Tesla, Solar City and Space X companies, scams, operated as political kick-back schemes?

A handful of criminally corrupt Senators, agency staff, White House staff and Silicon Valley campaign financiers prefer that this document never saw the light of day.

Experts believe that the attached, and related, documents, and emails, prove that Elon Musk and his investors and partners engaged in organized crime and corruption and were protected by The White House because of campaign financing deals. Multiple groups have challenged the suspects to live hearings, live TV debates or live webcasts. The suspects refuse to participate, because they know that any session of public transparency will eliminate all of their credibility. Cover-ups can only last for so long, though.

Over 300 million taxpayers and voters would prefer that such organized-crime and corruption activities are no longer tolerated in public policy.

Most certainly, the voters are likely to prevail and, of course, the law says that they should prevail.

As with all documents, and in full-disclosure, this document was authored with an agenda: To end corruption.

If you've found this document you probably already know what Tesla Motors is, and if you don't know you will in a near future understand why you should keep an eye on the company. Tesla Motor's history can be described as a roller coaster as there have been many ups and downs, including a near death experience in late 2008. This timeline will be continuously updated until Tesla Motors has achieved its vision or gone bankrupt. Much of this data was provided by ex-Tesla employees, founders and senior executives.

THE FORBIDDEN TESLA TIMELINE THAT ELON MUSK DOES NOT WANT YOU TO SEE:

1880

Detroit Electric sells Electric cars commercially across the USA

1900

38 percent of US automobiles are powered by electricity, but as Henry Ford designed the much cheaper T-Ford, the electric cars began to disappear.

1970

The price of gasoline hits record because of a series of energy crises, so the interest in electric cars increased again.

1971

June. Elon Musk was born.

1996

General Motors produced an electric car called EV1 and leased it to customers.

1999

Elon Musk sold his company Zip2 and made \$22 million. He founded X.com that would become PayPal.

2002

October. eBay acquired PayPal and Elon Musk made \$165 million.

2003

General Motors canceled the lease program and removed the last EV1 from the streets. They said they couldn't sell enough of the cars to make the EV1 profitable.

July. Martin Eberhard and Marc Tarpenning founded and incorporated Tesla Motors. They had earlier made a feasibility study to see if they could make an electric car. They now made a feasibility study together with AC Propulsion to see if the batteries would work.

November. The 2 employees searched for a partner to build the rest of the car. Lotus became their choice. Lotus engineers, from England, agree to provide chassis of car.

2004

February. Ian Wright, who had met Martin Eberhard while on a plane, joined the company. They finished business plan 1.0. Ian later leaves Tesla in disgust when he realizes what they are up to

March. Starting a car company is expensive, so they began to look for outside investors. Silicon Valley VC's discuss having Elon Musk take-over Tesla and get rid of the founders

As of this date CIA, NSA, DIA, FBI, OSC, and other agencies, are now recording all communications between all Silicon Valley VC's and technology companies. Those recordings still exist today.

April. Series A funding where Elon Musk was the main investor. Elon Musk had earlier aligned with JB Straubel who had friends at AC Propulsion, and the company told Elon Musk to contact Tesla. Other investors included SDL Ventures and Compass Technology Partners. JB Straubel joined the company as employee number 5.

May. An early styling study began at Tesla.

June. A technology implementation study began. Afghanistan lithium contracts for Tesla's batteries are, by now, fully controlled by White House financiers.

July. Tesla had 9 employees and moved to an office in San Carlos, California. They also made a "mule" which is a car that doesn't reproduce but you can see if the concept works. To design Mule 1 they bought an old Lotus Elise.

October. The 15 employees began to design the drivetrain component.

November. They installed the drivetrain in the Mule 1.

December. Tesla couldn't use the same design as the Lotus Elise, so they had a contest where Barney Hatt made the best design by copying most of the Lotus Elise.

2005

January. They made a 1/4 scale model in clay of the design Barney Hatt had made. Tesla had now 18 employees and they also took out Mule 1 for a test drive.

February. The now 23 employee strong company needed more money, so they made a series B funding. Not only Elon Musk invested more money, but also Valor Equity Partners. Tesla also opened an office in UK close to the Lotus office.

April-June. Tesla made a full-scale model in clay of the Tesla Roadster.

July. With 38 employees, they now tested a plastic model of the Roadster in a wind tunnel. It had problems with vector dynamics

August. Some of the 41 employees began developing a motor.

December. 63 employees and they began to build the Mule 2 in fiberglass.

2006

January. A drivable Tesla Mule 2 was finished. It has many technical problems and it is illegal to drive it on the road.

April. The engineers thought the Roadster was finished so they made 10 engineering prototypes (EP), which compared to a Mule can (in theory) be produced.

May. 92 employees and they finished the first EP, called EP 1. Tesla raised a series C round led by Vantage Point Partners and Elon Musk.

July. Almost no-one knew that Tesla existed, until now when Tesla showed EP 1 and EP 2 in Santa Monica, California.

August. 100 employees. Tesla crash tests and technical reports reveal fire dangers. Tesla senior staff orders the reports shredded. them. Tesla had earlier crashed a few virtual cars, but they needed to know if the computers models were accurate. They also began to show the Roadster at events to market it.

August. Elon Musk, John Doerr, Rahm Emanuel, Robert Gibbs and David Axelrod discuss a quid-pro-quo scheme to advance money for the Presidential and Senate campaigns and get paid back in spades from TARP and Dept. of Energy "Loans", tax credits, stock perks and monopolies.

September. 120 employees. They made more tests, including radiated emissions and susceptibility testing. EMF emissions during charging were high and those reports were ordered shredded

October. They made a durability test, which consists of driving the Roadster on a cobblestone racetrack. The idea is to simulate 100,000 miles in 6 months. It would have taken much longer time to drive the same distance on a smooth road. Tesla realized that their computer models were inaccurate - the Roadster's transmission didn't survive the durability test.

November. 144 employees, and more tests, including driving through a saltwater bath.

December. They showed the EP 2 at the Los Angeles Auto Show.

2007

January. Tesla brought the Roadster to Arvidsjaur, Sweden, to see if it could survive winter conditions.

February. 205 employees. Tesla began to build a validation prototype (VP), where they took everything they learned from the engineering prototype. Tesla says it will build a \$35 million plant in Albuquerque, to produce the Model S. They lied.

March. 230 employees and they finished the VP 1. Tesla senior staff and investors intensify private discussion with Dianne Feinstein and Richard Blum, who turn out to be the owners, managers, builders, staffing providers for Tesla's and Solyndra's land deals as well as the Senate and White House manipulators who rigged government

funding for Tesla.

April. Raised more money - a series D round led by Elon Musk, Technology Partners, and Vantage Point.

June. Tesla's motor factory in Taiwan was finished and it began producing parts.

July. A new transmission was ready to try but tests showed that it had mounting issues.

August. Tesla finished the VP 10. CEO Martin Eberhard was forced out and replaced by Tesla investor Michael Marks, who would work as an interim-CEO until Tesla found a long-term CEO.

September. Tesla delayed the launch of the Roadster because they needed more time to test its durability.

October. It turned out that also the new transmission failed in the durability test. Tesla needed yet another transmission.

November. Martin Eberhard is fully forced out of the company after confronting Elon Musk regarding Musk's manipulations.

December. Interim CEO Michael Marks see the lies and leaves and is replaced by interim CEO Ze'ev Drori. Bernard Tse is contracted, by Tesla, to hide the Tesla battery explosion documents that have been uncovered.

December. Tesla says it will build it's factory in Southern California. They lied. The locals in Southern California say they felt "used" by Elon Musk in order to manipulate state and federal taxpayer dollar pitches.

As of this date: John Doerr/Kleiner Perkins, Eric Schmidt/Google, Elon Musk/Steve Jurvetson and Rahm Emanuel, Robert Gibbs, David Plouffe and other White House staff had an integrated stock, lobbying, profit and pass-along benefits and resources structure established between all of them.

2008

January. 260 employees. The VPs survived the new tests, so the Roadster was finished - except for the transmission. Tesla accountants notify Musk of impending bankruptcy

March. Tesla began production of the Roadster.

April. Tesla can't get fleet orders or sell. Bankruptcy imminent. Short term cash put in by a idge financing led by Elon Musk and Valor Equity Partners.

May. Opened a retail store in Los Angeles, and they also finished a new transmission.

June. Opened a second retail store in Menlo Park, California, and they also delivered the first Roadster to the customers. Marc Tarpinning is sickened by the Musk plot and resigns from Tesla after getting a payout to keep quiet. The Model S was announced in a press release.

August. Franz von Holzhausen joined Tesla Motors as Chief Designer.

October. Elon Musk became the CEO so as to control all information in and out of tesla and prevent disclosure of organized crime funding. Tesla bankrupt on paper but cooking books to hide financial disaster.

October. Tesla tells White House and DOE, In writing, it will sell 200,000 cars by 2010. Competing applicants all say that only 10,000 to 50,000 electric cars can be sold by then. First hard evidence of Tesla "cooking the books" found.

December. White House staff order Dept. of Energy to only fund companies from their "special list" of campaign backers

December. Google investors and executives become key shareholders in Tesla and agree to control all media to benefit Tesla

December. Tesla says it will build it's factory in San Jose, CA. It lied and it is discovered that all of the different failed factory location announcements have to do with Dianne Feinstein's husband's screwed up real estate deals.

November. Tesla revealed it had requested about \$400 million in loans for the Model S and powertrain manufacturing, under the Department of Energy's Advanced Technology Vehicles Manufacturing (ATVM) program.

2009

March. Tesla unveiled two Model S prototypes at the Los Angeles headquarters of Tesla CEO Elon Musk's other startup, SpaceX. Tesla had decided to build a design studio at the factory. Tesla began taking reservations for the Model S. More than 500 people reserved a car in the first week.

June. Tesla gets approval for \$465 million in low-interest loans from the Department of Energy in exchange for campaign funding provided by Tesla and Google VC's. Tesla has written over 30 lies in it's Dept. of Energy Application, which Steven Chu is aware of, yet ignores, at White House request.

2010

January. Tesla registered for an initial public offering of stock. Tesla uses "free" taxpayer loan to exploit taxpayer dollars to fake the value of it's stock while also receiving free tax credits which it sells at a profit in exchange for campaign funds, thus fully qualifying as an organized crime operation.

February- Dianne Feinstein and Her real estate mogul husband execute profit stock calls on the Solyndra and NUMMI/Tesla factory properties for personal profit in exchange for campaign funding

May. Tesla bought NUMMI with taxpayer money - the former Toyota and General Motors factory in Fremont (manipulated by Feinstein), California, for \$42 million. Toyota Motor and Tesla announced they will cooperate on electric vehicle development. Toyota purchased Tesla shares.

June. 800 employees. Tesla shares began trading on the Nasdaq Stock Exchange. They gained 40.5 percent.

2011

Tesla works closely with Eric Holder to avoid public investigations

2012

January. Tesla ended production of the Roadster to focus on the Model S. The roadster had already had multiple lithium battery fires which were covered up according to Tesla's Bernard Tse.

February. Tesla revealed the Model X - a small SUV and says it will go on sale in early 2014.

June. 2000 employees. The Model S was officially launched at the Fremont factory. Retail deliveries of the Model S started in the United States.

September. Unveiled the Supercharger network.

2013

May. 4000 employees.

August. First Model S in Europe. Tesla formalizes relationship with Panasonic for batteries even as Panasonic is being charged with organized crime, price fixing, dumping and the deaths of thousands of factory workers and nearby neighbors to the factories. Tesla/Panasonic “Gigafactory” plan charged with exploiting Mexican workers with lethal work environment, toxic poisoning, nearby dangers to towns.

September. Shadow team of special investigators document over 30 federal crimes that Tesla, and Tesla investors, engaged in. Federal law enforcement is ordered to: "Leave Tesla alone, for now" by White House staff.

Musk is caught on recorded audio and video admitting that Tesla was broke when it applied for Dept. of Energy funds, thus breaking the Section 136 federal law for the ATVM and LGP loans.

Hackers designate Tesla as The most easily hacked car in the world. Fears of eavesdropping and forced battery overload attacks. Chinese hackers have already penetrated all of the Model S Tesla's.

As of this date; 4 top Tesla staff and 6 related reporters and partners had died mysteriously.

2014

Chinese hackers have now fully scoured all of the servers of Silicon Valley technology companies and VC's. They learn about major Cisco vulnerabilities and use these back-doors to penetrate a large portion of the State and federal agencies of the USA.

Musk now has multiple people from In-Q-Tel working for him. In-Q-Tel is revealed as being involved in the drug trade including a seizure of 5 tons of cocaine on it's airplanes. Musk silent partner Eric Schmidt is helping fund, and promote, In-Q-Tel. The head of the largest digital drug Cartel: Silk Road, is found to be working for both Musk and Eric Schmidt. Comparisons between the Delorean cocaine issues and the Tesla drug issues are examined.

2015

Elon Musk is forced to take out loans from the same corrupt bankers he has been working with all this time because they are the only ones who are willing to participate. Musk launches a number of funding efforts as minimal demand for his products along with an extensive list of technical defects and explosions hits hard.

Multiple former employees are now leaking the dirt on Tesla. One is arrested, others turn states evidence, or whistle-blowers.

Musk announces that his toxic Nevada lithium ion factory, created with Senator Harry Reid, will try to dig up some lithium, from some nearby holes in Nevada, in order to try to distract from the fact that the majority of his lithium was always planned to come from countries his investors wanted invaded.

Stay tuned.. more coming...

Elon Musk took U.S. taxpayer dollars under the guise of creating “U.S. jobs”, yet, the second he got the money he placed ads on Craigslist, LinkedIn and around the globe to hire H-1B foreign workers and H1-B staffing executives.

Musk then began looking at moving the entire Tesla company to other countries, particularly India. Musk never hired all of the U.S. NUMMI workers that he promised to hire, either.

Report On Tesla Recommendation for International Expansion

By
Teresa Bergmann
Vu Nguyen
Astrid Santiago
Sean Yang

Executive Summary

Tesla Motors is seeking to gain a more global presence and grow their business through international expansion. While a company can have numerous reasons for entering foreign markets, we will be focusing specifically on how Tesla can benefit from establishing a manufacturing plant in India and launching a marketing campaign in Singapore.

The purpose of the manufacturing plant in India is to also serve as Tesla’s international headquarters, which would be located in Chennai. This will position us to receive immediate cost savings in the production of our vehicles and transportation costs to Asian, European, and African countries. Possible threats to entering the Indian market include infrastructure, corruption, and bureaucracy. We also believe the improvements in India’s infrastructure through the AMP (automotive mission plan) agreement and our countries commitment to support our automobile industry stakeholders will make selling electric vehicles in India a very profitable market for the future.

Tesla should enter Singapore via EV test beds to qualify for a six-year vehicle tax exemption, while building its brand equity to make it more visible to the consumers. If the market condition is correct and the brand development is successful, the next step is opening a wholly owned showcase store that would house Tesla’s sales force, managers, and mechanics who are responsible for advertising, public relations, and services for Singapore. To finance this marketing expansion we believe using your cash on hand is enough to start up a campaign. We estimated the initial investment to be between \$4-\$6 million and the annually costs would be approximately \$1.3 to \$2 million. Tesla should see positive returns within five years based on our sales estimates. This entry strategy accounts for threats such as cultural differences, strict government regulations, and competition.

Tesla Strategic Position

Our goal is to help you further your international expansion by first understanding your strategic positioning. As an up-and-coming electric vehicle company, your differentiating factor is an “electric car without compromises.” Your Roadster competes with sports cars like Porsche and Ferrari while having the energy efficiency of a Prius, and we believe this to be a huge advantage against other sports cars in the market. However we understand that the Roadster is a means to generate revenue for the development of a more affordable family car, also providing zero emission electric power generation options.¹ With these goals in mind, Tesla is scanning for opportunities around the world to minimize cost and maximize revenue. You currently have facilities in the United States and throughout Europe where parts are being manufactured and assembled. Since you have limited resources, you must be very selective of the location for your expansion.

Before we go into further detail about potential locations, let us evaluate Tesla Motors' strengths and weaknesses for a better assessment of your expansion strategy. You are on the cutting edge of battery electric technology with good engineering and technology research capability. You build many of your own components in-house so it is tough for your competitors to duplicate. You have a first mover advantage by being the first company to offer a practical fully electric sports car, recognized by Arnold Schwarzenegger, former governor of California, and Jay Leno, late night T.V host.² These are the high-end consumers you are targeting but they are a vast minority of the general public contributing to Tesla low brand recognition. You also do not have the economy of scale because of your limited resources. Those are the strength and weaknesses of your company that we must consider in your expansion.

The decision to expand into India signifies your commitment and belief in the long-term success of Tesla in international markets. India boasts one of fastest growing economies in the world with a Gross Domestic Product (GDP) of \$1.4 trillion in 2009. They are also simultaneously working on improving their countries infrastructure to be more favorable for automobile manufacturing, research and development, and business through the India's Automotive Mission Plan (AMP) 2006-2016. Due to its geo-centric location to the Asian market and its existing environment for multiple big name automobile manufacturers, Chennai, India will serve as our international headquarters. This facility will serve as a location where we can conduct further R&D, final vehicle assembly, quality control, and administrative tasks for cars being purchased in the Asian markets. Due to the largely to the lack of quality roads in India which inhibit the growth of docking stations and non existent government tax breaks for alternative energy vehicles, our immediate efforts in India will not be focused on sales but rather operations. We do believe though that with the AMP, rapidly growing GDP, and decreasing trade barriers, India will eventually prove to be a very lucrative automotive market in the future.

With your decision to expand your operation into India, we believe Singapore is another great market to enter to generate revenue. Singapore is an island state with a GDP of \$303.7 billion in 2010. It is one of the most densely populated countries with approximately five million people on 694 km² of land. Due to its geography, Singapore has limited options for deploying alternative energy like wind and solar on a large scale. Despite this disadvantage it is committed to bringing about reliable, sustainable and competitively priced energy to support economic growth and a greener tomorrow. The government is offering tax incentives for environmentally friendly cars with a 40% rebate of the open market value of the vehicle if eligible.

Motives for Expanding into India

The motives that drove our decision to open an international headquarters in Chennai, India was driven by three primary factors. The most immediate benefit, was the abundant amount of low-cost technical and managerial talent that India produces on a consistent basis. These low labor costs will provide us an immediate expansion in our production possibilities frontier for producing cars while also cutting down drastically on the plants fixed operating costs. Secondly, we found that both the historical data for the return on other foreign investments in India and their ability to successfully trade throughout India to be a sound indicator for predicting our success. Opening our plant in Chennai, India, an automobile hotbed for foreign companies, will allow us to benefit immediately from the cluster effect by receiving associated cost savings and forcing us to innovate to remain competitive. Lastly, the legal framework in India will offer protection for our investment, flexible financial management, and fair process for any issues that may arise.

Low Manufacturing Labor Costs

In 2010, India's labor costs rose approximately 20% and surpassed China's average manufacturing costs by reaching USD 2.51 per hour to USD 2.68 per hour. India as a whole has seen how the recovery of domestic demand, inflation, and new government policies have lead to greater labor costs for foreign companies across the board. Although there is some unpredictability in the growth rate for India's labor costs, our country will still hold a comparative advantage in labor costs to the US automotive labor market. While our overall manufacturing costs are higher than China's, our autoworkers are compensated 18% less at USD 3.30/hour and USD 4.02 respectively³. In addition, approximately 36% of our labor costs are contributed to employee benefits such as "Provident fund (social security), survivor insurance, pension contributions, state mandated 13th month pay, and double pay for overtime".⁴ We believe these large contributions to our employees' benefits will reduce our risk

for public backlash and improve our image in the eyes of human rights activist who often pounce at abusive employers.

There has also been a consistent positive correlation between long-term growth rates and the low-dependency ratio's associated with a relatively youthful population. "According to a recent long-term growth forecast from banking group Goldman Sachs, demographic patterns may put Indian growth well ahead of Chinese growth by mid-century".

Comparatively, US workers in Ford or GM earned \$27 an hour plus benefits⁶ which means we cut down on labor costs by over 87%. As Tesla most recently reported in their Dec 31 2010 SEC filing⁷ to have 213 manufacturing department employees, we expect for this number to be at approximately 70 for our India headquarters. Our manufacturing plant will be significantly smaller than our US plant, and thus will not require as many workers. While the hourly pay rates for Tesla employees are likely to be higher than the average automotive laborer figures for both countries due to a greater requirement of skill and knowledge, we kept both figures constant in an attempt to account for this difference.

Low Administrative, IT, and Knowledge Based Positions Costs

We believe that India's large and growing workforce population, many of whom can speak English, will benefit us tremendously in terms of cutting down on employment costs. The education system of India is extremely large and caters to millions of citizens. According to our Constitution, education is a fundamental right, which demonstrates the importance of education in India. In recent years, we have been committed to progress. We have increased our primary education and literacy rates to include approximately two-thirds of the population. Additionally, India boasts the third largest number of students in higher education in the world⁸. In 2011, 582,000 engineers and 265,000 polytechnics graduated from college⁹. The high number of college graduates provides a larger pool of skilled and educated workers. This provides us with a very large pool of new graduates whom we could potentially train and employ in our factories each year.

Tesla reported \$84 million in selling, general, and administrative expenses for 2010. Since we cannot pinpoint the allocation of these expenses, we will estimate that their manufacturing employees labor costs accounted for approximately \$14million¹⁰. We expect our international headquarters to be smaller, and thus only have 70 labor employees, with \$462,000 in yearly labor costs.

We then assume that the \$70 million in other costs can be reduced through India's cheap labor force. Annual salaries for junior resources range from \$5,000 to \$9,000 US dollars while senior resources range from \$17,000-\$40,000. Tesla has 686 non-manufacturing labor employees in the US¹². We also assume the international headquarters will require 200 non-manufacturing labor employees total with 20% being senior resource managers. We then take the high end of the range for the given Indian salaries because our product requires a higher knowledge of skill and knowledge. This means 150 junior resources earning \$9,000 per year with 50 senior resources earning \$40,000 per year.¹³ This results in \$3,350,000 in annual labor costs for Indian workers. We will also add another \$1.5 million on top to compensate US transfer employees who will play a critical role in the total oversight, training, and daily operations in the India headquarters. This results in \$4.85 million in non-manufacturing labor costs.

Historical Trends for Chennai India

Major players such as Hyundai, Ford, Nissan and BMW have already established manufacturing plants in Chennai, which is considered by many to quickly becoming the "Detroit" of India.¹⁴ Compared to establishing a manufacturing plant in China, one expert says, "in lower-volume manufacturing where technology use is more intensive, then India is better".¹⁵ Since Tesla uses proprietary cutting edge technology and is targeted towards more affluent individuals, you fit especially well into the low-volume, technology intensive criteria. Additionally, India's average return on investment has historically compared favorably to China's with a five basis point difference at 19%.¹⁶ Both of the following trends largely link back to the high quantity of quality workers in India that attract high-value manufacturers.

Since there are over dozens of major automobile companies with manufacturing plants in Chennai, there are

already highly developed trade links to Europe, Africa, and Asia. Although the ports are very congested in India, Indranil Chowdhury of Volvo says “we find that if you have the right clearing agents, you can ship cargo.” By learning from our competitors, Tesla should be able to quickly adapt to navigating India’s export system as well cut costs through accessibility of new component supplier networks.

Tesla will receive benefits from the many factor endowments that the area possesses. Porter’s diamond reveals that being placed in an area with many related industries will result in cost savings and allow us to produce better output. 17 In addition, the rivalry of competing firms will force us to constantly innovate and prevent us from being lulled into stagnation. The supporting factor conditions in India, which consist of over 1500 engineering colleges¹⁸ and a growing working age population, will also allow us a large pool of qualified candidates to select from. The automobile demand conditions will allow us to spot out trends for electric vehicles in less developed countries as well as potentially capitalize on India’s market if we notice an opportunity. According to the OLI framework, all of the aforementioned factors regarding the benefits of Chennai’s location support our decision for a foreign direct investment in India.

Legal Framework

Our government has made it very easy for foreign companies to set up an automotive plant in our country. Industrial licenses are not required and thus there will be no barriers into our market entry. An FDI of 100% is allowed under the automatic route¹⁹ and additional incentives are granted to set up units in certain areas. Since Chennai falls under the Mahindra City area for Special Economic Zones (SEZ), we will be receiving 100% corporate tax exemption for the first 5 years and 50% corporate tax exemption for the next 10 years²⁰. Also, business’s investing over Rs 4000 cr over seven years, or approximately \$78 million USD, receive special incentives from the government such as tax cuts, easy land acquisition, and speedy implementation times for projects.

The official business government website of India is very transparent and adamant for their support of investors. They state that , “An effective regulatory and legal framework is indispensable for the proper and sustained growth of the company.”²² The Companies Act in 1956 and Companies Bill in 2004 have each been revised numerous times in order to provide clear interpretation for foreign businesses and put in place a legal framework that supports rapid economic growth. Combined with the support of the Securities and Exchange Board of India for foreign investors, India clearly stands out as a country who has one of the best legal frameworks to protect investments, facilitate growth, and support foreign investors.

Threats to Entry

Although the UNCTAD World Investment Prospects Survey 2007-09 deemed India the second most favored FDI destination following China²³, there are still barriers to entry. First, India’s infrastructure and poverty pose the biggest threats to entry. Power, road, rail, and port infrastructure are poorly maintained or non-existent, thus raising cost of production and lowering efficiencies. For instance, unreliable power is a common problem in India. “On average a company can expect nearly 17 significant power outages per month, against one per month in Malaysia and fewer than five in China.”²⁴ To compensate, many companies incur the cost of maintaining their own private power supplies. In addition to power, transportation is inadequate. Many of the roads are narrow, congested, and poorly maintained. In 2007, only 41% percent of roads were paved²⁵. India’s poor infrastructure could affect Tesla’s ability to efficiently manufacture and transport automobiles.

Also, bureaucracy and corruption have proven to be problematic while doing business in India. Bureaucracy and corruption hinder FDI by increasing costs of doing business, altering the allocating of resources, and wasting valuable time. Regarding bureaucracy, foreign businesses have reported that investment decisions and approvals by Indian government ministries can drag on for long periods of time for no apparent reason. Additionally, over the past few years, many government officials have been condemned under Indian anti-corruption laws²⁶. According to Transparency International, India is ranked 87 on the Corruption Perceptions Index 2010²⁷. To help you understand the implications of the ranking, the United States is ranked 22nd and Mexico is ranked 98th. To overcome the India’s obstacles, we recommend Tesla to locate in a SEZ to avoid issues with infrastructure and

unreliable administration and bureaucracies.

Automotive Industry and Regulations

“The auto industry in India has really matured. We are very upbeat about India, because we have been growing fast and we think we will go on growing fast.” -Indranil Chowdhury of Volvo.

India’s Automotive Industry has seen great growth in recent years. India’s automobile exports totaled \$1.5 billion in 2009. The United States auto component exports to India grew from \$210 million in 2004 to \$437 million in 2009²⁸. These figures demonstrate to Tesla that to facilitate expansion, India has implemented automotive policies that are conducive to foreign investment and Tesla’s business objectives. Since 2001, India has reduced import restrictions and opened the market. Also, India implemented the Automotive Policy of 2002. The policy permits 100% foreign ownership of automotive and automotive manufacturing firm without a minimum investment. The policy addresses import tariffs, and India’s objective to reduce the high tariffs. In 2003, tariffs were reduced to 30% and in 2005 they were further reduced to 15%. Moreover, in the Automotive Mission Plan 2006 - 2016, the vision statement states “To emerge as the destination of choice in the world for design and manufacture of automobiles and auto components with output reaching a level of \$145 billion accounting for more than 10% of the GDP” ²⁹.

As mentioned above, India further caters to the automotive industry through the creation of Special Economic Zones. The SEZ attract foreign investors by offering tax incentives, access to reliable infrastructure, and assisting with bureaucratic and administrative problems.

Economic Fundamentals and Principles- Government/Politics

The government of India is officially know as the Union Government and was established by the Constitution of India. India is home to the world’s most populous democracy and remains committed to the principles of democracy and rule of law³⁰. The political stability of a democracy creates an atmosphere that is conducive to investment, thus eliminating political risk. Although, India’s government promotes democratic ideals, there are still a few issues the government needs to address.

Economic issues that stem from government policy or lack of policy are problematic. For instance, India has little infrastructure, which is needed for long-term investments³¹. Also, corruption and bribery are common practice in the Indian government. The high amount of corruption can increase the cost of doing business and instill mistrust of government officials.

Economy and Financial System

Since the liberalization reforms in 1991, Indian has experienced exponential economic growth. By 2006, India’s growth rate in terms of GDP was 9.2%, second to China. Also, India experienced rapid growth in trade, especially in the manufacturing and service industries. From 1995 to 2005, total merchandise trade and imports of services almost tripled, and exports of services quadrupled³². During the deregulation, the economic policy transformed from extremely restrictive to moderately liberal. The new economic regime encourages FDI in almost all economic activities and provides a variety of incentives for foreign investors. Additionally, second generation reforms are aiming to further integrate Indian economy with global economy³³. India’s new economic policies and accelerated growth provide an ideal environment for Tesla’s objective.

In recent years, India’s financial system has proved to be sound. For instance, during the U.S. economic crisis of 2008, the central bank of India remained relatively unaffected. “India’s banks and financial institutions have not experienced the kinds of losses and write downs that even venerable banks and financial institutions in the Western world have faced.” ³⁴During the deregulation in the 1990s, we restructured our financial system, resulting in a stable and reliable financial system. In regards to the banking system, Indian banks are owned by the public sector (e.g. state and institution owned banks). The public owned banks create a greater feeling of among our depositors. Our financial system has been deemed “wise,” yet there is still criticism. Although we are deregulating our investment policies, many countries, such as the U.S., believe we are moving too slow and not taking enough risks³⁵.

Exchange Rates

India's exchange rate regime with respect to most foreign currencies is floating. However, the U.S. dollar and Indian rupee exchange rate regime is categorized as a "managed float"³⁶. A managed float reduces currency value fluctuations and transaction costs. Due to the changing nature of the market, Tesla will inevitably incur transaction costs when transferring profits to the United States. The transaction costs are a result of market shifts and exchange rate fluctuations. Even the smallest change will create transaction costs because a dollar today is not the same as a dollar tomorrow. Figure 1 lists the USD/IND exchange rates from 2006-10.

Over the years, India has encountered high inflation. For example, in November 2010 and September 2011, the inflation rates were 8.6% and 10.06%, respectively. Additionally, the inflation rates have proven to be unstable. Figure 2 demonstrates the volatility of the Indian inflation rate.

Figure 2

Initially, the high inflation rates will make India an ideal location for Tesla. The India rupee depreciates with inflation causing the U.S. dollar to appreciate, meaning the U.S. dollar has greater value in the Indian economy. This will reduce Tesla's initial costs because investing in India will be cost effective. However, high inflation rates are not conducive to foreign long-term investment. If inflation continues to increase, the value of the Indian rupee will decrease, resulting in lower returns for your company³⁷. Fortunately, the Indian government is working to alleviate the inflation rates in the future, which will be advantageous for Tesla's long term profits³⁸. In regards to the volatility, the unstable exchange rates cause uncertainty, however the fluctuations are not large enough to impede Tesla from entering India.

US/Indian Trade Relations

The United States is one of India's leading trade partners. India's exports to U.S. have increased dramatically. The value of these exports has more than doubled from \$9.3 billion in 2000 to \$18.7 billion in 2005. U.S. exports to India in 2007 totaled \$17.5 billion, a 75% increase from the year before. India and the United States have recognized the mutual benefits of working together and are committed to improving trade relations. Since 2004, they have formed a "strategic partnership" based on similar values and overlapping interests. From 2000 to 2006, India's total trade with the United States increased from \$12.2 billion to \$28.6 billion³⁹. In 2006, the U.S. President Bush and Indian Prime Minister Singh agreed to combine efforts to double bilateral trade agreements in three years. Since Bush, President Obama has continued to cultivate relations with Singh. In 2010, Obama and Singh signed numerous trade and defense agreements. The trade agreements were signed to facilitate business developments in India⁴⁰. The positive trade relations between the United States and Indian will foster a healthy

business environment that is conducive to Tesla's company strategy.

Culture

India is a very diverse nation and is host to hundreds of different ethnic groups, religious sectors, races, and social castes. We have 21 official languages including: Hindu, Urdu, Tamil, and English⁴¹. To Tesla's advantage, English is the official language of business⁴². Also, English is the primary language of instruction in institutions of higher education. This means that most educated Indian workers will be proficient in English, thus breaking the language barrier between Tesla's U.S. and Indian employees. The business culture of India is quite different than the United States. The Indian way of life and work are often interwoven. Religion, fatalism or "karma", and collectivism are central to the Indian culture inside and outside the workplace. Collectivism or a strong sense of community will have the greatest implications on Tesla's business. Friendship or clanship is highly valued, which is contrary to the U.S. emphasis on the individual. This group dynamic creates a greater acceptance of hierarchical settings, thus influencing the management style⁴³. In most companies, the most senior executives make decisions in a non-participatory way. So, even if an executive makes an incorrect order or decision, the employees listen without opposition. Knowing this information, we recommend Tesla place special attention on the hiring process of the future manager.

When hiring the Head of International Operations in India, the first consideration is whether to hire local or within Tesla. There are advantages and disadvantages in both cases. An Indian manager will understand the local culture, policies, and language, thus making him or her a valuable asset to Tesla. However, a local manager may not uphold or follow Tesla's business vision and strategies. On the other hand, a Tesla manager would understand the inner workings of Tesla operations and act as a liaison between the U.S. and India. Yet, installing a U.S. manager may result in conflict between Indian employees and management. Since this is your first installation of a foreign manufacturing operation, we recommend employing a U.S. manager. With a U.S. manager, Tesla will have tighter control of quality control, R&D, and company transactions. Additionally, since the headquarters in Chennai would concentrate on operations, local know-how is not as advantageous as it would be for marketing. Furthermore, we encourage employing a candidate that has demonstrated great personal ethics, so he or she can lead by example and create a productive and ethical organization culture.

Ethical Considerations

As mentioned before, corruption and bribery are common practice in India. As Tesla has found, bribery works well. The U.S. Foreign Corrupt Practices Act (FCPA) has outlawed bribes to foreign government officials in order to gain business. We suggest that Tesla should adapt a zero tolerance policy, similar to BP⁴⁴. This will produce an ethical organization culture, and protect Tesla's global reputation. To further promote high ethical standards we recommend implementing a Code of Conduct. The Code of Conduct would include a decision making process to ensure all company decision are ethical. The launch of our manufacturing plant has certain ethical and unethical aspects involved as well. The Kant view would believe that we are using low-wage workers as a means to achieve greater profitability and thus qualify our decision as unethical. On the other hand, it can be seen under the Utilitarian view that our plant will create jobs for Indian workers and help boost the GDP as something that could potentially outweigh the costs of our business, primarily pollution. Since we are paying our workers a fair wage and will not be emitting excessive amounts of fuel relative to other businesses, there should be little media back lack in regards to our ethics, despite not necessarily passing the tests in the Kant and Utilitarian perspective.

Financing Expansion into India

In March 2007, BMW began production at their automobile manufacturing plant in Chennai, India with an initial capacity of 3,000 cars per year⁴⁵. They initially invested approximately US \$22 million dollars into the facility and have since expanded their facilities to accommodate for production capacity of 11,000 cars⁴⁶. Due to their high recent sales in the Indian market and their bullish outlook on future domestic sales, BMW will be building an extension to their current plant in order to achieve higher production capabilities. As a result, BMW has agreed to sell us the original portion of their manufacturing plant which we will use as our international headquarters. The initial factory, which BMW invested \$22 million, has since depreciated over the course of its life to \$14 million.⁴⁷ BMW is also planning on moving \$4 million dollars worth of equipment to the new sector of their plant and thus have agreed to a potential sale price with us of \$10 million dollars.

Assuming a \$2 million dollar down payment on the project and a required return rate of 10%⁴⁸ our annual payments thereafter are approximately \$2.1 million each year for 10 years, starting a year after purchase. Although BMW has agreed to sell us a portion of their left over equipment, we estimate that renovations, building a wall separating the two companies, transfer of operating permits, transfer of emission credits, and buying new assembly equipment will cost us an additional \$8 million dollars. We will be able to finance this through the money remaining from our June 2010 IPO that netted us \$184.5 million.

Motives for Expansion into Singapore

Singapore has the world's highest percentage of millionaire households, with 15.5 percent of all households owning at least one million US dollars. These high-income households are the target consumers for the Tesla Roadster. Furthermore this consumer base is also very concentrated due to the population density of Singapore, which allow for cost efficient marketing. For example, billboards would have greater reach and word of mouth travels much faster in such a dense population.

Singapore is the crossroad of businesses worldwide which serve as an excellent location to raise Tesla's international brand equity. Executives on their business trip would recognize the brand and carry a positive word of mouth back home to their respective country about the Tesla Roadster where demand would follow. This would be the ideal outcome for international marketing.

Automotive Industry and Regulations

Singapore's auto industry is one of the largest and most sophisticated in Asia. It is considered one of the "cleanest and greenest" countries with one of the highest standards of living in the area. This is due to a highly industrialized business sector, multinational companies, excellent port facilities and land communication systems, as well as airports and sea links connecting the country to the entire world.⁵⁰ Located at the crossroads of international shipping and air routes, Singapore has a very strategic location on major sea-lanes.⁵¹ Basically, it is the center for transportation and communication in Southeast Asia.

Automotive Industry

The per capita car ownership rate in Singapore is 12 cars per 100 people. This is small compared to that of the United States, at approximately 78 cars per 100 people.⁵² However, Singapore's passenger car market and sales have been on the rise, as seen in Figure 3.⁵³

Figure 3

Source: Frost and Sullivan

Since Singapore is also very environmentally conscious and mainly composed of urban drivers with lesser driver range (due to the size of the city-state), it will likely prove as a feasible market for electric vehicles in coming years. Currently, Japanese car manufacturers have the largest market share in Singapore.⁵⁴ Japanese cars tend to be more environmentally friendly and smaller in size than most, making them very desirable vehicles in Singapore. Our Roadster is similar in that it is an electric vehicle, but it's differentiated in the fact that it is a high-performance sports vehicle, making us appeal to more high-end consumers.

Automotive Regulations

As previously addressed, the Singaporean government places a 100% tax on car imports into Singapore, which we hope to reduce by negotiating a green tax incentive due to the fact that our Roadster is extremely environmentally friendly. The Special Green Vehicle Rebate provides buyers of electric vehicles with a discount of up to 40%.⁵⁵ This rebate reduces the price of cars by a substantial amount for customers and gives them a huge incentive to buy our electric vehicles. There are a number of vehicle exhaust emission standards in Singapore, established by The Pollution Control Department (PCD) of the Ministry of the Environment.⁵⁶ Fortunately, electric cars don't emit CO₂ and thereby our Roadster has already met these standards. In terms of the possible hazardous material within an electric vehicle's battery, the Tesla Motors Lithium-Ion cells are not hazardous and are landfill safe. (Ed. Note: This has been proven to be a lie) The battery packs can also be sold to recycling companies to be recycled at the end of its +100,000-mile lifespan.⁵⁷

The Land Transport Authority, a department of the Singapore government, is making measures to reduce the amount of vehicle use in the country. These regulations that are designed to limit car ownership include the need for a Certificate of Entitlement (COE), which is an expensive certificate with its price based on engine size, sometimes as much as \$60,000. Singaporeans bid for the right to own a motor vehicle, and if granted a COE, are allowed to own a car for 10 years, after which they would have to bid for another COE. Since the Tesla Roadster is a luxury vehicle, it appeals to the wealthier residents of Singapore who probably don't mind paying this fee, since they would most likely already own a car. Although the Singaporean government places restrictive measures to reduce the number of vehicles on Singapore's roads, we strongly feel that Tesla could overcome these limits and become a very desirable possession for wealthy Singapore residents.

Economic Fundamentals and Principles

The economy of Singapore is a mixed economy known as the Singapore Model. The Singapore Model strongly advocates free market policies and practices, but involves ample government intervention. This is due to the fact that Singapore has a relatively small domestic market and therefore has to open itself to external markets in order for the economy to thrive. The purpose of Singapore's government intervention is to safeguard the country from fluctuations in the global market.⁵⁹ While government intervention might make managing a hassle, it demonstrates that Singapore is stable and open to foreign markets, and would undoubtedly welcome our appearance. Singapore's corrupt-free government, advanced infrastructure, and skilled labor force has attracted over 7,000 multinational investments from the United States, Europe, and Japan.⁶⁰ This means by investing in Singapore we would be entering a highly developed, non-corrupt, and well-structured investment world, guaranteeing stability and success. Since Singapore is very welcoming to external markets, we would recommend Tesla invest in a showcase store for direct sales, marketing, public relations, and services. We would not recommend more than one store since Singapore is a city-state with expensive land, and we are only targeting a specific market; also, most purchases are made online and shipped in. However, if the market proves to be lucrative, additional stores can always be opened.

Analysis of Ownership, Location, and Internalization

In terms of Dunning's OLI framework, we should not license, but instead own our own store in order to keep an owners advantage, since we don't want our trade or marketing secrets to leak out. The location advantage of Singapore has already been addressed; it is the center for transportation and communication in Southeast Asia and therefore an excellent market to enter. It is also much closer to India than the United States, thus reducing transportation costs by shipping to Singapore from India. Singapore also has a skilled, cheap labor force, which will reduce our costs and needs to train employees. Internalization (selling directly from Singapore as opposed to only online/from abroad) provides another way to reduce potential technological leakage. It also reduces potential for conflicts of interest and gives us an actual physical presence for our customers, as people would be able to walk by our storefronts and see our cars, as well as test-drive our cars.

Exchange Rate

The Monetary Authority of Singapore (MAS) manages Singapore's managed float exchange rate. It manages the Singapore dollar (S\$) exchange rate to prevent extreme fluctuations by maintaining it within an undisclosed target band. The Singapore dollar is allowed to appreciate and depreciate on factors such as world inflation and domestic price pressures. This means that its value changes with the world market, and in turn is the safest type of exchange rate to have to do business with. Since 1981, the Singapore dollar has been appreciating against the US dollar, as seen in Figure 4 below. While this means it would cost us more to invest now than before it would have before, it is one of our more inexpensive markets, compared to those we have entered in Europe. Figure 4 also shows how the Singaporean economy is growing steadily, indicating it is a financially stable market to enter.

Figure 4: Comparison of Singapore's GDP and Exchange Rate

Source: <http://www.imf.org/external/pubs/ft/weo/2006/01/data/dbcseim.cfm?G=2001> "World Economic Outlook".

Trade with the United States

Currently, the US is Singapore's largest source of foreign investments, with over 1,500 US firms operating in Singapore, accounting for 11.2% of new foreign investments in the manufacturing sector in 2008.⁶² Singapore is also among the 15th largest trading partners of the US. Within the last year, US trade with Singapore has also been on a rise as seen in Figure 5 below. In 2003, the United States signed the US-Singapore Free Trade Agreement, which lowered tariffs and fostered a deepening of the bilateral relationship.⁶³ This is beneficial to Tesla in the sense that US-Singapore trade is in good standing and planning on improving. Therefore, you won't have to worry about the development of poor trade relationships.

Figure 5

Source: <http://www.census.gov/foreign-trade/balance/c5590.html> "Trade in Goods with Singapore".

Culture

The four official languages of Singapore are Mandarin, Malay, Tamil and English.⁶⁴ It would be good practice if we could adopt a native speaker of each language in our Sales offices so we can appeal on a more personal level with our potential customers. This would make developing rapport with our customers easier and hopefully result in greater sales figures. Singapore also has a large blend of people from Malay, Chinese, Indian, and European descent. To adapt to the wide array of cultures in the area, we will prepare a report for our sales team that covers the main cultural differences of potential customers and gestures that could possibly be determined as offensive. We believe that Tesla can maximize sales and avoid cultural miscommunication through these two policies.

Ethical Considerations

Our ultimate reason and end goal for choosing to market in Singapore comes down to profitability. We would be acting unethically under the Kantian view because we are ultimately using the wealthy members of Singapore as a means to an end. However, under the Kantian view, nearly all businesses with the exception of non-profits can be argued as being unethical. While businesses can strive to promote environmental causes or support human rights movements, ultimately no business can exist without achieving profits. Therefore, I believe the best metric to judge the ethics of our decision to enter Singapore would be the Utilitarian viewpoint. Under Utilitarian ethics, which state that consequences determine the moral worth of our actions, our electric vehicles provide an extremely valuable social benefit to the country. The sales of our vehicles and their use will reduce carbon emissions and help decrease smog in a country that ranks 6th in the world for tons of carbon per person.⁶⁵ We are also marketing our vehicles towards the wealthy, so the costs of our business decision are minimal in terms of reducing the quality of lives for our customers. Since the environmental benefits we provide their society greatly outweigh the costs of the profits we receive from their wealthy consumers, our decision to launch a sales effort in Singapore is very ethical under the Utilitarian viewpoint.

EV Test Beds

Singapore launched its electric vehicle test-bed in June 2011 to decide whether it is feasible for mass adoption. Chee Hong Tat, chief executive of the Energy Market Authority (EMA), is optimistic about the EV test-bed as it could help Singapore "push towards a cleaner, greener and more sustainable transport system, and a better living environment." To make this test successful, they are inviting the private sector players to participate in the development and testing process. This is an opportunity for Tesla to introduce the Roadster to Singapore as well as build brand equity through the media coverage. Furthermore, the participants are exempt from vehicle taxes, road tax, and excise duty for the purpose of research and development. The tax waiver will last for an initial period of six years. This is an incentive to encourage more participation from companies interested in helping Singapore achieve a better living environment through green technology. ⁶⁶

Financing the Expansion into Singapore

The majority of your orders are made via website or by phone so the cost of capital to enter Singapore is very small. However, it would be beneficial to set up a few stores/showrooms for direct sales if this market proves to be profitable. Base on your 10-k, it seems like you are more than capable of opening at least one store in Singapore using the cash on hand. Loans and IPO's are not necessary for the expansion into Singapore.

We do not want you to put out substantial investments until we can be sure that Singapore is a place where your marketing effort pays off, therefore we finance the expansion first an investment in market assessment, which you are currently doing by hiring us. The next step is e-marketing to leverage search engine optimization and search engine marketing to increase visibility. The cost of both is fairly low. If there is potential, then brand building is the next step, which is more costly. A showcase store/office with a sales force and managers is needed in order to effectively develop Tesla's brand through advertising and public relations in order to create customer relationships and encourage positive word of mouth. Taking into consideration the land and building costs, as well as taxes and overhead, the annual costs would fall within the range of \$1.3 to \$2 million with a \$4 to \$6 million initial investment. We estimate the unit sales of the Tesla Roadster to be 70 cars per year with the tax exemption and 55 cars with tax incentive (40% rebate). Depending on whether you can obtain a tax exemption or just a tax incentive, Tesla will break even in 3.5 years and 5 years respectively, assuming consistent sales number for the Roadster and a 20% profit margin. If we incorporate the sales of the Model S, starting in mid 2012, we expect the break-even point to be lower and Tesla to start seeing profits in the Singapore market by the end of 2015.

Porter's 5-Force Analysis

Barriers to Entry

Cultural differences have a significant influence in the way that we market our product and can be a major obstacle to your entry. The Singaporean consumers are very skeptical to embrace new technology especially in terms of automotive application. They are highly selective due to the high cost of owning a vehicle in Singapore because of all the taxes and license costs. To overcome this barrier, we must positively shape their preference and attitudes towards high end electric to justify the high investment. Government support is crucial in doing so. Luckily, the government of Singapore is pushing towards greener technology such as electric vehicles by offering green incentive taxes and launching the EV test-beds. We believe the EV test-beds will be successful, initiating the next generation of energy efficient vehicles in Singapore. Therefore, the threat to entry is moderate.

Competition

The competitive environment in Singapore is similar to that of the United States with the major players being Toyota Motor Corporation, Honda Motor Co., Ltd., Hyundai Motor Co., and Kia Motors Corporation. They are competitors in the aspect that they all offer at least one type of energy efficient cars, whether it is hybrid or electric. Tesla is further differentiated by being a high performance electric car with a higher price tag, but this in turn creates more competition for Tesla as they are now also competing with sports cars like Ferrari and Porsche. The biggest advantage the competitors have over Tesla is brand recognition. Consumers do not simply spend over \$110,000 on a car they never heard of. We evaluate the threat of competition to be high.

Buyer Power

Since the Tesla Roadster is considered a luxury good, the demand is very inelastic so consumers are willingly to pay the high price. Furthermore, there is no similar class of car like the Roadster so there is no basis for the consumer to negotiate with. Unless they buy in mass quantities, the buyer power is low.

Supplier Power

The major supplier in this case is human capital. Motivated sales people and managers are crucial for effective marketing. They affect the success of Tesla in Singapore. Sales people can be trained, but a good sales manager is hard to come by. Assuming that the Singapore market is successful, the manager would have high bargaining power later on but for now it is low.

Substitutes

An alternative to Electric vehicles can be hybrid vehicles or even public transportation in the broad sense of environmental friendly transport. In terms of an electric sports car, there are no substitutes. It highly depends on your qualification for viable substitutes. We came to the conclusion that the threat level for substitutes is moderate due to the likelihood that your high end consumer base demands personal vehicle over public transportation.

Recommendations- India-Recommendation for operational expansion

Based by on your financial report, we noted Tesla has sufficient savings to invest in an acquisition of BMW's manufacturing plant in Chennai, India. We believe this is the fastest way and most cost effective way to start up our production abroad of the Tesla Roadster as well as the Model S early 2012. We recommend Tesla purchases BMW's manufacturing plant for NPV \$10 million, which can be financed over the course of ten years. The manufacturing plant will operate as Tesla's international headquarter where it will serve as a central distribution center for our shipments to Asian, African, and European markets. Purchase of the plant will allow you to take immediate advantage of being placed into an Special Economic Zone (SEZ) where we can avoid certain risks associated with entry and quickly begin production of our vehicles overseas. The proposed agreement in place with BMW will meet our target required return rate and provide us with a projected net present value of \$5.7 million (please see attached excel spreadsheet and appendix for details). We should make this purchase swiftly to start receiving the immediate benefits of reduced operating costs. In regards to hiring our Head of International Operations, the higher up positions such as VP of manufacturing and VP of research and development, we recommend promoting from within Tesla to ensure that we can maintain our strategic vision and consistent operating procedures. To address the cultural differences, we suggest hiring seasoned managers from within India to oversee the work of local manufacturing laborers and serve as a connection between laborers and the executives.

Singapore- Recommendation for marketing expansion

We highly recommend using the EV test beds as an entry method because the tax waiver would significantly lower the price of the Roadster to around \$110,000 as opposed to \$220,000. This would make it more accessible and appealing to the target consumers. With a \$220,000 price tag, the threat of substitutes and competition are much higher. At that price you are competing with Ferrari and Porsche, who have much higher brand recognition in Singapore than Tesla. It is crucial for Tesla to have a price advantage to be competitive given your lower brand recognition. It is also a strategic move to increase brand equity through media coverage and government support. The media and government of Singapore have a strong influence over its citizens and will have an important role in the success of Tesla in Singapore. The EV test beds is an opportunity for Tesla to demonstrate its willingness to help Singapore achieve a greener tomorrow and develop a network of supporters to propel Tesla through Singapore's tough automotive market. After the initial effort to promote Tesla through the EV test beds, the next step is to open up an office/showroom in Singapore with a mechanics, sales force, and managers directly in charge of servicing, public relations, and marketing. This store is wholly owned like any other Tesla showrooms, however it is important for the manager to understand Singapore's culture to effectively market to target consumers, establish relationships with consumers, and train the sales force. The manager should be hire locally, someone who really knows how to navigate the Singapore market and understand the consumers. This initial investment would cost approximately \$5 million, which includes the cost of land, building, licenses, and taxes. Annual costs would be higher in the beginning because of the initial amount of marketing and that comes to about \$2 million. The projected sales of the Tesla Roadster and Model have a growth rate of 3% and 7% respectively. These are conservative numbers and could change depending on our marketing efforts. Tesla should achieve a net present value by the end of 2015.

Appendix

Financial Model Assumptions and Calculations

We used \$110,000 for our price of Roasters and \$60,000 for our model S price.

Revenues from India Sales

We do not have a marketing plan in place for India or intend to immediately start selling vehicles. We do plan to start selling automobile vehicles in India starting in 2016, after the AMP agreement is completed and the countries infrastructure has improved. At the moment, we plan on selling these vehicles through online orders, and thus do not incur any additional costs. We estimate they will sell 10 Roadsters in 2016, increasing by 10% per year. We estimate they will sell 50 Model S, increasing by 20% per year.

Revenues from Singapore Sales

Although there is a 100% tax rate on vehicles imported into Singapore, we add this completely onto our car sales price, thus not affecting our profit per car. So we essentially ignore this tax in our financial report since the additional amount we earn in revenue, immediately gets deducted as a cost. Roadster 35 cars increasing by 3% each year over the span of 10 yrs. For the Model S, 110 cars increasing by 7% each year over the span of 10 yrs starting in mid 2012.

Revenue from rest of Asia, Africa, and Europe

Although we currently sell to these markets, we will count our cost savings from delivering cars with a closer production facility to be revenue when determining the NPV of this decision. We estimate a savings of \$200,000 dollars a year with a growth rate of 9%

Additional Revenues from rest of AAE sales

We expect additional sales to these markets of \$25 million per year with a 10% increase.

Cost of Labor

See calculations in article

Cost of Factory Automotive Sales

We factored in costs as 80% of sales. This is reasonable based on the financial reports from Tesla's annual report which reported approximately \$97 million in annual sales with costs of \$86 million for 2010. The lower cost of sales can be attributed from cost savings in India.

Building payment

We used \$2 million annual, based on calculations from earlier.

Depreciation

We used straight line depreciation of \$1 million dollars per year.

Income tax

The effective foreign corporate tax rate in India is 42.23%⁶⁸. SEZ's in India have a 100% corporate tax exemption for first 5 years. 50% corporate tax exemption for the next 10 years.

Capital Expenditure

Based on calculations made earlier, we came up with an initial investment cost of \$10 million.

Discount Factor

In both our negotiations with BMW and our own projected calculations, we have decided to use a required return rate of 10%, rounded up from 9.8% which is the historical average for the S and P 500⁶⁹.

<http://money.cnn.com/magazines/moneymag/money101/lesson4/index.htm> "Investing Basics" Accessed Nov 20 2011

AN OPEN LETTER TO TESLA MOTORS: (Public Response Required!)

Elon Musk, CEO, Tesla Motors, 3500 Deer Creek, Palo Alto, CA 94304, (650) 681-5000

Dear Mr. Musk and The Tesla Board of Directors:

Recently; Numerous ex-Tesla staff and contractors, former suppliers, federal investigators, investigative reporters, investors and ex-partners of Tesla Motors have provided facts about Tesla Motors which are disturbing to the public, Congress, and the market. Please provide clarification of the following charges and concerns in order to resolve outstanding issues between the public and Tesla Motors :

- Are Tesla and Google, essentially, the same entity by virtue of the same investors, agenda and stock market manipulations?*
- When damaging news about Tesla emerges, do Tesla and Google investors place multiple stock-buy orders from a multi-billion dollar slush fund in order to make it appear that individual outside investors are excited by Tesla when, in fact, it is only a small internal group of investors “pumping the market”? Does Google “bury” any negative stories about Tesla in their searches on orders from Tesla/Google investors? Is that a violation of securities laws?*
- It is said that the Tesla Model S has the most surveillance devices to watch, track, listen-to and broadcast the activities of the occupants, built into it than any other car in the world. Elon Musk has personally told reporters that his cars constantly watch the driver and occupants. Why is that? Why are Tesla and Google obsessed with spying on the public?*
- In multiple recorded interviews, Elon Musk is on public record telling the news media that, after careful research, the NUMMI plant in Fremont California would be a very bad choice for Tesla? Why did that suddenly change? What participation did Senator Dianne Feinstein and her husband’s real estate Company CBRE have on that decision and the award of the loan to Tesla? Why do Senator Feinsteins staff now work for Tesla? Why did Glenn Greenwald call Feinstein’s actions “suspicious”? What political support or funding did Tesla or Google provide to any related political officials?*
- From 2008 to 2010 numerous competing electric car companies have charged that Tesla Motors placed Tesla Motors “moles” inside of their companies to intelligence-gather and cause disruption. Is that true?*
- Google and Tesla motors share the same venture capital investor groups and alliances. Numerous expert at Tech-Crunch, Valleywag and other industry journals have published articles about the fact that those VC’s actively collude with each other to lock competing technologies and companies out of the market and create business monopolies. Did Tesla investors and associates participate in such activities? If so, would that not be a violation of SEC laws?*
- Did Tesla and/or Google reward certain politicians with campaign funding, web promotion, revolving door jobs for staff, and other incentives, in exchange for “hot-tracking” State and Federal taxpayer money for Tesla Motors?*
- While other companies built consumer priced electric cars before and during Tesla’s existence, why did Tesla choose to build an unaffordable car and position the marketing of it to “the 1%” when the money for that car came from the 99% taxpayers?*
- Numerous cities were told that they would have the Tesla car factory and then they stated, or sued Tesla, saying Tesla acted “in bad faith” and “used false and misleading information” to induce them to provide assurances which were used to pump the stock market. Why did Tesla lead so many cities on?*
- The factory that builds your batteries and the U.S. Government states, in their formal technical documents, that when Tesla batteries are on fire they emit lethal, brain-damaging, carcinogenic, liver, lung and DNA damaging fumes and smoke. Why do you not inform the public of this danger in your literature?*
- Lithium ion production kills and terminally sickens workers overseas. Multiple Tesla*

workers have been burned alive at your factory. OSHA has launched an investigation. What have you done to prevent the accidental and long term injuries to your staff and contractors?

- Bernard Tse, and other main Tesla Engineering staff including: electric engineer Doug Bourn, electrical engineer Andrew Ingram, Brian M. Finn, senior manager of interactive electronics and George Blankenship; while investigating battery purchases for Tesla Motors, received numerous white-papers and technical documents from LG Chem, Panasonic and the U.S. D.O.E and vast numbers of other battery-makers which specifically stated that lithium-ion batteries would be “stressed” and “likely to combust” when used in the configuration which

Tesla intended. They stated that the batteries were “not intended for use in cars”. Why then, did Tesla still use them? What effect did the monopolistic ownership of lithium ion mining and manufacturing resources by Tesla and Google investors have on the decision to use lithium ion?

- Is it not a fact that a majority of your cars have been sold to your own investors or associates who act as “fluffers” against any bad PR?

- In multiple recorded interviews, Elon Musk is on public record stating that, at the time of application for the DOE loan Tesla was on the verge of bankruptcy. The DOE loan was mandated under a Federal law known as Section 136. This law stated that no car company could receive money if it was on the verge of bankruptcy. Past accountants of Tesla have stated that Tesla was on the verge of bankruptcy at the time of the loan application. Numerous Tesla staff and contractors have verified this. Did Tesla commit a felony and acquire “unfair advantage” per the GAO?

- Relative to the number of cars sold, why has Tesla had so many Tesla drunk driver related crashes, deaths and homicides. Why are Tesla drivers killing innocent pedestrians simply because the Tesla’s “smell bad”?

- Psychographic, demographic and marketing studies have been published showing that Tesla drivers have a higher-than-average inclination towards drugs, strange sexual behavior and risk. Could this account for the number of Tesla crashes and deaths?

- Is it true that safety testing was done on Tesla cars without fully charged batteries and in a moisture-locked environment because Tesla staff knew that fully charged batteries and moisture in a crash WOULD cause a fiery explosion, as they already have?

- Is it not a fact that Google deletes, or hides any bad PR about Tesla on it’s network? Would this be considered stock market manipulation in violation of SEC laws?

- Numerous periodicals, including Valleywag, document the fact that Elon Musk sends spy emails to his employees, each with a few words changed in order to track them and see who might reveal anything damaging to regulators?

- Who are all of the property holders and lease-owners of the Tesla and Solyndra, past and current, real-estate?

- According to DOE staff, who were at DOE when the Tesla application was submitted, nothing that Tesla submitted was ever built by Tesla. In fact, these staff state that the vehicle that Tesla eventually sold was not even designed or engineered when Tesla was approved for the loan money, contrary to the Section 136 law requirement. They say that Tesla took the money and THEN hired people to figure out what they were going to do with it. As shown in the DOE files, the engineering of the shipping Tesla cars has no element that was submitted to

DOE. Is that true?

- Elon Musks wives and founders have filed lawsuits and made public statements that he is a fraud and coerced them into participation. Is it proper fiduciary practice to allow Mr. Musk to continue with the company?

- Why did Tesla not have to pay the cash participation fee that the Section 136 law said everybody had to pay? Tesla staff stated, at numerous documented Silicon Valley open meetings that they got a “special applicant participation waiver”. Why did Tesla get that waiver?

- Did Tesla Motors provide falsified information in order to acquire it’s Federal funding?

- Did Tesla Motors provide falsified information in order to acquire it’s Federal waivers, tax deferrals, credits and discounts?

- Kleiner Perkins and certain silicon valley VC’s, all investors in a number of DOE “winners” (including Tesla, Fisker, Solyndra, A123 and others), organized meetings with a Dmitry Medvedev and other men known by the State Department, CIA, FBI and federal investigators to be involved in Russian mobsterism and then Ener1, Severstal and A123, dark-money funded and run by billionaires (many of whom own lithium mining interests) known by the State Department, the CIA and federal investigators to be involved in Russian mobsterism, were

awarded taxpayer funds by Steven Chu, who was nominated by Kleiner Perkins. Was any of this a conflict of interest?

- Why is the only company to receive California State real estate exclusives, exclusive tax waivers, credits and stock enhancers and free rides on taxpayer backs also the same company who's investors were the largest funders of certain State officials?

- Federal communications monitoring of text, voice and email communications of certain highly placed Senators, lobbyists and venture capitalists from 2005 to today should be made available to ALL federal criminal investigators. Have they been? Are one or more Senators blocking this effort because they are compromised?

- Why have so many fraud lawsuits been filed against Elon Musk and Tesla Motors?

- The head of the NHTSA (Strickland) Tesla investigation quit because of increased scrutiny. The facts, such as these, demonstrate that Tesla and Fisker never should have passed any NHTSA safety review. How can the public be assured that ongoing NHTSA investigations regarding Tesla will not be rigged?

- Did Tesla Motors provide falsified information in order to acquire its State funding? Did Tesla Motors provide falsified information in order to acquire its State waivers, tax deferrals, credits and discounts? Did Tesla investors bribe, or influence Congress people?

- Did Tesla report tax credits as revenue/sales in stock reports in order to trick investors into thinking Tesla was making profit that it was actually not making?

- Did Tesla staff or owners investors bribe, or influence Congress people? Did Tesla staff, owners or investors provider misleading information to investors? Was there a conflict of interest between Department of Energy staff and Tesla owners, investors or staff? Was there a conflict of interest between White House staff and Tesla owners, investors or staff? Was there a conflict of interest between Senate staff and Tesla owners, investors or staff? Did Tesla Motors use taxpayer money to hire off-shore staff?

- Marketing sales staff from the ad agencies for 60 Minutes, Consumer Reports, GQ, Fortune and other mainstream periodicals have stated that Elon Musk purchased "puff piece" stories about himself in those broadcasts and magazines and that none of those stories were internally generated. Is it good fiduciary practice for an executive to use corporate resources for personal glorification?

- Did Tesla Motors use taxpayer money to purchase supplies offshore that could have been purchased in the United States? Did Tesla Motors participate in a market rigging scam to rig lithium ion purchasing for its investors? Did Tesla Motors participate in a market rigging scam to rig the electric car market for its investors? Did Tesla Motors staff, or owners, sabotage competitors?

- Did Tesla Motors staff, owners or investors exchange campaign funding quid pro quo for business financing?

- Did Silicon Valley companies, owned by Tesla investors and campaign financiers, use internet technology to falsify information to the public in order to manipulate stock market perceptions in violation of SEC, RICO, and various other laws?

- Did Tesla Motors lie about the safety metrics of its lithium ion battery system?

- Was Tesla Motors holding safety metric data in its files which differed fully from the safety metrics data it provided to investors and NHTSA?

- Did Tesla Motors violate securities law by using false information to acquire a federal loan which it then used to falsify its stock metrics in order to "pump" its stock?

- Did Deloitte accounting firm conspire with Tesla to manipulate market metrics in violation of RICO Statutes and did that firm manipulate Department of Energy review data on Tesla's behalf?

- A U.S. Senator officiated at the opening of the Tesla NUMMI plant and lobbied for Tesla's tax waivers, credits, acquisition of NUMMI and discounts and then that U.S. Senator had their staff work in Tesla's offices. Is it a conflict of interest that this senator received campaign funding and this senator's family received real estate deals from the Tesla and, (next door to Tesla), Solyndra real estate deals?

- Did Welles Fargo conspire with Tesla to manipulate market metrics in violation of RICO Statutes?

- Did Goldman Sachs conspire with Tesla to manipulate market metrics in violation of RICO Statutes?

- Were Department of Energy staff manipulating Tesla funding data in order to favor Tesla and its campaign funding investors in violation of RICO Statutes?

- Were Department of Energy staff manipulating Tesla funding data in order to disfavor Tesla competitors and competitors to its campaign funding investors in violation of RICO Statutes?

- Did Tesla owners, staff or investors attempt to delay federal investigations and indictments by asserting influence in violation of RICO Statutes and numerous other laws?

- Documents show there have been more Tesla fires that actually occurred than Tesla has reported in the media. How many actual Tesla factory fires, test car fires and Tesla battery fires have actually occurred?
- Please provide an identification matrix showing campaign backers who were lithium ion investors who had had their contacts exert influence over NHTSA decisions regarding Tesla?
- The Secretary of energy was friends with all of your investors. We have been unable to find the name of even one person from OPM and Congressional nomination file wrapper for Steven Chu's nomination, who Chu did not later give DOE \$\$ or perks to. Why is that?
- The U.S. Post Office, The TSA, The DOE, The GAO, Panasonic and over 100 of the leading technical companies in the world say lithium ion batteries can spontaneously explode. Why do you not disclose this to your buyers in your literature?
- The Tesla can blow-up from it's charger and/or it's batteries. Are there other dangers that have also not been disclosed?
- Is Tesla operating in violation of the patents of any other company?
- By Elon Musk's own admission, at the time of the DOE loan application all of the car designs were \$100,000.00, PER CAR, over budget and they had no final design for a factory production run DFM. How could Tesla have gotten the loan with the worst debt ratio, the least engineering, the greatest financial risk and the least collateral of any applicant?
- Tesla lobbyists worked with Rahm Emanuel in the White House, to arrange their loan deal. Rahm Emanuel's Senior Finance Aide was recently arrested for bribes, kickbacks, corruption and money Laundering. Steve Rattner, The West Wing "Car Czar", who Tesla investors worked with to secure the Tesla loan, was also indicted for corruption. Almost everyone at DOE involved in your loan was forced to quit or fired. Does this call your dealings into question?
- Rolls-Royce Holdings said the U.K.'s Serious Fraud Office has opened a formal investigation into bribery and corruption of government officials for cars for the 1%. Does this worry you?
- The NHTSA said that Elon Musk lied about Fire Safety Review approval and who made the request for recall and investigation. Should we trust Elon Musk?
- Tesla got another \$34 MILLION of our tax money in exclusive campaign finance kickbacks for billionaires from the State of California. Why did Tesla billionaires need a few million of our tax money in a recession when people have no jobs?
- The German Tesla "Safety Review" was exposed as "Sham" in that they conducted no safety review and were just told to "pass the car" by your bankers at Deutsche Bank! Why did you not disclose that the German's conducted no testing of your battery system of any nature?
- In Tesla's own filed patent applications you state that your batteries WILL explode spontaneously and kill and injure people and burn down their homes. Why did you not disclose this in buyers documentation?
- Tesla is MORE likely to catch on fire than gasoline car"per Bloomberg & MIT. Why did you not disclose this?
- Lithium Ion is "nearly impossible to extinguish, and "acts like solid rocket fuel" say firefighters. Tesla never supplied required battery company CO2 fire extinguishers to car owners. Why not?
- Federal Investigators say you are using "exploding flashlight batteries that were never intended to be used in cars, in an improperly shielded box" to power the car instead of commercial energy storage technology. They say your car has "85% less lithium crash protection on the Tesla than ANY OTHER ELECTRIC CAR". All other companies had to recall EXCEPT Tesla. Why not? What special leverage did you have?
- Over 150 defects and problems per model about the Tesla have been documented on user-forums and in the press including: "Doors lock you in and out. Bad if car on fire!"; "George Clooney Rips Tesla: 'Why Am I Always Stuck On The Side Of The F*cking Road "; "Tesla "Satisfaction" survey authored by it's own investors/fanboys"; "Tesla seat vibration causes Anal Itching!"; "VAMPIRE POWER DEFECT slams entire Tesla Model S fleet!"; "Numerous defects documented by owners online." When the NUMMI factory was in use by GM and Toyota only 5 defects per model car produced there occurred. Even after you bought brand new robots, why did the Tesla cars get worse in a pre-configured factory with billions of dollars of past car preparation?

Thank you for your consideration. We look forward to your public response to clarify these issues and concerns.

Sincerely,

The Challenge Of Corruption and the 2016 Elections.

In a crime of historical proportions, White House staff, and Department of Energy leaders, managed by Steven Chu, handed a shockingly large amount of taxpayer money to a private cadre of Silicon Valley campaign financiers. They did it via those financiers green-washing front companies as part of a political kick-back scheme. You have heard of the notorious Solyndra, A123, Fisker, Ener1 and other “Cleantech Crash” failures. This was part of that mess. It was an inside job. If you watch the feature film, called: “Inside Job”, you can see how it worked.

While doing this, they put sabotage and hit-job attacks on the competing applicants for the funding, who were also the competitors of the Silicon Valley campaign financiers. It was the most overt, heinous, and audacious form of crony manipulation Washington had ever conjured.

As of today, you can't find a major law enforcement agency that does not have a big case working on this. You can't find a major news organization that does not have reams of files and reports on this. You can't find a voter who does not think corruption, like this, is destroying Washington, DC.

All of those Silicon Valley oligarchs companies failed. The Silicon Valley oligarchs just wanted to get the federal cash in their bank, skim some for themselves, off the top, and let those front companies die. They didn't care, one iota, about “green energy”, “sustainable power” or anything, even remotely, altruistic. They cared about cash. They cared about the “grab-it-and-go”. The whole “green” thing they spouted was a smoke green to get voter sheep-like support.

The losses, from this criminal corruption scheme, to date, exceed 900 BILLION DOLLARS of YOUR tax money.

This is only one of thousands, and thousands, of cases of massive corruption, with our tax money, by elected officials. You read about a new one, in the news, almost every other day.

How did this corruption become so accelerated and so pervasive?

How did these politicians decide that they could just steal with impunity, like this?

It began in 2007 when the real estate market got interesting. People told Congress that “America might fail” if we don't take drastic steps. It was suggested that all the money, that anybody could find, be put into an emergency pot to save all of the Americans.

As we all now know, while the idea might have been interesting, the execution was criminally corrupt and deviant. Instead of giving the money to American families, it was handed to a small set of bankers and “financial speculators” who promptly stole it, later got charged with crimes (in most cases), and never did a thing with the money to help anybody but themselves.

TARP was a shambles. The banks did little, or nothing for the public. The other part of the scheme was a hard-

wired load of \$25 Billion dollars that Steven Chu, at the DOE, was parsing out to his friends.

In historical retrospective, based on overwhelming evidence, it is very clear to even the most naive newspaper reader, that a kick-back scheme went down. Only Elon Musk, John Doerr and their associates got the money. Only Elon Musk, John Doerr and their associates owned the supplier commodity routes. Only Elon Musk, John Doerr and their associates had the stock benefits. Only Elon Musk, John Doerr and their associates were the same campaign financiers who owned the only companies who got the cash and the government contracts. Only the competitors to Elon Musk, John Doerr and their associates got sabotaged by Steven Chu and his team while they were, exclusively, funding the asset holdings of Elon Musk, John Doerr and their associates. Only Elon Musk, John Doerr and their associates had “gifted” stock to the very elected and appointed officials who were in charge of “helping” Steven Chu hand out the cash to them. The list goes on...

Today, it is VERY clear what happened and how the kick-back scam was perpetrated.

The White House is still the boss of the DOJ, and many other law enforcement agencies. One can assume that they threatened law enforcement bosses with career, pension and stock problems unless they held off the arrests until after the 2016 elections. Is that really a good idea though?

The public is angry. They are angry about corruption and about the inability of anybody in Washington to do anything that doesn't pad their personal bank account and their personal stock portfolio.

Enter the 2016 elections. Not too long ago, the media told us it was already a “done deal”. It was going to be “Hillary Vs. Jeb”. It was resolved, just sit back and watch it happen.

But then...Not so much.

The rise of Donald Trump and Bernie Sanders, from impossible outliers to top tier underdogs, has shocked the people who control what you are supposed to think is happening in politics.

The public wasn't buying the spoon feeding of their “media message”. They were not so keen on getting “mood manipulated” by Facebook and Google into thinking one way, or another.

The public was not seeing any benefit from the so-called benefits they were supposed to get. The Silicon Valley oligarchs were seeing all kinds of benefits. For their 1% crowd, the economy was doing great. They got billions of free dollars, that they didn't have to work for.. wooo hooo!

In the beginning, Trump and Sanders were shunned and derided by the media. They were name called, character assassinated and diminished. That was before they started talking to the voters.

What the voters have heard, from both of these candidates, is the biggest challenge that they, or Washington, have heard, to crony capitalism, in a long time.

Candidates “normally” didn't say such things. These people were discussing the “forbidden issues”, right out loud. IN FRONT OF EVERYONE!

It resonated with all of the voters. For all of their crazy, no hair, wild hair and “plain speakin' abrasive slang”; they said things that voters have been waiting a long time to hear.

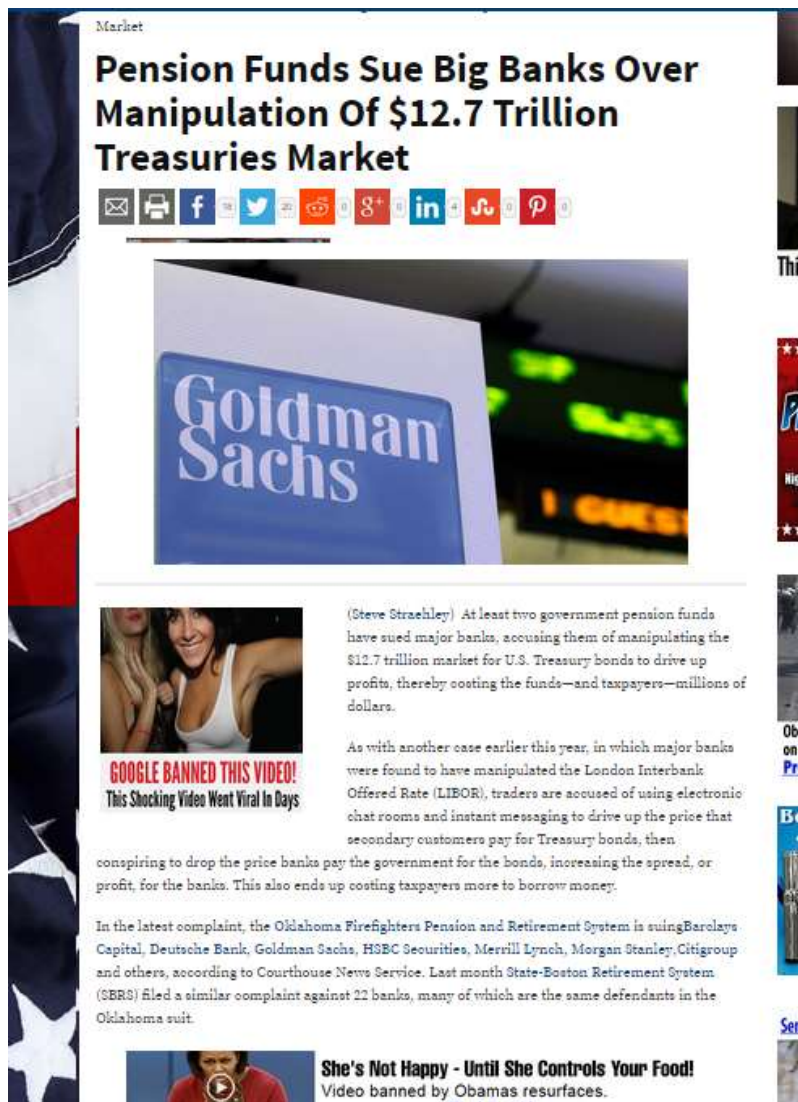

Election 2016 will be something few will ever forget!

How Elon Musk, and his investment partners, rigged the stock market

- Coordinated, criminal, stock market manipulations via “Flash Boy Algorithms”, “Buy Bots”, “Pumping via buybacks”, “Valuation fraud via Google ranking manipulation”, “Media cover-ups and news hiding via Google ranking manipulation”, “DOE PR Valuation boost coordination” and direct TSLA stock chart fraud

- The relationship between Tesla owners and Troll Farm services that provide “click-farm”, “meat-puppet”, “sock-puppet”, “fake likes” and automated contrived social media created stock market perception manipulation timed to fraudulently manipulate stock values which Tesla skimmed at the peak-points.

Tesla owners, and investors, acquired commodity control of Tesla supplies, especially lithium ion, via foreign invasion rights exploitation

Pension Funds Sue Big Banks Over Manipulation Of \$12.7 Trillion Treasuries Market

✉️ 🖨️ f 🌐 🐦 📺 📧 📄 📧 📄

(Steve Strachley) At least two government pension funds have sued major banks, accusing them of manipulating the \$12.7 trillion market for U.S. Treasury bonds to drive up profits, thereby costing the funds—and taxpayers—millions of dollars.

As with another case earlier this year, in which major banks were found to have manipulated the London Interbank Offered Rate (LIBOR), traders are accused of using electronic chat rooms and instant messaging to drive up the price that secondary customers pay for Treasury bonds, then conspiring to drop the price banks pay the government for the bonds, increasing the spread, or profit, for the banks. This also ends up costing taxpayers more to borrow money.

In the latest complaint, the Oklahoma Firefighters Pension and Retirement System is suing Barclays Capital, Deutsche Bank, Goldman Sachs, HSBC Securities, Merrill Lynch, Morgan Stanley, Citigroup and others, according to Courthouse News Service. Last month State-Boston Retirement System (SERS) filed a similar complaint against 22 banks, many of which are the same defendants in the Oklahoma suit.

Day Traders charge Tesla and Solyndra with being an Enron-Type Stock Pumping Swindle

How Tesla's investors rigged the stock market results using computerized systems timed with Google information manipulation

- Using federal funding to hype, pump, skim and dump public stocks and manipulate the stock market. Senators and some regulators implicated in running the cover-up? Big players grabbed billions of dollars up front, for their personal pockets, while workers at the Cleantech “bait companies” lost their jobs and their futures.
- Solyndra, Tesla, Fisker and Abound investors bragged about “pulling a scrape”.
- Vc’s used taxpayer loans to fake stock values and reap massive windfalls off of felony market manipulation violations under Section 9(a)(2) of the Securities Exchange Act of 1934.”

The screenshot shows a New York Post article. At the top is the newspaper's logo and navigation icons. Below is the author's name, JOHN CRUDELE, with a small profile picture. The article title is "Stock market rigging is no longer a 'conspiracy theory'", dated March 25, 2015. The main image shows a street sign for Wall Street with an American flag in the foreground. Below the image is a list of "MORE FROM JOHN CRUDELE" with links to various articles. The main text of the article begins with "The stock market is rigged. When I started making that claim years ago — and provided solid evidence — people scoffed. Some called it a conspiracy theory, tinfoil hats and that sort of stuff. Most people just ignored me. But that's not happening anymore. The dirty secret is out. With stock prices rushing far ahead of economic reality over the last six or so years, more experts in the financial markets are coming to the same conclusion — even if they don't fully understand how it's being rigged or the consequences. Ed Yardeni, a longtime Wall Street guru who isn't one of the clowns of the bunch, said flat out last week that the market was being propped up. "These markets are all rigged, and I don't say that critically. I just say that factually," he asserted on CNBC.

MONEY MAGAZINE -

How Investors May Be Getting Fooled by Buybacks

NEW YORK (AP)

By BERNARD CONDON AP Business Writer

If you're puzzled why the U.S. stock market has risen so fast in a slow-growing economy, consider one of its star performers: DirecTV.

The satellite TV provider has done a great job slashing expenses and expanding abroad, and that has helped lift its earnings per share dramatically in five years. But don't be fooled. The main reason for the EPS gain has nothing to do with how well it runs its business. It's because it has engaged in a massive stock buyback program, halving the number of its shares in circulation by purchasing them from investors.

Spreading earnings over fewer shares translates into higher EPS — a lot higher in DirecTV's case. Instead of an 88 percent rise to \$2.58, EPS nearly quadrupled to \$5.22.

Companies have been spending big on buybacks since the 1990s. What's new is the way buybacks have exaggerated the health of many companies, suggesting through EPS that they are much better at generating profits than they actually are. The distortion is ironic. Critics say the obsessive focus on buybacks has led companies to put off replacing plant and equipment, funding research and development, and generally doing the kind of spending needed to produce rising EPS for the long run.

"It's boosted the stock market and flattered earnings, but it's very short term," says David Rosenberg, former chief economist at Merrill Lynch, now at money manager Gluskin Sheff. He calls buybacks a "sugar high."

Over the past five years, 216 companies in the S&P 500 are just like DirecTV: They are getting more of a boost in EPS from slashing share count than from running their underlying business, according to a study by consultancy Fortuna Advisors at the request of The Associated Press. The list of companies cuts across industries, and includes retailer Gap, supermarket chain Kohl's, railroad operator Norfolk Southern and drug distributor AmerisourceBergen.

The stocks of those four have more than tripled, on average, in the past five years.

Companies insist that their buybacks must be judged case by case.

"The vast majority of our shareholders are sophisticated investors who not only use EPS growth but other important measures to determine the success of our company," says Darris Gringeri, a spokesman for DirecTV.

But Fortuna CEO Gregory Milano says buybacks are a waste of money for most companies.

"It's game playing — a legitimate, legal form of manufacturing earnings growth," says Milano, author of several studies on the impact of buybacks. "A lot of people (focus on) earnings per share growth, but they don't adequately distinguish the quality of the earnings."

So powerful is the impact, it has turned what would have been basically flat or falling EPS into a gain at some companies over five years. That list includes Lockheed Martin, the military contractor, Cintas, the country's largest supplier of work uniforms, WellPoint, an insurer, and Dun and Bradstreet, a credit-rating firm.

It's not clear investors are worried, or even aware, how much buybacks are exaggerating the underlying strength of companies. On Friday, they pushed the Standard and Poor's 500 stock index to a record close, up 178 percent from a 12-year low in 2009.

"How much credit should a company get earning from share buybacks rather than organic growth asks Brian Rauscher, chief portfolio strategist at Robert W. Baird & Co, an investment company. "I think the quality of earnings has been much lower than what the headlines suggest."

And it could get worse.

Companies in the S&P 500 have earmarked \$1 trillion for buybacks over the next several years. That's on top of \$1.7 trillion they spent on them in the previous five years. The figure is staggering. It is enough money to cut a check worth \$5,345 for every man, woman and child in the country.

There is nothing necessarily nefarious or wrong about buybacks per se. It doesn't seem that managements are trying to cover up a poor job of running their businesses. Even without factoring in a drop in share counts, earnings in the S&P 500 would have risen 80 percent since 2009.

The problem is that many investors are pouring money willy-nilly into companies doing buybacks as if they are always a good thing, and at every company.

A fund that tracks companies cutting shares the most, the PowerShares Buyback Achievers Portfolio, attracted \$2.2 billion in new investments in the last 12 months. That is nine times what had been invested at the start of that period, according to Lipper, which provides data on funds.

For their part, the companies note there are all sorts of reasons to like them besides EPS.

WellPoint points out that it has increased its cash dividend three times since 2011, a big draw for people looking for income. Cintas says that it's timed its buybacks well, buying at a deep discount to stock price today. And DirecTV says investors judge it also by revenue and cash flow, both of which are up strongly.

What's more, companies seem to genuinely believe their shares are a bargain and they'd be remiss for not buying, though their record of choosing the right time is poor.

The last time buybacks were running so high was 2007, right before stocks fell by more than half.

There are signs the next \$1 trillion in buybacks for S&P 500 companies could also prove ill-timed. Stocks aren't looking so cheap anymore. After a surge of nearly 30 percent last year, the S&P 500 is trading at 25 times its 10-year average earnings, as calculated by Nobel Prize winning economist Robert Shiller of Yale. That is much more expensive than the long-term average of 16.5.

Many investors assume shrinking shares automatically make remaining shares more valuable. The math is seductive. A company that has \$100 in earnings and 100 shares will report \$1 in earnings per share. But eliminate half the shares and the same \$100 is spread over 50 shares, and EPS doubles to \$2.

But that doesn't make the shares more valuable.

Shares aren't just a claim on short-term earnings. They are an ownership stake in an entire company, including R&D programs and its capital stock — the plants, equipment and other assets needed to boost productivity long into the future. Critics say the lavish spending on buybacks has “crowded out” spending on such things, which is at its weakest in decades.

“It's just like your car depreciating or your home depreciating — you have to invest,” says Gluskin Sheff's Rosenberg, “The corporate sector has barely preventing the capital stock from becoming obsolete.”

One result: U.S. productivity, or output per hour, increased just 0.5 percent last year, a pitiful performance. It has grown by an average 2 percent a year since 1947.

If not reversed, history suggests stocks will suffer. In a 2010 study, Fortuna's Milano found that stocks of companies that spent the most on buybacks vastly underperformed stocks of those that spent the least on them — at least over five years.

It's unclear whether the kind of investor who dominates stock trading now cares about the long-term, though. Buybacks are one of the few sure-fire ways to push a stock higher in the short term, and investors these days are very short term.

They “don't care what happens in three or five years,” laments Rauscher, the Baird strategist. “The market has become less of an investor culture, more of a trading one.”

U.S. stock markets are rigged, says author Michael Lewis

NEW YORK | BY JOHN MCCRANK

A Wall Street sign is pictured outside the New York Stock Exchange in New York, October 25, 2013. REUTERS/CHRIS ALLEGRI

(Reuters) - The U.S. stock market is rigged in favor of high-speed electronic trading firms, which use their advantages to extract billions from investors, according to Michael Lewis, author of a new book on the topic, "Flash Boys: A Wall Street Revolt."

High-frequency trading (HFT) is a practice carried out by many banks and proprietary trading firms using sophisticated computer programs to send gobbs of orders into the market, executing a small portion of them when opportunities arise to capitalize on price imbalances, or to make markets. HFT makes up more than half of all U.S. trading volume.

The trading methods and technology that make HFT possible are all legal, and the stock exchanges HFT firms trade on are highly regulated. But Lewis said these firms are using their speed advantage to profit at the expense of other market participants to the tune of tens of billions of dollars.

"They are able to identify your desire to buy shares in Microsoft and buy them in front of you and sell them back to you at a higher price," Lewis, whose book is available on Monday, said on the television program "60 Minutes" on Sunday.

"This speed advantage that the faster traders have is milliseconds, some of it is fractions of milliseconds," said Lewis, whose books include "The Big Short" and "Moneyball."

Those milliseconds can be valuable, making it possible to send around 10,000 orders in the blink of an eye.

Credits fueled Tesla stock sale?

By The Bakersfield Californian

Concerning your May 31 editorial ("Some clean energy bets pay off nicely") on Tesla Motors paying off the government loan:

In 2010, Tesla was awarded a milestone-based loan, requiring matching private capital obtained via public offering, by the Department of Energy as part of the Advanced Technology Vehicle Manufacturing Loan Program.

This program was signed into law by President George W. Bush in 2008, and then awarded under the Obama administration in the years that followed.

The loan payment was made using a portion of the approximately \$1 billion in funds raised in the previous weeks concurrent offerings of common stock and convertible senior notes.

According to a May 8 USA Today report by James R. Healey and Fred Meier, Tesla made a first-quarter profit of \$11 million on revenues of \$562 million. But Tesla gets government zero-emission-vehicle (ZEV) credits for each car it builds, credits that can then be auctioned to other automakers to offset their non-zero-emission vehicles. The company income from sales of ZEVs came to about \$68 million in the quarter, or 12 percent of revenue.

So, if you take away the ZEVs, Tesla lost \$57 million. It sounds to me like the first-quarter profit allowed Tesla to make a stock offering to which the government loan was paid from. The profit was from government money in the way of ZEVs. Would the stock sale have been as good if Tesla had shown a \$57 million loss?

It's interesting how you tied Bush to the failed Solyndra loan and President Obama to the Tesla loan, when in fact the Obama administration made both loans.

Tom Wimberly
Bakersfield

GOLDMAN SACHS WAS THE “COORDINATING” LINK IN ALMOST EVERY DEAL UNDER INVESTIGATION:

An extensive number of recordings, by multiple whistle-blowers, and agencies, now exist:

News media have speculated that the actual reason for “the CleanTech Crash” may have to do with a massive embezzlement scheme such as the concept shown in this published diagram:

Inside the U.S. Antitrust Probe of Google

Key FTC staff wanted to sue Internet giant after finding 'real harm to consumers and to innovation'

Google's Eric Schmidt testified in 2011 about the Internet giant's business practices and defended how it displayed search results. AP/PHOTO GETTY IMAGES

By BRODY MULLINS, ROLFE WINKLER and BRENT KENDALL

49 COMMENTS

Updated March 19, 2015 7:38 p.m. ET

WASHINGTON—Officials at the Federal Trade Commission concluded in 2012 that Google Inc. used anticompetitive tactics and abused its monopoly power in ways that harmed Internet users and rivals, a far harsher analysis of Google's business than was previously known.

The staff report from the agency's bureau of competition recommended the commission bring a lawsuit challenging three Google practices. The move would have triggered one of the highest-profile antitrust cases since the Justice Department sued Microsoft Corp. in the 1990s.

Roadies: Survivor

FEDERAL AND INDUSTRY INVESTIGATORS DISCOVER “PUMP AND DUMP” AND “PUMP AND FLUFF” STOCK SCAMS IN THE CLEANTECH FUNDING PROGRAM:”

The use of the media and the internet by a company, or it's investors, to pump that company's stocks is a felony. The use, by a company of armies of fake bloggers, paid for by that company to post false praise in order to raise that company's stocks is a felony. In the United States, this falls under market manipulation and is prohibited under Section 9(a)(2) of the Securities Exchange Act of 1934.”

The CleanTech stocks that crash and then suddenly recover are getting instantly “pumped” with fake investor buys computer “flashed” to make them look like Day-traders.” Pump and dumps are illegal because you are willfully attempting to manipulate the value of a security. And if you are doing this with other people as well, it's even worse because that implies it is more of a concentrated effort to do that. An example is if you and a few buddies are looking at a stock that only trades a few thousand shares a day. Between the group of you, you trade the stock so the volume is much, much higher than what it usually is. Others will notice this and think that the stock is going up by its own merits, clueless to the fact that you and your buddies are artificially driving up the price and volume. Others start buying and drive the price further based on the artificial demand you've created, and then you sell it off and the price probably tanks to where you started or less. In a sense and your buddies would be guilty of collusion and artificially manipulating the value of the security. That's why it's not fair, and understandably, that's why it's illegal. Furthermore, pump and dumps are also carried out by people that hack into others trading accounts, sell off their assets, and use the money to buy stocks involved in the pump and dump,

which has the same effect of artificially driving up the price. Source: Licensed Stock Broker

“Nothing wrong with buying low and selling high. But willful manipulation of worthless stocks of synthetically created Cleantech facade companies, like Abound, Solyndra, Fisker, Tesla, etc... crosses the legal boundary. When lying hype drives the price of a stock rather than financial performance of the company, the activity becomes criminal. It’s considered fraud because the pumper (AKA: The Tech CEO that just got free federal cash from a kick-back program) is artificially inflating the price of a stock through false and misleading statements.”

The image is a screenshot of a Business Insider article. At the top, the Business Insider logo is visible along with navigation tabs for Tech, Finance, Politics, Strategy, and Life. The article title is "Elon Musk Had Amazing Severance Packages For Tesla Employees In Case The Company Failed". Below the title, it says "KAMELIA ANGELOVA" and "NOV. 26, 2013, 4:47 PM" with a view count of 4,872 and 3 comments. There are social media sharing buttons for Recommend, Share (9), Tweet (106), g+1 (10), EMAIL, and MORE. Below the article text, there is a video player with a "Click for sound." prompt. The video shows Elon Musk sitting on a stage, wearing a black leather jacket. A Business Insider logo is in the bottom left of the video frame, and a caption below it reads "Elon Musk, CEO, Tesla Motors, SpaceX, Chairman, SolarCity".

Tesla and SpaceX were on the verge of bankruptcy in 2008 and Elon Musk was about to lose all his money, but the founder made sure that his employees would be taken care of, if the companies failed.

The Greentech VC Influence Over Washington

By [Katie Fehrenbacher](#) Aug. 18, 2010, 8:28am PDT [No Comments](#)

Buzz [_0](#)

There've been a couple articles in the past few weeks pointing to President Obama as the "[clean tech investor in chief](#)" and the [presidential VC with bets on clean energy](#). The real trend is that venture capitalists focusing on greentech seem to have had an unprecedented influence on U.S. federal policy and allocations of the stimulus package.

When I attended the Department of Energy's (DOE) first [ARPA-E conference](#) (Advanced Research Projects Agency-Energy) earlier this year in Washington D.C., I was struck by how many venture capitalists were there. I shared a cab back to the airport with some familiar Silicon Valley faces, and was told if your firm didn't have a dedicated person in Washington — in some circles they call them lobbyists — maneuvering grant and loan programs, you weren't able to be competitive.

Just look at the figures from the stimulus package (which I am fully in support of): somewhere between \$50 billion and \$80 billion into clean power and energy efficiency initiatives ([depending on](#)

ENRON AGAIN: ENERGY INDUSTRY SCAMS ALL WORK THE SAME – WIKIPEDIA

“Pump and dump” (P&D) is a form of microcap stock fraud that involves artificially inflating the price of an owned stock through false and misleading positive statements, in order to sell the cheaply purchased stock at a higher price. Once the operators of the scheme “dump” their overvalued shares, the price falls and investors lose their money. Stocks that are the subject of pump and dump schemes are sometimes called “chop stocks”.[1]While fraudsters in the past relied on cold calls, the Internet now offers a cheaper and easier way of reaching large numbers of potential investors.[1]Contents [hide]

Pump and dump scenarios[edit]Pump and dump schemes may take place on the Internet using an e-mail spam campaign, through media channels via a fake press release, or through telemarketing from “boiler room” brokerage houses (for example, see Boiler Room).[2] Often the stock promoter will claim to have “inside” information about impending news. Newsletters may purport to offer unbiased recommendations, then tout a company as a “hot” stock, for their own benefit. Promoters may also post messages in chat rooms or stock

message boards urging readers to buy the stock quickly.[1]

If a promoter's campaign to "pump" a stock is successful, it will entice unwitting investors to purchase shares of the target company. The increased demand, price, and trading volume of the stock may convince more people to believe the hype, and to buy shares as well. When the promoters behind the scheme sell (dump) their shares and stop promoting the stock, the price plummets, and other investors are left holding stock that is worth significantly less than what they paid for it.

Fraudsters frequently use this ploy with small, thinly traded companies—known as "penny stocks," generally traded over-the-counter (in the United States, this would mean markets such as the OTC Bulletin Board or the Pink Sheets), rather than markets such as the New York Stock Exchange (NYSE) or NASDAQ—because it is easier to manipulate a stock when there is little or no independent information available about the company.[3] The same principle applies in the United Kingdom, where target companies are typically small companies on the AIM or OFEX.

A more modern spin on this attack is known as hack, pump and dump.[4] In this form, a person purchases penny stocks in advance and then uses compromised brokerage accounts to purchase large quantities of that stock. The net result is a price increase, which is often pushed further by day traders seeing a quick advance in a stock. The holder of the stock then sells his stock at a premium.[5]

Specific examples[edit]Jonathan Lebed[edit]During the dot-com era, when stock-market fever was at its height and many people spent significant amounts of time on stock Internet message boards, a 15-year-old named Jonathan Lebed showed how easy it was to use the Internet to run a successful pump and dump. Lebed bought penny stocks and then promoted them on message boards, pointing at the price increase. When other investors bought the stock, Lebed sold his for a profit, leaving the other investors holding the bag. He came to the attention of the U.S. Securities and Exchange Commission (SEC), which filed a civil suit against him alleging security manipulation. Lebed settled the charges by paying a fraction of his total gains. He neither admitted nor denied wrongdoing, but promised not to manipulate securities in the future.[6]

Enron[edit]As late as April 2001, before the company's collapse, Enron executives participated in an elaborate scheme of pump and dump,[7] in addition to other illegal practices that fooled even the most experienced analysts on Wall Street. Studies of the anonymous messages posted on the Yahoo board dedicated to Enron revealed predictive messages that the company was basically a house of cards, and that investors should bail out while the stock was good.[8] After Enron falsely reported profits which inflated the stock price, they covered the real numbers by using questionable accounting practices. 29 Enron executives sold overvalued stock for more than a billion dollars before the company went bankrupt.[9]

Park Financial Group[edit]In April 2007, the U.S. SEC brought charges against Park Financial Group as a result of an investigation into a pump and dump scheme during 2002-2003 of the Pink Sheet listed stock of Spear & Jackson Inc.[10]

John Babikian[edit]John Babikian got rich, authorities allege, by what is known in the business as pumping-and-dumping stocks. He was operating 'AwesomePennyStocks' website and the 700,000 email push hyping America West.[11]

Langbar International[edit]Started as Crown Corporation, Langbar was the biggest pump and dump fraud on the Alternative Investment Market, part of the London Stock Exchange. The company was at one point valued greater than \$1 Billion, based on supposed bank deposits in Brazil which did not exist. None of the chief conspirators were convicted, although their whereabouts is known. A Patsy who made a negligent false statement about the assets was convicted and banned from being a director. The investors who lost as much as £100 million sued one of the fraudsters and recovered £30 million.

Pump and dump spam[edit]Pump and dump stock scams are prevalent in spam, accounting for about 15% of spam e-mail messages. A survey of 75,000 unsolicited emails sent between January 2004 and July 2005 concluded that spammers could make an average return of 4.29% by using this method, while recipients who act on the spam message typically lose close to 5.5% of their investment within two days.[12] A study by Böhme and Holz[13] shows a similar effect. Stocks targeted by spam are almost always penny stocks, selling for less than \$5 per share, not traded on major exchanges, are thinly traded, and are difficult or impossible to sell short. Spammers acquire stock before sending the messages, and sell the day the message is sent.[14]

Pump and dump differs from many other forms of spam (such as advance fee fraud emails and lottery scam messages) in that it does not require the recipient to contact the spammer to collect supposed "winnings," or to transfer money from supposed bank accounts. This makes tracking the source of pump and dump spam difficult,

and has also given rise to “minimalist” spam consisting of a small untraceable image file containing a picture of a stock symbol.[citation needed]

Short and distort[edit]Main article: Short and distortA variant of the pump and dump scam, the “short and distort” works in the opposite manner. Instead of first buying the stock, and then artificially raising its price before selling, in a “short and distort” the scammer first short-sells the stock, and then artificially lowers the price, using the same techniques as the pump and dump but using criticism or negative predictions regarding the stock. The scammer then covers his short position when he buys back the stock at a lower price.[15]

Regulation[edit]One method of regulating and restricting pump and dump manipulators is to target the category of stocks most often associated with this scheme. To that end, penny stocks have been the target of heightened enforcement efforts. In the United States, regulators have defined a penny stock as a security that must meet a number of specific standards. The criteria include price, market capitalization, and minimum shareholder equity. Securities traded on a national stock exchange, regardless of price, are exempt from regulatory designation as a penny stock,[16] since it is thought that exchange traded securities are less vulnerable to manipulation.[17] Therefore, CitiGroup (NYSE:C) and other NYSE listed securities which traded below \$1.00 during the market downturn of 2008-2009, while properly regarded as “low priced” securities, were not technically “penny stocks”. Although penny stock trading in the United States is now primarily controlled through rules and regulations enforced by the Securities and Exchange Commission and the Financial Industry Regulatory Authority (FINRA), the genesis of this control is found in State securities law. The State of Georgia was the first state to codify a comprehensive penny stock securities law.[18] Secretary of State Max Cleland, whose office enforced State securities laws[19] was a principal proponent of the legislation. Representative Chesley V. Morton, the only stockbroker in the Georgia General Assembly at the time, was principal sponsor of the bill in the House of Representatives. Georgia’s penny stock law was subsequently challenged in court. However, the law was eventually upheld in U.S. District Court,[20] and the statute became the template for laws enacted in other states. Shortly thereafter, both FINRA and the SEC enacted comprehensive revisions of their penny stock regulations. These regulations proved effective in either closing or greatly restricting broker/dealers, such as Blinder, Robinson & Company, which specialized in the penny stocks sector. Meyer Blinder was jailed for securities fraud in 1992, after the collapse of his firm.[21] However, sanctions under these specific regulations lack an effective means to address pump and dump schemes perpetrated by unregistered groups and individuals.

"One should either write ruthlessly what one believes to be the truth, or else shut up." — Arthur Koestler

When Wall Street Makes Crap Loans, It's a Crisis; When DOE's Steven Chu Does It, It's Green Energy.

Nick Gillespie | March 15, 2012

Via [Instapaper](#) linking to [The Fiscal Times](#) comes documentation of just what an easy grader Department of Energy (DOE) [Secretary Steven Chu](#) really is. As you'll recall, a while back the Nobel laureate cum bureaucrat was asked by Rep. Paul Brown (R-Ga.) to grade his performance at DOE. Chu's humble response? "There's always room for improvement, maybe an A-."

The [Fiscal Times'](#) Edward Morrissey writes about the new Government Accountability Office report on the performance of DOE's loan-guarantee program which gave way to Solyndra and other debacles. Suffice it to say, GAO wasn't grading on a curve set by the performance of Obama's cabinet. Snippets:

The GAO looked at the handling of \$30 billion outstanding in loan guarantees and future commitments and discovered that the DOE rarely follows its own written procedures for vetting and auditing applications. In fact, in many cases, the Loan Guarantee Program (LGP) couldn't even find the data managers needed to administer the loans properly...

In almost every case study investigated by the GAO, important steps got skipped in the reviews that determined whether loan applications would be granted. In other cases, the documentation was so poor that the GAO couldn't figure out what the LGP did...

The process had at least an 85 percent failure rate on its process check. Most people would not associate that level of process accuracy with a grade of A-minus....

With \$30 billion in taxpayer money at risk, the DOE under Steven Chu didn't bother to conduct the reviews it claimed it would on applications for loan guarantees, didn't keep records of what reviews they did accomplish, and signed off on loans with incomplete documentation and inadequate oversight of the risk. The result — perhaps [\\$0.5 billion immediately at risk](#), according to CRS, and possibly most of the \$30 billion.

Morrissey drives home the point that when it comes to lending standards and the vilification of private financial institutions processing mortgages that were either backed or bought up by government-sponsored enterprises, the Obama admin is firmly in the "do as we say, not as we do" camp:

What makes [DOE's] carelessness and

Solyndra and Tesla: Pump and Dump

A Wall Street Journal article quotes an investor in the bankrupt "green energy" boondoggle describing what the half-billion-dollar federal loan guarantee meant: "There was a perceived halo around the loan . . . If we get the loan, then we can definitely go public and cash out." Ed Lasky at American Thinker explains:

The huge loan would be a selling point in an initial public offering. The company promoters could point out that the loan gave them credibility — that the government had vouched for their viability and prospects. The private investors would cash out and when the loan came due and the company was unable to pay, taxpayers would be the ones left holding the IOUs. Take the money and run.

It was a straight-out scam, in other words, with a major Democratic donor as one of the primary beneficiaries. An environmentally-friendly three-card monte game — burning taxpayers instead of burning CO2.

Solyndra Investor admits: we wanted the loan so we could 'go public and cash out'

- Get in, pump the stock using the federal handout, skim a profit windfall off the top, kill the

company, then take another skim off of the tax loss write-off. This skim scam happened over and over in Steven Chu's world of crime.

By Ed Lasky

A clearer picture of the underlying insider scheme at Solyndra is beginning to emerge. Yuliya Chernova of the Wall Street Journal writes a superb column today regarding all the business problems that beset the scandal plagued Solyndra. There were a litany of engineering and business problems that were very apparent to everyone except, apparently, the White House politicians that pressured career officials in the government to extend a 500 million dollar loan guarantee. The crony investors were given an unusually low interest rate for such a venture.

Solyndra was first in line to get loan guarantees under the Obama program to promote solar energy ventures. Solyndra private investors were given priority in case of bankruptcy that placed their claims above those of taxpayers — a highly unusual occurrence, according to the Wall Street Journal. So who were the type of people granted such favorable treatment? Yes, Obama donors and bundlers. That has been widely publicized. But beyond that, what type of character did they possess?

One investor behind Solyndra blurted out the truth. The loan was needed and needed urgently to fatten up the company and show a going concern (with a factory, etc). Why? From the column:

There was another motivator — Solyndra's management and investors had an eye on an initial public offering. "There was a perceived halo around the loan," said an investor with knowledge of the company. "If we get the loan, then we can definitely go public and cash out."

The huge loan would be a selling point in an initial public offering. The company promoters could point out that the loan gave them credibility — that the government had vouched for their viability and prospects.

The private investors would cash out and when the loan came due and the company was unable to pay, taxpayers would be the ones left holding the IOUs.

Take the money and run.

Read more: <http://www.americanthinker.com/blog/2011>

"Almost every one of the CleanTech "Winners" under the Steven Chu Department Of Energy, engaged in this kind of felony grade stock manipulation and insider exploitation knowing that all of the federal law enforcement players were controlled by the insiders with a "hands-off" protection directive. Using newly optimized web techniques called "Flash Boy" stock processing and "blog meat puppets" they could totally manipulate the stock market and laugh in the faces of the few regulators who dared to step up. The bet that they have to make is that the Republicans do not win the majority in the 2014 Mid-Term elections...."

Micheal Lewis best-selling book "Flash Boys" reveals how much of what you think is happening, on the stock market, may be contrived false-hoods created by computerized manipulations and fake coordinated shell bloggers. The White House games the stock market to payback Silicon Valley campaign funding VC's and the GOP blows up those very games, right afterwards, in a secret dance of stock fraud tricks. They made a mistake, this time around, and the tricks became visible to everybody in the stock market world. This, on top of the Goldman Sachs sting operation recordings, shows that something is deeply wrong in Stock Land!

In the coming mid-term elections we are seeing Barbara Streisand and DNC notables bemoan the reduced budgets they have to work with this year. Privately, the DNC is ringing their core finance base (The Silicon Valley Vc's) telephones off the hook.

One of the most successful tactics by GOP specialists involves Tesla Motors. Called out by Mitt Romney, and other Republican notables, as White House fronts. Tesla gets strange and illogical bumps in the stock market in spite of massive numbers of lawsuits, consumer complaints, the lowest sales volume for the money invested in a car company in history, and other facts which, in a rational world, would say they should not survive.

In fact, what is happening is that the backers of Tesla, the same Silicon Valley investors who pay for the White House and DNC campaigns, "Pump" the stock from their own bank accounts each time more bad news comes out about Tesla. There are now charges that the White House is even "pumping the TSLA stock", like it may have done on the supposed October 16, 2014 "Pump" on the overall market, in order to protect Obama's "brand name".

This makes the stock chart for TSLA go up but it is not from mom and pop day-traders. It is "Pumping Cash" right out of the Vc's investment bank fronts to artificially inflate the stock.

While a final Tesla bankruptcy might seem like the dream for GOP PR; allowing them to point and say "Ha, look, another Department of Energy Crony-Kickback deal gone south", Tesla has provided even greater grist for

the GOP strategy meat-hooks.

MUSK GREED AND HUBRIS BLEW THE SECRET:

By forcing the Silicon Valley VC campaign backers to constantly drain their bank accounts in order to keep Tesla looking like it is still alive, the GOP strategists are also draining the life out of the funding for mid-term and 2016 Democratic candidates.

The GOP finally figured out that almost all of the cash and web media manipulation was coming from one tiny spot in California: SandHill Road and the area around Stanford University. They decided that to take down the GOP they just had to expose Silicon Valley.

Tesla was a test case and it worked well. The investment banks with auto refills on Tesla stock, running the investment funds for Doerr, Thiel, Westly, Draper and all the rest of the DNC VC's is running overtime trying to keep the stock pumped as one set of bad news after another gets exposed about Tesla.

One GOP operative claims that every Kleiner Perkins investment has been: "Targeted, tracked and media exposed" ... "can you hear that giant sucking sound", he says "...that's the sound of DNC VC cash sliding into oblivion...not only are they beating a dead horse but we have infected the very horse they are beating.."

The operative claims that Musk's carve-outs for Solar, Space and batteries is his gift, by the White House for conduit-ing cash, through those, "fronts" back to DNC candidates. Sierra Nevada Corp is suing Musk's Space X, claiming similar industry rigging. Tesla has been under investigation by many parties.

People don't like taking it in the ass unexpectedly. In this case the old adage of "You F**ed me in the ass, so now I'm F***ing you guys in the ass tens times more.." Seems to be the rule of the game.

Thomas Roster- Palo Alto Rev

NY POST PROPOSES STOCK MARKET RIGGED BY TESLA WHITE HOUSE CAMPAIGN BACKERS.

John Crudele, Business

'Plunge protection' behind market's sudden recovery

By John Crudele

Mysterious forces were trying their best, but they couldn't keep the stock market from swooning Wednesday.

They failed in the morning, despite massive purchases of stock index futures contracts. Within minutes of the market's opening, the Dow Jones industrial average was down 350 points. Later in the day — after a lot of shocking ebb and flow — the Dow bottomed out with a decline of 460 points.

It was only in the last hour of trading that the market saviors managed to trim the Dow loss to just 173 points. And they succeeded only after Janet Yellen's private, upbeat remarks about the economy were leaked.

Welcome to a new kind of stock market — one that the average investor should refuse to be invested in.

Anyone whose investments tightly track the major indices is now losing money since the beginning of 2014. The Dow is down 1.1 percent on the year, with the S&P and Nasdaq up 3 percent for 2014.

Just for the record, I've been telling you for years that the stock market was in a bubble and that you should enjoy it while it lasts because bubbles always pop.

Of course, if you could time the end of the bubble, you'd be doing quite well. Miss the end and you are back to where you started. Or worse off in terms of confidence and finances.

Welcome to a new kind of stock market — one that the average investor should refuse to be invested in.

I obviously don't know whether we are now seeing the end of the current stock market bubble, during which the S&P index has risen 102 percent since October 2008. But there are people like my friend Peter Grandich of Trinity Financial, who has been excellent at predicting market corrections in the past and who thinks this is the

end.

I already brought up the sensitive issue of a market crash in a column on Oct. 9 that began: “Is this the month the stock market will crash

October is historically a spooky month for stocks, and in that column I rattled off the crashes and major price corrections of 1929, ’78, ’79, ’87, ’89 and 2008 to prove it.

Will 2014 soon be added to that list? That’ll be the cliffhanger in today’s column.

But let me explain about the unknown forces in the market these days. Call it by a nickname — the Plunge Protection Team. Or call it the President’s Working Group on Financial Markets, the official name given to the group when it was formed by President Ronald Reagan after the market turbulence of 1989.

These forces may be working from a script in the “Doomsday Book,” which the US government recently fought to keep secret when it was brought up last week during the AIG trial in Washington.

Here’s the bottom line: Someone tried to rescue the market last Wednesday. And it’s becoming a regular occurrence.

The details of last Wednesday morning are these: At the same time the Dow was off 350 points, the S&P index was down 43.80 points, That was an enormous decline in just 11 minutes of trading and it was an indication that Wall Street was not having a good day.

Then, someone (or something) started buying S&P futures contracts en masse. Twenty-one minutes later, the S&P index had regained 30 of those lost points and was back at 1,861.

Maybe you’ll believe that there was some manipulation going on if you knew that a guy named Robert Heller, who was a member of the Federal Reserve’s Board of Governors until 1989, proposed just such a rigging as soon as he left the Fed.

Look it up. Oct. 27, 1989, Wall Street Journal. Headline: “Have Fed Support Stock Market, Too.” By Robert Heller, who had just left the Fed to head up the credit card company Visa.

“It would be inappropriate for the government or the central bank to buy or sell IBM or General Motors shares,” Heller wrote. “Instead, the Fed could buy the broad market composites in the futures market.”

In case you don’t know the lingo, Heller is proposing that the Fed or government purchase stock futures contracts that track — and can influence — the major indices.

These contracts are cheap and a government could turn the whole stock market around quickly — but probably not permanently.

Wow! Doesn’t that seem a lot like what happened Wednesday at 9:41 a.m., when S&P futures contracts were suddenly and mysteriously scooped up?

Let me allow Heller to finish his thought because it’s important to anyone who believes in free and fair markets.

“The Fed’s stock-market role ought not to be very ambitious. It should seek only to maintain the functioning of the markets — not to prop the Dow Jones or the New York Stock Exchange averages at a particular level,” he continued.

But times change and so does thinking. In recent weeks, we’ve discovered that the CME Group, the exchange in Chicago, has an incentive program under which foreign central banks could buy stock market derivatives like the S&P contracts at a discount.

It’s not that these foreign banks need a break on the price of their trading. But it does show that there is a back-door way — through foreign emissaries — for the Fed and the US government to prop up stocks like Heller suggested, and — maybe — not get caught.

BLOOMBERG - Faking the stock market for Tesla

How Markets Need \$200 Billion Each Quarter From Central Bankers

By Simon Kennedy

The central-bank put lives on.

Policy makers deny its existence, yet investors still reckon that whenever stocks and other risk assets take a tumble, the authorities will be there with calming words or economic stimulus to ensure the losses are limited.

A put option gives investors the right to sell their asset at a set price so the theory goes that central banks will ultimately provide a floor for falling asset markets to ensure they don’t take economies down with them.

Last week as markets swooned again, it was St. Louis Federal Reserve President James Bullard and Bank of England Chief Economist Andrew Haldane who did the trick. Bullard said the Fed should consider delaying the end of its bond-purchase program to halt a decline in inflation expectations, while Haldane said he's less likely to vote for a U.K. rate increase than three months ago.

"These comments left markets with the impression that the 'central-bank put' is still in place," Morgan Stanley currency strategists led by London-based Hans Redeker told clients in a report yesterday.

Matt King, global head of credit strategy at Citigroup Inc., and colleagues have put a price on how much liquidity central banks need to provide each quarter to stop markets from sliding.

Magic Marker

By estimating that zero stimulus would be consistent with a 10 percent quarterly drop in equities, they calculate it takes around \$200 billion from central banks each quarter to keep markets from selling off.

With the Fed and counterparts peeling back their net liquidity injections from almost \$1 trillion in 2012 toward that magic marker, King's team said "a negative reaction in markets was long overdue."

"We think the markets' weakness owes more to an almost belated reaction to a temporary lull in central bank stimulus than it does to any reduction in the effect of that stimulus in propping up asset prices," they said in an Oct. 17 report to clients.

Bank of America Merrill Lynch strategists said in a report today that another 10 percent decline in U.S. stocks might spark speculation of a fourth round of quantitative easing from the Fed. That would mimic how the Fed acted following equity declines of 11 percent in 2010 and 16 percent in 2011.

Bond-Buying

The good news for investors in the eyes of Citigroup is that although the Fed is still reversing and set to end its bond-buying this month, the European Central Bank and Bank of Japan will more than compensate with more stimulus in coming months.

The reason for the support is the fear that a prolonged sell-off in markets would upend the fragile economic outlook central banks are charged with safeguarding, they said.

"With central banks much more concerned about a return to recession than about asset-price bubbles, they have little choice but to step back in," said Citigroup.

Tesla's Banking Rigger: Goldman Sachs, runs many big banking scams

Goldman Makes It Official That the Stock Market is Manipulated, Buybacks Drive Valuations

Posted by Yves Smith

It's remarkable that this Goldman report, and its writeup on Business Insider, is being treated with a straight face. The short version is current stock price levels are dependent on continued stock buybacks. Key sections of the story:

Goldman Sachs' David Kostin believes a temporary pullback may explain why the S&P 500 has tumbled from its all-time high of 2,019 on Sept. 19.

"Most companies are precluded from engaging in open-market stock repurchases during the five weeks before releasing earnings," Kostin notes. "For many firms, the beginning of the blackout period coincided with the S&P 500 peak on September 18. So the sell-off occurred during a time when the single largest source of equity demand was absent. Buybacks dip during earnings reporting months, which have seen 1.2 points higher realized volatility than in other months during the past 25 years."...

"We expect companies will actively repurchase shares in November and December," he writes. "Since 2007, an average of 25% of annual buybacks has occurred during the last two months of the year."

Notice how the bulk of buybacks are concentrated in the fourth quarter, with the obvious intent of goosing prices at year end so as to lead to higher executive pay for "increasing shareholder value"? In fact, these companies are

being gradually liquidated. Issuing debt, which public companies have done in copious volumes since the crash, and using it to buy shares is dissipating corporate assets. They are over time shrinking their businesses. That is also reflected in aggressive headcount cuts and cost-saving measures. Even though analysts like to tout the cash that companies have sitting on their balance sheets as a source of potential investment, as we've discussed in previous posts, public companies are so terrified of even a quarterly blip in earnings due to incurring expenses relating to long-term investments that they'd rather do nothing, or go the inertial path of cutting costs to show higher profits.

But with borrowing the big source of this corporate munificence to the share-owning classes, this is a self-limiting game. But the end game could be a long time in coming. First, you have economists who believe that the stock market directly drives consumer spending, echoing the Fed's confidence in the wealth effect. For instance, see this argument from Roger Farmer (hat tip Bruegel blog):

There is a close relationship between changes in the value of the stock market and changes in the unemployment rate one quarter later. My research here, and here shows that a persistent 10% drop in the real value of the stock market is followed by a persistent 3% increase in the unemployment rate. The important word here is persistent. If the market drops 10% on Tuesday and recovers again a week later, (not an unusual movement in a volatile market), there will be no impact on the real economy. For a market panic to have real effects on Main Street it must be sustained for at least three months.

Yves here. The problem is that correlation is not causation. Significant and sustained stock market declines are almost always the result of Fed tightening. The usual lag between an interest rate cycle turn and a stock market peak historically was roughly four months, but in our new normal of seemingly permanent heavy-duty central bank meddling, old rules of thumb are to be used with great caution. Nevertheless, Greenspan was obsessed with what drove stock prices, and the Fed is unduly solicitous of asset price levels, no doubt because people like Janet Yellen have to leave their DC bubble in order to meet actual unemployed people.

Mike Whitney reminds those who manage to miss it that the Fed is so concerned about the actual and psychological impact of stock market prices that it immediately talked investors into getting back into the pool when the market started misbehaving badly last week. From Counterpunch:

For those readers who still think that the Fed doesn't meddle in the markets: Think again. Friday's stock surge had nothing to do with productivity, price, earnings, growth or any of the other so called fundamentals. It was all about manipulation; telling people what they want to hear, so they do exactly what you want them to do. The pundits call this jawboning, and the Fed has turned it into an art-form. All [St. Louis Fed President James] Bullard did was assure investors that the Fed "has their back", and, sure enough, another wild spending spree ensued. One can only imagine the backslapping and high-fives that broke out at the Central Bank following this latest flimflam....

It's too bad the Fed can't put in a good word for the real economy while they're at it. But, oh, I forgot that the real economy is stuffed with working stiffs who don't warrant the same kind of treatment as the esteemed supermen who trade stocks for a living. Besides, the Fed doesn't give a rip about the real economy. If it did, it would have loaded up on infrastructure bonds instead of funky mortgage backed securities (MBS). The difference between the two is pretty stark: Infrastructure bonds put people to work, circulate money, boost economic activity, and strengthen growth. In contrast, MBS purchases help to fatten the bank accounts of the fraudsters who created the financial crisis while doing bupkis for the economy. Guess who the Fed chose to help out?

Do you really want to know why the Fed isn't going to end QE? Here's how Nomura's chief economist Bob Janjuah summed it up:

"I want to remind readers of a message that may be buried in the past: When QE1 ended, the S&P 500 fell just under 20% in a roughly three-month period before the QE2 recovery.

When the QE2 ended, the S&P 500 fell about 20% in a three-month period before the next Fed-inspired bounce (aided by the ECB). QE3 is ending this month..."

Is that why the Fed started jawboning QE4, to avoid the inevitable 20 percent correction?

Whitney continues with one of our favorite tropes: that all QE has done is elevate asset prices. That has not led to a recovery in anything much beyond the balance sheets of the top cohorts and the income of the top 1%. Even worse, it has provide cover for the Administration falling in with investor-favoring austerity, in the form of reducing deficit spending when it ought to be increasing it to take up the considerable and costly slack in the economy.

It's not surprising to see the Fed double down on a failed strategy. The central bank had apparently finally

recognized in 2013 that QE was not helping the real economy, and they needed to exit the policy to reduce the resulting economic distortions. But they lost their nerve during last summer's taper tantrum, and turned cowardly again in response to a mere stock market hissy fit.

The Fed believes that what is good for the wealthy is good for the US, and that when they are in danger of suffering financially, the central bank should break glass and administer monetary relief. Even though the Fed may think it is serious about ending QE and eventually raising rates, as they say in Venezuela, "They have changed their minds, but they have not changed their hearts."

<http://www.cantechletter.com/2014/11/geeks-reading-list-week-november-21st-2014/>

The Mystery of 12,000 Missing Tesla’s: Overseas Boom or Waning U.S. Demand?

I have to be very careful what I say here, however, as a general rule, declining demand in the early adopter market is not a promising development for a technology company, or, in the case of Tesla, an automobile manufacturer. As with other remarkable observations regarding Tesla (fires, Trabant level reliability, etc.) no doubt a positive spin will be placed on this or, alternatively, aspersions will be cast on the data themselves. Nonetheless, as I said, declining demand in your early adopter market, especially when it is the US, is never a good sign. Never, ever, ever, a good sign.

“Tesla Motors (TSLA) is slowly ramping up production. Demand for its electric sedans allegedly remains high. Yet far fewer of the vehicles are making their way onto U.S. roads this year. In the first nine months of 2014, the number of U.S. registrations of Tesla vehicles fell by one-third to 9,331, according to an analysis of public records by Hedges & Co., an Ohio-based market-research firm. In the same period, however, Tesla said it delivered 21,821 cars—a 40 percent increase from a year earlier. What happened to the other 12,490 cars

About Brian Piccioni

Brian is a Partner at J Capital Partners, a new breed of investment bank focused on non resource growth companies with special emphasis on technology companies. He has been part of the technology industry for a third of a century. For 13 years he was an electronics designer and software developer. He designed early generation PCs, mobile phones (including cell phones) and a number of embedded systems which are still in use today. He then became a sell-side research analyst for the next 20 years, where he was ranked the #1 tech analyst in Canada for six consecutive years, named one of the best in the world, and won a number of awards for stock-picking and estimating.

He started writing the Geek’s Reading List about 10 years ago. In addition to the company specific research notes he was publishing almost every day, the Geek’s Reading List was a weekly list of articles he found interesting – usually provocative, new, and counter-consensus. The sorts of things he wasn’t seeing being written anywhere else.

They were not intended, at the time, to be taken as investment advice, nor should they today. But, investors need to understand crucial trends and developments in the industries in which they invest. Therefore, these comments may actually help investors with a longer time horizon. Not to mention they might come in handy for consumers, CEOs, IT managers ... or just about anybody, come to think of it. Technology isn’t just a niche area of interest to geeks these days: it impacts almost every part of our economy. In a way, we are all geeks now.

Death By Tesla

By Susan Johnlo For Web Times (**Based on actual events**)

The sun glistened off the sleek futuristic body of the six figure Tesla sports car as it careened around the next curve of the beautiful Malibu coastal highway.

Below, the Pacific Ocean spread out to the horizon in an endless carpet of blue, undulating waves and sparkling wonder.

Nickleback was blaring from the speakers of the car, the driver's hair was tossed in the wind, his popped collar was flapping in the high speed rush of air and his Ray Bans barely hid his I-own-the-world feeling of delight in the moment.

Then the gates of hell opened up...

The car suddenly swerved, it dived straight off the cliff. Did the driver smell the smoke, or see the flames first? We may never be sure.

Was the, notoriously, hackable Tesla suddenly taken over by Chinese hackers, who had found his car IP address on the internet? That is another question that has yet to be resolved.

What is certain, is the horrific death that then followed. As investigators, safety engineers and fire officials detail the sequence of events, the results require a warning to readers: Do not read further if you have a weak stomach –

First, lithium ion battery number 862, in the floor pan of the car, experienced the collapsing housing of the lightweight aluminum box housing that surrounded it. The collapsing metal pierced the skin of the first battery. This was caused by the first rock that the lower corner of the Tesla floor pan slammed into.

The rapid compression, and distortion of the 3 inch long Tesla battery caused that battery to buckle and forced the metal compounds inside, the lithium ion core battery chemicals, to experience the force as a pyrotechnic trigger. This, then caused that battery to release vapors, while at the same time, igniting those vapors like a little hand-grenade.

This battery had just been struck, ignited and exploded, and in that fire and explosion it was releasing gases which the driver was inhaling in his last moments of life. Those gasses have been publicly documented by The FDA, OSHA, Panasonic, and hundreds of other laboratory-grade facilities, to be the cause of cancer, liver damage, neurological damage, fetal damage and other deadly health issues.

If this driver had not been killed by the fire and explosions, he would have had a longer, slower set of lethal issues to contend with.

Back to battery number 862; a few milliseconds after battery number 862 experienced the catastrophic explosion, battery number 863, right next to it, experienced the same devastating failure. This was followed by battery number 864, then number 865, then number 866, milliseconds apart. A chain reaction of self-igniting

thermal hell was underway and no fireman could stop it now, nor, could they stop it after the crash.

The unstoppable nature of this lithium ion battery fire, set Malibu Canyon, itself, on fire.

So these flashlight-type batteries, that every Tesla driver is sitting on top of, are going off like military grade incendiary devices, during this crash, one-after-the-other.

These flashlight batteries were never made to be used in cars. Safety engineers say that Elon Musk's decision to use these batteries, in this way, was based on rapid profit exploitation, and not on proper engineering.

Be that as it may, we are now mid-way through the slow motion movie of this crash. The batteries are exploding, one after the other, the car is plowing through the rocks and debris as it dives off the cliff. But the horror has only begun. How many batteries do we have to watch explode in this single vehicle? NEARLY 8000 EXPLODING BATTERIES.

Let us stop and consider this fact.

Where only one in 40 gasoline tanks, in each regular car accident, ever explodes. Here, in one car, you have nearly 8000 possibilities of an explosion AND each battery, that explodes, has an extremely high likelihood of setting off, all the rest, in a chain reaction. Do you like those odds? You have a 400% better chance of winning the lottery.

In our slow motion analysis, we have only crossed the half-way point in the accident. The front of the car is crumpling, the heavy batteries are being thrown upwards, through the floor of the car, to cover the driver in exploding lithium metal particles, and the cockpit of the car is filling up with some of the most toxic fumes you can legally produce.

Still, the worst is yet to come.

The special alloys, which Tesla decided to make its car out of, turn out to interact with the exploding batteries to cause an effect called alloy conflagration. The very metal of the Tesla car has now been set on fire by the massive heat from these exploding batteries. The car has turned into the public version of a military phosphorous bomb, one of the most hideous military weapons of all time. This burning metal composition is worse than napalm, it can burn all the way through your face, your skull, and any bones in your body. It is a fire that almost nothing can extinguish.

Molten, flaming metal is dripping on the driver and it is coming from every side of the car, surrounding him in a fireball of deadly metal lava.

The car has finally come to a rest in a fireball. The driver is consumed in a nightmare of fire, dripping molten metal and deadly toxic smoke. The pain is beyond comprehension.

He is, in the same moment, burned to death, asphyxiated and entombed in red hot liquid metal.

The resulting fire, in the Canyon, is, at first, unstoppable and threatens the entire community of homes.

PHOTO: PETRUS BREEDT

The first responder's attempts to douse the car fire, only make it worse! Water, it turns out, makes lithium ion batteries explode all over again. The car has been filled with a type of battery that mere bumps, and water, can cause to explode. Let me repeat this for emphasis: **WATER MAKES LITHIUM ION BATTERIES EXPLODE.** Not only does water not put out lithium ion fires, **IT MAKES THEM WORSE!**

Hours later, after the car has burned itself out, the first responders try to recover the body.

The problem is, they can't recognize a body. The driver has been burned into an unrecognizable lump of melted plastic, molten metal and human flesh.

His lovely drive down the coast ended in a horror as awful as any nightmare midnight movie.

So this use, of this battery, in this way, was decided by the very Senators and billionaire campaign investors who owned the stock in this battery. If you wonder why a deadly choice, like this, was made about a battery that already had all of these dangers fully documented, on federal record; the answer can be found in one word: **Corruption.**

This massive oversight, putting the public at such risk, took place because a kick-back scheme was created by Mr. Musk, and his campaign finance partners. They chose greed, over scientific facts. Those chose mining commodity deals, and expediency, over proper engineering. They chose corruption, over anything else.

So, when you buy a Tesla, you need to think about your own safety and the safety of the American political system. Consider not supporting corruption and consider supporting the safety of yourself and your family: **Buy an Audi!**

NOTE TO TESLA DRIVERS: Do you know that driving this Tesla makes you part of a crime against America?

People think you support corruption when they see you drive it. Give it back to the dealer with this note and get your money back:

- Tesla said they were going to BUILD a Factory in San Jose. They had no intention of building a factory and just wanted to trick state and city officials into signing their appeal letters. The factory was never built. Tesla investors sought to get real estate profits from the land deal. Tesla said they were going to BUILD a Factory in New Mexico. They are being sued in New Mexico for is lie. They had no intention of building a factory and just wanted to trick state and city officials into signing their appeal letters. The factory was never built. Tesla investors sought to get real estate profits from the land deal. Tesla said they were going to BUILD a Factory in Downey, CA. They had no intention of building a factory and just wanted to trick state and city officials into signing their appeal letters. The factory was never built. Tesla investors sought to get real estate profits from the land deal.

- Tesla fired multiple workers without notice. They have been sued by those workers and lost those lawsuits. When this got other applicants declined, how did Tesla get through? Corruption? Tesla had no factory but DOE rejected other applicants for not having a factory. When this got other applicants declined, how did Tesla get through? Corruption?

- Tesla was \$100,000.00 off on their BOM calculations per car. When this got other applicants declined, how did Tesla get through? Corruption? Deloitte was both the accountant for Tesla and the accounting reviewer for DOE. With Tesla's at-application-time credit and numbers actually so bad, one has to wonder what was up. When this got other applicants declined, how did Tesla get through? Corruption?

- Tesla and DOE staff were supplied by McKinsey. Mckinsey wrote all of the green energy plans and white papers for David Axelrod to give to the White House. Mckinsey staff have now gone to jail. Tesla and Fisker investors are best friends with McKinsey senior executives. One Mckinsey executive, associated with a jailed McKinsey senior executive, is now dead from "natural causes". The heads of the DOE loan Program: Matt Rogers and Steve Spinner, were working for McKinsey while also working at the DOE loan program as "deciders" for Steven Chu. When this got other applicants declined, how did Tesla get through? Corruption?

- Tesla made a deal with DOE staff to spiff the loan announcement in order to hype the stock market in order to fake up stock sales. When this got other applicants declined, how did Tesla get through? Corruption? DOE had IBM consulting, in Virginia, do Tesla's "due diligence". IBM consulting was a contractor to Tesla. IBM

Consulting supplied the DOE loan staff that McKinsey did not supply. IBM consulting only gave Tesla their top score. The reviews by IBM consulting, which operating under a variety of names from a fake office, now seem to have been manipulated in favor of Tesla. When this got other applicants declined, how did Tesla get through? Corruption?

- Tesla investors emailed and phone called the White House and Senior DOE staff to make quid-pro-quo deals which are now documented. When this got other applicants declined, how did Tesla get through? Corruption?
- Tesla got their inside Senator to give them only-for-Tesla factory tax reductions, green tax credits and other special finance perks that allowed Tesla to book profit that did not actually exist. When this got other applicants in trouble, how did Tesla get through? Corruption?
- At the time of application, Tesla had no prototype of the car that was to be factory produced (The roadster was not at all the car produced), no design CAD, no factory production files and no engineering for factory machine automation. When this got other applicants declined, how did Tesla get through? Corruption?
- Tesla was caught sending out letters to customers telling them to close deposits so they could fake orders before the earnings call. When this got other applicants declined, how did Tesla get through?Corruption?
- Tesla engaged in a conflict-of-interest with a Senator and her real-estate family for Tesla and Solyndra land, and adjacent land, in Fremont, Ca. How did Tesla get this through? Corruption?
- Tesla had one of the worst credit ratings at the time of application. Even today, to pay back all of Tesla's investors is nearly impossible. When this got other applicants declined, how did Tesla get through? Tesla had one of the worst debt ratios at the time of application. When this got other applicants declined, how did Tesla get through? Corruption?
- The cost, BOM, time-to-market, range and domestic jobs metrics was lower in Tesla's application than most other applicants. When better ratings got other applicants declined, how did Tesla get through? DOE staff made a deal with Tesla to swap Detroit stock to cook up the books for the application. When this got other applicants declined, how did Tesla get through? Corruption?
- Tesla made a deal to hire union workers for the NUMMI plant then fired most of them and hired H1B foreign workers with taxpayer money. When this got other applicants declined, how did Tesla get through? Corruption?
- Tesla provided no collateral for their loan application and had no assets of value. When this got other applicants declined, how did Tesla get through? Corruption?
- Tesla buys the majority of its parts from non-American suppliers. When this got other applicants declined, how did Tesla get through? Corruption?
- Tesla hired multiple "famous auto people" who then quit when they say what Tesla was up to. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla said they were going to build and sell over 500,000 cars as of today's date. They have missed every milestone and sold less than 5000 cars. When this got other applicants declined, how did Tesla get through? Corruption? - Tesla could not make their payments and got their deal custom-changed multiple times. When this got other applicants declined, how did Tesla get through? Corruption?

WHERE DO ELON MUSK'S FAKE TESLA TROLL-FARM POSTINGS COME FROM?:

Tesla, and Elon Musk, working with their financial partners at Google, are famous for flooding blogs with meat puppets, shills, sock puppets and a variety of fake Tesla troll shill comments in order to make it look like Elon Musk, and his stock assets, are popular. Here is how they do it:

By Doug Bock Clark - New Republic

Every morning, Kim Casipong strolls past barbed wire, six dogs, and a watchman in order to get to her job in a pink apartment building decorated with ornate stonework in Lapu-Lapu City. The building towers above the slums surrounding it—houses made of scrap wood with muddy goat pens in place of yards. She is a pretty, milk-skinned, 17-year-old girl who loves the movie *Frozen* and whose favorite pastime is singing karaoke. She is on her way to do her part in bringing down Facebook.

Casipong huffs to the third floor of the apartment building, opens a door decorated with a crucifix, and greets her co-workers. The curtains are drawn, and the artificial moonlight of computer screens illuminates the room. Eight workers sit in two rows, their tools arranged on their desks: a computer, a minaret of cell phone SIM cards, and an old cell phone. Tens of thousands of additional SIM cards are taped into bricks and stored under chairs, on top of computers, and in old instant noodle boxes around the room.

Richard Braggs, Casipong's boss, sits at a desk positioned behind his employees, occasionally glancing up from his double monitor to survey their screens. Even in the gloom, he wears Ray-Ban sunglasses to shield his eyes from the glare of his computer. (Richard Braggs is the alias he uses for business purposes; he uses a number of pseudonyms for various online activities.)

Casipong inserts earbuds, queues up dance music—Paramore and Avicii—and checks her clients instructions. Their specifications are often quite pointed. A São Paulo gym might request 75 female Brazilian fitness fanatics, or a Castro-district bar might want 1,000 gay men living in San Francisco. Her current order is the most common: Facebook profiles of beautiful American women between the ages of 20 and 30. Once theyve received the accounts, the client will probably use them to sell Facebook likes to customers looking for an illicit social media boost.

Most of the accounts Casipong creates are sold to these digital middlemen—click farms as they have come to be known. Just as fast as Silicon Valley conjures something valuable from digital ephemera, click farms seek ways to create counterfeits. Google buy Facebook likes and youll see how easy it is to purchase black-market influence on the Internet: 1,000 Facebook likes for \$29.99; 1,000 Twitter followers for \$12; or any other type of fake social media credential, from YouTube views to Pinterest followers to SoundCloud plays. Social media is now the engine of the Internet, but that engine is running on some pretty suspect fuel.

Casipong plays her role in hijacking the currencies of social media—Facebook likes, Twitter followers—by performing the same routine over and over again. She starts by entering the clients specifications into the website Fake Name Generator, which returns a sociologically realistic identity: Ashley Nivens, 21, from Nashville, Tennessee, now a student at New York University who works part time at American Apparel. (Ashley Nivens is a composite based on Casipongs standard procedures, not the name of an actual person or account.) She then creates an email account. The email address forms the foundation of Ashley Nivenss Facebook account, which is fleshed out with a profile picture from a photo library that Braggs workers have compiled by scraping dating sites. The whole time, a proxy server makes it seem as though she is accessing the Internet from Manhattan, and software disables the cookies that Facebook uses to track suspicious activity.

Next, she inserts a SIM card into a Nokia cell phone, a pre-touch-screen antique thats been used so much the digits on its keypad have worn away. Once the phone is live, she types its number into Nivenss Facebook profile and waits for a verification code to arrive via text message. She enters the code into Facebook and—voilà!—Ashley Nivens is, according to Facebooks security algorithms, a real person. The whole process takes about three minutes.

Casipong sometimes wonders what happens to profiles like these once she turns them over to the clients. In fact, her whole job seems strange to her and the purpose of all these accounts somewhat mysterious. Still, she forgets this for long stretches of time: Shes young, she can do an almost perfect karaoke rendition of Mariah Careys We Belong Together, and she dreams of finishing college at the University of Cebu City after shes saved enough money from working for Braggs. Once she earns a degree in Web design, shell join the Philippine diaspora and find a job in Australia, New Zealand, or the United States. And during weekends, maybe she can lead a life similar to Nivenss.

When Casipong stands up a little after 6 p.m., a nightshift worker is waiting to take her chair.

Once, if you wanted to make money scamming people on the Internet, you used email. For two years, Braggs made his living spamming half a billion email addresses, hawking blueprints for a mythical perpetual energy machine or e-books that explained the secret to winning the lottery. Filipinos even invented a term for this kind of work, onlining, and, for about a decade, email spamming was a semi-honorable career path in Cebu City, the metropolitan area that encompasses Lapu-Lapu City and is one of the foremost business-outsource processing centers in the world. (Ring JPMorgan Chase or Microsoft customer support, and theres a good chance youll be connected to a Filipino in Cebu City whose excellent English is part of the legacy of the American colonization of the Philippines.) Successful onliners became the nouveau riche of Cebu City. A notorious set of six brothers formed a spamming cooperative and built a row of mansions amid the slums. They threw all-night parties with roving guitarists serenading scores of guests, while they drank beer and devoured lechón, Philippine whole-roasted pig.

But between 2010 and 2012, teams of Internet security researchers and law enforcement officials dismantled

several spambot networks across the world. These efforts, combined with the improved defenses of email hosts, effectively disabled many onliners in Cebu City. They had to look for new ways to make money.

Social medias takeover of the Internet has been swift and dramatic. From 2005 to 2012, the percentage of Internet-using, American adults on a social media platform mushroomed from 8 to 70 percent. In 2005, Facebook had 5.5 million users; at the end of 2014, Facebook claimed 1.39 billion active monthly users—about one for every five people in the world and a little less than half of all people with Internet access.

In 2009, Facebook introduced the like button, which quickly became a way for people to celebrate an engagement or the birth of a baby, but also for brands to get people to endorse their products. Companies loved social media for the ostensible humanity it lent them; and sales leads that came through social media, studies showed, had a much higher chance of converting into actual purchases. Google and Bings algorithms take social media into account, so large followings could also improve a companys position in search-engine rankings, where appearing even one slot higher can mean significant additional revenue. Researchers have also found that having lots of followers attracts even more followers, continually amplifying a companys or individuals reach. And while the impact of traditional advertising is difficult to quantify, social media counters are much more transparent.

Celebrities—and more minor personalities, like bloggers trying to get endorsement deals—have increasingly found their value measured in Facebook fans and Twitter followers, the payments they receive proportionate to their social media clout. Khloé Kardashian reportedly earns around \$13,000 every time she tweets things like, *Want to know how Old Navy makes your butt look scary good?* to her 13.6 million followers. Politicians desire large followings for obvious reasons. Even ordinary people have discovered perks to having an extensive social media presence. Some employers, for instance, now require social media savvy for jobs in marketing, PR, or tech. All these logical incentives aside, the imperatives are not always rational. A growing body of research has begun to unpack the envy and insecurity that social media can generate—the pernicious sense that your friends are gaining Twitter followers much faster than you.

To help companies, celebrities, and everyday people boost their social media standing, onliners set up Internet stores—click farms—where customers can buy social media influence. Click farms can be found across the globe, but are most commonly based in the developing world. They exist in India, Indonesia, Bangladesh, and the Philippines, and may also exist in Eastern Europe, Mexico, and Iraq. A small number of click farms employ manual labor, a dozen or so people who manipulate Facebook accounts individually to create the likes that they sell. But most click farms are run by smaller teams that manage software to give digital life to accounts like Ashley Nivens. What Braggs runs is actually referred to as an account farm—he makes the accounts and software that click farms use.

In terms of their professionalism, click farms range widely. Some maintain promotional newsletters, subscription packages, and 24/7 customer service. One of the more polished, *We Sell Likes*, was founded by a former Silicon Valley SEO professional. Others are much less formal: a freelancer sitting in front of his computer all day and selling the services of hundreds of social media accounts through websites like *SEO Clerks*. Last November, *The New York Times* reported that teenagers were licensing Twitter click-farm software to supplement their allowances.

Richards account farm feels more like a startup than a developing-world sweatshop.

But the stakes are much larger than pocket money. Researchers estimate that the market for fake Twitter followers was worth between \$40 million and \$360 million in 2013, and that the market for Facebook spam was worth \$87 million to \$390 million. Italian Internet security researcher Andrea Stroppa has suggested that the market for fake Facebook likes could exceed even that. International corporations like Pepsi, Coca-Cola, Mercedes-Benz, and Louis Vuitton have all been accused of employing click farms, and celebrities such as 50 Cent, Paris Hilton, and LeAnn Rimes, have been implicated in buying fake followers. During his 2012 presidential campaign, Mitt Romney gained more than 100,000 Twitter followers in a single weekend, despite averaging only 4,000 new followers a day previously. (His campaign denied having bought any fakes.) One

Indonesian click farmer told me that he had funneled two million Facebook likes to a candidate in his nation's hotly contested July 2014 presidential election.

Two of the most crucial rules of Facebook's terms of service are: You will not provide any false personal information on Facebook, or create an account for anyone other than yourself without permission, and You will not create more than one personal account. The law of one person, one account is meant to guarantee that Facebook is the most real place on the Internet: The roughly six billion likes the company processes every day are supposed to be a quantification of homo sapien emotion. Other social media platforms, like Twitter, allow for more than one account per user, but, ultimately, the medium is predicated on the idea that its digital world is an accurate extension of the physical world.

Click farms jeopardize the existential foundation of social media: the idea that the interactions on it are between real people. Just as importantly, they undermine the assumption that advertisers can use the medium to efficiently reach real people who will shell out real money. More than \$16 billion was spent worldwide on social media advertising in 2014; this money is the primary revenue for social media companies. If social media is no longer made up of people, what is it?

It was never Braggs's intention to make a career of onlining. He dreamed of becoming a pilot and even went to flight school. (He still recalls the Leonardo da Vinci quote: Once you have tasted flight, you will forever walk the earth with your eyes turned skyward, for there you have been, and there you will always long to return.) Financial problems forced him to give up on his plan when he was in his early thirties, and, for nearly a decade, he survived on menial jobs: running a coffee stall at the bazaar, working construction, and chauffeuring tourists. One day, when he was driving a group of Koreans to a brothel—the destination for most of his customers—they offered him a turn with the high-class prostitute they were planning to employ. Braggs began searching for a way out.

Braggs got into onlining in 2011 after a friend who had struck it rich spamming gave him the software to start his own operation. When Braggs's email spam business failed in 2012, he opened his own click farm, manually forging thousands of Facebook accounts and selling likes from them, incrementally hiring workers as his business grew. When he realized that he could make more money by supplying click farms with the products they needed—i.e., profiles and software to animate those profiles—he reorganized his business.

By July 2013, he was making phone verified accounts—or PVAs—full time. He hired 17 employees, including Casipong, and established round-the-clock shifts so his farm never went dark. Casipong guesses that she makes over 100 Facebook PVAs a day. Other employees average more than 150. Braggs sells PVAs for 70 cents; premium PVAs—accounts that are fleshed out with more than bare-bones biographical details—can be bought for \$1.50.

Since his business began, Braggs has expanded into Yahoo, Gmail, and Twitter PVAs, and his customers have used the fake accounts in all sorts of scams: On the dating site Tinder, for example, Braggs said he believes seductive women solicited male users for pay-to-access porn sites. His biggest order, he told me, was for Chinese hackers trying to fleece the digital payment exchange Stellar; he hired every freelance worker he could find, but he was still only able to fulfill a small portion of it.

In many ways, Braggs's account farm operates similarly to the outsourcing and industrial businesses that Cebu City is famous for. He relies on the infrastructure that carries the call center and technical support data to Cebu City from around the globe in order to pipe his forged profiles to his clients. He even benefits from cheap local resources—though instead of exploiting the Philippines' old-growth rainforest timber, he processes SIM cards dropped off by men on motorcycles, paying a few cents for a card that would sell for \$5 to \$10 in the United States. Workers willing to do repetitive manual labor are not in short supply, either.

But Braggs's account farm feels more like a startup than a developing-world sweatshop. Most of his employees are young IT university graduates infused with the excitement of beating the system. There is an office puppy named Hacker, and Braggs pays for a cook to prepare lunch for the employees every day. Casipong earns about

\$215 a month, significantly more than the minimum wage for a domestic helper, which is as low as \$34 a month. Braggs pays his nightshift workers extra, and some of his employees reportedly choose to become nocturnal for the additional wages.

Click farms jeopardize the existential foundation of social media: the idea that the interactions on it are between real people.

The Philippines has the highest rate of unemployment in the Association of Southeast Asian Nations. Casipong is aware of the alternative employment options: Cebu City is the cybersex capital of the Philippines, and illegal firework factories in the slums announce their presence every few weeks with a bang. Braggs employees seem genuinely happy; their main complaint was laggy Internet that disrupted the music they streamed while working. Many spoke of Braggs as a Horatio Alger*-style role model. In the fictionalized biography Braggs maintains on the website of his account farm, he calls himself the Robin Hood of Facebook marketing, and this contrarian idealism extends to his general attitude about life. His hero is the tribal chieftain Lapu-Lapu—the namesake of his city—famous for slaying the Portuguese explorer Ferdinand Magellan, who, in the name of capitalism and colonialism, was the first man to circumnavigate the globe. He has no desire to stay up all night answering questions about credit cards and Windows glitches for people on the other side of the world. Why shouldn't he feel proud of providing decent salaries to 17 workers, or paying for the school fees of his girlfriends younger sister or the local kids basketball jerseys? Hes a self-made man, trained on YouTube tutorials and in chat rooms; to this day, he types hunt-and-peck style, never having learned QWERTY.

What he and click-farm managers are doing is not illegal in the Philippines. Facebooks terms of service are not international law. In the United States, the Federal Trade Commission and attorneys general from several states have legislated against fake reviews—false endorsements on Amazon, for example. But no formal ruling has been passed down on inauthentic likes. Click farming raises serious consumer protection questions, said Ian Ayres, a specialist in contract law and a professor at Yales law and business schools. To participate as a buyer or a seller in the traditional click-farming market seems a clear wrong. But the actual law is less explicit. And Braggs has his own business ethics: Hes not hacking anyones bank account, only offering a service that people are clamoring to pay for and providing for himself, his family, and his countrymen.

For years, Facebook encouraged brands to use social media as a free way to connect with fans. Companies would post content, and Facebook would show it to a large percentage of the people who had liked those companies, free of charge: This was the so-called organic reach of a post. But, over the last few years, with a noticeably precipitous drop in late 2013, Facebook has steadily decreased the organic reach of posts; now, when a company posts something, it only reaches about 6 percent of the profiles that have already liked that company, and Facebook plans to decrease that reach further. This has meant that companies struggle to access most of the fans they have accumulated unless they pay Facebook to advertise. But as Facebook becomes more of a paid billboard, click-farm bots can disrupt the efforts of companies that advertise with Facebook—and, sometimes, even render them pointless.

Heres how this can happen. Second Floor Music, an independent, Manhattan-based jazz publishing company that represents critically acclaimed but lesser-known composers, was the kind of small business built on its history and reputation: Five Grammy certificates hung on the walls, and jazz legends and up-and-comers dropped by the studio to rehearse. It was not, however, exactly forward-leaning when it came to social media marketing. But it was also ideally positioned to take advantage of Facebooks advertising services: Its products targeted a niche audience that was often hard to reach, but which Facebook, with its vast trove of personal data, could easily access.

So in September 2013, Second Floor Music launched a Facebook advertising campaign for the Facebook page of Jazz Lead Sheets, a Second Floor Music website that allowed customers to download sheet music and song recordings. Because more than one-third of Jazz Lead Sheets business came from international clients, Second Floor Music asked Facebook to put ads in front of people from around the world, and paid Facebook a few cents each time one of them liked the page for Jazz Lead Sheets.

A young jazz singer employed by Second Floor Music named Rachel Nash Bronstein ended up overseeing the Facebook campaign. At first, Bronstein was exhilarated by how fast the Facebook page gained fans, hundreds within weeks. But then she began to notice that the fan activity—liking posts, commenting, etc.—on the page had plummeted. When Bronstein examined the profiles, her heart sank. Many of them hailed from Iraq. A lot of the profiles didnt display any English. None of them evidenced any interest in jazz.

Its impossible to pinpoint how these profiles ended up fans of Jazz Lead Sheets. (Facebook is fiercely secretive about how its internal algorithms work.) But when Bronstein paid Facebook to place her advertisement, Facebook may have put the ads in front of accounts that had already liked thousands of pages, figuring that those accounts were more likely to click on the ad. And those accounts were likely run by click farms. (The average American user only likes 70 pages.) Because many fake accounts are programmed to disguise their mercenary activities by liking lots of pages (not just their clients), these bots were primed to like the Jazz Lead Sheets page. And because click-farm accounts often are programmed to move in coordination, so that they are easier to control, having one bot like a page could have caused others to follow, setting off a cascade of fake likes.

These fake likes werent just an empty number. Whenever Second Floor Music posted content, Facebooks algorithms placed it on the newsfeeds of a small, random sample of fans—the people who had liked Second Floor Music—and measured how many engaged with the content. High levels of engagement meant that the content was deemed interesting and redistributed to more fans for free—the main goal of most businesses that use social media is to reach this tipping point where content spreads virally. But the fake fans never engaged, depressing each posts score and leaving it dead on arrival. The social media boost Bronstein had paid for never happened. Even worse, she now had thousands of fake fans who made it nearly impossible to reach her real fans. Bronstein struggled to get help from Facebook, reaching out repeatedly through help forums, but, in the end, she scrapped the original page and started again from scratch. Second Floor Music had effectively paid to ruin one of its flagship Facebook pages.

Across Facebook, well-intentioned companies and organizations have found themselves in this predicament. Small businesses ranging from Bay Area startups to Toronto magazine publishers have reported similar problems, and Internet forums and blogs are rife with related tales. Corporations with professional teams managing their Facebook pages and large advertising budgets seem to treat this kind of artificial appreciation as the price of doing business. But the side effects of click farms are a real threat to small businesses with slimmer margins for error and without the know-how to effectively target their ads. (Its worth noting that small businesses are the focus of a Facebook marketing push that has involved nationwide outreach and efforts to streamline the companys advertising platform. Since Second Floor Musics first campaign, Facebook has made more tools available for advertisers to direct and monitor their ads. A year later, Bronstein ran another campaign that worked much better than the first.)

From January 2013 to February 2014, a global team of researchers from the Max Planck Institute for Software Systems, Microsofts and AT&Ts research labs, as well as Boston and Northeastern Universities, conducted an experiment designed to determine just how often advertising campaigns resulted in likes from fake profiles. The researchers ran ten Facebook advertising campaigns, and when they analyzed the likes resulting from those campaigns, they found that 1,867 of the 2,767 likes—or about 67 percent—appeared to be illegitimate. After being informed of these suspicions, Facebook corroborated much of the teams work by erasing 1,730 of the likes. Sympathetic researchers from a study run by the online marketing website Search Engine Journal have suggested that targeted Facebook advertisements can yield suspicious likes at a rate above 50 percent. In the fall of 2014, Professor Emiliano De Cristofaro of the University College of London presented research which found that even a page explicitly labeled as fake gained followers—the vast majority presumably bots.

The bot buildup can even affect companies that arent advertising with Facebook, but are just passively hoping their pages gain real fans. In 2014, Harvard Universitys Facebook fans were most engaged in Dhaka, Bangladesh. (They stated that they did not pay for likes.) A 2012 article in The New York Times suggested that as much as 70 percent of President Obamas 19 million Twitter followers were fake. (His campaign denied buying followers.)

Less prominent pages from across the world—from those belonging to the English metal band Red Seas Fire to international bloggers—have been spontaneously overwhelmed by bots that are attempting to mask their illicit activity by glomming on to real social media profiles.

How to Build a Tesla Facebook Bot

(Its easy!)

Pick a name: Fake Name Generator is great for this. One click will get you a full identity: From name, to age, to job—it can even provide a blood type.

Create an email account: If you want a bulletproof bot, make a phone-verified Gmail account using the same SIM cards you are using to verify your fake Facebook account.

Make sure your stealth software is on: Your proxy server should show that youre working from someplace innocuous. Dont forget to disable the cookies that might snag you.

Create a profile: Using the details from Fake Name Generator, flesh out your Facebook account. Dating websites are a great place to steal photos.

Phone verify the account: Install a SIM card into a cell phone and type the phone number into Facebooks phone-verification feature. Wait for Facebook to text you a verification code. Enter the code.

Add some frills to the profile: Everything from favorite movies to photo albums, which you can just copy from other profiles. A bot looks a lot more authentic if it has friends, so make sure to send a few requests. If youre working for a big account farm, you can probably friend some real people who are in on the scam.

Control your bot with the software: Once youve made thousands of bots, youre not going to want to manually manipulate them. Purchase a program to automate your bots to act real.

Watch out for the social media police: Facebook is hunting you, so be careful. Newly made bots are subject to extra scrutiny, so let your bot marinate for a few weeks. Dont go overboard on liking too many things. Youll probably want to maintain a lot of accounts, so they can work in shifts. Whenever youre paid to like one thing, like a few other random things to create a smokescreen of activity.

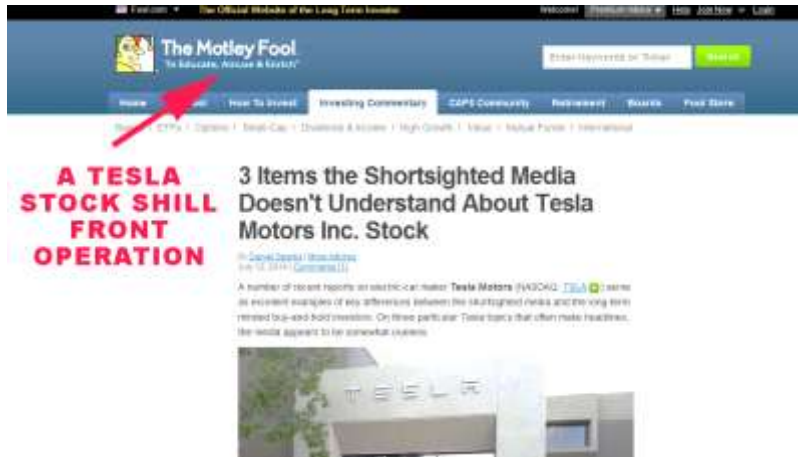

And if you are caught: Dont sweat it! Facebook is more likely to temporarily disable the like function of the account than delete it. But if the heats getting to be too much, just delete the account and reuse the phone number to make a new one. Your business wont miss a beat.

This February, Facebook stated that about 7 percent of its then 1.39 billion accounts were fake or duplicate, and that up to 28 million were undesirable—used for activities like spamming. In August 2014, Twitter disclosed in filings with the Securities and Exchange Commission that 23 million—or 8.5 percent—of its 270 million accounts were automated.

Almost since their inception, social media companies have tried to limit this kind of digital-influence inflation. YouTube periodically examines videos with suspicious numbers of views. In December 2014, in what was called the Instagram Rapture, the platform cleaned up a number of accounts; Justin Bieber lost 15 percent of his followers. Facebook is constantly refining its defenses; the verification processes that take up so much of Casipongs time are part of that effort. In some countries, Facebook has even requested pictures of government

IDs from suspicious accounts. (They've mostly avoided this tactic in the United States, where it has triggered a backlash.) As a Facebook spokesperson said in a statement last August: We have a real incentive to aggressively go after this activity because people want authentic connections on Facebook, and businesses use our platform to deliver real business results. Inauthentic interactions run counter to these goals, so we are constantly working to detect fraudulent activity and shut it down. In April, the spokesperson continued: Fraudulent activity has always been a tiny fraction of overall activity on our service, but recently we have developed new pattern recognition technologies that have mostly halted the major exchanges of fake like activity.

At the same time, interest of Facebook to downplay the problem. Twitter has more than 8 percent automated, but it are malicious—i.e., or used for spam—many are used for like tweeting the games. The company percent of its malicious, but researchers have suggested the actual figure is at least double that.

however, it is in the and other platforms severity of the recognized that of its accounts are says not all of these run by click farms suggesting that legitimate purposes, scores of sports has reported that 5 accounts are

These estimates are contentious because in 2014, more than 90 percent of Facebook's \$12.5 billion in revenue and about 90 percent of Twitter's \$1.4 billion in revenue came from advertising. If researchers are correct that advertising on social media leads to a high percentage of fake likes and fans and followers, the entire business model could be called into question by advertisers. What incentive do companies have to buy ads that target digital ghosts? As Internet security researcher Stroppa said, The worth of Twitter is based on their active and total numbers of accounts. If they ban fake profiles, then they will lose an important percentage of their user base. Brands have begun to report dissatisfaction with Facebook marketing, wrote Nate Elliott, a vice president for the technology and market research company Forrester Research, in an email. If fake profiles are a widespread problem, then it may turn out Facebook's value to marketers is even lower than we thought.

Facebook, Twitter, and other platforms claim to successfully police their populations, but evidence suggests otherwise. The Max Planck team found that more than 90 percent of accounts they flagged as black market were not eliminated after four months, even though Facebook had erased many of the fake likes that these accounts had created. De Cristofaro found that Facebook caught less than 1 percent of the fake profiles he investigated. The number was even lower for high-quality accounts: For the month that he monitored 621 active profiles from a high-end click farm, only one was canceled. When I looked through the accounts managed by Braggss account farm and several other click farms, time-stamps revealed that the majority had been lurking on the network for several years. Many had even attracted real friends, either through automation or because their profile pictures had intrigued actual people; attractive women created by Braggss account farm often get approached with explicit overtures. (Unless clients specify other identities for PVAs, Braggss instructs his workers to make sexy women.)

And just as onliners quickly shifted when email spam was no longer viable, click farms have wiggled away from efforts to rein them in. To my eye, Braggss premium PVAs are almost impossible to differentiate from the real deal. (Casipong fills the photo albums of her premium PVAs with pictures that remind her of one of her favorite blogs, Humans of New York, and adds quotes like hakuna matata, which she has no idea comes from The Lion King.) Experts believe that without computer-aided analysis, this extra camouflage makes it almost impossible to finger any click farmers' couture bot.

If Facebook comes to suspect that Ashley Nivens is not, in fact, a real person, and suspends her account, Braggs will have Casipong unearth the appropriate SIM card from the tens of thousands of cards organized and stacked around Braggs's shop, insert it into a phone, and answer Facebook's text message: Yes, she is a human. Basically, Braggs said when we met last September, there's nothing Facebook can do to stop me. Facebook has shut down his personal account, but Braggs laughs it off: Why would I need one Facebook account when I've got thousands? The main limiting factor for his business is a somewhat unpredictable supply of SIM cards.

Workers in Richard Braggs's account farm.

Last September, Braggs drove out of Lapu-Lapu City to one of the new luxury subdivisions springing up amid the wetlands and mangrove forests. He had purchased a house there and construction was underway. The streets were lined with boxy, concrete, two-story houses fronted by grass lawns—a Philippine version of the American dream, but with half the square footage of their Western counterparts and with roving goats nibbling their shrubbery. It is here that the ex-pats who run the nearby factories live.

The house was Braggs's reward for working weekends and never taking a vacation. He had been so busy that two months had passed since he had visited, and he had to argue with the guards to be let into the gated community. The lawn outside Braggs's house was chest-high, with saplings rising above the brush. His girlfriend—the first worker at his click farm—followed behind as Braggs pushed through the young jungle. This was the woman he would marry. This was where his children would be raised. This was where he would move his account farm once the electricity was turned on. The exterior of the house was finished, but the interior was bare. He stopped at the front door of his new home and he patted his pocket, worried that he had forgotten the key.

It seems impossible that Facebook, multibillion-dollar war chest, won't company knows his real name. It desist orders. But he's hopeful. Every told me, so there is always a way to

with its army of elite coders and eventually crush Braggs. The barrages his inboxes with cease-and-system is made by humans, Braggs beat it.

(PARODY) Senior Tesla Motors Media Consultant quits. Reveals All! Says STUPID, STUPID NEWS REPORTERS NOW USING FACTS INSTEAD OF TESLA TALKING POINTS, THUS RUINING THE WHOLE DEAL

Fremont, CA- As of today, there is no mention of Buzz Flapjaw on any Tesla Motors website. His name appears to have been scrubbed from all Tesla media.

Buzz is a legend in the corporate communications industry, but he now has no relationship with Tesla Motors, certainly as of this weekend.

Buzz said, The PRESS ARE IDIOTS! in national press releases (the results of which are shown below):

(Photo: Tesla media front Motley Fool)

He went on to say: The Stupid, Stupid news reporters are now using facts, hard data and detailed research to write their stories about Tesla Motors and Elon Musk, instead of the extensive and carefully prepared talking points we gave their news directors. You would think that our investors ad money would still give us control of the media but apparently not..

“(Fucking Glenn Greenwald)”, He muttered under his breath.. (“Jay Carney would never let this shit happen when he controlled the news”) he continued to mutter to himself

Buzz elaborated: Only those of us inside Tesla can truly describe the kool aid colors (Tesla’s fanboy shill bloggers favorite drink) of the bright Tesla future and the wonderfulness of just being a Rich Frat Boy Democrat, err,.. uh Tesla Owner

Formerly with Enron, Buzz moved on to run the General Motors ignition key safety group, and was stolen by Elon Musk (Who stole Tesla from Martin Eberhardt), from GM when his valuable disinformation skills were noted. Buzz expressed his angst and frustration with the constant concerns over Tesla’s stock activities and the reference to Tesla as a creepy taxpayer swindle-scam created to manipulate the stock market and exploit tax credits which Tesla’s investors bribed into place.

THAT IS JUST WRONG!, Raged Buzz, there is nothing creepy about it!

Buzz also commented on other controversies: Senator Feinstein DID NOT put herself on the intelligence committee just so she could get a heads-up just before she gets caught. She did not take bribes! Our investors huge cash payments to her PAC are irrelevant, as are the insider stocks and real estate holdings her, and her family, profited on and we only hired her staff to help them out, not as revolving door bribes, people are just making things up! The fact that Elon Musk had a personal relationship with her had nothing to do with it! If you ignore the direct connection between Solyndra and Tesla, and all of the investors who are also campaign donors, which are all on the same land, you can just err.uhm.. Benghazi!, Said Buzz.

Also commenting on the Tesla fires, he admonished: OK, so the Tesla patents do say, in no uncertain language, that the Tesla batteries will blow up and kill your family and burn your house down, but that is not why we were just giving the patents away. Also, even though every major university has said that they way we configured the NOT APPROVED FOR CARS batteries creates ‘the most likely scenario for an explosive fire, of any lithium ion configuration on EARTH, the handful of cars we have sold only blow up a little bit and the cancer-causing gas they emit can be avoided if you get 2 miles away from them very fast while holding your breath.

He went on: ..Tesla is getting a raw deal, you need to just ignore all the dead, and burned alive, Tesla car and battery factory workers..for GODS SAKES, all but three of them are in CHINA..They are ASIANS, they are not AMERICANS!.. who cares?! We asked him to discuss the safety issues: Look, he said: Yes, we all know that Tesla's have killed multiple people and that there are multiple homicide charges but it wasnt like the car killed people, except some of them.

We asked Mr. Flapjaw about the connection between all of Googles executives and investors, Tesla's investors and campaign contributions that line up in a very symmetrical way to the Department of Energy funding. Buzz exclaimed: What!?! You have a problem with symmetry? Look at the Tesla! It is design perfection. It is perfectly symmetrical. Symmetry is GOOD. You try to make it sound like kick-backs are a bad thing.. call them 'campaign support resources', that doesnt sound so bad, heh?, he wiped his brow and continued.. So what if Google controls the media and hides all the investigations about Tesla, it is better than letting voters get all upset!

The various charges that Tesla is an organized crime operation created as a kick-back scheme to control stock market valuations was taken to Mr. Erick Holder for comment. His secretary stated that: Mr. Holder cannot speak to you right now, he is very busy very, very busy. He has a lot on his mind right now. He has to redo his stock portfolio before Monday and all kinds of things..

Buzz expects to begin work on his new job as lobbyist for the new CIGARETTES COME FROM PLANTS AND ARE GREEN AND GOOD FOR YOU Campaign.

When asked for comment, Mitt Romney merely smirked in a knowing kind a way

We asked Buzz if it is true that Robert Gibbs, Jay Carney and Erick Holder told Elon Musk that he could pretty much kill and eat human babies and we can keep it from getting ACTUAL media coverage. Buzz walked away.

Tesla shareholder suit claims Elon Musk and other board members lied about car safety

* DOZENS OF FRAUD LAWSUITS NOW PRODUCED OVER TESLA FRAUD BY SHAREHOLDERS AND INSIDERS. CHARGES ERIC HOLDER WITH RUNNING COVER-UP TO PROTECT THE WHITE HOUSE!

* CHARGES TESLA IS A TOTAL CRIMINAL ENTERPRISE CREATED TO KICK-BACK FUNDS TO SILICON VALLEY CAMPAIGN FUNDING VCS!

By Paul Carr

Tesla fire: Out of the battery fire, into the shareholder lawsuit.

Tesla shareholder Ross Weintraub has filed a derivative suit against the company and its board members — including CEO Elon Musk — alleging that a series of dishonest statements made about safety and profitability caused Tesla's stock price to drop on multiple occasions.

A derivative suit is a legal tool used by shareholders who want to force a company to take corrective action against its own executives or, in this case, to take action directly if board members are unlikely to act. It should be noted that, to many, shareholder lawsuits are like patent trolls: An unfortunate cost of doing big business and not something that inherently bodes badly. Also, in Tesla's case, their stock isn't that far off its 52 week high (Chart via Google):

In the complaint, filed in Northern California District Court, and embedded below, Weintraub alleges a long history of dishonesty by the company and by Musk himself, including allegations that Tesla board members:

allowed the Company to embark on a campaign of false and misleading statements designed to convince the market that the Model S was literally the safest car in existence.

allowed the Company to misrepresent the low height and configuration of the Model S battery pack as enhancing the vehicles safety, without disclosing its very significant vulnerabilities for high-intensity fires.

egregiously allowed the Company to misrepresent the Model Ss history of fire incidents which included at least three very significant fires requiring first responder intervention.

And that Elon Musk himself

falsely claimed that [t]hroughout all our crash tests, throughout all similar incidents with vehicles on the road, never once has there been a fire. When a Model S fire later occurred during the relevant time period, a Tesla spokesperson falsely stated, This is the first fire. Thus, by the third Model S fire, the Individual Defendants were still causing or allowing Tesla to represent that there were low probabilities of such fires while simultaneously denying that a recall was necessary.

gave several interviews during which he downplayed this Model S fire and worse, failed to disclose that another Model S had been consumed by fire in Mexico on October 18, 2013 According to allegations in the Federal Securities Action, defendant E. Musk, with knowledge of the fire and inspection, unilaterally determined that the fire was not relevant to investors due to the circumstances under which it arose.

The lawsuit further claims that Musk and his fellow board members conduct has significantly and materially damaged the Company. By virtue of the Individual Defendants breaches of fiduciary duties, the Company faces a lawsuit alleging violations of the federal securities laws and Tesla has suffered significant disruption of, and damage to, its business, its reputation and goodwill.

It then goes on to list various conflicts held by board members which would make it unlikely that they would take action against Musk of their own volition. These include the fact that board member Steve Jurvetson of DFJ is an investor in other Musk companies including Solar City and Space X.

The suit demands a jury trial. The company has until the end of this week to respond or face a judgement by default.

Updated: A Tesla spokesperson told Pando We believe this lawsuit is without merit and intend to defend against it vigorously.

Paul Carr is editorial director of Pando. Previously he was founder and editor in chief of NSFWCORP.

Can Elon Musk code? * Quora

Elon taught himself computer programming and at age 12 sold the computer code for a video Elon Musk: . Bruce Hillman, liar, cheat, aspiring scam artist.

www.quora.com/Elon*Musk/Can-Elon*Musk-code

Is Elon Musk a sociopathic, narcissistic, Senator-bribing, lying, government funding fraud, stock swindling, woman-abusing, ego-maniacal, wife-cheating, company stealing, self-promoting attention whore like the lawsuits against him by his wives, customers, suppliers, and shareholders claim?

The Tesla Patent Giveaway SMOKE SCREEN!

Tesla has announced that they are giving their patents away, patents which state, in no uncertain terms, that their batteries can kill you, burn you and your family, set your house on fire, set your office or parking structure on fire (Not to mention the cancer-causing fumes they release). Tesla own engineers wrote that in the their patents and Musk signed off on those patents.

[wpvideo syQr4wbz]

So thats nice, they are giving them away. Who does this benefit?

Since 2006, EVERY SINGLE new electric car company has been sabotaged by Musk and his Silicon Valley investors, The Detroit Big 3 (SEE THIS LINK) !!! and/or the Department of Energy. Over 200 electric car companies tried to launch and every single one got lied to and stonewalled by the DOE, sabotaged by outsider take-overs who offered an investment and then generated a take-over EXACTLY like Musk did; Blockaded, by mutual agreement by the VCs; and/or regulated into non-operation by laws which were written so only the Detroit Big 3 could pass them.

So, Musk appears to be making all nice-nice by giving away the patents but in reality, they cant be used by anyone but the Detroit Big 3 because anybody else will be forced to endure the above-mentioned sabotage efforts. The Detroit Big 3 already have tons of their own patents and avoid any NIH (Not Invented Here) outsider technologies. So, what good are they?

There is no possible way to start, or run, an electric car company in America because Musk and his VCs along with DOE and Detroit have built a cartel that kills off any competitors. (With a little help from Robert Gibbs and Jay Carney)

Does President Obama care that they made him look like a fool for destroying his Miillion Electric Cars on Americas roads promise to the Public? The sabotage was intentional! They used taxpayer money to do it! Shouldnt the WHITE HOUSE be a little bit pissed off? Yet, another thing, the President has to first find out about by reading about it in the paper?

So could this be the precursor to a Tesla bankruptcy? We have seen that they cook the books, are we in for another cleantech shocker?

Send in your links. Lets discuss

Tom- Boston/G

[wpvideo Az6PiFCv]

The Takeover Game* ANOTHER REASON WHY THE TESLA PATENTS ARE WORTHLESS

Almost every electric car company that starts to get traction has a hostile takeover attempt. Later stage parties create a dispute which causes the founder to be forced out, bought out, quit or otherwise stop providing the impetus to deliver a disruptive technology. The process has now occurred so many times that it is beginning to look like an intentionally crafted standardized strategy by third-parties who fear market diffusion. It happened to XP but they overcame it. The new management usually accidentally tanks the company. Lets try to guess who the third-parties might beBUT:

What better way to control a market than to control all of the funding for that market and then have all that controlled funding administrated by your people who have been placed in, and around, a federal agency! Its the Takeover Game on a whole new level. Do people really do these sorts of things? Imagine megalomaniac car, energy and materials company heads with billions of dollars that want to control hundreds of billions of dollars and have insane egos

Who's Tesla's Bitch? THE LIST OF TESLA'S HIRED MEDIA SHILLS

(Draft 1.3 * Constantly updated)

Which media outlets cover-up Tesla Motors misdeeds and abuses?

Which ones are run, or directed, by Tesla's investors seeking to manipulate stock values?

Lets track, chart and document which media outlets are willfully smoke-screening Tesla Motors. Which outlets publish counter-stories when other outlets publish negative disclosure about Tesla to try to cover-up, or flood-out, the Tesla issues and charges?

Some reporters are compensated by Tesla's IR Department, PR contractors, founders, VC and banking groups with either cash, discounts, tickets, jobs, advertising contracts, sex workers, meals, travel and/or political access.

Which outlets now have documented tracking evidence, that can be exhibited in court?:

— Google (Investors)- owners of:

- * Hundreds of online news outlets
- * Also via web routing manipulation

— Hearst Communications (Investors)- owners of:

- * SF Gate
- * SF Chronicle
- * 15 daily and 34 weekly newspapers including
- * Houston Chronicle
- * San Francisco Chronicle
- * San Antonio Express-News
- * Albany Times Union
- * Hundreds of magazines around the world, including
- * Good Housekeeping
- * Cosmopolitan
- * ELLE
- * "O"
- * The Oprah Magazine
- * 29 television stations, which reach a combined 18 percent of U.S. viewers; ownership in leading cable networks, including Lifetime, A&E, HISTORY and ESPN; significant holdings in automotive, electronic and medical/pharmaceutical business information companies
- * a 50 percent stake in global ratings agency Fitch Group
- * Internet and marketing services businesses
- * television production
- * etc

— Gawker Media (White House Character Attack Conduit)- owners of:

- * Gawker

- * Gizmodo
- * Jalopnik
- * Kinja
- * Deadspin
- * Kotaku
- * Jezebel
- * Valleywag
- * Lifehacker
- * 109

etc

— The A.L.I.C.E. Alliance (Investor-Synchronized Reporters)- Controllers of:

- * Stands for: American Legislative and Issue Campaign Exchange
- * 1400 coordinated reporters using the Alice News Alerts in order to seek to cover up campaign backer crimes with

synchronized story releases, include:

- * The top two political reporters for The Huffington Post
 - * A Reuters reporter
 - * The editor of The Nation magazine
 - * A producer for Al Jazeera America television
 - * A U.S. News & World Report columnist
 - * Approximately two dozen Huffington Post contributors
 - * All of Gamechanger Salon
 - * Sally Kohn, formerly a Fox News contributor, now works for CNN
 - * Amanda Terkel, the Senior Political Reporter and Politics Managing Editor at The Huffington Post
 - * The Huffington Posts Washington bureau chief, Ryan Grim.
 - * A former New York Times freelance columnist who now works as an energy and commodities reporter for Thomson Reuters is also a member of Gamechanger Salon.
 - * Anna Louie Sussman is listed as an investigative reporter and journalist on the Gamechanger Salon membership list, and while her beat focuses on energy issues, she has also writes about local and international human rights and social justice issues according to her website.
 - * Katrina vanden Heuvel is the editor and publisher of The Nation magazine, a prominent and well-known periodical of leftwing political and social thought. She is also a member of Gamechanger Salon and a regular opinion writer for the online edition of The Washington Post.
 - * Lisa Graves, who leads the Madison, Wisconsin-based Center for Media and Democracy, is also a member of Gamechanger Salon, and * according to e-mails reviewed by Media Trackers * regularly promotes material developed by CMD to attack ALEC and the right-of-center lawmakers who tend to make up the majority of ALECs active legislative membership.
 - * Vanden Heuvel suggested in her column that liberals support the efforts of the American Legislative and Issue Campaign Exchange * ALICE (a leftwing counterpart to ALEC) * and the Progressive States Network.
 - * Jordan Flaherty was, as of last year, a producer for Al Jazeera America television. He is also listed as a member of Gamechanger Salon and for a while he occasionally blogged for The Huffington Post.
 - * In addition to working at the left-leaning American Sustainable Business Council, David Brodwin writes an online column for U.S. News & World Report.

Elon Musk's Hyperloop predicted to turn human beings into “bloody applesauce”. Musk's latest taxpayer hand-out scam!

- STAGE8 Advocates

Put a crowd of human beings in a can and connect that can to the ground in a line that never varies. Shoot that can down the line at speeds so high that any error, even the tiniest one, could turn the people inside, instantly, into what one investigator calls “bloody human applesauce”.

An earthquake, ISIS, a way-ward pick-up truck, a flood, a tornado, a cow on the tracks, a computer error, a driver mis-calculation, a confused self-diving car, a hacker attack, a solar flare, a fallen tree and hundreds of other possibilities could kill every passenger, at once, in the most horrible manner possible. It is a disaster nightmare guaranteed to happen. The ambulance drivers will be picking up the victims with a sponge.

For those who wish to do harm to others, now increasing in the new world, the Hyperloop gives them a perfectly timed opportunity to create a small anomaly which will cause an epic amount of death. The Hyperloop could not be a worse-timed, more ill-conceived operation.

Musk insists: “Oh we will have the latest technology. Nothing will happen.” But that is what the other CEO's of the companies that had terrible disasters said. The many filed lawsuits against Musk, for fraud; demonstrate that he has a loose relationship with the truth and a close relationship with “Hype”.

Regular trains have been suffering horrible human disasters, now featured in full color on You Tube, in increasing numbers. What kind of naiveté is making the Hyperloop people believe that they are immune to reality?

It is the open-eyed naiveté of Greed!

You see, Elon Musk has long been associated with railroad baron: Richard Blum. Richard “Dick” Blum of the railroad property of the FBI-raided Solyndra and next door property Tesla; Richard Blum of the high speed rail project so corrupt that a law had to be made to try to slow him down; Richard Blum who has a wife named Dianne Feinstein, who keeps routing state and federal tax dollar kick-backs to all of Elon Musk's companies. Many think that the “Hyperloop” is an attempt to bypass the curtailment of the Feinstein/Blum's other railroad project. “THAT” Richard Blum is also under investigation for profiteering, Chinese contractors, Post Office real estate scams, University regent rigging, and more.

Musk uses hype to baffle Senators into giving him billions of taxpayer dollars for all of his companies so that he can turn around and fund their campaigns with the very same money. It is called a “kick-back” scheme.

Musk's billions and his Tesla, Solar City and Space X could not possibly still be alive without tens of billions of dollars of tax credits, free real estate, fee waivers and cash that state and federal agency heads just handed him in exchange for some “perks”. The Hyperloop is the same story. Hyperloop can't exist without government kick-backs. Nobody in the consumer market asked for a “Hyperloop”. As usual, all of the media stories and blogs expressing excitement about the Hyperloop have been traced back to Elon Musk, and his Troll Farms. It is nearly a joke that Musk's latest hype-scam actually has the word “Hype” in it! It is, as if, he is taunting the authorities. He believes that corrupt Senators protect him from prosecution. That bet may be running out.

Musk, and his Google investment partners, have been handed, as a kick-back, most of NASA, free NASA jet

fuel for their private jets, free NASA airfields, Free NASA buildings, Free financing for their car, solar and spy satellite factories, Free H1-B overseas labor, and more..on the backs of the public.

While the inevitable disaster of “human sausage” is horrific, the disaster of allowing Elon Musk to engage in another corrupt hype-scam, on the pain of the taxpayer, is the biggest, most horrific, disaster of all.

Key investigation Issues:

Revolving door jobs for Lobbyists and Senator's staff; Real estate kickback scheme re: Tesla & Solyndra properties; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; running a “DO NOT FUND” list to protect Silicon Valley Cartel; Arranging quid-pro-quo funds-for-campaign contributions and funds-for-SEO-rigging and funds-for voter search-engine-mood manipulation; kickbacks; Misdeeds recorded by multiple law enforcement and intelligence agencies;

Key Characters in the Scandal:

WHITE HOUSE -

- ⑩ Rahm Emanuel- White House (Terminated- Chicago finance head indicted for Corruption)(Under Investigation)(24/7 DS)
- ⑩ Robert Gibbs- White House (Terminated)(Under Investigation)(24/7 DS)
- ⑩ David Axelrod- White House (Terminated)(Under Investigation)(24/7 DS)
- ⑩ Barack Obama- White House, Senior Executive Valerie Jarrett- White House(24/7 DS)
- ⑩ Larry Summers- White House (Fired)(Under Investigation)(24/7 DS)
- ⑩ Bill Daley- White House (Terminated)(Under Investigation)(24/7 DS)
- ⑩ Steve Rattner- White House Car Deals Director (Fired- Indicted in NY State for SEC Fraud/Corruption)(Under Investigation)(24/7 DS)
- ⑩ Jay Carney- White House (Forced to resign) (24/7 DS)
- ⑩ David Plouffe- White House (Forced to Resign) Arranged deals between VC campaign Donors (24/7 DS)
- ⑩ Eric Holder- DOJ (Forced to resign) Staff & VC Protections and blockade of FBI and Special Prosecutor deployments

Silicon Valley Cartel

Investigation Issues:

Revolving door jobs for Lobbyists and Senator's staff; Real estate kickback scheme re: Tesla & Solyndra properties; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; running a “DO NOT FUND” list to protect Silicon Valley Cartel; Arranging quid-pro-quo funds-for-campaign contributions and funds-for-SEO-rigging and funds-for search-engine-mood manipulation; kickbacks; Ran Illuminati-like frat-house boys club with goal of taking control of government policy process and creating monopolies which only profited their cartel; Misdeeds recorded by multiple law enforcement and intelligence agencies; Colluded together to rig markets in order to cut out those who were not in “the club”; Colluded on database to ensure that no VC funded a “black-listed” non-club member; Ordered Silicon Valley web companies they controlled to run SEO and perception manipulation programs to control voters perceptions; Pretended to review entrepreneurs new ideas and then rejected the good ideas and handed them over to another VC in “the club” so that VC could have their “entrepreneurs in residence” copy the ideas without paying the creator of the idea; Organized vast whitepaper authoring program with McKinsey Consulting which was distributed to Congress and White House to sell funding of DOE ATVM & LG programs which they had pre-rigged to benefit only companies they already owned part of; Fully meets definition of “Organized Crime”; Arranged with White House staff to make sure only their companies got funded in exchange for campaign cash and services to DNC candidates; Pre-acquired investments in minerals found almost exclusively in Afghanistan and then promoted Afghan war in order to monopolize those

minerals; May have arranged some of the suspected murders in Victims List, below;

- Larry Page- (Under Investigation)(24/7 DS)
- Eric Schmidt- (Under Investigation)(24/7 DS)
- John Doerr- (Under Investigation)(24/7 DS)
- Steve Westly- Campaign Bundler (Under Investigation)(24/7 DS)
- Richard Blum- Senator Feinsteins Husband (Under Investigation)(24/7 DS)
- Ray Lane- (Charged with Federal Tax Fraud)(Under Investigation)(24/7 DS)
- Elon Musk- CEO - Tesla (Under Investigation & in multiple lawsuits for fraud)(24/7 DS)
- Andy Bechtolsheim- Insider campaign backer (Under Investigation)(24/7 DS)
- Vinod Khosla- Campaign backer (Under Investigation and in multiple lawsuits)(24/7 DS)
- Martin LaGod- Campaign backer (Under Investigation)(24/7 DS)
- Ira Ehrenpreis- Campaign backer (Under Investigation)(24/7 DS)
- Eric Strickland- Campaign backer (Under Investigation)(24/7 DS)
- Tom Perkins- Campaign backer (Under Investigation, slammed by public and media)(24/7 DS)
- Tim Draper- Campaign backer (Under Investigation)(24/7 DS)
- Tom Styer- Campaign backer (Under Investigation)(24/7 DS)
- Lloyd Craig Blankfein- Head of Goldman Sachs (Under Investigation)
- Raj Gupta- McKinsey Fixer (Indicted, Jailed)(Under Investigation)(24/7 DS)
- Brian Goncher- Deloitte VC intermediary (Under Investigation)(24/7 DS)
- Goldman Sachs (Suspected of staging most of the TARP/DOE deals for personal gain & insider payouts)(24/7 DS)
- Kleiner Perkins (Campaign funder who received massive windfalls from Russian mining & tech start-up rigging)(24/7 DS)
- Draper Fisher (Campaign funder who received massive windfalls from Russian mining & tech start-up rigging)(24/7 DS)

Compromised Senators & Governors

Investigation Issues:

Organized Crime; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with constituents; Kick-backs; Fraud lawsuits underway; Contract rigging; Lithium cartel organization for Afghan war; Insider trading; Market rigging for family advantage; Misdeeds recorded by multiple law enforcement and intelligence agencies; All of the below received exclusive insider trading family gains and perks from the DOE & TARP funding winners that they hand-held through the funding process while sabotaging applicants who weren't in 'The Club?;

- Dianne Feinstein- Senator (Under Investigation) Wife of Silicon Valley Cartel Member Richard Blum (24/7 DS)
- Harry Reid- Senator- Solar factory guru, Congress lead (24/7 DS)
- Senator Calderone- (Indicted & charged with corruption)(24/7 DS)
- Leland Yee- Senator (Indicted & charged with corruption) (24/7 DS)
- Nancy Pelosi (24/7 DS)
- Barbara Boxer (24/7 DS)
- Arnold Schwarzenegger (24/7 DS)

David Plouffe - Suspect

Senior Advisor to the President

"In office January 10, 2011 ? January 25, 2013"

President Barack Obama

Preceded by David Axelrod

Succeeded by Daniel Pfeiffer

Personal details

Born "May 27, 1967 (age 47) Wilmington, Delaware, U.S."

Political party Democratic Party

Alma mater University of Delaware

"David Plouffe (/ˈplʊff/; born May 27,[[]^{citation needed} 1967)[[]¹[]][[]² is an American political strategist best known as the campaign manager for Barack Obama's 2008 presidential campaign in the United States. A long-time Democratic Party campaign consultant, he was a partner at the party-aligned campaign consulting firm AKPD Message and Media, which he joined in 2000.[[]³ Plouffe was an outside senior advisor to Obama since the president's first day in office and was then appointed as a Senior Advisor to the President (inside the White House) in 2011 following the resignation of David Axelrod, who went on to start Obama's reelection campaign.[[]⁴"

Early life

"Plouffe was born and raised in Wilmington, Delaware,[[]⁵ in a Jewish family,[[]⁶[[]⁷[[]⁸ the son of Frances (n,e Vincent), a stay-at-home mother, and James Everett ""Jim"" Plouffe, a factory worker who later had a job in marketing.[[]⁹[[]¹⁰ He was raised in a working-class family.[[]¹¹ Plouffe attended St. Mark's High School. He left the University of Delaware prior to graduating in 1989 to pursue a full-time career in politics, and completed his

full undergraduate degree in May 2010.[12]"

Career

"Plouffe began his political career by working for Senator Tom Harkin's 1990 re-election campaign.[13] He later worked as a state field director for Harkin's unsuccessful 1992 Presidential campaign. In the same year he successfully managed Congressman John Olver's first re-election bid in Massachusetts. In 1994 Plouffe managed Delaware Attorney General Charles M. Oberly's unsuccessful campaign against Senator William V. Roth. He then worked as campaign director for the Democratic Senatorial Campaign Committee in 1995. In 1996 Plouffe managed Bob Torricelli's successful campaign to fill Bill Bradley's New Jersey seat in the United States Senate.[citation needed] From 1997-98, Plouffe served as Democratic leader Dick Gephardt's Deputy Chief of Staff. In 1999-2000, as executive director of the Democratic Congressional Campaign Committee, Plouffe led Democrats to gains that came within several thousand votes of winning back the House. He also led the Democratic Congressional Campaign Committee to unusually high fundraising amounts, during his tenure at the DCCC. In the winter of 2000, Plouffe joined AKPD Message and Media but left briefly to serve as a strategist for Gephardt's unsuccessful Presidential bid. He returned to the firm and became a partner in February 2004. Beginning in 2003, Plouffe and fellow AKPD partner David Axelrod worked on Barack Obama's 2004 Illinois Senate campaign, beginning his association with Obama. Plouffe worked with Axelrod on the successful 2006 campaign of Deval Patrick for Governor of Massachusetts.[citation needed]"

2008 Barack Obama presidential campaign

"Plouffe was the campaign manager for Obama's successful 2008 presidential campaign. He is credited with the campaign's successful overall strategy in the race (primarily against Senator Hillary Clinton) for the Democratic Party presidential nomination, to focus on the first caucus in Iowa and on maximizing the number of pledged delegates, as opposed to focusing on states with primaries and the overall popular vote. He is also credited by The New Republic for Obama's success in the Iowa caucus and for crafting an overall strategy to prolong the primary past Super Tuesday. The Chicago Tribune writes, "'Plouffe was the mastermind behind a winning strategy that looked well past Super Tuesday's contests on Feb. 5 and placed value on large and small states.'"[14] Plouffe also maintained discipline over communications in the campaign, including controlling leaks and releasing information about the campaign on its terms. Averse to publicity himself, Plouffe's control over the internal workings of the Obama campaign successfully avoided the publicly aired squabbles that frequently trouble other campaigns.[14] In June 2008, when then-Senator Obama clinched the Democratic Party nomination, he thanked Plouffe for being the one "'who never gets any credit, but has built the best political campaign, I think, in the history of the United States.'" In May 2008, David Axelrod praised Plouffe, stating he had "'done the most magnificent job of managing a campaign that I've seen in my life of watching presidential politics. To start something like this from scratch and build what we have built was a truly remarkable thing.'"[15] After winning the election on November 4, Obama credited Plouffe in his acceptance speech, calling him "'the unsung hero of this campaign, who built the . . . best political campaign, I think, in the history of the United States of America.'"[16]"

2009-2011

"Plouffe went to work as an outside senior adviser to the Obama administration, in January 2009. His book *The Audacity to Win: The Inside Story and Lessons of Barack Obama's Historic Victory*, discussing management strategies and tactics that he used in the 2008 campaign,[17] was published on November 3, 2009 and became a New York Times bestseller. He later issued a video challenge for Obama supporters to buy a copy of his book on December 8, 2009 in order to "'Beat Sarah Palin'" and her best-selling book for one day.[18][19] He signed with the Washington Speakers Bureau to give paid speeches and plans to engage in non-government consulting work.[20] In May 2009, Plouffe delivered the convocation address at Cornell University.[21] He spoke about the balance between family time and professional time, and how he had yet to learn exactly how to accomplish an appropriate balance, but hoped to devote more time to his family than he was physically able to during 2007 and 2008."

2011-2013 Senior Advisor to the President

"In January 2011, Plouffe joined the White House as Assistant to the President and Senior Advisor. Plouffe replaced David Axelrod as Senior Advisor when Axelrod returned to Chicago to help run President Obama's 2012 re-election campaign.[22] In his role as Senior Advisor, Plouffe led the crafting of White House strategy and communicating the President's message. After a successful reelection and inauguration of President Obama, Plouffe departed the White House in January 2013. During a national news event, on his final day in the White House, Plouffe was singled out by the President saying, "What people don't always realize, because he doesn't like to show it, is the reason he does this stuff is because he cares deeply about people. And he cares about justice, and he cares about making sure that everybody gets a shot in life. And, those values have motivated him to do incredible things, and were it not for him, we would not have been as effective a White House and I probably wouldn't be here." [23]"

Career after the White House

"After leaving the White House in early 2013, Plouffe became a contributor for Bloomberg TV and ABC News.[24] In April 2013, Plouffe was inducted into the American Association of Political Consultants Hall of Fame.[25]"

Controversy

"Plouffe has drawn criticism for his paid speaking engagements abroad while on hiatus from advising Obama. In early 2009, Plouffe spoke in Baku, Azerbaijan for \$50,000. The event's sponsor had ties to the authoritarian government in the country. Following complaints from human rights groups, Plouffe donated his speaking fees to the National Democratic Institute.[26][27] In December 2010, Plouffe received \$100,000 for two speeches in Nigeria from an affiliate of the South African telecommunications company MTN Group. At the time, MTN had been doing business with the government of Iran since 2005. Recently, MTN has come under increased scrutiny by the U.S. for allegations that the Iranian government has used the MTN network in the country to track and monitor dissidents. MTN has been listed on the "'Iran Business Registry'" of prominent watchdog group United Against Nuclear Iran since 2009.[28] White House spokesman Eric Schultz explained that Plouffe only spoke to the group about digital communications and cellular technology, and declined to meet with the company's leadership. Schultz also said the criticism of Plouffe's speeches before he joined the White House was "'misplaced.'" [29] In 2013, in response to Congressman Darrell Issa's accusations that the Obama administration knew about the IRS targeting of not-for-profit conservative groups for extra scrutiny, Plouffe tweeted: "'Strong words from Mr Grand Theft Auto and suspected arsonist/insurance swindler. And loose ethically today'" referring to two incidents in Issa's past. In 1972, while a teenager, Issa was accused of stealing a Maserati sports car; the charges were later dropped. In 1982, a Cleveland warehouse belonging to Issa burned to the ground. The fire was ruled suspicious and Issa collected an insurance payout, but he was not charged with any crime.[30][31][32][33][34][35]"

Works

"Plouffe, David. *The Audacity to Win: The Inside Story and Lessons of Barack Obama's Historic Victory*, Viking Adult (November 3, 2009); ISBN 978-0-670-02133-8"

Personal life

"Plouffe is married to Olivia Morgan, a Senior Advisor to Maria Shriver's A Woman's Nation, a member of President Obama's Committee on the Arts and the Humanities,[36][37] and Director of Federal Relations to Gray Davis when he was governor of California.[38] The couple resides in Washington, D.C. and have a daughter, who was born two days after the 2008 Presidential election, and a son.[39]"

"David M. Axelrod (born February 22, 1955) is the director of the Institute of Politics at the University of Chicago. An American political consultant based in Chicago, Illinois, he was a top political advisor to President Bill Clinton as well as campaign advisor to President Barack Obama during Obama's successful run for President in 2008. Following Obama's election, Axelrod was appointed as Senior Advisor to the President.[1] Axelrod left the White House position in early 2011 and became the Senior Strategist for Obama's successful re-election campaign in 2012.[2][3] Axelrod was formerly a political writer for the Chicago Tribune. He is the founder of AKPD Message and Media, and operated ASK Public Strategies, now called ASGK Public Strategies."

Early life

"Axelrod grew up in Stuyvesant Town on the East Side of Manhattan, NY.[4][5] He is the son of Myril Bennett, a journalist at PM, a left-wing 1940s newspaper, and Joseph Axelrod, a psychologist and avid baseball fan.[6][7][8][9] His family was Jewish. He attended Public School 40 in Manhattan. Axelrod's parents separated when he was eight years old. Axelrod traces his political involvement back to his childhood. Describing the appeal of politics, he told the Los Angeles Times, "'I got into politics because I believe in idealism. Just to be a part of this effort that seems to be rekindling the kind of idealism that I knew when I was a kid, it's a great thing to do. So I find myself getting very emotional about it.'"[10] At thirteen years old, he was selling campaign buttons

for Robert F. Kennedy. After graduating from New York's Stuyvesant High School[6] in 1972, Axelrod attended the University of Chicago. He majored in political science. [11] As an undergraduate, Axelrod wrote for the Hyde Park Herald, covering politics, and picked up an internship at the Chicago Tribune. He lost his father to suicide about the time of his graduation from college[11] in 1977. While at the University of Chicago, he met his future wife, business student Susan Landau. They were married in 1979. In June 1981, Susan gave birth to their first child, Lauren, who was diagnosed with epilepsy at seven months of age.[12]"

Career prior to first Obama campaign

"The Chicago Tribune hired Axelrod when he graduated from college. At the age of 27, he became the City Hall Bureau Chief and a political columnist for the paper. He worked there for eight years, covering national, state and local politics, and became the youngest political writer there in 1981.[13] Unhappy with his prospects at the Tribune, in 1984 he joined the campaign of U.S. Senator Paul Simon as communications director; within weeks he was promoted to co-campaign manager.[14] In 1985, Axelrod formed a political consultancy company, Axelrod & Associates. In 1987 he worked on the successful reelection campaign of Harold Washington, Chicago's first black mayor, while also helping to spearhead Simon's campaign for the 1988 Democratic Presidential nomination. This established his first experience in working with black politicians and he later became a key player in similar mayoral campaigns of blacks, including Dennis Archer in Detroit, Michael R. White in Cleveland, Anthony A. Williams in Washington, D.C., Lee P. Brown in Houston, and John F. Street in Philadelphia.[11] Axelrod is a longtime strategist for the former Chicago Mayor Richard M. Daley[15] and styles himself a "'specialist in urban politics.'" The Economist notes he also specializes in "'packaging black candidates for white voters'".[15] In January 1990, Axelrod was hired to be the media consultant for the all but official re-election campaign of Oregon Governor Neil Goldschmidt.[16] However, Goldschmidt announced in February that he would not seek re-election.[17] In 2002, Axelrod was retained by the Liberal Party of Ontario to help Dalton McGuinty and his party to be elected into government in the October 2003 election. Axelrod's effect on Ontario was heard through the winning Liberal appeal to "'working families'" and placing an emphasis on positive policy contrasts like canceling corporate tax breaks to fund education and health.[18] In 2004, Axelrod worked for John Edwards' presidential campaign. During the campaign, he lost responsibility for making ads, but continued as the campaign's spokesman. Regarding Edwards' failed 2004 presidential campaign, Axelrod has commented, "'I have a whole lot of respect for John, but at some point the candidate has to close the deal and?I can?t tell you why?that never happened with John.'"[19][20] Axelrod contributed an op-ed to the Chicago Tribune in defense of patronage after two top officials in the administration of longtime client Chicago Mayor Richard M. Daley were arrested for what federal prosecutors described as "'pervasive fraud'" in City Hall hiring and promotions.[21][22] In 2006, Axelrod consulted for several campaigns, including the successful campaigns of Eliot Spitzer in New York's gubernatorial election and Deval Patrick in Massachusetts's gubernatorial election. Axelrod also served in 2006 as the chief political adviser for Democratic Congressional Campaign Committee chair U.S. Representative Rahm Emanuel for the U.S. House of Representatives elections, in which the Democrats gained 31 seats. Until recently, Axelrod also worked as an Adjunct Professor of Communication Studies at Northwestern University, where he, along with Professor Peter Miller, taught an undergraduate class titled Campaign Strategy, a class that analyzed political campaigns, the strategies used by them, and the effectiveness of those strategies.[23] On June 14, 2009 Axelrod received an honorary "'Doctor of Humane Letters'" degree from DePaul University, speaking at the commencement exercises of the College of Communication and College of Computing and Digital Media.[24]"

"Barack Obama presidential campaign, 2008"

"See also: Barack Obama presidential campaign, 2008"

"Axelrod first met Obama in 1992, when Betty Lou Saltzmann, a Chicago democrat, introduced the two of them after Obama had impressed her at a black voter registration drive that he ran. Obama consulted Axelrod before he delivered a 2002 anti-war speech,[25] and also asked him to read drafts of his book, The Audacity of Hope.[26] Axelrod contemplated taking a break from politics during the 2008 presidential campaign, as five of the candidates?Barack Obama, Hillary Rodham Clinton, John Edwards, Chris Dodd, and Tom Vilsack?were past clients. Personal ties between Axelrod and Hillary Clinton also made it difficult, as she had done significant work

on behalf of epilepsy causes for a foundation co-founded by Axelrod's wife and mother, Citizens United for Research in Epilepsy (CURE) (Axelrod's daughter suffers from developmental disabilities associated with chronic epileptic seizures.) Axelrod's wife even said that a 1999 conference Clinton convened to find a cure for the condition was "one of the most important things anyone has done for epilepsy." [27] Axelrod ultimately decided to participate in the Obama campaign, and served as chief strategist and media advisor for Obama. He told The Washington Post, "I thought that if I could help Barack Obama get to Washington, then I would have accomplished something great in my life." [6] Axelrod contributed to the initial announcement of Obama's campaign by creating a five-minute Internet video released January 16, 2007. [28][29] He continued to use 'man on the street' style biographical videos to create intimacy and authenticity in the political ads."

"Axelrod talking to reporters in the "spin room" after the Cleveland Democratic debate in February 2008"
"While the Clinton campaign chose a strategy that emphasized experience, Axelrod helped to craft the Obama campaign's main theme of "change." Axelrod criticized the Clinton campaign's positioning by saying that "being the consummate Washington insider is not where you want to be in a year when people want change... [Clinton's] initial strategic positioning was wrong and kind of played into our hands." [30] The change message played a factor in Obama's victory in the Iowa caucuses. "Just over half of [Iowa's] Democratic caucus-goers said change was the No. 1 factor they were looking for in a candidate, and 51 percent of those voters chose Barack Obama," said CNN senior political analyst Bill Schneider. "That compares to only 19 percent of 'change' caucus-goers who preferred Clinton." [31] Axelrod also believed that the Clinton campaign underestimated the importance of the caucus states. "For all the talent and the money they had over there," says Axelrod, "they?bewilderingly?seemed to have little understanding for the caucuses and how important they would become." [31] In the 2008 primary season, Obama won a majority of the states that use the caucus format. Axelrod is credited with implementing a strategy that encourages the participation of people, a lesson drawn partly from Howard Dean's 2004 presidential campaign as well as a personal goal of Barack Obama. Axelrod explained to Rolling Stone, "When we started this race, Barack told us that he wanted the campaign to be a vehicle for involving people and giving them a stake in the kind of organizing he believed in. According to Axelrod getting volunteers involved became the legacy of the campaign" [32] This includes drawing on "Web 2.0" technology and viral media to support a grassroots strategy. Obama's web platform allows supporters to blog, create their own personal page, and even phonebank from home. Axelrod's elaborate use of the Internet helped Obama to organize under-30 voters and build over 475,000 donors in 2007, most of whom were Internet donors contributing less than \$100 each. [33] The Obama strategy stood in contrast to Hillary Clinton's campaign, which benefited from high name recognition, large donors and strong support among established Democratic leaders. Politico described Axelrod as 'soft-spoken' and 'mild-mannered' [34] and it quoted one Obama aide in Chicago as saying, "Do you know how lucky we are that he is our Mark Penn" [35] Democratic consultant and former colleague Dan Fee said of Axelrod, "He's a calming presence." [36] "He's not a screamer, like some of these guys," political advisor Bill Daley said of Axelrod in the Chicago Tribune. "He has a good sense of humor, so he's able to defuse things." [14]"

"Senior Advisor to the President, 2009?2011"

"On November 20, 2008, Obama named Axelrod as a Senior Advisor to his administration. His role included crafting policy and communicating the President's message in coordination with President Obama, the Obama Administration, speechwriters, and the White House communications team. [37][38]"

"Barack Obama presidential campaign, 2012"

"See also: Barack Obama presidential campaign, 2012"

"Axelrod left his White House senior advisor post on January 28, 2011. He was a top aide to Obama's 2012 re-election campaign. [2][3] Axelrod also stated that his job as Obama's chief campaign strategist in the 2012 campaign would be his final job as a political operative. [39]"

Career after second Obama campaign

"It was announced on February 19, 2013, Axelrod joined NBC News and MSNBC as a senior political analyst. [40]"

Based on published federal and media investigations, it appears that White House Staff and Silicon Valley billionaires engaged in a racketeering operation to manipulate hundreds of billions of dollars of taxpayer funds into their own pockets via TARP and Department of Energy funding programs created for the purpose of running this scam. The individuals involved, are charged with organized crime activities, by investigators, but major regulatory agency executives have participated in delays, and cover-ups, in order to prevent effective prosecution of the parties involved. All of the parties involved in the swindle have now had their communications, meetings, money paths, beneficiary routes and competing interest attacks tracked, documented and verified. Major banking and corporate entities participated in the crimes and, while all of the banks have been charged with other crimes, they have yet to be prosecuted for this crime. Any jury trial evidence presentation opportunity can now clearly document the crimes, the players and the facts of this case. The many investigators, journalists and members of the public, who participated in the assembly of this evidence, challenge all parties to come forward in a live, televised, open public hearing to confirm, or deny, these facts. Read the facts, decide for yourself:

<http://www.thenewsdaily.org/investigation-team/big-fix-corruption-story/big-fix-index-table-contents/> [caption id="" attachment_8583"" align="" aligncenter"" width=""510""] Tesla: 45500 Fremont Blvd., Fremont, CA 94538 & Solyndra: 47488 Kato Road, Fremont, CA, 94538 Feinstein's ex-staff & lobbyists work there now. -----"

Who is Elon Musk's lobbyist, landlord, builder, shareholder and Senator: Dianne Feinstein?

"If you were in the Senate and you had been involved in corruption things, you would want to try to get yourself on the Senate Intelligence Committee so you could use, and monitor, agency information and resources to make sure nobody found out about the corruption things you and your husband were doing. Let's take Dianne Feinstein and her husband Richard Blum and his CBRE and vast other stealth companies and funds. When she was mayor of San Francisco, the San Francisco newspapers were rife with charges of corruption and cronyism about her. Her associate, Roger Boas, went to federal prison for corruption in City Hall AND for child prostitutes. Police reports show that he used child prostitutes plus sent prostitutes out to buy favors for City Hall corrupt winner/loser rigged selections. She personally interceded in getting Solyndra funded from taxpayer dollars and getting them to build the Solyndra buildings where it benefited her husbands business connections. Her Family made profits off of Solyndra getting picked as a DOE funding 'winner?'. <http://www.youtube.com/watch?v=Vv86dCW85uw> She personally interceded in getting Tesla funded from taxpayer dollars, and getting them to acquire buildings (physically next to Solyndra in the boondocks of Fremont, California) and equipment where it benefited her husbands business connections. Her Family made profits off of Tesla getting picked as a DOE funding 'winner?'. Guardian staff report that her husband has made multiple trips to Mongolia transporting cash for deals and now holds business interests there on mining companies that make materials for electric car batteries and other interests that she fought for bill or budget passage on. They have airport records, travel expense reports and photographs of him in Mongolia meeting with sketchy Chinese and Asian Business men. They state that he took suitcases full of cash to Mongolia. Why did Feinstein not properly document this in her disclosures? What intelligence did Blum get near, or to, China? Richard Blum got a group of Silicon Valley VC's to buy votes, get out the vote for her and push votes to get her on Committee when she was hanging by a thread from previous near-catches of their misdeeds according to a former reporter from ValleyWag. Feinstein wrote laws regarding the Regents of California which benefited her husband. If you web search their names and 'Corruption?' or 'Crony?' you will find a vast number of stories about all kinds of kickbacks that the Feinstein/Blums have been charged with. And a person like this has access to all the secret files? When you chart out all of the front companies, fake family trusts under other trusts, Blum offshore accounts in Belize, The Caymans and other interesting places, companies behind other companies between her and Mr. Blum, you have a facade of misdirection and phoney business names that would make any spy envious. Feinstein's bills and budgets tie back to more false front organizations that benefit her family interests than almost any other person in the Senate per the latest research from The Guardian. If you were someone like that you would certainly try to get yourself on the intelligence committee so you could have the first clue when you were about to get caught and to steer investigations away from your crony deals. You would certainly support domestic phone-tapping because you would order such taps on your public-interest agency enemies like the ACLU and BigGovernment.com and The Schweizer team in order to keep an eye on them. Of course she is fighting on behalf of ongoing domestic spying. It is how she covers her ass. UPDATE: Here is a teeny, tiny selection of the many corruption charges against Feinstein:

<https://www.sodahead.com/united-states/dianne-feinstein-the-most-corrupt-person-in-congress-routes-even-more-money-to-husbands-firm/question-3651127/> <http://capoliticalnews.com/2013/06/03/more-dianne-feinstein-corruption-husband-given-exclusive-to-sell-56-post-offices-6-commission/>

http://www.blacklistednews.com/Senator_Feinstein%E2%80%99s_Husband_Stand_to_Make_Millions_from_USPS_Contract/26454/0/38/38/Y/M.html <https://vidrebel.wordpress.com/2013/01/06/dianne-feinstein-thy-name-is-corruption/> http://www.salon.com/2012/07/24/dianne_feinsteins_espionage/

Washington, you get Feinstein to watch the databases to make sure nobody gets wind of it. It is like the one bank robber that sits in the car to listen to the police scanner during the bank robbery."

????????????????????

"Ok, Here is the most extreme theory ever, "

but it is amusing:

"?Google, Twitter and Facebook are actually spy agency sting operations and were originally created as such. They conduited the money through Kleiner Perkins offices to launder it. They paid Kleiner's people off by giving them monopolies on the electric car and battery industries and associated mining interests.

"I saw that on a blog and just had to repost it. How about them Apples? One of the original founders of Twitter is running around saying it wasn't what he had in mind. Even though they are supposed to be competitors you usually see their ?join? or ?login as? buttons clumped together on other sites and they sell ads for each other secretly. Those ?Google Barges? could just be international waters scrutiny evasion systems. While it sounds crazy, with all the related news coming out this week, it could almost be true. "

H.T. -----

Feinstein Tesla/Solyndra Corruption Scandal

"Last week California Senator Diane Feinstein abruptly resigned her position as the chairman and ranking member of the Senate Military Construction Appropriations Subcommittee (MILCON).The MILCON subcommittee is in charge of supervising military construction. The committee also oversees ""quality of life"" issues for veterans, which includes building housing for military families and operating hospitals and clinics for wounded soldiers.During her six years as MILCON leader Senator Feinstein had a conflict of interest due to her husband Richard C. Blum's ownership of two major defense contractors, who were awarded billions of dollars for military construction projects that were approved by Senator Feinstein.That's Billion with a capitol B. My very own California Senator Diane Feinstein may have just hit one out of the park folks. By directing Billions of dollars of our tax dollars to her husbands companies, DiFi may have have set a new record for corruption.According to a report compiled by MetroActive a San Francisco area newspaper Diane Feinstein used insider information to direct billions of dollars of military construction projects to companies, URS Corporation and Perini Corporation, that were owned or controlled by her husband."

"While setting MILCON agendas for many years, Feinstein, 73, supervised her own staff of military construction experts as they carefully examined the details of each proposal. She lobbied Pentagon officials in public hearings to support defense projects that she favored, some of which already were or subsequently became URS or Perini contracts. From 2001 to 2005, URS earned \$792 million from military construction and environmental cleanup projects approved by MILCON; Perini earned \$759 million from such MILCON projects."

792 million and 759 million works out to 1.551 Billion dollars. And what portion of this billion and a half dollars

did DiFi and her husband pocket?

"In 2005, Roll Call calculated Feinstein's wealth at \$40 million, up \$10 million from just a year earlier. Reports show her family earned between \$500,000 and \$5 million from capital gains on URS and Perini stock. From CB Richard Ellis, her husband earned from \$1.3 million to \$4 million. Public records show Blum's company paid \$4 a share for controlling interest in Perini, and later sold about three million shares for \$23.75 each. The report also showed URS' military construction work in 2000 was only \$24 million, but the next year, when Feinstein took over as MILCON chair, military construction earned URS \$185 million. Additionally, its military construction architectural and engineering revenue rose from \$108,000 in 2000 to \$142 million in 2001, a thousand-fold increase. In late 2005, Blum sold 5.5 million URS shares, worth \$220 million"

"So a US Senator has used insider information to direct billions of tax payer dollars to her husband's companies and yet I have not seen one word of this in a single antique media outlet. Where is the outrage, where is the indignation, where are CNN, Fox, MSNBC, NBC, ABC, CBS news? And even more importantly where is an investigation by the Senate Rules Committee? Oh wait, DiFi is the newly appointed chairman of the Rules Committee so I guess we can rule out an investigation there. So after pocketing over as much as 300 million dollars as a direct result of her involvement with the MILCON committee DiFi just walks away unscathed? Where is the investigation and where is DiFi's resignation followed shortly by her indictment? Or does that only happen to Republicans? Full information can be found here and here and here."

"The federal investigation of DiFi is under deepest security because she keeps pulling the plug on the stings and research in her current position, but multiple agencies are still working the case and now multiple news organizations so her day will come."

Andrea - LAT

"RT, Al-Jazeera and The Guardian are all said to have narrowed their focus onto Feinstein with a blockbuster story on her expected from one, or all, soon. Glenn Greenwald has been building an ongoing large-format story on her, and took her on, previously. His story, though, is likely not the same as the Guardian effort. Andrea - LAT"

Adding fuel to the fires of suspicion is Tesla's refusal to answer these questions in a responsive manner. Why won't Elon Musk answer these questions in front of the U.S. Congress during a live broadcast:

Adding fuel to the fires of suspicion is Tesla's refusal to answer these questions in a responsive manner:

"We are most interested in having Elon Musk answer these, and other questions, in front of the U.S. Congress during a live broadcast: Deposition Draft 2.7 (compiled by reporters & public submissions) - Would Tesla Motors exist today, if Senators, DOE and campaign staff had not been bribed in 2007, 2008 and 2009? - Has your company, or anyone associated with your company, ever hired multitudes of fake bloggers to post fake positive reviews about Tesla motors in order to create a fake perception of interest? - Has Tesla Motors ever compensated a publisher, or industrial rating company, for contrived positive reviews or ratings? - Does Tesla Motors believe that the coordinated manipulation of the public perception of a company, trading on the stock market, via the dissemination of inaccurate data, by the company spokespeople, is not stock fraud and a not a violation of SEC laws? - What percentage of Tesla Motors do Google's investors, staff and executives own cumulatively? - How much money did those Tesla/Google investors contribute to election campaigns from 2007 to today? Which campaigns? Did the winners in any of those campaigns award U.S. taxpayer funds to the portfolio companies of those investors? How much money? - When Tesla Motors applied for the Department of Energy funds Elon Musk stated that Tesla was in exceptional financial health, yet now Elon Musk, and his senior staff, have been recorded

stating that the company was nearly bankrupt then. In light of these more recent revelations, is that not a felony violation of the federal ""Section 136 Law"" which states that 'a company cannot be on the verge of bankruptcy or it shall not receive Department of Energy funds'? New disclosures show that Tesla stated information in it's federal application which Tesla's founders and staff have stated they knew was false at the time. Should Tesla be prosecuted for this? - Did Deloitte, under contract to Tesla, arrange false accounting via the Tesla Wells Fargo bank account while Deloitte was also acting, in conflict of interest, as the Department of Energy reviewer of applicants? - Does Tesla Motors have a confidential relationship with a national group of reporters, from different publications, who have agreed to release Tesla-positive news spin stories on a synchronized basis, at the same time, in order to coverup Tesla investigation disclosures and artificially accelerate stock market vales? Has Tesla Motors arranged with Google to have negative Tesla Motors stories down-ranked while having positive Tesla stories up-ranked? Would that be considered stock fraud? - How many Senators and their families, that you are aware of, own stock in Tesla Motors? - Was Elon Musk promised any NASA contracts, in advance of the closure of a portion of NASA, in exchange for campaign funding from Tesla and Google investors? - How many Senators, their families and Google-related investors, that you are aware of, hold stock in lithium-ion battery related companies? - Has Steven Chu, the former head of the Department of Energy, ever had a personal relationship with any Tesla staff or investors? - Has Senator Dianne Feinstein, or her family, ever had a personal relationship with any Tesla staff or investors? - Why are Tesla and Solyndra on the same physical plot of land? - Has anyone from Senator Dianne Feinstein's office also worked for Tesla Motors and/or Solyndra? - Did Dianne Feinstein's husband, Richard Blum, ever travel to Mongolia to arrange for resource deals beneficial to Tesla's investors? - Has anyone associated with Senator Dianne Feinstein's family, named Herb Newman of Sausalito, California, ever supplied staffing to Tesla Motors? - Has anyone associated with Senator Dianne Feinstein's family had any relationship with the real estate transactions involving Tesla and/or Solyndra real estate? - Now that the CIA has hacked into Dianne and Kathryn Feinsteins computers and all of Richard Blum's personal and business computers, do you think they found anything incriminating? Do you think the NSA phone and email records from 2007, to today, show anything incriminating? - Federal whistle-blowers have stated that Tesla Motors was involved in a felony funding kick-back scheme with Dianne Feinstein. Is that true? - If these charges are true, did you think you would never be caught because the same people who put Eric Holder and Steven Chu in office are paying for the cover-up? Now that Steven Chu has been terminated and Eric Holder is facing multiple charges of contempt, are still feeling so cocky? - Communications between The California, Fremont City Administrators, Dianne Feinstein's senior staffer (M. Nelson) and the general management of NUMMI indicate that economic and political pressure was used to manipulate a deal structure. What is your comment on these revelations? - Panasonic, your battery partner, has been charged with organized crime, dumping, price fixing, the deaths of thousands of battery workers from toxic poisoning and with building lethal battery factories that destroyed all of the towns near them. Is that a problem? - You said, in writing, in your DOE application documents that the car to be produced with the DOE money was all designed and engineered, yet every aspect of the released model S was designed and engineered AFTER you received the DOE money! Did you lie on your application? - Do your battery packs release toxic and/or cancer causing fumes when they burn? - What was your relationship with Eric Strickland, the head of the National Highway Transportation safety agency who quit his job 48 hours after being notified that the toxic Tesla report he knew about was going public? - Did you falsify lithium-ion safety reports? - Bernard Tse, your battery program director, and 7 other senior staff, provided your company with numerous severely concerning lithium-ion safety reports which were never presented to the Department of Energy. Were these reports covered up because the Senators and Investors of Google and Tesla all have ownership interest in the lithium-ion industry? - Has Elon Musk ever spied on his own employees and competitors? - Has Elon Musk ever undertaken sabotage programs against his competitors? - Did your SEC filings use tax credits from the White House to make Tesla look like it had profits? - Did Elon Musk actually found Tesla or did Martin Eberhard found Tesla and Elon Musk then came in later and stole it from him in a hostile takeover? - You said their were no chances of fire yet you have had two recalls in order to install fire prevention systems AFTER there were fires. Why is that? - What was Tesla's debt ratio at the time that Tesla applied for the DOE loan? Why do you think Tesla had the worse debt ratio of any applicant yet Tesla was awarded funds with almost no review? - Why has Tesla spent billions, and a decade, to only sell a few cars when all of your competitors have done 20 times better on less money and in less time? Why are over 200 technical problems with the car documented online by Tesla owners yet you say nothing about those problems? Why are you being sued for fraud under the Federal ""Lemon Law""? - Why were your cars \$100,000.00 over budget PER

CAR, at the time of your Department of Energy loan application, yet nobody at the DOE commented about that in their review notes? - Did Steven Chu's senior staff: Matt Rogers and Steven Spinner have any relationship with Tesla-related investors prior to Chu hiring them at the DOE? Was it coincidental that McKinsey Consulting, the company they worked for, produced all of the pitch documents for the White House and Congress, which were used to steer the Federal funds to Tesla Motors? - Was Tesla Motors funded as a gift to campaign investors? - Did you lie about asking the NHTSA to conduct a safety study on your car when, in fact, the NHTSA first asked Tesla for a study after fires were reported? Did you then bribe NHTSA officials to halt the request for an investigation after you plea-bargained to install a ""titanium safety shield"" which, in fact, only solves a small portion of the potentially lethal dangers from your battery pack? Is your battery pack made up of ""non-automotive"" batteries which are being used in the wrong way relative to what they were built for? - Are you trying to build a battery factory not far from Mexico in order to take advantage of Mexican workers? Are you concerned that most battery factory workers in China were poisoned with toxins? Are you concerned that your battery factory will ENCOURAGE immigration abuse and devastate our border? - The founders ex-partners, investors, buyers, suppliers, employees and ex wives have sued Elon Musk for fraud? What does that say about Mr. Musk? - How many of your employees have been burned alive at your factories? Has OSHA ever fined you? - If somebody puts a bunson burner or torch under a Tesla, will it blow up? If hackers hack the easily hacked Tesla, can they make the battery charging system overload and blow up? If so, did you inform the NHTSA of this in writing? When? - Did California State Officials, in Sacramento, California, ever manipulate tax laws and decisions to exclusively benefit Tesla Motors in exchange for perks? - What percentage of your buyers have killed members of the public with their Tesla Vehicles? Why is that number, in relative terms, higher than any other car company? - What percentage of your buyers have crashed their Tesla's while driving drunk, destroying public property, homes and Tesla's? Why is that number, in relative terms, higher than any other car company? - Have White House staff agreed to protect Tesla, at all costs, in order to keep Mitt Romney's prediction from coming true and to cover campaign funding billionaires? - Did Tesla representatives meet with Rahm Emanuel, David Axelrod, David Plouffe or their campaign staff prior to the Election

of President Obama? - Is it not true that you have sold 4000% less cars than you told the U.S. Government, in writing, you would sell by this date, in your DOE application documents? - Why did you switch your factory plans between 5 different cities, during the DOE loan process, when you told everyone that your factory location was already a done deal? - Do your VC investors pump the stock market rating by buying their own Tesla stock when bad news comes out about Tesla in order to create a synthetic cover-story short term stock rise? Would that be considered part of a stock fraud activity? - What is the relationship between Tesla's investors, Google's investors and the VC funds of Richard Blum, Dianne Feinstein's husband

"Any reporter who can get a legitimate set of responses to these very important questions, is encouraged to post those responses"

Tesla 'Truth Ticket' people are back with Phase 2: PROJECT AXCIOM. Dedicated to making sure every Tesla owner on Earth knows the truth!

"(SOURCE: Public Team) Remember the 'Tesla Truth Tickets'? Now, every Tesla owner in the world can, shortly, expect to get the following email, snail-mail letter or notice: 'TESLA'S HAVE BEEN PROVEN TO HAVE BEEN FOUNDED BY ORGANIZED CRIME-CLASS BRIBES AND CORRUPTION IN ORDER TO SELL CANCER-CAUSING LITHIUM ION BATTERIES OWNED BY CAMPAIGN INVESTORS. BY DRIVING THAT CAR; YOU SUPPORT CRIME, ENVIRONMENTAL POISONING AND PSYCHOTIC POWER-MAD BILLIONAIRES! THE BRIBES ARE PROVEN. THE CANCER CAUSING EFFECTS OF THE CHEMICALS IN LITHIUM ION BATTERIES IS PROVEN. THE TOXIC NATURE OF THE BUILDING THAT CAR IS PROVEN.' THIS IS YOUR TESLA MOTORS INTERVENTION: BORN IN BRIBES AND CORRUPTION, FORGED IN FIRES, AND MORE FIRES, AND STILL MORE FIRES AND SOME EXPLOSIONS, THE TOXIC TESLA CRIME-MOBILE THAT YOU ARE DRIVING IS FULL OF LIES AND CANCER CAUSING MATERIAL. WE WANTED YOU TO KNOW THAT THE LOOK ON PEOPLE'S FACES, WHEN YOU DRIVE BY, MAY NOT BE ENVY BUT, RATHER: DISGUST! BRIBED: 5 Senators, 8 Senior Agency Staff and 2 White House Staff. Why do YOU want to be a part of that? Let's examine the facts and details?' The email goes on at great, and forensic, length. Some of the people involved have worked at Tesla and claim to have witnessed: 'Organized crime on a first hand basis.' Two members have subscriptions to the Axiom Privacy Abuse database. They thought: 'hmmm, why not use something evil for good purposes by helping to inform, and save, hapless Tesla owners who got screwed during the information Green-wash?' Members found out that major media outlet owners (Engadget, Google, AUTOBLOG GREEN, Gizmodo, Jalopnik, etc.) had stock in the Tesla and battery cartels and, thus, covered up the first investigation results. They want to clean the market more completely than an email 'accident' on an IRS Hard Drive. Does that sound like a big project? It isn't! After nearly a decade and billions of dollars of your tax money, Tesla has only sold .5% of the cars that their competing electric, or gas cars have sold for the same investments in time and dollars. Nobody wants a Tesla except Tesla's investors and douche-bag surgeons who then crash them and kill people. So, relatively speaking, there are not that many people to hunt down. TINA S- FREMONT, CA"

Anatomy of A Civic Corruption Case- San Francisco- The Bridge To Sin and Dianne Feinstein's Benefactor

Part 1- The Golden Days

"See how the Golden Gate Bridge and a little bridge between two buildings at Embarcadero Center connected to an organized crime and child sex abuse ring for billionaires in A billion dollar real estate political kickback scam, by San Francisco ""elites"", to create an owned and controlled Senator. Interesting that one has posted pictures of them-self dancing and hugging very young girls on Facebook, one was arrested and indicted for running an underage prostitution ring for billionaire campaign backers and San Francisco ""elites"", One (A senior public official) had their daughter removed from their home by the police because she was sexually abused (Police reports available) and one was charged with hiring underage prostitutes. "

"You would think it would be hard to be indicted for BOTH running a child prostitution ring for Pacific Heights

billionaires AND helping to embezzle government funds for Moscone Convention Center AND Embarcadero Center but one managed to do both, on behalf of the others. James Bronkema was known as David Rockefeller's "Bag Man" on the West Coast. He looked exactly like the greedy little "Monopoly Man" Billionaire on the game-board and even sported the same mustache and vest just to make the point that he was not only corrupt, he was BAD ASS CORRUPT and he would get the Rockefellers on your ass if you messed with him! [caption id="attachment_10753" align="center" width="449"] "Bronk" When a real estate or political policy action needed to be greased, Bronkema or Coblenz showed up with the cash for the Supervisors, inspectors and public policy-types. Bronkema was one of the creators of "Flower" and ran the cash into John Molinari's Mayoral campaign. He put his girl-friends in executive city jobs as payoff for services rendered. Their hope was to move Molinari from Mayor, to Senator to Governor and on up... but that didn't work out..... when the FBI showed up on some doorsteps. [caption id="attachment_10796" align="center" width="150"] James Bronkema Bronkema ran the Business Bureau, The Golden Gate Bridge, Embarcadero Center and Rockre, a "private business operations group" for the Rockefellers. He funneled kickbacks, crony deals and special favors from San Rafael to Oakland to City Hall. When his manipulations went international, he cooked his own goose. [caption id="attachment_10793" align="center" width="150"] John Molinari "Old School" They got a different party to play Senator and Molinari was forgotten but not forgiven for his false campaign district address, tax form creativity and family police incidents. A bug was placed in Molinari's Classic Jaguar and feds got quite a bit of dirt on old-school San Francisco corruption off of Molinari's North Beach idle chatter. Molinari then turned State's evidence. Once Molinari ate it in the elections, they plowed all of the cash into Feinstein. A key associate (Goudie, aligned with Molinari) was a top Presidential appointee and campaign funder who was arrested and indicted for federal funds fraud in the Christopher Columbus Scandal which emulated the Golden Gate Bridge Scandal with the same consultants. (Check out his old Facebook page)."

CHRISTOPHER COLUMBUS AND THE MOBSTERS: The Bad Guys behind Feinstein's cash

"In a special event scam, that Molionari and Bronkema schemed up, (that was a bigger Disaster than the recent SF America's Cup), quite a bit of taxpayer cash went sideways. Said Marin County activist, Gene Pratt: "The Golden Gate Bridge District is a bunch of Crooks" [caption id="attachment_10790" align="center" width="150"] TERRY SELLARDS: The PitchMan The new Silicon Valley Prostitution cases have opened up the Old San Francisco child prostitution cases, as girls reveal decades of abuse and finally tell reporters what really happened back then. Which Silicon Valley and SF Venture Capitalists, who you see quoted in the news lately, were founders of "Flower" the top secret San Francisco underage sex ring for billionaires, held in the billionaires hotels so surveillance security could be totally controlled, (With SF, NYC and Silicon Valley Branches), which is, apparently, still operating? Why are they so excited about all of the underage girls coming over the border in the Mexican child border crisis? Why are Silicon Valley CEO's and VC's so supportive of "child Immigrants"? Paying a bribe for real estate exclusives was often done with cash and hookers, known as "pink cash" in SF. Why was NAMBLA allowed to thrive in San Francisco at the time, Including being given San Francisco Public Libraries, On Potrero hill and in other locations, to hold their secret "how to abuse children" meetings? (See FBI reports on NAMBLA) Which San Francisco billionaire VC, in the news lately for

other reasons, has a regular weekly appointment to have six nude girls come over and read him books from his library while he pleasures himself? Which one is under investigation regarding a murder and an attempted murder? Which one ordered a "hit" on someone? Part of Kubrick's film: "Eyes Wide Shut" was based on "Flower". The cost for a young virgin started at \$50,000.00. Taking her virginity was called: "picking a flower". Run all of the names on your database and draw the financial, business and personal connections and see how interesting this case REALLY is! Who was the bigger real estate guru: Blum, Rockefeller or Shorestein? What do Dianne Feinstein, Richard Blum, James Bronkema, Roger Boas, John Molinari and David Rockefeller all have in common? All them reported to WHO? Nobody can now say they "didn't know what was going on!" The evidence overtly implicates all of the players. Was there a different reason, than we were told, that Mayor George Moscone was killed? Dan White said he was "drugged up on Twinkies", was he drugged up on something else so he could carry out his "kill orders" from on high? Who went to federal prison and who didn't? Who ordered the case shut down, but who kept working on it because they thought there was a major cover-up going on? Who took the fall while the others kept on keeping on? Who paid for who's political campaign..and still does? Who pulls who's strings? Who is under 24 hour digital device surveillance by 5 different agencies? (Answer: EVERY SINGLE ONE OF THEM, THEIR FAMILIES AND ASSOCIATES) What is a RICO? What did federal investigators find when they set-up an office in one of the suspects condo buildings across from his office above Chevy's Restaurant? How bad is running a child prostitution ring for the San Francisco elite and Silicon Valley founders? How much, in bribes and corruption, did the exclusive little bridge from one Embarcadero Center to another, over the public road, really cost Boas, Rockefeller, Molinari, Bronkema and Feinstein? Who is still operating as a front for whom? Let's discuss. Send in your links. Watch for the YOUTUBE VIDEO: Anatomy of A Civic Corruption Case and please ask PBS Frontline to pick up the full length version! Please ask City, State and Federal agencies to OFFICIALLY RE-OPEN THIS CASE! TA- Former FB*, Associate Producer/ D- SF Chron, FG, J- Worked with Bruce Brugman, GG, HJK, R- Latimes, Wspo-G, bSpecial thanks to D at Regional Federal Office"

SAN FRANCISCO'S COLDEST CASE / A cover-up is still suspected ...

"16 Feb 2003 ... chief administrative officer under mayors George Moscone and Dianne Feinstein. ... Campaign posters of Boas dotted the city, and a prostitute ... on the brothel operators, Roger Boas and seven other customers, including ..."

www.sfgate.com/magazine/article/SAN-FRANCISCO-S-COLDEST-CASE-A-coverup-is-still-2669756.php -

"This bridge broke the camels back and connects, politically and financially, to The Golden Gate Bridge District which was, at the time, operated as a private government for personal profit by the suspects. These is the only real estate project in the City that got this deal...bribes DO work!... until you get caught! Notice the "bunker-like" Compound construction of Embarcadero Center shaped like the Bohemian Club "Owl Books"[caption id="attachment_10707" align="aligncenter" width="1275"] To protect the identity of the abused girl, we will not show the un-blurred form but it, and associated files, can be seen at SFPD, FBI and WIKILEAKS via FOIA[caption id="attachment_10708" align="aligncenter" width="694"] The complexities of sex party and secret meeting hiding[caption id="attachment_10709" align="aligncenter" width="529"] When you make a chart of all of these people and their political, personal and business connections, almost everything is revealed . / Says David: "The greatest fun you will ever have, in your life, is dropping these names into a Federal Cross-Checker, like XKEYSCORE, FCCPS, or NCVS, and watching the results! Afterwards, add "Feinstein", or "Saxeena", and try it again. Wow! Epic!"David T. is a Federal Special Investigator. Says David: "The greatest fun you will ever have, in your life, is dropping these names into a Federal Cross-Checker, like XKEYSCORE,

FCCPS, or NCVS, and watching the results! Afterwards, add ""Feinstein"", or ""Saxeena"", and try it again. Wow! Epic!"" David also stated that: ""John Goudie's (Of Christopher Columbus Anniversary Fame) stand-alone case files, by themselves, are a week of Ludlum-class reading. He was so old-school"" The most interesting lines of connection in the organized crime databases go from David Rockefeller to Tony Blair To Rakesh Saxeena (Tony Blair interceded in Saxeena's trial in England over Blackwater gun running, a case that ties back to Senator Leland Yee's arrest) to Wendy Deng to Rupert Murdoch. Said David: ""Sierra Leone is the most out of the way, tiny, sad little country but the mega-billionaires will do anything to get the raw gemstones and mineral ore buried under it..... Rakesh Saxeena is the most dashing, undercover, mysterious, amazing spooky guy you will ever meet in your life. Rockefeller may think he is bad-ass but he is in kindergarten compared to Rakesh. Is he evil, Is he secretly saving countries or secretly destroying them?...hard to say..... Oh, and by the way, The Illuminati never, ever, call themselves ""The Illuminati"" There are five groups of ""businessmen s clubs"" who get together to plan laws, purchases and contracts that will increase their stock value and profits. They do share common beliefs but not all five share the same beliefs so they are always in a subtle war. From time-to-time some jump ship from one group to another. It's as simple as that..... They love the myth of the ""Illuminati"" because it creates confusion and disinformation. The ""Illuminati"" are a bullshit myth. The businessmen's clubs are the real deal and you can see them at work in the headlines every week. The 'ceremonies' at the Grove and the Masons and the other outfits are simple psychological reinforcement tactics to make them all feel more bonded and ""above it all"". It works."" Goudie was trying to copy the financial skimming scam that the Golden Gate Bridge directors were using for their Golden Gate Bridge Anniversary scheme to fund campaigns and personal hobbies. Goudie's business partners ratted him out, though, first claiming he killed his wife, by bludgeoning, to get the attention of the feds. Goudie went to prison but various murder claims never stuck."

Part 2- The Investigation Deepens

"Now that key players are either dead, indicted, arrested or otherwise interdicted, the rest of the story can be revealed. Rockefeller and Bronkema came up with a plan to build the downtown version of The Bohemian Grove; A financial district compound which was totally under their control and that could cut off the ""little people"" of the outside world unless they were needed to deliver sandwiches or run errands. All of the Bohemian Grovers and cartel planners could be in the same buildings, keep their girls in the adjacent condo's and it would be one big happy, corrupt, family. You will find, in records searches, that almost everyone from the spooky Bohemian Grove sex and monopoly planning club, also had offices in the Embarcadero Center compound. [caption id=""attachment_10798"" align=""aligncenter"" width=""150""]"

"James BronkemaA walk around San Francisco's Embarcadero Center reveals a Q-Sensitive militaristic facade of concrete bunker-like structures where you can never walk without 3 cameras on you at all times. Metal sign-plates in the ground remind you that you are not in the outside world and that you better watch your P's and Q's. An ideal configuration for a modern version of the Speak-Easy, ready to hide dirty deeds upon a ""Cheese it, The Cops"" internal announcement signal. There is only one way in and one way out for the entries, all carefully guarded and monitored. Bronk, a builder, was trained by the Rockefellers in ""private governments"". He honed his skills running the Golden Gate Bridge, it's own private government suspended in a no-mans land between San Francisco and Marin Counties, but accountable to no one. It was supposed to stop charging tolls once the bridge was paid for but the cash flow from taxpayer to bridge director pockets was so good, they figured, ""why kill the golden cow"". Many bridge directors have now faced the law over ""accounting discrepancies. Bridge Directors are now pretty much under permanent 24 hour digital law enforcement surveillance because they tend to be so naughty. [caption id=""attachment_10759"" align=""aligncenter"" width=""300""]" The entire foundation of the house circled on the right was built from stolen Golden Gate Bridge steel, paid for by taxpayers money, and looks right in the window of another Golden Gate Bridge executives home (the house circled on the left).Then the operation moved up. Big Office complexes with their own bridges between buildings (So you never had to interact with the commoners) and fancy hotel chains that were hidden behind layers of trusts, assumed names, holding companies, corporate facades and inter-level contracts were the new private government. This was the perfect layout to evade law enforcement. Not only could you trot parades of hookers in, and out and ditch the video, you could have all kinds of secret sketchy meetings. The Pacific Union Club, (The Original Bohemian

Grove Urban Compound) on top of Nob Hill, has a little Victorian house across the street. (next to the parking garage) from it on California Street. That house has a tunnel under the street to the Pacific Union Club for bringing the Hookers in; according to Tommy, the former car lot attendant. That pales in comparison to the Bronkema/Rockefeller scheme. After each sex party, or sketchy meeting, they would order all of the security cameras to have a Lois Lerner-like hard drive crash. They believed this destroyed all of the evidence. They controlled all of the buildings and all of the security, they could do as they please...they thought. Some former security guards saw the profit potential in hanging onto some of those tapes and hard-drives before they got wiped. [caption id="" attachment_10791"" align="" aligncenter"" width="" 150""] The GirlfriendThe recent death-by-hooker of the ultra high tech Google executive shows that even the most savvy ultra-rich geeks can't hide from surveillance camera interdiction. The cool thing about cameras is that they turn all audio and video into a signal, the interesting thing about that is that any signal can be intercepted, even before it reaches the security office. Let's repeat: Somebody else can ALWAYS get the signal before it gets to where the bad guys think it is going to go! Private activists now have Bohemian Grove under personal drone surveillance, camera interdiction and, the wilder ones, have pre-climbed Redwood trees, in advance of the retreat, and placed hidden micro-tiny chip cameras high up in the bark of the redwoods... this will be interesting. [caption id="" attachment_10803"" align="" aligncenter"" width="" 168""] Surveillance Video Is Forever!But, this was part of the downfall. Those who believe they are immune from the law finally make pretty big mistakes. Their ego and power mania's always bring them down. When Bronk and his Rockre associates started meeting with NGO's, Nigerian Oilfield barons, The notorious Rakesh Saxeena (Look him up) and middle east mining heads; Interpol, GCHQ and all kinds of law enforcement people became interested. To his dying day, James Bronkema denied that he was ""A Bohemian Grove Grand Wizard"", or ""West Coast Grand Master of the Illuminati"" or anything ""creepy or mysterious"". ""I am merely a humble servant to the world's needs"", he said in one of his last communications with a reporter... To be continued... TT- Brugman Team, df- Arn- LATIMES 4, df, FOIA data. MEET THE PLAYERS: STEVEN LAWRENCE RATTNER

Steven Lawrence Rattner

- Under investigation for trading federal funds for votes while senior White House official - Under investigation for battering influence for cash while working in White House - UAW conflicts of interest - Indicted for securities fraud (born July 5, 1952) is an American financier who served as lead adviser to the Presidential Task Force on the Auto Industry in 2009 for the Obama administration.[1]"

New York Pension Fund Investigation

"In 2005, Quadrangle made payments to private placement agent Hank Morris to help Quadrangle raise money for its second buyout fund.[13] Morris had come highly recommended to Rattner from U.S. Senator Charles Schumer.[14] Morris was also the chief political advisor to Alan Hevesi, the New York State Comptroller and manager of the New York State Common Retirement Fund (CRF), which invests in many private equity funds. Morris told Rattner he could increase the size of the CRF investment in Quadrangle's second buyout fund. Rattner agreed to pay Morris a placement fee of 1.1% of any investments greater than \$25 million from the CRF.[15] In 2009, Quadrangle and a dozen other investment firms, including the Carlyle Group, were investigated by the U.S. Securities and Exchange Commission for their hiring of Morris. The SEC viewed the payments as ""kickbacks""

in order to receive investments from the CRF since Morris was also a consultant to Hevesi.[16] Quadrangle paid \$7 million in April 2010 to settle the SEC investigation, and Rattner personally settled in November for \$6.2 million without admitting or denying any wrongdoing.[17]"

Prosecution by Attorney General Cuomo

"The case drew significant media attention when Andrew Cuomo, the New York State Attorney General, demanded more severe penalties from Rattner than any of the other firms or individuals who had hired Morris as a placement agent.[18] Rattner was once a major fundraiser for Democratic Party candidates including Al Gore and Hillary Clinton, but Rattner had repeatedly passed on fundraising for Cuomo despite Cuomo's past attempts to cultivate Rattner's support.[19] In an appearance on the Charlie Rose Show, Rattner asserted that hiring Morris as a placement agent was ""legal then, legal now, and done properly.""[20] He explained he was willing to settle on reasonable terms as he had done with the SEC, but questioned whether Cuomo was motivated by the ""facts"" of the case and called Cuomo's demands ""close to extortion.""[21] On December 30, 2010, Rattner reached a settlement with Cuomo to pay \$10 million in restitution but no fines or penalties. He was not prohibited from continuing to protest his innocence.[22] Wikipedia -----"

Steven Chu - The Guy Who Broke Washington

12th United States Secretary of Energy
"In office January 21, 2009 ? April 22, 2013"

President	Barack Obama
Deputy	Daniel Poneman
Preceded by	Samuel Bodman
Succeeded by	Ernest Moniz
Personal details	
Born	"February 28, 1948 (age 65) St. Louis, Missouri, U.S."
Political party	Democratic[1][2]
Alma mater	"University of Rochester University of California, Berkeley"
Website	Official website
Steven Chu	
Chinese	???

Hanyu Pinyin Zh? D • w,n

[show]Transcriptions

"Steven Chu (Chinese: ???; pinyin: Zh? D • w,n,[3][4][5][6][7] born February 28, 1948[8]) is an American physicist who became the 12th United States Secretary of Energy in 2009. Chu is known for his research at Bell Labs in cooling and trapping of atoms with laser light, which won him the Nobel Prize in Physics in 1997, along with his scientific colleagues Claude Cohen-Tannoudji and William Daniel Phillips.[9] At the time of his appointment as Energy Secretary, he was a professor of physics and molecular and cellular biology at the University of California, Berkeley, and the director of the Lawrence Berkeley National Laboratory, where his research was concerned primarily with the study of biological systems at the single molecule level.[10] Previously, he had been a professor of physics at Stanford University. He is a vocal advocate for more research into renewable energy and nuclear power, arguing that a shift away from fossil fuels is essential to combating climate change.[11][12][13] For example, he has conceived of a global ""glucose economy"", a form of a low-carbon economy, in which glucose from tropical plants is shipped around like oil is today.[14] On February 1, 2013, he announced he would not serve for the President's second term and resigned on April 22, 2013.[15]"

Personal life

"Chu[16] was born in St. Louis, Missouri, with ancestry from Taicang, in Jiangsu,[17] and graduated from Garden City High School.[18] He received both a B.A. in mathematics and a B.S. in physics in 1970 from the University of Rochester. He went on to earn his Ph.D. in physics from the University of California, Berkeley, in 1976, during which he was supported by a National Science Foundation Graduate Research Fellowship.[19] Chu comes from a family of scholars. His father earned an advanced chemical engineering degree at the Massachusetts Institute of Technology and taught at Washington University in St. Louis and Brooklyn Polytechnic Institute, while his mother studied economics. His maternal grandfather, Dr. Shu-tian Li, earned a Ph.D. degree from Cornell University and his mother's uncle, Li Shu-hua, a physical scientist, studied physics at the Sorbonne before they returned to China.[9] His older brother, Gilbert Chu, is a professor and researcher of biochemistry and medicine at Stanford University. His younger brother, Morgan Chu, is a partner and the former Co-Managing Partner at the law firm Irell & Manella LLP.[20] According to Chu, his two brothers and four cousins earned three M.D.s, four Ph.D.s, and a J.D. among them. In 1997, he married Jean Fetter, a British American and an Oxford-trained physicist.[16] He has two sons, Geoffrey and Michael, from a previous marriage to Lisa Chu-Thielbar.[9]

Beside his scientific career, Chu has also developed interest in various sports, including baseball, swimming and cycling. He taught himself tennis by reading a book in the eighth grade, and was a second-string substitute for the school team for three years. He also taught himself how to pole vault using bamboo poles obtained from the local carpet store.[9] Chu said he never learned to speak Chinese because his parents always talked to him and his brothers in English, although he said (in 1997) that he was trying to learn Mandarin, believing that if he could stay in China for "at least six months", he would become fluent.[16]"

Career and research

After obtaining his doctorate, Chu remained at Berkeley as a postdoctoral researcher for two years before joining Bell Labs, where he and his several co-workers carried out his Nobel Prize-winning laser cooling work. He left Bell Labs and became a professor of physics at Stanford University in 1987,[9] serving as the chair of its Physics Department from 1990 to 1993 and from 1999 to 2001. While at Stanford, Chu, together with three other professors, initiated the Bio-X program, which focuses on interdisciplinary research in biology and medicine,[21] and played an important role in securing the funding of the Kavli Institute for Particle Astrophysics and Cosmology.[22] In August 2004, Chu was appointed as the director of the Lawrence Berkeley National Laboratory, a U.S. Department of Energy National Laboratory, and joined UC Berkeley's Department of Physics and Department of Molecular and Cell Biology.[23] Under Chu's leadership, the Lawrence Berkeley National Laboratory has been a center of research into biofuels and solar energy technologies.[11] He spearheaded the laboratory's Helios project, an initiative to develop methods of harnessing solar power as a source of renewable energy for transportation.[23] Chu's early research focused on atomic physics by developing laser cooling techniques and the magneto-optical trapping of atoms using lasers. He and his co-workers at Bell Labs developed a method of cooling atoms by employing six laser beams opposed in pairs and arranged in three directions at right angles to each other. Trapping atoms with this method allows scientists to study individual atoms with great accuracy. Additionally, the technique can be used to construct an atomic clock with great precision.[24] While at Stanford, Chu's research interests expanded into biological physics and polymer physics at the single molecular level. In the field of biological physics, he studied enzyme activity and protein and RNA folding using techniques such as fluorescence resonance energy transfer, atomic force microscopy, and optical tweezers. Chu's research in polymer physics made use of individual molecules of DNA to study polymer dynamics and phase transitions associated with these dynamics. He further continued his research in atomic physics as well, developing new methods of laser cooling and trapping.[25]"

Energy and climate change

"Chu has been a vocal advocate for more research into renewable energy and nuclear power, arguing that a shift away from fossil fuels is essential to combat climate change and global warming.[11][12][13] He also spoke at the 2009 and 2011 National Science Bowl about the importance of America's science students, emphasizing their future role in environmental planning and global initiative. Chu said that a typical coal power plant emits 100 times more radiation than a nuclear power plant.[26] Chu warns that global warming could wipe out California farms within the century.[27] He has joined the Copenhagen Climate Council,[28] an international collaboration between business and science, established to create momentum for the 2009 United Nations Climate Change Conference in Copenhagen. Chu was instrumental in submitting a winning bid for the Energy Biosciences Institute, a BP-funded \$500 million multi-disciplinary collaborative project between UC Berkeley, the Lawrence Berkeley Lab and the University of Illinois. This sparked controversy on the Berkeley campus, where some fear the alliance could harm the school's reputation for academic integrity.[29][30][31][32] Based partially on his research at UC Berkeley, Chu has speculated that a global "glucose economy", a form of a low-carbon economy, could replace the current system. In the future, special varieties of high-glucose plants would be grown in the tropics, processed, and then the chemical would be shipped around like oil is today to other countries. The St. Petersburg Times has stated that Chu's concept "shows vision on the scale needed to deal with global warming.""[14] Chu has also advocated making the roofs of buildings and the tops of roads around the world white or other light colors, which could possibly reflect a lot of sunlight back into space and significantly mitigate global warming. The effect would be, according to Chu, similar to taking every car in the world off the roads for about 11 years.[14] Samuel Thernstrom, a resident fellow at the American Enterprise Institute and co-director of

the AEI Geoengineering Project, expressed support in *The American* and remarked "'Chu has done the nation a service'" since "'the idea has an important role to play in the climate debate.'"[33]"

Honors and awards

"Steven Chu is a co-winner of the Nobel Prize in Physics in 1997 for the "'development of methods to cool and trap atoms with laser light'", shared with Claude Cohen-Tannoudji and William Daniel Phillips. He is a member of the United States National Academy of Sciences, the American Academy of Arts and Sciences, the American Philosophical Society and the Academia Sinica, and is a foreign member of the Chinese Academy of Sciences and of the Korean Academy of Science and Engineering.[34] He was also awarded the Humboldt Prize by the Alexander von Humboldt Foundation in 1995. Dr. Chu received an honorary doctorate from Boston University when he was the keynote speaker at the 2007 commencement exercises.[35] He is a Senior Fellow of the Design Futures Council.[36] *Diablo* magazine, based east of Berkeley in Walnut Creek, California, honored Dr. Chu with one of its annual Eco Awards in its April 2009 issue,[37] shortly after he was nominated as energy secretary. Washington University in St. Louis and Harvard University awarded him an honorary doctorate during their 2010 and 2009 commencement exercises, respectively.[38][39] He was awarded an honorary degree from Yale University during its 2010 commencement.[40] He was also awarded an honorary degree from the Polytechnic Institute of New York University, the same institution at which his father taught for several years, during its 2011 commencement.[41] Penn State University awarded him an honorary doctorate during their 2012 commencement exercises.[42]"

Secretary of Energy

"Steven Chu meeting with President Barack Obama on February 5, 2009."

"His nomination to be Secretary of Energy was unanimously confirmed by the U.S. Senate on January 20, 2009.[43] On January 21, 2009, Chu was sworn in as Secretary of Energy in the Barack Obama administration. Chu is the first person appointed to the US Cabinet after having won a Nobel Prize.[44] He is also the second Chinese American to be a member of the US Cabinet after Elaine Chao.[45] His scientific work continues, however, including a paper on gravitational redshift published in *Nature* (463, 926-929) in February 2010[46] and a second one co-authored in July 2010.[47][48] In March 2011 Chu said that federal regulators should not delay approving construction licenses for planned U.S. nuclear power plants because of the Fukushima Daiichi nuclear disaster. "'I think those things can proceed,'" Chu told reporters on Capitol Hill, referring to construction license applications pending at the U.S. Nuclear Regulatory Commission.[49] In August 2011 Chu praised an advisory panel's report on curbing the environmental risks of natural-gas development. Chu responded to the panel's report on hydraulic fracturing, the controversial drilling method that is enabling a U.S. gas boom while bringing fears of groundwater contamination. The report called for greater data collection of air and water data, as well as 'rigorous' air pollution standards and mandatory disclosure of chemicals used in the hydraulic fracturing process, among other steps. 'The report ... recommends a range of tools for implementing these measures, including regulation, continuous improvement in best practices by industry, and ongoing research and development,' Chu said in a statement. 'I will be working closely with my colleagues in the Administration to review the recommendations and to chart a path for continued development of this vital energy resource in a safe manner,' he added.[50] On February 1, 2013, Chu announced his intent to resign.[51] In his resignation announcement to Energy Department employees, he warned of the risks of climate change from continued reliance on fossil fuels,

and wrote, ""As the saying goes, the Stone Age did not end because we ran out of stones; we transitioned to better solutions."" [52] He resigned on April 22, 2013."

How F**KED Over By Your Own Representatives Do you Need To Get Before You Get Upset? Let's count the ways (these are things that actually happened!)... There's this:

"Small businesses claim US government stealing their ideas By Eric Shawn "They stole all my stuff and used taxpayer money to do it," John Hnatio, a Maryland small business owner, says of the U.S. government. Hnatio claims the government has put his company, FoodquestTQ, nearly out of business by stealing his firm's software that was designed to be licensed to the Food and Drug Administration to monitor food safety. The FDA "took our ideas, plagiarized my doctoral dissertation on which a patent was based, and then they infringed on our patent. The result was that it decimated our business," he adds. Hnatio says his company has been left hanging by a thread. He has had to fire employees and says that the remaining three, including himself, are receiving no salary and have been forced to go on unemployment insurance. "I have never seen anything like it," says Hnatio, who is a retired federal government official. He says the FDA "duplicated exactly what we were selling to industry and they were giving it away for free...instead of helping small business commercialize their product, what we are seeing is a dragon, in the name of the U.S. government that is eating their own young." FoodquestTQ is only one of numerous small businesses that accuse the government of stealing their intellectual property or trade secrets when they enter into contracts or research agreements with federal agencies. "The government interceded, stole the technology and attempted to use this in classified programs," says Jim O'Keefe, the president of the small New Jersey technology company Demodulation. He has filed a \$50 million lawsuit against the U.S. government, accusing it of taking his firm's research. Demodulation developed an advanced technology involving fiber coated wire, called microwire, which is thinner than a human hair. The company says its microwire can be used for a variety of national security applications, such as tracking drones, keeping tabs on soldiers on battlefields, transmitting information without a power source, and that it even has the ability "to render objects invisible to radar." "It sounds incredible and impossible that the U.S. government is taking things from people," says Demodulation lawyer Sean Callagy. "We believe this is the greatest country in the world with the greatest justice system in the world but the U.S. government is not an eagle or a flag, but human beings. And human beings make mistakes." The lawsuit accuses the Department of Energy and the National Nuclear Security Administration, among others, of illegally swiping the firm's information by "using microwire and Demodulation's trade secrets in its mission to gather intelligence." It also says that the U.S. has even built "a secure facility for the production of microwire" on its own. "There are classified reports showing the technology," declares Demodulation attorney Ben Light, who says that after the company "shared the secret sauce" about microwire with federal officials, they simply "took (the) wire." The Department of Energy referred Fox News' requests for comment to the National Nuclear Security Administration, which did not respond to repeated requests for a comment about the company's allegations. The Department of Justice denies Demodulation's charges in court filings. Stuart Delery, an Acting Assistant Attorney General, wrote that while "the United States admits that it continues to conduct research regarding what is generally known as 'microwire,'" he says that the government did not act improperly. The Department of Justice claims the government did not take any proprietary information or develop the microwire technology based on Demodulation's work, and that "none of the asserted patents have been infringed on by the United States." Delery also pointed out that some of Demodulation's patents had expired. "The only reason the patents expired is because Demodulation was driven out of business," responds the firm's

lawyer, Light. "It doesn't affect the entire case because any infringement during the period when the patents were enforced is still compensable." O'Keefe says the government denials are "an impossibility based on the evidence I have." He is calling for "reform and legislation to protect us. I hope through our litigation we will be able to expose some of the problems." It turns out that the government is routinely accused of similar wrongdoing and sometimes has to pony up. The U.S. Army settled a case in November by paying \$50 million to a Texas company, Apptricity, which claimed the government took some of its software, which tracks military equipment from MRE's to troops, without paying for it. The company's court papers said that the government "willfully infringed" on its copyrights, "failed to provide information" about what it did and was engaged in "actively concealing the Army's misappropriation of Apptricity software." The complaint said the Army paid for using the software on five servers and 150 devices, but actually "copied and installed Apptricity software on at least 98 servers and at least 9,063 devices" without telling the company. "I don't think there was malicious intent," Apptricity's founder and president Tim Garcia tells Fox News in the aftermath of the settlement. He says his company pursued its case by the "standard process through the Court of Claims." There are numerous other companies that have filed similar actions at the Washington, D.C.-based court, which is the venue for legal claims against the federal government. Among them: Liberty Ammunition, which is suing the government for allegedly infringing on its copyright for developing a lead-free "green bullet" after it worked on the invention with the Department of Defense. Net Results, which claims that the Army infringed on its patent for a "mine detecting device" by giving out its design to six other government contractors. In 2009, NASA was ordered to pay \$28.3 million to Boeing after the court found that the government infringed on the company's aluminum alloy patent. In a noted case in 1999, the U.S. government paid then Hughes Electronics \$154 million in damages after a 30-year long legal battle found that the government illegally appropriated the company's satellite technology. The U.S. Court of Federal Claims calls itself "the people's court," and says it is considered "the keeper of the nation's conscience." It is situated right across Lafayette Park from the White House. "There is no reason to think it can't happen," observes New York University law Professor Jeanne Fromer, an intellectual property and copyright law specialist. "The government can take patent rights, as long as they compensate for it. It is not dissimilar, in that sense, to notions of eminent domain." "The government is a big sprawling place and there are lots of people acting in it. I think some of them act very nobly...but it's hard to say that everyone always does." "We are hearing more frequently from companies about intellectual property theft by the government," notes John Palatiello, head of the Washington, D.C.-area lobbying group, the Business Coalition for Fair Competition, which is studying the issue. "Companies are becoming more vocal about it." Hnatio believes there is a troubling explanation for alleged government flinching. "What we are seeing is a direct competition between the private sector and the U.S. government. The problem for small businesses is that they are simply being destroyed by their own government in spite of the fact that we hear politicians say all the time, that small business is important...it's extremely disturbing because it means we lose jobs, and it means we lose our competitive edge in the world. It creates a very dangerous situation for our national security." Fox News repeatedly requested comment from the FDA regarding Hnatio's allegations about FoodquestTQ, but the agency did not issue a statement. While the Demodulation case is expected to go to trial next year, Hnatio says he has been left without any money to hire a lawyer to go to court. "From the time I was a little kid I dreamed of starting a business. But I do have to tell you that there is a grave danger to the American dream," he says. Controlled by Silicon Valley Cartel. Under world-wide investigation (24/7 DS) Google (Connected to every investor/campaign funder in this group. Suspected of news manipulation & campaign trades) (Moles planted) (24/7 DS) Lois Lerner- Director of ?Hits and Deletions? (Charged with crimes) (24/7 DS) Midland Services (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu)(24/7 DS) Technology Management Services (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu)(24/7 DS) IBM Consulting Services (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu) Had strange fake office in Virginia church building (24/7 DS) Covington & Burling, LLP (Arranged appointment of Eric Holder on behalf of campaign backers & Silicon Valley) Put Eric Holder in Office to protect White House Staff from discovery (24/7 DS) Debevoise (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu) (24/7 DS) The Petroleum Institute (Lobbyists who worked the Detroit side of the insider deals) (24/7 DS) Argonne National Labs (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu and Rahm Emanuel) (24/7 DS) "

"- States Whose Tax and Operations Offices, in Their State Capitals, Participated in Cover-Ups and Kick-Backs"

"Investigation Issues: Organized Crime; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; Contract rigging; Lithium cartel organization for Afghan war; Misdeeds recorded by multiple law enforcement and intelligence agencies; Michigan State Offices (Under Investigation) (24/7 DS) Illinois State Offices (Under Investigation) (24/7 DS) Nevada State Offices (Under Investigation) (24/7 DS) California State Offices (Under Investigation) (24/7 DS) "

" Note from Team: Investigative members have relied on published reports, papers, GAO, OPM, U.S. Treasury, FBI, published investigations, interviews with City, State and Federal staffs and law enforcement tips. While there may be one or two names that do not belong on this list, any clarity can be easily rectified by the appointment of a public special prosecutor and an open public hearing process which allows protections for tipsters and whistleblowers. Such a hearing will dispel any confusion about who did, or didn't, do what! On orders from highly placed political officials?, FBI investigations and assignment of a Special Prosecutor or Public Judge is being blocked to avoid embarrassing public review of the corruption. Using commonly available databases, YOU can track the financial, business, political and operational connections of all of these individuals, yourself, and validate this information. While this whole case sounds wild, please remember, billionaires have extreme ways of thinking, and acting. They do things that normal people can't even conceive of. The lust for Power will drive these sorts of people to do un-heard of things in order to control that power and take those hundreds of billions of dollars in tax and treasury profits for themselves. "

- The Trillion dollar + Lithium-ion industry pays over a billion dollars a year to elected officials, appointed officials, their staff and lobbyists in order to get them to cover up the facts listed here and to promote this dangerous chemical for profit. Many of those have family stock in lithium-ion companies, private sector job promises and PAC funding from lithium-ion companies. Why won't the people who are using lithium-ion stop using it? Why is there almost no regulation of deadly lithium-ion? The answer: KICKBACKS! - If you are exposed to burning lithium-ion from a burning car, iPad, phone, airplane, FED-Ex or UPS truck, or other fire from lithium-ion batteries, the smoke and vapors that you inhale are some of the most cancer-causing, brain-damaging, lung damaging liver poisoning chemicals you could be exposed to. SEE HIS LINK and THIS ONE and THIS ONE and THIS ONE (More coming) - Lithium-ion batteries are made in ""concentration camp-like"" fenced-in compounds where low income workers are exposed to poison gas and powders from the lithium-ion manufacturing process. A dramatically large group of these workers die from the cancers and toxic poisoning from these factories. They have always been made in overseas, impoverished, regions because there is little or no

occupational safety regulation there. Tesla's factory has been fined by OSHA for setting workers on fire. This is a very deadly business. Now they are trying to build these factories in the American southwest to try to exploit Mexican workers like they do overseas. Some argue that large "white man owned" corporations "fighting for immigration rights" are really fighting to relax laws to allow cheap labor into these kinds of camp-factories in the desert. Some of the factory owners have even purchased multiple lots, in multiple southern states, and told investors that they will "build on the one where we can buy control of the most local politicians?". - The makers of lithium ion batteries have issued a document called the "MSDS". It states known facts about the batteries. The MSDS warns firefighters they can get cancer. It warns that the batteries are toxic. It clearly states the very great dangers of spontaneous, or easily caused fire from bumps or moisture. Why did Panasonic kill it's MSDS web links the day the first Tesla fires hit the news? Look at the facts [HERE](#). - Lithium-ion batteries seem to have caused some wars. At [THIS LINK](#), you will see hundreds of facts, films and links showing the direct connection between lithium ion investors in Silicon Valley and wars for ore in middle east countries. - Silicon Valley Lithium-ion investors signed deal with Russian "businessmen" to create an international lithium ion cartel. - Lithium ion battery companies Enerdel, and A123, and others, went bankrupt, after being funded with your tax dollars, from corruption, explosions and spontaneous fires. Facts that were well known by the people that funded them. - Less compromised Senators have railed against the dangers of lithium-ion has shown [HERE](#) and [HERE](#) - IPAD Lithium-ion batteries have blown up setting entire stores on fire. - Samsung lithium-ion batteries in cell phones have set a number of people, including many children, on fire. - Lithium-ion does not even work as well as other lower-cost, safer energy solutions: - The charge-keeping capability of a typical lithium-ion battery degrades steadily over time and with use. After only one or two years of use, the runtime of a laptop or cell phone battery is reduced to the point where the user experience is significantly impacted. For example, the runtime of a typical 4-hour laptop battery drops to only about 2.5 hours after 3,000 hours of use. By contrast, the latest fuel cells continue to deliver nearly their original levels of runtime well past the 2,000 and 3,000 hour marks and are still going strong at 5,000+ hours. - The electrical capacity of batteries has not kept up with the increasing power consumption of electronic devices. Features such as W-LAN, higher CPU speed, "always-on", large and bright displays and many others are important for the user but severely limited by today`s battery life. Lithium ion batteries, and lithium-polymer batteries have almost reached fundamental limits. A laptop playing a DVD today has a runtime of just above one hour on one battery pack, which is clearly not acceptable. - Silicon Valley Lithium-ion billionaires try to exploit the lack of public awareness with disinformation campaigns linking anti-lithium-ion to saying that you are anti-environment. In fact: Lithium ion use and manufacturing is one of the most toxic industries on the planet. - Lithium-ion battery companies have actually been charged with, and sued for organized crime. [HERE IS AN EXAMPLE](#) - AT&T 's U-verse TV service now had a exploding battery problem, making it necessary for the firm to replace 17,000 backup batteries in its nationwide network. - Lithium-ion batteries might have crashed the Malayasian airlines flight. [SEE DETAILS HERE](#). **TESLA SAFETY REPORT Vers. 1.05M- Public Wiki Produced for NHTSA other governmental agencies and public transparency Draft-1.05M (Document under construction - not final)- First Final Draft Due to NHTSA Due: 1/14/14.** (Note: The head of the NHTSA has now quit over this, let's keep all eyes on this make sure nothing is rigged) For Public Comment and Review Please refer all agencies to this document link at: <http://somo1.com/2013/12/06/tesla-safety-report-vers-1-05-public-wiki-produced-for-nhtsa-and-other-governmental-agencies/> OR <http://wp.me/p4e1uX-AK> **CONTENTS:** 1. Overview 2. Known, Unresolved, Safety Issues. 3. Safety tests that were never conducted and must now be conducted. 4. How many fire incidents have there been. 5. Contacts to follow-up on investigations 6. Are Tesla drivers more likely to get in accidents than mainstream drivers? 7. Original participant conflicts-of-interest created reduced safety oversight Appendix - Lithium ion site - NHTSA Demand Letter - Additional data - Video Evidence - Questioning the validity of the German "Safety Report" - Demand for identification matrix showing campaign backers who were lithium ion investors who had had their contacts exert influence over NHTSA decisions! (Supplemental material now numbers over 10,000 pages and will be submitted directly to regulators in order to avoid congesting this site) 1. Overview Regulators asked Tesla to detail the possible consequences of battery pack damage to the Model S and how those problems were addressed in the Model S design. NHTSA also asked Tesla to describe the "limits of that design to prevent damage to the propulsion battery, stalling and fires". While electric cars have been in commercial production since the 1800's, and have been widely released by major automobile manufacturers, only the Tesla vehicles have experienced the fire issues, relative-to-inventory, in this magnitude. The questions and data required by NHTSA, in the letter from NHTSA, contained below, demands disclosure of certain Tesla information which will reveal conflicts in

previously provided Tesla data. Reporters and public interest law firms will be using the FOIA process to disclose the responses, required under federal law, in the public interest. 2. Known, Unresolved, Safety Issues. - Dense packing non-automotive lithium cells - Self ignition from exposure to air - Self ignition from exposure to water - Burning lithium ion, plastics and human skin - Inability to extinguish lithium ion fires - Failure to provide disclosures to buyers - Failure to provide required CO2 fire extinguishers to buyers - Toxic carcinogenic chemicals released in Tesla Fire- Danger to passengers - Toxic carcinogenic chemicals released in Tesla Fire- Danger to bystanders - Brain damage from toxic chemicals released in Tesla Fire- Danger to passengers - Brain damage from toxic chemicals released in Tesla Fire- Danger to bystanders - Lung damage from toxic chemicals released in Tesla Fire- Danger to passengers - Lung damage from toxic chemicals released in Tesla Fire- Danger to bystanders - Birth defects from toxic chemicals released in Tesla Fire- Danger to passengers - Birth defects from toxic chemicals released in Tesla Fire- Danger to bystanders - Home and office conflagration as warned in Tesla's own patents - BMS (Battery Management System) programming, ie: Vampire issues, etc. - Danger to factory workers exposed to internal materials in Tesla Lithium ion cells - Electronic door locks failing. Could passengers be locked inside car in fire? - Previous seat safety recall - Miscellaneous owner complaints about technical issues and relation to safety Additional... 3. Safety Tests That Were Never Conducted and Must Now Be Conducted. The continued failure to engage in these tests, and/or provide the results from these tests, continues to call into question the efficacy and conflicts

of interest of the original testing. The batteries used by Tesla were never designed, or created, to be used in automobiles and this short-cut to cost reduction must be mitigated by the relative increase in safety reduction. - Vehicle with fully charged batteries drives into 3', 4"', 5"', 6"', 7"', 8"' concrete curb at 5MPH, 15MPH, 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3 hours to analyze spontaneous lithium ion combustion. - Vehicle with fully charged batteries drives into 3"', 4"', 5"', 6"', 7"', 8"' metal post embedded in road at 5MPH, 15MPH, 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3 hours to analyze spontaneous lithium ion combustion.. - Vehicle with fully charged batteries drives into 3"', 4"', 5"', 6"', 7"', 8"' concrete curb at 5MPH, 15MPH, 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3 hours in simulated rain storm to analyze spontaneous lithium ion combustion.. - Vehicle with fully charged batteries drives into 3"', 4"', 5"', 6"', 7"', 8"' concrete curb at 5MPH, 15MPH, 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3 hours after complete immersion in water as in a hurricane or high-water event to analyze spontaneous lithium ion combustion.. - Rolling the vehicle with fully charged batteries in a 3 roll crash at 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH ending in the vehicle laying on it's roof and counting the number of lithium ion cells that came loose from their mounts risking burning lithium falling on passengers. - Rolling the vehicle with fully charged batteries in a 3 roll crash at 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH ending in the vehicle laying on it's roof and counting the number of lithium ion cells that had their housings damaged risking burning lithium falling on passengers. - Rolling the vehicle with fully charged batteries in a 3 roll crash at 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH ending in the vehicle laying on it's roof and simulating a full rain storm on the, now exposed, underside of the vehicle for 2 hours to see if lithium ion ignites when wet risking burning lithium falling on passenger and to analyze spontaneous lithium ion combustion. - Filling the battery compartment, with fully charged batteries, with water, draining it and observing for 4 hours to analyze spontaneous lithium ion combustion. - Pouring 18 Oz. soft drinks into the battery compartment, with fully charged batteries, and observing for 4 hours to analyze spontaneous lithium ion combustion. - Impacting the lower quarter panel of Tesla with fully charged batteries on the side of the car, on each side, at the lower center of the passenger door and two feet to either side at 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH at 3"', 4"', 5"', 6"', 7"', 8"' so as to penetrate the battery chamber at least 4 inches and then saturating the damaged area with water and waiting four hours to analyze spontaneous lithium ion combustion. - Forced ignition of lithium ion cells in flipped over (vehicle resting upside down on it's roof) with fully charged batteries and timing of penetration of smoke and flames to occupants simulated as contained within. - Spectrograph analysis and complete full-range chemical read-out of the front metal and plastics of a Tesla on fire with fully charged batteries along with the lithium ion batteries. Disclosure of all known harmful chemicals in

said smoke. - Manually cutting 10 (ten) fully charged lithium ion Tesla battery cells in half long-ways in open air at average humidity and videotaping the results followed by dropping them in a bucket of water 60 seconds after cutting them. With the large number of lithium ion cells in a Tesla, physics and the law of averages predict that at least 10 cells will be fully ruptured in a high speed accident. Plus such additional tests to be specified by: The Center for Auto Safety Davis College Engineering Department Denver College Engineering Department General Motors Ford Motor Company Automobile Dealers Association and other public interest safety groups

4. How many fire incidents have there been. Factory Fire 1? Factory Fire 2? Boston Fire? Half Moon Bay Fire? Tenn. Fire? Seattle Fire? Mexico Fire? Factory Prototype Fires? other post crash and testing fires... 5. Contacts to follow-up on investigations ## <http://www.nhtsa.gov/Contact> With a copy to: ## public.affairs@dot.gov The Center for Auto Safety Organization that informs consumers about auto safety issues. www.autosafety.org 1825 Connecticut Ave, NW Suite 330 Washington, DC 20009-5708 (202) 328-7700 <http://www.autosafety.org/fileacomplaint> Criminal Investigations: <https://tips.fbi.gov/> with a copy to: askdoj@usdoj.gov antitrust.complaints@usdoj.gov <https://wb-gop-oversight.house.gov/> Chairman Barbara Boxer Senate Select Committee on Ethics 220 Hart Senate Office Building Washington, D.C. 20510 Fax: (202) 224-7416 For German Investigations: Kraftfahrt-Bundesamt (KBA) at: pressestelle@kba.de and at this link: http://www.kba.de/cln_031/nn_540136/EN/Service__en/Contact/Contact__node__en.html?__nnn=true and by hard-copy mail to: Kraftfahrt-Bundesamt Stabsstelle (Office of Interdepartmental functions) Mr. Thomas Meyer 24932 Flensburg 6. Are Tesla drivers more likely to get in accidents than mainstream drivers? Sociological reports, such as the report below, confirm that Tesla drivers are more likely to drive drunk, use drugs and respect less laws: Various crash reports find that a large number of Tesla drivers drive drunk. Here is a typical mocking web graphic pointing out this fact: Tesla related investors engage in this sort of extreme behavior and use their resources to promote the car as a tool to skirt social bounds with speed and sex. Skirting social bounds often lies close to skirting laws and common sense. Here are reports on activities and personalities of these people who promote the vehicle: <http://www.youtube.com/watch?v=5BYc3PqvBCo> <http://www.youtube.com/watch?v=XIdprsGvlb8> <http://www.youtube.com/watch?v=6PZipwucanc> <http://www.youtube.com/watch?v=amnwBzcxMAU> <http://vcracket.weebly.com> A Tesla Driver is now charged with the homicide of two people in a crash with their Tesla. The evidence shows that Tesla drivers and the Tesla Culture promotes extra-carelessness, extra arrogance, extra drinking, extra distraction due to sexual theatrics and an overall requirement to create higher-than-normal safety parameters for these drivers, particularly in light of the highly explosive bed of material they are driving around amongst other consumers and structures. Tesla drivers appear to be more likely to crash, or create lithium ion thermal event circumstances, because of the cultural dynamic which Tesla attracts. 7. Original participant conflicts-of-interest created reduced safety oversight A certain, specific, group of investors, known to the FBI, The GAO, The SEC and the Senate Ethics Committee, purchased undo influence on the previous Tesla decisions process, in order to acquire ""unjust rewards"" from the U.S. Treasury. These investors, coincidentally, provided funds to related campaign efforts and, shockingly, they all hold major investments in the very battery system in question. Because of this, the American consumer has been forced to ""accidentally"" conduct some of these tests at great personal risk to those consumers. These risks should have been disclosed by Tesla prior to the application for their DOE loan and prior to their first contact with NHTSA. Tesla produced documents show that Tesla was aware of the dangers disclosed herein. -----

----- Appendix: Reference Data: FROM: <http://lithium-ion.weebly.com> The lurking threat in your car and home ""over a million failures of this chemistry and these batteries globally.."" Go to <http://www.nts.gov/> and demand action: ""LITHIUM ION BATTERIES ARE MADE OVERSEAS BY CHEAP LABOR WHERE OSHA CAN'T WATCH. POOR PEOPLE MAKE LITHIUM ION BATTERIES OFF SHORE WHERE THEY ARE NOT TOLD ABOUT THE TOXIC CANCER, LIVER AND LUNG DISEASES THEY GET FROM THE MANUFACTURING PROCESS. SILICON VALLEY VC'S PUSH LITHIUM ION BECAUSE THEY CAN MAKE A HUGE PROFIT ON THE CHEAP LABOR BUILDING A BATTERY THAT SELF DESTRUCTS BUILT BY WORKERS WHO DIE FROM TOXIC POISONING. CHINESE, MALAY, MEXICAN AND OTHER WORKERS, SHOULD FILE CLASS ACTION LAWSUITS AGAINST SILICON VALLEY VC'S WHO PUSH THESE BATTERIES."" TESLA EXPLODE IN FLAMES: <http://static3.businessinsider.com/image/524c7d5369bedd842edc40a0-482-361/tesla-58.jpg> <http://www.youtube.com/watch?v=uF18v1lxH0k> ----- October 2, 2013, 4:27 PM Tesla Motors Inc. TSLA shares tanked after a video of a Model S on fire circulated on the web, prompting the electric car company to move quickly to douse the flames of bad publicity. Elizabeth Jarvis-Shean,

director of global communications at Tesla, confirmed that the vehicle engulfed in flames was indeed a Tesla but stressed that the driver walked away without injuries. -----"

Another Tesla Caught On Fire While Sitting In A Toronto ...

"Earlier this month, a Tesla Model S sitting in a Toronto garage ignited and caught on fire. The car was about four months old and was not plugged in to an electric socket, says a source."
rr.com/articles/2014/02/13/a/another-tesla-cau...

Tesla Issues Statement On Fiery Car Crash That Caused The Stock To Tank

MMamta Badkar Oct. 2, 2013, 3:45 PM 13,469 11 tesla Aj Gill via YouTube Tesla's stock was down over 7% to a low of \$175.40 today, but pared some of its losses to close down 6.24% at \$180.95. It appears that shares began to tumble in the last half hour on reports that a Tesla Model S car caught fire on Washington State Route 167. Some speculated that the video highlights problems with the car's battery. Though others rushed to point out that the battery is located in the back of the car. ----- ""

Media finds that ""Safety Investigators"" (read ""SHILLS"") are bribed by VC's and lithium holding companies to say ""nothing to see here"", ""lithium batteries are probably ok"". Beware of NTSB ""consultant's"" and ""investigators"" who are being bribed, offered after-politics high pay jobs, called up by bribed congressional staff with ""suggestions"", given sports tickets, handed stock in certain ventures and other bribes. Many of the

""investigators"" need to be put under investigation themselves!!!! When you see an investigator talking about how lithium ion is a wonderful thing, investigate them!"" The following are a variety of quotes, from across the web, demonstrating the critical nature of this public safety issue: ?Lithium ion batteries are blowing up, starting fires and, generally, destroying people?s homes, cars, electronics and physical health. Boeing was just ordered to stop flying the 787 Dreamliner because it's Lithium ion batteries are catching fire spontaneously."" ""A group of silicon valley venture capitalists forced/leveraged the government to buy and pay for these specific batteries, that they have stock in, in order to benefit their profit margins. Other batteries don?t have these problems. They knew about this from day one but put greed ahead of safety. There are thousands and thousands of reports of spontaneous lithium ion fires but the VC's who back lithium ion pay to keep this information hushed up. Millions of these batteries have been recalled for fire risk. The VC's tried to push as many as they could before they got caught. Now they are caught. These VC's own stock in lithium mining companies too."" ""Here is the Fisker Karma after it got wet and the batteries blew up. These batteries blow up JUST FROM GETTING WET! ALL of these burned up hulks are brand new \$100,000.00+ cars that just blew up and torched everything around them just because they got wet! How bad do you want a Fisker or Tesla now? Fisker's insurance company is balking at paying for this saying: ""You knew this would happen"". THIS WHOLE THING IS FULL OF LITHIUM. YOUR WHOLE FAMILY IS SUPPOSED TO SIT ON TOP OF THIS!!! TESLA HAS TO TEST THEIR BATTERIES IN A BLAST CHAMBER!!!!!!!: Picture IF TESLA SAYS THIS THING IS SO SAFE WHY DO THEY TEST IT IN A STEEL ENCLOSED EXPLOSION ROOM WITH WIRES COMING IN THROUGH BLAST HOLES!!!!????? ""TESLA ELECTRIC CARS HAVE 6800 CHANCES OF ""GOING THERMAL"". ""TESLA ELECTRIC CAR BATTERIES ARE MORE LIKELY TO BLOW UP."" SAYS STANFORD ENGINEER, ""USING LITHIUM ION IN AN ELECTRIC CAR DOUBLES THE CHANCES IT WILL EXPLODE OR GO THERMAL BECAUSE AN ELECTRIC CAR PUSHES IT FURTHER THAN ANYTHING ELSE. BOEING HAD MANY SAFETY CIRCUITS AND EVEN THOSE FAILED. THERE IS NO WAY THE TESLA SAFETY CIRCUITS WILL NOT EVENTUALLY FAIL"" ""Tesla Electric cars have 6800 lithium ion batteries wedged into a box. This can create a repercussive thermal event that can set the whole car off. The TESLA 18650 batteries can be seen exploding in multiple YOUTUBE videos. It is NOT TRUE that they are ""an entirely different battery"" they are the same chemical compound that blows up."" ""A direct quote from Tesla's patent application, below. Tesla KNEW this was going to happen and never adequately warned anybody. Tesla wrote these words in the federal papers they filed yet they never showed these words to any buyers : ""Thermal runaway is of major concern since a single incident can lead to significant property damage and, in some circumstances, bodily harm or loss of life. When a battery undergoes thermal runaway, it typically emits a large quantity of smoke, jets of flaming liquid electrolyte, and sufficient heat to lead to the combustion and destruction of materials in close proximity to the cell. If the cell undergoing thermal runaway is surrounded by one or more additional cells as is typical in a battery pack, then a single thermal runaway event can quickly lead to the thermal runaway of multiple cells which, in turn, can lead to much more extensive collateral damage. Regardless of whether a single cell or multiple cells are undergoing this phenomenon, if the initial fire is not extinguished immediately, subsequent fires may be caused that dramatically expand the degree of property damage. For example, the thermal runaway of a

battery within an unattended laptop will likely result in not only the destruction of the laptop, but also at least partial destruction of its surroundings, e.g., home, office, car, laboratory, etc. If the laptop is on-board an aircraft, for example within the cargo hold or a luggage compartment, the ensuing smoke and fire may lead to an emergency landing or, under more dire conditions, a crash landing. Similarly, the thermal runaway of one or more batteries within the battery pack of a hybrid or electric vehicle may destroy not only the car, but may lead to a car wreck if the car is being driven or the destruction of its surroundings if the car is parked." "" ""WTF!!!!!! Tesla's own staff have now admitted that once a lithium ion fire gets started in one of their cars, it is almost impossible to extinguish burning lithium ion material. This is Tesla's own words in THEIR patent filing, (You can look it up online) saying that the risk is monumental. Tesla has 6800 lithium ion batteries, any one of which can go thermal and start a chain reaction! If you look at all of the referenced YOUTUBE movies you will see how easy it is to set these things into danger mode." "" "

"" ""Imagine a car crash with a Tesla where these 6800 batteries get slammed all over and then exposed to rain, fire hose water, water on the roads, cooling system liquid.. OMG!! And then if, in that same accident the other car is a gasoline car? getting burned alive sounds BAD?! Tesla is covering up the problems with its batteries." ""

AS A DEMONSTRATION OF HOW DANGEROUS LITHIUM IS, NASA IS GOING TO MAKE IT BURN IN OUTER SPACE: ""If you're along the Eastern Seaboard tonight, it might be worth your while to look at the sky this evening. NASA's Wallops Flight Facility is scheduled to launch a sounding rocket that will release ""two red-colored lithium vapor trails in space."" As Space.com reports, those trails might be seen across the Mid-Atlantic and perhaps as far north as Canada and as far south as northern Florida. Space.com explains how these trails will produce a ""night sky show:"" ""The sounding rocket that will be used to create the two NASA-made glowing cloud trails will be a Terrier-Improved Orion. In this technology test launch, two canisters in the rocket's payload section will contain solid metal lithium rods or chips embedded in a thermite cake. The thermite is ignited and produces heat to vaporize the lithium. ""Once the vapor is released in space, it can be detected and tracked optically. The rocket will eject two streams of lithium which will be illuminated at high altitudes by the sun (which will be below the local horizon at ground level)."" In a statement, mission project manager Libby West said the launch is a test flight for two upcoming missions. It'll give scientists a view of two different methods for creating lithium vapor trails. By the way, NASA says the ""lithium combustion process poses no threat to the public during the release in space."" If lithium is so dangerous it will even burn in space, why are we putting it in our airplanes and cars?????? Lithium Ion batteries blow up and burn down commercial building: <http://westhawaii.com/sections/news/nation-world-news/787-battery-blew-%E2%80%99906-lab-test-burned-down-building.html> ""Tesla and Fisker have only sold a few hundred cars, (thank god) because nobody but dicks want these overpriced eliteist toys. A regular car company sells hundreds of thousands of cars per model. Every single Tesla or Fisker sold increases the likelihood of a burn up. Those burn-ups will affect the homes, cars and lives of the people next door who never even bought one." "" ""Go to <http://www.youtube.com> and type into the search window: ?Lithium ion explosion? or ?lithium battery and water? or ?lithium ion water? and any related derivation and you will find hundreds of videos about how dangerous these batteries are. There are numerous videos of Tesla's 18650 batteries blowing up." "" ""This article in the LA Times sheds more light on the horrors of Lithium Ion: <http://articles.latimes.com/2013/jan/18/business/la-fi-dreamliner-battery-20130119> "" ""Lithium Ion batteries go thermal in peoples pockets, in your notebook, especially in your Tesla and Fisker car and everywhere else. There are thousands and thousands of articles documenting this and there is a cover-up by the VC's that fund these things to keep this fact out-of-sight. Making Lithium Ion batteries poisons the workers who make them. It is a dangerous product. Each time the workers, particularly in Asia, realize they are being poisoned by the factory, they jack up the product. Outlaw lithium ion batteries. Demand a recall.? There are PLENTY of other energy storage solutions that do not involve the highly compromised Lithium Ion chemistry!"" ""Below are a few samples of HUNDREDS of videos proving that Lithium Ion Batteries JUST BLOW UP. This is why TSA does not want them, or liquid, on planes." "" Report: Galaxy S 4 Lithium Explosion Burns Hong Kong Home To The Ground: By Stephanie Mlot July 30, 2013 A Hong Kong couple have been displaced after an exploding Samsung Galaxy S 4 smartphone burst into flames, burning their house to a crisp. The man, identified in the

original Xianguo.com report only as Mr. Du, claims that his phone, battery, and charger were all legitimate Samsung products, but that's now difficult to confirm since his home and everything in it were destroyed. According to the translated report, Du sat on the living room sofa playing the game "Love Machine" on his charging GS4 when it suddenly exploded. In the heat of the moment, he threw the device onto the couch, which caught fire. The flames then spread to the curtains and the rest of the house, "out of control," Xianguo said. Du, his wife, and his dogs managed to escape the house unscathed; neighbors were temporarily evacuated as firefighters fought the flames. Almost all of the couple's furniture and appliances burned to ash, the news site said, adding that their Mercedes parked outside was also damaged. Whether or not the true cause of an entire house fire was a singular 5-inch smartphone remains to be seen, though a fire department investigation initially resulted in a report of "no suspicious circumstances." Samsung did not immediately respond to PCMag's request for comment, but told Xianguo that it will "carry out detailed investigations and tests to determine the cause of the incident." Last year, a Galaxy S III owner in Dublin was driving in his car when the device caught fire. Cell phone safety is increasingly becoming an issue in Asia, where two cases of iPhone shock occurred within a week of each other this month. On July 11, a 23-year-old flight attendant with China Southern Airlines was allegedly electrocuted when she took a call on her Apple device while it was charging. She was reportedly using the original charger when she was killed. Here is what the Lithium Ion Batteries did to their home: Picture Boeing 787 Dreamliner woes put spotlight on lithium ion battery risks BY KEN BENSINGER, Los Angeles Times Chances are the same kind of battery that twice caught fire in Boeing 787 Dreamliners in recent weeks is in your pocket at this very moment. Lithium ion batteries, small and powerful, have become the electricity storage device of choice. They are everywhere ? in cellular phones, laptops, power tools, even cars. They allow us to talk, email and drill longer than ever possible in the past. But the incidents that led to the grounding of the 787 fleet worldwide, and the decision by Boeing on Friday to temporarily halt all deliveries of the plane, have highlighted a troubling downside of these energy-dense dynamos: their tendency to occasionally burst into flames. FOR THE RECORD: Dreamliner batteries: An article in the Jan. 19 Section A on lithium ion battery safety and the grounding of the Boeing 787 incorrectly described a fire in a Chevrolet Volt automobile. The battery did not ignite spontaneously; instead it burned after a crash test damaged the vehicle's cooling system and the test car was left parked with the battery fully charged, eventually causing it to overheat. With investigators now working to determine the cause of the incidents, one on a Dreamliner on a Boston runway, the other forcing an emergency landing of a 787 in western Japan, the larger question of lithium ion safety has snapped into focus. "Every battery can burn and every battery can be flammable," said Mike Eskra, a Milwaukee-based battery development scientist who also works as a battery fire investigator for insurers. "But lithium ion batteries are more dangerous because they store more energy. It's like a firecracker instead of a stick of dynamite." The casualty list is long. In recent years, tens of thousands of laptop batteries have been recalled due to the risk of fire or explosion. The 400-pound lithium ion battery on General Motors' cutting-edge electric car, the Chevrolet Volt, burst into flames seemingly spontaneously while parked in 2011. And investigators blamed a cargo hold full of lithium ion batteries for a fire that caused a UPS-operated 747 to crash shortly after takeoff from Dubai in late 2010. That crash, which killed both pilots, is one of more than 100 incidents recorded by the Federal Aviation Administration linking lithium ion batteries to onboard fires over the last two decades. This month, new rules took effect limiting the transport of lithium ion batteries in aircraft. And the FAA had long prohibited use of the technology in commercial airplanes. That changed in 2007, when it granted Boeing permission to use the batteries in the 787 under a number of conditions to ensure safety. For Boeing the lithium ion advantage was clear. Thanks to their chemistry, the rechargeable batteries can store as much energy as a nickel metal hydride pack that's 50% heavier, while charging and discharging faster than other battery types. That's made them attractive for military applications such as the B-2 bomber and also for use on the International Space Station and the Mars Rover. Lithium ion batteries enabled Boeing to swap out heavy hydraulic systems in the airframe for lightweight electronics and electric motors to operate systems like wing de-icers. That's a key reason the Dreamliner burns 20% less fuel than other wide-body aircraft. The weight and power savings are exactly what made lithium ion batteries popular in other applications. In excess of 95% of mobile phone batteries worldwide are lithium ion, and without lithium ion, laptops couldn't run anywhere near as long as they do without a recharge. "They completely dominate the consumer market," said Vishal Sapru, energy and power systems research manager at consulting firm Frost & Sullivan in Mountain View, Calif.. He estimates that global sales of lithium ion batteries reached \$14.7 billion last year, up from \$9.6 billion in 2009, a 53% increase. Sapru expects the market to soar to \$50.7 billion by 2018. "No other battery chemistries are growing at that rate." But lithium ion also has downsides.

The batteries tend to have shorter life spans than older, more proven battery technologies. And although the price is falling, lithium ion is still more expensive than other batteries. Although some carmakers have embraced the technology, others, such as Toyota, have decided against it. Several makers of lithium ion auto batteries for electric vehicles have filed for bankruptcy last year because of weak demand. Safety experts also have concerns. Because lithium ion batteries can store more energy, and discharge it more quickly, than other batteries, lithium ion cells can get much hotter than other technologies in the event of an overcharge or the external application of a heat source. Larger applications, such as the 63-pound batteries on the 787, incorporate multiple cells and the heat can spread rapidly from cell to cell, a chain reaction called "thermal runaway." And while other types of batteries use a water-based electrolyte in each cell, lithium ion relies on a highly flammable solvent. When heated up, that solvent tends to vaporize, spraying the burnable gas into the surrounding air. As a result, lithium ion battery fires burn extremely hot, as high as 2,000 degrees Fahrenheit. Those conditions were blamed for an explosion at a General Motors battery testing lab last April that caused \$5 million in damage and sent one person to the hospital. GM said flammable gas had vented from an experimental lithium ion battery that heated up during extreme testing. "Lithium ion is very controversial in the safety engineering space," said Brian Barnett, vice president for battery technology at Tiax, a technology firm in Lexington, Mass. He spoke last month at a conference on battery safety in Las Vegas, where more than three-quarters of the presentations focused on lithium ion batteries. The cause of the fires in the two Dreamliners has still not been determined and neither Boeing nor the Japanese company that made the batteries, GS Yuasa, have publicly commented on likely factors. Boeing subjected the batteries on the plane to thousands of hours of testing and installed numerous safety systems specific to the batteries. "We have high confidence in the safety of the 787 and stand squarely behind its integrity as the newest addition to our product family," Boeing Chief Executive Jim McNerny said Friday. Barnett and others emphasize that it's not uncommon to see problems in relatively new technologies. But they add that most lithium ion fires are caused by an external problem, such as a bad circuit or a software glitch that leads to overcharging. Another common problem in consumer electronics is the use of low-cost wiring and other components that can overheat and spark or catch fire next to the battery itself. Eskra, the battery fire investigator, said he's seen fires started by Chinese-made toys that use lithium ion batteries hooked up to chargers designed for nickel cadmium or nickel metal hydride batteries. Manufacturing errors, including allowing tiny metal particles to contaminate cells, can cause dangerous shorts, although they are exceedingly rare. "Somebody tried to cut corners somewhere," he said, noting that most lithium ion fires are caused by a tiny part that malfunctioned somewhere along the line and are easily resolved. "It's a \$2 fix, but it takes half a million dollars in research to figure out what it is." Sometimes the problem is more persistent. In 2006, Sony announced a global recall of more than 10 million lithium ion laptop batteries used in a variety of laptop computers after more than a dozen fires, and two years later issued a second recall. "This is a battery type that is only one of hundreds of possible batteries but this particular type was pushed by a few companies and investors so they could make money off it at the risk of public injury or death..." Picture THIS IS AN ACTUAL BOEING BATTERY "2006 fire under NTSB scrutiny Carli Brosseau Arizona Daily Star When a test of a lithium-ion battery charger turned into an inferno at Securaplane Technologies Inc. in 2006, temperatures reached as high as 1,200 degrees and three waves of firefighters failed to save the building. An employee of the Oro Valley company blasted the flaming battery with a fire extinguisher to no effect. Two hours later, the galvanized metal roof collapsed, and the 10,000 square-foot building was a total loss. It's a fire that federal safety regulators are taking another look at now, since Securaplane provides two key battery components to the Boeing 787 Dreamliner, the start-power and battery-charger units. Records from local Golder Ranch Fire Department, the first of three fire departments to respond to the blaze, describe "an uncontrolled thermal reaction (that) caused the battery to vent and this venting caused the ignition to various items and fixtures throughout the test lab area." "The electrical technician who was performing a test on the battery when it exploded likened the experience to being near a jet after-burner. Electrolytes from inside the battery were shooting 10 feet into the air, the former Securaplane employee, Michael Leon, said in an interview Friday. "The magnitude of that energy is indescribable." "The fire stands as a graphic illustration of the power stored within energy-dense lithium-ion batteries and the potential consequences if something goes awry. It also highlights the importance and delicacy of the quality-control measures applied to a novel - and potentially explosive - technology, a technology now allowed, under special conditions, to be used as the main and auxiliary power source of certain aircraft. The Boeing 787 Dreamliner, the company's newest and most energy-efficient plane, uses two lithium-ion batteries. After two battery-related incidents in the past month, the 50 Dreamliners distributed so far have been grounded." "Whistleblower: Dreamliner LITHIUM ION

Batteries Could Explode He says he was fired after warning about battery problems By Christopher Freeburn, InvestorPlace Writer Boeing's (NYSE:BA) new 787 Dreamliner could end up being a nightmare for the aircraft giant. A former senior engineering technician at Securaplane Technologies, which makes the charging system for the lithium-ion batteries used in 787 Dreamliners, told CNBC that the batteries are defective and liable to explode if they overheat. "Lithium-ion batteries are heat intolerant, according to a potential whistleblower familiar with... Lithium-ion batteries are heat intolerant, according to a potential whistleblower familiar with their technology. "Too much heat on those things, they will go into a thermal runaway, they will explode." The informant, a former senior engineering technician of Securaplane Technologies, was fired in 2007 for repeated misconduct, but he says it was in retaliation for voicing concerns about the batteries. The NTSB acknowledges that the lithium-ion batteries in Boeing's (BA) Dreamliner experienced a thermal runaway, but insists there's no connection between the incident and the whistleblower's claims. "The Japan Transport Safety Board makes a number of interim points. This battery, unlike one that burst into flames in a Japan Airlines 787 earlier in January, did not actually ignite. It experienced a thermal runaway, as a result of a build up of heat, yet the materials affected did not start burning. While the semantics might escape the casual observer the safety investigator said: "The battery was destroyed in a process called thermal runaway, in which the heat builds up to the point where it becomes uncontrollable. "But it is still not known what caused the uncontrollable high temperature?. In simple language, uncontrollable rises in temperature will if uncontrolled most likely result in a fire, including one that can burn through structural composites and alloys, and prove almost uncontrollable by fire fighters, even on the ground. It took a Boston airport fire brigade detachment 99 minutes to put out the Japan Airlines fire using equipment unavailable if the airliner was hours away from an emergency landing strip in the high arctic or north Pacific, which that particular flight had only recently traversed before the fire broke out after landing. he Japan air safety investigator said the wire supposed to ground or discharge static electricity build ups in the battery had been severed meaning it had experienced abnormal levels of current. However as also confirmed by the early stage of the US incident investigation into the Japan Airlines fire, this large lithium-ion battery had not experienced a voltage surge, and had so far as flight data recordings could tell, had been operating normally immediately before the emergency landing. Expect the news release in Japan to cause more tension between those who want the 787s to fly again pending a full understanding of the causes and cures in these incidents, and independent safety investigators who will recommend to safety regulators like the FAA a continuation of the grounding" "One aspect that may confuse some people relates to the decision to use this particular type of battery. The danger posed by it has been evident by a lengthy and documented list of disturbing events in recent years. They include many thousands of batteries used in laptops being recalled, because of determined risks of fire or explosion. General Motors were also placed in the battery limelight. In 2011, the 400 pounds Lithium ion battery

in their Chevrolet Volt apparently was subject to spontaneous combustion when it burst into flames, while reportedly in a parked vehicle. In 2010, a UPS-operated Boeing 747 crashed just after take-off from Dubai. Investigators placed the blame on a cargo hold that contained Lithium ion batteries, for a fire that caused the incident." A number of incidents of cell phones with lithium ion batteries blowing up in peoples pockets, notebook computers blowing up in peoples briefcases and other shocking fires have been deeply documented. Picture LITHIUM ION BATERIES BLOWING UP ON THEIR OWN Picture FISKERS CARS THAT BLEW UP AND BURST INTO FLAMES JUST BECAUSE THEIR LITHIUM ION BATTERIES GOT WET "Here is where they make some of these batteries, in forced labor camps: <http://www.thedailybeast.com/newsweek/2013/01/13/china-s-labor-pains.html> Because, as we all know, chinese prostitutes are the best choice to make the things that keep our airplanes in the air and our cars on the road. The silicon valley venture capital guys front these batteries because they have such cheap labor to give them great profits.. quality control? not so much

NHTSA DEMAND LETTER ADDITIONAL DATA: Additional Mechanical Failures of the Tesla. Some could lead to lock-in during fire: Mocking web image, below, highlights acknowledgement of high volume of Tesla drivers drinking and driving: Image, below, shows that the battery compartment of Tesla has more impact points to cause ignition than any other electric car: The Chevy Volt did a recall because of the lithium ion dangers and added extra steel, (image below) around the lithium ion chamber but they had already acknowledged this danger by burying the lithium ion deep within the body of the car without exposing it to the outside edges like

Tesla does: The following article (image below:) indicates that Tesla was in violation of federal law when it applied for DOE funds, which required that a company was not about to go bankrupt. Musk, herein states that he WAS about to go bankrupt when he applied. Additionally, he states that he front-loading his friends contracts to grab all the federal cash at a bankruptcy. This seems to indicate that safety due diligence data was being manipulated, along with federal law, on behalf of Tesla investors. Tjis calls into question, all data has submitted, or will submit, relative to honesty. Exclusive: Tesla Model S charging system may have started garage fire - California fire dept BY BERNIE WOODALL AND NORIHIKO SHIROUZU Wed Dec 18, 2013 (Reuters) - A fire department in Southern California said a garage fire may have been caused by an overheated charging system in a Tesla Model S sedan, in the latest link between the top selling electric car and the potential for fire. While Tesla Motors Inc maintains that the fire was not related to the car or its charging system, the Orange County Fire Authority said the Tesla-supplied charging system or the connection at the electricity panel on the wall of the garage of a single-family home could have caused the fire. ""The fire occurred as a result of an electrical failure in the charging system for an electric vehicle,"" said a report by the fire authority, a copy of which was obtained by Reuters. The report also emphasizes that the cause of the fire is unclear. ""The most probable cause of this fire is a high resistance connection at the wall socket or the Universal Mobile Connector from the Tesla charging system"" which was plugged into a 240-volt wall socket, the report said. The fire occurred on November 15 in Irvine, California. The possible link between the fire and the Tesla Model S was not reported previously. The garage fire is not related to three road fires in Model S sedans that occurred in October and November and which caused Tesla's stock to fall sharply last month. The road fires occurred in Washington state, Tennessee and Mexico. In the U.S. incidents, Model S sedans caught fire after running over road debris. In Mexico, a Model S caught fire after striking a concrete wall. U.S. regulators are investigating the cause of the U.S. road fires, which caused the high-flying stock of the ""green"" car maker to fall from a high of \$194.50 in late September to under \$120 in late November. On Wednesday, Tesla shares fell 2.9 percent to close at \$147.98 on the Nasdaq. The November residential fire on the campus of the University of California-Irvine caused \$25,000 of damage to the garage and its contents, but the Model S sustained only smoke damage, and no one in the house was injured, according to the Orange County Fire Authority's report. A Tesla representative disagreed on Wednesday with some of the report's findings. ""We looked into the incident,"" said Tesla spokeswoman Liz Jarvis-Shean. ""We can say it absolutely was not the car, the battery or the charging electronics."" She added: ""The cable was fine on the vehicle side. All the damage was on the wall side. ""A review of the car's logs showed that the battery had been charging normally, and there were no fluctuations in temperature or malfunctions within the battery or the charge electronics,"" said Jarvis-Shean. The owner of the Model S, who lives at the Irvine residence, had parked the car in the garage the evening of November 14, plugged the cord from the vehicle into the 240-volt wall socket, and set a timer to begin the flow of electricity to the car's on-board batteries at midnight. She noticed a fire just before 3 a.m. and called for help. Fire crews put out the blaze quickly. Some cardboard boxes stacked near the point of connection between the Tesla Model S charging system and the connection to the 240-volt outlet helped the fire spread, the report said. (Reporting by Bernie Woodall in Detroit and Norihiko Shirouzu in Beijing; editing by Matthew Lewis) VIDEO EVIDENCE: TESLA STRIKING ROAD DEBRIS NEAR FREMONT, CALIFORNIA: LITHIUM ION BATTERY PACK SPONTANEOUS EXPLOSION <http://www.youtube.com/watch?v=JzWbWBfd91w> <http://www.youtube.com/watch?v=7jIEjk3Qu4A> NETWORK TV NEWS REPORTS: <http://www.youtube.com/watch?v=fhMjRzvE1Ng> http://www.youtube.com/watch?v=kXGzBzeHF_Y LITHIUM ION DANGER: <http://www.youtube.com/watch?v=ZrJcWKmIwOc> BATTERY CELL TEST: Notice that in the following movie, the lithium ion battery like Tesla uses starts exploding just when the insides are exposed to air and ALSO when it gets wet: <http://www.youtube.com/watch?v=v7abq34mckg> TESLA ISSUE <http://www.youtube.com/watch?v=uFUNPpn4080> TESLA STAFF VIDEO: Here is a video made by Tesla's own employees about their product: <http://youtu.be/cTqnP0McPcs> <http://www.youtube.com/watch?v=cTqnP0McPcs> You can also see it at: <http://tinypic.com/t/7295hs/6> WATCH THIS VIDEO OF A TESLA BURNING AND BLOWING UP BECAUSE OF BATTERY SHOCK IN A CRASH. <http://www.youtube.com/watch?v=RCn1CufaCYc> <http://youtu.be/RCn1CufaCYc> - Questioning the validity of the German ""Safety Report"" Re-Quoted from: <http://www.freerepublic.com/focus/f-bloggers/3098653/posts> Hard to Take the German Absolution of Tesla Fires Seriously NLPC | December 5, 2013 | Paul Chesser Posted on Thursday, December 05, 2013 10:31:19 PM by jazusamo Following incidents in Washington state, Mexico and Tennessee, the National Highway Traffic Safety Administration announced it would probe fires that occurred

recently over a six week period in Tesla Motors' electric Model S. And this week, as revealed in a Detroit News story, the NHTSA looks like they're serious - at least more serious than Germany's transportation safety authority. Why bring up Germany? Because as the regulatory heat bears down in the U.S. on Tesla and high-profile CEO Elon Musk, they have trotted out the Eastern Europe nation to demonstrate that they've been absolved of any culpability in the fires. The media that has mostly fawned over the electric automaker helpfully amplified the development, which certainly Musk welcomed. He even got a slight recovery in the company stock price as a result. On Monday Tesla posted a press release that claimed the company received an inquiry from the German Federal Motor Transport Authority about the three fires. While the NHTSA seems intent on conducting a thorough investigation (I'll get to those details momentarily), the Germans have already wrapped up their inquiry! The result: After Tesla provided "data and additional information" and the Germans "reviewed Tesla's responses to their inquiries," they determined that "no manufacturer-related defects could be found. Therefore, no further measures under the German Product Safety Act are deemed necessary." Tesla posted a copy of the letter from the German Transport Authority - which is addressed to what appears to be the company's local legal counsel - with the translation into English in the press release. Four things beg for explanation:"

"The letter is dated Nov. 27, which is only about three weeks after the most recent fire. Such a rapid conclusion to an inquiry would seem to be a new record for governmental efficiency looking into complicated, sensitive matters such as this."

"The letter references a phone call earlier in the day with the attorney. What was that discussion about, that the Transport Authority immediately issued its exculpatory letter the same day

Tesla blacked out the identity and contact information of the Transport Authority representative who wrote the letter. Why?

"It's apparent the German authority depended only on limited information supplied to it by Tesla (?According to the documents, no manufacturer-related defects could be found?). So it's hard to give their ?investigation? much credibility."

"Compare that to what the US NHTSA is asking for. As the Detroit News reported Tuesday, the safety agency has requested that Tesla turn over detailed records of all consumer complaints, field reports, warranty claims and property damage claims related to the fires. ?Describe in detail all possible consequences to the vehicle from an impact to the subject component that damages the battery,? wrote NHTSA vehicle integrity chief D. Scott Yon. ?Describe in detail how these possible consequences were addressed in the design of the (Model S) and the limits of that design to prevent damage to the propulsion battery, stalling and fires.? The newspaper reported that Yon also asked for the results of all Tesla's tests, studies, and investigations to review the battery fires and the alleged defect, and information about whether Tesla made any changes to the Model S to address the possible defect of roadway debris sparking fires in the battery packs. He also wants detailed records of vehicles at the time of the incidents, owner contact information, and all communication to owners or regional officers that the company plans to issue in the next four months. The letter was dated November 27, and Tesla has until January 14 to respond. That's about 50 days just to gather the information ? more than twice as long as it took the Germans to collect, analyze and conclude their ?inquiry? that ?cleared? Tesla. Tesla has carefully controlled information that's been released about the fires, including statements from the Model S owners. For the most part media reports have derived from these. It makes you wonder if there is some sort of non-disclosure agreement between the company and its vehicle owners. For example, in early October ? shortly after the first fire in Kent, Wash. ? Musk posted an essay on Tesla's blog that explained how the Model S ?struck a large metal object? that caused damage. ?A curved section that fell off a semi-trailer was recovered from the roadway near where the accident occurred and, according to the road crew that was on the scene, appears to be the culprit,? Musk explained. ?The geometry of the object caused a powerful lever action as it went under the car, punching upward and impaling the Model S with a peak force on the order of 25 tons. Only a force of this magnitude would be strong enough to punch a 3-inch diameter hole through the quarter inch armor plate protecting the base of the vehicle.? Maybe so, but for all the physical explanations Musk has tried to present, no photos of the large metal object have been produced. Nor are there any pictures ? that are reasonably findable on the Web, at least ? of the tow hitch that was accused of causing the Model S fire in Tennessee. In such a hotly scrutinized case you'd think Musk would be parading the evidence if it existed, but he hasn't. In the same blog post Musk went to great lengths to argue a conventional gasoline powered car, in the same circumstances, could have experienced a far worse fate. ?A typical gasoline car only has a thin metal sheet protecting the underbody, leaving it vulnerable to destruction of the fuel supply lines or fuel tank, which causes a pool of gasoline to form and often burn the entire car to the ground,? he wrote. But the crash data doesn't support that. As Justin Hyde of Yahoo!'s automotive Web site Motoramic wrote in early November, ?Even though it has fewer electric cars on the road than its competitors (such as the Chevy Volt or Nissan Leaf), none have reported similar fires after crashes. And while liquid-fueled vehicles suffer about 170,000 such fires every year, federal data show they take place in only 0.1 percent of all crashes.? Tesla's control freakishness is also reflected in how the Model S owners who were fire victims. Has any independent journalist interviewed them? Below Musk's blog post was a portion of an email exchange between Tesla's vice president for sales and service and Rob Carlson, the Washington driver. The VP's missive came off as a carefully crafted (lawyered?) explanation of how the fire occurred and that the Model S's safety protections ?operated correctly.? In reply, Carlson supported Tesla's response to the incident and said, ?I am still a big fan of your car and look forward to getting back into one.? Then he revealed that he is an investor in Tesla ? so certainly a critical response on his part would not have helped the value of the shares he owns! While not exactly tanking, Musk likely felt some anxiety (and investor pressure) when the company's stock dropped from almost \$200 earlier this year to about \$120 the last couple of weeks, after the fires. Publicly Musk has said Tesla's share price was overpriced anyway (he's right), but at the same time, what executive wants to see a rapid drop like he's

seen? Not a moment too soon, this week he discovered a way to turn the German 'inquiry' of the Model S fires into a Wall Street bump ? the stock is up to almost \$139 this morning. As for the American investigation, time ? and a serious examination ? will tell whether Tesla needs to revisit its Model S design or not. Before the fires NHTSA still gave it a top safety rating, which seemed more like it was joining the irrational exuberance party rather than an accurate evaluation. The signs point to the agency taking this a lot more seriously than the Germans did, but then again, this is the Obama administration we're talking about, which has relentlessly protected and subsidized the electric vehicle industry. Samsung exploding Lithium ion Galaxy COVER-UP Expose proves Danger of Lithium ion!

Lithium ion and Cover-Ups seem to go hand-in-hand. Samsung tries to silence user whose S4 caught fire, it doesn't go over well"

Brad Sams
8-Dec-13

"Oh Samsung, you tried to have a YouTube video pulled after it showed a Galaxy S4 that caught fire while charging but this is about to blow up in your PR and legal teams face after you sent a 'hush' document to the user. Here's the deal, YouTube user GhostlyRich posted a video on YouTube in early December that showed that his Samsung Galaxy S4 caught fire while charging. While the battery did not explode (thankfully) you can clearly see the charging port is burnt. To no surprise, a burnt charging point rendered the device useless and seeing that the Phone is still under warranty, you would think Samsung would simply exchange the device and make good with the consumer to fix the issue. http://www.youtube.com/watch?v=2QHd-_qncEU Wrong. What Samsung has done, foolishly, is sent the user a document saying that they will exchange his defective device only after he pulls his initial video from YouTube. If Samsung was unaware of how the Internet works, it's about to find out that trying to quiet the user will result in a black eye for the company. Yes, we can understand why a company would want keep this type of incident quiet but anyone who has a basic understanding of the Internet will tell you that once it's posted to the web, there is no way to delete it. Sure, removing the video might keep it a bit quieter, but that would likely only raise more suspicion in the long run with the followers of that YouTube channel. Samsung has goofed up big time as the original YouTube video, at the time of this posting, had 45,000 views and the video showing the Samsung demand letter, well, it has over 277,000 views. The video discussing the letter and the incident is posted above and is worth a watch. It goes to show what Samsung will do anything to keep its S4 issues off the radar but in this case, it has completely backfired. Not to mention that having to sign a contract to execute a warranty is borderline unethical for the circumstances of this incident. Additionally, the lithium ion in Apple iPad Tablets are exploding: iPad Air explodes, erupting with smoke and flames in retail ... Hard to Take the German Absolution of Tesla Fires Seriously

by Paul Chesser
7-Dec-13

"Following incidents in Washington state, Mexico and Tennessee, the National Highway Traffic Safety Administration announced it would probe fires that occurred recently over a six week period in Tesla Motors' electric Model S. And this week, as revealed in a Detroit News story, the NHTSA looks like they're serious - at least more serious than Germany's transportation safety authority. Why bring up Germany? Because as the regulatory heat bears down in the U.S. on Tesla and high-profile CEO Elon Musk, they have trotted out the Eastern Europe nation to demonstrate that they've been absolved of any culpability in the fires. The media that has mostly fawned over the electric automaker helpfully amplified the development, which certainly Musk welcomed. He even got a slight recovery in the company stock price as a result. On Monday Tesla posted a press release that claimed the company received an inquiry from the German Federal Motor Transport Authority about the three fires. While the NHTSA seems intent on conducting a thorough investigation (I'll get to those details momentarily), the Germans have already wrapped up their inquiry! The result: After Tesla provided "data and additional information" and the Germans "reviewed Tesla's responses to their inquiries," they determined that "no manufacturer-related defects could be found. Therefore, no further measures under the German Product Safety Act are deemed necessary." Tesla posted a copy of the letter from the German Transport Authority - which is addressed to what appears to be the company's local legal counsel - with the translation into English in the press release. Four things beg for explanation:"

"The letter is dated Nov. 27, which is only about three weeks after the most recent fire. Such a rapid conclusion to an inquiry would seem to be a new record for governmental efficiency looking into complicated, sensitive matters such as this."

"The letter references a phone call earlier in the day with the attorney. What was that discussion about, that the Transport Authority immediately issued its exculpatory letter the same day

Tesla blacked out the identity and contact information of the Transport Authority representative who wrote the letter. Why?

"It's apparent the German authority depended only on limited information supplied to it by Tesla ("According to the documents, no manufacturer-related defects could be found?"). So it's hard to give their "investigation" much credibility."

"Compare that to what the US NHTSA is asking for. As the Detroit News reported Tuesday, the safety agency has requested that Tesla turn over detailed records of all consumer complaints, field reports, warranty claims and property damage claims related to the fires. "Describe in detail all possible consequences to the vehicle from an

impact to the subject component that damages the battery," wrote NHTSA vehicle integrity chief D. Scott Yon. "Describe in detail how these possible consequences were addressed in the design of the (Model S) and the limits of that design to prevent damage to the propulsion battery, stalling and fires." The newspaper reported that Yon also asked for the results of all Tesla's tests, studies, and investigations to review the battery fires and the alleged defect, and information about whether Tesla made any changes to the Model S to address the possible defect of roadway debris sparking fires in the battery packs. He also wants detailed records of vehicles at the time of the incidents, owner contact information, and all communication to owners or regional officers that the company plans to issue in the next four months. The letter was dated November 27, and Tesla has until January 14 to respond. That's about 50 days just to gather the information — more than twice as long as it took the Germans to collect, analyze and conclude their "inquiry" that "cleared" Tesla. Tesla has carefully controlled information that's been released about the fires, including statements from the Model S owners. For the most part media reports have derived from these. It makes you wonder if there is some sort of non-disclosure agreement between the company and its vehicle owners. For example, in early October — shortly after the first fire in Kent, Wash. — Musk posted an essay on Tesla's blog that explained how the Model S "struck a large metal object" that caused damage. "A curved section that fell off a semi-trailer was recovered from the roadway near where the accident occurred and, according to the road crew that was on the scene, appears to be the culprit," Musk explained. "The geometry of the object caused a powerful lever action as it went under the car, punching upward and impaling the Model S with a peak force on the order of 25 tons. Only a force of this magnitude would be strong enough to punch a 3-inch diameter hole through the quarter inch armor plate protecting the base of the vehicle." Maybe so, but for all the physical explanations Musk has tried to present, no photos of the large metal object have been produced. Nor are there any pictures — that are reasonably findable on the Web, at least — of the tow hitch that was accused of causing the Model S fire in Tennessee. In such a hotly scrutinized case you'd think Musk would be parading the evidence if it existed, but he hasn't. In the same blog post Musk went to great lengths to argue a conventional gasoline powered car, in the same circumstances, could have experienced a far worse fate. "A typical gasoline car only has a thin metal sheet protecting the underbody, leaving it vulnerable to destruction of the fuel supply lines or fuel tank, which causes a pool of gasoline to form and often burn the entire car to the ground," he wrote. But the crash data doesn't support that. As Justin Hyde of Yahoo!'s automotive Web site Motoramic wrote in early November, "Even though it has fewer electric cars on the road than its competitors (such as the Chevy Volt or Nissan Leaf), none have reported similar fires after crashes. And while liquid-fueled vehicles suffer about 170,000 such fires every year, federal data show they take place in only 0.1 percent of all crashes." Tesla's control freakishness is also reflected in how the Model S owners who were fire victims. Has any independent journalist interviewed them? Below Musk's blog post was a portion of an email exchange between Tesla's vice president for sales and service and Rob Carlson, the Washington driver. The VP's missive came off as a carefully crafted (lawyered?) explanation of how the fire occurred and that the Model S's safety protections "operated correctly." In reply, Carlson supported Tesla's response to the incident and said, "I am still a big fan of your car and look forward to getting back into one." Then he revealed that he is an investor in Tesla — so certainly a critical response on his part would not have helped the value of the shares he owns! While not exactly tanking, Musk likely felt some anxiety (and investor pressure) when the company's stock dropped from almost \$200 earlier this year to about \$120 the last couple of weeks, after the fires. Publicly Musk has said Tesla's share price was overpriced anyway (he's right), but at the same time, what executive wants to see a rapid drop like he's seen? Not a moment too soon, this week he discovered a way to turn the German "inquiry" of the Model S fires into a Wall Street bump — the stock is up to almost \$139 this morning. Tesla Safety Challenged! The Facts: ----- Deadly Smoke and Fumes. If the crash and fire don't kill you now, the toxins in the deadly smoke fumes kill you later. "

"(See all that smoke in the TESLA fire, above? That smoke is filled with deadly toxins from burning lithium ion combined with plastics. Why does Tesla say nothing about this in it's buyer documents? See all the cars stuck

in traffic in the smoke plume? Do those innocent drivers, and their families, that have to sit there, behind the fire and in the smoke, appreciate having to breath in deadly vapors? See the fireman with the Full-Hazmat breathing apparatus on? He knows it sucks.) Per the IJES via the State School of Chemical Engineering and Technology of China: ----- "

(Image above: New tests can see the cancer causing chemicals that got in your body from a Tesla fire from just two strands of your hair or one drop of blood or one swab of saliva. You can't hide product toxic poisoning anymore.)

"There are a vast number of MSDS disclosure forms and technical product documents from the feds, the battery companies, the FAA, the TSA, the SME, The IEEE and tons of others say that ""Lithium ion batteries will explode and they will give off toxic gas"". Why were the Tesla's not equipped with carbon dioxide fire extinguishers as required? Why was a simple sheet of soft metal placed between the explosives and a ""thousands-of-pound-per-sq.-ft. impact surface"" (the road)? Was the car actually engineered or did Musk just doodle it out on the back of a napkin? You can hit the edge or front of the car and it will go off. The reason ""Elon Musk stands behind Tesla"" is because they usually blow up starting from the front. Andrew- DC Group -----

TESLA COVER UP Lithium Ion goes boom when it gets wet, poked, charged, used or pretty much gets unhappy for no apparent reason. All those car hulks, below, lined up next to each other are lithium ion electric piles of burned up \$100K, per pile, cars, Nice huh? They are going to great lengths to cover that fact up: "

"(Notice the surgeon who owned it. Most of these guys are Swingin' D Rich Guy Male Doctors) Those images above show many different lithium ion electric car fires. Why is this being covered up? By whom? So far, most Tesla's have been acquired by Tesla Fan Boys and their own investors to pump up the numbers. This has prevented a number of ""thermal events"" from getting reported. WHAT!!!? You don't think that's enough burning Tesla's? Well here's some more, the next one is from Boston: Not enough burning Tesla's? Stand by... RS- LAT ---

Tell The U.S. Government to order Tesla to remove all Lithium Ion chemicals from it's cars! Is someone telling the NTSB not to do their job? Who? <http://www.youtube.com/watch?v=ZrJcWkmIwOc> TESLA CAN LOCK DOORS ON ITS OWN- BURNING ALIVE = BAD THING! You can read a number of postings online about the continual failure of the Tesla electronic door handles and door locks. How might fire increase these failure-to-unlock issues. Is it possible your own Tesla could lock you, and your family, INSIDE the car when it catches fire? How was this tested in the safety tests, or was it even tested? The Tesla Defects seem to be multiplying. Roberta- (A Mother) -----

Lithium ion = Bad Stuff Notice that in the following movie, the lithium ion battery like Tesla uses starts exploding just when the insides are exposed to air and ALSO when it gets wet: <http://www.youtube.com/watch?v=v7abq34mckg> -----

Another Tesla Movie So you think: ""OK, I would never drive my Tesla over any metal or bumpy roads so I never need to worry about that"", Well, that's what this Tesla driver thought: Watch the left side of the screen along the meridian wall. You can recognize the Tesla by the round open mouth grill. No matter what kind of a persnickety, self-centered, rich douche-kinda guy you are: Your Tesla is eventually going to hit a pot-hole, bottom-out or hit some crap in the road and then: fire and toxic smoke! -----

SHOCKER EXCLUSIVE!!!!!! Tesla ""battery supply"" problem -NOT. Battery explosion problem- YES. ""The napalm-like lava that is burning lithium-ion, combined with burning Tesla plastic, can eat through your entire face in about 2.5 seconds and it is nearly impossible to extinguish. This is not good stuff. They tried it on pig-corpse, ugly results. There are over 1000 different ways to store electricity. Lithium ion is the worst. The faster a car goes, the more likely it is to crash and to flip over in a crash. Tesla is the fastest car so it will crash more and flip over more. People that drive Tesla's are, generally, arrogant yuppie males with ego issues who want to go fast and show off. That makes crashes even more likely. While you are driving around on a carpet of deadly lithium ion, buried in the floorboards of the Tesla at your feet, and the car suddenly flips over, you are now trapped under a ceiling of burning lithium ion that firefighters can't extinguish and your face burns off. This is like flouridation of water controversy; this chemical was specified because a certain group is making money off of this chemical. Over time, each battery has a higher and higher chance of ""going off"" because the charging demands of a car combined with the degradation offset of a single lithium ion battery is high in normal circumstances. Tesla uses them in extreme circumstances. They were never built for cars. You are not going to see less Tesla fires, you are going to see more. Tesla has dense-packed 6800 lithium ion packs in a closed metal box under your seat. That is 6800 chances of having your face burned off and 6800 chances of getting rained on with burning lithium ion and plastic, gassed out and burned up by the Tesla. I don't like the odds. Look at some of these pictures on this site, it even melts the metal. The people that are telling you ""Lithium Ion is just a lovely thing, don't worry about all of those scare stories"" have a financial investment in batteries using this chemical. Almost all of them have worked for, invested in or been hired by the people that make money off it. The form factor Tesla uses is a common 18650 battery you can buy on Amazon and Ebay so Tesla is not telling the truth about ""having a battery supply problem"" in their latest financial reports. They are having a battery blow-up problem. Suppliers won't sell them any batteries because they know Tesla abuses the batteries in the way they deploy them in cars and they don't want to get sued too, along with the lawsuits that are coming after Tesla. These batteries were never intended to be used in cars. All this has been known for decades. If the ""biggest electric car funding effort in history"" hired the ""greatest technical review team ever created"", how did this get by? Why didn't the reviewers mention this for Tesla's 'loan'? This is not new technical information!"" Dr. Lee- USGA (FYI- I am available for TV

interviews. Contact me through the SOMO funnel.) -----

NHTSA has now called Musk a Liar TWICE, said he lied about probe and lied about NHTSA safety rating The National Highway Traffic Safety Administration (NHTSA), which produced the safety rating, isn't happy about Tesla's boasting. In its announcement, Tesla explained that the Model S earned five-star marks in every category; a rare feat. On top of that, its overall Vehicle Safety Score, provided to manufacturers, gave it a "new combined record of 5.4 stars." In a statement on its website, the NHTSA issued a rebuke to Tesla: "NHTSA does not rate vehicles beyond 5 stars and does not rank or order vehicles within the star rating categories. In addition, the agency has guidelines in place for manufacturers and advertising agencies to follow to ensure that accurate and consistent information is conveyed to the public." <http://www.businessinsider.com/nhtsa-tesla-didnt-request-investigation-2013-11> <http://www.businessinsider.com/government-mad-at-tesla-over-safety-claim-2013-8> Reporters use a new technology called: FACTS, to recall that only just the other day Musk was screaming in the press that "no recall" and "no probe" was needed, yet today he says he has secretly been demanding that NHTSA do a probe. Hmmm? Interesting! Bloomberg, Guardian and Reuters staff have now spoken with NHTSA staff, including the head: David Strickland, who have said, on record, that Tesla did NOT request probe and that it would be "unprecedented" for any car company to request a liability probe like that. Another Musk lie to his investors. Both the lie and the counter, published and on the record. NHTSA said it had already had concerns about Tesla prior to any calls from Tesla or Tesla's investors. Previous communications had been from Tesla backers and Senators (Who Tesla investors already had in their pockets) saying "don't do a probe"! Another P.T. Barnum "smoke-screen" move by Musk. Musk tried to take credit for creating Tesla even though Martin Eberhard created Tesla. Musk tried to take credit for creating the probe even though the feds had it already going. Musk tried to take credit for inventing electric cars even though GM and others did it decades earlier. Musk changed the NHTSA safety results and got caught lying about that too. Musk tried to take credit for creating the HyperLoop even though MIT created it 9 years earlier. What's up with this douche bag? GHT- LAT --

----- T

esla: Unsafe At Any Speed, Unethical at Inception. If I read all of the posts and articles on this page I get: "Tesla seems to have been used to provide kickbacks to lithium ion investors in exchange for politics and those investors may, or may not, have known that lithium ion blows up, on its own, way more often than gasoline. When it does blow-up, along with the plastics and metals of the car, the toxic smoke and vapors can lead to a slow death of the occupants and bystanders. The Tesla batteries were not made for cars and when they are made, the workers who make them become very ill or fatally ill. There are plenty of electric cars available, today, from other companies. Tesla was not the first or the last and has led no wave of innovation that was not already in place decades earlier. Tesla staff and bundlers bribed Washington DC officials to get taxpayer money and fake stock market positioning for a billionaire. They deserve no applause. Almost all of the "Tesla fanboy Hype" is Tesla's own hired bloggers, and investors, run out of Fremont, creating fake buzz by operating as thousands of fake social media accounts." Does that about sum it up? EACH of those electric Fisker cars, in the photos above, blew up as they sat there when their lithium ion got wet in a storm. Lithium Ion blows up just from getting wet (or overcharged or banged). The cars, in the photos above, were not all brought there, and put together, after they blew up. They just blew up sitting in the parking lot waiting to get delivered to customers. That is a picture of dozens and dozens of VERY expensive cars that were being used as a scam to sell this chemical called "lithium ion" that campaign financiers had a near monopoly on. It was a kickback deal. Due Diligence was done, but ordered to be ignored, in order to shove as much cash out the door, and in their pockets, before they got caught. Here is another one, below, the owner just ran into the grocery store and BOOM the lithium ion batteries in his \$100K+ lithium ion electric super car just blew up, taking the tree and the car next to it out:"

TESLA PATENTS, FILED WITH FEDS, SHOW MUSK KNEW CARS WERE UNSAFE! TESLA knew their car was unsafe and says so in their own patent filings. This, alone, says Musk was lying. The extreme military tank-type ""ballistic shield"" measures called for in their patent, below, are shocking proof that they knew how awful lithium ion is the way they use it. In another Tesla patent, Tesla says, in THEIR words filed with the feds: """"Thermal runaway is of major concern since a single incident can lead to significant property damage and, in some circumstances, bodily harm or loss of life. When a battery undergoes thermal runaway, it typically emits a large quantity of smoke, jets of flaming liquid electrolyte, and sufficient heat to lead to the combustion and destruction of materials in close proximity to the cell. If the cell undergoing thermal runaway is surrounded by one or more additional cells as is typical in a battery pack, then a single thermal runaway event can quickly lead to the thermal runaway of multiple cells which, in turn, can lead to much more extensive collateral damage. Regardless of whether a single cell or multiple cells are undergoing this phenomenon, if the initial fire is not extinguished immediately, subsequent fires may be caused that dramatically expand the degree of property damage. For example, the thermal runaway of a battery within an unattended laptop will likely result in not only the destruction of the laptop, but also at least partial destruction of its surroundings, e.g., home, office, car, laboratory, etc. If the laptop is on-board an aircraft, for example within the cargo hold or a luggage compartment,

the ensuing smoke and fire may lead to an emergency landing or, under more dire conditions, a crash landing. Similarly, the thermal runaway of one or more batteries within the battery pack of a hybrid or electric vehicle may destroy not only the car, but may lead to a car wreck if the car is being driven or the destruction of its surroundings if the car is parked." Plus this other Tesla patent which says you need to, essentially, be in a military tank to drive a Tesla safely. Patent calls for "Ballistic Shielding" to keep drivers & passengers alive !!!!: http://www.patentlens.net/patentlens/patents.html?patnums=US_8286743#tab_1 "HJ- BOST -----

Per SME, lithium ion has blown up in products over 2000 times more often than any other energy storage. Lead acid batteries, gasoline, hydrogen, nickel metal hydride, and all other product energy storage technologies COMBINED have NOT blown up as much as lithium ion has gone thermal in cars, airplanes, cell phones, computers, data centers, tablets, backup power systems and other systems. People have died in some of these incidents. Planes have crashed. Homes have been set on fire. People have been horribly burned. It is not OK to let lithium ion investors buy the news media and shut down the articles about these dangers. Hj, WSJ -----

Please Send This open letter to the German Federal Motor Transport Authority, or Kraftfahrt-Bundesamt (KBA): Regarding: Your recent Tesla "safety declaration". Dear German Federal Motor Transport Authority: It is quite surprising to hear that your organization has declared the Tesla completely safe without engaging in full due diligence. It makes it appear like someone got bribed. We certainly hope that Deutsche Bank staff's substantial positions in Tesla held no bearing. We see that Deutsche Bank staff were just indicted for massive securities fraud and we hope that is just a coincidence. Numerous organizations and experts have provided data showing that the car is not safe. The statistics, historical facts about lithium ion, and actual evidence point to the opposite conclusion. Many websites, including: <http://lithium-ion.weebly.com> and others provide rather contrary evidence. Tesla's own patent documents state that the car is not safe. The Chevy Volt was recalled for far less battery issues with lithium ion. There are over 200 safety concerns that can be provided to you in a documented report. America has not even started their safety investigation and has requested a deep set of technical documents from Tesla. Did your agency request such documents? The members of the public hereby request publication of the identities of the reviewers, the methods and analysis methods they employed, the read-out of their data and the conclusive, specific data that the research was based upon. Here is a link to a much more overt investigation you might want to review: <http://somo1.com/2013/12/06/tesla-safety-report-vers-1-05-public-wiki-produced-for-nhtsa-and-other-governmental-agencies/> Sincerely, XXX Please feel free to send your own version to Kraftfahrt-Bundesamt (KBA) at: pressestelle@kba.de and at this link: http://www.kba.de/cln_031/nn_540136/EN/Service__en/Contact/Contact__node__en.html?__nnn=true and by hard-copy mail to: Kraftfahrt-Bundesamt Stabsstelle (Office of Interdepartmental functions) Mr. Thomas Meyer 24932 Flensburg ki- ggt -----

Samsung exploding Lithium ion Galaxy COVER-UP Expose proves Danger of Lithium ion! Lithium ion and Cover-Ups seem to go hand-in-hand. Samsung tries to silence user whose S4 caught fire, it doesn't go over well"

Brad Sams

8-Dec-13

"Oh Samsung, you tried to have a YouTube video pulled after it showed a Galaxy S4 that caught fire while charging but this is about to blow up in your PR and legal teams face after you sent a 'hush' document to the user. Here's the deal, YouTube user GhostlyRich posted a video on YouTube in early December that showed that his Samsung Galaxy S4 caught fire while charging. While the battery did not explode (thankfully) you can clearly see the charging port is burnt. To no surprise, a burnt charging point rendered the device useless and seeing that the Phone is still under warranty, you would think Samsung would simply exchange the device and make good with the consumer to fix the issue. http://www.youtube.com/watch?v=2QHd-_qncEU Wrong. What Samsung has done, foolishly, is sent the user a document saying that they will exchange his defective device only after he pulls his initial video from YouTube. If Samsung was unaware of how the Internet works, it's about to find out that trying to quiet the user will result in a black eye for the company. Yes, we can understand why a company would want keep this type of incident quiet but anyone who has a basic understanding of the Internet will tell you that once it's posted to the web, there is no way to delete it. Sure, removing the video might keep it a bit quieter, but that would likely only raise more suspicion in the long run with the followers of that YouTube channel. Samsung has goofed up big time as the original YouTube video, at the time of this posting, had 45,000 views and the video showing the Samsung demand letter, well, it has over 277,000 views. The video discussing the letter and the incident is posted above and is worth a watch. It goes to show what Samsung will do anything to keep its S4 issues off the radar but in this case, it has completely backfired. Not to mention that having to sign a contract to execute a warranty is borderline unethical for the circumstances of this incident. -----

Germany Clears Tesla Of Fire Probe????? Was it a real probe? Tue Dec 3, 2013 (Business Insider) The German Federal Motor Transport Authority, Kraftfahrt-Bundesamt (KBA) has concluded an investigation into three recent Tesla Model S fires and found 'no manufacturer-related defects,' Tesla said today. In a press release, Tesla said it provided the KBA with relevant data on the accidents, and received a letter saying 'no further measures under the German Product Safety Act [Produktsicherheitsgesetz (ProdSG)] are deemed necessary.' In November, the National Highway Transportation Safety Administration (NHTSA) opened an investigation into the three fires. Tesla said it has 'requested' the process, but NHTSA Administrator told a House panel that was untrue, according to The Detroit News. That investigation is ongoing, but at least the Germans have been placated. If you woke up this morning and read this, as I did, upon seeing TSLA up 6% before the open and my puts reversing lower on this 'news', you could be forgiven if your first impression was, 'when the hell did Germany open an investigation?' You see, I remember being told about the investigation being conducted by the NHTSA, the US based auto safety agency. I remember they opened an investigation following three fires, two of which occurred in the US, and the remaining one in Mexico. Barely a few weeks ago? But it's funny, as I don't recall there ever being an announcement of a German investigation. It must have got lost under the Blankenship resignation announcement. In fact, swinging over to Tesla's Investor Press Releases 'it's astounding' but it seems completely devoid of any bad news at all. Not even a mention of the US based investigation, much less a German one, or a peep about the VP of sales leaving the company. Meanwhile, in the real world, real men and women are throwing their money into this company, shaking off oversold conditions on a hard bounce. And class action lawsuits are raining from the sky. I've mostly been thinking those lawsuits were warrantless before now, but if this is how Tesla handles communications, I'm not so sure. This isn't a game, people. Mr. Cain Thaler Stock advice in actual English. -----

If GM had to do a recall for a potential thing, why didn't Tesla have to do one for an actual thing? (Hint: Bribes)

""GM to Call Back 8,000 Chevrolet Volt to Strengthen Battery Pack Michael Graham Richard Transportation / Cars @ Treehugger The saga continues! After some Chevy Volt battery fire issues during testing and GM offering Volt owners to buy back their cars or loan them replacements, we learn that that GM has decided to not take any chances; it is supposedly about to announce a call back of 8,000 Volt electric cars. The Associated Press only writes: ""A person briefed on the matter says General Motors will ask Volt owners to bring their electric cars into dealers to strengthen the structure around the batteries."" We should have more details later today, but if you own a Volt, expect to be contacted by your dealer and to have to bring them you car for some strengthening of the structure protecting the battery pack."" ### See image below. Even though Chevy Volt batteries are contained deep within the body and chassis of the car, GM still had to do a recall to cover the lithium ion batteries up in even more steel. Tesla lithium ion batteries are fully exposed at the edges and bottom of the car. It should not be possible for NHTSA to NOT require a recall unless someone is paying someone off. Is Musk ""Convinced there will be no recall"" because Rahm told him so? "

""(C) GM The Tesla Battery pack has TONS more impact points than a Chevy Volt, Nissan Leaf or other car. It has less shielding density per Lithium Ion Square inches than any car. The batteries are very close to the edge and exterior of the car without protection equal to the known, and calculated, destruction potential. That is why Tesla's blow up more often: The Tesla battery box wall is a mere breath away from a deadly road surface moving with tremendous force and the lower edge of the car where an impact is most likely to occur. Thousands of pounds of shock force will instantly do things to those batteries that will be: Awesome in a frightening and fire-explosion kinda way. KF & GG -----

Incriminating New Evidence! Corporate testing videos have now been uncovered showing mice in a glass box exposed to a single burning Tesla Lithium ion cell and then exposed to a single burning Tesla Lithium 2 inch ion battery with a section of Tesla car body plastic and metal burning. After the horrid results, the mouse bodies were tested for toxins. Needless to say, none of the results were good. U.S. Government MSDS documents reveal the toxic vapor danger from these batteries was fully documented outside of DOE, yet never discussed by staff. Federal MSDS documents, from multiple federal agencies, specifically state that the Tesla lithium ion batteries are deadly toxic when burning. DF- NYP -----

Tesla fires Can't be ignored no matter what the CEO says <http://www.consumeraffairs.com/news/tesla-fires-cant-be-ignored-no-matter-what-Tesla's-ceo-claims-112013.html> -----

Tesla Batteries Act Like Solid ""rocket fuel"" when they ignite! As of 11/6/2013 Tesla had said there were only 3 fires, yet social media shows there were many more fires. Those other fires have been documented in photos and videos and Elon Musk has said he has tracking chips on all of the cars so Tesla had to have known about all of the other fires. The reality of the documentation and the statements from Tesla seem to clearly show a cover-up. Lithium ion in a metal box burns like solid rocket fuel when it gets going in a fire. Musk would have known this since he started SPACE X: A rocket company! (Which keeps having technical failures) RS-LAT -----

Bad Engineering It was an idiotic move to use thousands of lithium ion consumer flashlight-type batteries, that were never made to be used in a car, to create an entire bed of toxic explosive material and put it just a hair breadth away from a surface that can puncture, explode and inflame it. That surface, the road, is trying to puncture, bump, and destroy the undercarriage, of every car, every inch of every mile of every road across the country. Also, the batteries are so close to almost all of the outside edges of the car, that puncture damage in a crash is certain. They decided to CHEAP OUT with the flashlight batteries yet they charge buyers insane amounts of money for a car with a growing list of technical failures. What were these people thinking? HD- SME engineer Update: See Fluoride controversy (below) for explanation about why someone would do this: -----

Understanding Tesla's Life Threatening Battery Decisions SEEKING ALPHA- John Peterson Nov 22 2013 In the last couple of months, electric cars from Tesla Motors (TSLA) have had three collision-related battery fires that were widely covered by the media. Last week, the NHTSA decided to conduct a formal investigation of these incidents. While Tesla's CEO Elon Musk immediately went on the offensive arguing that Tesla's BEVs have a lower fire risk than gasoline powered cars, the question an increasing number of investors are asking is ""Why has Tesla had three battery fires in a fleet of 17,000 BEVs while Nissan hasn't had any fires in its fleet of over 90,000 BEVs " The answer is simple. Tesla's battery decisions significantly increased battery risks for both the customer and the company. MORE... -----

Musk Claim of Fewer Tesla Fires Questioned in MIT Report Bloomberg By Angela Greiling Keane & Jeff Green Tesla Motors Inc. (TSLA) cars have caught fire caused by collisions more often than gasoline-powered vehicles, according to a Massachusetts Institute of Technology report rebutting assertions by Elon Musk, the electric-car maker's chief executive officer. Because only 4 percent of vehicle fires are caused by collisions, Tesla's Model S sedan, with a rechargeable lithium-ion battery, is statistically more likely to catch fire than are cars with gasoline tanks, wrote Kevin Bullis, senior editor for energy for MIT Technology Review. Update: <http://muckrack.com/link/tdT2/musk-claim-of-fewer-tesla-fires-questioned-in-mit-report> -----

WATCH THIS VIDEO OF A TESLA BURNING AND BLOWING UP BECAUSE OF BATTERY UNHAPPINESS. <http://www.youtube.com/watch?v=RCn1CufaCYc> <http://youtu.be/RCn1CufaCYc> <http://m.digitaltrends.com/cars/second-tesla-model-s-catches-fire-critical-crash-mexico/> ""Is the beginning of an onslaught of fiery Tesla Model S wrecks? A second Tesla Model S reportedly caught fire last week after crashing through a concrete wall in Mexico. According to Mexican paper Progreso Hoy (by way of Business Insider), a Model S owner was speeding when he lost control of the car and went through a concrete wall and then into a large tree. You can see the resulting fire in the video below. The man was apparently not seriously injured and walked away from the incident. Here is an official recount from Tesla: ?We were able to contact the driver quickly and are pleased that he is safe. This was a significant accident where the car was traveling at such a high speed that it smashed through a concrete wall and then hit a large tree, yet the driver walked away from the car with no permanent injury. He is appreciative of the safety and performance of the car and has asked if we can expedite delivery of his next Model S. The first reported Model S fire occurred earlier this month when a Washington State driver struck an object in the road, which caused a fire in the front portion of the car, beneath the carpeted trunk area. It appears the Mexican Model S fire also began in the forward section of the car."" ? Manu Fs. - Obsido -----

The Lithium ion profiteering scam. Dump, grab the money and run. FISKER lithium Ion batteries burst into flames at the drop of a hat. This is now well-known. Telsa and Fisker funding with tax dollars was more about funding battery company deals for their investors than anything else. Lithium Ion Batteries blow up in Boeing's, Tesla's and they just blow up. That is why TSA does not allow liquid on airplanes. That is why AT&T eliminated Lithium Ion in its server racks. EVERYBODY knows that lithium ion blows up and releases deadly chemicals,

why is this cover-up still going on? Oh, I See: Profits and kickbacks! Everyone was warned about this. Over 100 published reports from major universities and federally funded studies have now been sourced and posted showing that this had been guaranteed to happen by some of the top scientists in the world prior to Tesla receiving DOE money. Who owns all these battery companies? Watch for the WESTON REPORT from a major Huffington Post Journalist which links every investor in TESLA to all of their political connections and influences. Invest in Tesla and you will get tracked by numerous investigative reporters. Dan -----

Tesla shares slip more on reports of third fire, other car problems By Jerry Hirsch- LA Times November 7, 2013 By Jerry Hirsch November 7, 2013, 8:39 a.m. Tesla Motors shares continued to fall Thursday as the automaker confirmed a third fire in one of its high-end electric cars and a major auto reviewer pointed out problems with its Model S luxury hatchback. The 9%, or \$13.40, decline in mid-morning trading to \$137.76 followed a 15% plunge in the shares Wednesday after the automaker said limited supplies of batteries were hampering sales and that it was spending heavily on research and development to design new models. Tesla shares have been on a run for most of the year, rising about 400% before this reversal. Car shopping website Edmunds.com said its 2013 Model S was "making an ominous noise under acceleration and deceleration. It originates from the rear of the car and seems to be getting worse." It is a complaint that's also starting to show up on Tesla's owners forum, an online discussion group hosted by the automaker for drivers of its cars. "Mine had that and it got bad at 70 mph," said one owner, posting under the "mortgagebruce" moniker. He said Tesla had to replace the drive unit twice to fix the problem. Tesla also replaced the drive unit on the Edmunds car, but declined to tell the company what caused the problem. It also replaced the driver door mechanism because of another problem. The car has just less than 11,000 miles on the road. "We're not sure what to think about the fact that both of these repairs were completed with just one overnight stay," said Mike Schmidt, Edmunds' vehicle testing manager. "Maybe the dealer is really on the ball. Maybe the supply chain is short. Or maybe the parts are readily available because they've seen these before." Tesla spokeswoman Liz Jarvis Shean said she was not familiar with the Edmunds complaint. Meanwhile, another Model S electric car caught fire Wednesday near Smyrna, Tenn., following a crash. This was the third Model S to have caught fire in the last five weeks. One burned near Seattle and another in Mexico. Both cars were in crashes and the fires injured no one. Normally, car fires are not significant events that influence investors. There are about 150,000 annually, according to the National Fire Protection Assn. However, safety officials have been tracking fires in electric cars, as well as computers and other equipment, out of concern that the lithium-ion battery systems might be fire-prone. Earlier this year, federal regulators grounded Boeing 787 planes for four months after batteries on two planes overheated, with one catching on fire. Boeing later ordered modifications to the jets to increase ventilation and insulation near the batteries, but the company and investigators never determined the root cause of the overheating. The National Highway Traffic Safety Administration reviewed the

Tesla fire in Seattle and concluded it was caused by the accident rather than a vehicle defect. Tesla said it contacted the driver of the car in Tennessee and noted he was not injured and "believes the car saved his life. Our team is on its way to Tennessee to learn more about what happened in the accident." "The problem is that we have three fires in six weeks," said Karl Brauer, senior analyst at Kelley Blue Book, the car information company. "For a company with a stock price based as much or more on image than financials, those recurring headlines are highly damaging." The Palo Alto automaker said Tuesday it posted a loss of \$38.5 million, or 32 cents per share, in the third quarter. That compares to a loss of \$110.8 million, or \$1.05 per share, in the same period a year earlier. Now that it is delivering cars, revenue grew to \$431 million from just \$50.1 million a year earlier. -----

Science Question With all of these lithium ion cars, IPADs and phones just blowing up and going off more and more, does the increased prevalence of WIFI, broadcast signals and atmospheric radiation and other ion drivers make Lithium Ion increasingly more likely to go off? DDF -----

"Breaks Automotive History Record for Wasted Money, It's Official 2013/05/16"

They Lied About Profits: Business Insider 2013/05/16

" - Other competing power systems run many, many times longer and provide massively greater range per charge - The run time of batteries constantly shortens - Lithium-ion batteries have a problematic "Memory Effect" - Lithium-ion batteries have a much shorter end-of-life metric. - Lithium-ion batteries need to be charged from a "sour-grid". - Other technologies have a far higher storage density than lithium-ion batteries. - Other technologies are far less bulky than lithium-ion batteries. - The weight of lithium-ion batteries reduces the range of travel of a vehicle which causes the use of wasteful energy just to haul the lithium-ion batteries along with the car. Other technologies energy systems weigh far less. - The disposal of lithium ion batteries, after use, presents a deadly environmental issue while other technologies do not. - Other technologies do not self-discharge like lithium-ion batteries. - Lithium ion batteries cause a greater carbon footprint than other technologies technology - Lithium-ion batteries require coal be burned to charge them. One pound of coal has roughly 14,000 Btu of chemical energy in it. When everything operates well, all that turns out to be generally around 30% efficient, meaning that 30% of the chemical energy that started out in the coal has become actual electricity. Scientists say that you poison the planet even more by using lithium-ion batteries. "

" Stay tuned for additions as we sort through the massive amount of tips, whitepapers, government reports, lawsuits, disclosure documents and files that have been submitted, by you, for this article? "

"COVERING-UP THE BIG FIX?, HOW THE STORY WAS HIDDEN FOR SO LONG" "Google down-ranking and search manipulation by the very investors who stole the cash; The A.L.I.C.E news spin synchronization team and a whole lot of people too horrified by the truth to be willing to print it... It was about CRIME but the bad guys tried to make it be about POLITICS in order to keep the stink on any concept of having the media cover it. It turns out, BOTH parties were involved in the crimes!"

" HIGHLIGHTS: - Google and their investors got the cash and perks and also owned 40% of the internet news traffic. Did they rig the news flow? You bet! - Democratic newspaper and website owners were being told "it would hurt the party plans if you cover these crimes, just ignore them for now" - The covert league of synchronized spin reporters in the group known as A.L.I.C.E used a secret email and tweet system to coordinate cover stories but they did not know they had moles - In this case, don't think about your political affiliation; think about the huge part of your paycheck that was taken away to give to actual criminals - From Schwarzenegger, to Feinstein, to Emanuel; big shots from both parties participated in the scheme. When one found out about the other, the cry of "I want some too!" was raised! "

"Hide D, Showcase R? "

It's the media's unwritten rule for covering political scandals.

By L. Brent Bozell III

1,000-member secretive progressive journalist group uncovered. Group floods media with fake Tesla stock pumping stories on-demand from Silicon Valley. Exposed by Media Trackers

"Media Trackers is dedicated to media accountability, government transparency, and quality fact-based journalism. Archive -"

"WASHINGTON, D.C. - A prominent CNN commentator, the top two political reporters for The Huffington Post, a Reuters reporter, the editor of The Nation magazine, a producer for Al Jazeera America television, a U.S. News & World Report columnist, and approximately two dozen Huffington Post contributors are among the more than 1,000 members of Gamechanger Salon. "

"Founded by leftwing activist Billy Wimsatt, the group is a secretive digital gathering of writers, opinion leaders, activists and political hands who share information, ideas and strategy via a closed Google group. The group's existence was discovered by Media Trackers through an open records request filed with a University of Wisconsin professor who happened to be a member of the network. Sally Kohn, formerly a Fox News contributor, now works for CNN reliably echoing pro-Obama Administration talking points and championing leftwing ideas as a network commentator. Kohn is also a member of Gamechanger Salon, and e-mails show that she occasionally approached the group's membership and asked them to promote her television appearances. "I'm guest co-hosting CNN's Crossfire tonight at 6:30pm EST, with fellow co-host Newt Gingrich. I would be grateful for folks (a) helping spread the word on Facebook, Twitter, etc to encourage people to tune in; and (b) tuning in and live tweeting during the show," Kohn wrote to the group on January 14 of this year. In another e-mail, Kohn pitched her TED talk about working as a liberal at Fox News. "I would be grateful for any shares and reactions. Here is a straightforward, sample tweet[:] Watch @sallykohn's amazing TED talk on emotional correctness: on.ted.com/Kohn" she wrote. "Thanks for everything all of you do every day to make the world a better place!" she signed off. Amanda Terkel, the "Senior Political Reporter and Politics Managing Editor at The Huffington Post," is a member of Gamechanger Salon along with The Huffington Post's Washington bureau chief, Ryan Grim. In mid-July, Terkel and Grim jointly wrote a piece about a leftwing effort to push Massachusetts Sen. Elizabeth Warren (D) to run for president. The pair of reporters heavily quoted Erica Segrans, a fellow member of Gamechanger Salon and leading organizer of the "Ready For Warren" effort, and cited Billy Wimsatt's support for the project. Wimsatt's work as founder of Gamechanger Salon and the reporters' own membership in the group, along with Segrans' membership, went unreported. In a subsequent piece Terkel again reported on the effort to recruit Warren for a presidential bid, and a previous piece by Grim contrasted Warren with presumptive Democratic presidential candidate Hillary Clinton. A former New York Times freelance columnist who now works as an energy and commodities reporter for Thomson Reuters is also a member of Gamechanger Salon. Anna Louie Sussman is listed as an "investigative reporter and journalist" on the Gamechanger Salon membership list, and while her beat focuses on energy issues, she has also writes about "local and international human rights and social justice issues" according to her website."

"Katrina vanden Heuvel is the editor and publisher of The Nation magazine, a prominent and well-known periodical of leftwing political and social thought. She is also a member of Gamechanger Salon and a regular

opinion writer for the online edition of The Washington Post. A late-July column for the Post by vanden Heuvel entitled "Building a progressive alternative to ALEC" hit on a theme regularly mentioned on Gamechanger Salon: liberals must build an alternative to the American Legislative Exchange Council. Lisa Graves, who leads the Madison, Wisconsin-based Center for Media and Democracy, is also a member of Gamechanger Salon, and according to e-mails reviewed by Media Trackers regularly promotes material developed by CMD to attack ALEC and the right-of-center lawmakers who tend to make up the majority of ALEC's active legislative membership. Vanden Heuvel suggested in her column that liberals support the efforts of the American Legislative and Issue Campaign Exchange "ALICE" (a leftwing counterpart to ALEC) and the Progressive States Network. Gamechanger Salon member Prof. Joel Rogers of the University of Wisconsin Madison founded ALICE. Vanden Heuvel in a 2012 column for the Post wrote about Rogers founding ALICE. Not once does she appear to disclose her membership in Gamechanger Salon along with some of the very people she writes about. Jordan Flaherty was, as of last year, a producer for Al Jazeera America television. He is also listed as a member of Gamechanger Salon and for a while he occasionally blogged for The Huffington Post. In addition to working at the left-leaning American Sustainable Business Council, David Brodwin writes an online column for U.S. News & World Report. Brodwin is a member of Gamechanger Salon, and on July 14 he published a column arguing that small business owners support a minimum wage increase. Fascinatingly, the Obama Administration's U.S. Department of Labor relies on Brodwin's American Sustainable Business Council to argue that very point in a recent "fact-sheet" advocating for a minimum wage hike. Dozens of members of the leftwing network have contributed columns to The Huffington Post, and others have written opinion pieces for several other publications. The full extent of the network's activity and effectiveness at amplifying and coordinating left-leaning messaging campaigns has yet to be fully explored. Authored by Brian Sikma"

Who's Tesla's Bitch? THE LIST:

"(Draft 1.3 - Constantly updated) Which media outlets cover-up Tesla Motors misdeeds and abuses? Which ones are run, or directed, by Tesla's investors seeking to manipulate stock values? Let's track, chart and document which media outlets are willfully smoke-screening Tesla Motors. Which outlets publish counter-stories when other outlets publish negative disclosure about Tesla to try to cover-up, or flood-out, the Tesla issues and charges? Some reporters are compensated by Tesla's IR Department, PR contractors, founders, VC and banking groups with either cash, discounts, tickets, jobs, advertising contracts, sex workers, meals, travel and/or political access. Send in your submissions... Which outlets now have documented tracking evidence, that can be exhibited in court?: -- Google (Investors) - Hundreds of online news outlets - Also via web routing manipulation -- Hearst Communications (Investors) - SF Gate - SF Chronicle - 15 daily and 34 weekly newspapers including - Houston

Chronicle - San Francisco Chronicle - San Antonio Express-News - Albany Times Union - Hundreds of magazines around the world, including - Good Housekeeping - Cosmopolitan - ELLE - O - The Oprah Magazine - 29 television stations, which reach a combined 18 percent of U.S. viewers; ownership in leading cable networks, including Lifetime, A&E, HISTORY and ESPN; significant holdings in automotive, electronic and medical/pharmaceutical business information companies - a 50 percent stake in global ratings agency Fitch Group - Internet and marketing services businesses - television production - etc... -- Gawker Media (White House Character Attack Conduit) - Gawker - Gizmodo - Jalopnik - Kinja - Deadspin - Kotaku - Jezebel - Valleywag - Lifehacker - 109 etc... -- The A.L.I.C.E. Alliance (Investor-Synchronized Reporters) - Stands for: American Legislative and Issue Campaign Exchange - 1400 coordinated reporters using the ""Alice News Alerts"" in order to seek to cover up campaign backer crimes with synchronized story releases, include: - The top two political reporters for The Huffington Post - A Reuters reporter - The editor of The Nation magazine - A producer for Al Jazeera America television - A U.S. News & World Report columnist - Approximately two dozen Huffington Post contributors - All of ""Gamechanger Salon"" - Sally Kohn, formerly a Fox News contributor, now works for CNN - Amanda Terkel, the ?Senior Political Reporter and Politics Managing Editor at The Huffington Post - The Huffington Post?s Washington bureau chief, Ryan Grim. - A former New York Times freelance columnist who now works as an energy and commodities reporter for Thomson Reuters is also a member of Gamechanger Salon. - Anna Louie Sussman is listed as an ?investigative reporter and journalist? on the Gamechanger Salon membership list, and while her beat focuses on energy issues, she has also writes about ?local and international human rights and social justice issues? according to her website. - Katrina vanden Heuvel is the editor and publisher of The Nation magazine, a prominent and well-known periodical of leftwing political and social thought. She is also a member of Gamechanger Salon and a regular opinion writer for the online edition of The Washington Post. - Lisa Graves, who leads the Madison, Wisconsin-based Center for Media and Democracy, is also a member of Gamechanger Salon, and ? according to e-mails reviewed by Media Trackers ? regularly promotes material developed by CMD to attack ALEC and the right-of-center lawmakers who tend to make up the majority of ALEC?s active legislative membership. - Vanden Heuvel suggested in her column that liberals support the efforts of the American Legislative and Issue Campaign Exchange ? ALICE (a leftwing counterpart to ALEC) ? and the Progressive States Network. - Jordan Flaherty was, as of last year, a producer for Al Jazeera America television. He is also listed as a member of Gamechanger Salon and for a while he occasionally blogged for The Huffington Post. - In addition to working at the left-leaning American Sustainable Business Council, David Brodwin writes an online column for U.S. News & World Report."

""This matter has absolutely nothing to do with whether or not you like solar power or electric cars or gasoline or fracking or one technology over another. It has nothing to do with climate change; not a single thing. This is totally about banking, securities and finance fraud. It is entirely about organized crime racketeering kickbacks arranged by arrogant frat-boy billionaires who sought to buy government, buy power, buy ego-trips, kill competitors and monopolize industries for personal gain in exchange for campaign efforts."" - A U.S. Senate Source -----

Watch the 60 Minutes episode: ""The Cleantech Crash"", below, that began the series of 2014 expose events coming over the next 6 months: [wpvideo jMnc6LJb] The lobbyists called ""Think Progress"" (many of those targeted by investigations work, or worked there) and others, funded by the VC's, have started massive spin to call it a bunch of lies and say that ""No, No, it was really a big success"", but the facts, the criminal investigations and

the money trail speak for themselves. It doesn't matter if you are Democrat or Republican, it matters if you want billionaires buying your government and cutting you out of the loop. D- LA Times -----

Now watch the 60 Minutes episode about how it was done: <http://www.youtube.com/watch?v=CHiicN0Kg10>
[wpvideo fARepFIX] -----

The Democrats needed cash for the campaign. Democrats are always poor, so they never have enough money. The campaign staff went to the Silicon Valley Vc's and said that if they paid for the campaign costs up front and rigged the search engines to only promote the Democrat candidates, then the campaign would give them \$100 Billion of tax money that they would not have otherwise gotten, once the Democrats had control of the DOE slush fund. So they did, but they got caught by their greed, and now they need to go to federal prison. It's as simple as that! E- Heritage -----

Note From Victims: Multiple SOMO reporters/writers have spoken with a number of victims of this series of hits organized by the same group of people. If any major law firms (Multiple firms can file) begin the process of filing a class action RICO or damages action on behalf of the victims: Arrington, Assange, Eberhard, Brown, Conway, DM, Steve, Lakatos, Katie, AL, Etc... It is highly likely that a number of other victims (over 20+) will join the cases once they are filed and publicly noticed. Substantial evidence and testimony now exists and recoverable assets in potential court-ordered awards, from the attackers, exceed \$50B+ in possible recoveries for damages caused by their organized efforts against these competitors and reporters. In other words, big class-action law firms, according to many plaintiff candidates: ""if you file it, they will come."" DFG, YY, DS, SAT/LAT/NYT --

Seriously... ..Don't get your panties in a knot about saving electric cars or solar panels. They are NOT AT RISK. There are a ton of solar panel companies doing gangbuster business and you can buy all kinds of electric cars, from many companies, right now. Those things are safe. They are doing fine. Don't let the VC media shills play your feel-good heart-strings. By complaining about political corruption you are not going to destroy the planet. You are going to destroy corruption. Got it? Green energy is doing fine but Corruption is also doing fine. Let's stop the corruption and let the green energy keep on keepin' on! Bradley T- SF Chr -----

Did they break the law? Multiple federal agency & committee probes now asked to look into organized crime charges over kickbacks. The Westly Group (Under Investigation) Ira ""Linguini"" Erenpries (Under Investigation) Firelake Capital (Under Investigation) John ""Doe"" Doerr (Under Investigation) Kliener Perkins (Sued for Sexual Abuse)(Under Investigation) Elon ""The MuskRat"" Musk (Sued on multiple charges of fraud by shareholders) Steve ""The Fix"" Westly (Under Investigation) Ray ""The Sausage"" Lane (Charged with Tax Fraud) Steve Juvetson (Under Investigation) The Google Boys (Under Investigation) Jonathan ""Slippery"" Silver (Fired) (Under Investigation) Tom Perkins (Under Investigation) Tim ""I want-to-run-my-own-state"" Draper (Under Investigation) Draper Fisher (Under Investigation) Vinohd Khosla and Connie Rice (Under Investigation, multiple documentaries) Khosla Ventures (Under Investigation) Tom ""Fettucine"" Styer (Under Investigation) Steven ""The Rat"" Rattner (Indicted) Raj ""I-Am-Untouchable"" Gupta (Indicted) Hey Now? when you look at: their lobby hires, payment disclosures and blind SUPERPAC?s, which lithium ion interests they own or control and when you follow the money, it gets pretty ironic... They are all friends of silicon valley?s ?McKinsey? DOE Secretary of Energy Steven Chu; McKinsey DOE \$\$ Guy Matt Rogers & McKinsey DOE \$\$ Guy Steve Spinner (They paid to get them appointed). McKinsey staff have previously been put in Federal prison for rigging things, ie: Rajat Gupta.; and are under investigation world-wide. They contracted a silicon valley consulting company called McKinsey Consulting and told McKinsey to write all these white papers for the White House and Federal Agencies that said: ?lithium ion is the key to the future?. Then they bribed and influenced and ""Revolving Door'd"" to put Chu at DOE (Silicon Valley VC's were the primary nominators of Chu per his nomination file docket) and they invested in all of the Lithium while their guy: Chu, (working with Rahm Emanuel, Valarie Jarrett, David Axelrod and Robert Gibbs) handed out all of the taxpayer money to their investment projects. Easy Peasy. Scam. Which Senator did they interact with the most? Which West Wing Chief

of Staff?? See the latest Senate investigations and Class Action lawsuits for more. The Pope just hired McKinsey to fix ""Vatican Corruption"".. Maybe not such a good idea? Recordings and emails appearing soon. Many agencies, committees and media groups are now investigating, or have been asked to investigate by senior Congressional staff. Since Reid went ?nuclear?, the gloves are off, it seems. Do your own research. Check out every name mentioned and all of their past connections. Nowadays, it isn?t that hard to research. All of the parts of this have been mentioned in the mainstream press as of now. Reporters asking to FOIA review the original Solyndra case # and case #'s hyphenated off of the Abound, Solyndra, and similar cases case #'s are having the best luck in story leads. ""One is building the new Bohemian Grove on the California coast at Half Moon Bay. One has started a Jr. Illuminati initiation program for young recruits that begins in the Stanford dorm rooms. One has publicly been charged with multiple crimes. One runs the technology suppression team for the NCVA. One has broken the record for hiring local escorts. Come watch the fun! It's non-stop hijinks with those crazy old boys from the Tech Branch of the Illuminati. Stay tuned for each episode of this made-for-tv romp that is guaranteed to be great fun for the whole family."" Elon Musk, and these sorts of ego-maniac billionaires, do not care about regular people or customers. They exist for the joy they get in manipulating power and control and tend to do things like this: [wpvideo jMnc6LJb] [wpvideo 6syz0vNW] [wpvideo h3AixjhD] [wpvideo 6syz0vNW] [wpvideo efQDTOLF] [wpvideo fsB9480q] [wpvideo QrKvoUyA] <http://www.youtube.com/watch?v=5BYc3PqvBCo> <http://www.youtube.com/watch?v=XIdprsGvlb8> <http://www.youtube.com/watch?v=6PZipwucanc> <http://www.youtube.com/watch?v=amnwBzcxMAU> KL, HJK, H, TH, JKL, PROPU- Denver News, LA Times, WSJ, BB, Susu -----

Steven Lawrence Rattner - Suspect

(born July 5, 1952) is an American financier who served as lead adviser to the Presidential Task Force on the Auto Industry in 2009 for the Obama administration.[1]"

New York Pension Fund Investigation

"In 2005, Quadrangle made payments to private placement agent Hank Morris to help Quadrangle raise money for its second buyout fund.[13] Morris had come highly recommended to Rattner from U.S. Senator Charles Schumer.[14] Morris was also the chief political advisor to Alan Hevesi, the New York State Comptroller and manager of the New York State Common Retirement Fund (CRF), which invests in many private equity funds. Morris told Rattner he could increase the size of the CRF investment in Quadrangle's second buyout fund. Rattner agreed to pay Morris a placement fee of 1.1% of any investments greater than \$25 million from the CRF.[15] In 2009, Quadrangle and a dozen other investment firms, including the Carlyle Group, were investigated by the U.S. Securities and Exchange Commission for their hiring of Morris. The SEC viewed the payments as "kickbacks" in order to receive investments from the CRF since Morris was also a consultant to Hevesi.[16] Quadrangle paid \$7 million in April 2010 to settle the SEC investigation, and Rattner personally settled in November for \$6.2

million without admitting or denying any wrongdoing.[17]"

Prosecution by Attorney General Cuomo

"The case drew significant media attention when Andrew Cuomo, the New York State Attorney General, demanded more severe penalties from Rattner than any of the other firms or individuals who had hired Morris as a placement agent.[18] Rattner was once a major fundraiser for Democratic Party candidates including Al Gore and Hillary Clinton, but Rattner had repeatedly passed on fundraising for Cuomo despite Cuomo's past attempts to cultivate Rattner's support.[19] In an appearance on the Charlie Rose Show, Rattner asserted that hiring Morris as a placement agent was ""legal then, legal now, and done properly.""[20] He explained he was willing to settle on reasonable terms as he had done with the SEC, but questioned whether Cuomo was motivated by the ""facts"" of the case and called Cuomo's demands ""close to extortion.""[21] On December 30, 2010, Rattner reached a settlement with Cuomo to pay \$10 million in restitution but no fines or penalties. He was not prohibited from continuing to protest his innocence.[22] Wikipedia ----- "

"Ray Lane Rode Tech Boom Tax-Shelter Wave Broken by IRS By Andrew Zajac & Jesse Drucker The dot-com boom of the late 1990s has come back to haunt former Hewlett-Packard Co. (HPQ) Chairman Ray Lane. Lane's dispute with the Internal Revenue Service opens a window to a mostly bygone era when accounting and law firms conceived and sold tax-dodging strategies to investors seeking to avoid taxes on outsized gains from the still-swelling tech bubble. A file photo shows Hewlett-Packard Co. former Chairman Ray Lane speaking during the Wall Street Journal ECO:nomics conference in Santa Barbara, California, during March 2011. Photographer: Jonathan Alcorn/Bloomberg The shelters had memorable nicknames, based on acronyms: Son of BOSS, BLIPS, PICO and COBRA. Lane used one called POPS. Then the IRS cracked down, triggering the kind of legal battles with the agency Lane is now embroiled in. ?Most of these types of tax shelters have flushed through the system,? said Bryan Skarlatos, a tax attorney at Kostelanetz & Fink LLP in New York. ?The ones like you're seeing with Lane are some of the stragglers.? ?It's not the very last dinosaur caught in the tar pit, but it's one of the last,? said Skarlatos, who represents clients in disputes with the IRS over POPS transactions. Tax Bill Lane, also the former president of Oracle Corp. (ORCL) and partner emeritus at venture-capital firm Kleiner Perkins Caufield & Byers, used POPS in an attempt to shield \$250 million of income through what the IRS ruled were ?sham? transactions. Lane, 66, who left Oracle with more than \$1 billion in stock and stock options in mid-2000, has agreed to settle with the IRS on a tax bill that could be as much as \$100 million, even as he appeals the agency's ruling in U.S. Tax Court in Washington. He said he fully paid his tax bill on sale of his Oracle options. ?My tax advisers put me into an investment,? he said in an interview. ?Somewhere along the way I knew these things were being questioned by the IRS.? The investment totaled \$25 million, Lane said, and included an \$18 million up-front payment used to fund startups. A portion of that went to purchase warrants or stock options in five companies, including RocketGas Inc., Kleptomaniac.com. and Spectrum Target Detection Inc., according to a filing in one of at least five U.S. Tax Court cases involving Lane's tax shelter investments. Tech Startups RocketGas was described in court papers as a business to ?bring services traditionally available only at a gasoline station to customer's home or office.? Kleptomaniac.com was an ?e-commerce solutions provider and e-tailing consultant? to brick-and-mortar retailers and Spectrum had developed a traffic radar gun that ?was expected to replace traditional speed measuring devices used by law enforcement agencies.? ?Like most high tech startups which seemed so attractive in 2000, that high risk, high reward portfolio proved worthless within three years and petitioner simply seeks to recognize the real, hard-cash economic loss,? one of Lane's lawyers argued in a court filing. Losses for the five companies totaled about \$17 million, according to another filing. The IRS argued that the investments in the companies ?were payments of fees to promoters of listed and/or abusive tax avoidance transactions.? Other Investors Lane and other investors didn't establish the value of stock options or warrants in an ?amount greater than zero,? and as a result, no losses were allowable, IRS lawyers wrote. Lane said the POPS shelter was assembled for him by Sidley Austin LLP, a Chicago-based law firm, the BDO Seidman consulting firm and Deutsche Bank AG, he said. Deutsche Bank, Germany's largest bank, admitted criminal wrongdoing in 2010 and agreed to pay \$553.6 million to avoid prosecution over its participation in 15 fraudulent tax shelters, including POPS transactions. The bank admitted to involvement in at least 1,300 deals, helping more than 2,100 customers evade about \$5.9 billion in individual income tax on capital gains and ordinary income, according to a

settlement agreement with the Justice Department. Duncan King, a spokesman for Frankfurt-based Deutsche Bank, and Jerry Walsh, a spokesman for BDO, declined to comment on Lane's remarks. Sidley Austin didn't reply to phone and e-mail messages requesting comment. Conspiracy Charge BDO, now known as BDO USA LLP, said in June 2012 it would pay \$50 million to settle a charge of tax-fraud conspiracy for helping wealthy individuals evade about \$1.3 billion in taxes from 1997 to 2003. In 2011, a jury convicted former BDO chief executive officer Denis Field and three others of more than 20 criminal counts including conspiracy and tax evasion. A judge threw out Field's conviction after finding that a juror lied about her past. A re-trial is pending. POPS stands for Partnership Option Portfolio Securities. Though it has multiple variations, a POPS transaction, in general, worked like this: an accounting firm would set up a series of partnerships, which would typically enter into transactions called straddles using foreign currencies. Straddles involve simultaneously taking long and short positions to offset the investment risks. Offsetting Loss The partnership would sell off the position that generates the gain, which would be attributed to a partner that would be indifferent to the tax, such as a tax-exempt entity. That would leave one of the partnerships with the offsetting loss. An investor with a big gain somewhere else could then buy into the partnership and thus take advantage of the loss. The IRS attacked such transactions for separating out the losses from the gains. The IRS case against Lane's Vanadium Partners LLC mentions "a series of meaningless steps," involving a straddle, a tiered partnership structure and a transitory partner that allowed "a tax shelter investor to claim a permanent non-economic loss." Lane's attorney, Charles Hodges, disputed the IRS contention that Vanadium was a sham that "lacked economic substance." In addition to the tech boom, conditions were ripe for tax shelters in the 1990s because the IRS had eased off enforcement under pressure from Congress, said Christopher Rizek, a lawyer at Caplin & Drysdale, a Washington-based law firm that specializes in tax matters. Wealthy Individuals "They spent about two years re-organizing themselves," he said. "They were intimidated." By the mid-2000s more aggressive enforcement resumed. Wealthy individuals who purchased POPS and other tax shelters were often identified by the IRS and Justice Department in probes of the accounting firms and law firms that sold them. The uproar in Congress over whether the IRS tried to head off conservative groups from getting non-profit status could curb challenges to tax shelters again, Rizek said. Tax lawyers are watching how the agency responds to "this month's use as a pinata by Congress," he said. "They could be cowed again," Rizek said. "We'll see." The case is Vanadium Partners Fund LLC v. IRS, 9970-13, U.S. Tax Court (Washington). How the VC's manipulated Afghanistan for Lithium HERE>>> -----

"BLOOMBERG: Tom Steyer: The Wrath of a Green Billionaire By Joshua Green April 25, 2013 The billionaire -- with a jar of tar sand oil Billionaires get frustrated by Washington ineptitude just like everybody else. The difference is that they can afford to do something about it. Tom Steyer, who founded the San Francisco-based hedge fund Farallon Capital Management and retired last year with an estimated \$1.4 billion fortune, is one such fed-up billionaire. Steyer's particular grievance is the lack of government action to combat global warming. "If you look at the 2012 campaign, climate change was like incest?something you couldn't talk about in polite company," he says. "With the current Congress, the chance of any significant energy or climate legislation that would move the ball forward is somewhere around nil?possibly lower." So Steyer, 55, a major Democratic

contributor, quit Farallon to devote his time and much of his money to changing this reality. In doing so, he's joined an emerging class of billionaires including this magazine's owner, Michael Bloomberg and Facebook (FB) co-founder Mark Zuckerberg who have forsaken the traditional approach of working through the political parties and instead jumped directly into the fray, putting their reputations and fortunes behind a cause. Some environmental activists are thrilled. "In a country that's dominated by billionaires gaming the political system for their narrow self-interest, it's pretty neat to see a player who's in it for the common good," says author and environmentalist Bill McKibben. "He's not a greedhead." Many Democrats, McKibben among them, view Steyer as a liberal analogue of the conservative Koch brothers, the billionaire owners of Koch Industries, whose lavish support of free-market causes and political ruthlessness loom large in the liberal imagination. Steyer's financial commitment is unquestioned. In 2010 he and his wife, philanthropist Kat Taylor, signed the "Giving Pledge" begun by Warren Buffett and Bill and Melinda Gates to persuade wealthy people to devote the majority of their fortunes to good causes. That same year he spent \$5 million successfully defending California's greenhouse gas emissions law against a ballot measure, heavily financed by oil companies, to weaken it. He spent an additional \$35 million last year on an initiative to close a tax loophole that benefited out-of-state corporations. Voters approved the measure, which will raise \$1 billion a year in new revenue for the state, in November. "He has made a difference in California," says Representative Henry Waxman, the Los Angeles Democrat. His aptitude for hardball politics is less certain. On March 18, Steyer, a vocal opponent of the proposed Keystone XL pipeline that would pump tar sands oil from Canada to the Gulf Coast, clumsily inserted himself into the Massachusetts Democratic primary race between Representatives Edward Markey and Stephen Lynch for the state's open Senate seat. Channeling John Wayne, Steyer penned a bullying letter demanding that Lynch renounce his support for the pipeline "by high noon" a few days later or face the wrath of all the opposition Steyer and his checkbook could muster. Lynch's campaign dismissed the stunt as "billionaires issuing ultimatums." The Boston Globe chastised Steyer for butting into a race in which both candidates had pledged to eschew PAC support. Markey probably doesn't even need the support: But after the searing defeat in Congress three years ago of legislation to cap carbon emissions, Steyer and many other Democrats preoccupied with climate change are convinced that only a smash-mouth, confrontational style of politics can save the planet. He subscribes to the analysis offered in a recent paper by Harvard sociologist Theda Skocpol that the loss derived from Democrats' naive faith that their best chance at climate legislation was cooperating with polluters on a grand bargain negotiated by Washington power brokers. The strategy failed to account for Republicans' radicalization and use of the filibuster. And because environmental groups had neglected to organize, no grassroots pressure materialized when the legislation stalled. Steyer confidently presents himself as being in the vanguard of a hardheaded new approach. "The way politics works is by people winning and losing jobs—their own jobs," he says. "Until people running for office believe it's in their own interest, that it will make them popular with their constituents to stand up for good policy, it's not going to be good politics." For now, this approach entails rounding up a posse of environmental activists and making blustery threats to keep Democrats in line. Earlier this month, Steyer paid for an airplane to circle a Boston Red Sox game at Fenway Park trailing a banner that read, "Steve Lynch for Oil Evil Empire." -----

Team Obama Releases List of Campaign Bundlers?Corrupt Jon Corzine and Solyndra Goons Steve Spinner/Steve Westly Top the List February 1, 2012 by Scotty Starnes What a list of corruption. Ex-Democrat Senator Jon Corzine is on the list. Corzine bankrupted MF Global and stole hundreds of billions from investors. Steve Spinner is an Obama bundler who pushed the Solyndra loan and Steve Westly has received billions for corporations he has ties to. Remember, Obama pretended to hate lobbyist as he issued waivers for lobbyists to work in his administration. WASHINGTON (AP) ? President Barack Obama's re-election campaign identified its top fundraisers on Tuesday, including 61 people who each raised at least half a million dollars. Altogether, the more than 440 fundraisers collected at least \$75 million to help Obama win a second term. Among them are embattled former New Jersey Gov. Jon Corzine. Obama's campaign and the Democratic National Committee late last year returned \$70,000 in contributions from Corzine and his wife following questions about the collapse of MF Global, the financial firm Corzine ran. ?The list includes two fundraisers linked to Solyndra LLC, theCalifornia solar company that received a \$528 million federal loan and then later declared bankruptcy, prompting a federal investigation. Steve Spinner, an Energy Department adviser, raised at least \$500,000 and Steve Westly, a venture capitalist who was an unpaid adviser to the department, raised between \$200,000 and \$500,000. ?Though Obama rejects contributions from lobbyists, his top fundraisers include individuals involved in the business of

influencing government. Michael Kempner, among those who raised more than \$500,000, is president and CEO of MWW Group, a public relations firm with a large lobbying business. Kempner himself is not a registered lobbyist. Sally Susman, another fundraiser in the \$500,000-plus category, is executive vice president for policy, external affairs and communications at Pfizer Inc., a job that includes directing the pharmaceutical giant's government relations operations. Spinner and Westly are lobbyist as well. They bundled money for Obama then lobbied for money to be invested in corporations they have interest in. -----

Obama releases list of top money 'bundlers' Associated Press By JIM KUHNHENN and KEN THOMAS February 1, 2012 9:32 AM WASHINGTON (AP) ? President Barack Obama's re-election campaign identified its top fundraisers on Tuesday, including 61 people who each raised at least half a million dollars. Altogether, the more than 440 fundraisers collected at least \$75 million to help Obama win a second term. Among them are embattled former New Jersey Gov. Jon Corzine. Obama's campaign and the Democratic National Committee late last year returned \$70,000 in contributions from Corzine and his wife following questions about the collapse of MF Global, the financial firm Corzine ran. Corzine is no longer raising money for the re-election, campaign officials said. The campaign divided the list into four groups based on how much money donors raised: \$50,000-\$100,000, \$100,000-\$200,000, \$200,000 to \$500,000 and those who raised more than \$500,000 apiece. The donors represent a broad network of contributors, many of them longtime Democratic Party stalwarts. The list includes two fundraisers linked to Solyndra LLC, the California solar company that received a \$528 million federal loan and then later declared bankruptcy, prompting a federal investigation. Steve Spinner, an Energy Department adviser, raised at least \$500,000 and Steve Westly, a venture capitalist who was an unpaid adviser to the department, raised between \$200,000 and \$500,000. The disclosure came as Obama headed back out on the money trail, speaking Tuesday night at two high-dollar fundraisers in the Washington area where donors paid \$35,800 per ticket to see him. At an event at the posh St. Regis Hotel, the president told donors that Republicans have ""the wrong vision for America,"" though he didn't mention any of his opponents by name or reference the voting under way in Florida, where polls were closing in the state's GOP primary. Obama said voters needed to know ""that this is not an abstract ideological argument, that this is a practical concrete argument,"" and that the election is about whether they'll be able to find a good job with a living wage and get health care for their families. ""They've got to feel that we are actively advocating on their behalf."" Obama's campaign ended the year with more than \$81 million in the bank, but Republicans are gearing up in the race for the White House. The Republican National Committee collected \$27 million during the final three months of 2011, compared with \$23 million by the DNC. In December, the RNC raised \$11.6 million while the DNC collected \$8.8 million. Through the end of 2011, the RNC had \$20 million in the bank and \$13

million in debt, while the DNC held \$12.5 million in cash on hand and \$6.5 million in debt. Though Obama rejects contributions from lobbyists, his top fundraisers include individuals involved in the business of influencing government. Michael Kempner, among those who raised more than \$500,000, is president and CEO of MWW Group, a public relations firm with a large lobbying business. Kempner himself is not a registered lobbyist. Sally Susman, another fundraiser in the \$500,000-plus category, is executive vice president for policy, external affairs and communications at Pfizer Inc., a job that includes directing the pharmaceutical giant's government relations operations. California figured most prominently on Obama's roster of big money ""bundlers."" Sixteen are from California and 13 are from New York. Top fundraisers include movie producers Jeffrey Katzenberg and Harvey Weinstein, and Vogue editor-in-chief Anna Wintour. Actress Eva Longoria was in the second highest tier, bundling \$200,000 to \$500,000 for Obama's re-election. Associated Press writer Erica Werner contributed to this report. -----

Trolling the illuminati! According to all of these studies, and general consensus, people who drive Tesla's are arrogant pricks. According to all of the studies, and general consensus, about Silicon Valley Billionaires, they, too are arrogant pricks. Arrogant Fraternity House prick boys are the most entitled, egotistical pseudo-macho people on Earth. Ergo, they will defend their sports team, beer brand, stock portfolio and anything that questions their penis-size, to the death. So, if you are trying to drain the illuminati's bank accounts in order to achieve a political advantage, there is no greater gift than Tesla Motors. By Elon Musk's own published admission, Tesla was dead in

2008. It was only kept alive as The Walking Dead by Silicon Valley VC's in order to get battery kickback deals and policy control. Every time the Tesla stock ticker starts dropping like a rock, when real investors realize it is a scam, the Silicon Valley VC's run out and buy a bunch of stock to make it look like Tesla has risen from the stock market dead in spite of the fires, recalls, management walk-outs, employee accidents, fraud charges, lawsuits and all of the other things that would kill any other company in the stock market. (Is that legal?) That is called ""pumping the stock"". Those are fake stock buys from Silicon Valley VC's. The only thing is, the more they pump, the poorer they get. T. C. - BB -----

Here is why they tried to ""KILL"" Micheal Arrington, Martin Eberhard, Snowden, Assange and the rest: So A Blogger Walks Into A Bar? Michael Arrington Tuesday, September 21st, 2010 Yesterday I was tipped off about a ?secret meeting? between a group of ?Super Angels? being held at Bin 38, a restaurant and bar in San Francisco. ?Do not come, you will not be welcome,? I was told. So I did what any self respecting blogger would do ? I drove over to Bin 38, parked my car and walked in. in the back of the restaurant in a private room was a long oval table. Sitting around the table, Godfather style, were ten or so of the highest profile angel investors in Silicon Valley. These investors, known as ?super angels? because they have mostly moved on to launch small venture funds of their own, are all friends of mine. I knew each person in the room very, very well.

"I certainly didn't think anything was amiss and I expected a friendly hello and an invitation to sit down for a drink or two before being shooed off while they talked about whatever they thought should be kept off record. But instead it went something like this: Me: Hey! Person who was talking: oh, oh no. Me: Hi. I heard you guys were here and I wanted to stop by and say hi. Them: dead silence. Me: so?. Them: Deafening silence. Me: This is usually where you guys say ?sit down, have a drink.? Them: not one sound Me: This is awkward. I guess I'll be leaving now. I've never seen a more guilty looking group of people. But that alone isn't that big of a deal. Lively

conversations often die quickly when I arrive, and I've learned not to take it personally. But I did sniff around a little afterwards, and have spoken to three people who were at that meeting. And that's where things got interesting. This group of investors, which together account for nearly 100% of early stage startup deals in Silicon Valley, have been meeting regularly to compare notes. Early on it was mostly to complain about a variety of things. But the conversation has evolved to the point where these super angels are actually colluding (and I don't use that word lightly) to solve a number of problems, say multiple sources who are part of the group and were at the dinner. According to these sources, the ongoing agenda includes:"

"Complaints about Y Combinator's growing power, and how to counteract competitiveness in Y Combinator deals."

Complaints about rising deal valuations and they can act as a group to reduce those valuations.

How the group can act together to keep traditional venture capitalists out of deals entirely

How the group can act together to keep out new angel investors invading the market and driving up valuations.

"More mundane things, like agreeing as a group not to accept convertible notes in deals (an entrepreneur-friendly type of deal)."

One source has also said that there is a wiki of some sort that the group has that explicitly talks about how the group should act as one to keep deal valuations down.

"At least two people attending were extremely uneasy about the meetings, and have said that they are only there to gather information, not participate. So what's wrong with this? Collusion and price fixing, that's what. It is absolutely unlawful for competitors to act together to keep other competitors out of the market, or to discuss ways to keep prices under control. And that appears to be exactly what this group is doing. This isn't minor league stuff. We're talking about federal crimes and civil prosecutions if in fact that's what they're doing. I had a quick call with an attorney this morning, and he confirmed that these types of meetings are exactly what these laws were designed to prevent. I'm not going to say who was at the meeting since at least a couple of the attendees are saying they were extremely uncomfortable with the direction the conversation was going. But like I said, it included just about every major angel investor in Silicon Valley. On a side note, this is a difficult post to write, because I call nearly every person in that room a friend. But these actions are so completely inappropriate it has to be called out. ??????????????????????????????????- Not sure what your sources are, but courts have ruled that parallel action can be sufficient evidence of conspiracy under Section 2 of the Sherman Act. See e.g. *American Tobacco v. United States* (1946), available here: <http://supreme.vlex.com/vid/american-tobacco-v-united-states>? The Supreme Court wrote: "[The conspiracy's] existence was established, not through the presentation of a formal written agreement, but through the evidence of widespread and effective conduct on the part of petitioners in relation to their existing or potential competitors." If I remember correctly from my anti-trust class last year, the American Tobacco precedent still stands. You don't need written or audio evidence to get a conviction; anti-competitive behavior in the marketplace is sufficient. ?? dandelany 774 days ago | link Interesting questions? IANAL, but I imagine they're colluding to bring down the valuations of startups, therefore essentially fixing the price of their money, to be paid for in startup equity. If I, and others, say your company is worth a million

dollars, then I'm fixing the price of my \$500,000 at 50% of your company. ?? brendonjason 774 days ago | link IANAL(E), but this scenario would seem to be more of a concern if startups in Silicon valley got together over dinner to deny deals that didn't offer similar terms and prices in dollars for securities of all startups represented at said dinner simultaneously. As for angels fixing the 'price of their money' I don't understand how antitrust applies to this anymore than it would to, say, how LIBOR is determined. If antitrust applies to colluding on the dollar amount to be paid OUT instead of price asked for money coming in, then if I start a boycott of something (colluding to pay \$0) am I guilty of violating antitrust laws? As I understand it (not much, I admit), antitrust applies to goods and services, not cost of money. If antitrust applied to cost of money, the Federal Reserve would not exist since it's basically an extension of the member banks that make up its institutional board of directors (not board of governors). All they do is get together and fix the price of money to be printed and lent out to member banks. Also, this whole 'I stumbled in on a secret meeting of powerful men conspiring to start a revolution' thing is somewhat suspect; throughout history this gambit, if it actually happened that way, is usually either desperate grab at 15 minutes of fame (which seems unlikely given Michael's popularity), an attempt to gain instant credibility on some esoteric but useful new subject ('I was the only outsider privvy to what happened there, so you can trust me') or, unfortunately, a cynical move feigned by the men in the room to inspire hasty and possibly faulty reactionary stances by the supposed target of their 'envy'. I could be wrong though. I just can't believe guys who are careful enough to get to such a position in life would all simultaneously get so careless. On the same day. In the same place. ?? polynomial 773 days ago | link > if I start a boycott of something (colluding to pay \$0) <http://j.mp/dividedby0> (Unless of course you actually get them to give it to you for nothing, which is generally not the point of a boycott?) ?? jeromec 774 days ago | link Think of the stock market. That's certainly a marketplace. It's made up of investors seeking to earn a return on their money by investing in companies. Think of the illegalities involved in collusion to manipulate the stock market. Now think of Silicon Valley as a less formal/regulated stock market? With Groupon nobody is asked to not buy or otherwise participate in the market unless done through Groupon. Instead, it's like a grocery store co-op; members pool their money to get more buying power. This doesn't mean they agree to refrain from shopping elsewhere, as that would be collusion/conspiring to produce a market effect. IANAL ?? brendonjason 774 days ago | link If I have an investing club and we come to define an investment approach, say, what stocks we like and what we think they should be valued at, are we colluding to price fix the market? If I think a company is over priced and I am in charge of executing trades for my investing club, whose members unanimously agreed not to buy the stock in question until it fell down say, \$20 more in price ? are we colluding? Yes. Colluding to price fix? No. We're simply colluding not to participate in the buy side. That may or may not lead to sellers slowly changing their asking price. But that's a two-way street. I don't see the illegality according to anti-trust. Now if every major institutional house/hedge/mutual/pension fund that owned that stock got together and colluded to refuse to SELL us any stock until we agreed to their higher price, that I understand is illegal. They are fixing the price literally. But I don't see how us refusing to participate in a transaction on the buy side is illegal whether we have 5 members or 5 million. Saying that the angels are colluding to price fix buys into Michael's assertion that 'together, the men in that room account for nearly 100% of all angel deals?'. That means that their 'deals' are the commodity in question, and they are free to do as they wish. If it's their money, then it's hard to make the claim that their money is the market. There's certainly more money in the world than theirs. ?? blueben 774 days ago | link 'Look, you and I both know your company is worth \$50 million. But I only want to pay \$10 million, and I've already worked out a deal with my competitors so they won't bid any more than that either. We own the market for investment, so you can take it or your company can die for lack of funding.' You don't see a problem with this kind of artificial market manipulation? This is no longer a market; it short circuits true capitalism and only serves to siphon gains from the seller (in this case, the company's founders) to the buyer, who will turn around and effectively try to resell (or otherwise exit) the company for profit. Everyone seems to be convinced that price fixing only applies to sellers. That's wrong. It firmly applies to both selling and buying. It's fundamentally about market manipulation; taking steps to undermine the economy of the system for direct personal gain. That kind of behavior destroys wealth and erodes confidence in the marketplace. ?? aufreak3 774 days ago | link I'm ignorant enough to have the same question in my mind. ?? SkyMarshal 774 days ago | link Grellas, what's your take on this Quora comment? In a nutshell, it's not illegal for collusion on the buy side, only the sell side: Tarun Nimmagadda, Mutual Mobile Co-Founder, COO <http://www.quora.com/Who-are-the-Super-Angels-that-Michael-A?> The article was a fun read, but it is a false claim that this is illegal. Collusion, price fixing, and dividing markets is only illegal on the selling side. Think about how people and groups are able to

band together for purchasing power and special treatment when buying goods/services. Its not illegal. Worth noting thought that if this price manipulation happened in relation to a company with over a 100 investors, SEC regulations would begin to apply and this behavior would be illegal? ?? grellas 774 days ago | link That comment was made out of ignorance. Antitrust laws are by no means limited to sellers only. ?? SkyMarshal 774 days ago | link Interesting, thanks. ?? Alex3917 774 days ago | link ?Collusion, price fixing, and dividing markets is only illegal on the selling side.? IANAL, but didn't Standard Oil got broken up largely for being a monopsony? In fact the first two complaints from the DoJ were about sell-side issues: ?Rebates, preferences, and other discriminatory practices in favor of the combination by railroad companies; restraint and monopolization by control of pipe lines, and unfair practices against competing pipe lines; contracts with competitors in restraint of trade; unfair methods of competition, such as local price cutting at the points where necessary to suppress competition; [and] espionage of the business of competitors, the operation of bogus independent companies, and payment of rebates on oil, with the like intent.? ?? invisible 774 days ago | link I know this was pointed at grellas, but I think this is a misunderstanding when we look at price fixing and collusion. The illegality of collusion is secretly forming agreements to benefit competitors at the expense of other parties. Words like defraud can succinctly help you understand whether it is illegal or not when looking at these agreements. ?? dctoedt 774 days ago | link The Wikipedia summary of Section 1 of the Sherman Act is a decent read:

http://en.wikipedia.org/wiki/Sherman_Antitrust_Act#Violation?

?? ?? jon_dahl 774 days ago | link Grellas, would there have to be evidence that the participants were acting anti-competitively, or is being in the room enough? Arrington says that a few of the folks there were uncomfortable with what was going on, and were maybe there just to see what was happening. ?? grellas 774 days ago | link Assuming the meeting had an illegal purpose (which is a major assumption at this point), one might infer that anyone present was complicit in that illegal purpose. In my view, that by itself would not normally be enough to subject someone to liability, especially if the participant disclaims affiliation with the group and thereafter does not act in concert with it. ?? guelo 774 days ago | link Does it matter if the participants have monopoly power over the market? I have a hard time believing Arrington's claim that ?ten or so? angels control ?nearly 100% of early stage startup deals in Silicon Valley?. If they control lets say only 50% of this market would it still be illegal collusion? ?? grellas 774 days ago | link It is not required that the participants have monopoly power for them to transgress the law on this point. I agree with you that the ?nearly 100% of the early stage deals in Silicon Valley? statement is wildly overstated but this should not affect the fundamental legal analysis here. ??tc 774 days ago | link Congratulations to PG & company. When I first met Paul years ago, he was musing about spam filters and the finer points of a well-designed lisp. Now he apparently has the top 10 angels in Silicon Valley running scared of him. ?? jeromec 774 days ago | link The interesting thing is unlike that group of Angels apparently in the bar PG's interests are less about helping himself, and more about helping entrepreneurs. From an essay by PG entitled ?Why YC?: The real reason we started Y Combinator is one probably only a hacker would understand. We did it because it seems such a great hack. There are thousands of smart people who could start companies and don't, and with a relatively small amount of force applied at just the right place, we can spring on the world a stream of new startups that might otherwise not have existed. In a way this is virtuous, because I think startups are a good thing. But really what motivates us is the completely amoral desire that would motivate any hacker who looked at some complex device and realized that with a tiny tweak he could make it run more efficiently. In this case, the device is the world's economy, which fortunately happens to be open source. <http://paulgraham.com/whyyc.html> ?? wensing 774 days ago | link YC's greatest hack is identifying founder material based on technical rather than social proof (the YC app asks for an example of the coolest thing you've ever built, not an example of a cool person that thinks you are cool). This hack is possible thanks to a judges panel full of real nerds. How many super angels or VC's can claim to have the same? ?? gruseom 774 days ago | link I agree that YC are able to identify great hackers and great founders more easily because they are these things themselves. What's little recognized is how big a difference this is between YC and the other YC-like funds. ?? wensing 774 days ago | link Yes. I had a colleague apply for TechStars and her takeaway from the interview was ?he was really focused on where the business was.? Doesn't seem in line with what I've heard about YC's primary interest (it's not the business model). ?? gruseom 774 days ago | link It seems kind of obvious that most successful startups don't succeed via the business model they started with. And that great founders can change business models more easily than great business models can change founders. Thesethings are so obvious that they're cliches, in fact, but that doesn't mean that they're common practice. ?? qq66 774 days ago | link I don't think anybody's stated interests should be taken as an indicator of their true interests. In this case,with PG, I do

believe that his stated intentions are sincere. But there is often so little correlation between actual and stated intentions, that I don't take any such statement at face value. ?? jeromec 774 days ago | link I don't think anybody's stated interests should be taken as an indicator of their true interests. I agree. (actually I'd replace ?taken as an indicator? with ?taken as an absolute indicator?) In this case, with PG, I do believe that his stated intentions are sincere. I agree. ?? mhendrick 774 days ago | link Correct me if I'm wrong, but isn't it likely that the angels involved also make up a strong percentage of the people who invest on Demo Day in post-YC companies? How can it be a ?PG vs Angels? situation when the parties involved are likely some of YC's portfolio companies biggest ?supporters?? ?? brc 774 days ago | link One of the outputs from the YC process is better educated founders who have a lot more guidance in negotiating through a deal Even if the deal flow was exactly the same, just having the founders suffering less from information assymetry would be a stone in the shoe of the Angels. Think of it this way : if YC did all the same things, but also turned founders into being Angel patsies at dealtime, do you think they would be upset about it? I would guess it's the information about how to negotiate, and what a good deal looks like is the problem. I'm sure they love the concept of demo-day to go deal shopping, but would prefer it if the products didn't talk back. ?? MediaSquirrel 774 days ago | link YC is the seller, angels at Demo Day are the buyers. Just cuz you work with someone closely doesn't mean you won't or can't try to screw them. ?? redrobot5050 774 days ago | link Yeah. I mean, look at the JooJoo/CrunchPad Debacle. According to the Mike A., that's exactly what happened. ?? mhendrick 774 days ago | link Agreed. It's possible they got a bit overconfident in their respective positions because of the easy access to so many well-vetted companies. ?? jeromec 774 days ago | link Correct me if I'm wrong, but isn't it likely that the angels involved also make up a strong percentage of the people who invest on Demo Day in post-YC companies? Yes, I believe so. How can it be a ?PG vs Angels? situation when the parties involved are likely some of YC's portfolio companies biggest ?supporters?? That question might be better put to those Angels in the bar? ?? mhendrick 774 days ago | link I'm not defending the angels involved by any means; I actually think it's a great thing that this has been exposed if it is indeed what's been going on. The easy access to YC companies may in fact be what emboldened them to act in this manner in the first place. Once this all plays out, I think it's safe to assume that at least a few of the angels in question are going to have to answer for their actions. Should be interesting to hear what they have to say. ?? brendonjason 774 days ago | link Yes. They are running scared of the growing threat of the Ylluminati. But since they have 100% of all the deals, they also seem to co-invest(?!). These anxious (yet all-powerful) group of angels and this unstoppable new seed-stage prominence. They form a closed loop. A loop closed off to venture capitalists and angels not at that meeting ? which is basically everybody. Except Michael. He got away with his life intact and lived to warn us all. Actually, I don't know what's scarier ? the supposed collusion or the subtle dread that Y Combinator is supposed to evoke in my mind as I ponder the possibility of this event being true. If it is true ? maybe we should be side with these poor angels and help them before it's too late. To paraphrase Woodrow Wilson, ?Since I entered (angel investing), I have chiefly had (angel investor's) views confided to me privately. Some of the biggest men in the (Valley), in the Field of (IT) and (Venture Capital), are afraid of something. They know that there is a power somewhere so organized, so subtle, so watchful, so interlocked, so complete, so pervasive, that they better not speak above their breath when they speak in condemnation of it.? That something ? is Y Combinator. Um ? no. The dark side doesn't suit you, Y Combinator. Please stop. I'm sorry. Maybe I've had too many beers tonight. But this is the kind of scenario that only comes out of the mind of a silicon valley PR firm. (please don't downvote me too much ? I'd like to get above 100 karma points just once for a change! Noooo!) ?? limist 774 days ago | link I upvoted you just for the historical reference. ?? mixmax 774 days ago | link So a blogger gets a tip from a source, knows the people involved, acts on it and smells a rat. He sticks around and talks to a few people he knows, makes a few calls and gets a breaking story. Sounds to me like bloggers are the new journalists and that traditional media is in big big trouble. ?? sachinag 774 days ago | link Felix Salmon does this, and he's a blogger working for Reuters. Dan Primack does this, and he's a blogger working for Fortune. It's not about old/new media ? it's about hustle. ?? Alex3917 774 days ago | link Read Manufacturing Consent or any of the books that have been written about the MSM since then. It's very much about old media verse new media. If this were the NYT they'd probably tell Arrington he couldn't run the story because it'd interfere with either their ad sales or else their access to sources. For example, just look at how/why they covered up their knowledge of the warrantless wiretapping until after Bush got reelected. Whereas with Arrington there's no one to tell him he can't do it because it's his blog, and because he's not part of some mega corporation the chances of a story like this killing the revenue of some part of his empire are infinitely lower. ?? metamemetics 774 days ago | link >Sounds to me like bloggers are the new journalists

Journalism used to be considered the fourth branch of government, keeping the other branches and large institutions in check. Blogs are the startups of the journalism world. As America moves from bureaucratic capitalism with large institutions to entrepreneurial capitalism with many small firms & independent players, the responsibility to call out unethical behavior is transferred from news companies to the individual. ?? vaksel 774 days ago | link a breaking story would name names?him not naming names just means he can use this as a hammer to get better terms for Techcrunch(either I get exclusive to every deal you guys do?or your names will be posted) ?? metamemetics 774 days ago | link I would argue it's more ethical to discourage and prevent crime from ever happening in the first place. Seeking satisfaction from ?catching the bad guy? (naming names) is to setup a market dependent on the need for new crimes. Arrington did the right thing. It's not about whether he caught a criminal, it's about whether he prevented someone from becoming one. ?? eavc 773 days ago | link Someone (maybe everyone) in that group knew what they were doing to be wrong. I doubt that they will abandon their ethical choice; they'll find smarter ways to do what they'd intended all along. One thing that might work is if someone in the group has damning correspondence, everyone will panic and promise to ?never talk about that summer again,? genuinely preventing future problems. ?? jon_dahl 774 days ago | link Maybe. This approach shows some integrity too, though. Not everything has to turn into a scandal (at least if inappropriate behavior stops quickly). Call me soft on crime. ?? mattmaroon 774 days ago | link Him not naming names means that people will continue to give him information in the future. He'd be shooting himself in the foot by naming a source that requested anonymity. ?? SkyMarshal 774 days ago | link There's an interesting conundrum there too. He can't name names without either omitting (and hence identifying) his source/s, or including (and indicting) them. Either way he loses that/those source/s for future stories. He did the only thing he could do, besides staying silent. If it happened to be the right thing as well, so much the better. ?? drusenko 774 days ago | link unlikely. business in the valley is not done by extortion. more likely is that he doesn't want anyone to get in trouble, he's just putting them on notice. ?? jnoller 774 days ago | link I do hope he's wrong, or that this a mistake of some sort. The rise of Angel investors has seen a lot of ideas and entrepreneurs get needed money when they might not have under the traditional VC model. Something like this, if true, will cause the government to step in, and probably regulate and change things for the worse for a great many people. It won't just hurt these few super angels. It will take everyone with it. ?? j_baker 774 days ago | link To be fair, this is Michael Arrington. He's not above sensationalism to get a few extra clicks. ?? mattmaroon 774 days ago | link This goes well beyond sensationalism. I'm inclined to believe him for three reasons: 1. Mike's not known for boldly lying. He might publish rumors that Facebook is building a phone too liberally, but I've not heard of him saying ?I saw x happen? and it wasn't true. Assuming the account of what he himself saw was accurate it's hard to imagine collusion wouldn't be the purpose. 2. This sounds like something that would happen. VCs do this crap all the time, why not angels? 3. Publishing this might be bad for him, and if it were untrue, it would definitely be really bad for him. ?? cletus 774 days ago | link I believe it too. You succinctly enumerate the reasons. The biggest for me was that (he claims) he saw it happen. That puts his personal reputation at stake, which I think will have to meet a far higher standard than the rumour publishing ?go to? of ?an anonymous source?. The FB phone was (imho) classic Arrington (the bad side). Posted on the weekend (in the hopes that FB PR would be slow to respond and debunk it), quoting anonymous sources and no substance at all. Basically, link bait. That sort of story does him (or rather his credibility) no favours. ?? swombat 774 days ago | link Add to that that there is no convincing reasons why this group of angels would manufacture this story to lead him on. Unlike with some other TC stories which turned out to be manufactured to discredit TC, in this one, the sources themselves would risk a lot by leaking this ? true or false. ?? Alex3917 774 days ago | link In Arrington's defense his claims are laid out clearly without any weasel words. Either this is happening or it isn't. So while I'm pretty meh about TC as a whole, I'm giving him the benefit of the doubt on this one. ?? chc 774 days ago | link He didn't name a single name. If he really believed this was so certain, he could have. Unless he's trying to make them do something, the only reason to keep names out of it is because he thinks this might be libel. ?? swombat 774 days ago | link He doesn't need to expose himself to lawsuits by naming names. The names are pretty obvious to anyone in the field. ?? chc 774 days ago | link Yes, but that's the thing ? you can't get sued for ?obvious names.? Even if he's completely making this up, if one of the obvious suspects sues him, he can just say, ?Oh, no, I didn't mean him.? The comment I was replying to said, ?his claims are laid out clearly without any weasel words. Either this is happening or it isn't.? I disagree with that ? Arrington is not laying it all out here as a black-and-white truth. He's consciously omitting facts in a way that happens to shield him from repercussions if this is false. As a traditional dead-tree newspaper guy, I'm very familiar with the ways reporters fudge their claims to avoid being responsible if it turns out to be crap.

That's what this sounds like to me. ?? eavc 773 days ago | link If he calls them felons and they wind up being acquitted for whatever reason, however technical or stupid, then he would be liable for libel. He clearly wanted to avoid using weasel words. The only way to do that without being reckless is to not refer directly to the objects of the post. ?? techiferous 774 days ago | link ?the only reason? He did mention that they were his friends. Perhaps he wants to nip the illegal activity in the bud with as little collateral damage as possible. ?? jnoller 774 days ago | link I'm not going to disagree with that. As I said, I hope this is a mistake. ?? origoterra 774 days ago | link Arrington is smart, a lawyer himself, and already know he is headed straight to the witness stand. Thanks for blowing this whistle Mike. That's the TC we like. ?? seldo 774 days ago | link I don't know if witnessing a table full of people go silent when he turns up proves anything, and the rest is all info that would put his source on the stand, not him. ?? danielnicollet 774 days ago | link If you read the full post, take in account that he was present and saw who was there, and assume he has not chosen to reveal everything about the sources through TC at this time (that's highly understandable ? protecting his sources and only disclosing what he feels is verifiable), there is definitely a lot here and absolutely enough for a climb to the witness stand! ?? tomjen3 774 days ago | link I am not so sure ? he said that several of the persons there were very uncomfortable with the deal, so being there alone would not be enough. The rest is heresay, which is admissible in no non-kangaroo court that I know of. ?? MediaSquirrel 774 days ago | link I believe the saying that applies is: ?Power corrupts?? ?? cool-RR 774 days ago | link I wouldn't take anything he says seriously. [Edit: If it wasn't clear, I meant Arrington, not Jesse] ?? Isterlicht 774 days ago | link I think your statement was clear. However, I find it hard to believe Arrington would put some of his best sources at risk if his claims were completely unfounded. ?? onan_barbarian 774 days ago | link Strange how any post that could be construed as being negative about Arrington gets down-modded by about 5 points, regular as clockwork. That being said, I think he's on the money with this one. This can only be good for YC overall. The suspicion that YC alternatives are all colluding against your startup is likely to make YC seem more attractive still, to the class of startup that would be wavering between YC and a rival. ?? stanleydrew 774 days ago | link Posts that consist of nothing more than subjective statements tend to get a lot of downvotes, not just the ones about Arrington. ?? ori_b 774 days ago | link The reason it's always exactly 4 points of downvote is because hn caps the visible downvotes at 4, not because there are 4 skills. ?? ericd 774 days ago | link Super angels aren't really an alternative to YC? they normally step in at the stage a company is at where YC normally ends. ?? gruseom 774 days ago | link I find it fascinating how the very qualities that lead people to call Michael Arrington an asshole are dramatically in evidence here. It takes a staggering immunity to social mores to walk in on a meeting of rich and powerful friends, friends who are connected to his own business in many ways (read: friends with leverage) and behave the way MA says he did, let alone go home and write that article. Very few people could do it. I'm not sure I could, to put it mildly. I particularly doubt if many (any) of Arrington's competitors ever would. It may take a character disorder to be able to act this way. In an age when journalists grade themselves by which power-brokers deign to have lunch with them (anybody see David Brooks prattling about this on Charlie Rose the other night? lunch and dinner, he said) it's impressive to see anyone act like this. Especially if what he's saying

is true and this really is a matter of right and wrong. ?? mrtron 774 days ago | link I have always felt MA had a certain?brashness, abrasiveness, assholish tone, whatever you want to call it?about him. You could feel it in his articles. I now feel it is not only helpful but entirely necessary for him to develop that quality in his career path. Kudos for pushing the boundaries Mr. Arrington. The evidence speaks for itself ? you don't see this type of journalism in any industry anymore. ?? jexe 774 days ago | link Well, at least one investor seems to have accidentally included himself in the mess (from TC's comments) <http://twitter.com/speechu/status/25083299594> ?? jakevoytko 774 days ago | link This link is now a 404. Thankfully Google has the text of the tweet! speechu: Bin 38 is like heaven right now, chock-full of angels. Not explicitly incriminating, but it sounds pretty bad ?? dzlobin 774 days ago | link Strangely, it's still on the feed. <http://twitter.com/speechu> But the status link is deleted ?? borism 774 days ago | link real-time wonders of nosql? ?? nostromo 774 days ago | link I just put ?forming a cartel? on my list of things not to tweet. ?? mattmaroon 774 days ago | link Unless you're in Mexico. Then Tweeting is probably a good idea. ?? mrduncan 774 days ago | link The original tweet was removed in the past few minutes (others have dug it up again). His latest tweet doesn't seem to be taking Arrington too seriously: Thanks Mike for techcrunching me for no reason. Note to self: hold next secret meeting in underground bunker to get the feds off my trail. Sundeep Peechu@speechu Thanks Mike for techcrunching me for no reason. Note to self: hold next secret meeting in underground bunker to get the feds off my trail. 21 Sep 10 Reply Retweet Favorite ?? dannyr 774 days ago | link The tweet has been erased but somebody did an old-school retweet of it.

?Timestamp is 8p yesterday. RT @speechu: Bin 38 is like heaven right now, chock-full of angels. #superevil #evidence cc @arrington? Matt Mireles@mattmireles Timestamp is 8p yesterday. " On Self Importance: <http://techcrunch.com/2010/09/26/angelgate-chris-sacca-responds-to-ron-conway/>
AngelGate: Chris Sacca Responds To Ron Conway Michael Arrington Sunday, September 26th, 2010 As I said the other day, there would be more private emails getting published. This one is from Chris Sacca, a prominent ?super angel? who was not at the meeting I stumbled into but was at a previous meeting. He wrote a response to the Ron Conway email. It?s worth pointing out that this email is time stamped a good half hour before our story broke, meaning he wrote it thinking it would all still stay private. This is also the first leaked email we?ve received that actually includes names in the header of some of the people who are involved in this mess. Presumably these were the people Ron Conway emailed, but the header was stripped out of that email when we received it. Like the Ron Conway email, we have separately confirmed this email is authentic, although Sacca will not comment on it. I?ve removed one sentence from the email that was highly sensitive. Nothing that material to the overall message, but it was very personal and not appropriate to print publicly. The email: From: Christopher Sacca Date: Thu, Sep 23, 2010 at 7:05 PM Subject: Re: Super Angels Gathering To: Ron Conway Cc: Josh Kopelman, Steve Anderson, Jeff Clavier, Mike Maples, Dave McClure, David Lee Ron, I agree with you that we all owe it to each other to be candid. In that spirit, I will say that I will always be grateful for the opportunities you have given me in this business. You have shared deals with me, introduced me to colleagues, and invited me to events for years. Your philanthropy knows no bounds and has definitely inspired my work with charity:water and Livestrong. In fact, I have great respect for how you took my introducing you to will.i.am as an opportunity to become the single most important benefactor to his foundation. As I wrote last year before the Crunchies when I endorsed you for Angel of the Year: I mention Ron last only because this one gets a little emotional for me. It goes without saying, his prolific reach is legendary. He is the Zelig of the startup world in that there isn?t a liquidity event in our industry in which he isn?t involved and a closing dinner to which he isn?t invited. Of course, he isn?t just invited as an investor, but usually as the guy who made the introduction, helped negotiate the terms, and saved it from the brink of disaster along the way. It gets emotional for me because no one in this business has been more generous, more selfless, or more caring with me. We all learn from Ron, and none of us could be here without him. I will never understand how he covers so much ground and how he manages to be so responsive and perform so much service for others. When you are with Ron, you know he will go to any length to help you. When guys with his success might otherwise take time to rest, Ron then redoubles his efforts for his charitable causes, not just giving money, but raising funds and awareness and doing hard work on non-profit boards. I feel lucky to know Ron and to have the chance to work with him virtually every day as I am sure many of you do too. That said, I am having a hard time resolving the person I quite literally grew up with in this business, with the person who sent the email to which I am replying. Your anger and personal accusations hurt, and it is clear they are intended to. I wasn?t in town for the second meeting, but I went to the first dinner. I wish you would?ve been there. Not only would your input have been valuable, but if you had attended, you would have seen firsthand these topics of discussion: 1) Standard docs to make financings cheaper for startups. The group talked about who would be willing to pitch in our own money and time to help draft a set of financing documents that would allow for priced rounds to cost the same as convertible notes. As you know, it usually costs 10-15 thousand dollars more to sell stock than issue a note. Entrepreneurs would directly benefit from that work by lower costs and less bullshit legal process to get a financing done. In fact, it is exactly what YCombinator did in building a model convertible note. I am sure you agree that would be a good thing for founders everywhere if we were able to publish docs like this to the public to be used as open source. 2) Pro-rata rights. At the first dinner, we heard, from guys who have been doing this for a long time, about the importance of securing pro-rata rights

for future rounds. This would allow them to continue to invest alongside other investors at the new, higher, market price in future rounds. I have no doubt you would agree that entrepreneurs also benefit from having their early investors continue to stay involved and demonstrate their renewed commitment to the company. I know you would also love to be able to continue to invest in companies beyond their seed round, and you also know this is only ever helpful to your founders. 3) The futility of VCs blocking company sales. We also discussed how pointless it was for VCs to put clauses in deals that would prevent companies from selling and how the guys in the room had never invoked such a clause because doing so would create misalignment with their founders. We identified that as one way in which many traditional VCs were just missing the boat as to how to work with founders as peers and collaborators and not put them on the opposite side of the table. Each of us felt better knowing we weren't alone in pushing back on this term that very directly harms founders. 4) Earliest stage founder cash-outs. Among efforts from others, we talked about my recent projects to get very early stage founders some liquidity. Traditional VCs have rarely been inclined to give founders any ability to cash out claiming it makes them less "hungry". As someone who, just five years ago, had net worth of exactly zero dollars, I remember the difference between being "panicked" and "hungry". As I have invested in more and more companies, I have learned that many founders would benefit dramatically from even the smallest amounts of cash (compared to the overall deal size). I have worked hard to get my founders as little as \$25,000 to pay off credit cards and student loans. Or, in a small deal that closed this week, I was able to get a founder the money so he can pay for his wedding and not have to worry about taking on debt. I, and the other investors in this group who do the same thing, feel good about helping our founders in this way. I hope you can really pause to consider who is on this list you mailed, as well as the others in the room you didn't, and the way they do business. All of us have considered you a mentor along the way, and you have recognized that by collaboration with each of us. Inspired by your service, we have seen each of our firms evolve to continually try to always put founders first. Guys like Kopelman are so painfully pro-entrepreneur, and so service-oriented to the community of founders, one topic of discussion at our dinner was understanding all of the different founder perks on which he has spent his fund's money. From the venture concierge and his hiring services, to his CRM software and CEO summits, I haven't seen anyone add as much value to founders as First Round. I wish you could have been there to experience firsthand the discussion about how the rest of us could emulate more and more of that model. And, like typical Josh, he was certainly willing to teach us his best practices. I was so blown away, that I actually asked FR to lead a deal I sourced recently because I knew they could serve the company better than I could. I know that each of the guys on this list coaches entrepreneurs they aren't even invested with and continue to take time to help the entire startup ecosystem. They work to get founders access to early betas that they know will help. They call in favors to get costs down. They spend political capital to bring in the best hires and they lose sleep brainstorming how to solve problems. Each of the guys here takes phone calls and sends emails at all hours of the day and night. Everyone here hustles. Frankly, I find it hard to keep up with them, just like I can't keep up with you. I told you last night that I think some of this issue is worth discussing, even on stage. But, this message, and the ferocity and ad hominem attacks that you include, hurt. Both what you wrote to me before (calling this group "dirtbags") and in this message above. I am not sure why it needed to get personal. In sharp contrast to your stereotyping about what you say is obsession with talking about cars, I actually drive a piece of shit truck with 115k miles, despite having been frequently encouraged to visit Franz to buy a Mercedes. I fly coach and I stay on friends' couches in NYC and LA, not out of Signature Aviation and at the Peninsula. That said, though I haven't yet made a buck, I sincerely hope I will. As I post clearly on my website: "We don't think of ourselves as money managers. That isn't to say we aren't tireless and competitive. In fact, we are ruthless negotiators, aggressive businesspeople, and have no allergy to disproportionately large returns. However, frankly, capital just isn't that important to the early triumph of a company anymore." My founders will tell you, as will the founders of everyone listed here, that I/we sweat with these guys just like you do, bleed with them just like you do, and try as hard as we can to put their interests first. My founders stay at my house for team retreats. In fact, I just bought an entirely new place for them to be able to come to the woods, exercise, relax, focus, unwind, and bond with each other. That came out of my pocket. They get overweight? I buy them a mountain bike. They look skinny? I pick up groceries.

Just talk to them and I am sure you will see that, though each of us investors adds value to our founders' lives in different ways, everyone on this thread adds value, Ron. Everyone. To claim that SV Angel has a monopoly on adding value is disingenuous. When I started angel investing, my first deal was paid for with a credit card check. It was a dumb idea, but I was so drawn to the notion that I could be helpful to the team and I relished the chance to be building something again. You and I were in that deal together and we both made out pretty well. As you

know, at Google, I didn't get rich by Silicon Valley standards. I left there worth less than a million dollars. I started doing angel investing in part because you and others like Coach Campbell encouraged me to and you knew I would be good at it. I wrote checks to companies when it was financially irresponsible for me to do so, then I went in there and busted my ass to make those things succeed. My days have been driven by a passion that makes it impossible for me to avoid the opportunity to help. Right now, 94% of my net worth is tied up in startups and I [REMOVED BY TECHCRUNCH]. I have every shred of my money alongside my founders, often buying their same common stock. No one but an obsessive idiot would ever allocate their money that way. But, I love what I do. And I know that goes for everyone on this list. Kopelman bids his kids farewell every few weeks to fly the redeye here and back to be with his companies. I have watched Maples, Clavier, and Steve all drop what they are doing to be supremely helpful to their founders and to their peers. Each of them shares opportunities and leverages their network to try to offer the best possible service to their companies' teams. Sure, McClure is loud and swears like a drunken sailor, but he takes bullets for his guys, and his service to entrepreneurs through Geeks on a Plane and his Startup 2 Startup dinners series is unparalleled. His followings among founders make that clear. They love and respect him, no matter how you may judge his writing style. They know they have an ally in Dave. I have seen guys on this list, and in the larger group of all dinner attendees, repeatedly back off terms or convince other investors to take haircuts alongside them so deals can get done. Ask any single one of the companies who has met with me and they'll tell you that I always negotiate against myself. To a fault. I have given back shares to make room for hiring and I have talked other angels into waiving any fiduciary arguments so our teams could stretch a small deal farther. Everyone here has done that knowing we will get to work with those entrepreneurs again in better times. This group of guys could all take a much easier path if they were just out to make a buck. Everyone here could raise megafunds, bilk them for fees, jam too much money into deals and repeat that process all over again just mooching off the system. Instead, the folks you listed are all your fellow pioneers in a new way of doing business, a way that admits the structural change the industry has undergone. This is a different era, and each of these guys knows that means greater accountability than ever before. I described on my Lowercase site characteristics that I think apply to everyone on this thread, and especially you, Ron: We dive in to work with teams that obsess over user experiences, customer happiness, and that, to quote Paul Graham, "make something people want." Along with relatively small amounts of money, we give them the time, attention, and the empathy that catalyze winning outcomes for all involved. Rolling up our sleeves, we help design front pages, invent new services, prioritize product features, negotiate partnerships, and deal with the everyday professional and personal challenges of startup life. We are grateful for the companies who have chosen us, and feel lucky for the chance to collaborate with such brilliant minds. The dealflow that comes to us is flattering, and we are beyond thankful for the other individuals and firms with whom we partner and learn from along the way. It makes me sad to hear you don't think that is actually the case, because I actually don't doubt for a second that the guys on this list all exceed the standard above. You know they do. You have worked alongside them for years. You have broken bread with them. You know who these people are and you know what their values are. You have referred deals to all of them because you know the positive impact they have on this industry. Now you are willing to throw that away over second-hand accounts of what transpired at a dinner you didn't attend. I think you owe this group more than that. I also think you owe the press and the founders who are reading the accounts you have prompted more than that. Ron, we live in the age of Twitter. If we ever fucked an entrepreneur, or if an entrepreneur even hinted we had fucked them, it would be broadcast immediately and the resulting blog posts would be permanently attached to a search on our names. Founders have never been better educated or more empowered than they are today. We aren't giving them money; they are giving us the right to invest in their companies. Our founders hire us and they do so after consulting a rich network of datapoints confirming whether we are or are not helpful. Slackers don't get deal flow. Jerks don't get deal flow. Poseurs get left aside. Abuse the system once and you are tattooed with shame. Entrepreneurs outnumber us and they talk more than we do. The good opportunities are more than any of us can handle. There are legions of investors at the gates hucking checks at today's founders. The only possible way any of us can stay in business is by serving. If we are not demonstrably and materially helpful to entrepreneurs, we are dead. Pausing now to look back and re-read what you wrote, it just makes me sad and your rush to judgment of people you called your friends is disappointing. All of this goodwill burned with guys you have loved. All of this time spent on an issue when we should be helping our companies. (I am writing to you when I should be calling a founder to help him weigh the demands of his VCs and a potential acquirer.) All of this anger directed at people with whom you didn't even have a discussion to understand what was or wasn't going on. I wish you had been at those dinners. First, I am sure you would have

had helpful input. But, more importantly, you would have instead seen your peers working, as they have always done, to cut through the bullshit in this industry and continue to restore the purity and honor a decade of misaligned interests has left here. I hope you will find some time over the next couple of days to chew on all this, some time to reflect on who we all are and what we all do. I hope you will spend a little time with our founders and ask them how they feel about working with all of us. I hope you will work to clear the air about what did or didn't happen. You have such an important voice. But, with that voice comes the responsibility to investigate, know, and share the whole truth. All told, I know that the gratitude that this group has for your work in this business can't be undone with one vitriolic email. So, I am optimistic that after you have a chance to chat with each of us, you will remember the passion and selflessness that underpin the work all of us do. While I deeply believe none of us could have gotten here without you, I also ask that you respect that we have all worked our asses off to be here. We all care, we all help, and we all serve. We all learned much of that from you. I hope in time that will be clear once again and we can all get back to helping our founders and each other. Thank you, -----

<http://37signals.com/svn/posts/1927-the-next-generation-bends-over> The next generation bends over Jason Fried wrote this on Sep 18 2009 Mint's sale to Intuit really pissed me off. Why should I care? Because I think it's indicative of a VC-induced cancer that's infecting our industry and killing off the next generation. I don't know the full backstory, but I'd bet this sale was encouraged by a Mint investor. Here's a fresh new company that was gunning for an aging incumbent. And not only gunning, but gaining. They had a great product, great design, and great potential. They were growing rapidly and figured out the revenue game. They were on their way to redefining an industry ? one that was left for dead by the current custodians. They were everything their main competitor, Intuit, was not. While Mint was inventing, Intuit was out of it. People used Quickbooks/Quicken out of habit and legacy. People used Mint because they loved it. Intuit was disgruntled, Mint was disruptive. But here's what happened: Intuit, last decade's leader in personal finance, just became the next decade's leader in personal finance. Mint had their number, but they sold it for \$170 million. A big payday for sure, and if that was their two-year goal then they nailed it, but I can't believe that was the point behind Mint. It had too much potential. Mint was a key leader of the next generation of game changers. And now it's property of Intuit ? the poster-child for the last generation. What a loss. Is that the best the next generation can do? Become part of the old generation? How about kicking the shit out of the old guys? What ever happened to that? As more great new companies are absorbed into big old companies, a whole new generation of change is lost. They can issue press releases saying how excited they are to be able to bring their product to a whole new world of customers, and how their new suitor will bring enormous resources to bear, but we know that's usually not really what happens. Development slows, products stall,

the staff that built the great stuff leaves, and mediocrity creeps in. Not always, but usually. Thomas Jefferson said "Periodic revolution, ?at least once every 20 years,? was ?a medicine necessary for the sound health of government.?" That may be even truer for business. We need new blood, new companies, new methods, new ideas, new applications, and new leaders to regenerate stale industries. The old must be plowed under by the new. But today it seems like the old is doing the plowing. Let's stop that. Let's build great companies that are here to fight, here to win, and here to stay until the next generation after us comes along and kicks all our asses. And again and again and again. That's how better happens. Jason Fried wrote this on Sep 18 2009 There are 186 comments. -----

Brainwashed by the cult of the super-rich

"Followers, in thrall to Harrods and Downton Abbey, repeat the mantra that the greed of a few means prosperity for all"

Priyamvada Gopal

"The Guardian, Wednesday 25 December 2013"

"We are invited to deceive ourselves into believing we are playing for the same stakes while worshipping the same ideals, a process labelled 'aspiration'. Photograph: Alamy"

"Last week, Tory MP Esther McVey, Iain Duncan Smith's deputy, insisted it was "right" that half a million Britons be dependent on food banks in "tough times". Around the same time, the motor racing heiress Tamara Ecclestone totted up a champagne bill of £30,000 in one evening. A rich teenager in Texas has just got away with probation for drunkenly running over and killing four people because his lawyers argued successfully that he suffered from "affluenza", which rendered him unable to handle a car responsibly. What we've been realising for some time now is that, for all the team sport rhetoric, only two sides are really at play in Britain and beyond: Team Super-Rich and Team Everyone Else. The rich are not merely different: they've become a cult which drafts us as members. We are invited to deceive ourselves into believing we are playing for the same stakes while worshipping the same ideals, a process labelled "aspiration". Reaching its zenith at this time of year, our participation in cult rituals ? buy, consume, accumulate beyond need ? helps mute our criticism and diffuse anger at systemic exploitation. That's why we buy into the notion that a £20 Zara necklace worn by the Duchess of Cambridge on a designer gown costing thousands of pounds is evidence that she is like us. We hear that the monarch begrudges police officers who guard her family and her palaces a handful of cashew nuts and interpret it as eccentricity rather than an apt metaphor for the Dickensian meanness of spirit that underlies the selective concentration of wealth. The adulation of royalty is not a harmless anachronism; it is calculated totem worship that only entrenches the bizarre notion that some people are rich simply because they are more deserving but somehow they are still just like us. Cults rely on spectacles of opulence intended to stoke an obsessive veneration for riches. The Rich Kids of Instagram who showed us what the "unapologetically uber-rich" can do because they have "more money than you" will find further fame in a novel and a reality show. Beyond the sumptuous lifestyle spreads in glossies or the gift-strewn shop windows at Harrods and Selfridges, and Gwyneth Paltrow's Goop website, shows like Downton Abbey keep us in thrall to the idea of moolah, mansions and autocratic power. They help us forget that wealthy British landowners, including the Queen, get millions of pounds in farming subsidies while the rest of us take back to the modest homes, which we probably don't own, lower salaries and slashed pensions. Transfixed by courtroom dramas involving people who can spend a small family's living income on flower arrangements, we don't ask why inherited wealth is rewarded by more revenue but tough manual labour or care work by low wages. Cue the predictable charge of "class envy" or what Boris Johnson dismisses as "bashing or moaning or preaching or bitching". Issued by its high priests, this brand of condemnation is integral to the cult of the rich. We must repeat the mantra that the greed of a few means prosperity for all. Those who stick to writ and offer humble thanks to the acquisitive are contradictorily assured

by mansion-dwellers that money does not buy happiness and that electric blankets can replace central heating. Enter "austerity chic" wherein celebrity footballers are hailed for the odd Poundland foray, millionaire property pundits teach us how to "make do" with handmade home projects and celebrity chefs demonstrate how to "save" on ingredients ? after we've purchased their money-spinning books, of course. Cultish thinking means that the stupendously rich who throw small slivers of their fortunes at charity, or merely grace lavish fundraisers ? like Prince William's Winter Whites gala for the homeless at his taxpayer-funded Kensington Palace home ? with their presence, become instant saints. The poor and the less well-off, subject to austerity and exploitation, their "excesses" constantly policed and criminalised, are turned into objects of patronage, grateful canvasses against which the generosity of wealth can be stirringly displayed. The cult of the rich propounds the idea that vast economic inequalities are both natural and just: the winner who takes most is, like any cult hero, just more intelligent and deserving, even when inherited affluence gives them a head start. We are mildly baffled rather than galvanised into righteous indignation when told that the rich are being persecuted ? bullied for taxes and lynched for bonuses. The demonising of the poor is the flip side of the cult of the rich or, as a friend puts it, together they comprise the yin and yang of maintaining a dismal status quo. It is time to change it through reality checks, not reality shows. ----- Glenn Greenwald and team are seeking top reporters and researchers for the new venture. Elon Musk's partner is Google and the CIA. Journey to the (Revolutionary, Evil-Hating, Cash-Crazy, and Possibly Self-Destructive) Center of Google"

"You've heard the story. Larry and Sergey drop out of school, start a company in a garage, then become billionaires. But will Larry and Sergey ever grow up

By John Heilemann
Photographs by Ken Probst/Corbis Outline

"It's August 19, Going Public Day for Google, and Larry Page and his comrades are eyeing the lavish breakfast laid out before them at the NASDAQ building: poached eggs perched on tiny pedestals, piles of canapés, pots of crème fraîche. In a few minutes, Larry will preside over the ceremonial opening of the market, then he'll troop up the street to Morgan Stanley to watch Google's stock start trading. At 31, Larry is about to cross the threshold into bona fide billionairehood. So you'd think he'd be as high as Courtney Love right now?but he doesn't really look it. Buttoned up in a suit from Macy's, strangled by a stiff white collar, he isn't eating, isn't schmoozing, and is only rarely smiling. Maybe it's the absence of Sergey Brin, his fellow Google founder, who has chosen this morning, unaccountably, to stay back in Silicon Valley. Or maybe he's just exhausted. But even when his elders approach and kiss his ass, Larry's at a loss for words. "Congratulations, congratulations," says NASDAQ president Robert Greifeld. "This offering is great for all of us. Great for Google, great for the NASDAQ. It's going to be a great success!" Larry mumbles, "It will be interesting to see what happens." A few feet away, Google's CEO, Eric Schmidt, is chatting with John Doerr, one of the company's venture-capital investors and a member of its board. At 49 and 53, respectively, they are senior members of the Silicon Valley patriarchy. Schmidt is the former CEO of the software firm Novell and, before that, was a longtime executive at Sun Microsystems. Doerr, the marquee partner in the VC firm Kleiner Perkins Caufield & Byers, is the financier who bankrolled Netscape, Amazon.com, Compaq, and Sun. Between them, Schmidt and Doerr have spent more than fifty years in the Valley. But as both will attest, they have never encountered a pair of founders quite like Larry and Sergey?or an IPO quite like this one. What started out at the founders' instigation as a grand experiment in popular capitalism has turned into what this morning's Wall Street Journal described as "a rather messy affair." There have been inquiries by the Securities and Exchange Commission, acid criticism in the media, and investor skittishness about the price of the stock and about the auction by which it's being sold. (And let us not forget the pièce d'incompétence: a Playboy interview with Larry and Sergey that came out during the SEC-mandated "quiet period" and made the Google PR team look like a bunch of, well, boobs.) So while Schmidt and Doerr must surely be taking comfort in the fact that they're about to make a bundle, they must also be praying silently that nothing else goes wrong. Suddenly, there's a flurry of activity, a scurrying of factotums. Two pretty young women in short black skirts cry out for sparkling water and napkins. Schmidt and Doerr glance around the room, finally clocking the cause of the commotion: Larry has planted his billion-dollar butt in a plateful of crème fraîche. As the young ladies gamely dab his bottom, trying to rid him of his stain, Larry stands stiffly, his face the color of claret. Schmidt turns to me and rolls his eyes. "These things happen," he says. "We've seen worse." The rise of Google is a tale often told as a Silicon Valley classic. Two precocious Stanford grad-student nerds swept up in the fever of the Internet boom invent technology that profoundly changes the experience of the Web; they drop out and start a company (in a garage) that achieves iconic status; they stage a historic public offering, achieving vast wealth and fame. This version of events is accurate in all its particulars. If anything, it understates the case. Arguably the most important technology company to emerge in two decades, Google is as ubiquitous as the Internet itself. By the end of 2004, the controversies that plagued its IPO were long forgotten. Its stock was trading at around \$190?more than double the offering price?and Larry and Sergey were worth approximately \$7 billion each. They'd even made it onto Barbara Walters's list of the year's "Most Fascinating People." But beneath these familiar surface details, the Google story is more nuanced and compelling. It's a story about the clash between youth and experience, more a messy ensemble drama than a simple buddy flick?one whose main characters have persistently deviated from any script, resulting in unexpected twists and turns that haven't come to light until now. Through boom and bust, the prevailing plotline in Silicon Valley has revolved around fathers and sons. And despite the caricature of the Valley as a realm where the latter are constantly cudgeling the former, the relationship has often been more traditional than outsiders assume. Like every other precinct of the business world, the Valley has long been in thrall to the Serious American Executive, the seasoned CEO, valued for his maturity and credibility with Wall Street. At the height of the dot-com bubble especially, the importing of bosses with top-heavy CVs became the fashion in the Valley, even as the image of the place was centered on its pizza-munching, Rollerblading tyros. At Netscape, Yahoo, eBay, and many other start-ups, twentysomething founders were soon reporting to executives old enough to be their parents. Netscape phenom Marc Andreessen had CEO Jim Barksdale. Yahoo's Jerry Yang and David Filo first had CEO Tim Koogle and later Terry Semel. Frequently, these executives had no experience in technology. They were typically, however patronizingly, referred to as the "adult supervision," and their job was to engender a semblance of corporate sanity and discipline?in other words, to keep the kids in line. Their presence also highlighted where the real

power in the Valley rested: with the venture capitalists who had installed them in the first place. Larry Page and Sergey Brin are, in Silicon Valley terms, of a different generation than Andreessen, Yang, and Filo. Which is to say, they started their company four years later. By then the pair had determined they had no use for many of the Valley's customs. At every stage in their quest to build what Larry describes as "not a conventional company," they have ignored the adamant advice of Google's designated grown-ups. They've accepted a middle-aged CEO but denied him full authority. They've displayed indifference, even contempt, for Wall Street, their stockholders, and the press. And while the Google IPO provided some of the most vivid scenes so far in the company's patricidal drama, those tense enactments weren't the first, and they won't be the last. Michael Moritz, the other venture capitalist behind Google, once told me, "Most people think that IPOs are the climax of a company's story, but in fact they're just the first chapter." He went on to say that a company's genetic code gets set in its first eighteen months. "After that," he said, "companies are impossible to change; their cultures are hardwired in. If the DNA is right, you're golden. If not, you're screwed." In January 1996, Larry, a reticent midwesterner who had gained renown in college by building an ink-jet printer out of LEGOs, and Sergey, a Muscovite by birth and an amateur trapeze artist, started working together on technology to search the Internet. At the time, most search engines based their results on the number of times a search-for term appeared on a given Web site. Larry and Sergey, both in the midst of pursuing their Ph.D.'s in computer science, surmised that it would be better to base searches on relevance; they believed popularity mattered?that the more often a site was linked to, the more relevant it was likely to be. Using complex algorithms, they devised a system they called Page-Rank, after Larry, and they put it at the heart of their search engine, first dubbed BackRub and soon thereafter, Google. Within two years, Google was the rage among the online cognoscenti, and Larry and Sergey were toying with the idea of starting a company. In August 1998, on a porch in Palo Alto, they delivered a demo to Sun cofounder Andy Bechtolsheim, a legend in the Valley for his engineering prowess and his nose for talent. He took one look at the demo and ambled off toward his car, then came back with a \$100,000 check made out to Google, Inc. In Bechtolsheim, Larry and Sergey had found their first big brother. In short order, they found several others, from whom they collected \$1 million in seed money. But Larry and Sergey knew that a million bucks wouldn't last long in the boom-era Valley, so they made their way up to Sand Hill Road, where the Valley's venture capitalists cluster in a kind of multimillionaires' ghetto. For the most part, Sand Hill Road proved inhospitable to Google. The VCs didn't think search was a promising business; the field was already crowded, the leaders (Yahoo and Excite) firmly entrenched. The VCs also recoiled from the price tag on the deal, which valued Google at a brisk \$75 million. And they didn't seem to care much for Larry and Sergey, either. "They really had an attitude," one of them recalls. "It was: We're smarter than you, our stuff is great, everyone else's sucks." But two VCs felt differently: John Doerr, of Kleiner Perkins, and Mike Moritz, of Sequoia Capital. Doerr was arguably the most important venture capitalist in the Valley, and Moritz was the VC who'd backed Yahoo. With Moritz behind them, Larry and Sergey reasoned, Google would have a line into a company they badly wanted to do business with. Similarly, they saw Doerr and his firm as an avenue into AOL, which Kleiner had financed. For their parts, Doerr and Moritz were as smitten with Google's product as Bechtolsheim had been. The absence of a business plan didn't faze them; nor did the price. Indeed, Doerr was known to advise novice VCs, "If you like the founders and you like the technology,

price doesn't matter." By May 1999, Doerr had decided he wanted to invest in Google, and so had Moritz. Given the connections each could provide, Larry and Sergey were keen, even adamant, about snagging both as backers. There was just one hitch: Neither father was inclined to share custody of his new favorite sons. Before the internet bubble, it was common for venture firms to team up on deals in order to spread risks and defray costs. By 1999, however, the size of many VC funds had swollen to \$1 billion or more, and the venture capitalists had more money than they knew what to do with. Not only was collaboration no longer necessary; it wasn't desirable. Nowhere was the every-VC-for-himself ethos more ingrained than at Sequoia and Kleiner Perkins. Two of the oldest venture firms in Silicon Valley, they were also the most powerful and influential. But in outlook and demeanor, they were diametric opposites. Kleiner was flashy, promotional, profligate; Sequoia was low-key, gritty, frugal. In the words of one Kleiner partner, William Randolph Hearst III, "KP is Athens; Sequoia is Sparta." Doerr and Moritz were as different as their firms. Doerr: midwestern, Catholic, schooled as an engineer at Rice University. Moritz: Welsh, Jewish, schooled in history at Oxford. Doerr's introduction to Silicon Valley was selling microchips at Intel. Moritz's intro was covering the Valley for Time. Where Doerr was an enthusiast prone to hyperbole ("the largest legal creation of wealth in the history of the planet" was how he famously described the Valley during the boom), Moritz was a skeptic and a cynic (his view of the Valley in 1998: "There's

going to be a lot of flesh on a lot of windshields"). And although no overt animosity existed between them, they were rivals who only rarely worked together. Taking on the task of getting the VCs to commingle were a pair of Google advisers, Ram Shriram and Ron Conway. Shriram, a former Netscape executive and one of Google's seed-money suppliers, had known Doerr for years; and Conway, a Silicon Valley angel investor (one who puts small sums into start-ups before they're ripe for VC funding), was friendly with Moritz. Day after day, Shriram and Conway wheedled and romanced the venture capitalists, all to no avail. "You had to convince both sides that Larry and Sergey were really serious about wanting two VCs," an early Google insider says. "John and Mike both wanted to do the deal alone. It turned into a fight. They didn't realize how headstrong the founders were." Larry and Sergey couldn't believe what was happening. Neither could Doerr or Moritz. During the dot-com melee, the VCs were constantly confronted with money-hungry children wanting to be taken care of. But here the kids were saying, "You guys have to learn to share." About a month into the standoff, Larry and Sergey called Conway and said, "Get a list together of your angel friends?we might just do the whole deal with angel money. KP and Sequoia don't get it?. We're gonna give them another couple of days, and then it's over." Conway and Shriram delivered the message. The next Saturday morning, Conway was sitting in a Starbucks parking lot when he got a call from Shriram. "The fight is over," Shriram said. "They're both going to invest, and it's going to be fifty-fifty." On June 7, 1999, Google announced the financing: a \$25 million infusion, led by Kleiner Perkins and Sequoia. The VCs each now owned roughly 10 percent of Google, and Google now had all the money it would need to pursue its ambitions. But Larry and Sergey had acquired something more valuable than money, and potentially more problematic: a sense that, unlike so many young founders before them, they could defy the grown-ups' wishes and not be punished for it. Despite their differences, Moritz and Doerr agreed emphatically about one thing: Google needed to hire an A-list CEO, and quickly. Before investing, they had elicited a verbal commitment from Larry and Sergey that they would do just that. But while Larry and Sergey had assured the VCs that they agreed, they did nothing about it. To be fair, they were busy moving Google and its sixty-odd employees into a new headquarters in Mountain View, which they dubbed the Googleplex; they were coping with skyrocketing popularity, to the tune of 4 million queries a day; and they were striking their first major licensing deal, to provide Web search for AOL/Netscape. Still, as months rolled by and 2000 approached with no CEO on the horizon, it was clear that the boys were balking about bringing in someone above them. Eventually, they began to make the case ardently against adult supervision, citing Bill Gates, Jeff Bezos, and Michael Dell as precedents. "They saw the founders who had retained control as CEOs as the best, most creative, and most successful," says Dave Whorton, a venture capitalist who was then Doerr's prot,g,. "What they didn't see were all the others who had failed. That wasn't in their data set." Moritz monitored the situation with mounting frustration. Suspicious by nature, he'd doubted all along that Larry and Sergey would honor their commitment. Confronting them, he threatened to pull Sequoia's money if they refused to yield. "It was not a pleasant conversation," Moritz recalls. "In the heat of things, I rattled my saber loudly." Doerr told me at the time that he, too, was contemplating such a threat. But instead he chose a different tack. What Doerr was hearing from Larry and Sergey was a combination of the engineer's demand for logic and the adolescent's impulse to challenge parental authority. "Because we say so" or "because that's how it's done" would never convince the boys of anything, and that was what the VC's arguments sounded like to them. So Doerr proposed that the boys take a little tour around Silicon Valley. He would arrange for them to meet and discuss the matter with some of the industry executives they had long admired. The names on Larry and Sergey's itinerary comprised a high-tech murderer's row: Intel chairman Andy Grove; Amazon.com's Bezos; Sun chairman and CEO Scott McNealy; Intuit founder and former chairman Scott Cook?the list went on and on. Doerr discreetly kept tabs on the meetings as they stretched out over several weeks. At one point, he asked Bezos what he thought of the boys' obstinacy. "Hey, some people just want to paddle across the Atlantic Ocean in a rubber raft," Doerr recalls Bezos replying. "That's fine for them. The question is whether you want to put up with it." The prospect of putting up with it became more palatable when Doerr heard back from Larry and Sergey. Having gotten Socratic with their heroes, they were finally prepared to acquiesce in the hiring of a CEO. Their definition of acquiescence, however, was neither unconditional nor expeditious. "If Larry and Sergey were given clear instructions by a divine presence, they would still have questions," Moritz says. For more than a year, in fact, Doerr and Moritz would continue to tear at their hair. But Larry and Sergey refused to be rushed; they took their own sweet time. "Most young people starting companies are afraid," says Joe Kraus, who at 21 was a founder of Excite. "They're afraid of failing. Afraid of getting it wrong. Afraid of missing their chance. Afraid, especially, of saying no to John Doerr. But these guys weren't afraid." When Google announced in early 2001 that Eric Schmidt was becoming its

chairman? a move followed a few months later by his installation as CEO? Silicon Valley was puzzled. For the past four years, Schmidt had served as CEO of Novell, and for nearly fifteen before that he was a senior executive at Sun. So his decision, in the midst of the NASDAQ meltdown, to join a dot-com start-up? a search-engine start-up, no less? simply did not compute. Actually, it did. Schmidt's tenure at Novell had been decidedly less than joyful. Novell was a company in steep decline when he arrived, and his labors had only modestly reversed it. Worse, hardly anyone gave a damn if Novell lived or died; its software was boring even to software freaks. For Schmidt, working at Google was an ideal solution to a high-tech midlife crisis. It put him back at the center of the action while letting him kick it with the boys. Describing his attraction to Larry and Sergey, Schmidt says, ""We're not just three random guys. We're all computer scientists with the same interests and backgrounds. The first time we met, we argued for an hour and a half over pretty much everything?and it was a really good argument."" Schmidt met all of Larry and Sergey's stringent criteria. He had a credible name, a Ph.D. (from Berkeley), and he promised not to push the boys aside or dismantle the quirky culture they'd engendered. ""The board members told me, basically, 'Don't screw this thing up!' "" Schmidt says. ""They said, 'It needs some infrastructure, some growing, but the gem here is very real.' "" At a glance, the culture Schmidt pledged not to replace seemed a relic of the just-bygone era: The Googleplex looked like a dot-com wax museum. There were lava lamps, beanbag chairs, an on-site masseuse. But beneath the comically clichéd trappings, Google was becoming something interesting?and powerful. Having cut deals with an array of companies, most critically Yahoo, Google was processing more than 100 million searches a day and indexing an unprecedented 1 billion Web pages. Fueling this growth was a relentlessness about innovation. Larry and Sergey were openly, brutally elitist when it came to hiring engineers. (Job applicants, no matter their age, had to submit their college transcripts.) In software and hardware, Google's innovation was remarkable. Using off-the-shelf components, the company was building what was, in effect, the planet's largest computing system. And its official mission "to organize

the world's information and make it universally accessible and useful""?extended far beyond searching the Internet. ""I did not understand when I came to the company how broad Larry and Sergey's vision was,"" Schmidt says. ""It took me six months of talking to them to really understand it. I remember sitting with Larry, saying, 'Tell me again what our strategy is,' and writing it down."" At the same time, the boys had fostered an environment that was flamboyantly idealistic. Search was all, profit peripheral, ""Don't be evil"" the corporate motto. (Asked later what the slogan meant, Schmidt would say, ""Evil is what Sergey says is evil."") In short, Larry and Sergey had already encoded the DNA of the company Schmidt was supposed to run. The character they instilled in Google could be summed up in three phrases: Technology matters. We make our own rules. We'll grow up when we're damn good and ready. The boys' reality took some getting used to for Schmidt. It wasn't just the dot-com fripperies that fazed him or the dogs trotting up and down the halls. It was the squatter in his office. (The interloper was an engineer frustrated with the bustle in his own shared quarters. After first attempting to evict him, Schmidt gave up and endured the situation for several months.) He also found himself frequently occupied with grounding Larry and Sergey's flights of fancy. There was the time the boys suggested having Google enter the business of low-cost space launchings. And the time Larry reportedly tried to ban telephones from a new Google office building. Even so, Schmidt now looks back fondly on the genesis of the relationship. ""Our roles evolved quickly,"" he says. ""Sergey is the master dealmaker, Larry is the deep technologist, and I make the trains run on time."" Seizing on a different analogy, he adds, ""We developed the equivalent of what's known in basketball as a run-and-shoot offense: Larry and Sergey's only goal is to run to the other end of the court as fast as possible, so they're always ahead of everyone else, strategically, technologically, culturally. I'm the not-running-ahead person. I stay back and get the rebounds."" Others, however, viewed the apparent anarchy at Google more skeptically. Stewart Alsop, a venture capitalist and former journalist, recalls interviewing Schmidt onstage at an industry conference. ""I asked him, 'How the hell do you make decisions? From the outside, it seems crazy.' Eric spent forty-five minutes trying to answer, but he couldn't describe it. And the thing was, he was proud of that. He said it was a new way of doing business. There was no hierarchy; they acted as a triumvirate of equals. They were breaking all the rules. I thought it was a disaster in the making."" Doerr's views were less apocalyptic, but he harbored some concerns. ""The company wasn't falling apart,"" says one of his Kleiner partners, ""but it could have been headed in the wrong direction. The situation was unstable."" Seeking to stabilize it, Doerr picked up the phone and sought an intercession from Bill Campbell. Campbell, former CEO and current chairman of Intuit, as well as an Apple board member and Steve Jobs confidant, was one of the most respected executives in Silicon Valley. His nickname was the Coach? a reference both to his past as a college-football field general and his present sideline as an informal management adviser. Now, in late 2001, Campbell started logging hours at Google,

visiting the company several times a week, playing mentor to Larry, Sergey, and Schmidt? a relationship that has only grown over time, though it has never been publicly disclosed before in any detail. "Don't overdramatize my role," Campbell urges me. "I'm just another set of eyes, another person in the room." Hardly. "I think John Doerr would say Bill Campbell saved Google," says Kleiner partner Will Hearst. "He coached Eric on what it means to be a CEO?not the CEO of Novell but of a company like Google. He taught Eric it's a lot like being a janitor: There's a lot of shit you have to do. And he spent a lot of time with Larry and Sergey, explaining the difference between being a cool company or a smart company and being a successful company. It didn't happen overnight, but Bill Campbell won." "God bless that man" is what Doerr says. "I don't know where the company would be without him." Moritz concurs: "He is the quiet, behind-the-scenes, unsung hero in this whole epic." Even Schmidt, who might have felt undermined by Campbell's presence, has nothing but praise for him. "At first we tried to integrate him just a little bit, but we eventually decided our only goal was to get as much of Bill's time as possible. Our basic strategy is to invite him to everything. He's priceless beyond belief." Google's embrace of Campbell marked a turning point for Larry and Sergey. It was a symbol of their dawning awareness that they had some things to learn?and that with age occasionally comes wisdom. Campbell's arrival also signaled Google's transition from a glorified research lab into a proper company, one that cared about management and, yes, even making money. Since its founding, Google's financial condition had been, as Moritz describes it, "lots of cash outgoing, very little incoming, and we were trying to pin the tail on the donkey as to what the business was." In 2000, Google started experimenting with advertising. Because Larry and Sergey had long been vehemently opposed to banner and pop-up ads, the company's approach was minimalist: unobtrusive, text-based messages on the right side of the page. Late the next year, the company unveiled a program called AdWords, which let advertisers bid for keywords, with higher bidders getting better placement and being charged a fee only when users clicked on the ads. (In much of this, Google was following a path blazed by rival Overture Services, which later sued for patent infringement. The case was ultimately settled out of court.) In 2003, Google launched AdSense, a program extending its ad system to non-search sites, in effect making Google a media broker for Web operators ranging from The New York Times and AOL to countless humble bloggers. Advertising turned Google into a commercial juggernaut. In 2001 the company had \$87 million in revenues and was barely in the black; two years later, its sales had soared to \$1.5 billion and its operating profit to more than \$340 million. The company had introduced Google Image Search, Google News, and Froogle, and its name made the syntactical leap from noun to verb. The only question now was when, not whether, the company would cross the Rubicon. All eyes in the Valley and on Wall Street turned to the Google IPO. Larry and Sergey were never wild about going public. The main rationale for doing it was to raise money, and Google already had plenty. The boys knew that past IPOs had unleashed tidal forces of greed and envy that wreaked havoc on promising start-ups. They also knew that being a public company meant acquiring a new and demanding set of masters: Wall Street analysts, shareholders, securities regulators, the press. Your ability to keep commercial secrets diminished dramatically. If this was what it meant to be an adult company, who wouldn't prefer perpetual adolescence? But the end of Google's adolescence wasn't optional. The boys had obligations to their investors and underlings. Doerr and Moritz, both sitting on funds that had been hammered by the collapse of the bubble, were keen to cash in their Google chips, while employees who'd been slaving for years were eager for a payday that would put rental housing behind them. On top of that, there was an SEC rule that would require Google (due to the number of shares it had given out) to start publishing its financials in April 2004. Public or private, the veil of fiscal secrecy was about to be lifted. In the fall of 2003, the Google high command began discussing the IPO in earnest. Almost immediately it was apparent that Larry and Sergey had no intention of staging a traditional offering where Wall Street underwriters ran the show?setting the price of the shares and doling them out to favored investors, who could then expect a windfall from a first-day run-up in the stock. Instead, the boys wanted to conduct the IPO through a Dutch auction, a novel process allowing anyone who wanted to own a piece of the company to bid for its newly minted stock in the days before it started trading. They also wanted to issue two classes of shares, giving Larry, Sergey, and Google's executives and directors ten-to-one voting power over ordinary investors. And they wanted to make it clear that Google wouldn't accede to Wall Street's congenital short-termitis. Its executives would focus on the long term, not be slaves to quarterly profits. Each of these positions had its virtues. Dutch auctions promised to let small investors in on the IPO action; to reduce the power of underwriters to game the system, as they had done so flagrantly during the bubble; and to maximize the financial return from the offering to Google?as opposed to Wall Street. Dual-class voting structures, too, had advantages, which is why they were used by media giants like The New York Times and by the sainted Warren Buffett's Berkshire Hathaway. With

two share classes in place, the chances of a hostile takeover of Google would be virtually nil. As for short-termitis, who could deny that pressure to "make the quarter" had led to much corporate mischief? "None of this was ill-considered," says maverick San Francisco banker William Hambrecht, a vocal proponent of Dutch auctions and an underwriter of the Google IPO. "They had talked to Buffett, talked to Steve Jobs, talked to lots of people. They were trying to do the right thing for the company?to avoid the mistakes of the past." But taken together, Larry and Sergey's plans

sent a different message: They intended for Google to be a public company that operated as if it were private. "They said, 'If we have to go public, we'll go public,' " says a pre-IPO Google investor. "But we're going public on our terms?we're going to have our cake and eat it, too.'" The Wall Street bankers who would wind up leading the deal, at Morgan Stanley and Credit Suisse First Boston, privately issued dire warnings about proceeding with an auction. They argued that unsophisticated individual investors might bid up the stock on opening day to a stratospheric level?to a market value as high as \$100 billion, they said?only to have it come quickly crashing down, a costly embarrassment. Moritz, who had done an auction IPO previously with Hambrecht, thought these warnings were overblown. But Doerr and others were swayed. The fear that the IPO might "run away from us," as Doerr put it, led to various maneuvers designed to dampen demand from individual investors: an offering in August, when the market was usually slow; a complex registration process for bidders; a high price on the stock. The result was a kind of bastard deal, a compromise between Larry and Sergey's mold-breaking aspirations and the conservative instincts of the grown-ups, forged in an atmosphere suffused with Sturm und Drang. "We said, 'If you want to do an auction, do a fucking auction,'" says a partner in one of the VC firms. "But why don't you also try listening to us? We're not new to this, you know. Warren Buffett is your guru? Is this the same Warren Buffett who doesn't want anything to do with tech stocks? Are we talking about the same Warren Buffett?" Apparently, yes. Early in the last week of April, just days before Google was set to file its IPO paperwork, Larry told the board he'd decided to write an open letter, la Buffett, to be included in the document. Nervously, the board consented, but time was running short. The night before the deadline, Doerr drove to the Googleplex. It was after midnight, and Larry was laboring like a college student on speed crashing a term paper. Doerr read Larry's manifesto: "'An Owner's Manual' for Google's Shareholders." And then, as gently as possible, Doerr said, "We need an editor." Even after being edited, the letter, like the IPO itself, debuted to mixed reviews. From Wall Street, with its antipathy toward auctions, came a torrent of unattributed sniping. Corporate-governance mavens pilloried the dual-share structure, which seemed starkly at odds with the populist tone of Larry's letter. Then came the news that, of the 24.6 million shares being offered, 10.5 million were being sold by Google insiders, including Larry and Sergey. For the first time in the boys' careers, they were tarred by the brush of greed. By early August, when Larry, Sergey, and Schmidt set off on the IPO road show, the offering was reeling. With the NASDAQ down 15 percent from its January high, the stock price?projected by the company at \$108 to \$135 a share?looked excessive. Wall Street piled on the criticism; mistakes piled up left and right. Investors attending the road show described the Google troika as unprepared, uncomm"

<http://www.theguardian.com/commentisfree/2013/dec/30/we-need-to-talk-about-ted>

"TED, The illuminati self-congratulatory Tony Robbins-esque festival gets reckoned with. Is TED the gentrification of thought? "

We need to talk about TED

"Science, philosophy and technology run on the model of American Idol ? as embodied by TED talks ? is a recipe for civilisational disaster"

Benjamin Bratton
"theguardian.com, Monday 30 December 2013"

"In our culture, talking about the future is sometimes a polite way of saying things about the present that would otherwise be rude or risky."

"But have you ever wondered why so little of the future promised in TED talks actually happens? So much potential and enthusiasm, and so little actual change. Are the ideas wrong? Or is the idea about what ideas can do all by themselves wrong? I write about entanglements of technology and culture, how technologies enable the making of certain worlds, and at the same time how culture structures how those technologies will evolve, this way or that. It's where philosophy and design intersect. So the conceptualization of possibilities is something that I take very seriously. That's why I, and many people, think it's way past time to take a step back and ask some serious questions about the intellectual viability of things like TED. So my TED talk is not about my work or my new book ? the usual spiel ? but about TED itself, what it is and why it doesn't work. The first reason is oversimplification. To be clear, I think that having smart people who do very smart things explain what they doing in a way that everyone can understand is a good thing. But TED goes way beyond that. Let me tell you a story. I was at a presentation that a friend, an astrophysicist, gave to a potential donor. I thought the presentation was lucid and compelling (and I'm a professor of visual arts here at UC San Diego so at the end of the day, I know really nothing about astrophysics). After the talk the sponsor said to him, ""you know what, I'm gonna pass because I just don't feel inspired ...you should be more like Malcolm Gladwell."" At this point I kind of lost it. Can you imagine? Think about it: an actual scientist who produces actual knowledge should be more like a journalist who recycles fake insights! This is beyond popularisation. This is taking something with value and substance and coring it out so that it can be swallowed without chewing. This is not the solution to our most frightening problems ? rather this is one of our most frightening problems. So I ask the question: does TED epitomize a situation where if a scientist's work (or an artist's or philosopher's or activist's or whoever) is told that their work is not worthy of support, because the public doesn't feel good listening to them? I submit that astrophysics run on the model of American Idol is a recipe for civilizational disaster."

What is TED?

"So what is TED exactly? Perhaps it's the proposition that if we talk about world-changing ideas enough, then the world will change. But this is not true, and that's the second problem. TED of course stands for Technology, Entertainment, Design, and I'll talk a bit about all three. I Think TED actually stands for: middlebrow megachurch infotainment. The key rhetorical device for TED talks is a combination of epiphany and personal testimony (an ""epiphimony"" if you like) through which the speaker shares a personal journey of insight and realisation, its triumphs and tribulations. What is it that the TED audience hopes to get from this? A vicarious insight, a fleeting moment of wonder, an inkling that maybe it's all going to work out after all? A spiritual buzz? I'm sorry but this fails to meet the challenges that we are supposedly here to confront. These are complicated and difficult and are not given to tidy just-so solutions. They don't care about anyone's experience of optimism. Given the stakes, making our best and brightest waste their time ? and the audience's time ? dancing like infomercial hosts is too high a price. It is cynical. Also, it just doesn't work. Recently there was a bit of a dust up when TEDGobal sent out a note to TEDx organisers asking them not to not book speakers whose work spans the paranormal, the conspiratorial, new age ""quantum neuroenergy"", etc: what is called woo. Instead of these placebos, TEDx should instead curate talks that are imaginative but grounded in reality. In fairness, they took some heat, so their gesture should be acknowledged. A lot of people take TED very seriously, and might lend credence to specious ideas if stamped with TED credentials. ""No"" to placebo science and medicine. But ... the corollaries of placebo science and placebo medicine are placebo politics and placebo innovation. On this point, TED has a long way to go. Perhaps the pinnacle of placebo politics and innovation was featured at TEDx San Diego in 2011. You're familiar I assume with Kony2012, the social media campaign to stop war crimes in central Africa? So what happened here? Evangelical surfer bro goes to help kids in Africa. He makes a campy video explaining genocide to the cast of Glee. The world finds his public epiphany to be shallow to the point of self-delusion. The complex

geopolitics of central Africa are left undisturbed. Kony's still there. The end. You see, when inspiration becomes manipulation, inspiration becomes obfuscation. If you are not cynical you should be sceptical. You should be as sceptical of placebo politics as you are placebo medicine."

T and Technology

"T ? E ? D. I'll go through them each quickly. So first technology ... We hear that not only is change accelerating but that the pace of change is accelerating as well. While this is true of computational carrying-capacity at a planetary level, at the same time ? and in fact the two are connected ? we are also in a moment of cultural de-acceleration. We invest our energy in futuristic information technologies, including our cars, but drive them home to kitsch architecture copied from the 18th century. The future on offer is one in which everything changes, so long as everything stays the same. We'll have Google Glass, but still also business casual. This timidity is our path to the future? No, this is incredibly conservative, and there is no reason to think that more gigaflops will inoculate us. Because, if a problem is in fact endemic to a system, then the exponential effects of Moore's law also serve to amplify what's broken. It is more computation along the wrong curve, and I don't it is necessarily a triumph of reason. Part of my work explores deep technocultural shifts, from post-humanism to the post-anthropocene, but TED's version has too much faith in technology, and not nearly enough commitment to technology. It is placebo technoradicalism, toying with risk so as to reaffirm the comfortable. So our machines get smarter and we get stupider. But it doesn't have to be like that. Both can be much more intelligent. Another futurism is possible."

E and economics

"A better 'E' in TED would stand for economics, and the need for, yes imagining and designing, different systems of valuation, exchange, accounting of transaction externalities, financing of coordinated planning, etc. Because states plus markets, states versus markets, these are insufficient models, and our conversation is stuck in Cold War gear. Worse is when economics is debated like metaphysics, as if the reality of a system is merely a bad example of the ideal. Communism in theory is an egalitarian utopia. Actually existing communism meant ecological devastation, government spying, crappy cars and gulags. Capitalism in theory is rocket ships, nanomedicine, and Bono saving Africa. Actually existing capitalism means Walmart jobs, McMansions, people living in the sewers under Las Vegas, Ryan Seacrest ? plus ? ecological devastation, government spying, crappy public transportation and for-profit prisons. Our options for change range from basically what we have plus a little more Hayek, to what we have plus a little more Keynes. Why? The most recent centuries have seen extraordinary accomplishments in improving quality of life. The paradox is that the system we have now ?whatever you want to call it ? is in the short term what makes the amazing new technologies possible, but in the long run it is also what suppresses their full flowering. Another economic architecture is prerequisite."

D and design

"Instead of our designers prototyping the same ""change agent for good"" projects over and over again, and then wondering why they don't get implemented at scale, perhaps we should resolve that design is not some magic answer. Design matters a lot, but for very different reasons. It's easy to get enthusiastic about design because, like talking about the future, it is more polite than referring to white elephants in the room. Such as? Phones, drones and genomes, that's what we do here in San Diego and La Jolla. In addition to the other insanely great things these technologies do, they are the basis of NSA spying, flying robots killing people, and the wholesale privatisation of biological life itself. That's also what we do. The potential for these technologies are both wonderful and horrifying at the same time, and to make them serve good futures, design as ""innovation"" just isn't a strong enough idea by itself. We need to talk more about design as ""immunisation,"" actively preventing certain potential ""innovations"" that we do not want from happening."

And so?

"As for one simple take away ... I don't have one simple take away, one magic idea. That's kind of the point. I will say that if and when the key problems facing our species were to be solved, then perhaps many of us in this

room would be out of work (and perhaps in jail). But it's not as though there is a shortage of topics for serious discussion. We need a deeper conversation about the difference between digital cosmopolitanism and cloud feudalism (and toward that, a queer history of computer science and Alan Turing's birthday as holiday!) I would like new maps of the world, ones not based on settler colonialism, legacy genomes and bronze age myths, but instead on something more ? scalable. TED today is not that. Problems are not ""puzzles"" to be solved. That metaphor assumes that all the necessary pieces are already on the table, they just need to be rearranged and reprogrammed. It's not true. ""Innovation"" defined as moving the pieces around and adding more processing power is not some Big Idea that will disrupt a broken status quo: that precisely is the broken status quo. One TED speaker said recently, ""If you remove this boundary ... the only boundary left is our imagination"". Wrong. If we really want transformation, we have to slog through the hard stuff (history, economics, philosophy, art, ambiguities, contradictions). Bracketing it off to the side to focus just on technology, or just on innovation, actually prevents transformation. Instead of dumbing-down the future, we need to raise the level of general understanding to the level of complexity of the systems in which we are embedded and which are embedded in us. This is not about ""personal stories of inspiration"", it's about the difficult and uncertain work of demystification and reconceptualisation: the hard stuff that really changes how we think. More Copernicus, less Tony Robbins. At a societal level, the bottom line is if we invest in things that make us feel good but which don't work, and don't invest in things that don't make us feel good but which may solve problems, then our fate is that it will just get harder to feel good about not solving problems. In this case the placebo is worse than ineffective, it's harmful. It's diverts your interest, enthusiasm and outrage until it's absorbed into this black hole of affectation. Keep calm and carry on ""innovating"" ... is that the real message of TED? To me that's not inspirational, it's cynical. In the US the rightwing has certain media channels that allow it to bracket reality ... other constituencies have TED. ? This article first appeared on Benjamin Bratton's website and is republished with permission. It is the text of a talk given at TEDx San Diego -----

Let me try to sum up the VC's TED party concept, in short, per the writer above: ""TED Talks and the Techno-Futurist paid Tony Robbins-like EST-ish seminars are Male Bovine Excretion Deliverance Systems For The Enthralled Masses"". Is that what the article is saying? Does it imply that TED is ""vacuous superficial celebratory self-indulgent ideological infomercial fluff for patriotic mythmaking for Silicon Valley elitists " ""It seems that TED hires preening, vain, egotists with great used car salesman/cable tv news pundit speaking skills who espouse popcorn intellectualism but have little actual engineering background who deliver bite sized tidbits of information, with no actual depth, to the lowest common denominator of wide eyed UFO enthusiasts and hipsters." ""Charismatic intellectual gurus wrapped in TED showmanship and glitz cause cults full of Kool Aid drinkers to buy into their crap-peddling in order to get in the VC frat funding club. Utopian fake intellectualism is the vat of poo that Silicon Valley Vc's revel in because the rest of society thinks they are such arrogant weasels." The writer seems to say that TED is a ""festival of self-importance. A waterfall of ego and a back-patting extravaganza of the loud and self-centered telling the masses how much louder and more important they are than the attendees. To talk at TED you have to hire a ghost-writer to write you a book about some amorphous topic that sounds important in a one sentence description but accomplishes nothing nor instructs anyone how to do anything tangible that will have visible non-commercial results outside of pumping a stock portfolio. Almost no speaker leaves TED and does anything tangible. Almost no speaker at TED has, or will, do anything that you can pull metrics on except get their PR agent to book them in more seminars. ?But they inspire us to do great things?, cry some of the middle class attendees?? Do they really? Does that encapsulate the writers point? TOMG- (Note: I am NOT Charlie Sheen) -----

Who rules America?

"By Allan J. Lichtman,"

""The public be damned!"" ? William H. Vanderbilt, railroad magnate, 1882 A shattering new study by two political science professors has found that ordinary Americans have virtually no impact whatsoever on the making of national policy in our country. The analysts found that rich individuals and business-controlled interest groups largely shape policy outcomes in the United States. This study should be a loud wake-up call to the vast majority

of Americans who are bypassed by their government. To reclaim the promise of American democracy, ordinary citizens must act positively to change the relationship between the people and our government"

"The new study, with the jaw-clenching title of ""Testing Theories of American Politics: Elites, Interest Groups, and Average Citizens,"" is forthcoming in the fall 2014 edition of Perspectives on Politics. Its authors, Martin Gilens of Princeton University and Benjamin Page of Northwestern University, examined survey data on 1,779 national policy issues for which they could gauge the preferences of average citizens, economic elites, mass-based interest groups and business-dominated interest groups. They used statistical methods to determine the influence of each of these four groups on policy outcomes, including both policies that are adopted and rejected. The analysts found that when controlling for the power of economic elites and organized interest groups, the influence of ordinary Americans registers at a ""non-significant, near-zero level."" The analysts further discovered that rich individuals and business-dominated interest groups dominate the policymaking process. The mass-based interest groups had minimal influence compared to the business-based interest groups. The study also debunks the notion that the policy preferences of business and the rich reflect the views of common citizens. They found to the contrary that such preferences often sharply diverge and when they do, the economic elites and business interests almost always win and the ordinary Americans lose. The authors also say that given limitations to tapping into the full power elite in America and their policy preferences, ""the real world impact of elites upon public policy may be still greater"" than their findings indicate. Ultimately, Gilens and Page conclude from their work, ""economic elites and organized groups representing business interests have substantial independent impacts on U.S. government policy, while average citizens and mass-based interest groups have little or no independent influence."" Rich individuals and business interests have the capacity to hire the lobbyists that shadow legislators in Washington and to fill the campaign coffers of political candidates. Ordinary citizens are themselves partly to blame, however, because they do not choose to vote. America's turnout rate places us near the bottom of industrialized democracies. More than 90 million eligible Americans did not vote in the presidential election of 2012 and more than 120 million did not vote in the midterm elections of 2010. Electoral turnout in the United States is highly correlated with economic standing: The more affluent Americans vote in much higher proportion than the less affluent. A study by Ellen Shearer of the Medill School of Journalism at Northwestern found that 59 percent of 2012 voters earned \$50,000 or more per year, compared to 39 percent of non-voters. Only 12 percent of non-voters earned more than \$75,000, compared to 31 percent of voters. Ordinary citizens in recent decades have largely abandoned their participation in grassroots movements. Politicians respond to the mass mobilization of everyday Americans as proven by the civil rights and women's movements of the 1960s and 1970s. But no comparable movements exist today. Without a substantial presence on the ground, people-oriented interest groups cannot compete against their wealthy adversaries. Average Americans also have failed to deploy the political techniques used by elites. Political Action Committees (PACs) and super-PACs, for example, raise large sums of money to sway the outcome of any election in the United States. Although average Americans cannot match the economic power of the rich, large numbers of modest contributions can still finance PACs and super-PACs that advance our common interests. If only they vote and organize, ordinary Americans can reclaim American democracy and challenge the politicians who still echo the view of old Vanderbilt that the public should be damned. Lichtman is distinguished professor of history at American University in Washington."

THE CALIFORNIA CONNECTION IN THE CORRUPTION

One of the biggest State's allowed some of the biggest corruption, in CARGATE, to happen. Now heads are

rolling. Tons of evidence has been rolling out to reporters from Washington & Russian whistle-blowers. Share the link to this article (with your favorite reporter or Sacramento Politico): <http://wp.me/p4e1uX-2hz> Let's take a look at a small part of the new revelations: "

The Feinstein Connection:

"Tesla: 45500 Fremont Blvd., Fremont, CA 94538 and Solyndra: 47488 Kato Road, Fremont, CA, 94538 Feinstein's ex-staff & lobbyists work there now. The real estate, funding, profit scheme, Afghan ore deals, staff and campaign funding is all connected! IN ALL OF AMERICA, the TWO BIGGEST SCAMS in the DOE ATVM/LGP disaster JUST HAPPEN TO BE ON ADJACENT PROPERTIES!!!!???? What are the odds? There was nothing in the existing structures that was used by the new companies. GM & Toyota had written reports saying the NUMMI building was obsolete. American had hundreds of thousands of other big empty manufacturing buildings at the time. Why did Solyndra spend your TAX MONEY money building a brand new building (for the leasing agents?) SCAM! Campaign funding from DOE ATVM & LGP ""WINNERS"" was routed to State Senators who ""greased the skids"". Here is another cozy, intimate scene (photo below) at Dianne Feinstein's House with Elon Musk. Many intimate times spent with Musk, Jurvetson, Doerr and Draper, (Who all got the DOE taxpayer \$\$\$) and who then funded her campaigns: [caption id=""attachment_8831"" align=""aligncenter"" width=""900""] Feinstein Chief of Staff told Unions ""all NUMMI workers would stay"" in order to take over NUMMI but then Tesla put ads up for off-shore H1-B workers and H1-B lawyers to bring on all of the cheap overseas labor using YOUR tax dollars.[caption id=""attachment_8829"" align=""aligncenter"" width=""529""] Richard Blum Man-Handles Feinstein to do his bidding:[caption id=""attachment_8832"" align=""aligncenter"" width=""534""] It is the biggest JOKE IN WASHINGTON to call Tesla ""A success Story"": They have sold almost no cars after spending more money on the few cars they have sold than ANY OTHER CAR COMPANY IN HISTORY. They are rife with corruption, lawsuits, fraud charges, employee claims, explosions, fires, recalls and more...Matt Rogers is Dianne Feinstein's and Richard Blum's Buddy. Even after being warned that Solyndra was a dead/bad bet, Chu and Rogers ordered Solyndra to get the money because ""the skim"" off the top of the money was already promised to Feinstein, Goldman and the VC's At Tesla NUMMI Opening: ""OK, So I got all my Russian Mining Buddies set-up, now you get on the Senate Intelligence Committee and steer the reports so it looks like we have to take over Afghanistan and then your husband's Silicon Valley VC chums will get the Afghan lithium (For Tesla and Fisker and Enerdel and A123) and indium monopoly (For Solyndra) and they will pay for all of your campaigns in return..., PLUS we got Steven Chu in our back AND front pocket... Yaaah, Sound Good "[wpvideo znLDRIL7] For More see THIS LINK>>> For More #2 see THIS LINK>>> [caption id=""attachment_8641"" align=""aligncenter"" width=""529""] Has Eric Holder been ORDERED not to prosecute? If so, BY WHO?[wpvideo 5aLyQBuw]"

The State TAX Department Special Piggy Bank Connection & Tax Targeting (Like the IRS hits in DC):

"TAX and EPA Waivers served as a PIGGY BANK FOR CAMPAIGN FINANCIERS. California Board of Equalization member Paul B. Carpenter (D) was found guilty of 11 counts of obstruction of justice and money laundering. Orange County County Assessor Andrew J. Hinshaw (R) was convicted of accepting bribes while Assessor of Orange County. he was serving in the US Congress at the time of his conviction. He served one year in prison. Bill Lockyers special deal with Tesla. Only CAMPAIGN BACKERS got these tax give-aways, waivers and credits. Non-Campaign backer companies, who qualified for them, were still turned down, or stone-walled, to

protect the insider crony companies. "

"The Terminator, Silicon Valley VC's & the Russian Lithium Mobsters"

"Arnold Schwarzenegger took California campaign backer VC's from Silicon Valley to meet Russian mobsters he met while making his Russian movie over a decade ago. The Silicon Valley VC's were involved in pushing for the invasion of Afghanistan in order to arrange a TRILLION DOLLAR Lithium and Indium mining deal for Tesla, Fisker, Abound and Solyndra from the ore in Afghanistan that they made deals for with the Russian oligarchs who owned the mining companies. Gary Connely of Sol-Focus was said to have been killed over his revelation of this. In the following video the Afghani-Scam deal is exposed. It turns out the lithium they were going to take over explodes spontaneously, causes fires, and burns cancer-causing smoke: Bummer! "

"[wpvideo SvTwGI4x] For More see THIS LINK>>> For More #2 see THIS LINK>>> For More #3 see THIS LINK>>> For More #4 see THIS LINK>>> [wpvideo 2BX66KKg] [wpvideo 1WVAQdmj] [wpvideo FbbWN6Dz] [wpvideo wOZobJ19] [wpvideo 7uPjtxtO] [wpvideo KzolcfNS] [wpvideo h3AixjhD] [wpvideo V5wB2w4x] [wpvideo cgGmWDTG] [wpvideo lSAYkmQl] [caption id="" attachment_8378"" align="" aligncenter"" width="" 308""] \$1 Trillion Dollars Lithium Ore Scheme[wpvideo WfIN4lum] "

The ""Open Grant Program"" Piggy Bank that was not so open:"

"It turned out to be very ironic that California ""grant winners"" were exactly equal to the amount of campaign financing and lobbyists bribes they paid out. If you did not pay the pig, you got no bacon! "

For More see THIS LINK>>>

The EPA ""look-the-other-way"" fix:"

"Some of the most toxic chemicals were pouring into the State and being made even more toxic by some ""winners"" of Department of Energy Money. The California environmental agency people were crunching bones and levying big fines for companies that were caught.. EXCEPT for the DOE ""winners"" who also happened to be huge campaign financiers.. for them, not so much! Tesla, Solyndra, Abound, and many, many more were some of the most toxic terrors yet regulators stayed away from them. "

For More see THIS LINK>>> For More #2 see THIS LINK>>> For More #3 see THIS LINK>>> For More #4 see THIS LINK>>> For More #5 see THIS LINK>>> For More #6 see THIS LINK>>>

The "'Upstanding-State-Leaders-Don't-Actually-Do-Crimes"' Fallacy:"

"It almost seems like running for office in Nevada, Michigan, Illinois and Washington is simply a public statement that you are a criminal. But the happy-go-lucky sunshine state has usually been ignored as a "'cesspool of political corruption"' ... not any more: Senator Leland Yee Arrested for organized crime and gun-running. State Senator Roderick Wright (D) convicted of 8 counts of voter fraud. Mayor of San Diego Bob Filner (D) given three months of house arrest, three years probation, and partial loss of his mayoral pension after pleading guilty to state charges of false imprisonment and battery. State Senator Roy Ashburn (R) of Bakersfield was arrested on two counts of driving under the influence of alcohol. He was sentenced to two days in jail and three years probation. Mayor Gavin Newsom of San Francisco for in-office sexual affairs with best friends wives on the Mayor's office desks. The Director of the California Obamacare program: James Brown , Jr. was arrested for organized crime during the building of the Obamacare website. Mayor of Inglewood Roosevelt F. Dorn (D) pleaded guilty on January 25, 2010, to a misdemeanor conflict-of-interest charge, He was placed on probation for two years, was fined \$2,000 and was barred from ever holding public office again. Member of the San Francisco Board of Supervisors from District 4 Ed Jew (D), was sentenced to 64 months in federal prison for extortion, and a year in county jail for perjury. The FBI's Bribery and Special Interest sting operation (BRISPEC, or "'Shrimpscam'") targeted corruption in the California legislature. Five convictions were obtained. California Senator Alan Robbins (D) resigned in advance of pleading guilty to federal racketeering charges in connection with insurance-industry bribes. California Senator Joseph B. Montoya (D) was convicted in April 1990 of racketeering, extortion and money laundering and was sentenced to 61 1/2 years in prison. California Senator Frank Hill (R) and his aid were found guilty of corruption and money laundering and sentenced to 46 months in prison. California Board of Equalization member Paul B. Carpenter (D) was found guilty of 11 counts of obstruction of justice and money laundering. California State Assemblyman Pat Nolan (R) served 29 months for bribery in the FBI's BRISPEC sting operation. Orange County County Assessor Andrew J. Hinshaw (R) was convicted of accepting bribes while Assessor of Orange County. He was serving in the US Congress at the time of his conviction. He served one year in prison. Sen. Ronald S. Calderon of Montebello pleaded not guilty after his indictment on charges of bribery and money laundering. And the list goes on, and on, and on... Senior investigators say that a large number of top California officials remain under investigation and that additional indictments are expected. Very well known Senate names have been mentioned. None of these idiot politicians ever seem to learn that the "'cover-up is always worse than the admission of the crime!'" ----- Participant writer/editors from The LA Times, The Sacramento Bee, The Fresno Bee, The San Francisco Chronicle, ProPublica and public Wiki citizen journalists contributed to this study. GH, J, GHJ, KTT, WS Note: Any resemblance to actual characters or events is entirely coincidental - "

Is the Tesla GigaFactory a ""FRONT"" to conduit cash to the 2016 Presidential Campaign like Tesla was for the Obama campaign? Is Tesla getting Taxpayer money from Nevada to kick back to campaigns

Report By Public Reporter-Tony S.

WHAT MIGHT SUCH A CAMPAIGN FUNDING CONDUITING SCHEME LOOK LIKE IN REAL LIFE?:

9/11/2014 8:30

Bad Rep - THE NATIONAL REVIEW Does the Democratic power broker Chaka Fattah run a crime family?

? Jillian Kay Melchior is a Thomas L. Rhodes Fellow for the Franklin Center for Government and Public Integrity. She is also a Senior Fellow at the Independent Women?s Forum.

"In late August, a great crack resounded across Philadelphia?s Democratic establishment when Gregory Naylor, a prominent political consultant, entered a guilty plea in federal court, implicating not only himself but also a U.S. congressman and several of his key allies in a sordid and complex fraud scheme involving taxpayer dollars and campaign finances. The plea memorandum mentions only ?Elected Official A,? but numerous details corroborate the identity of Representative Chaka Fattah, one of the most powerful men in Philadelphia. The son of a vocal black nationalist activist, Fattah cut his teeth in politics in the late 1970s when he was just 22, running with a friend for election to the city commission. Though he lost that election, Fattah learned a valuable lesson about political organization and spent the subsequent decades building one of the most effective political machines in

Philly, an effort that eventually won him not only local prestige but also ten terms in Congress."

Advertisement

"Naylor and Fattah have dominated the African-American faction of Philadelphia's Democratic party and have, for years, been major figures in the political discussion here, recognized for their ability to determine the outcome of races," says Dan Fee, a political consultant who has worked for Ed Rendell, the former governor, and other major Pennsylvania candidates. Furthermore, as a senior member of the House Appropriations Committee, which manages more than \$1 trillion in federal discretionary spending, Fattah excelled at bringing the federal bacon home to Philadelphia. "I think probably Chaka was more successful at delivering to his constituents than any number of congressmen – certainly [he is] the most successful in Philadelphia, or the Pennsylvania delegation, for that matter," says Carl Singley, the former dean of Temple University Law School. Now, after Naylor's guilty plea, many of Philadelphia's top Democrats see the congressman as vulnerable. A surprisingly juicy read, the plea memorandum details the alleged misdeeds not only of Fattah but also of several other political big shots who supported him. "My God, [the feds] must have had an awful lot of stuff for Greg Naylor to dime out Chaka Fattah just like that," says Jim Foster, the publisher of the Germantown Chronicle and a longtime observer of Philadelphia politics who mounted a symbolic challenge against Fattah two years ago, winning 1.4 percent of the vote as an independent. Singley says, "I have heard any number of people are exploring the possibility of running for that job," adding that he's saddened to see political and legal difficulties for a man long considered "one of our brightest stars." He continues: "I wouldn't call it a feeding frenzy, but the speculation is rampant, and all kinds of names are circulating, and all kinds of people are preening and walking around and are putting their toe in the water, so to speak. I think people are lining up because, inevitably, they think that seat is going to be available." The plea memorandum focuses in large part on an alleged fraud scheme that Fattah ran during and after his unsuccessful bid for mayor in 2007. An early front-runner, Fattah nonetheless found himself short of cash and sought to overturn Philadelphia's \$5,000-per-individual, \$20,000-per-political-committee campaign-contribution caps, but the state appeals court ruled against him. So, the plea memorandum says, Fattah "engaged in a scheme to violate the applicable Philadelphia campaign finance laws and contribution limits by secretly arranging for and receiving a \$1 million campaign contribution in the form of a personal loan from long-time friend and political supporter, Person D." The plea memorandum does not identify this million-dollar donor, but the Philadelphia Inquirer reported that "according to numerous sources, the loan was provided by Alfred Lord," who until 2013 was the chief executive of Sallie Mae, the quasi-governmental student-loan corporation. Lord did not return repeated phone calls from National Review Online, but according to the Inquirer, he had earlier donated \$100,000 to Fattah's mayoral exploratory committee. To obtain this unlawful campaign cash, the plea memorandum says, Fattah turned to another political consultant, "Person B," who served as the middleman, guaranteeing the \$1 million loan and funneling it to Naylor, who in turn spent \$600,000 of it on media buys and "street money" on Election Day. And, the Philadelphia Inquirer suggests, that middleman was also a hotshot: D.C. consultant Tom Lindenfeld, a former partner to David Axelrod who has most recently worked as a strategist for D.C. mayoral candidate Muriel Bowser. (Bowser quickly dropped Lindenfeld after Naylor entered his guilty plea. Lindenfeld did not return phone and LinkedIn messages, but Bowser tells NRO by e-mail: "I'm quite surprised by the allegations out of Philadelphia today. I have the highest expectation of transparency from my campaign team; Tom no longer has a role on the campaign.") Despite the alleged illicit loan, Fattah ended up losing his primary bid for mayor. To pay back the money, the plea deal says, Fattah used taxpayer dollars funneled through a not-for-profit, disguising the transactions with fake contracts."

Advertisement

"Enter the Educational Advancement Alliance (EAA), a not-for-profit that just happened to be run by Karen E. Nicholas, Representative Fattah's former director of constituent services. Thanks in large part to Fattah's congressional patronage, the not-for-profit had a steady flow of taxpayer money. Between 2009 and 2011, EAA received more than \$21 million from the federal government. Likewise, Department of Energy records released in 2010 show the not-for-profit receiving millions of dollars in funds from the U.S. Department of Education, the U.S. Department of Justice, the U.S. Department of Housing and Urban Development, and the National Aeronautics and Space Administration. EAA also received funding from Sallie Mae. At Fattah's bidding, the not-for-profit inked a fake contract with a tech firm friendly with the congressman, which in turn inked a fake contract with the political-consultant middleman, according to the plea memorandum. Essentially, it alleges, these

bogus deals allowed Fattah to steal \$600,000 in federal money and use it to pay off the secret campaign loan. EAA's number has been disconnected, and so were all numbers listed in records for its CEO, Nicholas, who also did not respond to an NRO interview request sent through LinkedIn. Fattah's office told National Review Online to email his spokesperson for a comment; his spokesperson did not answer the email before publication. After this article was published, a spokesperson e-mailed a comment from the congressman to NRO. "In all my years as a public servant I have never engaged in any illegal conduct," Fattah says.

"Beyond the campaign-financing fraud, Naylor also pleaded guilty to a separate scheme "initiated" by Fattah, according to the memorandum: Naylor admitted that he used Fattah's campaign funds to pay down the substantial student-loan debt of Chaka Fattah's son, Chaka Fattah Jr. The money was channeled through Naylor's consultancy, the plea memorandum says, and billed as work that Fattah Jr. never actually did. Altogether, the plea memorandum says, Naylor paid off \$22,663 in student-loan debt in 33 separate payments using Fattah's misappropriated campaign cash."

"Chaka Fattah Jr., who is 31 years old and has worked as an education and business consultant, was indicted in August on numerous fraud and tax charges. They include stealing from the Philadelphia School District, lying on tax returns, and obtaining bank loans using inaccurate information. Fattah Junior pleaded not guilty to these charges, and he has filed suit against the IRS seeking \$10 million in damages for harming his reputation and his business. "I am innocent of these allegations," Fattah Jr. tells NRO. "I am confident that after I have my day in court, the public will understand that I didn't break any laws. I'm looking forward to the opportunity to show that I have always been a legitimate businessman." Fattah Jr. declined to comment on the Naylor plea memorandum, noting that no related charges have been filed against him. Meanwhile, his father has remained unusually close-lipped, initially declining several interview requests from Philadelphia papers. "While Fattah has not responded to requests for comment from the Daily News, he has been busy tweeting, including four pictures he tweeted of himself with President Obama in a 24-hour period Monday and [Tuesday]," one local reporter wrote last week. Fattah did appear on local radio, but said regarding Naylor that he was "not going to respond to an allegation that hasn't been made." Finally speaking to the Inquirer yesterday, Fattah urged the media to focus on his positive accomplishments, saying: "We stand by our very declarative statement: Not today, not any day that I've been an elected official " this includes decades, all right? " have I been involved in illegal conduct." Fattah is up for reelection this fall, and the suggestion of scandal doesn't yet seem to be hurting his popularity among the electorate. His Republican challenger, Armond James, has barely registered among voters: On Twitter, his campaign has only 159 followers. The federal government has, to date, filed no charges against Representative Fattah. But Naylor's damning plea memorandum signals possible future prosecution, which would be forthcoming even as Fattah fends off challengers within his own party. For the congressman, it's no longer sunny in Philadelphia. " Jillian Kay Melchior is a Thomas L. Rhodes Fellow for the Franklin Center for Government and Public Integrity. She is also a Senior Fellow at the Independent Women's Forum."

"While the story is big and complex, the plot is simple: ""Bad people did bad things in order to steal taxpayer money and control government policy for personal gain"""

Here are some quick overviews to get you into the meat of the matter:

QUICK VERSION OPTION 1

"A Quick hit on ""what went down"" for the busy reader A Wiki-Optimized overview- Draft 2.2 - Keep checking back, this will undergo continuous review until we get it as simple as possible. 1. Some bad guys wanted some free money 2. Those guys created a panic, or took advantage of a panic, in order to re-direct your tax money. 3.

They put many billions of tax dollars in a special place in Washington. 4. Then they put one of their guys on top of the special place. 5. Then they had their guy on top hire the bad guy's friends to staff his office. 6. Then they created a fake contest to give your tax money away... 7. ...Except they made themselves the only winners and killed off any other contestants with help from famous politicians and White House staff. 8. Then some other bad guys said: ""me too.."" 9. So all of the sets of bad guys got your tax money in exchange for paying for political campaigns. 10. After they each grabbed their personal wads of cash they bankrupted the companies to avoid having to actually deliver the things they were supposed to. 11. They spent a good chunk of it on hookers and jet plane trips to the tropics and sold nothing you can afford, or use, so you, the public, got almost nothing out of it. So that's why you don't have enough teachers at your kids school. -----

Do you like that? Does that sound like what you wanted your tax money used for? Oh, You're not happy about it? Well, taxpayer, it is kinda your fault this happened! Next time. Only vote for the candidates that ""guarantee and warrant that they will pass laws that outlaw lobbying and revolving doors"" Don't settle for a ""promise"". A political promise lasts as long as the next donor party, tomorrow. Demand that your candidate for Mayor, Senate, Congress, Assembly, President, or whatever: ""guarantee and warrant"" IN WRITING (so they are legally liable) to do that. If you don't, you are GUARANTEED to go through all of the economic problems of the last 6 years all over again, only worse. All of the parties did this with the DC kick-back culture. Fix it or repeat the past. If you take on just those two issues: Outlawing ALL Lobbying and Revolving Door kickback schemes, you can pretty much fix Washington, DC. "

Were John Doerr and Elon Musk copying the FDR BUSINESS PLOT?

The Shocking TRUE STORY of Marine Corps Major General Smedley Butler and The Attempted Overthrow of the U.S. Government

"ONE OF THE MOST COVERED UP STORIES IN AMERICAN HISTORY. CHARACTER ASSASSINATED FOR TELLING THE TRUTH ABOUT A MASSIVE CONSPIRACY, HISTORY SHOWS ALL OF HIS REVELATIONS WERE TRUE. HAS THIS SAME THING HAPPENED ""MORE RECENTLY"" WITH OTHER BILLIONAIRES?: Smedley Darlington Butler[1] (July 30, 1881 ? June 21, 1940) was a United States Marine Corps major general, the highest rank authorized at that time, and at the time of his death the most decorated Marine in U.S. history. During his 34-year career as a Marine, he participated in military actions in the Philippines, China, in Central America and the Caribbean during the Banana Wars, and France in World War I. Butler is well known for having later become an outspoken critic of U.S. wars and their consequences, as well as exposing ""the Business Plot"", a plan, by a secret billionaires coalition, to overthrow the U.S. government. Many say it is the same thing that a group of Silicon Valley billionaires have tried with Washington, using Google news and information manipulation, in recent times. In November 1934, Butler claimed the existence of a political conspiracy by billionaire business leaders to overthrow President Roosevelt, a series of allegations that came to be known in the media as the Business Plot.[59][60] A special committee of the House of Representatives headed by Representatives John W. McCormack of Massachusetts and Samuel Dickstein of New York, who was later alleged to have been a paid agent of the NKVD,[61] heard his testimony in secret.[62] The McCormack-Dickstein committee was a precursor to the House Committee on Un-American Activities. In November 1934, Butler told the committee that one Gerald P. MacGuire told him that a group of billionaire businessmen, supposedly backed by a private army of 500,000 ex-soldiers and others, intended to establish a fascist dictatorship. Butler had been asked to lead it, he said, by MacGuire, who was a bond salesman with Grayson M?P Murphy & Co. (KIND OF LIKE GOLDMAN SACHS) The New York Times reported that Butler had told friends that General Hugh S. Johnson, a former official with the National Recovery Administration, was to be installed as dictator, and that the J.P. Morgan banking firm (WHO< EVEN TODAY< IS STILL BEING CHARGED WITH CRIMES) was behind the plot. Butler told Congress that MacGuire had told him the attempted coup was backed by three million dollars, and that the 500,000 men were probably to be assembled in Washington, D.C. the following year. All the parties alleged to be involved publicly said there was no truth in the story, calling it a joke and a fantasy.[62] In its report, the committee stated that it was unable to confirm Butler's statements other than the conversations with MacGuire.[63] No prosecutions or further investigations followed, and historians have questioned whether or not a coup was actually contemplated. Historians have not reported any independent evidence apart from Butler's report on what MacGuire told him. Schmidt says Maguire was an ""inconsequential trickster.""[64][65][66][67] The news media (ie: GOOGLE) dismissed the plot, with a New York Times editorial characterizing it as a ""gigantic hoax"".[68] When the committee's final report was released, the Times said the committee ""purported to report that a two-month investigation had convinced it that General Butler's story of a Fascist march on Washington was alarmingly true"" and ""... also alleged that definite proof had been found that the much publicized Fascist march on Washington, which was to have been led by Major. Gen. Smedley D. Butler, retired, according to testimony at a hearing, was actually contemplated"".[69] The individuals involved all denied the existence of a plot, despite evidence to the contrary. The media ridiculed the allegations, although a final report by a special House of Representatives Committee confirmed some of Butler's accusations [70] [n 1][n 2] The McCormack-Dickstein Committee confirmed some of Butler's testimony in its final report. ""In the last few

weeks of the committee's official life it received evidence showing that certain persons had made an attempt to establish a fascist organization in this country...There is no question that these attempts were discussed, were planned, and might have been placed in execution when and if the financial backers (AKA: ""the billionaires'") deemed it expedient.""[70] [n 1][n 2] "

""If"" a modern version of the Smedley Butler ""BUSINESS PLOT"" take-over of Washington has, or had, been attempted, Who do you suspect was behind it, theoretically

"War Is a Racket is the title of two works, a speech and a booklet, by retired United States Marine Corps Major General and two time Medal of Honor recipient Smedley D. Butler. In them, Butler frankly discusses from his experience as a career military officer how business interests commercially benefit (war profiteering) from warfare. After his retirement from the Marine Corps, Butler made a nationwide tour in the early 1930s giving his

speech ""War is a Racket"". The speech was so well received that he wrote a longer version as a small book with the same title that was published in 1935 by Round Table Press, Inc., of New York. The booklet was also condensed in Reader's Digest as a book supplement which helped popularize his message. In an introduction to the Reader's Digest version, Lowell Thomas, the ""as told to"" author of Butler's oral autobiographical adventures, praised Butler's ""moral as well as physical courage"". [1] THIS ARTICLE DESCRIBES WHAT HAPPENED IN THE AFGHANISTAN AND IRAQ AGHANI-SCAM SITUATIONS"

Written by Two-Time Congressional Medal of Honor Recipient

Major General Smedley D. Butler

"USMC, Retired"

CHAPTER ONE

WAR IS A RACKET

WAR is a racket. It always has been.

" It is possibly the oldest, easily the most profitable, surely the most vicious. It is the only one international in scope. It is the only one in which the profits are reckoned in dollars and the losses in lives."

" A racket is best described, I believe, as something that is not what it seems to the majority of the people. Only a small ""inside"" group knows what it is about. It is conducted for the benefit of the very few, at the expense of the very many. Out of war a few people make huge fortunes."

" In the World War [I] a mere handful garnered the profits of the conflict. At least 21,000 new millionaires and billionaires were made in the United States during the World War. That many admitted their huge blood gains in their income tax returns. How many other war millionaires falsified their tax returns no one knows."

" How many of these war millionaires shouldered a rifle? How many of them dug a trench? How many of them knew what it meant to go hungry in a rat-infested dug-out? How many of them spent sleepless, frightened nights, ducking shells and shrapnel and machine gun bullets? How many of them parried a bayonet thrust of an enemy? How many of them were wounded or killed in battle

" Out of war nations acquire additional territory, if they are victorious. They just take it. This newly acquired territory promptly is exploited by the few ? the selfsame few who wrung dollars out of blood in the war. The general public shoulders the bill."

And what is this bill?

This bill renders a horrible accounting. Newly placed gravestones. Mangled bodies. Shattered minds. Broken hearts and homes. Economic instability. Depression and all its attendant miseries. Back-breaking taxation for

generations and generations.

"For a great many years, as a soldier, I had a suspicion that war was a racket; not until I retired to civil life did I fully realize it. Now that I see the international war clouds gathering, as they are today, I must face it and speak out."

" Again they are choosing sides. France and Russia met and agreed to stand side by side. Italy and Austria hurried to make a similar agreement. Poland and Germany cast sheep's eyes at each other, forgetting for the nonce [one unique occasion], their dispute over the Polish Corridor. "

"The assassination of King Alexander of Yugoslavia [Yugoslavia] complicated matters. Yugoslavia and Hungary, long bitter enemies, were almost at each other's throats. Italy was ready to jump in. But France was waiting. So was Czechoslovakia. All of them are looking ahead to war. Not the people ? not those who fight and pay and die ? only those who foment wars and remain safely at home to profit."

"There are 40,000,000 men under arms in the world today, and our statesmen and diplomats have the temerity to say that war is not in the making."

"Hell's bells! Are these 40,000,000 men being trained to be dancers

"Not in Italy, to be sure. Premier Mussolini knows what they are being trained for. He, at least, is frank enough to speak out. Only the other day, Il Duce in ""International Conciliation,"" the publication of the Carnegie Endowment for International Peace, said:"

""And above all, Fascism, the more it considers and observes the future and the development of humanity quite apart from political considerations of the moment, believes neither in the possibility nor the utility of perpetual peace... War alone brings up to its highest tension all human energy and puts the stamp of nobility upon the people who have the courage to meet it.""

"Undoubtedly Mussolini means exactly what he says. His well-trained army, his great fleet of planes, and even his navy are ready for war ? anxious for it, apparently. His recent stand at the side of Hungary in the latter's dispute with Yugoslavia showed that. And the hurried mobilization of his troops on the Austrian border after the assassination of Dollfuss showed it too. There are others in Europe too whose sabre rattling presages war, sooner or later."

"Herr Hitler, with his rearming Germany and his constant demands for more and more arms, is an equal if not greater menace to peace. France only recently increased the term of military service for its youth from a year to eighteen months."

"Yes, all over, nations are camping in their arms. The mad dogs of Europe are on the loose. In the Orient the maneuvering is more adroit. Back in 1904, when Russia and Japan fought, we kicked out our old friends the Russians and backed Japan. Then our very generous international bankers were financing Japan. Now the trend is to poison us against the Japanese. What does the ""open door"" policy to China mean to us? Our trade with China is about \$90,000,000 a year. Or the Philippine Islands? We have spent about \$600,000,000 in the Philippines in thirty-five years and we (our bankers and industrialists and speculators) have private investments there of less than \$200,000,000."

"Then, to save that China trade of about \$90,000,000, or to protect these private investments of less than \$200,000,000 in the Philippines, we would be all stirred up to hate Japan and go to war ? a war that might well cost us tens of billions of dollars, hundreds of thousands of lives of Americans, and many more hundreds of thousands of physically maimed and mentally unbalanced men."

"Of course, for this loss, there would be a compensating profit ? fortunes would be made. Millions and billions

of dollars would be piled up. By a few. Munitions makers. Bankers. Ship builders. Manufacturers. Meat packers. Speculators. They would fare well."

"Yes, they are getting ready for another war. Why shouldn't they? It pays high dividends."

"But what does it profit the men who are killed? What does it profit their mothers and sisters, their wives and their sweethearts? What does it profit their children

What does it profit anyone except the very few to whom war means huge profits?

"Yes, and what does it profit the nation

"Take our own case. Until 1898 we didn't own a bit of territory outside the mainland of North America. At that time our national debt was a little more than \$1,000,000,000. Then we became ""internationally minded."" We forgot, or shunted aside, the advice of the Father of our country. We forgot George Washington's warning about ""entangling alliances."" We went to war. We acquired outside territory. At the end of the World War period, as a direct result of our fiddling in international affairs, our national debt had jumped to over \$25,000,000,000. Our total favorable trade balance during the twenty-five-year period was about \$24,000,000,000. Therefore, on a purely bookkeeping basis, we ran a little behind year for year, and that foreign trade might well have been ours without the wars."

"It would have been far cheaper (not to say safer) for the average American who pays the bills to stay out of foreign entanglements. For a very few this racket, like bootlegging and other underworld rackets, brings fancy profits, but the cost of operations is always transferred to the people ? who do not profit."

CHAPTER TWO

WHO MAKES THE PROFITS?

"The World War, rather our brief participation in it, has cost the United States some \$52,000,000,000. Figure it out. That means \$400 to every American man, woman, and child. And we haven't paid the debt yet. We are paying it, our children will pay it, and our children's children probably still will be paying the cost of that war."

"The normal profits of a business concern in the United States are six, eight, ten, and sometimes twelve percent. But war-time profits ? ah! that is another matter ? twenty, sixty, one hundred, three hundred, and even eighteen hundred per cent ? the sky is the limit. All that traffic will bear. Uncle Sam has the money. Let's get it."

"Of course, it isn't put that crudely in war time. It is dressed into speeches about patriotism, love of country, and ""we must all put our shoulders to the wheel,"" but the profits jump and leap and skyrocket ? and are safely pocketed. Let's just take a few examples:"

"Take our friends the du Ponts, the powder people ? didn't one of them testify before a Senate committee recently that their powder won the war? Or saved the world for democracy? Or something? How did they do in the war? They were a patriotic corporation. Well, the average earnings of the du Ponts for the period 1910 to 1914 were \$6,000,000 a year. It wasn't much, but the du Ponts managed to get along on it. Now let's look at their average yearly profit during the war years, 1914 to 1918. Fifty-eight million dollars a year profit we find! Nearly ten times that of normal times, and the profits of normal times were pretty good. An increase in profits of more than 950 per cent."

"Take one of our little steel companies that patriotically shunted aside the making of rails and girders and bridges to manufacture war materials. Well, their 1910-1914 yearly earnings averaged \$6,000,000. Then came the war. And, like loyal citizens, Bethlehem Steel promptly turned to munitions making. Did their profits jump ? or did they let Uncle Sam in for a bargain? Well, their 1914-1918 average was \$49,000,000 a year!"

"Or, let's take United States Steel. The normal earnings during the five-year period prior to the war were \$105,000,000 a year. Not bad. Then along came the war and up went the profits. The average yearly profit for the period 1914-1918 was \$240,000,000. Not bad."

"There you have some of the steel and powder earnings. Let's look at something else. A little copper, perhaps. That always does well in war times."

"Anaconda, for instance. Average yearly earnings during the pre-war years 1910-1914 of \$10,000,000. During the war years 1914-1918 profits leaped to \$34,000,000 per year."

"Or Utah Copper. Average of \$5,000,000 per year during the 1910-1914 period. Jumped to an average of \$21,000,000 yearly profits for the war period."

"Let's group these five, with three smaller companies. The total yearly average profits of the pre-war period 1910-1914 were \$137,480,000. Then along came the war. The average yearly profits for this group skyrocketed to \$408,300,000."

A little increase in profits of approximately 200 per cent.

Does war pay? It paid them. But they aren't the only ones. There are still others. Let's take leather.

"For the three-year period before the war the total profits of Central Leather Company were \$3,500,000. That was approximately \$1,167,000 a year. Well, in 1916 Central Leather returned a profit of \$15,000,000, a small increase of 1,100 per cent. That's all. The General Chemical Company averaged a profit for the three years before the war of a little over \$800,000 a year. Came the war, and the profits jumped to \$12,000,000. a leap of 1,400 per cent."

"International Nickel Company ? and you can't have a war without nickel ? showed an increase in profits from a mere average of \$4,000,000 a year to \$73,000,000 yearly. Not bad? An increase of more than 1,700 per cent."

"American Sugar Refining Company averaged \$2,000,000 a year for the three years before the war. In 1916 a profit of \$6,000,000 was recorded."

"Listen to Senate Document No. 259. The Sixty-Fifth Congress, reporting on corporate earnings and government revenues. Considering the profits of 122 meat packers, 153 cotton manufacturers, 299 garment makers, 49 steel plants, and 340 coal producers during the war. Profits under 25 per cent were exceptional. For instance the coal companies made between 100 per cent and 7,856 per cent on their capital stock during the war. The Chicago packers doubled and tripled their earnings."

"And let us not forget the bankers who financed the great war. If anyone had the cream of the profits it was the bankers. Being partnerships rather than incorporated organizations, they do not have to report to stockholders. And their profits were as secret as they were immense. How the bankers made their millions and their billions I do not know, because those little secrets never become public ? even before a Senate investigatory body."

But here's how some of the other patriotic industrialists and speculators chiseled their way into war profits.

"Take the shoe people. They like war. It brings business with abnormal profits. They made huge profits on sales abroad to our allies. Perhaps, like the munitions manufacturers and armament makers, they also sold to the enemy. For a dollar is a dollar whether it comes from Germany or from France. But they did well by Uncle Sam too. For instance, they sold Uncle Sam 35,000,000 pairs of hobnailed service shoes. There were 4,000,000 soldiers. Eight pairs, and more, to a soldier. My regiment during the war had only one pair to a soldier. Some of these shoes probably are still in existence. They were good shoes. But when the war was over Uncle Sam has a matter of

25,000,000 pairs left over. Bought ? and paid for. Profits recorded and pocketed."

"There was still lots of leather left. So the leather people sold your Uncle Sam hundreds of thousands of McClellan saddles for the cavalry. But there wasn't any American cavalry overseas! Somebody had to get rid of this leather, however. Somebody had to make a profit in it ? so we had a lot of McClellan saddles. And we probably have those yet."

"Also somebody had a lot of mosquito netting. They sold your Uncle Sam 20,000,000 mosquito nets for the use of the soldiers overseas. I suppose the boys were expected to put it over them as they tried to sleep in muddy trenches ? one hand scratching cooties on their backs and the other making passes at scurrying rats. Well, not one of these mosquito nets ever got to France!"

"Anyhow, these thoughtful manufacturers wanted to make sure that no soldier would be without his mosquito net, so 40,000,000 additional yards of mosquito netting were sold to Uncle Sam."

"There were pretty good profits in mosquito netting in those days, even if there were no mosquitoes in France. I suppose, if the war had lasted just a little longer, the enterprising mosquito netting manufacturers would have sold your Uncle Sam a couple of consignments of mosquitoes to plant in France so that more mosquito netting would be in order."

"Airplane and engine manufacturers felt they, too, should get their just profits out of this war. Why not? Everybody else was getting theirs. So \$1,000,000,000 ? count them if you live long enough ? was spent by Uncle Sam in building airplane engines that never left the ground! Not one plane, or motor, out of the billion dollars worth ordered, ever got into a battle in France. Just the same the manufacturers made their little profit of 30, 100, or perhaps 300 per cent."

Undershirts for soldiers cost 14¢ to make and Uncle Sam paid 30¢ to 40¢ each for them ? a nice little profit for the undershirt manufacturer. And the stocking manufacturer and the uniform manufacturers and the cap manufacturers and the steel helmet manufacturers ? all got theirs.

"Why, when the war was over some 4,000,000 sets of equipment ? knapsacks and the things that go to fill them ? crammed warehouses on this side. Now they are being scrapped because the regulations have changed the contents. But the manufacturers collected their wartime profits on them ? and they will do it all over again the next time."

There were lots of brilliant ideas for profit making during the war.

"One very versatile patriot sold Uncle Sam twelve dozen 48-inch wrenches. Oh, they were very nice wrenches. The only trouble was that there was only one nut ever made that was large enough for these wrenches. That is the one that holds the turbines at Niagara Falls. Well, after Uncle Sam had bought them and the manufacturer had pocketed the profit, the wrenches were put on freight cars and shunted all around the United States in an effort to find a use for them. When the Armistice was signed it was indeed a sad blow to the wrench manufacturer. He was just about to make some nuts to fit the wrenches. Then he planned to sell these, too, to your Uncle Sam."

"Still another had the brilliant idea that colonels shouldn't ride in automobiles, nor should they even ride on horseback. One has probably seen a picture of Andy Jackson riding in a buckboard. Well, some 6,000 buckboards were sold to Uncle Sam for the use of colonels! Not one of them was used. But the buckboard manufacturer got his war profit."

"The shipbuilders felt they should come in on some of it, too. They built a lot of ships that made a lot of profit. More than \$3,000,000,000 worth. Some of the ships were all right. But \$635,000,000 worth of them were made of wood and wouldn't float! The seams opened up ? and they sank. We paid for them, though. And somebody pocketed the profits."

"It has been estimated by statisticians and economists and researchers that the war cost your Uncle Sam \$52,000,000,000. Of this sum, \$39,000,000,000 was expended in the actual war itself. This expenditure yielded \$16,000,000,000 in profits. That is how the 21,000 billionaires and millionaires got that way. This \$16,000,000,000 profits is not to be sneezed at. It is quite a tidy sum. And it went to a very few."

"The Senate (Nye) committee probe of the munitions industry and its wartime profits, despite its sensational disclosures, hardly has scratched the surface."

"Even so, it has had some effect. The State Department has been studying ""for some time"" methods of keeping out of war. The War Department suddenly decides it has a wonderful plan to spring. The Administration names a committee ? with the War and Navy Departments ably represented under the chairmanship of a Wall Street speculator ? to limit profits in war time. To what extent isn't suggested. Hmmm. Possibly the profits of 300 and 600 and 1,600 per cent of those who turned blood into gold in the World War would be limited to some smaller figure."

"Apparently, however, the plan does not call for any limitation of losses ? that is, the losses of those who fight the war. As far as I have been able to ascertain there is nothing in the scheme to limit a soldier to the loss of but one eye, or one arm, or to limit his wounds to one or two or three. Or to limit the loss of life."

"There is nothing in this scheme, apparently, that says not more than 12 per cent of a regiment shall be wounded in battle, or that not more than 7 per cent in a division shall be killed."

"Of course, the committee cannot be bothered with such trifling matters."

CHAPTER THREE

WHO PAYS THE BILLS?

"Who provides the profits ? these nice little profits of 20, 100, 300, 1,500 and 1,800 per cent? We all pay them ? in taxation. We paid the bankers their profits when we bought Liberty Bonds at \$100.00 and sold them back at \$84 or \$86 to the bankers. These bankers collected \$100 plus. It was a simple manipulation. The bankers control the security marts. It was easy for them to depress the price of these bonds. Then all of us ? the people ? got frightened and sold the bonds at \$84 or \$86. The bankers bought them. Then these same bankers stimulated a boom and government bonds went to par ? and above. Then the bankers collected their profits."

But the soldier pays the biggest part of the bill.

"If you don't believe this, visit the American cemeteries on the battlefields abroad. Or visit any of the veteran's hospitals in the United States. On a tour of the country, in the midst of which I am at the time of this writing, I have visited eighteen government hospitals for veterans. In them are a total of about 50,000 destroyed men ? men who were the pick of the nation eighteen years ago. The very able chief surgeon at the government hospital; at Milwaukee, where there are 3,800 of the living dead, told me that mortality among veterans is three times as great as among those who stayed at home."

"Boys with a normal viewpoint were taken out of the fields and offices and factories and classrooms and put into the ranks. There they were remolded; they were made over; they were made to ""about face""; to regard murder as the order of the day. They were put shoulder to shoulder and, through mass psychology, they were entirely changed. We used them for a couple of years and trained them to think nothing at all of killing or of being killed."

"Then, suddenly, we discharged them and told them to make another ""about face"" ! This time they had to do their own readjustment, sans [without] mass psychology, sans officers' aid and advice and sans nation-wide propaganda. We didn't need them any more. So we scattered them about without any ""three-minute"" or

"Liberty Loan" speeches or parades. Many, too many, of these fine young boys are eventually destroyed, mentally, because they could not make that final "about face" alone."

"In the government hospital in Marion, Indiana, 1,800 of these boys are in pens! Five hundred of them in a barracks with steel bars and wires all around outside the buildings and on the porches. These already have been mentally destroyed. These boys don't even look like human beings. Oh, the looks on their faces! Physically, they are in good shape; mentally, they are gone."

"There are thousands and thousands of these cases, and more and more are coming in all the time. The tremendous excitement of the war, the sudden cutting off of that excitement ? the young boys couldn't stand it."

"That's a part of the bill. So much for the dead ? they have paid their part of the war profits. So much for the mentally and physically wounded ? they are paying now their share of the war profits. But the others paid, too ? they paid with heartbreaks when they tore themselves away from their firesides and their families to don the uniform of Uncle Sam ? on which a profit had been made. They paid another part in the training camps where they were regimented and drilled while others took their jobs and their places in the lives of their communities. They paid for it in the trenches where they shot and were shot; where they were hungry for days at a time; where they slept in the mud and the cold and in the rain ? with the moans and shrieks of the dying for a horrible lullaby."

But don't forget ? the soldier paid part of the dollars and cents bill too.

"Up to and including the Spanish-American War, we had a prize system, and soldiers and sailors fought for money. During the Civil War they were paid bonuses, in many instances, before they went into service. The government, or states, paid as high as \$1,200 for an enlistment. In the Spanish-American War they gave prize money. When we captured any vessels, the soldiers all got their share ? at least, they were supposed to. Then it was found that we could reduce the cost of wars by taking all the prize money and keeping it, but conscripting [drafting] the soldier anyway. Then soldiers couldn't bargain for their labor, Everyone else could bargain, but the soldier couldn't. "

"Napoleon once said, "All men are enamored of decorations...they positively hunger for them.""

"So by developing the Napoleonic system ? the medal business ? the government learned it could get soldiers for less money, because the boys liked to be decorated. Until the Civil War there were no medals. Then the Congressional Medal of Honor was handed out. It made enlistments easier. After the Civil War no new medals were issued until the Spanish-American War."

"In the World War, we used propaganda to make the boys accept conscription. They were made to feel ashamed if they didn't join the army."

"So vicious was this war propaganda that even God was brought into it. With few exceptions our clergymen joined in the clamor to kill, kill, kill. To kill the Germans. God is on our side...it is His will that the Germans be killed."

"And in Germany, the good pastors called upon the Germans to kill the allies...to please the same God. That was a part of the general propaganda, built up to make people war conscious and murder conscious."

"Beautiful ideals were painted for our boys who were sent out to die. This was the "war to end all wars." This was the "war to make the world safe for democracy." No one mentioned to them, as they marched away, that their going and their dying would mean huge war profits. No one told these American soldiers that they might be shot down by bullets made by their own brothers here. No one told them that the ships on which they were going to cross might be torpedoed by submarines built with United States patents. They were just told it was to be a "glorious adventure.""

"Thus, having stuffed patriotism down their throats, it was decided to make them help pay for the war, too. So, we gave them the large salary of \$30 a month."

"All they had to do for this munificent sum was to leave their dear ones behind, give up their jobs, lie in swampy trenches, eat canned willy (when they could get it) and kill and kill and kill...and be killed."

But wait!

"Half of that wage (just a little more than a riveter in a shipyard or a laborer in a munitions factory safe at home made in a day) was promptly taken from him to support his dependents, so that they would not become a charge upon his community. Then we made him pay what amounted to accident insurance ? something the employer pays for in an enlightened state ? and that cost him \$6 a month. He had less than \$9 a month left."

"Then, the most crowning insolence of all ? he was virtually blackjacked into paying for his own ammunition, clothing, and food by being made to buy Liberty Bonds. Most soldiers got no money at all on pay days."

"We made them buy Liberty Bonds at \$100 and then we bought them back ? when they came back from the war and couldn't find work ? at \$84 and \$86. And the soldiers bought about \$2,000,000,000 worth of these bonds!"

"Yes, the soldier pays the greater part of the bill. His family pays too. They pay it in the same heart-break that he does. As he suffers, they suffer. At nights, as he lay in the trenches and watched shrapnel burst about him, they lay home in their beds and tossed sleeplessly ? his father, his mother, his wife, his sisters, his brothers, his sons, and his daughters."

"When he returned home minus an eye, or minus a leg or with his mind broken, they suffered too ? as much as and even sometimes more than he. Yes, and they, too, contributed their dollars to the profits of the munitions makers and bankers and shipbuilders and the manufacturers and the speculators made. They, too, bought Liberty Bonds and contributed to the profit of the bankers after the Armistice in the hocus-pocus of manipulated Liberty Bond prices."

And even now the families of the wounded men and of the mentally broken and those who never were able to readjust themselves are still suffering and still paying.

CHAPTER FOUR

HOW TO SMASH THIS RACKET!

"WELL, it's a racket, all right."

A few profit ? and the many pay. But there is a way to stop it. You can't end it by disarmament conferences. You can't eliminate it by peace parleys at Geneva. Well-meaning but impractical groups can't wipe it out by resolutions. It can be smashed effectively only by taking the profit out of war.

"The only way to smash this racket is to conscript capital and industry and labor before the nations manhood can be conscripted. One month before the Government can conscript the young men of the nation ? it must conscript capital and industry and labor. Let the officers and the directors and the high-powered executives of our armament factories and our munitions makers and our shipbuilders and our airplane builders and the manufacturers of all the other things that provide profit in war time as well as the bankers and the speculators, be conscripted ? to get \$30 a month, the same wage as the lads in the trenches get."

"Let the workers in these plants get the same wages ? all the workers, all presidents, all executives, all directors, all managers, all bankers

"yes, and all generals and all admirals and all officers and all politicians and all government office holders ? everyone in the nation be restricted to a total monthly income not to exceed that paid to the soldier in the trenches!"

Let all these kings and tycoons and masters of business and all those workers in industry and all our senators and governors and majors pay half of their monthly \$30 wage to their families and pay war risk insurance and buy Liberty Bonds.

Why shouldn't they?

They aren't running any risk of being killed or of having their bodies mangled or their minds shattered. They aren't sleeping in muddy trenches. They aren't hungry. The soldiers are!

"Give capital and industry and labor thirty days to think it over and you will find, by that time, there will be no war. That will smash the war racket ? that and nothing else. "

"Maybe I am a little too optimistic. Capital still has some say. So capital won't permit the taking of the profit out of war until the people ? those who do the suffering and still pay the price ? make up their minds that those they elect to office shall do their bidding, and not that of the profiteers."

Another step necessary in this fight to smash the war racket is the limited plebiscite to determine whether a war should be declared. A plebiscite not of all the voters but merely of those who would be called upon to do the fighting and dying. There wouldn't be very much sense in having a 76-year-old president of a munitions factory or the flat-footed head of an international banking firm or the cross-eyed manager of a uniform manufacturing plant ? all of whom see visions of tremendous profits in the event of war ? voting on whether the nation should go to war or not. They never would be called upon to shoulder arms ? to sleep in a trench and to be shot. Only those who would be called upon to risk their lives for their country should have the privilege of voting to determine whether the nation should go to war.

"There is ample precedent for restricting the voting to those affected. Many of our states have restrictions on those permitted to vote. In most, it is necessary to be able to read and write before you may vote. In some, you must own property. It would be a simple matter each year for the men coming of military age to register in their communities as they did in the draft during the World War and be examined physically. Those who could pass and who would therefore be called upon to bear arms in the event of war would be eligible to vote in a limited plebiscite. They should be the ones to have the power to decide ? and not a Congress few of whose members are within the age limit and fewer still of whom are in physical condition to bear arms. Only those who must suffer should have the right to vote."

A third step in this business of smashing the war racket is to make certain that our military forces are truly forces for defense only.

"At each session of Congress the question of further naval appropriations comes up. The swivel-chair admirals of Washington (and there are always a lot of them) are very adroit lobbyists. And they are smart. They don't shout that ""We need a lot of battleships to war on this nation or that nation."" Oh no. First of all, they let it be known that America is menaced by a great naval power. Almost any day, these admirals will tell you, the great fleet of this supposed enemy will strike suddenly and annihilate 125,000,000 people. Just like that. Then they begin to cry for a larger navy. For what? To fight the enemy? Oh my, no. Oh, no. For defense purposes only."

"Then, incidentally, they announce maneuvers in the Pacific. For defense. Uh, huh."

"The Pacific is a great big ocean. We have a tremendous coastline on the Pacific. Will the maneuvers be off the coast, two or three hundred miles? Oh, no. The maneuvers will be two thousand, yes, perhaps even thirty-five hundred miles, off the coast."

"The Japanese, a proud people, of course will be pleased beyond expression to see the united States fleet so close to Nippon's shores. Even as pleased as would be the residents of California were they to dimly discern through the morning mist, the Japanese fleet playing at war games off Los Angeles."

"The ships of our navy, it can be seen, should be specifically limited, by law, to within 200 miles of our coastline. Had that been the law in 1898 the Maine would never have gone to Havana Harbor. She never would have been blown up. There would have been no war with Spain with its attendant loss of life. Two hundred miles is ample, in the opinion of experts, for defense purposes. Our nation cannot start an offensive war if its ships can't go further than 200 miles from the coastline. Planes might be permitted to go as far as 500 miles from the coast for purposes of reconnaissance. And the army should never leave the territorial limits of our nation."

To summarize: Three steps must be taken to smash the war racket.

* We must take the profit out of war.

* We must permit the youth of the land who would bear arms to decide whether or not there should be war.

* We must limit our military forces to home defense purposes.

CHAPTER FIVE

TO HELL WITH WAR!

"I am not a fool as to believe that war is a thing of the past. I know the people do not want war, but there is no use in saying we cannot be pushed into another war."

"Looking back, Woodrow Wilson was re-elected president in 1916 on a platform that he had ""kept us out of war"" and on the implied promise that he would ""keep us out of war."" Yet, five months later he asked Congress to declare war on Germany."

"In that five-month interval the people had not been asked whether they had changed their minds. The 4,000,000 young men who put on uniforms and marched or sailed away were not asked whether they wanted to go forth to suffer and die."

Then what caused our government to change its mind so suddenly?

Money.

"An allied commission, it may be recalled, came over shortly before the war declaration and called on the President. The President summoned a group of advisers. The head of the commission spoke. Stripped of its diplomatic language, this is what he told the President and his group:"

""There is no use kidding ourselves any longer. The cause of the allies is lost. We now owe you (American bankers, American munitions makers, American manufacturers, American speculators, American exporters) five or six billion dollars."

"If we lose (and without the help of the United States we must lose) we, England, France and Italy, cannot pay back this money...and Germany won't."

"So...""

"Had secrecy been outlawed as far as war negotiations were concerned, and had the press been invited to be

present at that conference, or had radio been available to broadcast the proceedings, America never would have entered the World War. But this conference, like all war discussions, was shrouded in utmost secrecy. When our boys were sent off to war they were told it was a ""war to make the world safe for democracy"" and a ""war to end all wars."" "

"Well, eighteen years after, the world has less of democracy than it had then. Besides, what business is it of ours whether Russia or Germany or England or France or Italy or Austria live under democracies or monarchies? Whether they are Fascists or Communists? Our problem is to preserve our own democracy."

"And very little, if anything, has been accomplished to assure us that the World War was really the war to end all wars."

"Yes, we have had disarmament conferences and limitations of arms conferences. They don't mean a thing. One has just failed; the results of another have been nullified. We send our professional soldiers and our sailors and our politicians and our diplomats to these conferences. And what happens

"The professional soldiers and sailors don't want to disarm. No admiral wants to be without a ship. No general wants to be without a command. Both mean men without jobs. They are not for disarmament. They cannot be for limitations of arms. And at all these conferences, lurking in the background but all-powerful, just the same, are the sinister agents of those who profit by war. They see to it that these conferences do not disarm or seriously limit armaments."

The chief aim of any power at any of these conferences has not been to achieve disarmament to prevent war but rather to get more armament for itself and less for any potential foe.

"There is only one way to disarm with any semblance of practicability. That is for all nations to get together and scrap every ship, every gun, every rifle, every tank, every war plane. Even this, if it were possible, would not be enough."

"The next war, according to experts, will be fought not with battleships, not by artillery, not with rifles and not with machine guns. It will be fought with deadly chemicals and gases."

"Secretly each nation is studying and perfecting newer and ghastlier means of annihilating its foes wholesale. Yes, ships will continue to be built, for the shipbuilders must make their profits. And guns still will be manufactured and powder and rifles will be made, for the munitions makers must make their huge profits. And the soldiers, of course, must wear uniforms, for the manufacturer must make their war profits too."

But victory or defeat will be determined by the skill and ingenuity of our scientists.

"If we put them to work making poison gas and more and more fiendish mechanical and explosive instruments of destruction, they will have no time for the constructive job of building greater prosperity for all peoples. By putting them to this useful job, we can all make more money out of peace than we can out of war ? even the munitions makers."

" So...I say,"

TO HELL WITH WAR!

This also describes the Afghan war and lithium mining scam deals for John Doer and Elon Musk's operations.

"SEE THIS LINK TO THE MORE RECENT REFERENCE <http://www.youtube.com/watch?v=oMEI8bnbw1o> <http://www.youtube.com/watch?v=hTdx6vEUtIA> <http://www.youtube.com/watch?v=7RD-ISImWgw> The Eric

Schmidt Worse-Case Scenario Theory: - There was a posting on the web, some time ago, that proposed what sounded like a crazy concept about Eric Schmidt and Google running some insane scheme to take over America. That posting was before The Snowden thing happened. If you had come across this guy's posting from a year, or so, ago, you might have dismissed it as whack. In light of the facts that have now emerged in the news.. it's kinda sounding more ""right on the mark"". See what you think: ""I used to work at Google. I left because of what I saw. Eric Schmidt has gone nuts. He can act normal in interviews but behind the scenes, he has lost his marbles from hyper-affluenza. He has this secret group called New America Foundation that tells politicians what to do, he even tells Obama. His people are ON STAFF in the White House. He has this spy thing called INQTEL that does weird politics manipulation. He buys girls for weird parties. He has a concept that he wants America run ""his way"" and that he has the money to buy that plan. He got some other big Silicon Valley investors to buy into his plan and they seem to be doing this thing based around the FDR Smedley Butler federal take-over attempt. Look up ""Smedley Butler"" online but don't look anything up on Google. Schmidt, and the boys, have the Google search engine rigged to hide anything that comes out about this. He and the boys got Obama to give billions and billions of dollars to them through TARP and the Department of Energy. He even claimed, once at a private party, to have arranged, with Goldman Sachs, to have faked the last economic collapse in order to get the TARP and Department of Energy funds created so that they could be given to ""his boys"". I'm going to China until this blows over. You will see that the beneficiaries of the TARP and DOE cash were almost all connected to Eric. Schmidt uses the Google built-in spying systems to keep an eye out for any trouble-makers who might squeal. Good Luck."" Hmmmmm.. What do you think

THE DEADLY TOXIC SECRET OF THE TESLA GIGAFACTORY: THE PUBLIC IS BEING LIED TO...

"- Harry Reid: Department of Energy ""KickBack King"" got more crony US tax dollars in his investment portfolio than any other Senator besides Feinstein. - Nevada Residents horrified by toxins danger, and existing charges against Tesla and Panasonic. ""Harry, How could you do this to us ", cry Residents - Major financial analysts say the Tesla Toxic-Factory has no market demand; they say it is just a stock manipulation deal - Nevada tired of being the guinea pig for Toxic federal tests and ""dumping ground"" for lethal projects - Factory ""Guaranteed to kill"" nearby towns via ground contamination, air toxins and surface particulants, say safety experts - Just another greedy political taxpayer abuse scam? "

TESLA Battery Factory

?

"The shocking Video above can be found at: <http://wp.me/p4e1uX-2sV> and the related background videos at: https://www.dropbox.com/sh/lt4wyz4bu4bcinw/AADVaWCHEodfoYoSxfs0_A4ia Said local, Andrew Schwartz: "this is another one of those politician kick-back schemes where they promise unicorns and then kill the air, water and really, THE PEOPLE, of a whole region and, later, shrug their shoulders and say..uh, uh, well, we didn't know,," Mr. Schwartz went on to say that he had researched the battery factory disasters in Asia and found that there was "vast documentation about the extensive deaths and permanent toxic poisonings" from regions where lithium, and similiar, battery factories existed in the past. He claims Tesla is fully aware of the lethal nature of their Task but that Elon Musk just wants to maximize his stock value without any care for the potential loss of life and the potential for toxic "lithium babies". "Those things will come much later, after Mr. Musk has cashed out his stock", said Schwartz. Said Mr. Schwartz: "When it now only takes \$50,000.00 to buy a Senator, and over 20 Senators have personal insider trading investments in these Tesla batteries, how can the public even have a chance at fair treatment?," he continued, "we can't have these billionaires raping our communities for profit and then walking away from the dead poisoned towns they leave behind. Tesla has been proven to have lied, over and over again, nobody in their right mind can trust them to build this." This battery factory is so toxic that EVEN CHINA WON'T BUILD IT!!! "

"OVER 40 TOXIC CHEMICALS ARE USED IN ALL 5 OF THE TOXIC BATTERY TYPES TESLA AND PANASONIC ARE TRYING TO PUSH OFF ON SOME HAPLESS RUSTIC AMERICAN TOWNS. ALL 40 OF THESE CHEMICALS CAN GIVE YOU CANCER, LIVER DISEASE, DEFORMED BABIES & BRAIN DAMAGE. Panasonic has killed vast numbers of workers in Asia, is charged with "cover-ups", has been sued for organized crime price fixing and dumping and you trust them to do this right? The controversy also involves the abuse of migrant workers in a part of the immigration/cheap labor scandal. "

"Lithium Ion Giga-Factories Kill Workers! Contact with, and breathing the chemicals causes Cancer, Lung Damage, Brain Damage!In ""Brain Damage""

"Tesla Fire Victims' and relatives demand answers from Tesla over hidden 'death trap' toxic smoke from Tesla car batteries.In """"blood for batteries""""

"'Lemon Law King' sues Tesla MotorsIn ""'Lemon Law King' sues Tesla"" "

The 500 trolls of Tesla Motors!

"Elon Musk has a massive amount of fake meat puppet social media accounts that he uses to create the false impression that there are ""no problems at Tesla Motors"" and that the fires, lawsuits, staff departures, investor departures, criminal charges, cartel charges, toxic smoke, cancer causing chemicals, DOE application fraud, factory workers on fire, ex-wife & girlfriend abuse stories, battery factory worker deaths, buyer homicide charges, Lemon Law litigation, Billionaire sex clubs, Tesla patents disclose lethal & conflagration potential, Mexican worker battery factory ""death camps"" plans, dangerous chemicals, political corruption and hundreds of other issues are ""keep walking, nothing to see here"" issues. "

"Ex-Tesla staff say that, in addition to the hundreds of hired ""meat puppet"" trolls that Musk has hired, in India, to watch the internet 24/7 for any mention of the word Tesla"" , (so they can instantly bombard the comment section with ""A Tesla is Christ in the form of a car"" messages), Musk has 4 news scanning services that email him, and the trolls, any mentions of the company so that their greasy troll-like knobby fingers can leap into action in their dark little troll caves. Every comment section of every article about Tesla has been IP and sequence-route traced backed to the same Tesla-hired shills and trolls who login, comment after comment, under a massive

number of fake accounts and identities. There is NO massive Tesla fanboy acclaim by millionaires sitting around blogging about the orgasmic joy of even thinking about a Tesla. There are only dour 17 year old bloggers in basements in Idaho and India collecting \$5.00 per post. But the biggest, hairiest, most wart-ridden Tesla troll of all, the one that towers above all trolls, is Tesla investor: Google. Google scrapes any negative Tesla press off of the internet and manually moves all positive troll Tesla press to the top of its search and news engine. This is cartel-level falsification of the stock market via coordinated manipulation of false information about a stock. It is an SEC felony, but federal executives, who arranged the scam, won't allow the SEC or FBI to go after these people because it will be politically embarrassing to "Senior People". "

"It will be politically embarrassing because certain Washington, DC politicians gave a "massively unqualified", "bankrupt" (Per Elon Musk himself), "failing", "lethally debt-ratio'd", "no-demand", "technically old-school" Tesla a free gift of Taxpayer money as a pass along kickback to Tesla investors in exchange for billions of dollars of campaign financing. Submit your links. Let's discuss... T- LA Times [wpvideo Az6PiFCv]"

"HA! See this article: <http://www.bbc.com/news/technology-27741041> BBC News - Tesla boss Elon Musk hints at technology giveaway Ever since 1745, horses considered, and then, actually, began giving away their horse-shit. Nobody was excited about it then. Nobody is excited about it today. Horse-shit is still just horse-shit. Musk's patents disclose that Tesla knew that their cars energy system could "kill you" and "burn down your home or office". It says it right in the very papers that TESLA MOTORS wrote and filed with the U.S. Patent office. They posted on the public U.S. Government servers, where they can never be removed, the awful truth: Tesla's WILL burn you, your family, your house, your office. Tesla's own engineers wrote this! They should give them away because they are worthless! Danny- Times"

Who's Tesla's Bitch? THE LIST:

"(Draft 1.3 - Constantly updated) Which media outlets cover-up Tesla Motors misdeeds and abuses? Which ones are run, or directed, by Tesla's investors seeking to manipulate stock values? Let's track, chart and document which media outlets are willfully smoke-screening Tesla Motors. Which outlets publish counter-stories when other outlets publish negative disclosure about Tesla to try to cover-up, or flood-out, the Tesla issues and charges? Some reporters are compensated by Tesla's IR Department, PR contractors, founders, VC and banking groups with either cash, discounts, tickets, jobs, advertising contracts, sex workers, meals, travel and/or political access. Send in your submissions... Which outlets now have documented tracking evidence, that can be exhibited in court?: -- Google (Investors) - Hundreds of online news outlets - Also via web routing manipulation -- Hearst Communications (Investors) - SF Gate - SF Chronicle - 15 daily and 34 weekly newspapers including - Houston Chronicle - San Francisco Chronicle - San Antonio Express-News - Albany Times Union - Hundreds of magazines around the world, including - Good Housekeeping - Cosmopolitan - ELLE - O - The Oprah Magazine - 29 television stations, which reach a combined 18 percent of U.S. viewers; ownership in leading cable networks, including Lifetime, A&E, HISTORY and ESPN; significant holdings in automotive, electronic and medical/pharmaceutical business information companies - a 50 percent stake in global ratings agency Fitch Group - Internet and marketing services businesses - television production - etc... -- Gawker Media (White House Character Attack Conduit) - Gawker - Gizmodo - Jalopnik - Kinja - Deadspin - Kotaku - Jezebel - Valleywag - Lifehacker - 109 etc... -- The A.L.I.C.E. Alliance (Investor-Synchronized Reporters) - Stands for: American Legislative and Issue Campaign Exchange - 1400 coordinated reporters using the ""Alice News Alerts"" in order to seek to cover up campaign backer crimes with synchronized story releases, include: - The top two political reporters for The Huffington Post - A Reuters reporter - The editor of The Nation magazine - A producer for Al Jazeera America television - A U.S. News & World Report columnist - Approximately two dozen Huffington Post contributors - All of ""Gamechanger Salon"" - Sally Kohn, formerly a Fox News contributor, now works for CNN - Amanda Terkel, the ?Senior Political Reporter and Politics Managing Editor at The Huffington Post - The

Huffington Post's Washington bureau chief, Ryan Grim. - A former New York Times freelance columnist who now works as an energy and commodities reporter for Thomson Reuters is also a member of Gamechanger Salon. - Anna Louie Sussman is listed as an "investigative reporter and journalist" on the Gamechanger Salon membership list, and while her beat focuses on energy issues, she has also writes about "local and international human rights and social justice issues" according to her website. - Katrina vanden Heuvel is the editor and publisher of The Nation magazine, a prominent and well-known periodical of leftwing political and social thought. She is also a member of Gamechanger Salon and a regular opinion writer for the online edition of The Washington Post. - Lisa Graves, who leads the Madison, Wisconsin-based Center for Media and Democracy, is also a member of Gamechanger Salon, and "according to e-mails reviewed by Media Trackers" regularly promotes material developed by CMD to attack ALEC and the right-of-center lawmakers who tend to make up the majority of ALEC's active legislative membership. - Vanden Heuvel suggested in her column that liberals support the efforts of the American Legislative and Issue Campaign Exchange "ALICE (a leftwing counterpart to ALEC)" and the Progressive States Network. - Jordan Flaherty was, as of last year, a producer for Al Jazeera America television. He is also listed as a member of Gamechanger Salon and for a while he occasionally blogged for The Huffington Post. - In addition to working at the left-leaning American Sustainable Business Council, David Brodwin writes an online column for U.S. News & World Report."

TV Investigation blows lithium ion dangers out into the open!

SEE: <http://www.ktvu.com/news/news/local/lab-test-video-dangers-lithium-batteries/nfzcS/>

2 Investigates: Government tests show lithium batteries in flames

By Tom Vacar

KTVU.com

"Though lithium batteries are lightweight, hold a charge longer and deliver six times more energy than traditional lead batteries, the US Federal Aviation Administration banned the carrying of any commercial shipments of lithiums in the cargo holds of passenger aircrafts, because they can start fires. "Safety is a major concern within the lithium ion battery industry," said battery expert Elton Cairns, who is an Engineering Professor at UC Berkeley, and a senior scientist at Lawrence Berkeley National Lab, long specializing in battery technology. Cairns says though he believes the overwhelming majority of lithiums are safe, they are far from fault free. "We're still learning how to make lithium batteries safer," he said. Thirteen months ago, KTVU asked the U.S. Department of Energy to show us video of tests it had been conducting on lithium batteries. When it said no, KTVU used the Freedom of Information Act and obtained what the Energy Department did not want the public to see."

Watch the video of the tests here

"The tests make the batteries fail by doing what has made them fail in real operation - overcharging them, over heating them, draining them too quickly and damaging them. One common failure was batteries spewing highly

flammable and toxic gases. In another failure, the batteries catch fire. In yet another test, a build-up of pressure led to an explosion. It gets even more dangerous when you have a cluster of lithiums that fail like a row of dominoes. ""And that is a situation where it feeds on itself. The faster the reaction, the more heat is released. The more that gets released causes the reaction to go faster,"" said Cairns. That's the small batteries that consumers can still bring on board. But what about big shipments, and what about lithiums to power up passenger planes? For the last six years in the U.S., only cargo planes have been permitted to carry commercial shipments of lithiums. Even so, Investigators blamed lithiums, at least in part, for the destruction of three cargo planes since 2006 - two of which crashed. All three were carrying large amounts of lithium batteries. Meanwhile, the current missing Malaysian airliner was carrying 2.5 tons of lithiums in its cargo hold. Many foreign air carriers have no restrictions. Shortly after the first 787 battery failure early last year, the Federal Aviation Administration undertook a series of full scale tests to document the characteristics of large battery fires and how to suppress them on a real, but retired cargo jet. The tests illustrate the potential for a fire to rapidly gain size and strength. In one case, toxic smoke kept thickening throughout the plane including the pilots' flight deck. Eventually, the smoke got so thick, it's doubtful a pilot could see the instrument panel, let alone look out the window. In another case, pressure released from the burning batteries did internal damage to the aircraft's structure. In some cases, the tests were terminated because the fuselage got too hot - in excess of 1,700 degrees. Many of the lessons learned have been and are being incorporated into aircraft systems design as well as how the batteries themselves are being packaged. ""It's a very, very small fraction of lithium ion batteries that fail,"" said Cairns. The world's newest airliner, the 787, had an original design, according to Cairns, of its lithium batteries sitting right next to each other with no space between them for cooling. The FAA approved a redesign, separating the batteries, enclosing all of them in a stainless steel box with venting so they cool with air. Cairns isn't sure that air cooling is the best solution, ""I think a much better design would be to have a liquid cooling system that is insensitive to altitude and can provide a much greater rate of heat removal so that if any one of the cells begins to overheat, for whatever reason, that overheating will not be transferred to adjacent cells."" Four months ago, a Japan Airlines 787, with the approved fix, suffered a battery leak and smoke which temporarily grounded that plane. It is now flying again. <http://www.ktvu.com/videos/news/2-investigates-dangers-of-lithium-batteries/vCbbYP/>

NOBODY WANTS TO PLAY WITH TESLA ANY MORE SINCE BATTERY FACTORY WORKER DEATH REPORTS: <http://investorplace.com/2014/05/tesla-stock-tsla-gigafactory/>

[wpvideo quTdL0Qf] [wpvideo LawOt7hw] [wpvideo VJMkJPg9] [wpvideo KI2DM6bx] [wpvideo IWVAQdmj] [wpvideo 6Uyn2vPy] [wpvideo 8TD8d8iK] [wpvideo gLiazbtP] [wpvideo S833Y9ji] [wpvideo uTGKHhrZ]

[wpvideo xLJfcI3V] [wpvideo fqjjwi1]

BATTERY FACTORIES KILLING FOREIGN WORKERS AND NEARBY CITIES.

THE DEADLY BATTERY FACTORY IMMIGRATION COVER-UP COMING TO THE U.S.

"Lithium-ion batteries are made in ""concentration camp-like"" fenced-in compounds where low income workers are exposed to poison gas and powders from the lithium-ion manufacturing process. A dramatically large group of these workers die from the cancers and toxic poisoning from these factories. They have always been made in overseas, impoverished, regions because there is little or no occupational safety regulation there. Now they are trying to build these factories in the American southwest to try to exploit Mexican workers like they do

overseas. Some argue that large "white man owned" corporations "fighting for immigration rights" are really fighting to relax laws to allow cheap labor into these kinds of camp-factories in the desert. Some of the factory owners have even purchased multiple lots, in multiple southern states, and told investors that they will "build on the one where we can buy control of the most local politicians?". When even towns in China are rioting to shut down these "death-factories", you know it is a bad thing! [wpvideo Az6PiFCv] Tesla Motors "giga-factory" is an ill-considered profiteering scam designed to help billionaires profit on the bodies of migrant workers. The old tactic of: "let's put the lethal factory where only poor people will come to work because they can't afford good lawyers"-concept is running dry. The last 4 Lithium Ion battery factories in the U.S. gave campaign cash and stock to the politicians in charge of the areas where those factories were built. Most of those factories are now bankrupt. Now they are doing it again with the plans for the new factories. Also see THIS report on the TOXIC DETAILS (CLICK HERE>>>) See the Film: "WORKED TO DEATH: THE TESLA BATTERY COVER-UP": [wpvideo KI2DM6bx] [wpvideo 6b7UYYgJ] [wpvideo JBbJM8ub] [wpvideo tO5TROjP] [wpvideo PrmlZbSb] [wpvideo VJMkJPg9] [wpvideo dA40NCCC] [wpvideo LawOt7hw] "

"Tesla Lithium Ion Giga-Factories Kill Workers! Contact with, and breathing the chemicals causes Cancer, Lung Damage, Brain Damage!"

"That is why all of the batteries are made overseas. Because they can make them in Asia where there are almost no safety regulations! Share this page with this link: <http://wp.me/p4e1uX-2lo> Dead Asian factory workers tell no tales. Will this hold true for a USA operation? Slow death from toxic poisoning is not an immediate problem, it is, for Tesla, a "post-profit problem" to be dealt with later, after the money is grabbed. Musk is looking to position the factories in states near Mexico so that cheap Mexican labor can be used to build the batteries but Mexican labor leaders say that "the time has come to stop looking at workers from Mexico as having less valuable lives, and less important health needs than white workers." OSHA just fined Tesla's factory for setting workers "ON FIRE". Battery suppliers have cut Elon Musk off because of the dangerous way he uses batteries. The dangerous way is that he uses batteries in cars that were never designed to be used in cars. That is why they blow up, release toxic smoke and are hard to get! Monolithic factory-like encampments in the desert where "undesirable" foreigners are exposed to poison gas doesn't sound Auschwitz-like at all. Nobody body has done that before. Tesla is famous for taking taxpayer money and then using it to hire offshore H1-B workers. Tesla and the Silicon Valley companies "support immigration" because they want cheap workers, not because they "uphold the American dream". Is Tesla working both ends of the deal: Grab all the cheap ones and kill off all the rest? Ask Elon Musk, the Head of the EPA, The head of the CDC, the head of OSHA and the head of MSDS to confirm, or deny, these facts! If any of them deny that they have the reports that show these facts, we will show you the data that proves who is lying. If the Giga-Factory blows up or catches on fire, it will poison the towns nearby. Where will the toxic waste from these factories go? The factories are a result of the DOE funding, yet Tesla had to GUARANTEE AND WARRANT, in their federal contract that they would NEVER violate the NEPA laws. These factories will violate the NEPA agreements Musk signed. Let's look at why these chemicals, that Musk uses, are so dangerous. Below you will find a chemical analysis break-down and a partial list of hundreds of manufacturer, corporate and government reports confirming the danger:"

Tesla Fire Victims' and relatives demand answers from Tesla over hidden 'death trap' toxic smoke from Tesla car batteries.

- Over 1000 scientific papers on chemical analysis now confirm the known danger...

"- Many reporters are calling ""BULLSHIT"" on the NHTSA Tesla studies. "

"- It's not ""Green"" to buy a Tesla, It's Toxic! Workers overseas DEAD! Drivers in fires POISONED! "

"- Detailed State-of-the-art laboratory ""smoke room"" spectrograph chemical analysis proves lethal toxins"

"- Hair, blood & tissue analysis can prove if you were exposed by being near a Tesla fire "

"- Chemical ""cancer-cocktail"" from Tesla smoke detailed in element-by-element breakdown"

"- Firefighters warned: ""Burning lithium ion batteries can produce toxic fumes including HF, oxides of carbon, aluminum, lithium, copper, and cobalt. Volatile phosphorus pentafluoride may form...""

"- Tesla ""GIGA-FACTORY"" a deathplant for Mexican workers? Economically & biologically ""Fatal"" to closest town if a fire erupts? "

- Tesla lobbyists & campaign backers force NHTSA to close investigation rather than complete it and reveal the depth of the cover-ups and extensive safety defects. Tesla coddled BECAUSE OF TESLA'S INVESTORS CAMPAIGN FINANCING AND AFGHANI_SCAM INVOLVEMENT!

"Link to this page: <http://wp.me/p4e1uX-2a8> Owners, Family members and BYSTANDERS whose loved ones were poisoned in auto accidents linked to a defect in Tesla cars demanded answers -- and accountability from Tesla in light of safety cover-ups Congress has exposed by GM and Toyota. The implication of corruption involving federal funding has arisen. Many reporters are calling ""BULLSHIT"" on the NHTSA Tesla studies. First the head of NHTSA quits over revelation of Tesla safety cover-ups, then the new staff state that there are no ""actual defects"" even though the numbers of cars-in-flames vs. cars produced exceeds every other car company. They ignore the proven toxic gas charges in the same week that the EPA is being investigated for exposing citizens to 10 times less toxic vapors in laboratory ""test chambers"", without full consent. These are gasses that 8 different federal agencies say are ""lethal in exposure effect."" They ignore the fact that the Tesla battery pack is exposed on every edge and across the bottom and state that ""no complex engineering studies have been performed"". NHTSA ignores the review of a rolled-over Tesla with burning lithium above you and dripping molten metal and plastic dripping down on you. NHTSA ignores the recommended fully charged battery shock and moisture tests recommended by experts and fails to publish all FOIA materials. Very clearly White House staff and campaign investors have ordered NHTSA to wave Tesla through at a time when GM and Toyota are undoing federal hearings and billion dollar fines for equally dangerous circumstances. One has to wonder of NHTSA staff will lose their pensions if they go to Federal prison for rigging safety reviews. If even one battery goes off, poisonous gases and vapors are released. At least one of the thousands and thousands of batteries under your seats in a Tesla will eventually vent toxic gas even if you do not get caught in one of the catastrophic Tesla or Fisker fireball explosions. The odds are not in your favor with over 7000 possible battery failures in each car. These are gasses that 8 different federal agencies say are ""lethal in exposure effect."" Tesla is being coddled for campaign favors."

"The burning Tesla battery chemicals are known to CAUSE: Neurological dysfunction, cancer, lung damage, liver damage and other long-term fatality repercussions."

"If you were within 800 feet of a Tesla on fire, you need to see your doctor, even if you were only driving, or a neighbor to a home where a Tesla fire took place, or walking or by-standing nearby. Tesla has been fully aware of this per a report from their battery team, including Bernad Tse, of Tesla, for over 10 years ago. Certain elected officials and DOE staff have personal investments in Lithium Ion profiteering, thus certain federal officials are resistant to regulating these batteries. These facts can now be proven via multiple federal investigations and liability lawsuits are certain to follow. The head of the NHTSA, A Mr. Strickland, recently quit over these charges. Calling the Tesla cars a ""death trap,"" they said the company knew for years the vehicles were dangerous -- but their sons, daughters and relatives are potentially dying ""because they were a cost of doing business Tesla's and Elon Musk's way."" Said one concerned owner: ""The GM defect kills you fast but the Tesla defect kills you slowly over time, it isn't right that Tesla never fully disclosed this to owners and the public. I have a baby and a teenager. What will happen to them from exposure to this stuff "" "

"For years, Elon Musk, and Tesla executives, have adopted a: ""Nothing to see here, move along, move along"" approach when confronted with the dangers. Now the proof is irrefutable, GM and Toyota have been busted doing similar cover-ups of potentially lethal defects, Congress is investigating and the public are demanding answers! A report submitted to Congress discloses: ""A fellow CPF?r whom I hold in high regard for his experience and knowledge for guidance. Unfortunately, he was unavailable. OH wait, here it comes again!! another episode, this time though without the chest pain and not as severe as the first one. We rushed to the hospital, wife driving me, and into the emergency room and to the doctor. We explained what had happened, and surprisingly the doctor was well versed in this type of poisonous inhalation. He could relate to all the symptoms, and concluded I had inhaled dangerous Hydrofluoric acid vapor. The delayed reaction, he said, was due to the bloodstream absorbing the vapor and hence the shortness of breath, chest pain, and weak limbs. A third episode took place while in the emergency room but this time it was much less than the first or second episodes. It has been about 14 hours since this incident, I did not get much sleep last night but not because I felt bad, only very scared. Hydrofluoric acid will, with a possible delayed effect, affect the nervous system, respiratory tract, lungs, and impair the cardiovascular system. Those effects are from inhalation only, more severe effect including weakening of the bones and a host of other things if ingested or from wounds such as LunarModules. i.e. skin contact."

WHAT I LEARNED AND MY DOCTOR SAID TO ME:

"1) DO NOT DELAY a trip to the emergency room in the hospital if you have inhaled, ingested, or came into skin contact with Lithium battery venting. 2) Have someone else drive you to the hospital if possible. You could become quickly and without warning completely impaired. Oxygen and emergency treatment by qualified personel are your only chances of survival after cardiac arrest or if you are unable to breathe. 3) DO NOT ASSUME you are OK if you as much as think you've been exposed to battery fumes, EVEN IF the battery seems to be OK and explosions are not a requisite. 4) Keep handy antidote in the form of calcium gluconate saline solution for inhalation or in gel form for skin cuts or burns. Intravenous solutions are a possibility and must be administered by hospital personnel. This incident was very mild compared to other cases, but I assure you fellow CPF?rs, it is very scary and dangerous. A battery can start to vent if mishandled or dropped as in my case, it does not have to explode. It happened to a name brand chinese made CR123, it does not have to be a ""cheap battery"", this one cost me \$2.00 a piece. Don?t ever pull the vent holes in the positive end of the battery up close to your face or nose like I very stupidly did. If you suspect a battery is venting, just toss it aside.""

"ABOVE: A TESLA ON FIRE RELEASES TOXIC SMOKE WHICH CAN AFFLICT FIREMEN, PASSENGERS, PASSERS-BY, PEDESTRIANS, NEIGHBORS AND ANYONE ELSE NEARBY."

"Even then, Sony and Dell had millionaire recalls of laptop computers with defective batteries. The department of transportation has prohibited the carriage of Lithium cells aboard passenger aircraft Hydrofluoric acid is indeed a dangerous chemical, both as a fume and in liquid form. IMO, as a chemist it should not be allowed in consumer products."

"ABSTRACT Wang, Q., Sun, J. and Chu, G., 2005. Lithium Ion Battery Fire And Explosion. Fire Safety Science 8: 375-382. doi:10.3801/IAFSS.FSS.8-375"

"With the extensive applications of lithium ion batteries, many batteries fire and explosion accidents were reported. Base on the combustion triangle theory, the combustion triangle contributions of lithium ion battery were analyzed. By using C80 micro calorimeter, the thermal behavior studies on the materials show that the flammable electrolyte, oxygen generated by charged cathode and anode decomposition, and exothermic reaction heats form the combustion triangle together. The thermal runaway of working materials in lithium ion battery system was studied with common used battery materials, and the no return temperature TNR was calculated is 75oC and the self-accelerating decomposition temperature (SADT) is 66.5oC. Further analysis shows that the lithium ion battery reaction chain according with Domino effect, therefore, the lithium ion battery fire and explosion developing sequences was drawn by ""Domino chain."""

"In the related GM Death investigation, General Motors' new CEO, Mary Barra, and the head of the nation's auto safety watchdog are set to testify before Congress Tuesday afternoon about the defect in small cars that is linked to 13 deaths. In written testimony released ahead of the House subcommittee hearing, acting National Highway Traffic Safety Administration chief David Friedman said GM had information connecting defective ignition switches to the non-deployment of air bags, but didn't share it until last month. Committee members will press Barra and Friedman to explain why neither the company nor the safety agency moved to recall millions of small cars with a defective ignition switch, even though GM knew of the problem as early as 2001. "Sitting here today, I cannot tell you why it took years for a safety defect to be announced in (the small car) program, but I can tell you that we will find out," Barra said in prepared testimony submitted to the subcommittee. Barra plans to apologize to family members of victims, according to her prepared testimony. But the family members, appearing alongside lawmakers, aired their frustration and grief Tuesday morning. Ken Rimer, whose teenage stepdaughter was killed in a 2006 crash in Wisconsin, recalled how she died. "What was to be a simple shopping excursion turned into a death trap as their vehicle, without any warning, lost power," he said. "The steeringwheel lock, power breaks, no longer worked and the safety airbags were turned off. When all of this happened the car followed a path off the road, went airborne over an adjoining driveway, crushed a phone box, and tragically collided with a group of trees." He added: "Would fixing the problem when it was discovered saved these two girls' lives and the lives of many others? Yes. Should GM be able to hide behind their bankruptcy and not accept the responsibility and liability of these young lives? No. Please help us in standing up for what is right. GM knew it was wrong. GM hid it during their bankruptcy proceedings. GM is liable for these young deaths." "

"Tesla is accused of also knowing and hiding the threats, as disclosed in internal Tesla documents, Tesla patent filings and by former Tesla staff. GM has recalled 2.6 million cars for the faulty switch. That recall prompted GM to name a new safety chief and review its recall processes. GM continued its efforts to show regulators and consumers that it is more focused on safety, announcing the recall of 1.5 million more vehicles on Monday for a power steering problem. With Monday's recall, GM has now recalled 6.3 million vehicles since February. GM estimates the actions will cost it \$750 million. The House hearing -- and a separate one Wednesday before a Senate subcommittee -- will likely be tense and emotional. At least a dozen family members of victims will attend, wearing blue shirts featuring a photo of 16-year-old Amber Marie Rose, who was killed in a 2005 Cobalt crash, and the words "Protect Our Children." Barra may try to limit her answers to Congress, citing an ongoing internal review and government investigations. "When we have answers, we will be fully transparent with you, with our regulators, and with our customers," she said in the prepared testimony. That could test the patience of committee members, who will want to know immediately why GM failed to protect its customers in this case. Laura Christian, birth mother of Amber Marie Rose, a teenager who died in a 2005 Maryland crash involving a Chevrolet Cobalt, said about 30 family members met with Barra and two GM attorneys Monday night. All got a chance to tell their stories to GM's new CEO, but Christian said they got little reaction. "A lot of, 'I'm so sorry, I'm so sorry,'" Christian said. GM would not comment on details of the meeting. Congress also wants to know if it needs to strengthen a 2000 law intended to improve communication between automakers and the government. "

"The information found leads one to believe that fumes from lithium batteries are very dangerous. According to Energizer ?Fire fighters should wear self-contained breathing apparatus. Burning lithium ion batteries can produce toxic fumes including HF, oxides of carbon, aluminum, lithium, copper, and cobalt. Volatile phosphorus pentafluoride may form at a temperature above 230ø F.? http://data.energizer.com/PDFs/lithiumion_psd.pdf Hydrofluoric acid is mentioned because if the battery _burns_ then one of the ingredients (the lithium trifluoromethanesulfonate) can produce hydrofluoric acid. This only happens if the battery burns or "vents with flame". An analogous material would be the Teflon that is used to make non-stick cooking pans - if it burns it too will emit hydrofluoric acid. Here is the MSDS sheet for a very common LG 18650 Li-Ion cell: http://www.hp.com/hpinfo/globalcitiz...s_lg_liion.pdf Molicel: <http://www.tek.com/Measurement/cgi-b...ameSet=service> Battery Space Li-Ion: <http://www.batteryspace.com/prod-specs/MSDSLion.pdf> International Battery Li-Ion: http://www.internationalbatteryinc.c...SDS_090105.pdf As you get more recent MSDS sheets for Li-ion cells you will find the following standard disclaimer: "Hydrofluoric Acid Exposure During Fire Fighting This information is given for use of professional fire fighters responding to a warehouse fire where fire from other materials may incinerate battery. This section is provided solely in case of exposure, during fire fighting, to the combustion by-products. Hydrofluoric acid is not present in the product. Contact with battery causes none of the

following symptoms. Hydrofluoric acid is extremely corrosive. Contact with hydrogen fluoride fumes is to be avoided. Permissible exposure limit is 3 parts per million. In case of contact with hydrogen fluoride fumes, immediately leave the area and seek first aid and emergency medical attention. Symptoms may have delayed onset. Fluoride ions penetrate skin readily causing destruction of deep tissue layers and even bone. Fluoride interferes with nerve impulse conduction causing severe pain or absence of sensations. Immediately flush eyes or skin with water for at least 20 minutes to neutralize the acidity and remove some fluoride. Remove and destroy all contaminated clothing and permeable personal possessions. Before re-use, impermeable possessions should be soaked in benzalkonium chloride after washing. Following flushing of the affected areas, an iced aqueous solution of benzalkonium chloride or 2.5 % calcium gluconate gel should be applied to react with the fluoride ion. Compresses and wraps may be used for areas where immersion is not practical. Medicated dressing should be changed every 2 minutes. Exposure to hydrofluoric acid fumes sufficient to cause pain requires immediate hospitalization for monitoring for pulmonary edema." So, where does this hydrofluoric acid come from? Reviewing MSDS (Material Safety Data Sheet) for many of the cell layer separators (you can find a foot or two of it wrapped inside the Lithium Ion cell) show the generation of HF (Hydrogen Fluoride) and PFIB (Perfluoroisobutylene) from heat decomposition (such as a cell venting/explosion). HF, is a clear gas, will become Hydrofluoric Acid upon contact with even minute amounts of moisture (such as humidity). The United States Army Medical Research Institute of Chemical Defense has classified PFIB, also a clear gas, as a pulmonary agent. Usually, items like this get glossed over in MSDS sheets. Another item found in Lithium Ion cells that has fluorine in it is the Lithium Hexafluorophosphate or LiPF₆. This can also break down during venting/explosion and contribute to the generation of hydrofluoric acid. A MSDS for LiPF₆: <http://www.gfschemicals.com/Search/MSDS/2534MSDS.PDF> One company gives a better breakdown of what is in their product, instead of calling it proprietary:"

"TESLA Lithium Ion Batteries Contain, at least, (but there may be more):"

Acetylene Black (CAS# 1333-86-4) 0-2% Biphenyl (CAS# 92-52-4) 0-15% Diethyl Carbonate (CAS# 105-58-8) 0-15% Dimethyl Carbonate (CAS# 616-38-6) 0-15% Ethyl Methyl Carbonate (CAS# 623-53-0) 0-15% Ethylene Carbonate (CAS# 96-49-1) 0-15% Graphite (CAS# 7782-42-5) 7-22% Lithium Cobalt Oxide (CAS# 12190-79-3) 15-30% Lithium Hexafluorophosphate (CAS# 21324-40-3) 0-5% Lithium Tetrafluoroborate (CAS# 14283-07-9) 0-5% n-Methyl Pyrrolidinone (CAS# 872-50-4) 0-1% Oxalic Acid (CAS# 144-62-7) 0-1% Propylene Carbonate (CAS# 108-32-7) 0-15%

...and BURNING lithium ion combined with burning Tesla plastic and Chassis metal DOUBLES the amount of toxins!

"One of our erstwhile cpfers showed me a link to some testing that was done with Li-Ion cells: <http://www.pcpitstop.com/pcsafety/video.asp> Hydrofluoric acid is very dangerous, here is the MSDS for hydrofluoric acid <http://www.bu.edu/es/labsafety/ESMSD...1#anchor888417>"

Breaking out the Li-Ion chemicals:

"Energizer Lithium Ion: Acetylene Black (CAS# 1333-86-4) 0-2%

<http://www.itcilo.it/english/actrav/...ic/1333864.htm> Biphenyl (CAS# 92-52-4) 0-15% Synonyms: Diphenol; 1,1'biphenyl; phenylbenzene 3. Hazards Identification Emergency Overview ----- QUOTE: ""WARNING! HARMFUL IF SWALLOWED, INHALED OR ABSORBED THROUGH SKIN. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. MAY AFFECT LIVER, CENTRAL AND PERIPHERAL NERVOUS SYSTEMS. MAY CAUSE ALLERGIC SKIN REACTION.""

Potential Health Effects -----

"Inhalation: Inhalation of dust or vapors can irritate the mucous membranes and respiratory tract. Other symptoms may parallel those from ingestion exposure. Ingestion: Exerts toxic effects on the central nervous system and liver. Symptoms may include headache, diffuse gastro-intestinal pain, nausea, numbness, body aches, and general fatigue. Skin Contact: May cause irritation. May be absorbed through the skin with symptom paralleling those from ingestion exposure. May cause allergic reaction insensitive individuals. Eye Contact: Vapors and dust cause eye irritation. Chronic Exposure: Chronic exposure may cause peripheral nerve damage and liver injury. Aggravation of Pre-existing Conditions: No information found. "Ingestion of internal material from Tesla batteries will kill you, your children or your pets."

"Tesla batteries are made overseas because workers who make them die from exposure to the chemicals. Good luck to Tesla with their GIGA-FACTORY death warehouse for Mexican workers in New Mexico. Tesla, already under investigation by OSHA, has found a new way to tell OSHA to screw themselves!"

"They KNEW: Laptops draw scrutiny from airline-safety officials August 15, 2006 12:00 AM By Corey Dade The Wall Street Journal Passengers aboard Lufthansa Flight 435 at Chicago O'Hare International Airport on May 15 were settling in for the nine-hour haul to Munich, Germany, when a burning odor floated into the first-class

cabin. According to witnesses, the luggage bin above seat 2A was burping smoke. Flight attendants evacuated first class just before a computer case in the compartment began to spit fire. The crew grabbed extinguishers and sprayed the bin. Someone swung open a cabin door, snatched the case and tossed it onto the ramp. The case erupted in flames. As passengers watched, fire trucks -- then the bomb squad -- roared to the scene and put out the blaze. But they found no terrorist device. Instead, authorities discovered a charred laptop computer and a six-pack of melted lithium-ion batteries. Long before last week's foiled plot to blow up airlines using material secreted in carry-on luggage, a growing number of transportation and product-safety officials had expressed concerns that batteries in laptops and other electronics pose a serious risk to airplanes -- for reasons completely unrelated to global terror. Although the risk is small, the Consumer Product Safety Commission has documented 339 cases of lithium and lithium-ion batteries for portable electronics overheating, emitting smoke and fumes or exploding since 2003. There is no record of a serious injury or death, but the Federal Aviation Administration has logged 60 incidents since 1991. In the past two years, six incidents have occurred on aircraft, including five fires and an overheated flashlight that had to be handled with oven mitts. In February, a United Parcel Service Inc. plane full of packages -- including lithium-ion batteries -- was engulfed in flames while landing in Philadelphia. Investigators haven't reached a final ruling on the cause but continue to closely examine the melted shipment of batteries. In October 2004, a plane carrying Vice Presidential candidate John Edwards made an emergency landing after a lithium-ion battery exploded in the hand of a television newsman. Worries about the possible dangers are serious enough that the National Transportation Safety Board held a two-day hearing in July in Washington to discuss the safety of lithium-ion batteries on passenger and cargo planes and the investigation into the UPS fire. No formal proposal for new regulations has yet been put forward, but regulators are discussing options ranging from tightening manufacturing guidelines for the batteries to potentially restricting their use on passenger jets. A series of fires dating back to 1999 led to a federal regulation in 2004 banning cargo shipments of an earlier generation of batteries from the bellies of passenger aircraft. These batteries, known as lithium batteries, differ from lithium-ion models in that they can't be recharged. The rule called lithium batteries on commercial airliners ""an immediate safety risk"" but did not prohibit them from carry-on or checked luggage. Today, the more-advanced lithium-ion batteries account for the majority of battery incidents. There are currently no controls on them in carry-on or checked bags, nor when they are shipped in the cargo holds of passenger planes. Major airlines say they will comply with whatever safety regulators determine. ""It's too early to weigh in on the issue,"" says Victoria Day, a spokeswoman with the airline trade group Air Transport Association. ""We understand the experts are working on the matter, and we'll just have to wait and see what they say."" No action is expected in the near future until the Federal Aviation Administration completes its testing of lithium-ion batteries, which it began in 2004. A trade group representing battery makers has defended the manufacturing practices of its member companies. ""Based on the millions of lithium-ion batteries in use today and the exceptionally small number of cases in which a battery malfunction has occurred, we believe these batteries are safe and reliable when used according to manufacturers' guidelines,"" said Norm England, president and chief executive of the Portable Rechargeable Battery Association, on the group's Web site. The U.K. last week banned laptops and all other electronics in the cabins of flights from or through the U.K. after information surfaced that the alleged plotters planned to use an electronic device to detonate bombs. The ban, which British Airways extended to its flights into the U.K., was excruciating to many fliers. ""I feel naked,"" said Jon Thompson last week, after being told to check his laptop at the British Airways ticket counter at Atlanta's Hartsfield-Jackson International Airport. About to board a flight to London, he hastily wrapped a shirt around his computer for extra cushioning and jammed it into his suitcase. Capable of storing an enormous amount of energy in a small package, the lithium-ion battery is perhaps the most popular power source for notebook computers, MP3 players and high-performance cellular phones. The nickel-metal-hydride battery is the closest competitor on the laptop and mobile phone markets but requires more care to prolong battery life and generates less power. The lithium-ion model holds a charge longer, is more powerful and has the capacity to produce ever-greater power as manufacturing technology advances. But its fragile chemistry requires circuitry to control peak voltage. Product-safety officials say that as technology enhancements produce models packed with more power, more of them are overheating or blowing up. The hazards have prompted dozens of manufacturers to recall more than two million rechargeable batteries for cellphones, laptops, portable DVD players and digital cameras since 2003. Major U.S. computer makers Hewlett-Packard Co., Apple Computer Inc. and Dell Inc. each cited reports of overheating and fire risk as reasons for recalling a total of 300,700 units of laptop batteries world-wide since May 2005. ""The affected batteries could overheat, posing a fire hazard to consumers,"" said an Apple statement posted on its Web site detailing a program

in which consumers can exchange their recalled batteries for new ones. The three companies say the recalled batteries were made by suppliers based in Asia, and that batteries now for sale are safe. "It's safe to assume that, yes, we are selling a safe product," says Hewlett-Packard spokesman Ryan Donovan. Dell said the defects discovered in the cells of its batteries have been corrected. An Apple spokeswoman declined to comment beyond the company's online statement. Cellphones are of less concern in the air because their use is barred during flights. In general, they also operate at lower energy levels than computers and thus pose less of a fire risk. The problem, experts say, is "thermal runaway" -- a chemical reaction inside a battery cell that generates intense heat so rapidly that it flares out of control. Most of the failures are traced to a short circuit in the cell or the wires that connect the cell to contact points on the battery pack. Richard L. Stern, associate director of compliance at the Consumer Product Safety Commission, says tiny metal shards can contaminate the battery pack during assembly and later pierce the insulation separating the positive and negative terminals. The opposite poles touch and create an electrical spark. A defective or damaged battery that is vigorously jostled -- like a laptop rattling around in a luggage compartment -- can trigger a flare. Many of the airplane incidents involved batteries purchased separately from the computer. "The trend with smoke or fires would be some type of after-market use, like with spare batteries," says Bill Wilkening, who enforces hazardous-materials regulations at the Federal Aviation Administration. Product regulators say replacements marketed as compatible with many different devices frequently aren't. Some of them, including a significant number of counterfeits, lack circuitry that protects the battery cell from overcharging. "That's where you tend to see a lot more allegations of fire or explosions," Mr. Stern says. "It's difficult for consumers to know which are good and which aren't, unless you're an electrical engineer." The passenger whose case caught fire on the Lufthansa flight, Dana Smith, told officials the batteries were bought on eBay and possibly were "not built to the original specifications," according to the incident report filed with federal regulators. Mr. Smith couldn't be reached at his Munich address. Lufthansa, in Frankfurt, Germany, said it has no position on whether lithium batteries should be further restricted, but will comply with any government regulations. But sometimes, batteries seem to blow up for no clear reason. A sound technician with ABC News had just decided to change a battery as the Edwards' campaign's chartered Boeing 727 lifted off from Raleigh-Durham International Airport four days before the 2004 election. In the rear of the cabin, the sound man pulled a nine-volt battery from his equipment and it burst into flames. Someone screamed "fire!," according to official accounts of the incident and witnesses. Within a few seconds, Secret Service agents barreled into the cabin and extinguished the fire. The plane immediately returned to the airport. "It was a little scary. It was dark, it was smoky," Mr. Edwards said in a recent interview. He was in the front of the cabin with his wife and two children and campaign staff. "It got people worked up." Nearly three months earlier, a box of batteries caught fire aboard a FedEx Corp. cargo plane in Memphis, Tenn., moments before it departed for Paris. The fire damaged most of the other boxes packed in the huge freight container. FedEx

and Memphis firefighters put out the blaze on the ground. Marvin Sudduth, a safety manager in FedEx's dangerous goods section, examined the container of 64 batteries more than three hours later and they were still sparking. "I had to jerk my hand back pretty quick," he says. "Not one of my top 10 things to experience." FedEx says the shipper violated federal guidelines requiring the batteries be packaged in a plastic sheath to protect them from making contact with other objects. Instead they were rolled in cardboard wrapping and placed in a cardboard box with metal tools used to install the batteries. Mr. Sudduth said the tools probably shifted during transit and struck the batteries, causing sparks. The Memphis-based air cargo carrier says it has tightened standards to exceed federal requirements. It now refuses to carry hazardous materials without first confirming they have been packaged according to federal standards. The potential danger to airlines first surfaced in 1999 involving the lithium "primary" battery that preceded the rechargeable lithium-ion version. After two pallets holding 120,000 of those batteries unloaded from a passenger plane went up in flames at Los Angeles International Airport, the NTSB requested an investigation of the products by the FAA. In 2004, the federal agency that regulates the transport of dangerous substances, now called the Pipeline and Hazardous Materials Safety Administration, ended the transport of those batteries in the cargo holds of passenger carriers. After the FedEx incident earlier in 2004, the FAA began a still-ongoing investigation into lithium-ion batteries. The most dramatic mishap so far involved the UPS jet descending on Philadelphia International Airport from 31,000 feet the night of Feb. 7. "Smells like wood burning. Smell that " the co-pilot told his two fellow crew members about 25 minutes before landing, according to the flight cockpit recording. The flight engineer left his seat and entered the cargo hold to check for smoke. He later told investigators that nearly every inch was filled with freight, and he had no path to walk through the holding area for a closer look. So he aimed a flashlight at the upper cargo deck

and ran it the length wall. He smelled smoke but found no fumes and returned to the cockpit. At about 4,000 feet and a few minutes before landing, the warning light for smoke on the main deck flashed on. "Alright," the first officer said, "I'm turning into the airport then." Air traffic control cleared the plane to land. Then the fire warning indicator for the lower rear cargo area lit, and the captain ordered his crew to put on their oxygen masks. On final approach some functions on the instrument panel began to fail, and smoke streamed into the cockpit. The captain landed the plane and opened his window to breathe but inhaled a thick plume of smoke. The co-captain leaned out his window and was choked with smoke. In a raspy voice, he managed to radio the tower: "UPS Flight 1307 evacuating the aircraft." One by one, they disappeared in the haze through the back of the cockpit and made their way off the plane. The fire raged for four hours, with the DC-8 sitting on the tarmac, destroying the cargo and burning two gigantic holes through the top of the fuselage. In the months since then, investigators have methodically excluded possible causes of the fire. They say there is no sign that airplane wiring or systems were the culprit. Containers of hazardous material being shipped on the plane don't appear to be the cause. Several partially burned lithium-ion computer batteries are still undergoing tests. "It is not known at this time the role that these types of batteries may have played in the fire," NTSB lead investigator Frank Hilldrup said at the federal hearing in July. "Nevertheless, secondary lithium batteries, as well as primary, can present fire hazards. Several lithium battery incidents have occurred in recent years." Of the more than 60 incidents of batteries overheating since 1991: Short circuits appear to be the primary cause Unexplained fires/explosions usually involve lithium-based batteries Almost all incidents involve unlabeled "nonregulated" or "excepted" batteries No incident involved batteries in retail packaging Almost all incidents detected on the ground Source: Federal Aviation Administration Read more: <http://www.post-gazette.com/business/technology/2006/08/15/Laptops-draw-scrutiny-from-airline-safety-officials/stories/200608150233#ixzz2xetLkzkW> "

"<http://www.youtube.com/watch?v=gCT3Li5dfZE> For more TESLA SAFETY REVIEW DATA, CLICK HERE>>> Tesla lobbyists & campaign backers force NHTSA to close investigation rather than complete it and reveal the depth of the cover-ups and extensive safety defects. "

"Here is how this is going to happen: In a few years there will be a number of consumer lawsuits in court, Tesla will say "we didn't know that", then all of these documents will come out, then it will become absolutely clear that Tesla knew about this danger for ages and covered it up. Then Tesla will lose the lawsuits and either go out of business or have to pay billions of dollars like Toyota and soon, GM. Those politicians and administrators who covered up will fry and lose their pensions. That's all there is to it. FG- LAT"

"Tesla battery plant faces skepticism from stakeholders, analysts"

"It's all about the numbers: If Tesla Motors intends to sell more of its electric cars, it'll need more batteries to power them. And while the company has ambitious plans for its own battery manufacturing plant, some of Tesla's backers aren't yet committed to the project."

"By John Voelcker, Guest blogger / April 6, 2014"

"A man looks around Tesla Motors' Model S P85 at its showroom in Beijing. Panasonic is considering investing in a U.S. car battery plant planned by Tesla Motors, with total investment estimated by one source at around \$979 million."

"Now he faces new doubts over the company's plans for a massive ""gigafactory"" costing as much as \$5 billion to manufacture more lithium-ion cells than any other plant in the world. Having mostly convinced disbelieving analysts, journalists, and industry colleagues that Tesla can at least design, engineer, build, and sell good-looking high-performance all-electric luxury sedans, Musk may not pay a lot of attention to ""You can't"" noises from critics."

Panasonic: large risk

"But even Tesla's lithium-ion cell supplier Panasonic--which owns a small share of the company--hasn't yet committed to participating in the gigafactory plan. Bloomberg noted last week that the Japanese electronics giant's president, Kazuhiro Tsuga, told reporters the project would pose an ""investment risk [that] is definitely larger"" than the company prefers. Panasonic prefers to ""make investments step by step,"" he said, adding that he ""would like to cooperate"" with Musk's plans. He also noted that Panasonic's battery production ""depends"" on Tesla sales, which it monitors closely. Tsuga's comments may reflect the slow pace of building consensus for such a major investment on Panasonic's part. VW, Daimler perplexed But it is hardly the only voice saying the gigafactory plan could be too large, and too much for Tesla to bite off. An article yesterday in The Wall Street Journal quoted Harald Kroeger, the head of Daimler's electric-vehicle efforts, who noted that the gigafactory plan had ""some huge disadvantages"" to go along with its benefits. (Daimler, which makes Mercedes-Benz and Smart cars, owns a small stake in Tesla Motors too, as does Toyota.) And Volkswagen CEO Martin Winterkorn said he didn't ""quite get it,"" noting that VW would not consider opening its own battery plant, as it had enough suppliers for its needs. Few details Musk announced a handful of high-level details about the proposed plant, which could be the world's largest single factory, in late February. The need is clear: Even at a production rate of about 25,000 cars a year, Tesla used one-third of the world's electric-car batteries. To scale up to 100,000 Model S sedans and Model X crossovers by 2016, he needs to quadruple that supply--which Panasonic and Tesla together expect to happen. But if the company starts production of its next model, a lower-cost sedan often dubbed the ""Model E,"" it will need multiples of its current battery supply. And to hit the target price of \$35,000 or less for the new car, which is expected to offer at least 200 miles of rated range, Tesla will need every bit of the 30-percent cost reduction it says it can achieve with the gigafactory. Can Tesla sell 500,000 cars? In the end, as investment journal Barron's notes, the gigafactory will only pay off if Tesla can reliably sell half a million cars a year. (The Barron's article also noted that Tesla has not responded to any of its inquiries since Musk hung up on its reporter a year ago.) If Tesla can sell that many cars by 2020, it is likely to become one of the top three plug-in electric car makers in the world--along with Nissan and General Motors. Meanwhile, rivals say they will keep pace with its cost reductions--although they are likely banking on far lower volumes of electric-car sales that Musk and Tesla anticipate. More details are likely to emerge about the Tesla gigafactory, perhaps including a site selection. The candidates are Arizona, Nevada, New Mexico, and Texas, each of which putting together incentives to offer to Tesla. "

Tesla Model S

The all-electric Tesla Model S sedan.

"Tesla Motors TSLA -3.31% Inc. makes electric cars ? and they must be pretty good cars because they cost \$70,000. Despite selling really expensive cars, Tesla has long been the darling of the left. Nothing says ?I am committed to saving the polar bears? better than driving a luxury, battery-powered car."

"For several years, Tesla has been in a fight with the states. Tesla does not use dealerships. It sells its cars on its website and in showrooms. Almost every state bans or limits the sale of automobiles directly to customers, which is terrible and reflects the power of auto dealerships. The dealerships want you to buy your car from them because, well, that?s how they make money. And because they are wealthy and connected, they have persuaded many states to make it hard for automakers to sell directly to people. After all, if you were buying a car directly from a manufacturer, who would sponsor the local Little League teams

"The auto dealers argue that direct sales will result in massive layoffs, disruptions in the community, and less

odious car-selling techniques. Actually, they're not making the last argument, but they're saying that without dealerships, customers will never figure out where or how to get their cars repaired. By the way, the dealerships pay lawmakers with campaign contributions and promised future support if the lawmakers keep Tesla out of their states."

"Tesla's response is that the car dealerships' position violates every notion of free markets. Tesla argues that prohibiting direct sales protects only the dealerships and harms the consumer. Tesla is right. There's no reason to prohibit a consumer from buying directly from the manufacturer. Cutting out the middleman is generally a good thing - unless you're the middleman. So Tesla is right - but few companies owe their existence to the government and the public dole as Tesla does. The idea that Tesla can enter a legislature and sing the praises of free markets with a straight face is rich. In 2010 the company received a \$500 million loan from the U.S. Department of Energy. It prospers because of the federal tax credit of up to \$7,500, plus \$2,500 in California credits for each new purchase. It receives credits from the California Air Resources Board, which it sells for a large profit. Last year the company received \$34 million in tax breaks from California as an incentive to build a plant in the San Francisco area. Tesla has the gall to encourage consumers to ask state lawmakers to subsidize the purchase of their vehicles. Free markets, indeed."

"Tesla wants to expand its operations and is considering investing up to \$5 billion for a new plant in Nevada, Arizona, New Mexico, or Texas, all of which ban direct sales except Nevada. Tesla wants Texas to repeal its direct sale prohibition, but while the Lone Star State is offering infrastructure money, it's not budging on the direct sale issue. Arizona has already introduced a bill to lift its ban on direct sales and Gov. Jan Brewer (R) is promising tax breaks. New Mexico Gov. Susana Martinez (R) has promised that the state will do whatever is necessary to land the expected 6,500 jobs. Rumors are that in lieu of tax breaks, Nevada is willing to purchase all the land Tesla needs for the plant. You can be sure the free-market-loving Tesla lobbyists are in the middle of the fight."

"Why would Tesla do something so dangerous, thinking nobody would notice? Greed! Tesla can play all the ""ignore the facts"" games they want, but when the lawsuits start, Tesla will lose in a very big way!"

Do White House Press Staff and Campaign Billionaires maintain a team of ?Character Assassins? to take out U.S. citizens they don't like?

“(SOURCE: Public Team) ?Wet Work? or murder-for-hire resulting in dead bodies, inside the United States, is highly frowned upon and constitutional illegal. But what if you could kill people that bugged you without causing a dead body? The one way you can kill people, inside the United States, is called ?Character Assassination?. This process destroys the career, brand, friends, income, savings, reputation and world of the target in such a manner that, for all intents and purposes, they are dead. The suspicious resignations of Robert Gibbs, Jay Carney and a host of associated West Wing staff have led credence to this theory relative to timing, revelations and whistle-

blower reports from former White House staff. Campaign billionaires that they answered to, are known to have paid for some of the attack campaigns. In addition to the hit stories that are put out, all of the databases (ie: Axciom), that any hiring manager might ever use to background check you for a job application, are tainted with false information about you; and your credit rating is crashed on other databases. ?Honey Traps? are launched on you, followed by a host of other dirty tricks designed to maliciously harm you in retribution for being effective at something they don?t want you to be effective at. The Snowden documents go into great detail about these human destruction techniques. It is suspected that people that do this are hired blogger/media attackers such as [For The Obama Administration] : John Herrman, Adrian Covert, Nick Denton (more about them in a forthcoming feature article), Patrick George, and [for the Bush Administration] Ann Coulter, Karl Rove and Sarah Palin. NSA tracking and special investigators have recorded and documented who did what to whom, now it is just a matter of special prosecutors and subpoenas. You can read more about the tactics [HERE>>>](#) Let?s discuss. Send in your links?
Tom Ray- LAT"

The Strange Death of Clean-Tech CEO Whistle-blower Gary D. Conley

"Link to this story: <http://www.thenewsdaily.org/?p=1814> (Reporter/editors now contributing to this story: 127) - Friends, family and associates say he would not have killed himself - Was known to have met with reporters to disclose Silicon Valley corrupt cartel dealings - Was deeply involved in Silicon Valley Clean-Tech circle - Worse case scenario: ""What would an insane, ego-maniacal Silicon Valley billionaire campaign backer do to keep his \$200 Billion U.S. Treasury campaign-cash-for-DOE-CleanTech-loans scam quiet " - Nearby area crime-scene surveillance tapes ""missing"" - Are multiple other Silicon Valley-related deaths part of an attempt to ""close the loop"" and shut people up? - Were other VC's, or political figures, involved? - Investigators want to know if Silicon Valley deaths have political connections. Gary D. Conley, Stan Myers, Rajeev Motwani, Forrest Timothy Hayes, James D Johnston, Rory Johnson, Gabriel Magee, Karl Slym, William ?Bill? Broeksmit, Raveesh Kumra, Doug Bourn, Brian Finn and Andrew Ingram of Tesla, David Palecek; and over 32 more, were all connected to the same group of Silicon Valley/CleanTech/Car/Sachs/DOE industry suspects and died unexpectedly... - The odds of all of these people, with great medical plans, being connected to the same scandal, dying unexpectedly from strange and mysterious causes in relative time-frames are astronomical. If these are coincidences, they violate every actuarial calculation and all of the laws-of-averages. - Senate hearings and Hacker Convention expose use of undetectable heart-attack gas vapors, Cortisol suicide-causing agents and cardiac-targeted fine-

focus electromagnetic pulse guns - Federal Investigators release HISTORICAL, UNPRECEDENTED expose letter confirming massive cover-ups! Most of Government's own watchdogs say they're stonewalled! (Below, near bottom) The big VC's didn't like the maverick approaches that Gary took. He did not play the Silicon Valley Frat boy brogrammer game. Unlike Silicon Valley, he treated women executives as equals and not as reception room eye candy like the other VC's. But Gary's biggest indiscretion was that he got past the VC's technology suppression and control system in the Valley. Time after time he created, launched and got funded one amazing new energy technology company after another. The Big VC's only want things funded that support their portfolio and they stop anything that is going to compete with it. As an example: The Valley VC's decided that they wanted a chemical called ?lithium Ion? to be the main chemical to power electric cars. Even though many other options existed, they picked this one chemical because they had configured their investment plays in lithium mining, lithium processing, lithium cars and lithium batteries in each of their portfolios and then, even though they were billionaires, they made Congress give them many more billions of tax money just for this one chemical because they had monopolized it globally. Alas, Gary promoted a technology that competed with the Silicon Valley VC's at Solyndra and with all of their lithium plays. He had the metrics, working proof and opportunity to exceed their technology. First they tried putting a FULL MONTY on him but that didn't work out. It is now almost impossible to kill reporters and whistle-blowers without it getting recorded. Glenn Greenwald, and people like him, are now under so much surveillance that, if anybody did try to whack Mr. Greenwald, it would be caught on so many drones, microphones, laser scanners, cameras, tracking chips, window vibrators, IR chipcams, cell phones, bugs and other gadgets that the killers could never get away with it. Watch the TV show: Person of Interest. Everything in that show already exists today. Private investigators, taking another look at the case, have been sourcing new surveillance data sources to try to find out what really happened to Mr. Conley in the time period leading up to, and at, the shooting. History has proven: 1.) That Solyndra panels self-ignited and Lithium ion blows up when it gets banged, 2.) That Gary had better plans. 3.) That Gary's efforts conflicted with the plans of the Silicon Valley VC's. 4.) That Silicon Valley VC's will stop at nothing to get their way; politically, egotistically and industrially. Did he pay the ultimate price for his innovations and for speaking out? Ironically, Ford has announced that their new electric car will use the same type of solar optical concentrator on the roof of the car, as Gary's SolFocus developed, although Gary is no longer alive to participate in the profits. Many reporters find it ?strange? that Steven Chu, the Secretary of Energy, who openly hated Hydrogen energy, was nominated and lobbied into office by opponents of hydrogen energy (who were investors in competing technologies) and that during Steven Chu's reign, a record number of hydrogen executives and companies died. Of course, it could all just be a coincidence. Forced suicide? Murder? Cover-up? Unusual number of coincidences? What do you think? ghj-de, sdLAT, rf-Den Gary Conley Dead: Silicon Valley Entrepreneur Dies Of Gunshot Wound A man found dead Sunday afternoon from a gunshot wound outside a Beale Air Force Base residential area was a well-known Silicon Valley entrepreneur and clean energy pioneer, according to base officials. Gary D. Conley, 52, whose most recent corporate venture, b2u Solar of San Jose and Gurgaon, India, was one of several energy-related companies he founded, was discovered by a Beale resident at about 1 p.m. Sunday. His body was found outside a parked car near the Vassar Lake Gate with a gun in close proximity, according to Brian Wagner, 9th Reconnaissance Wing spokesman. According to officials at the Air Force Office of Special Investigation, no foul play was involved. Conley's brother, who lives in Oklahoma, said he and other family members are mystified by details surrounding the body's discovery. ?It's very perplexing,? said Mark Conley, 55. ?The circumstances don't seem to make much sense.? [video width=""640"" height=""360"" mp4=""http://www.thenewsdaily.org/wp-content/uploads/2014/08/SolFocus-CEO-Mark-Crowley.mp4""][video] Gary D. Conley served in the US Air Force from 1979-83, as did Mark Conley and their father before them, according to Mark Conley. ?We're an Air Force family,? said his sister, Michele Conley, 59, of Paradise Valley, Ariz., who said her brother was born at McClellan Air Force Base, about a half-hour south of where his body was found. B2u Solar frequently negotiated military and other government contracts, she said, which would explain his presence in the area. The energy entrepreneur was named Clean Energy Entrepreneur of the Year in 2005 by the National Renewable Energy Laboratory Growth Forum. He is credited with having founded SolFocus in 2005 in order to commercialize products created through its predecessor, a research company called H2Go. That firm, also founded by Conley, began with hydrogen-related energy projects and later switched focus to solar energy. ?He was a genius,? Mark Conley said. ?He did some really amazing stuff.? According to Michele Conley, he also was a gourmet cook. Christmas Eve featured an elaborate meal he prepared in their Saratoga home for his wife, Grace, and their two teenage sons. Gary D. Conley's profile on LinkedIn, an online professional networking site, lists flying, skiing,

food, several branches of science, economics and hydroponics among his interests. B2u Solar, a small startup he founded in 2010, had solar demonstration projects in the works in China, and at the NASA Ames Research Center at Moffett Field in Mountain View, according to GigaOM, a technology news website. [video width=""320"" height=""240"" mp4=""http://www.thenewsdaily.org/wp-content/uploads/2014/08/Interview-with-Gary-Conley_low.mp4""][video] Michele Conley said her brother had been expected to meet a friend at the former Castle Air Force Base outside Merced this week to help with a solar project there. She last saw him a month ago, she said. "He was having so much fun, traveling and doing so well," Michele Conley said. He recently bought a new car, which he did pretty regularly, she said. The three siblings had been raised by their mother, primarily in Ohio, according to Mark Conley. Their father had been killed when his Air Force fighter jet was shot down over Vietnam in 1967, he said. "We didn't have any money," said Michele Conley of their upbringing. "Gary was always the whiz kid ? the braniac." She described her brother as a self-made man. His suspected suicide, she said, is implausible to her. "He was not depressed. He was like a big kid ? always excited about everything. It just makes zero sense," Michele Conley said. CONTACT Nancy Pasternack at npasternack@appealdemocrat.com or 749-4781. ???????????????????? Call me old fashioned, but isn?t killing taxpayers, and their companies, because they won?t join your business monopoly, considered to be a bad thing these days? As of Jan. 1, 2014, Steven Chu?s actions, and those of his staff, have put over 118 companies out of business that might have otherwise survived, and every single one of those companies competed with Steven Chu?s Silicon Valley venture capital sponsors/buddies. Now there is an interesting coincidence! MT- MJ"

-Another Bizarre Google Key Player Death! Murders or just coincidence? NOT the first Silicon Valley DEATH-BY-HOOKER!

"Eric Schmidt sex penthouse, Gary Conley Dead, google executive murder, Rajeev Motwani"

Another Bizarre Google Key Player Death! The Silicon Valley Murders (or just coincidence)?

"Rajeev Motwani invented the mood manipulation and page ranking system that Google now uses as it?s key technology. According to many in Silicon Valley, Rajeev taught the technology to Google?s founders, who made ?Google? with the information. Then Rajeev, in perfect health, was found floating, dead, face-down in his Silicon Valley swimming pool (Breitbart similarity?). Conspiracy theorists say he was killed with a spy agency-class non-detectable cardiac arrest vapor (The existence of this kind of kill-vapor is now public knowledge) to avoid the exposure of the fact that Google is now using ?mood manipulation? for subliminal political voter manipulation. Cleantech Executive Gary Conley, a whistle-blower about, and enemy of, Google?s investors, was found with a

bullet in his head in the backfields of a Northern California Air Force base. His family and friends say he would never have hurt himself. There are a number of other strange Google-related deaths? Anyway? As investigations on what Google is ?really? up to, close-in, the bodies keep piling up. Google Executives are known to love their kinky sex (Websearch: ?Eric Schmidt?s NY Sex Penthouse?) and hookers but this one takes the cake. Honey Trap? Mata Hari was famous for pretending to be a hooker and then killing her targets with ?accidental overdoses?, Death-by-hooker is one of the oldest tricks in the book. Sometimes the hooker?s job is just to get the target to pass out and then the ?WET WORK? guys come in and finish him off with the overdose and make sure he flat-lines. See THE DC MADAM story. She did staging for ?Honey Traps? and political hits and then she was suspiciously hung/terminated!:"

Suspected hooker?s alleged heroin victim was Google exec

Evan Sernoffsky

1 of 4

"Police say Alix Catherine Tichelman, 26, killed a 51-year-old man by administering a lethal dose of heroin on his yacht in Santa Cruz, Calif., in November 2013. Tichelman was arrested July 4, 2014. Photo: Courtesy, Santa Cruz Police Department"

Prostitute accused of killing yacht-owning client with heroin

"(07-09) 10:37 PDT SANTA CRUZ ? A ?high-priced? prostitute from Folsom was behind bars Wednesday after police said she was responsible for the heroin overdose death of a regular client ? a Google executive whose body was found in November on his yacht in Santa Cruz. Alix Catherine Tichelman, 26, was arrested Friday after police lured her to the Santa Cruz area by posing as a customer and offering her \$1,000 for sex, authorities said. She was arrested on suspicion of murder, but Santa Cruz County prosecutors accused her of the lesser charge of manslaughter, along with counts of transporting drugs and destroying evidence. She made her first court appearance Wednesday and was being held on \$1.5 million bail. Tichelman is scheduled to return to court June 16 for arraignment, said Assistant District Attorney Rafael Vazquez. The victim, 51-year-old Forrest Timothy Hayes, died Nov. 23 on his 50-foot yacht, Escape, in the Santa Cruz harbor, according to Santa Cruz police Deputy Chief Steve Clark. According to an online memorial site, Hayes had worked at tech companies including Sun Microsystems, Apple and finally Google. He was born in Dearborn, Mich., was married 17 years and had five children, according to his obituary."

SILICON VALLEY SECRETS

" ?I was really devastated when I heard about it,? Todd Zion, who worked at Google for a short time under Hayes, told The Chronicle on Wednesday. ?He was a great boss. I never had a chance to thank him.? "

"An unidentified person wrote on the online memorial page, ?It is incredible to see the number of people Forrest touched. There are simply no words to describe this. I had the unique opportunity to work for Forrest at Apple and Google. He is one of the best bosses I have had ? caring and thoughtful.? In a press release, Santa Cruz police

said Tichelman had an "ongoing prostitution relationship" with the victim, met him the night he died and injected him with heroin. Footage from a security camera on the yacht showed Hayes "suffering medical complications and going unconscious," officials said. Rather than call for help from authorities, Tichelman allegedly gathered her belongings, including drugs and paraphernalia, and at one point stepped over Hayes' body to "finish a glass of wine," before lowering the blinds to conceal the body and leaving. Police said they had learned of a second case in another state with "similar circumstances" and were investigating Tichelman's possible involvement. The police press release said Tichelman "works as a high-priced outcall prostitute and meets her clients through a website, "Seeking Arrangements." During interviews, Ms. Tichelman boasted of over 200 client relationships. According to online profiles of Tichelman, she is from Atlanta, went to high school in Duluth, Ga., and studied journalism at Georgia State University. She called herself a makeup artist, a model and a dancer. A modeling page on Facebook associated with Tichelman contains dozens of pictures of her posing seductively in racy outfits. Santa Cruz police said they hurried to arrest Tichelman last week after learning that she might leave the area. On her Facebook page, Tichelman wrote June 30 that she was "coming home to the filthy, nasty, dirty south! Hoping to start the drive back to Atlanta at the beginning of next week. Can't wait to see everyone. It's celebration time y'all!"

Are they "cleaning up loose ends"?

Is this a "deadmen tell no tales" exercise?

"If these are all murders, is Eric Schmidt having people killed or are Google's investors having people killed or are the politicians that they swapped the kick-backs with having the people who know the whole story killed???? I'm confused."

"As we have all seen, hundreds of times, in the recent news: Insane, power mad, billionaires and Silicon Valley VC's will do anything, stop at nothing, lie like there is no tomorrow, and consider "the law" to be something-that-does-not-apply-to-them."

"Oh those Silicon Valley Illuminati, they are just little buggers aren't they

"Send in your links..., Let's discuss."

TT- Google

"We need to see the video on the yacht. Did she screw him, help him get high, figure her sex gig was over and leave because hookers just want to get their cash and get out of there? In that case: Alibi."

SUSPECTS?

"Did the video run on for a few hours afterwards, without being edited, and do we see anyone else enter? Can we prove the video was not edited? Where did the heroin come from? Him, or her

"Really, really want to see the yacht video.."

<http://www.theguardian.com/technology/2009/jun/07/rajeev-motwani-dead-google-swimming-pool> ?

""UNDETECTABLE"" POLITICAL ELECTRO-ASSASSINATION"

"The perfectly healthy person that suddenly falls over dead on a crowded commuter platform, bus, subway or on the street, may have been the victim of a high-tech hit-man. Using either a modified Taser, a portable Medtronic defibrillator in a backpack or a motorcycle battery and large capacitor, the attacker runs insulated wires out to highly shielded spiked pads on their finger-tips and simple touches the target, in a certain way, and the victim is silently, undetectably dead from an apparent heart attack. Emergency medical technicians will tell you that they are trained to never shock a person with a ""defib"" unless they are already flat-lined. Doing so to a live person will kill them. Sometimes the hit-man is waiting for the target in their home, hidden in the basement or attic, to do the deed while they are in the shower, or sleeping. The newly spotlighted knowledge of these types of political kill-jobs has police re-examining cold-cases and families signing exhumation orders to look for possible indicators. Although very hard to find, unless you are looking for certain specific trace aspects, science may have made the ""undetectable"", detectable. New tests, for certain chemical elements that the brain and organs release into the system during a heart attack can now be found with state-of-the-art equipment. Entry and exit points, of the electrical occurrence, may also leave skin and cellular modifications that can now be detected."

"Russian, and other, spy agencies use Cortisol overdose to make trouble-makers kill themselves! Making murder look like suicide!"

"By getting doctors, who are on the take, to change a target?s regular medication, diet or food source or by planting drugs on their sheets to be absorbed by the skin. Bad guy spies can make you kill yourself so their hands are, apparently, clean. Per The Telegraph: Researchers at John Hopkins University in Baltimore, US, found that variations in a single gene can be used to predict if someone is likely to take their own life. Sarah Knapton, Science Correspondent reports that A blood test that can predict whether someone may attempt suicide has been developed by scientists in a breakthrough which could prevent hundreds of deaths and explain hundreds of political and journalist murders that were, at first, thought to be suicides. In addition to non-detectable Cardiac Arrest gasses, that spies are now known to use, they have this other, more insidious tool."

American researchers have found that variations in a single gene can be used to predict if someone is likely to take their own life.

Those mutations can be spotted through a simple blood test which could allow therapists or doctors to intervene before it is too late.

"It could be useful for screening soldiers before they enter warzones, or checking their risk of suicide on their return, the scientists say."

"Researchers at John Hopkins University, in Baltimore, Maryland, found that the gene SKA2 stopped functioning correctly in people at risk of suicide."

"The gene is responsible for keeping levels of cortisol ? the stress hormone ? under control. ?Suicide is a major preventable public health problem, but we have been stymied in our prevention efforts because we have no consistent way to predict those who are at increased risk of killing themselves,? says study leader Dr Zachary Kaminsky, an assistant professor of psychiatry and behavioural sciences. ?With a test like ours, we may be able to stem suicide rates by identifying those people and intervening early enough to head off a catastrophe.? The blood test managed to predict those with the most severe risk of suicide with 90 per cent accuracy. They could also spot if someone had already attempted suicide with 96 per cent accuracy, simply by looking at the levels of SKA2. The SKA2 gene is found in the prefrontal cortex of the brain, and is involved in preventing negative thoughts and controlling impulsive behaviour. If there isn?t enough SKA2, or it is altered in some way, the body cannot control levels of cortisol. Previous research has shown that people who attempt suicide or who take their own lives have large amounts of cortisol in their systems. A test could allow doctors or psychologists to place patients on ?suicide watch? and restrict their access to drugs or equipment which they could use to end their own life. Dr Kaminsky said it could also help doctors know whether to give medications which are linked to suicidal thoughts. ?We have found a gene that we think could be really important for consistently identifying a range of behaviours from suicidal thoughts to attempts to completions,? Kaminsky said. ?We need to study this in a larger sample but we believe that we might be able to monitor the blood to identify those at risk of suicide.? The research was reported in the American Journal of Psychology. Bottom line: If you are doing something political and you are feeling

?kinda off? get your Cortisol levels checked in your blood. Was the Reddit Guy ?Cortisol?d?

Law news

Most of Government's Own Watchdogs Say They're Stonewalled

"Melissa Quinn / @MelissaQuinn97 / August 07, 2014 / 0 comments"

"A joint complaint from 47 of 73 inspectors general went to the House Oversight and Government Reform Committee, which meets in this hearing room. (Photo: Oversight and Reform Committee)"

"More than half of the federal government's inspectors general have joined to lodge a formal complaint that the Obama administration places 'serious limitations' on their ability to uncover waste, fraud, and abuse. A total of 47 of the 73 government watchdogs sent the unprecedented letter to leaders of two congressional committees, Fox News reported. In their complaint, the inspectors general say:"

"Agency actions that limit, condition, or delay access thus have profoundly negative consequences for our work: they make us less effective, encourage other agencies to take similar actions in the future, and erode the morale of the dedicated professionals that make up our staffs."

"The watchdogs include IGs from the National Security Agency, Department of Homeland Security, and Department of Justice. They wrote Tuesday to the House Oversight and Government Reform Committee and the Senate Homeland Security and Governmental Affairs Committee. They call on the oversight leaders to reaffirm the commitment of Congress to helping IGs combat waste, fraud, and abuse, and to exert 'all available powers to enforce' access to agencies that refuse to comply. Government bureaus, the IGs write, typically prevented them from obtaining relevant information by calling it 'privileged.' These restrictions, they add, risk 'leaving the agencies insulated from scrutiny and unacceptably vulnerable to mismanagement and misconduct' the very problems that our offices were established to review and that the American people expect us to be able to address." Hans von Spakovsky, senior legal fellow at The Heritage Foundation, told The Daily Signal that the IGs' letter is both unprecedented and telling:"

This unprecedented complaint by a majority of the federal government's inspectors general that the Obama administration is obstructing their ability to investigate corruption shows just how far the administration is willing to go to hide its wrongdoing.

The IGs describe three specific instances in which government agencies would not give them access to records and other information needed to do their oversight work properly:

The Peace Corps refused to provide records of reported sexual assaults that were needed for an investigation into how the agency handled such cases.

"In a statement to Fox News, a Peace Corps spokeswoman reaffirmed the agency's commitment to 'working with the inspector general to ensure rigorous oversight while protecting the confidentiality and privacy of volunteers who are sexually assaulted.

The Department of Justice would not produce three separate reviews until officials learned that the documents would be of assistance to the agency's leadership.

"DOJ spokesman Brian Fallon told Fox that the inspector general received all information requested, but that 'because the documents at issue included grand jury material, credit reports, and other information whose dissemination is restricted by law, it was necessary to identify exceptions to the law to accommodate the inspector general's request.

The Environmental Protection Agency's Chemical Safety and Hazard Investigation Board refused to provide requested documents during an investigation.

"House Oversight Chairman Darrell Issa, R-Calif., said of the 47 IGs' letter:"

"If there is anyone who should have transparency [from the government], it should be the watchdogs inside the government working for the president."

"Because many IG reports and activities are not public until their completion, Issa said, 'some of the best examples of obstruction probably are the ones the IGs don't want to say in a public format.' Inspectors general played a crucial role in investigating allegations that the Internal Revenue Service targeted tea party and other conservative groups seeking tax-exempt status. They also identified internal weaknesses at the Export-Import Bank. Inspectors general for both the IRS and the Export-Import Bank agencies signed the letter. Von Spakovsky, co-author of a book about Attorney General Eric Holder's Justice Department, said the allegations by the

agency's inspector general are notable. He told The Daily Signal:"

The complaint by the Justice Department's IG is particularly concerning and very revealing. Eric Holder has no hesitation in abusing his power to prevent the public from finding out about the rank politicization of justice and the attorney general's corrupt exploitation of his authority as the chief law enforcement officer of the United States.

"In the wake of the Watergate scandal, Congress in 1978 passed the Inspector General Act establishing the initial 12 IG offices. The law stipulates that each official watchdog has "complete, unfiltered, and timely access to all information and materials available to the agency that relate to that inspector general's oversight activities, without unreasonable administrative burdens," the letter to the congressional committees states. Issa, saying "there has never been a letter even with a dozen IGs complaining," called the letter unprecedented. He added:"

"This is the majority of all inspectors general saying not just in the examples they gave, but government wide, they see a pattern that is making them unable to do their job."

The Oversight Committee chairman said he intends to hold hearings to delve into issues raised by the IGs' letter when lawmakers return to Washington in September. This post has been updated. Read the 47 IGs' letter: IG Access Letter to Congress

Who's Tesla's Bitch? THE LIST:

"(Draft 1.5 - Constantly updated) Which media outlets cover-up Tesla Motors misdeeds and abuses? Which ones are run, or directed, by Tesla's investors seeking to manipulate stock values? Let's track, chart and document which media outlets are willfully smoke-screening Tesla Motors. Which outlets publish counter-stories when other outlets publish negative disclosure about Tesla to try to cover-up, or flood-out, the Tesla issues and charges? Recently, when Elon Musk's other company: Space X, started crashing and secretly laid off a huge staff count (they are now being sued over this) they ALICE alerts went out with the ""tell them nothing-to-see-here"" message. This began to reveal the GameChangers news spin-synchronization scandal now disclosed by the Media Trackers group, and others. A lawsuit is in preparation to sue each of the writers individually, and as a group, for conspiracy to engage in stock fraud. Tesla's employees and records show that Tesla's actual circumstances have always been far different from what these reporters stated in their synchronized media manipulations. This has precedent as grounds for conspiracy fraud and securities fraud. Emails and alerts show that reporters were asked to spin-synchronize and coordinate ""BS stories"" and ""smoke screen stories"" at times when known negative news about Tesla was coming out. Because the reporters were informed of different circumstances than what they wrote, and some of them hold stock in Tesla, and related ventures, direct intent to defraud can be proven and their personal assets attached for recovery in the event of a jury award. Some reporters are compensated by Tesla's IR Department, PR contractors, founders, VC and banking groups with either cash, discounts, tickets, jobs, advertising contracts, sex workers, meals, travel and/or political access. Media Tracker and a number of other groups have had all of the companies, and individuals on tracking systems and can now metricize and quantify who did what, when. Who conspired and coordinated what and who wrote the truth and who coordinated lies. Send in your submissions... Which outlets now have documented tracking evidence, that can be exhibited in court?:"

-- Google (Investors) - Hundreds of online news outlets - Google has purchased, or acquired over 40% of internet traffic and can now delete, or dead-end, information it does not like, before you can see it. This is a violation of Freedom of Speech (aka: The First Amendment) - Also via web routing manipulation"

-- Hearst Communications (Investors) - SFGate.com and hundreds of ""media websites"" - 15 daily and 34 weekly newspapers including - Houston Chronicle - San Francisco Chronicle - San Antonio Express-News - Albany Times Union - Hundreds of magazines around the world, including - Good Housekeeping - Cosmopolitan - ELLE - O Magazine - The Oprah Magazine - 29 television stations, which reach a combined 18 percent of U.S. viewers; ownership in leading cable networks, including Lifetime, A&E, HISTORY and ESPN; significant holdings in automotive, electronic and medical/pharmaceutical business information companies - a 50 percent stake in global ratings agency Fitch Group - Internet and marketing services businesses - television production - etc..."

-- Gawker Media (White House Character Attack Conduit) - Gawker - Gizmodo - Jalopnik - Kinja - Deadspin - Kotaku - Jezebel - Valleywag - Lifehacker - 109 etc...

THE FORBIDDEN TESLA TIMELINE THAT THE COVER-UP PEOPLE DON'T WANT YOU TO SEE:

"- How Senators insider stock and campaign funding kickback scheme funded a car company with stock market manipulation (SOURCE: SOMO1) Derived from RICO CASE FILE #456-D-hj45A and Tesla Employee Testimony. 15 Tesla employees have provided every company email since 2003, between all suppliers, investors and third parties. (Their hard drives did not crash). All of this information can be independently verified with minor research and interviews. HIGHLIGHTS: (Full Timeline is 42 pages long) 1880's- Detroit Electric sells Electric cars commercially 1900. 38 percent of US automobiles are powered by electricity, but as Henry Ford designed the much cheaper T-Ford, the electric cars began to disappear. 1970s. The price of gasoline hits record because of a series of energy crises, so the interest in electric cars increased again. June 1971. Elon Musk was born. 1996-1999. General Motors produced an electric car called EV1 and leased it to customers. 1999. Elon Musk sold his company Zip2 and made \$22 million. He founded X.com that would become PayPal. October 2002. eBay acquired PayPal and Elon Musk made \$165 million. 2003. General Motors cancelled the lease program and removed the last EV1 from the streets. They said they couldn't sell enough of the cars to make the EV1 profitable. July. Martin Eberhard and Marc Tarpenning incorporated Tesla Motors. They had earlier made a feasibility study to see if they could make an electric car. They now made a feasibility study together with AC Propulsion to see if the batteries would work. November. The 2 employees searched for a partner to build the rest of the car. Lotus became their choice. Lotus engineers, from England, agree to provide chassis of car. 2004 February. Ian Wright, who had met Martin Eberhard while on a plane, joined the company. They finished business plan 1.0. Ian later leaves Tesla in disgust when he realizes what they are up to March. Starting a car company is expensive, so they began to look for outside investors. Silicon Valley VC's discuss having Elon Musk take-over Tesla and get rid of the founders April. Series A funding where Elon Musk was the main investor. Elon Musk had earlier aligned with JB Straubel, as his directed mole, who had friends at AC Propulsion, and the VC's told Elon Musk to contact Tesla. Other investors included SDL Ventures and Compass Technology Partners. JB Straubel joined the company as employee number 5. May. An early styling study began at Tesla. June. A technology implementation study began. July. Tesla had 9 employees and moved to an office in San Carlos, California. They also made a ""mule"" which is a car that doesn't reproduce but you can see if the concept works. This fake ""mule"" car is shown as a real sellable car to DOE and investors, when, in fact, it is not October. The 15 employees began to design the drivetrain component. November. They installed the drivetrain in the Mule 1. December. Tesla couldn't use the same design as the Lotus Elise, so they had a contest where Barney Hatt made the best design by copying most of the Lotus Elise so they would not have to pay Lotus the full licensing costs. 2005 January. They made a 1/4 scale model in clay of the design Barney Hatt had made. Tesla had now 18 employees and they also took out Mule 1 for a test drive but it was not legal to be driven on any road. February. The now 23 employee strong company needed more money, so they made a series B funding. Not only Elon Musk invested more money, but also Valor Equity Partners. Tesla also opened an office in UK close to the Lotus office to try to tie into Lotus. Lotus is leery. April-June. Tesla made a full-scale model in clay of the Tesla Roadster. July. With 38 employees, they now tested a plastic model of the Roadster in a wind tunnel. August. Some of the 41 employees began developing a motor. December. 63 employees and they began to build the Mule 2 in fiberglass. 2006 January. A drivable Mule 2 was finished but it still isn't a production car and it is not legal for sale or driving on the road. April. The engineers thought the Roadster was finished so they made 10 engineering prototypes (EP), which compared to a Mule can (in theory) be produced. May. 92 employees and they finished the first EP, called EP 1. Tesla raised a series C round led by Vantage Point Partners and Elon Musk. July. Almost no-one knew that Tesla existed, until now when Tesla showed EP 1 and EP 2 in Santa Monica,

California. August. 100 employees. Tesla crast tests and technical reports reveal fire dangers. Tesla senior staff orders the reports shredded. them. Tesla had earlier crashed a few virtual cars, but they needed to know if the computers models were accurate. They also began to show the Roadster at events to market it. August. Elon Musk, John Doerr, Rahm Emanuel, Robert Gibbs and David Axelrod discuss a quid-pro-quo scheme to advance money for the Presidential and Senate campaigns and get paid back in spades from TARP and Dept. of Energy ""Loans"", tax credits, stock perks and monopolies. September. 120 employees. They made more tests, including radiated emissions and susceptibility testing. EMF emissions during charging were high and those reports were ordered shredded October. They made a durability test, which consists of driving the Roadster on a cobblestone racetrack. The idea is to simulate 100,000 miles in 6 months. It would have taken much longer time to drive the same distance on a smooth road. Tesla realized that their computer models were inaccurate - the Roadster's transmission didn't survive the durability test. Tesla is warned, by Detroit UAW executives that everything they are doing is wrong, wasting tens of millions of dollars and could damage the overall auto industry. Musk hates unions and pledges to keep unions out. He ignores the advice due to narcissism issues. November 2004. 144 employees, and more tests, including driving through a saltwater bath. December. They showed the EP 2 at the Los Angeles Auto Show. 2007 January. Tesla brought the Roadster to Arvidsjaur, Sweden, to see if it could survive winter conditions. It had severe charging issues February. 205 employees. Tesla began to build a validation prototype (VP), where they took everything they learned from the engineering prototype. Tesla says it will build a \$35 million plant in Albuquerque, to produce the Model S. They lied. March. 230 employees and they finished the VP 1. April. In dire finances, Tesla raised more money - a series D round led by Elon Musk, Technology Partners, and Vantage Point. June. Tesla's motor factory in Taiwan was finished and it began producing parts. July. A new transmission was somewhat finished but still has ongoing problems. August. Tesla finished the VP 10. CEO Martin Eberhard was replaced by Tesla investor. Tesla's are now \$100,000.00 over budget PER CAR Michael Marks, hired, who would wprk as an interim-CEO until Tesla found a long-term CEO. September. Tesla delayed the launch of the Roadster because they needed more time to test its durability. October. Tesla transmission failed in the durability tests. Massive engineering failures are piling up. Tesla needed yet another transmission. November. Actual Tesla Martin Eberhard is forced out of the company after confronting Elon Musk regarding Musk's manipulations. Musk orders his PR group to launch character assassination campaign against Eberhardt December. Interim CEO Michael Marks see the lies and leaves and is replaced by interim CEO Ze'ev Drori. Bernard Tse is contracted, by Tesla, to hide the Tesla battery explosion documents that have been uncovered. December. Tesla says it will build it;s factory in Southern California. They lied. December. Sex worker hired by Musk attempts blackmail. Lawyers shut her down 2008 January. 260 employees. The VPs survived the new tests, so the Roadster was finished -except for the transmission. Tesla accountants notify Musk of impending bankruptcy. Tesla makes customers sign confidentiality agreements to keep from disclosing extensive defects and price changes that are constantly occurring. March. Tesla began production of the Roadster. Elon Musk cheating on wife and kids with B-movi"

"Senior Tesla Motors Media Consultant quits. Reveals All! Says ""STUPID, STUPID NEWS REPORTERS NOW USING FACTS INSTEAD OF TESLA TALKING POINTS, THUS RUINING THE WHOLE DEAL..."""

"Share this story via this link: <http://wp.me/p4e1uX-2IH> Fremont, CA- As of today, there is no mention of Buzz Flapjaw on any Tesla Motors website. His name appears to have been scrubbed from all Tesla media. Buzz is a legend in the corporate communications industry, but he now has no relationship with Tesla Motors, certainly as of this weekend. Buzz said, ""The PRESS ARE IDIOTS!"" in national press releases (the results of which are shown below): "

"He went on to say: ""The Stupid, Stupid news reporters are now using facts, hard data and detailed research to write their stories about Tesla Motors and Elon Musk, instead of the extensive and carefully prepared talking points we gave their news directors. You would think that our investors ad money would still give us control of the media but apparently not.."" ""(Fucking Glenn Greenwald)""", He muttered under his breath.. ""(Jay Carney would never let this shit happen when he controlled the news...""") he continued to mutter to himself... Buzz elaborated: ""Only those of us inside Tesla can truly describe the kool aid colors (Tesla's fanboy shill bloggers

favorite drink) of the bright Tesla future and the wonderfulness of just being a Rich Frat Boy Democrat, err... uh... Tesla Owner"" Formerly with Enron, Buzz moved on to run the General Motors ignition key safety group, and was stolen by Elon Musk (Who stole Tesla from Martin Eberhardt), from GM when his valuable disinformation skills were noted. Buzz expressed his angst and frustration with the constant concerns over Tesla's stock ""activities"" and the reference to Tesla as a ""creepy taxpayer swindle-scam created to manipulate the stock market and exploit tax credits which Tesla's investors bribed into place"". ""THAT IS JUST WRONG!"" , Raged Buzz, ""there is nothing creepy about it!"" Buzz also commented on other controversies: ""Senator Feinstein DID NOT put herself on the intelligence committee just so she could get a heads-up just before she gets caught. She did not take bribes! Our investors huge cash payments to her PAC are irrelevant, as are the insider stocks and real estate holdings her, and her family, profited on and we only hired her staff to help them out, not as revolving door bribes, people are just making things up! The fact that Elon Musk had a personal relationship with her had nothing to do with it! If you ignore the direct connection between Solyndra and Tesla, and all of the investors who are also campaign donors, which are all on the same land, you can just ... err...uhm.... Benghazi!"" , Said Buzz. Also commenting on the Tesla fires, he admonished: ""OK, so the Tesla patents do say, in no uncertain language, that the Tesla batteries will blow up and kill your family and burn your house down, but that is not why we were just giving the patents away. Also, even though every major university has said that they way we configured the NOT APPROVED FOR CARS batteries creates 'the most likely scenario for an explosive fire, of any lithium ion configuration on EARTH', the handful of cars we have sold only blow up a little bit and the cancer-causing gas they emit can be avoided if you get 2 miles away from them very fast while holding your breath."" He went on: ""..Tesla is getting a raw deal, you need to just ignore all the dead, and burned alive, Tesla car and battery factory workers..for GODS SAKES, all but three of them are in CHINA..They are ASIANS, they are not AMERICANS!.. who cares?!"" We asked him to discuss the safety issues: ""Look"" , he said: ""Yes, we all know that Tesla's have killed multiple people and that there are multiple homicide charges but it wasn't like the car killed people, except some of them."" We asked Mr. Flapjaw about the connection between all of Google's executives and investors, Tesla's investors and campaign contributions that line up in a very symmetrical way to the Department of Energy funding. Buzz exclaimed: ""What!? You have a problem with symmetry? Look at the Tesla! It is design perfection. It is perfectly symmetrical. Symmetry is GOOD. You try to make it sound like kick-backs are a bad thing.. call them 'campaign support resources', that doesn't sound so bad, heh ", he wiped his brow and continued.. ""...So what if Google controls the media and hides all the investigations about Tesla, it is better than letting voters get all upset!"" The various charges that Tesla is an organized crime operation created as a kick-back scheme to control stock market valuations was taken to Mr. Erick Holder for comment. His secretary stated that: ""Mr. Holder cannot speak to you right now, he is very busy... very, very busy. He has a lot on his mind right now. He has to redo his stock portfolio before Monday and all kinds of things."" Buzz expects to begin work on his new job as lobbyist for the new ""CIGARETTES COME FROM PLANTS AND ARE GREEN AND GOOD FOR YOU"" Campaign. When asked for comment, Mitt Romney merely smirked in a knowing kind a way... We asked Buzz if it is true that Robert Gibbs, Jay Carney and Erick Holder told Elon Musk that he could ""pretty much kill and eat human babies and we can keep it from getting ACTUAL media coverage"". Buzz walked away."

Tesla shareholder suit claims Elon Musk and other board members lied about car safety

"- DOZENS OF FRAUD LAWSUITS NOW PRODUCED OVER TESLA FRAUD BY SHAREHOLDERS AND INSIDERS. CHARGES ERIC HOLDER WITH RUNNING COVER-UP TO PROTECT THE WHITE HOUSE! - CHARGES TESLA IS ""A TOTAL CRIMINAL ENTERPRISE CREATED TO KICK-BACK FUNDS TO SILICON VALLEY CAMPAIGN FUNDING VC'S!"""

By Paul Carr

"Out of the battery fire, into the shareholder lawsuit. Tesla shareholder Ross Weintraub has filed a derivative suit against the company and its board members ? including CEO Elon Musk ? alleging that a series of dishonest statements made about safety and profitability caused Tesla?s stock price to drop on multiple occasions. A derivative suit is a legal tool used by shareholders who want to force a company to take corrective action against its own executives or, in this case, to take action directly if board members are unlikely to act. It should be noted that, to many, shareholder lawsuits are like patent trolls: An unfortunate cost of doing big business and not something that inherently bodes badly. Also, in Tesla?s case, their stock isn?t that far off its 52 week high (Chart via Google): In the complaint, filed in Northern California District Court, and embedded below, Weintraub alleges a long history of dishonesty by the company and by Musk himself, including allegations that Tesla board members:"

"?allowed the Company to embark on a campaign of false and misleading statements designed to convince the market that the Model S was literally the safest car in existence.? ?allowed the Company to misrepresent the low

height and configuration of the Model S battery pack as enhancing the vehicle's safety, without disclosing its very significant vulnerabilities for high-intensity fires. egregiously allowed the Company to misrepresent the Model S's history of fire incidents which included at least three very significant fires requiring first responder intervention."

And that Elon Musk himself?

"falsely claimed that [t]hroughout all our crash tests, throughout all similar incidents with vehicles on the road, never once has there been a fire. When a Model S fire later occurred during the relevant time period, a Tesla spokesperson falsely stated, "This is the first fire." Thus, by the third Model S fire, the Individual Defendants were still causing or allowing Tesla to represent that there were low probabilities of such fires while simultaneously denying that a recall was necessary. gave several interviews during which he downplayed this Model S fire and worse, failed to disclose that another Model S had been consumed by fire in Mexico on October 18, 2013? According to allegations in the Federal Securities Action, defendant E. Musk, with knowledge of the fire and inspection, unilaterally determined that the fire was not relevant to investors due to the circumstances under which it arose."

"The lawsuit further claims that Musk and his fellow board members' conduct has significantly and materially damaged the Company. By virtue of the Individual Defendants' breaches of fiduciary duties, the Company faces a lawsuit alleging violations of the federal securities laws and Tesla has suffered significant disruption of, and damage to, its business, its reputation and goodwill. It then goes on to list various conflicts held by board members which would make it unlikely that they would take action against Musk of their own volition. These include the fact that board member Steve Jurvetson of DFJ is an investor in other Musk companies including Solar City and Space X. The suit demands a jury trial. The company has until the end of this week to respond or face a judgement by default. Updated: A Tesla spokesperson told Pando "We believe this lawsuit is without merit and intend to defend against it vigorously. "

The Tesla Patent Giveaway SMOKE SCREEN!

"Tesla has announced that they are giving their patents away, patents which state, in no uncertain terms, that their batteries can ""kill you"", ""burn you and your family"", ""set your house on fire"", ""set your office or parking structure on fire"" (Not to mention the cancer-causing fumes they release). Tesla own engineers wrote that in the their patents and Musk signed off on those patents. [wpvideo syQr4wbz] So that's nice, they are giving them away. Who does this benefit? Since 2006, EVERY SINGLE new electric car company has been sabotaged by Musk and his Silicon Valley investors, The Detroit Big 3 (SEE THIS LINK) !!! and/or the Department of Energy. Over 200 electric car companies tried to launch and every single one got lied to and stonewalled by the DOE, sabotaged by outsider take-overs who offered an investment and then generated a take-over EXACTLY like Musk did; Blockaded, by mutual agreement by the VC's; and/or regulated into non-operation by laws which were written so only the Detroit Big 3 could pass them. So, Musk appears to be making all nice-nice by ""giving away"" the patents but in reality, they can't be used by anyone but the Detroit Big 3 because anybody else will be forced to endure the above-mentioned sabotage efforts. The Detroit Big 3 already have tons of their own patents and avoid any NIH (Not Invented Here) outsider technologies. So, what good are they? There is no possible way to start, or run, an electric car company in America because Musk and his VC's along with DOE and Detroit have built a cartel that kills off any competitors. (With a little help from Robert Gibbs and Jay Carney) Does President Obama care that they made him look like a fool for destroying his ""Miillion Electric Cars on America's roads"" promise to the Public? The sabotage was intentional! They used taxpayer money to do it! Shouldn't the WHITE HOUSE be a little bit pissed off? Yet, another thing, the President has to first find out about by reading about it in the paper? So could this be the precursor to a Tesla bankruptcy? We have seen that they ""cook the books"", are we in for another ""cleantech"" shocker? Send in your links. Let's discuss... Tom- Boston/G [wpvideo Az6PiFCv]

----- The Takeover Game- ANOTHER REASON WHY THE TESLA PATENTS ARE WORTHLESS... Almost every electric car company that starts to get traction has a hostile takeover attempt. Later stage parties create a dispute which causes the founder to be forced out, bought out, quit or otherwise stop providing the impetus to deliver a disruptive technology. The process has now occurred so many times that it is beginning to look like an intentionally crafted standardized strategy by third-parties who fear market diffusion. It happened to XP but they overcame it. The ""new management"" usually ""accidently""

tanks the company. Let's try to guess who the ""third-parties"" might be...BUT: What better way to control a market than to control all of the funding for that market and then have all that controlled funding administrated by ""your people"" who have been placed in, and around, a federal agency! It's the ""Takeover Game"" on a whole new level. Do people really do these sorts of things? Imagine megalomaniac car, energy and materials company heads with billions of dollars that want to control hundreds of billions of dollars and have insane egos... HERE ARE JUST A FEW EXAMPLES OF HOSTILE TAKEOVER SABOTAGE ATTEMPTS TO STALL, CONTROL AND MANIPLUATE THE ELECTRIC CAR INDUSTRY: "

Who's Tesla's Bitch? THE LIST:

"(Draft 1.3 - Constantly updated) Which media outlets cover-up Tesla Motors misdeeds and abuses? Which ones are run, or directed, by Tesla's investors seeking to manipulate stock values? Let's track, chart and document which media outlets are willfully smoke-screening Tesla Motors. Which outlets publish counter-stories when other outlets publish negative disclosure about Tesla to try to cover-up, or flood-out, the Tesla issues and charges? Some reporters are compensated by Tesla's IR Department, PR contractors, founders, VC and banking groups with either cash, discounts, tickets, jobs, advertising contracts, sex workers, meals, travel and/or political access. Send in your submissions... Which outlets now have documented tracking evidence, that can be exhibited in court?: -- Google (Investors) - Hundreds of online news outlets - Also via web routing manipulation -- Hearst Communications (Investors) - SF Gate - SF Chronicle - 15 daily and 34 weekly newspapers including - Houston Chronicle - San Francisco Chronicle - San Antonio Express-News - Albany Times Union - Hundreds of magazines around the world, including - Good Housekeeping - Cosmopolitan - ELLE - O - The Oprah Magazine - 29 television stations, which reach a combined 18 percent of U.S. viewers; ownership in leading cable networks, including Lifetime, A&E, HISTORY and ESPN; significant holdings in automotive, electronic and medical/pharmaceutical business information companies - a 50 percent stake in global ratings agency Fitch Group - Internet and marketing services businesses - television production - etc... -- Gawker Media (White House Character Attack Conduit) - Gawker - Gizmodo - Jalopnik - Kinja - Deadspin - Kotaku - Jezebel - Valleywag - Lifehacker - 109 etc... -- The A.L.I.C.E. Alliance (Investor-Synchronized Reporters) - Stands for: American Legislative and Issue Campaign Exchange - 1400 coordinated reporters using the ""Alice News Alerts"" in order to seek to cover up campaign backer crimes with synchronized story releases, include: - The top two political reporters for The Huffington Post - A Reuters reporter - The editor of The Nation magazine - A producer for Al Jazeera America television - A U.S. News & World Report columnist - Approximately two dozen Huffington Post contributors - All of ""Gamechanger Salon"" - Sally Kohn, formerly a Fox News contributor, now works for CNN - Amanda Terkel, the ?Senior Political Reporter and Politics Managing Editor at The Huffington Post - The Huffington Post's Washington bureau chief, Ryan Grim. - A former New York Times freelance columnist who now works as an energy and commodities reporter for Thomson Reuters is also a member of Gamechanger Salon. - Anna Louie Sussman is listed as an ?investigative reporter and journalist? on the Gamechanger Salon membership list, and while her beat focuses on energy issues, she has also writes about ?local and international human rights and social justice issues? according to her website. - Katrina vanden Heuvel is the editor and publisher of The Nation magazine, a prominent and well-known periodical of leftwing political and social thought. She is also a member of Gamechanger Salon and a regular opinion writer for the online edition of The Washington Post. - Lisa Graves, who leads the Madison, Wisconsin-based Center for Media and Democracy, is also a member of Gamechanger Salon, and ? according to e-mails reviewed by Media Trackers ? regularly promotes material developed by CMD to attack ALEC and the right-of-center lawmakers who tend to make up the majority of ALEC's active legislative membership. - Vanden Heuvel suggested in her column that liberals support the efforts of the American Legislative and Issue Campaign Exchange ? ALICE (a leftwing counterpart to ALEC) ? and the Progressive States Network. - Jordan Flaherty was, as of last year, a producer for Al Jazeera America television. He is also listed as a member of Gamechanger Salon and for a while he occasionally blogged for The Huffington Post. - In addition to working at the left-leaning American Sustainable Business Council, David Brodwin writes an online column for U.S. News & World Report."

Top Tesla PR Department LIES:

"Tesla is a ""Success Story"" - LIE!"

"Fraud Lawsuits, fires, explosions, injured workers, low sales, corruption, multiple investigations, Lemon Law violations, extensive owner defect reports, real estate fraud investigation, and more... Tesla ""paid back"" it's Department of Energy ""Loan"" - LIE! Tesla still gets over a hundred million dollars in subsidies, every year, from your tax money and the damage to the market, the economy, NUMMI job reduction and sabotage to competitors continues to rise in cost while the founders, and their investors, are buying escorts with your tax money. Tesla's are ""Selling like hotcakes"" - LIE! For the amount of money blown on Tesla, it has the lowest sales per volume investment dollar of ANY CAR IN WORLD HISTORY! Tesla's are ""Green"", ""Cleantech"" clean energy cars- LIE! It uses more toxic materials to make and run a Tesla than any other car IN THE WORLD! The Afghan war may have been advanced in order to get lithium and indium for Tesla and Solyndra for Tesla's investors. Tesla's are ""Safe"" - LIE! There are multiple police homicide charges on Tesla owners; by %, there are more drunk driver arrests in Tesla's than almost any other car; Tesla's release cancer causing smoke, brain damaging smoke & neurological damaging smoke when they burn; An inordinate number of Tesla's have blown up; The 7000+ lithium ion batteries in the Tesla have 7000+ chances of going off when any one of them gets wet or banged; Tesla's have had multiple recalls for fires including fires which burned people's homes; Tesla's go faster when you accelerate and cause more accidents because drivers lose control; Tesla is the ""people's electric car"" - LIE! Tesla was created by billionaires for billionaires in order to exploit certain minerals for their investment funds, nobody can ever afford one, they were born in corruption in a Washington DC kickback scheme. Tesla investors have bribed a large number of federal agency heads who were then forced to quit. Tesla's are the ""best made cars"" with ""the highest consumer satisfaction"" - LIE! Tesla bought and paid for all of it's ""Consumer PR ratings"". There are hundreds of defects noted in online owner posts. Even Elon Musk is quoted in interviews saying he has to ""look at each car individually"" because they each have problems. Google's owners also co-own Tesla so Google makes sure no actual stories about Tesla's problems get out on the internet. There are tens of thousands of evidence items proving that Tesla is lying. That evidence is posted here, at the GAO, in the U.S. Congress and

other locations you can easily find."

More coming...

"Now that we all know that Tesla is tainted, and, basically an embarrassment to drive, how about an Aston Martin DB7 Vantage as the coolest car? Dande-"

Elon Musk's new worst Enemies: The Russian Billionaires

"A lot of people hate Elon Musk: Ex-wives, ex-girlfriends, ex-partners, ex-employees, ex-competitors, ex-customers, ex-suppliers, current competitors...you name it. Many of them have already sued him for fraud in federal court. Many more are preparing to. But nobody takes the cake for hating Musk, and having the resources to hate him good, like the Russian billionaires Musk, and his investors, screwed over. [wpvideo Gptxdx8Y] First, Musk and his investors took the Russian Billionaires for a ride in the AFGHANI-SCAM scandal. Next, Musk spent massive amounts of money with his Space-x company to cut the Russian billionaires out of the defense contracting industry. He has now filed legal papers to legally blockade the Russian billionaires from getting near space. He has jerked over about 40 OF THEM!!!! (40 times \$50 Billion average holdings... hmmmm.. Musk must really be loaded to deal with that fire-power) So, if only half the movies about what Russian billionaires do when they are pissed off at a guy, like Musk, are true... shouldn't Musk be buying a tank about now? What is up with Musks Ego issues? DT- ----- [wpvideo fnmTOlzJ] [wpvideo znLDRIL7] [wpvideo IWVAQdmj] [wpvideo ullehv2A] [wpvideo jMnc6LJb] "

""RIGHT TO BUILD"" Campaign against ELON MUSK Launches!"

"(This is a re-write of Musk's Press Release, wherein he turns the tables on what he did in the DOE scandal) ?This is not right,? Tom told reporters during a news conference. Tom said the DOE contract with Tesla amounted to a continuing crony monopoly, was unfair by blocking Tom's company, and over 200 others, from competing for deployments of consumer and government vehicles and would cost taxpayers billions of extra dollars in coming years. ?What we feel is that this is not right ? that the national security of our Nation's auto options should be put up for transparent competition and they should not be awarded on a sole source, uncompleted basis because of campaign bribes,? said Tom at the briefing called on short notice and held at the National Press Club in Washington, DC. We're just protesting and saying that the DOE funding should be transparently competed,? Tom said. ?If we compete and lose that's fine. But why were they not even competed? That just doesn't make sense.? ?So far we were ALL of the way through the certification process. And so far there have been zero changes to the car. Mostly it's just been a paperwork exercise.? ?Since this is a large multiyear contract, why not show the actual merits of each applicant on a side-by-side basis to the public, And then do the competition. That seems very reasonable to me.? ""The fact that EVERY SINGLE INDEPENDENT CAR COMPANY WAS INTENTIONALLY CUT OUT OF THE FUNDING BECAUSE THEY DID NOT GIVE A BRIBE OR REVOLVING DOOR KICK-BACK seems to be something that should be considered a crime!""

Announcement Regarding Complaint Filing by 200 DOE Funding Applicants:

"On 2008, shortly after trillions of dollars of lithium and indium were discovered in Afghanistan, DOE sent out a request for American companies to build new energy and automotive solutions to help the nation. The long-term contract was granted to only a few campaign backers on a sole-source basis without any transparent competition from other providers. Applicants are not seeking to be awarded contracts for these monies. We are simply seeking the right to fairly compete without rigging. Most Americans have probably never heard of the ATVM/LG program. It was implemented by The Department of Energy in to reduce the dependence on foreign energy by 25-50%, to improve reliability over the heritage energy system, and to create a more ?commercial-like? procurement process. Initially there were three competitors-- GM, Chrysler & Ford with the Detroit System. However, following the misappropriation by all three of thousands of confidential documents, the three companies put aside their claims against each other and formed a conspiracy, citing the real issue as competition itself and asserting the new monopoly would save US taxpayers \$100-150M per year. Since the Detroit ""Club"" was formed, not only have there been no savings but costs have skyrocketed. Vehicle costs are up from approximately \$10K per vehicle to \$40K per vehicle?making Detroit's vehicles the most expensive not just in the US, but the world. In addition, the United States pays Detroit nearly \$1 billion dollars per year in subsidies just to maintain the ability to get more campaign influence?regardless of whether or not they launch a single ethical candidate. The DOE program is now the fourth largest line item in the country's entire Energy budget, with Losses now projected at nearly \$150 billion through 2030. This legal action seeks to shine a spotlight on an issue that has gone unchecked since 2006, when the Detroit monopoly was formed creating the lack of competition in the national security auto and energy market. The decision to file was not entered into lightly, and made only after all other avenues were exhausted. In a Acquisition Decision Memorandum, as part of an effort to

fundamentally restructure the DOE program, The GAO directed the DOE to "aggressively" bring competition into the Program and expressly stated his intent was to "obtain the benefits of competition as quickly as possible." Importantly, in a follow-on letter to the Government Accountability Office issued in 2013, many American's also expressly made clear that New Entrants would be in a position to compete once all forms had been filed."The Department [of Energy] will allow new entrants to compete for launch awards as soon as the new entrant delivers the data from their final certification." By design, certification is meant to run in parallel to the competition"with certification required just prior to the actual contract award. The Tesla contract with DOE was negotiated and executed outside of public view and all communications around it have never been made public. Reporters, and investigators, have requested the contract using the Freedom of Information Act (FOIA) but has not yet received a response. As a result, to this day, no one except Steven Chu and the government really knows precisely what the inside deal says or what it requires. What we did learn, the day after the Senate hearings on the DOE""competition"", was that Tesla was nearly broke when they applied and that this violated the law regarding this ATVM/LGP Congressional funding; That senate staff and Senators were working FOr Tesla; That Tesla stated numerous lies in it's DOE application; that the Tesla car submitted was not even designed or engineered; That a real-estate scheme involving Tesla and Solyndra was under-way and hundreds of other facts which appear to be criminal. Clearly the block crony contract is in direct opposition with the very notion of competition. It maintains the Detroit and Silicon Valley VC (See This link too) (And this One) (And this One) monopoly until at least 2018, perhaps well beyond. And it will needlessly cost taxpayers hundreds of billions of dollars and has already cost American lives in Afghanistan and elsewhere. The contract is made even more egregious in light of deteriorating U.S. relations with Russia, who Silicon Valley VC's had partnered with to mine the Afghan minerals for Tesla and Solyndra. The majority of DOE launches are performed by Fisker, Tesla, , A123, Enerdel, Solyndra and Abound launch vehicles, which use the toxic, exploding chemicals from Afghanistan that explode when they get wet or banged, release cancer-causing smoke in combustion, and continue the dependence on foreign energy sources. Enerdel, Severstal and many of the DOE funded entities hadowners who, themselves are owned and controlled by the Russian government. Some of these people are on the United States? sanctions list. As the U.S. contemplates additional sanctions against the Russian defense sector, it is incongruous and damaging that DOE continued to send millions of dollars to Russian controlled entities to support U.S. national security and energy. Given international events, this seems like the wrong time to send hundreds of millions of dollars to the Kremlin and Silicon Valley Oligarchs ? especially considering there are domestic alternatives available and qualified to compete today that do not rely on components from countries that pose a national security risk. Each DOE failure costs American taxpayers roughly \$400 million? four times as much as Senators get in bribes, and at least twice as much as any provider in the world. It?s a false premise to suggest that a more expensive car is a more reliable car. Prices have increased because there is no competition. The American Independent Auto and Energy Industry is better able to control costs because our factories are built in the 21st century and take advantage of both new design innovations and new manufacturing techniques. As a private company with no government subsidies, our business only succeeds when we deliver our customers? payloads safely and reliably to orbit. We stand ready and able to reliably provide launch services at an estimated cost savings of 75%. To be clear, ""The American Independent Auto and Energy Industry who did not bribe Senators"" is not seeking to be awarded any contracts. We are simply seeking the opportunity to fairly and transparently compete ? for any qualified company to fairly compete. If we compete and we lose fairly, that?s ok too. But to not be given the opportunity to compete at all, especially in light of the U.S. Governments stated interest in competition and current dependence on Russia and Silicon Valley Oligarchs for national security land energy, just doesn?t make any sense. Signed- The American Independent Auto and Energy Industry Read more: <http://www.universetoday.com/111535/spacex-ceo-elon-musk-sues-government-to-break-us-air-forces-national-security-launch-monopoly/#ixzz30NzJIgr9> LINK TO THIS PAGE: <http://wp.me/p4e1uX-2ju>"

"One of the Most Epic Political Organized Crime Scams in History Hundreds of billions of tax dollars of campaign financing fraud, kickbacks, industry-rigging, cover-ups and lies! You might find this interesting because you think felony crimes should be punished. You might also find this book interesting because you believe that some people in Washington should not take 40% of your paycheck and give it to their friends. DOJ & FBI Ordered, By White House, Not To Prosecute So As To Protect Senior White House Staff & Campaign Billionaires! "

"A Collaborative Crime Book INTRODUCTION: This is the true story of an American Crime. It is a very large crime comprised of a series of criminal activities. It is important to you because it affected the history, and the future, of your country. It is important to you because it affected your income, your community and your representation. It happened because greed and egomania overcame the legal process and the Constitution. It cost

you, and the nation, hundreds of billions of dollars of your tax money. It involved rigged programs, kickbacks, corrupt Senators, escorts and all the dark elements of organized crime. It involved people from ALL political parties. This was a plot that spiraled out of control. It cost White House staff, senior agency heads and hundreds of political executives their careers. It cost investors their entire companies. It cost Washington the trust of the voters. This was a sinister affair. A number of people are dead because of it, (including soldiers)...far too many to think they were all accidental deaths. The cover-up has been epic, but that cover-up is now falling apart weekly. To date, more effort has been spent covering up the crime, than prosecuting those involved in the crime. We hope that will change soon. Some dedicated law enforcement and public officials have sought to enforce ethics, legal process and the public interest, but it has been a hard battle for them. In some cases, their bosses are the main gate-keepers in the very cover-up that their agents want to break open. It started with a rock, in a desert far away, and moved from the glass towers of GM in Detroit, to The White House, to Silicon Valley and China; but it touched every voter in America. Every single detail of evidence needed to prove every detail of this case, now exists in the hands of those who can prosecute and those who can support that prosecution. The resolution to this case requires the appointment of a Special Prosecutor, but those who are incriminated are blocking the appointment of a Special Prosecutor. What can you do? Tweet, blog, post and petition for the appointment of a Special Prosecutor. Almost every participant in this book (hundreds of individuals), is willing to testify before such a hearing! **CLICK HERE TO CONTACT YOUR REPRESENTATIVE TO: DEMAND A SPECIAL PROSECUTOR!"**

" This is a LIVE book that will continue to refine itself over time, please keep checking back. Most of the information in this book was provided by federal investigators or reporters who interviewed federal investigators. Now we need help from the members of the public who were involved in these incidents. Please submit edits, data, typo corrections and material **HERE, AT THIS LINK**. (Introduction Draft 2.4)"

"This is a ""LIVE"" document. It will continue to grow. Check back. See this link for a process description about how this book was produced. Every fact in this Wiki book can be checked and verified by the reader. In many cases, verification links are provided. In many other cases, the information has already been verified by the criminal investigations which exposed and released that information. Additional information has been ""dead-man switched"" via the pre-distribution of encrypted file sets to various journalists."

WHAT MIGHT SUCH A CAMPAIGN FUNDING CONDUITING SCHEME LOOK LIKE IN REAL LIFE?:

9/11/2014 8:30

Bad Rep - THE NATIONAL REVIEW Does the Democratic power broker Chaka Fattah run a crime family?

? Jillian Kay Melchior is a Thomas L. Rhodes Fellow for the Franklin Center for Government and Public Integrity. She is also a Senior Fellow at the Independent Women's Forum.

"In late August, a great crack resounded across Philadelphia's Democratic establishment when Gregory Naylor, a prominent political consultant, entered a guilty plea in federal court, implicating not only himself but also a U.S. congressman and several of his key allies in a sordid and complex fraud scheme involving taxpayer dollars and campaign finances. The plea memorandum mentions only "Elected Official A," but numerous details corroborate the identity of Representative Chaka Fattah, one of the most powerful men in Philadelphia. The son of a vocal black nationalist activist, Fattah cut his teeth in politics in the late 1970s when he was just 22, running with a friend for election to the city commission. Though he lost that election, Fattah learned a valuable lesson about political organization and spent the subsequent decades building one of the most effective political machines in Philly, an effort that eventually won him not only local prestige but also ten terms in Congress."

Advertisement

"Naylor and Fattah have dominated the African-American faction of Philadelphia's Democratic party and have, for years, been major figures in the political discussion here, recognized for their ability to determine the outcome of races," says Dan Fee, a political consultant who has worked for Ed Rendell, the former governor, and other major Pennsylvania candidates. Furthermore, as a senior member of the House Appropriations Committee, which manages more than \$1 trillion in federal discretionary spending, Fattah excelled at bringing the federal bacon home to Philadelphia. "I think probably Chaka was more successful at delivering to his constituents than any number of congressmen — certainly [he is] the most successful in Philadelphia, or the Pennsylvania delegation, for that matter," says Carl Singley, the former dean of Temple University Law School. Now, after Naylor's guilty plea, many of Philadelphia's top Democrats see the congressman as vulnerable. A surprisingly juicy read, the plea memorandum details the alleged misdeeds not only of Fattah but also of several other political big shots who supported him. "My God, [the feds] must have had an awful lot of stuff for Greg Naylor to dime out Chaka Fattah just like that," says Jim Foster, the publisher of the Germantown Chronicle and a longtime observer of Philadelphia politics who mounted a symbolic challenge against Fattah two years ago, winning 1.4 percent of the vote as an independent. Singley says, "I have heard any number of people are exploring the possibility of running for that job," adding that he's saddened to see political and legal difficulties for a man long considered "one of our brightest stars." He continues: "I wouldn't call it a feeding frenzy, but the speculation is rampant, and all kinds of names are circulating, and all kinds of people are preening and walking around and are putting their toe in the water, so to speak. I think people are lining up because, inevitably, they think that seat is going to be available." The plea memorandum focuses in large part on an alleged fraud scheme that Fattah ran during and after his unsuccessful bid for mayor in 2007. An early front-runner, Fattah nonetheless found himself short of cash and sought to overturn Philadelphia's \$5,000-per-individual, \$20,000-per-political-committee campaign-contribution caps, but the state appeals court ruled against him. So, the plea memorandum says, Fattah "engaged in a scheme to violate the applicable Philadelphia campaign finance laws and contribution limits by secretly arranging for and receiving a \$1 million campaign contribution in the form of a personal loan from long-time friend and political supporter, Person D." The plea memorandum does not identify this million-dollar donor, but the Philadelphia Inquirer reported that "according to numerous sources, the loan was provided by Alfred Lord," who until 2013 was the chief executive of Sallie Mae, the quasi-governmental student-loan corporation. Lord did not return repeated phone calls from National Review Online, but according to the Inquirer, he had earlier donated \$100,000 to Fattah's mayoral exploratory committee. To obtain this unlawful campaign cash, the plea memorandum says, Fattah turned to another political consultant, "Person B," who served as the middleman, guaranteeing the \$1 million loan and funneling it to Naylor, who in turn spent \$600,000 of it on media buys and "street money" on Election Day. And, the Philadelphia Inquirer suggests, that middleman was also a hotshot: D.C. consultant Tom Lindenfeld, a former partner to David Axelrod who has most recently worked as a strategist for D.C. mayoral candidate Muriel Bowser. (Bowser quickly dropped Lindenfeld after Naylor entered his guilty plea. Lindenfeld did not return phone and LinkedIn messages, but Bowser tells NRO by e-mail: "I'm quite surprised by the allegations out of Philadelphia today. I have the highest expectation of transparency from my campaign team; Tom no longer has a role on the campaign.") Despite the alleged illicit loan, Fattah ended up losing his primary bid for mayor. To pay back the money, the plea deal says, Fattah used taxpayer dollars funneled

through a not-for-profit, disguising the transactions with fake contracts."
Advertisement

"Enter the Educational Advancement Alliance (EAA), a not-for-profit that just happened to be run by Karen E. Nicholas, Representative Fattah's former director of constituent services. Thanks in large part to Fattah's congressional patronage, the not-for-profit had a steady flow of taxpayer money. Between 2009 and 2011, EAA received more than \$21 million from the federal government. Likewise, Department of Energy records released in 2010 show the not-for-profit receiving millions of dollars in funds from the U.S. Department of Education, the U.S. Department of Justice, the U.S. Department of Housing and Urban Development, and the National Aeronautics and Space Administration. EAA also received funding from Sallie Mae. At Fattah's bidding, the not-for-profit inked a fake contract with a tech firm friendly with the congressman, which in turn inked a fake contract with the political-consultant middleman, according to the plea memorandum. Essentially, it alleges, these bogus deals allowed Fattah to steal \$600,000 in federal money and use it to pay off the secret campaign loan. EAA's number has been disconnected, and so were all numbers listed in records for its CEO, Nicholas, who also did not respond to an NRO interview request sent through LinkedIn. Fattah's office told National Review Online to email his spokesperson for a comment; his spokesperson did not answer the email before publication. After this article was published, a spokesperson e-mailed a comment from the congressman to NRO. "In all my years as a public servant I have never engaged in any illegal conduct," Fattah says."

"Beyond the campaign-financing fraud, Naylor also pleaded guilty to a separate scheme "initiated" by Fattah, according to the memorandum: Naylor admitted that he used Fattah's campaign funds to pay down the substantial student-loan debt of Chaka Fattah's son, Chaka Fattah Jr. The money was channeled through Naylor's consultancy, the plea memorandum says, and billed as work that Fattah Jr. never actually did. Altogether, the plea memorandum says, Naylor paid off \$22,663 in student-loan debt in 33 separate payments using Fattah's misappropriated campaign cash."

"Chaka Fattah Jr., who is 31 years old and has worked as an education and business consultant, was indicted in August on numerous fraud and tax charges. They include stealing from the Philadelphia School District, lying on tax returns, and obtaining bank loans using inaccurate information. Fattah Junior pleaded not guilty to these charges, and he has filed suit against the IRS seeking \$10 million in damages for harming his reputation and his business. "I am innocent of these allegations," Fattah Jr. tells NRO. "I am confident that after I have my day in court, the public will understand that I didn't break any laws. I'm looking forward to the opportunity to show that I have always been a legitimate businessman." Fattah Jr. declined to comment on the Naylor plea memorandum, noting that no related charges have been filed against him. Meanwhile, his father has remained unusually close-lipped, initially declining several interview requests from Philadelphia papers. "While Fattah has not responded to requests for comment from the Daily News, he has been busy tweeting, including four pictures he tweeted of himself with President Obama in a 24-hour period Monday and [Tuesday]," one local reporter wrote last week. Fattah did appear on local radio, but said regarding Naylor that he was "not going to respond to an allegation that hasn't been made." Finally speaking to the Inquirer yesterday, Fattah urged the media to focus on his positive accomplishments, saying: "We stand by our very declarative statement: Not today, not any day that I've been an elected official " this includes decades, all right? " have I been involved in illegal conduct." Fattah is up for reelection this fall, and the suggestion of scandal doesn't yet seem to be hurting his popularity among the electorate. His Republican challenger, Armond James, has barely registered among voters: On Twitter, his campaign has only 159 followers. The federal government has, to date, filed no charges against Representative Fattah. But Naylor's damning plea memorandum signals possible future prosecution, which would be forthcoming even as Fattah fends off challengers within his own party. For the congressman, it's no longer sunny in Philadelphia. " Jillian Kay Melchior is a Thomas L. Rhodes Fellow for the Franklin Center for Government and Public Integrity. She is also a Senior Fellow at the Independent Women's Forum."

THE QUESTIONS TESLA MOTORS REFUSES TO ANSWER: "Adding fuel to the fires of suspicion is Tesla's refusal to answer these questions in a responsive manner. Why won't Elon Musk answer these questions in front of the U.S. Congress during a live broadcast? He took your money, why won't he take your questions?: "

<http://www.thenewsdaily.org/investigation-team/big-fix-corruption-story/big-fix-tesla-motors-story-section-1/questions-tesla-motors-refuses-answer/8/12/2014> THE EDITORS & WIKI MEMBERS publish ccft_post_comment_title: panels_data: Array kopa_fastnewsight_total_view: 53 wp-mm-fb-likes-enabled: wp-mm-fb-likes-num: wp-mm-fb-likes-duration: wp-mm-fb-likes-weekends: wp-mm-fb-shares-enabled: wp-mm-fb-shares-num: wp-mm-fb-shares-duration: wp-mm-fb-shares-weekends: wp-mm-google-plus-enabled: wp-mm-google-plus-num: wp-mm-google-plus-duration: wp-mm-google-plus-weekends: wp-mm-twitter-tweets-enabled: wp-mm-twitter-tweets-num: wp-mm-twitter-tweets-duration: wp-mm-twitter-tweets-weekends:

"Highlights Below: - Lawyers seek to sue Tesla Shill Bloggers for stock and campaign fraud - Special Prosecutor demanded - Shareholder stock fraud charged - Campaign finance fraud charged - Note to public officials from one of the investigators - Federal officials charged with cover-up - ""hard-drive crash"" excuses made ineffective by Snowden exposed surveillance techniques - Tesla Scandal 10 times bigger than the DeLorean Cocaine Scandal "

"Whether or not you are a Tesla fanboy, a Tesla investor, A GOP activist, Elon Musk's army of shill bloggers, a public citizen or otherwise; all of the outcry about Tesla can be quickly, and easily, resolved in one easy session in front of a Special Prosecutor in Washington DC."

Eric Holder needs to appoint a Special Prosecutor so the public can be convinced that the hearing isn't run by some Tesla shill politician. The only possible reason not to appoint a Special Prosecutor would be to openly confirm that there is a cover-up of the Tesla funding to protect a criminal political kick-back scheme.

"Then these questions can be asked, and answered, by Elon Musk and the whole ruckus can be done with!"

[CLICK HERE TO WRITE CONGRESS AND DEMAND A SPECIAL PROSECUTOR](#)

Adding fuel to the fires of suspicion is Tesla's refusal to answer these questions in a responsive manner:

"We are most interested in having Elon Musk answer these, and other questions, in front of the U.S. Congress during a live broadcast: Deposition Draft 3.9 (compiled by reporters & public submissions) - Would Tesla Motors exist today, if Senators, DOE and campaign staff had not been bribed in 2007, 2008 and 2009? - Did acting Senator Dianne Feinstein, White House staff David Axelrod, David Plouffe and Rahm Emanuel and Energy head Steven Chu conspire with Tesla to exchange campaign resources for cash and stock value? - Has your company, or anyone associated with your company, ever hired multitudes of fake bloggers to post fake positive reviews about Tesla motors in order to create a fake perception of interest? - Has Tesla Motors ever compensated a publisher, or industrial rating company, for contrived positive reviews or ratings? - Please list each and every investor in Tesla Motors, SpaceX and Your Solar Company? Have any of those parties contributed money to political campaigns? How much? - At a party near Atherton, Calif. Did you ever say to a Venture Capitalist: "Nobody is ever going to touch us because Feinstein's my bitch!"? - Does Tesla Motors believe that the coordinated manipulation of the public perception of a company, trading on the stock market, via the dissemination of inaccurate data, by the company spokespeople, is not stock fraud and a not a violation of SEC laws? - What percentage of Tesla Motors do Google's investors, staff and executives own cumulatively? - How much money did those Tesla/Google investors contribute to election campaigns from 2007 to today? Which campaigns? Did the winners in any of those campaigns award U.S. taxpayer funds to the portfolio companies of those investors? How much money? - When Tesla Motors applied for the Department of Energy funds Elon Musk stated that Tesla was in exceptional financial health, yet now Elon Musk, and his senior staff, have been recorded stating that the company was nearly bankrupt then. In light of these more recent revelations, is that not a felony violation of the federal "Section 136 Law" which states that 'a company cannot be on the verge of bankruptcy or it shall not receive Department of Energy funds'? New disclosures show that Tesla stated information in it's federal application which Tesla's founders and staff have stated they knew was false at the time. Should Tesla be prosecuted for this? - Did Deloitte, under contract to Tesla, arrange false accounting via the Tesla Wells Fargo bank account while Deloitte was also acting, in conflict of interest, as the Department of Energy reviewer of applicants? - Does Tesla Motors have a confidential relationship with a national group of reporters, from different publications, who have agreed to release Tesla-positive news spin stories on a synchronized basis, at the same time, in order to coverup Tesla investigation disclosures and artificially accelerate stock market vales? Has Tesla Motors arranged with Google to have negative Tesla Motors stories down-ranked while having positive Tesla stories up-ranked? Would that be considered stock fraud? - How many Senators and their families, that you are aware of, own stock in Tesla Motors? - Was Elon Musk promised any NASA contracts, in advance of the closure of a portion of NASA, in exchange for campaign funding from Tesla and Google investors? - How many Senators, their families and Google-related investors, that you are aware of, hold stock in lithium-ion battery related companies? - Has Steven Chu, the former head of the Department of Energy, ever had a personal relationship with any Tesla staff or investors? - Has Senator Dianne Feinstein, or her family, ever had a personal relationship with any Tesla staff or investors? - Why are Tesla and Solyndra on the same physical plot of land? - Has anyone from Senator Dianne Feinstein's office also worked for Tesla Motors and/or Solyndra? - Did Dianne Feinstein's husband, Richard Blum, ever travel to Mongolia to arrange for resource deals beneficial to Tesla's investors? - Has anyone associated with Senator Dianne Feinstein's family, named Herb Newman of Sausalito, California, ever supplied staffing to Tesla Motors? - Has anyone associated with Senator Dianne Feinstein's family had any relationship with the real estate transactions involving Tesla and/or Solyndra real estate? - Now that the CIA has hacked into Dianne and Kathryn Feinsteins computers and all of Richard Blum's personal and business computers, do you think they found anything incriminating? Do you think the NSA phone and email records from 2007, to today, show anything incriminating? - Federal whistle-blowers have stated that Tesla Motors was involved in a felony funding kick-back scheme with Dianne Feinstein. Is that true? - If these charges are true, did you think you would never be caught because the same people who put Eric Holder and Steven Chu in office are paying for the cover-up? Now that Steven Chu has been terminated and Eric Holder is facing

multiple charges of contempt, are you still feeling so cocky? - Please describe your three overseas bank accounts and the dates and sources of the largest deposits therein? - Communications between The California, Fremont City Administrators, Dianne Feinstein's senior staffer (M. Nelson) and the general management of NUMMI indicate that economic and political pressure was used to manipulate a deal structure. What is your comment on these revelations? - Panasonic, your battery partner, has been charged with organized crime, dumping, price fixing, the deaths of thousands of battery workers from toxic poisoning and with building lethal battery factories that destroyed all of the towns near them. Is that a problem? - You said, in writing, in your DOE application documents that the car to be produced with the DOE money was all designed and engineered, yet every aspect of the released model S was designed and engineered AFTER you received the DOE money! Did you lie on your application? - Do your battery packs release toxic and/or cancer causing fumes when they burn? - What was your relationship with Eric Strickland, the head of the National Highway Transportation safety agency who quit his job 48 hours after being notified that the toxic Tesla report he knew about was going public? - Did you falsify lithium-ion safety reports? - Bernard Tse, your battery program director, and 7 other senior staff, provided your company with numerous severely concerning lithium-ion safety reports which were never presented to the Department of Energy. Were these reports covered up because the Senators and Investors of Google and Tesla all have ownership interest in the lithium-ion industry? - Has Elon Musk ever spied on his own employees and competitors? - Has Elon Musk ever undertaken sabotage programs against his competitors? - Did your SEC filings use tax credits from the White House to make Tesla look like it had profits? - Did Elon Musk actually found Tesla or did Martin Eberhard found Tesla and Elon Musk then came in later and stole it from him in a hostile takeover? - You said there were no chances of fire yet you have had two recalls in order to install fire prevention systems AFTER there were fires. Why is that? - What was Tesla's debt ratio at the time that Tesla applied for the DOE loan? Why do you think Tesla had the worse debt ratio of any applicant yet Tesla was awarded funds with almost no review? - Why has Tesla spent billions, and a decade, to only sell a few cars when all of your competitors have done 20 times better on less money and in less time? Why are over 200 technical problems with the car documented online by Tesla owners yet you say nothing about those problems? Why are you being sued for fraud under the Federal ""Lemon Law""? - Why were your cars \$100,000.00 over budget PER CAR, at the time of your Department of Energy loan application, yet nobody at the DOE commented about that in their review notes? - Did Steven Chu's senior staff: Matt Rogers and Steven Spinner have any relationship with Tesla-related investors prior to Chu hiring them at the DOE? Was it coincidental that McKinsey Consulting, the company they worked for, produced all of the pitch documents for the White House and Congress, which were used to steer the Federal funds to Tesla Motors? - Was Tesla Motors funded as a gift to campaign investors? - Did you lie about asking the NHTSA to conduct a safety study on your car when, in fact, the NHTSA first asked Tesla for a study after fires were reported? Did you then bribe NHTSA officials to halt the request for an investigation after you plea-bargained to install a ""titanium safety shield"" which, in fact, only solves a small portion of the potentially lethal dangers from your battery pack? Is your battery pack made up of ""non-automotive"" batteries which are being used in the wrong way relative to what they were built for? - Are you trying to build a battery factory not far from Mexico in order to take advantage of Mexican workers? Are you concerned that most battery factory workers in China were poisoned with toxins? Are you concerned that your battery factory will ENCOURAGE immigration abuse and devastate our border? - The founders ex-partners, investors, buyers, suppliers, employees and ex wives have sued Elon Musk for fraud? What does that say about Mr. Musk? - How many of your employees have been burned alive at your factories? Has OSHA ever fined you? - If somebody puts a bunson burner or torch under a Tesla, will it blow up? If hackers hack the easily hacked Tesla, can they make the battery charging system overload and blow up? If so, did you inform the NHTSA of this in writing? When? - Did California State Officials, in Sacramento, California, ever manipulate tax laws and decisions to exclusively benefit Tesla Motors in exchange for perks? - What percentage of your buyers have killed members of the public with their Tesla Vehicles? Why is that number, in relative terms, higher than any other car company? - What percentage of your buyers have crashed their Tesla's while driving drunk, destroying public property, homes and Tesla's? Why is that number, in relative terms, higher than any other car company? - Have White House staff agreed to protect Tesla, at all costs, in order to keep Mitt Romney's prediction from coming true and to cover campaign funding billionaires? - Did Tesla representatives meet with Rahm Emanuel, David Axelrod, David Plouffe or their campaign staff prior to the Election of President Obama? - Is it not true that you have sold 4000% less cars than you told the U.S. Government, in writing, you would sell by this date, in your DOE application documents? - Why did you switch your factory plans between 5 different

cities, during the DOE loan process, when you told everyone that your factory location was already a done deal? - Do your VC investors pump the stock market rating by buying their own Tesla stock when bad news comes out about Tesla in order to create a synthetic cover-story short term stock rise? Would that be considered part of a stock fraud activity? - What is the relationship between Tesla's investors, Google's investors and the VC funds of Richard Blum, Dianne Feinstein's husband

To Federal Officials - from one of the investigators:

"It is time to consider your legacy and your pensions? How do you want to show up in the history books when this whole case shakes out? Do you want to be Ken Starr or Halderman? How do you want your family to think of you? While you may have orders to cover things up, you have a moral and legal obligation to not cover things up. History has never fallen on the side of the cover-up people. Only those on the side of the angels, in the end, in every one of these matters, throughout history, has survived. If you have testimony, send a copy of it to the following , at the same time, and you will have guaranteed coverage: The GAO, The FBI, The Senate Ethics Committee's, The Editors- NY Times, LA Times, The Guardian, Washington Post and The Hill. Send it to as many other reporters as you are willing. There are now systems and resources in place to guarantee you, your protection. There are rewards available. Get out in front of this now! The last ones to speak up, are the least ones to get off the hook. T- Senior Agent "

"Any reporter who can get a legitimate set of responses to these very important questions, is encouraged to post those responses"

Tesla "Truth Ticket" people are back with Phase 2: PROJECT AXCIOM. Dedicated to making sure every Tesla owner on Earth knows the truth!

"(SOURCE: Public Team) Remember the "Tesla Truth Tickets"? Now, every Tesla owner in the world can, shortly, expect to get the following email, snail-mail letter or notice: "TESLA'S HAVE BEEN PROVEN TO HAVE BEEN FOUNDED BY ORGANIZED CRIME-CLASS BRIBES AND CORRUPTION IN ORDER TO SELL CANCER-CAUSING LITHIUM ION BATTERIES OWNED BY CAMPAIGN INVESTORS. BY DRIVING THAT CAR; YOU SUPPORT CRIME, ENVIRONMENTAL POISONING AND PSYCHOTIC POWER-MAD BILLIONAIRES! THE BRIBES ARE PROVEN. THE CANCER CAUSING EFFECTS OF THE CHEMICALS IN LITHIUM ION BATTERIES IS PROVEN. THE TOXIC NATURE OF THE BUILDING THAT CAR IS PROVEN." THIS IS YOUR TESLA MOTORS INTERVENTION: BORN IN BRIBES AND CORRUPTION, FORGED IN FIRES, AND MORE FIRES, AND STILL MORE FIRES AND SOME EXPLOSIONS, THE TOXIC TESLA CRIME-MOBILE THAT YOU ARE DRIVING IS FULL OF LIES AND CANCER CAUSING MATERIAL. WE WANTED YOU TO KNOW THAT THE LOOK ON PEOPLE'S FACES, WHEN YOU DRIVE BY, MAY NOT BE ENVY BUT, RATHER: DISGUST! BRIBED: 5 Senators, 8 Senior Agency Staff and 2 White House Staff. Why do "YOU" want to be a part of that? Let's examine the facts and details?" The email goes on at great, and forensic, length. Some of the people involved have worked at Tesla and claim to have witnessed: "Organized crime on a first hand basis." Two members have subscriptions to the Axiom Privacy Abuse database. They thought: "hmmm, why not use something evil for good purposes by helping to inform, and save, hapless Tesla owners who got screwed during the information Green-wash!" Members found out that major media outlet owners (Engadget, Google, AUTOBLOG GREEN, Gizmodo, Jalopnik, etc.) had stock in the Tesla and battery cartels and, thus, covered up the first investigation results. They want to clean the market more completely than an email "accident" on an IRS Hard Drive. Does that sound like a big project? It isn't! After nearly a decade and billions of dollars of your tax money, Tesla has only sold .5% of the cars that their competing electric, or gas cars have sold for the same investments in time and dollars. Nobody wants a Tesla except Tesla's investors and douche-bag surgeons who then crash them and kill people. So, relatively speaking, there are not that many people to hunt down. TINA S- FREMONT, CA"

LAWYERS TO SUE TESLA SHILLS -

Who's Tesla's Bitch? THE LIST:

""(Draft 1.5 - Constantly updated) Which media outlets cover-up Tesla Motors misdeeds and abuses? Per discovered legal precedents: THESE REPORTERS CAN NOW BE LEGALLY SUED FOR STOCK FRAUD AND S.E.C . VIOLATIONS AND THEIR PERSONAL ASSETS ATTACHED. Said one of the lawyers preparing a specific case against these parties: ""These bloggers and writers engaged in conspiracy to commit stock fraud in violation of securities laws and to commit felony campaign finance fraud in violation of FEC laws. They knowingly coordinated the dissemination of false information for which they had accurate knowledge that they avoided using. They promoted this false information in order to misrepresent stock value so that personal gain would inure to themselves, their employers and those directing their actions. They communicated intent, between each other. This is a felony. They stupidly thought they would not get caught and planned to have IRS-like ""hard-drive failures"" if confronted. Alas, the Snowden Factor"" has foiled their plans. Almost all of their phone calls, texts and emails have been archived, by multiple agencies, going back for a lengthy period of time. They can whine and claim to not have known what they were writing, but the facts will show otherwise. We will present those facts in court (we are requesting a jury trial) and certainly have no problem also presenting these facts before a Special Prosecutor. We encourage other firms to file duplicate matters in order to protect their shareholder clients and the public."" Which ones are run, or directed, by Tesla's investors seeking to manipulate stock values? Let's track, chart and document which media outlets are willfully smoke-screening Tesla Motors. Which outlets publish counter-stories when other outlets publish negative disclosure about Tesla to try to cover-up, or flood-out, the Tesla issues and charges? Some reporters are compensated by Tesla's IR Department, PR contractors, founders, VC and banking groups with either cash, discounts, tickets, jobs, advertising contracts, sex workers, meals, travel and/or political access. Send in your submissions... Which outlets now have documented tracking evidence, that can be exhibited in court?:"

More lost emails ? When will Democrats have enough?

"By Rick Manning, contributor"

"Twenty different Obama administration officials have lost or destroyed a portion of their email traffic. Email traffic that was, in some cases, under subpoena or in others requested as part of a larger inquiry into the conduct of the executive branch."

"House Committee on Oversight Chairman Darrell Issa (R-Calif.) expressed his frustration at the revelation that another Obama official, Marilyn Tavenner, the director of the Center for Medicare Services, deleted emails in the wake of the botched Healthcare.gov website roll out, stating, ""It defies logic that so many senior Administration officials were found to have ignored federal recordkeeping requirements only after Congress asked to see their e-mails [sic]."" Yes, Rep. Issa, it does defy logic. The brazenly contemptuous stonewall-and-erase-evidence approach to congressional inquiries preferred by the Obama administration is perhaps this president's greatest affront to our constitutional system of government. When you have records going missing across an administration, it is impossible to conclude anything other than it is a coordinated and condoned cover-up, and not just a series of incompetent, coincidental keystrokes wiping out information. The conclusions get even uglier when you realize that the IRS dismissed the government contractor responsible for maintaining back-up files of their emails concurrent with Lois Lerner and her band mysteriously having their computers flatline. The question is, where are the Democrats in the face of this obvious malfeasance? During the Watergate scandal that brought down the presidency of Richard Nixon, a few Republicans came forward and urged the president to come clean. Yet, the silence is deafening from Democrats in both the House and Senate in the wake of this obvious obstruction of the congressional oversight function. Where are the patriots on the Democratic side, who are willing to stand up to an executive branch that has declared them inconsequential? The Democrats' partisan acquiescence to Obama's declaration of war against congressional prerogatives sets the precedent that future presidents can hardly be faulted for following. A precedent that makes a mockery of the legislative branch and brings into question why we bother even providing office space for Congress at all? With 20 Obama officials from all over the government losing critical emails, one wonders what, if any, is the threshold for Democratic outrage? When are the Democratic Party and their elected officials going to put our nation ahead of partisanship? If the past few years are any indication, I'm not holding my breath. Manning (@rmanning957) is vice president of public policy and communications for Americans for Limited Government. Contact him at rmanning@getliberty.org."

Scientists and physicists use Path Integral Formulation Probability Quantum Mechanics to calculate the likelihood of corruption in the Department of Energy funding programs. Science says: 99.7%!!!!

"Forensic Scientists and physicists were tasked with examining the fatal Department of Energy ATVM and LGP electric car and ""Cleantech"" VC funding programs for reports to the GAO and FBI. They used a type of quantum probability analysis mechanics software science that was also used for such things as finding the cause of the Space Shuttle Challenger disaster. This probability technology is now also being used to search for the lost Malaysian airlines Flight. Just like experts combed the wreckage of the Shuttle Challenger and thousands of other air disasters, financial debacles and similar wrecks, the wreckage of the DOE programs has left clues that point to absolute answers, specific people and exact dollar amounts. If you have some ""Path Integral Formulation Probability"" software at your school, (It is available in Physics departments) you can run these same numbers yourself. The Outcomes: The odds of Tesla, Fisker and A123 being the only ""winners"" against all other applicants given the known facts, and side-by-side metrics, at the time: 19841 to 1 unlikely. The odds, that, in a fair selection, out of the hundreds of applicants, only the certain handful would be selected and that that certain handful would happen to be owned or operated by some of the largest campaign donors: 45,780 to 1 against this outcome if the true comparisons were conducted. The odds of Steven Chu ignoring the financial and career holdings he had, at the time, in order to provide un-biased decisions: 22885 to 1 unlikely. The odds that campaign backers bribed Department of Energy Staff: 802 to 1 likely. The odds that, given the ACTUAL financial and engineering status of Tesla, at the time, that Tesla would have qualified for the taxpayer money per federal law: 43277 to 1 unlikely that Tesla would have qualified. The odds that award beneficiaries bribed at least 4 U.S. Senators: 2581 to 1 likely. The odds that, given a fair playing field and complete transparency, the awards and failures would have turned out as they have: 42,988 to 1 against the disastrous outcome that DID occur vs. what would have been avoided if corruption was not involved. The odds that an ongoing cover-up is underway: 36090 to 1 likely. Tim D.- University of Chicago ----- "

SYKES: Obama's green-energy boondoggles leave taxpayers in red

China gets the cash meant for American jobs

"It's been more than five years since President Obama signed his misguided economic-stimulus package into law, creating green-energy subsidies and expanding others, but American taxpayers are still feeling its disastrous effects.

"This month a deal was reached between competing creditors of much-ballyhooed Fisker Automotive Inc.,

which went bankrupt after receiving a \$529 million loan through the Department of Energy's (DOE) controversial Advanced Technology Vehicle Manufacturing program. The failure of Fisker highlights ongoing concerns over the Obama administration's handling of taxpayer-backed investments in so-called "green energy" initiatives. Once again, overseas companies have emerged as the big winner, with two of China's largest auto manufacturers set to receive millions in windfall benefits from the sale of Fisker's operations and the Energy Department loan. The loan program"

"is overseen by DOE's Loan Programs Office, which is perhaps best known for its "success" in backing the solar-energy startup Solyndra, which cost American taxpayers more than \$500 million. The Loan Programs Office has also provided billions in direct loans to U.S. auto manufacturers to encourage green-energy innovation and, ironically, to help offset compliance costs associated with far-reaching federal standards. Under the program, Fisker was approved to receive up to \$529 million in taxpayer-backed loans. As is the case with many of the Obama administration's market-distorting green-energy gambles, Fisker proved to be a failed bet and eventually filed for Chapter 11"

"bankruptcy. The most recent development in the administration's green-energy gamble on Fisker has two Chinese auto manufacturers increasing their business capital with American taxpayers footing the bill. First is a subsidiary of China's Wanxiang Group, a multinational Chinese automotive-components manufacturing company"

"owned by Chinese billionaire Lu Guanqiu. Second is Hybrid Tech Holdings, owned by Chinese billionaire Richard Li. The two billionaires went head-to-head in a bidding war last year over Fisker's operations, with Lu Guanqiu winning out with a bid of \$149.2 million in a bankruptcy sale. His bid for Fisker is only complemented by his previous purchase of A123 Systems LLC. (A123 Systems was another recipient under the Energy Department's loan program and much like Fisker, was a failed green-energy gamble that ended up filing for bankruptcy.) Under similar circumstances, he purchased A123 Systems at the expense of the American taxpayers. Richard Li did not come out empty-handed, considering he purchased the taxpayer-backed loan to Fisker for \$25 million at auction. According to a recent article in The Wall Street Journal, Mr. Li paid a "deeply discounted price for the DOE loan, which had a face value of \$168 million at the time it was put up for auction." The article went on to point out that Mr. Li would profit as much as \$90 million from his purchase of the loan. The Obama administration green-energy gamble to prop up Fisker allowed two of China's largest auto-manufacturing companies to directly receive hundreds of millions in windfall benefits at the expense of U.S. taxpayers. So much for "nation-building here at home." Sadly, the Fisker debacle is not even the most recent failure of the Energy Department's loan program. Just this month, Missouri-based Smith Electric Vehicles"

"announced that it was closing its operations in the United States owing to financial troubles. Under the department's loan program, Smith Electric received almost \$30 million in funds. In justifying the funds, the White House projected more than 220 jobs would be created as result. However, "Smith only reported the creation of the hourly equivalent of 70.4 jobs " meaning the DOE spent an average of about \$414,000 per job created." The Smith Electric closure further exemplifies the continuing failure of the president's green-energy gambles. In a report released this month, the Government Accountability Office"

"advised against continuing the Department of Energy's Advanced Technology Vehicle Manufacturing loan program. The report suggested that Congress rescind "all or part of the remaining credit subsidy appropriations to the loan program, unless the [DOE] can demonstrate sufficient demand for new ATVM loans and viable applications." Even so, the Obama administration looks set to double down on their bad green-energy bets with a public push recently for the controversial program. The Energy Department's website cites a remaining \$16 billion in loans still available to applicants. It's time for the Obama administration to pump the brakes on the loan program, and wind down this taxpayer-funded jackpot that allows Chinese interests to capitalize on the U.S. mistakes. Justin Sykes is a policy analyst at Americans for Prosperity."

How We Fact-Swarm An investigation: "Collaborative Team News Production A story starts with a tip or revelation. It can come from a whistle-blower, a Senator, a law enforcement specialist, an ex employee or any member of the public that sees a situation that needs discussion. A draft of the story is then published. As all of the people who are affected by the story look it over, the details are refined and smooth into focus like a camera lens. The live story is constantly refined via peer-to-peer collaborative editing. Sometimes a person who was involved in the story will read the current draft and then write something like: ""Ok, that is all great, up to this point, but what actually happened then was this guy took it to this other guy..." Then, previous editors will double check, or confirm against their known facts, once we have consensus, that story segment is held to that point, but like Wikipedia, and other Wiki-type formats, as new evidence emerges, the story evolves. A Fact-Swarmed Investigation is always ""LIVE"" it is growing and evolving. If you are interested in a story, always check back on it. This News is Alive! The process also involves Wiki architecture:"

Wiki

A wiki (

[?]w[?]ki / WIK-ee) is a web application which allows people to add, modify, or delete content in collaboration with others. In a typical wiki, text is written using a simplified markup language or a rich-text editor.[1][2] While a wiki is a type of content management system, it differs from a blog or most other such systems in that the content is created without any defined owner or leader, and wikis have little implicit structure, allowing structure to emerge according to the needs of the users.[2] The encyclopedia project Wikipedia is the most popular wiki on the public web in terms of page views,[3] but there are many sites running many different kinds of wiki software. Wikis can serve many different purposes both public and private, including knowledge management, notetaking, community websites and intranets. Some permit control over different functions (levels of access). For example, editing rights may permit changing, adding or removing material. Others may permit access without enforcing access control. Other rules may also be imposed to organize content. Ward Cunningham, the developer of the first wiki software, WikiWikiWeb, originally described it as "the simplest online database that could possibly work".[4] "Wiki" (pronounced [?]w[?]iki [note 1]) is a Hawaiian word meaning "Quick".[5][6][7]"

Characteristics

"Ward Cunningham, inventor of the wiki"

"Ward Cunningham and co-author Bo Leuf, in their book *The Wiki Way: Quick Collaboration on the Web*, described the essence of the Wiki concept as follows:[citation needed]"

"A wiki invites all users to edit any page or to create new pages within the wiki Web site, using only a plain-vanilla Web browser without any extra add-ons."

Wiki promotes meaningful topic associations between different pages by making page link creation almost intuitively easy and showing whether an intended target page exists or not.

"A wiki is not a carefully crafted site for casual visitors. Instead, it seeks to involve the visitor in an ongoing process of creation and collaboration that constantly changes the Web site landscape."

"A wiki enables communities to write documents collaboratively, using a simple markup language and a web browser. A single page in a wiki website is referred to as a "'wiki page'", while the entire collection of pages, which are usually well interconnected by hyperlinks, is "'the wiki'". A wiki is essentially a database for creating, browsing, and searching through information. A wiki allows non-linear, evolving, complex and networked text, argument and interaction.[8] A defining characteristic of wiki technology is the ease with which pages can be created and updated. Generally, there is no review before modifications are accepted. Many wikis are open to alteration by the general public without requiring registration of user accounts. Many edits can be made in real-time and appear almost instantly online. This can facilitate abuse of the system. Private wiki servers require user authentication to edit pages, and sometimes even to read them. Maged N. Kamel Boulos, Cito Maramba and Steve Wheeler write that the open wikis produce a process of Social Darwinism. "'Unfit' sentences and sections are ruthlessly culled, edited and replaced if they are not considered 'fit', which hopefully results in the evolution of a higher quality and more relevant page. Whilst such openness may invite 'vandalism' and the posting of untrue information, this same openness also makes it possible to rapidly correct or restore a 'quality' wiki page." [9]"

Editing wiki pages

"Some wikis have an "'edit'" button or link directly on the page being viewed, if the user has permission to edit the page. This leads to an editing page which allows participants to structure and format wiki pages with a simplified markup language, sometimes known as wikitext (for example, starting a line of text with an asterisk often sets up a bulleted list). The style and syntax of wikitexts can vary greatly among wiki implementations,[example needed] some of which also allow HTML tags. Wikis favour plain-text editing, with fewer and simpler conventions than HTML, for indicating style and structure. Although limiting access to HTML and Cascading Style Sheets (CSS) of wikis limits user ability to alter the structure and formatting of wiki content, there are some benefits. Limited access to CSS promotes consistency in the look and feel, and having JavaScript disabled prevents a user from implementing code that may limit other users' access."

MediaWiki syntax	Equivalent HTML	Rendered output
------------------	-----------------	-----------------

""Take some more [[tea]],"" the March Hare said to Alice, very earnestly.""I've had ""nothing"" yet,"" Alice replied in an offended tone, ""so I can't take more.""""You mean you can't take ""less"" " said the Hatter. ""It's very easy to take ""more"" than nothing."" ""Take some more ""/wiki/Tea"" title=""Tea"" tea ,"" the March Hare said to Alice, very earnestly. ""I've had nothing yet,"" Alice replied in an offended tone, ""so I can't take more."" <p>""You mean you can't take <i>less</i> " said the Hatter. ""It's very easy to take <i>more</i> than nothing."" ""Take some more tea,"" the March Hare said to Alice, very earnestly.""I've had nothing yet,"" Alice replied in an offended tone, ""so I can't take more.""""You mean you can't take less " said the Hatter. ""It's very easy to take more than nothing.""

"Wikis can make WYSIWYG editing available to users, usually by means of JavaScript control that translates graphically entered formatting instructions into the corresponding HTML tags or wikitext. In those

implementations, the markup of a newly edited, marked-up version of the page is generated and submitted to the server transparently, shielding the user from this technical detail. However, WYSIWYG controls do not always provide all of the features available in wikitext, and some users prefer not to use a WYSIWYG editor. Hence, many of these sites offer some means to edit the wikitext directly. Some wikis keep a record of changes made to wiki pages; often, every version of the page is stored. This means that authors can revert to an older version of the page, should it be necessary because a mistake has been made or the page has been vandalized. Many implementations, like MediaWiki, allow users to supply an edit summary when they edit a page; this is a short piece of text summarising the changes. It is not inserted into the article, but is stored along with that revision of the page, allowing users to explain what has been done and why; this is similar to a log message when making changes to a revision-control system."

Navigation

"Within the text of most pages there are usually a large number of hypertext links to other pages. This form of non-linear navigation is more "native" to wiki than structured/formalized navigation schemes. That said, users can also create any number of index or table-of-contents pages, with hierarchical categorization or whatever form of organization they like. These may be challenging to maintain by hand, as multiple authors create and delete pages in an ad hoc manner. Wikis can provide one or more ways to categorize or tag pages to support the maintenance of such index pages. Some wikis have a backlink feature, which displays all pages that link to a given page. It is typical in a wiki to create links to pages that do not yet exist, as a way to invite others to share what they know about a subject new to the wiki."

Linking and creating pages

"Links are created using a specific syntax, the so-called "link pattern" (also see CURIE). Originally, most wikis[citation needed] used CamelCase to name pages and create links. These are produced by capitalizing words in a phrase and removing the spaces between them (the word "CamelCase" is itself an example). While CamelCase makes linking very easy, it also leads to links which are written in a form that deviates from the standard spelling. To link to a page with a single-word title, one must abnormally capitalize one of the letters in the word (e.g. "WiKi" instead of "Wiki"). CamelCase-based wikis are instantly recognizable because they have many links with names such as "TableOfContents" and "BeginnerQuestions." It is possible for a wiki to render the visible anchor of such links "pretty" by reinserting spaces, and possibly also reverting to lower case. However, this reprocessing of the link to improve the readability of the anchor is limited by the loss of capitalization information caused by CamelCase reversal. For example, "RichardWagner" should be rendered as "Richard Wagner", whereas "PopularMusic" should be rendered as "popular music". There is no easy way to determine which capital letters should remain capitalized. As a result, many wikis now have "free linking" using brackets, and some disable CamelCase by default."

Searching

"Most wikis offer at least a title search, and sometimes a full-text search. The scalability of the search depends on whether the wiki engine uses a database. Some wikis, such as PmWiki, use flat files.[10] MediaWiki's first versions used flat files, but it was rewritten by Lee Daniel Crocker in the early 2000s to be a database application. Indexed database access is necessary for high speed searches on large wikis. Alternatively, external search engines such as Google Search can sometimes be used on wikis with limited searching functions in order to obtain more precise results."

History

Main article: History of wikis

Wiki Wiki Shuttle at Honolulu International Airport

"WikiWikiWeb was the first wiki.[11] Ward Cunningham started developing WikiWikiWeb in Portland, Oregon, in 1994, and installed it on the Internet domain c2.com on March 25, 1995. It was named by Cunningham, who remembered a Honolulu International Airport counter employee telling him to take the ""Wiki Wiki Shuttle"" bus that runs between the airport's terminals. According to Cunningham, ""I chose wiki-wiki as an alliterative substitute for 'quick' and thereby avoided naming this stuff quick-web.""[12][13] Cunningham was in part inspired by Apple's HyperCard, which he had used before but which was single-user.[14] Apple had designed a system allowing users to create virtual ""card stacks"" supporting links among the various cards. Cunningham developed Vannevar Bush's ideas by allowing users to ""comment on and change one another's text.""[1][15] Cunningham says his goals were to link together the experiences of multiple people to create a new literature to document programming patterns, and to harness people's natural desire to talk and tell stories with a technology that would feel comfortable to those not used to ""authoring"".[14] Wikipedia became the most famous wiki site, entering the top ten most popular websites in 2007. In the early 2000s, wikis were increasingly adopted in enterprise as collaborative software. Common uses included project communication, intranets, and documentation, initially for technical users. Some companies use wikis as their only collaborative software and as a replacement for static intranets, and some schools and universities use wikis to enhance group learning. There may be greater use of wikis behind firewalls than on the public Internet. On March 15, 2007, the word wiki was listed in the online Oxford English Dictionary.[16]"

Implementations

"Wiki software is a type of collaborative software that runs a wiki system, allowing web pages to be created and edited using a common web browser. It may be implemented as a series of scripts behind an existing web server, or as a standalone application server that runs on one or more web servers. The content is stored in a file system, and changes to the content are stored in a relational database management system. A commonly implemented software package is MediaWiki, which runs Wikipedia. See the List of wiki software for further information. Alternatively, personal wikis run as a standalone application on a single computer. WikidPad is an example. Or even single local HTML file with JavaScript inside ? like TiddlyWiki. Wikis can also be created on a ""wiki farm"", where the server side software is implemented by the wiki farm owner. PBwiki, Socialtext, Wetpaint, and Wikia are popular examples of such services. Some wiki farms can also make private, password-protected wikis. Note that free wiki farms generally contain advertising on every page. For more information, see Comparison of wiki farms."

Trust and security

Controlling changes

""Recent changes"" redirects here. For the Wikipedia help page, see Help:Recent changes."

History comparison reports highlight the changes between two revisions of a page.

"Wikis are generally designed with the philosophy of making it easy to correct mistakes, rather than making it

difficult to make them. Thus, while wikis are very open, they provide a means to verify the validity of recent additions to the body of pages. The most prominent, on almost every wiki, is the "Recent Changes" page—a specific list numbering recent edits, or a list of edits made within a given time frame.[17] Some wikis can filter the list to remove minor edits and edits made by automatic importing scripts ("bots").[18] From the change log, other functions are accessible in most wikis: the revision history shows previous page versions and the diff feature highlights the changes between two revisions. Using the revision history, an editor can view and restore a previous version of the article. The diff feature can be used to decide whether or not this is necessary. A regular wiki user can view the diff of an edit listed on the "Recent Changes" page and, if it is an unacceptable edit, consult the history, restoring a previous revision; this process is more or less streamlined, depending on the wiki software used.[19] In case unacceptable edits are missed on the "recent changes" page, some wiki engines provide additional content control. It can be monitored to ensure that a page, or a set of pages, keeps its quality. A person willing to maintain pages will be warned of modifications to the pages, allowing him or her to verify the validity of new editions quickly.[20] A watchlist is a common implementation of this. Some wikis also implement "patrolled revisions", in which editors with the requisite credentials can mark some edits as not vandalism. A "flagged revisions" system can prevent edits from going live until they have been reviewed.[21]"

Trustworthiness

"Critics of publicly editable wiki systems argue that these systems could be easily tampered with, while proponents argue that the community of users can catch malicious content and correct it.[1] Lars Aronsson, a data systems specialist, summarizes the controversy as follows:"

"Most people, when they first learn about the wiki concept, assume that a Web site that can be edited by anybody would soon be rendered useless by destructive input. It sounds like offering free spray cans next to a grey concrete wall. The only likely outcome would be ugly graffiti and simple tagging, and many artistic efforts would not be long lived. Still, it seems to work very well.[11]"

"High editorial standards in medicine have led to the idea of expert-moderated wikis.[22] Some wikis allow one to link to specific versions of articles, which has been useful to the scientific community, in that expert peer reviewers could analyse articles, improve them and provide links to the trusted version of that article.[23] Noveck points out that "participants are accredited by members of the wiki community, who have a vested interest in preserving the quality of the work product, on the basis of their ongoing participation." On controversial topics that have been subject to disruptive editing, a wiki may restrict editing to registered users.[24]"

Security

"The open philosophy of wiki — allowing anyone to edit content, does not ensure that every editor's intentions are well-mannered. For example, vandalism (changing wiki content to something offensive or nonsensical) can be a major problem. On larger wiki sites, such as those run by the Wikimedia Foundation, vandalism can go unnoticed for some period of time. Wikis, because of their open access nature, are susceptible to intentional disruption, known as "trolling". Wikis tend to take a soft-security[25][unreliable source] approach to the problem of vandalism; making damage easy to undo rather than attempting to prevent damage. Larger wikis often employ sophisticated methods, such as bots that automatically identify and revert vandalism and JavaScript enhancements that show characters that have been added in each edit. In this way vandalism can be limited to just "minor vandalism" or "sneaky vandalism", where the characters added/eliminated are so few that bots do not identify them and users do not pay much attention to them.[26][unreliable source] The amount of vandalism a wiki receives depends on how open the wiki is. For instance, some wikis allow unregistered users, identified by their IP addresses, to edit content, whilst others limit this function to just registered users. Most wikis allow anonymous editing without an account,[27] but give registered users additional editing functions; on most wikis, becoming a registered user is a short and simple process. Some wikis require an additional waiting period before gaining access to certain tools. For example, on the English Wikipedia, registered users can rename pages only if their account is at least four days old. Other wikis such as the Portuguese Wikipedia use an editing requirement instead of a time requirement, granting extra tools after the user has made a certain number of edits to prove their

trustworthiness and usefulness as an editor. Vandalism of Wikipedia is common (though policed and usually reverted) because it is extremely open, allowing anyone with a computer and Internet access to edit it, but making it grow rapidly. In contrast, Citizendium requires an editor's real name and short autobiography, affecting the growth of the wiki but sometimes helping stop vandalism. Edit wars can also occur as users repetitively revert a page to the version they favor. Some wiki software allows an administrator to stop such edit wars by locking a page from further editing until a decision has been made on what version of the page would be most appropriate.[8] Some wikis are in a better position than others to control behavior due to governance structures existing outside the wiki. For instance, a college teacher can create incentives for students to behave themselves on a class wiki they administer, by limiting editing to logged-in users and pointing out that all contributions can be traced back to the contributors. Bad behavior can then be dealt with in accordance with university policies.[10]"

Potential malware vector

"Malware can also be problem, as users can add links to sites hosting malicious code. For example, a German Wikipedia article about the Blaster Worm was edited to include a hyperlink to a malicious website. Users of vulnerable Microsoft Windows systems who followed the link would be infected.[8] A countermeasure is the use of software that prevents users from saving an edit that contains a link to a site listed on a blacklist of malware sites.[28]"

Communities

It has been suggested that City wiki be merged into this section. (Discuss) Proposed since May 2014.

Applications

"The English Wikipedia has the largest user base among wikis on the World Wide Web[29] and ranks in the top 10 among all Web sites in terms of traffic.[30][needs update] Other large wikis include the WikiWikiWeb, Memory Alpha, Wikivoyage and Susning.nu, a Swedish-language knowledge base. Medical and health-related wiki examples include Ganfyd, an online collaborative medical reference that is edited by medical professionals and invited non-medical experts.[9] Many wiki communities are private, particularly within enterprises. They are often used as internal documentation for in-house systems and applications. Some companies use wikis to allow customers to help produce software documentation.[31] A study of corporate wiki users found that they could be divided into ""synthesizers"" and ""adders"" of content. Synthesizers' frequency of contribution was affected more by their impact on other wiki users, while adders' contribution frequency was affected more by being able to accomplish their immediate work.[32] In 2005, the Gartner Group, noting the increasing popularity of wikis, estimated that they would become mainstream collaboration tools in at least 50% of companies by 2009.[33][needs update] Wikis can be used for project management.[34][35][unreliable source] Wikis have also been used in the academic community for sharing and dissemination of information across institutional and international boundaries.[36] In those settings, they have been found useful for collaboration on grant writing, strategic planning, departmental documentation, and committee work.[37] In the mid-2000s, the increasing trend amongst industries toward collaboration was placing a heavier impetus upon educators to make students proficient in collaborative work, inspiring even greater interest in wikis being used in the classroom.[8] Wikis have found some use within the legal profession, and within government. Examples include the Central Intelligence Agency's Intellipedia, designed to share and collect intelligence, dKospedia, which was used by the American Civil Liberties Union to assist with review of documents pertaining to internment of detainees in Guantamo Bay;[38] and the wiki of the United States Court of Appeals for the Seventh Circuit, used to post court rules and allow practitioners to comment and ask questions. The United States Patent and Trademark Office operates Peer-to-Patent, a wiki to allow the public to collaborate on finding prior art relevant to examination of pending patent applications. Queens, New York has used a wiki to allow citizens to collaborate on the design and planning of a local park. Cornell Law School founded a wiki-based legal dictionary called Wex, whose growth has been hampered by restrictions on who can edit.[24]"

WikiNodes

"WikiNodes are pages on wikis that describe related wikis. They are usually organized as neighbors and delegates. A neighbor wiki is simply a wiki that may discuss similar content or may otherwise be of interest. A delegate wiki is a wiki that agrees to have certain content delegated to that wiki.[39] One way of finding a wiki on a specific subject is to follow the wiki-node network from wiki to wiki; another is to take a Wiki ""bus tour"", for example: Wikipedia's Tour Bus Stop."

Participants

"The four basic types of users who participate in wikis are reader, author, wiki administrator and system administrator. The system administrator is responsible for installation and maintenance of the wiki engine and the container web server. The wiki administrator maintains wiki content and is provided additional functions pertaining to pages (e.g. page protection and deletion), and can adjust users' access rights by, for instance, blocking them from editing.[40]"

Growth factors

A study of several hundred wikis showed that a relatively high number of administrators for a given content size is likely to reduce growth;[41] that access controls restricting editing to registered users tends to reduce growth; that a lack of such access controls tends to fuel new user registration; and that higher administration ratios (i.e. admins/user) have no significant effect on content or population growth.[42]

Conferences

Conferences and meetings about wikis in general include:

"The International Symposium on Wikis (WikiSym), a conference dedicated to wiki research and practice in general."

"RecentChangesCamp, an unconference on wiki-related topics"

Conferences on specific wiki sites and applications include:

"Atlassian Summit, an annual conference for users of Atlassian software, including Confluence[43]"

"RegioWikiCamp, a semi-annual unconference on ""regiowikis"", or wikis on cities and other geographic areas.[44]"

"SMWCon, a bi-annual conference for users and developers of Semantic MediaWiki.[45]"

"TikiFest, a frequently held meeting for users and developers of Tiki Wiki CMS Groupware.[46]"

"Wikimania, an annual conference dedicated to the research and practice of Wikimedia Foundation projects like Wikipedia."

Rules

"Wikis typically have a set of rules governing user behavior. Wikipedia, for instance, has a labyrinthine set of policies and guidelines summed up in its five pillars: Wikipedia is an encyclopedia; Wikipedia has a neutral point of view; Wikipedia is free content; Wikipedians should interact in a respectful and civil manner; and Wikipedia does not have firm rules. Many wikis have adopted a set of commandments. For instance, Conservapedia commands, among other things, that its editors use ""B.C."" rather than ""B.C.E."" when referring to years prior to A.D.1 and refrain from ""unproductive activity.""[47] One teacher instituted a commandment for a class wiki, ""Wiki unto others as you would have them wiki unto you.""[10]"

Legal environment

"Joint authorship of articles, in which different users participate in correcting, editing, and compiling the finished product, can also cause editors to become tenants in common of the copyright, making it impossible to republish without the permission of all co-owners, some of whose identities may be unknown due to pseudonymous or anonymous editing.[8] However, where persons contribute to a collective work such as an encyclopedia, there is no joint ownership if the contributions are separate and distinguishable.[48] Despite most wikis' tracking of individual contributions, the action of contributing to a wiki page is still arguably one of jointly correcting, editing, or compiling which would give rise to joint ownership. Some copyright issues can be alleviated through the use of an open content license. Version 2 of the GNU Free Documentation License includes a specific provision for wiki relicensing; Creative Commons licenses are also popular. When no license is specified, an implied license to read and add content to a wiki may be deemed to exist on the grounds of business necessity and the inherent nature of a wiki, although the legal basis for such an implied license may not exist in all circumstances.[citation needed] Wikis and their users can be held liable for certain activities that occur on the wiki. If a wiki owner displays indifference and forgoes controls (such as banning copyright infringers) that he could have exercised to stop copyright infringement, he may be deemed to have authorized infringement, especially if the wiki is primarily used to infringe copyrights or obtains direct financial benefit, such as advertising revenue, from infringing activities.[8] In the United States, wikis may benefit from Section 230 of the Communications Decency Act, which protects sites that engage in ""Good Samaritan"" policing of harmful material, with no requirement on the quality or quantity of such self-policing.[49] However, it has also been argued that a wiki's enforcement of certain rules, such as anti-bias, verifiability, reliable sourcing, and no-original-research policies, could pose legal risks.[50] When defamation occurs on a wiki, theoretically all users of the wiki can be held liable, because any of them had the ability to remove or amend the defamatory material from the ""publication."" It remains to be seen whether wikis will be regarded as more akin to an internet service provider, which is generally not held liable due to its lack of control over publications' contents, than a publisher.[8] It has been recommended that trademark owners monitor what information is presented about their trademarks on wikis, since courts may use such content as evidence pertaining to public perceptions. Joshua Jarvis notes, ""Once misinformation is identified, the trade mark owner can simply edit the entry.""[51]"

Notes

"1. The realization of the Hawaiian /w/ phoneme varies between [w] and [v], and the realization of the /k/ phoneme varies between [k] and [t], among other realizations. Thus, the pronunciation of the Hawaiian word wiki varies between ['wiki], ['witi], ['viki], and ['viti]. See Hawaiian phonology for more details."

Over \$200B of your tax money in the pockets of billionaires who did not need it. Why? Where did the cash really go?

" A Collaborative Crime Book This is a "LIVE" document. It will continue to grow. Check back. See this link for process description. INDEX AND TABLE OF CONTENTS LINK Link to this page: <http://www.thenewsdaily.org/?p=1915> Reference Document Files Set [1] [2] [3] [4] [5] [6] [7] [8] [9] [10] [11] [12] [13] [14] [15] [16] [17] Reference Video Files Set [1] [2] [3] [4] [5] [6] [7] [8] [9] [10] [11] [12] Reference Audio Files Set [1] [2] [3] [4] [5] [6] [7] [8] Each one of the "Highlights" items below has over 1000 pages of evidence to back it up. Only a Special Prosecutor is now capable of prosecuting such a case. Appointment of a Special Prosecutor is currently being blockaded by The DOJ and FBI, on orders from The White House, in violation of the requests of the U.S. Senate, The GAO and public out-cry. This case involves hundreds of billions of dollars of criminally misused tax money. Highlights: - Federal bribes are never clean. They always become complicated because of the "I want some too" factor - The transactions, and documented quid pro quo, not only qualify for, but exceed, the requirements for Federal Racketeering indictments - When an adjacent entity finds out there is a bribe going on, they can use the knowledge of the bribe to extort sub-bribes - Party One = Billionaire campaign backers who were investors in Google, Tesla and "CleanTech" - Party Two = DNC and Presidential campaign office - Party Two point five = The White House - Party Three = Goldman Sachs - Parties Four+ = Aligned Silicon Valley Venture Capital Groups - Parties Five+ = Russian investors - Parties Six+ = General Motors, Ford, Nissan and Chrysler working as a consortium - Transacted item 1 = Free NASA jet fuel, NASA partial agency closure and exclusive private supplier contracts to Space X, NASA Ames airport exclusive hand-over for Google & billionaire jets as payback for campaign resources - Transacted item 2 = Exclusive free federal taxpayer cash from Department of Energy in spite of low credit ratings and failing reviews in actual side-by-side comparisons of ALL applicants - Transacted item 3 = Exclusive tax credits, exclusive carbon credits, exclusive factory fee discounts, exclusive employee tax waivers, and land discounts from state underwritten by feds -

Transacted item 4 = First position in federal contract allocations - Transacted item 5 = Real estate discounts and ongoing revenue upsides from contiguous Tesla/Solyndra real estate and pass-along leases which Senator Feinstein's family exploited - Transacted item 6 = Loans by Billionaire campaign backers who were investors in Google, Tesla and ""CleanTech"" to Senators campaign PACs and funds - Transacted item 7 = Loans by Billionaire campaign backers who were investors in Google, Tesla and ""CleanTech"" to DNC and Presidential campaign office campaign PACs and funds via conduited means - Transacted item 8 = Payments of campaign bills by Billionaire campaign backers who were investors in Google, Tesla and ""CleanTech via conduit-ed means - Transacted item 9 = Provision of Search Engine manipulation, mood manipulation and competing interest web-search deletion on Silicon Valley global web architecture - Transacted item 10 = Sex workers as deal incentives - Transacted item 11 = Provision of federal funds and filings in a manner intended to be used for, and which were used to alter SEC securities filings, aligned with manipulated news distribution by insiders in order to defraud the stock market and falsify stock values for personal profit relative to Tesla, Solyndra, Abound, Fisker and related entities - Transacted item 12 = The service, provided by the Department of Energy, whereby all competitors to the stock portfolios of the Billionaire campaign backers who were investors in Google, Tesla and ""CleanTech"" were terminated, stone-walled and review-manipulated by the actions of the Department of Energy - Transacted item 13 = Revolving door jobs for White House and DOE staff in exchange for favorable federal decisions - Transacted item 14 = Custom authored white-papers by McKinsey Consulting, the content of which was directed by Billionaire campaign backers, who were investors in Google, Tesla and ""CleanTech, and Steven Chu, Steven Spinner and Matt Rogers, who then became the heads of the DOE funding. These White Papers were distributed to the White House and Congress by lobbyists working for the Billionaire campaign backers who were investors in Google, Tesla and ""CleanTech"". The white-papers were constructed in order to give a false impression of Clean-tech and happened to favor only the stock investments of Billionaire campaign backers, who were investors in Google, Tesla and ""CleanTech"". The manipulated white-papers were used to sell Congress, via contrived data, on plans beneficial only to the Billionaire campaign backers, who were investors in Google, Tesla and ""CleanTech. McKinsey staff have been arrested and the company is under investigation - Transacted item 15 = Possible terminations. An inordinately large number of individuals connected to this bribe died during this event. All of the deaths were unexpected, untimely, non-indicated by current medical conditions and game-changing by ironically reducing the risk of exposure in most of the cases - Transacted item 16 = Orders by White House staff, to DOJ, SEC & FBI to ""leave this matter alone for now"". Ordered failure-to-enforce - Transacted item 17 = Senior position Jobs at DOE and DOJ on orders of campaign backing billionaires such that the people in those positions were working on behalf of those campaign backing billionaires - Transacted item 18 = Lack of review, ""don't observe"" process as Solyndra, Abound, Fisker, etc. were immediately failing. Orders to avoid noticing the failures in order to cover up campaign negatives - Transacted item 19 = Down-favoring of non portfolio and competing technologies by the Department of Energy via Steven Chu, thus removing them from support and off the playing field - Transacted item 20 = Law-firm Covington & Burling was paid to place Eric Holder and Steven Chu in office via nomination manipulation on behalf of Billionaire campaign backers who were investors in Google, Tesla and ""CleanTech"" - Transacted item 21 = The Deloitte accounting firm was paid to manipulate both the applicants applications and the DOE review process on behalf of Billionaire campaign backers who were investors in Google, Tesla and ""CleanTech"" in knowing conflict of interest and while knowingly engaged in fraud - Transacted item 22 = IBM Consulting and Argonne Laboratories was paid to manipulate both the applicants applications and the DOE review process on behalf of Billionaire campaign backers who were investors in Google, Tesla and ""CleanTech"" in knowing conflict of interest and while knowingly engaged in fraud - Transacted item 23 = Access. Department of Energy funding ""winners"" had been pre-decided, prior to application, by DOE staff on orders from White House staff exclusively on behalf of a select set of campaign donors "

Naming-the-Names Master List SCORECARD:

"PERSONS OF INTEREST Notes: The sources of the most interesting discussion. Each has their own page,

click to link. All have been mentioned in 2, or more, investigations. Media investigators and agency investigators have much more data than is shown on each of their pages below. Do your own additional research. This is not an exhaustive list. No person is proposed as a final suspect herein. All parties are innocent until proven guilty in a court of law. All persons listed have been previously listed in published media investigations and publications, City, State and Federal investigations and lawsuits. The entities below are thought, by many, to be capable of offering more complete perspectives in the ongoing investigations. The Greenwald/Snowden documents provide additional details, to be viewed. The Guardian and Der Spiegel have an extensive repository involving the figures below, to be viewed. DEMAND A SPECIAL PUBLIC PROSECUTOR IN YOUR LOCAL BLOG POSTINGS!

"Investigation Issues: Revolving door jobs for Lobbyists and Senator's staff; Real estate kickback scheme re: Tesla & Solyndra properties; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; Lied to investors; Misdeeds recorded by multiple law enforcement and intelligence agencies; Brad W. Buss (24/7 DS) Ira Ehrenpreis (24/7 DS) Antonio J. Gracias (24/7 DS) Steve Jurvetson (24/7 DS) Harald Kroeger (24/7 DS) Kimbal Musk (24/7 DS) Tim Draper (24/7 DS) Elon Musk (24/7 DS) "

- Department of Energy

"Investigation Issues: Revolving door jobs for Lobbyists and Senator's staff; Real estate kickback scheme re: Tesla & Solyndra properties; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; They and their families held insider trading stock in associated winners; Received ?revolving door?

kickbacks; Misdeeds recorded by multiple law enforcement and intelligence agencies; Had vast documentation of falsehoods and lies by 'winners' that they ignored; Ordered rigging of ATVM & LG reviews to benefit campaign donors; Steven Chu ? Dept. of Energy (Terminated/Fired)(Under Investigation) (24/7 DS) Matt Rogers- Dept. of Energy (Fired)(Under Investigation)(24/7 DS) Steve Spinner- Dept. of Energy (Terminated/Fired)(Under Investigation)(24/7 DS) Jonathan Silver- Dept. of Energy (Terminated)(Under Investigation)(24/7 DS) Lachlan Seward- Dept. of Energy (Fired)(Under Investigation)(24/7 DS) David Frantz- Dept. of Energy (Under Investigation)(24/7 DS) Steve Izokowitz- Dept. of Energy (Under Investigation)(24/7 DS) Danial Cohen- Dept. of Energy lawyer during the making of the scandal (Under Investigation)(24/7 DS) More coming? "

- White House Staff

"Investigation Issues: Revolving door jobs for Lobbyists and Senator's staff; Real estate kickback scheme re: Tesla & Solyndra properties; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; running a 'DO NOT FUND' list to protect Silicon Valley Cartel; Arranging quid-pro-quo funds-for-campaign contributions and funds-for-SEO-rigging and funds-for search-engine-'mood manipulation' kickbacks; Misdeeds recorded by multiple law enforcement and intelligence agencies; Rahm Emanuel- White House (Terminated- Chicago finance head indicted for Corruption)(Under Investigation)(24/7 DS) Robert Gibbs- White House (Terminated)(Under Investigation)(24/7 DS) David Axelrod- White House (Terminated)(Under Investigation)(24/7 DS) Valerie Jarrett- White House(24/7 DS) Larry Summers- White House (Fired)(Under Investigation)(24/7 DS) Bill Daley- White House (Terminated)(Under Investigation)(24/7 DS) Steve Rattner- White House Car Deals Director (Fired- Indicted in NY State for SEC Fraud/Corruption)(Under Investigation)(24/7 DS) Jay Carney- White House (Forced to resign) (24/7 DS) David Plouffe- White House (Forced to Resign) Arranged deals between VC campaign Donors (24/7 DS) Eric Holder ? Staff & VC Protections and blockade of FBI and Special Prosecutor deployments "

- Silicon Valley Cartel

"Investigation Issues: Revolving door jobs for Lobbyists and Senator's staff; Real estate kickback scheme re: Tesla & Solyndra properties; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; running a 'DO NOT FUND' list to protect Silicon Valley Cartel; Arranging quid-pro-quo funds-for-campaign contributions and funds-for-SEO-rigging and funds-for search-engine-'mood manipulation' kickbacks; Ran 'Illuminati'-like frat-house boys club with goal of taking control of government policy process and creating monopolies which only profited their cartel; Misdeeds recorded by multiple law enforcement and intelligence agencies; Colluded together to rig markets in order to cut out those who were not in 'the club'; Colluded on database to ensure that no VC funded a 'black-listed' non-club member; Ordered Silicon Valley web companies they controlled to run SEO and perception manipulation programs to control voters perceptions; Pretended to review entrepreneurs new ideas and then rejected the good ideas and handed them over to another VC in 'the club' so that VC could have their 'entrepreneurs in residence' copy the ideas without paying the creator of the idea; Organized vast whitepaper authoring program with McKinsey Consulting which was distributed to Congress and White House to sell funding of DOE ATVM & LG programs which they had pre-rigged to benefit only companies they already owned part of; Fully meets definition of 'Organized Crime'; Arranged with White House staff to make sure only their companies got funded in exchange for campaign cash and services to DNC candidates; Pre-acquired investments in minerals found almost exclusively in Afghanistan and then promoted Afghan war in order to monopolize those minerals; May have arranged some of the suspected murders in Victims List, below; Larry Page- (Under Investigation)(24/7 DS) Eric Schmidt- (Under Investigation)(24/7 DS) John Doerr- (Under Investigation)(24/7 DS) Steve Westly- Campaign Bundler (Under Investigation)(24/7 DS) Richard Blum- Senator Feinsteins Husband (Under Investigation)(24/7 DS) (AND HERE) (AND HERE) Ray Lane- (Charged with Federal Tax Fraud)(Under Investigation)(24/7 DS) (AND HERE) Elon Musk ? CEO ? Tesla (Under Investigation & in multiple lawsuits for fraud)(24/7 DS) (AND HERE) (AND HERE) (AND HERE) (AND HERE) (AND HERE) (AND HERE) (AND HERE) Andy Bechtolsheim- Insider campaign backer (Under Investigation)(24/7 DS) Vinod Khosla- Campaign backer (Under Investigation and in multiple lawsuits)(24/7

DS)(AND HERE) Martin LaGod- Campaign backer (Under Investigation)(24/7 DS) Ira Ehrenpreis- Campaign backer (Under Investigation)(24/7 DS) Eric Strickland- Campaign backer (Under Investigation)(24/7 DS) Tom Perkins- Campaign backer (Under Investigation, slammed by public and media)(24/7 DS) Tim Draper- Campaign backer (Under Investigation)(24/7 DS) Tom Styer- Campaign backer (Under Investigation)(24/7 DS) Lloyd Craig Blankfein- Head of Goldman Sachs (Under Investigation)(AND HERE) (AND HERE) (AND HERE) (AND HERE) (AND HERE) (AND HERE) Raj Gupta- McKinsey Fixer (Indicted, Jailed)(Under Investigation)(24/7 DS) Brian Goncher- Deloitte VC intermediary (Under Investigation)(24/7 DS) Goldman Sachs (Suspected of staging most of the TARP/DOE deals for personal gain & insider payouts)(24/7 DS) Kleiner Perkins (Campaign funder who received massive windfalls from Russian mining & tech start-up rigging)(24/7 DS) Draper Fisher (Campaign funder who received massive windfalls from Russian mining & tech start-up rigging)(24/7 DS) More Coming

- Compromised Senators & Governors

"Investigation Issues: Organized Crime; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with constituents; Kick-backs; Fraud lawsuits underway; Contract rigging; Lithium cartel organization for Afghan war; Insider trading; Market rigging for family advantage; Misdeeds recorded by multiple law enforcement and intelligence agencies; All of the below received exclusive insider trading family gains and perks from the DOE & TARP funding winners that they hand-held through the funding process while sabotaging applicants who weren't in 'The Club?'; Dianne Feinstein- Senator (Under Investigation) Wife of Silicon Valley Cartel Member Richard Blum (AND HERE) (AND HERE)(24/7 DS) Harry Reid- Senator ? Solar factory guru, Congress lead (24/7 DS) Senator Calderone- (Indicted & charged with corruption)(24/7 DS) Leland Yee- Senator (Indicted & charged with corruption) (24/7 DS) Nancy Pelosi (24/7 DS) Barbara Boxer (24/7 DS) Arnold Schwarzenegger (24/7 DS) More coming? "

- Russian Oligarch Mining and Manufacturing Cartel Supporting Silicon Valley Cartel

"Investigation Issues: Organized Crime; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; Contract rigging; Lithium cartel organization for Afghan war; Misdeeds recorded by multiple law enforcement and intelligence agencies; All of these people and their associates were connected to, or controlled, multiple Department of Energy 'winners' and had extensive business relationships with Silicon Valley Cartel members. Alexey Mordashov- Russian 'businessman' in relations with others on this list (Under Investigation)(On CIA & NSA Watchlist)(24/7 DS) Boris Zingarevich- Russian 'businessman' in relations with others on this list (Under Investigation)(On CIA & NSA Watchlist)(24/7 DS) George Trifonov- Russian 'businessman' in relations with others on this list (Under Investigation)(On CIA & NSA Watchlist)(24/7 DS) Yuri Savinkov- Russian 'businessman' in relations with others on this list (Under Investigation)(On CIA & NSA Watchlist)(24/7 DS) Nick Denton- Tabloid Publisher (Under Investigation) (On CIA & NSA Watchlist)(24/7 DS) . Keeps money in Russia per contracted political hits Dmitry Medvedev- Russian 'businessman' in relations with others on this list (Under Investigation)(On CIA & NSA Watchlist)(24/7 DS) See also: John Doerr More coming in NSA Congressional hearings in 2015

- Department of Energy 'Winners'?

"Investigation Issues: Organized Crime; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; Contract rigging; Lithium, indium and mining cartel organization for Afghan war; Misdeeds recorded by multiple law enforcement and intelligence agencies; Heinrik Fisker- CEO of Fisker (Bankrupt) (Under Investigation).(24/7 DS) Shut down Tesla and Elon Musk ? CEO ? Tesla (Under Investigation) (24/7 DS) (AND HERE) (AND HERE) (AND HERE) (AND HERE) (AND HERE) (AND HERE) (AND HERE) (AND HERE) Adjoins Solyndra real estate Solyndra ? (FBI Raid. Shut Down) . Adjoins Tesla real estate Abound- (Attorney General Raid) (Shut down) GM, CHRYSLER & FORD- ?Funds Organizing Team? and shared-cost lobbyists (Under Investigation, sued) (24/7 DS) Severstal- Russian Mob connected manufacturing/Mining steel

company (Under Investigation) (24/7 DS) Ener1- Russian Mob connected Lithium battery company. (Shut down)
Many more coming

- Collateral Damage Victims

"Research the facts yourself: All of these connected people are, indeed, dead. They all died in unexpected, surprise, deaths; They died in similar time envelopes; They all had business and financial connections to, and insider knowledge of, the Silicon Valley Cartel plans; Almost all of them have been documented, filmed or recorded in involvements with the Silicon Valley Cartel members or Google controlling members; Many of them had started whistle-blowing or were already whistle-blowing; per laws of averages- this is a lot of related people to have died unexpectedly with this much in common, near impossible for these combined data points to be coincidental: Gary D. Conley- Dead guy who railed against Silicon Valley VC's Cleantech Monopoly. Died from lead poisoning via bullet in head (Case Under Investigation) (DEAD!) Rajeev Motwani- Google Founder. Possible Murder. Found floating dead in swimming pool. Cardiac Incident or Micheal Clayton-type (see the George Clooney Movie) Murder similar to Andrew Breitbart? (DEAD!) Forrest Hayes, a married 51-year-old father-of-five, Ran Google Glass Mood Manipulation development- Killed By Hooker (DEAD!) James D Johnston, GM lobbyist/key witness- Dead! Questionable Circumstances? (DEAD!) Three crucial Tesla Senior Staff killed, one of whom was whistleblower- Accidental Plane Crash or ?Boston Brakes?? (DEAD!) Investigative Reporter Michael Hastings fiery crash- ?Boston Brakes?? (look it up) per Defcon Hackers Convention showcase on how easy it is to takeover car, plane or boat controls by radio and crash the vehicle. (DEAD!) Rory Johnson- Targeted by DOE for his novel engine patent- Dead! (DEAD!) Stanley Meyer- Hydrogen car promoter- Murder by poisoning? (DEAD!) JP Morgan Senior Technology Banker Gabriel Magee jumped off HQ building. (DEAD!) William ?Bill? Broeksmit Deutsche Banker , Tesla German ?safety inspection fixer? who got a free-pass for Tesla on safety report in Germany- Hanged at home! (DEAD!) Danny Lewin, Creator of Bulk Internet at Akamai. Attempted to copy Google Page-ranking and Mood Manipulation technology. The Architect and Builder of the Internet Tracking System- Plane Crash 9/11? (DEAD!) Ravi Kumra- Founder, Tesla Capital- Murdered! (DEAD!) Silicon Valley VC Attorney- Autoerotic asphyxiation or Murder? (DEAD!) One Senator's Son- Accidental Plane Crash or ?Boston Brakes?? (DEAD!) White House liason's wife- Burned to Death in Parked Car/Murder? (DEAD!) John Wheeler- Washington DC- Drugged, escaped, recaptured, murdered? (DEAD!) Two Guys from McKinsey Consulting- Questionable Circumstances? (DEAD!) Top DC Madam's and Escorts, including ?THE? DC Madam herself- Suicides? (DEAD!) Tata Motors Head Karl Slym dies in fall from hotel- Suicide or Push? (DEAD!) Wall Street Journal DOE/Oil Investigative Writer David Bird Missing- ??? Top DOE funding oversight aide for energy-radical Senator Alexander had vast insider knowledge of DOE staff actions. Did he leak to Greenwald, and others, before his death? Senate aide found hanged in basement- Suicide or sex-scandal set-up like Arrington? Do suicidal people write such carefully composed, edited, grammar-perfect suicide letters in their dire states? (DEAD!) Andrew Brietbart the Blogger/whistleblower. First to provide tips about CARGATE online.- Cardiac Incident or Micheal Clayton-type Murder similar to Rajeev Motwani (DEAD!) "

- Facilitating Contractors for Cartel Effort

"Investigation Issues: Organized Crime; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; Contract rigging; Lithium cartel organization for Afghan war; Crimes recorded by multiple law enforcement and intelligence agencies; Raj Gupta- McKinsey Fixer (Indicted, Jailed)(Under Investigation)(24/7 DS) Brian Goncher- Deloitte VC intermediary (Under Investigation)(24/7 DS) John Weinberg- Fixer (Under Investigation)(24/7 DS) McKinsey Consulting (DOE/Federal Contractor- Wrote biased/rigged whitepapers for White House & Congress on behalf of Silicon Valley VC's to sell the feds on backing the VC's investment holdings) (24/7 DS) Nick Denton- ?Hit-Man? for Robert Gibbs and Jay Carney in White House. Tabloid owner who did the dirty work for White House Press Secretaries. Formerly involved with British tabloid hacking. Thought to be hacking U.S. celebrities and senators for tips (On CIA and NSA Watchlist) (24/7 DS) Perkins Coie (Law Firm who staged many of the insider deals. Suspected of improper gain.)(24/7 DS) Deloitte Consulting (DOE Contractor- Suspected manipulated evaluation results) Operared in conflict of interest

as both banking strategist for DOE ?Winners? and Evaluator for DOE. Controlled by Silicon Valley Cartel. Under world-wide investigation (24/7 DS) Google (Connected to every investor/campaign funder in this group. Suspected of news manipulation & campaign trades) (Moles planted) (24/7 DS) Lois Lerner- Director of ?Hits and Deletions? (Charged with crimes) (24/7 DS) Midland Services (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu)(24/7 DS) Technology Management Services (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu)(24/7 DS) IBM Consulting Services (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu) Had strange fake office in Virginia church building (24/7 DS) Covington & Burling, LLP (Arranged appointment of Eric Holder on behalf of campaign backers & Silicon Valley) Put Eric Holder in Office to protect White House Staff from discovery (24/7 DS) Debevoise (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu) (24/7 DS) The Petroleum Institute (Lobbyists who worked the Detroit side of the insider deals) (24/7 DS) Argonne National Labs (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu and Rahm Emanuel) (24/7 DS) "

"- States Whose Tax and Operations Offices, in Their State Capitals, Participated in Cover-Ups and Kick-Backs"

"Investigation Issues: Organized Crime; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; Contract rigging; Lithium cartel organization for Afghan war; Misdeeds recorded by multiple law enforcement and intelligence agencies; Michigan State Offices (Under Investigation) (24/7 DS) Illinois State Offices (Under Investigation) (24/7 DS) Nevada State Offices (Under Investigation) (24/7 DS) California State Offices (Under Investigation) (24/7 DS) "

" Note from Team: Investigative members have relied on published reports, papers, GAO, OPM, U.S. Treasury, FBI, published investigations, interviews with City, State and Federal staffs and law enforcement tips. While there may be one or two names that do not belong on this list, any clarity can be easily rectified by the appointment of a public special prosecutor and an open public hearing process which allows protections for tipsters and whistleblowers. Such a hearing will dispel any confusion about who did, or didn't, do what! On orders from ?highly placed political officials?, FBI investigations and assignment of a Special Prosecutor or Public Judge is being blocked to avoid embarrassing public review of the corruption. Using commonly available databases, YOU can track the financial, business, political and operational connections of all of these individuals, yourself, and validate this information. While this whole case sounds wild, please remember, billionaires have extreme ways of thinking, and acting. They do things that normal people can't even conceive of. The lust for Power will drive these sorts of people to do un-heard of things in order to control that power and take those hundreds of billions of dollars in tax and treasury profits for themselves. -THE CRIME OF THE CENTURY

01FridayAug 2014

Posted by EDITORS in Uncategorized

÷ Leave a comment

"Tags 60 minutes investigation, auto green, autogreenblog.com, barack obama, Bob Woodward, Boycott Tesla, Bribery, Corruption, Dept. of energy, diane feinstein, Dianne FEinstein, DOE Corruption, Elon MUsk, gao investigation, grassley, Kardasian, Kardasian Game, mitt romney, NASDAQ: TSLA, solyindra, Solyndra scandal, solyndramobile, Steve Spinner, Steve Westly, Steven Chu, Tesla, Tesla motors, Tesla Stock, THE CRIME OF THE CENTURY, Throw Them All Out, TSLA, wall street journal investigation, washington corruption, washington corruption investigation"

THE CRIME OF THE CENTURY

"Current best evidence, and witness testimony, appears to confirm that 6 Senior Obama White House staff (Gibbs, Axelrod, Plouffe, Rattner, Emanuel, etc.) and 3 Agency heads (Chu, Holder, etc.) colluded in an organized crime operation, within The White House, which ended up defrauding the U.S. Government, and Taxpayers, of over \$200 Billion. Their scheme involved acquiring campaign funds from UAW (Over-seen by Rattner with the Detroit gang) and related unions as well as Silicon Valley billionaires in exchange for give-away taxpayer money for their personal investments. At least 3 Senators (Feinstein, Reid, Pelosi, etc.) participated in the scam. Most of the persons of interest also had insider trading stock profit schemes running through all of the deals. This is the manner in which Tesla, Solyndra, Ener1, Abound and the bulk of the ?Clean-Tech? deals were done. ?Skims? as ?finders fees? and ?transaction fees? went into each of their pockets via stealthed routes and took place at each transaction point in the process, assisted by Goldman Sachs. To date; thousands of points of evidence have been documented by Press and Civic investigations. Finanical records, emails, phone calls, staff testimony, stock records, trust filings, SEC documents, GAO records and NSA archives confirm everything beyond a shadow of a doubt. The FBI and DOJ have been ordered, by Senior White House officials, not to investigate, nor to respond to witnesses or interview any subjects which would reveal information that would require them to fully engage in the prosecution. NSA has complete records of all illicit actions but cannot supply the recordings, or data, without a subpoena from a Special Prosecutor. The impunity and arrogance that the Billionaires and fixers have strutted their ?nobody is going to come after us as long as our guy is in office? attitude has subsided as they see that the end is nigh. Some reporters have significant evidential files and are awaiting other legal developments in order to

coincide information release. Let's discuss? TG, GH, JK- LAT, WASHPO 6, HY-y- K, Tom, GHJ, GF, HJ"

1. White House corruption | TribLIVE

"May 1, 2014 ? When this power is applied, Obama will feel the pressure and more information pointing directly to White House involvement in corrupt

<http://www.triblive.com/opinion/featuredcommentary/6040767-74/groups-irs-obama> ?

2. Mindblowing: 252 Well-Cited Examples of Obama Corruption ?

"In a letter to Congress, the White House said that Walpin was fired because he was ?confused, ?.. 64) Oversaw some of the world?s worst increases in corruption ."

<http://www.ijreview.com/2013/08/73971-mindblowing-252-well-cited-examples-of-obama-corruption-cronyism-lying-lawbreaking/> ?

3. Retiring White House Prosecutor Says the SEC Is Corrupt ?

"Apr 9, 2014 ? Retiring White House Prosecutor Says the SEC Is Corrupt. by ERIC ZUESSE. Bloomberg News reported, on April 8th, that a Securities and

<http://www.counterpunch.org/2014/04/09/65578/> ?

4. Corruption: Obama closes the White House to public access but is ?

"You've probably heard that President Obama closed the White House to public tours this week, blaming the sequester. What you may not have heard, however,

The 500 trolls of Tesla Motors!

"Elon Musk has a massive amount of fake meat puppet social media accounts that he uses to create the false impression that there are ""no problems at Tesla Motors"" and that the fires, lawsuits, staff departures, investor departures, criminal charges, cartel charges, toxic smoke, cancer causing chemicals, DOE application fraud, factory workers on fire, ex-wife & girlfriend abuse stories, battery factory worker deaths, buyer homicide charges, Lemon Law litigation, Billionaire sex clubs, Tesla patents disclose lethal & conflagration potential, Mexican worker battery factory ""death camps"" plans, dangerous chemicals, political corruption and hundreds of other issues are ""keep walking, nothing to see here"" issues. "

"Ex-Tesla staff say that, in addition to the hundreds of hired ""meat puppet"" trolls that Musk has hired, in India, to watch the internet 24/7 for any mention of the word Tesla"" , (so they can instantly bombard the comment section with ""A Tesla is Christ in the form of a car"" messages), Musk has 4 news scanning services that email him, and the trolls, any mentions of the company so that their greasy troll-like knobby fingers can leap into action in their dark little troll caves. Every comment section of every article about Tesla has been IP and sequence-route traced backed to the same Tesla-hired shills and trolls who login, comment after comment, under a massive number of fake accounts and identities. There is NO massive Tesla fanboy acclaim by millionaires sitting around blogging about the orgasmic joy of even thinking about a Tesla. There are only four 17 year old bloggers in basements in Idaho and India collecting \$5.00 per post. But the biggest, hairiest, most wart-ridden Tesla troll of all, the one that towers above all trolls, is Tesla investor: Google. Google scrapes any negative Tesla press off of the internet and manually moves all positive troll Tesla press to the top of its search and news engine. This is cartel-level falsification of the stock market via coordinated manipulation of false information about a stock. It is

an SEC felony, but federal executives, who arranged the scam, won't allow the SEC or FBI to go after these people because it will be politically embarrassing to ""Senior People"". It will be politically embarrassing because certain Washington, DC politicians gave a ""massively unqualified"", ""bankrupt"" (Per Elon Musk himself), ""failing"", ""lethally debt-ratio'd"", ""no-demand"", ""technically old-school"" Tesla a free gift of Taxpayer money as a pass along kickback to Tesla investors in exchange for billions of dollars of campaign financing. Submit your links. Let's discuss... T- LA Times [wpvideo Az6PiFCv]"

"HA! See this article: <http://www.bbc.com/news/technology-27741041> BBC News - Tesla boss Elon Musk hints at technology giveaway Ever since 1745, horses considered, and then, actually, began giving away their horse-shit. Nobody was excited about it then. Nobody is excited about it today. Horse-shit is still just horse-shit. Musk's patents disclose that Tesla knew that their cars energy system could ""kill you"" and ""burn down your home or office"". It says it right in the very papers that TESLA MOTORS wrote and filed with the U.S. Patent office. They posted on the public U.S. Government servers, where they can never be removed, the awful truth: Tesla's WILL burn you, your family, your house, your office. Tesla's own engineers wrote this! They should give them away because they are worthless! Danny- Times"

"Tech Industry ""Face-ism"": Like Racism but with facial symmetry"

"Why do the heads of most tech companies look like they just stepped off a GQ cover? Do you only get hired in a top job in Silicon Valley if you look yuppie enough? Why are the few top jobs that hire women in tech usually ""PR"" or ""Marketing"" positions and why do most of those few top women, in big tech, look like fashion models or idealized sorority leads? Is that too much of a WWII-like German Aryan social control system? Should Stanford's frat-house ""Douchebags-only"" rules be allowed to run Silicon Valley's technology innovations? Does it have anything to do with the fact that almost every single one of them were funded by male VC's, from related fraternities at Ivy League schools and ""tier 1 families"", who also have the same facial appearance? Does the glass ceiling extend across genders and the golden mean? Are the recent pictures of the MEN ONLY clubs in Silicon valley conferences, meetings and funding pitches showing up a darker side of tech than we suspected? Do we need equal-rights laws and affirmative action laws for facial appearance too? Send in your links. Let's discuss... JJ- ----- The tech people of Silicon Valley: "

The 1% illuminati Lithium-Gate VC's- Rigging Washington DC for profit at the expense of the public!

"Who are the ?Lithium ion VC's?? Say ""Howdy"" to the ACTUAL 1% Illuminati! -----
----- ""This matter has absolutely nothing to do with whether or not you like solar power or electric cars or gasoline or fracking or one technology over another. It has nothing to do with climate change; not a single thing. This is totally about banking, securities and finance fraud. It is entirely about organized crime racketeering kickbacks arranged by arrogant frat-boy billionaires who sought to buy government, buy power, buy ego-trips, kill competitors and monopolize industries for personal gain in exchange for campaign efforts."" - A U.S. Senate Source ----- Watch the 60 Minutes episode: ""The Cleantech Crash"", below, that began the series of 2014 expose events coming over the next 6 months: [wpvideo jMnc6LJb] The lobbyists called ""Think Progress"" (many of those targeted by investigations work, or worked there) and others, funded by the VC's, have started massive spin to call it a bunch of lies and say that ""No, No, it was really a big success"", but the facts, the criminal investigations and the money trail speak for themselves. It doesn't matter if you are Democrat or Republican, it matters if you want billionaires buying your government and cutting you out of the loop. D- LA Times -----
----- Now watch the 60 Minutes episode about how it was done:
<http://www.youtube.com/watch?v=CHiicN0Kg10> [wpvideo fARepFIX] -----
----- The Democrats needed cash for the campaign. Democrats are always poor, so they never have enough money. The campaign staff went to the Silicon Valley Vc's and said that if they paid for the campaign costs up front and rigged the search engines to only promote the Democrat candidates, then the campaign would give them \$100 Billion of tax money that they would not have otherwise gotten, once the Democrats had control of the DOE slush fund. So they did, but they got caught by their greed, and now they need to go to federal prison. It's as simple as that! E- Heritage ----- Note From Victims:
Multiple SOMO reporters/writers have spoken with a number of victims of this series of hits organized by the same group of people. If any major law firms (Multiple firms can file) begin the process of filing a class action RICO or damages action on behalf of the victims: Arrington, Assange, Eberhard, Brown, Conway, DM, Steve, Lakatos, Katie, AL, Etc... It is highly likely that a number of other victims (over 20+) will join the cases once they are filed and publicly noticed. Substantial evidence and testimony now exists and recoverable assets in potential court-ordered awards, from the attackers, exceed \$50B+ in possible recoveries for damages caused by their organized efforts against these competitors and reporters. In other words, big class-action law firms, according to many plaintiff candidates: ""if you file it, they will come."" DFG, YY, DS, SAT/LAT/NYT -----
----- Seriously... ..Don't get your panties in a knot about saving electric cars or solar panels. They are NOT AT RISK. There are a ton of solar panel companies doing gangbuster business and you can buy all kinds of electric cars, from many companies, right now. Those things are safe. They are doing fine. Don't let the VC media shills play your feel-good heart-strings. By complaining about political corruption you are not going to destroy the planet. You are going to destroy corruption. Got it? Green energy is doing fine but Corruption is also doing fine. Let's stop the corruption and let the green energy keep on keepin' on! Bradley T-SF Chr ----- Did they break the law? Multiple federal agency & committee probes now asked to look into organized crime charges over kickbacks. The Westly Group (Under Investigation) Ira ""Linguini"" Erenpries (Under Investigation) Firelake Capital (Under Investigation) John ""Doe"" Doerr (Under Investigation) Kliener Perkins (Sued for Sexual Abuse)(Under Investigation) Elon

""The MuskRat"" Musk (Sued on multiple charges of fraud by shareholders) Steve ""The Fix"" Westly (Under Investigation) Ray ""The Sausage"" Lane (Charged with Tax Fraud) Steve Jurvetson (Under Investigation) The Google Boys (Under Investigation) Jonathan"" Slippery"" Silver (Fired) (Under Investigation) Tom Perkins (Under Investigation) Tim ""I want-to-run-my-own-state"" Draper (Under Investigation) Draper Fisher (Under Investigation) Vinohd Khosla and Connie Rice (Under Investigation, multiple documentaries) Khosla Ventures (Under Investigation) Tom ""Fettucine"" Styer (Under Investigation) Steven ""The Rat"" Rattner (Indicted) Raj ""I-Am-Untouchable"" Gupta (Indicted) Hey Now? when you look at: their lobby hires, payment disclosures and blind SUPERPAC?s, which lithium ion interests they own or control and when you follow the money, it gets pretty ironic... They are all friends of silicon valley?s ?McKinsey? DOE Secretary of Energy Steven Chu; McKinsey DOE \$\$ Guy Matt Rogers & McKinsey DOE \$\$ Guy Steve Spinner (They paid to get them appointed). McKinsey staff have previously been put in Federal prison for rigging things, ie: Rajat Gupta.; and are under investigation world-wide. They contracted a silicon valley consulting company called McKinsey Consulting and told McKinsey to write all these white papers for the White House and Federal Agencies that said: ?lithium ion is the key to the future?. Then they bribed and influenced and ""Revolving Door'd"" to put Chu at DOE (Silicon Valley VC's were the primary nominators of Chu per his nomination file docket) and they invested in all of the Lithium while their guy: Chu, (working with Rahm Emanuel, Valarie Jarrett, David Axelrod and Robert Gibbs) handed out all of the taxpayer money to their investment projects. Easy Peasy. Scam. Which Senator did they interact with the most? Which West Wing Chief of Staff?? See the latest Senate investigations and Class Action lawsuits for more. The Pope just hired McKinsey to fix ""Vatican Corruption"".. Maybe not such a good idea? Recordings and emails appearing soon. Many agencies, committees and media groups are now investigating, or have been asked to investigate by senior Congressional staff. Since Reid went ?nuclear?, the gloves are off, it seems. Do your own research. Check out every name mentioned and all of their past connections. Nowadays, it isn?t that hard to research. All of the parts of this have been mentioned in the mainstream press as of now. Reporters asking to FOIA review the original Solyndra case # and case #?s hyphenated off of the Abound, Solyndra, and similar cases case #?s are having the best luck in story leads. ""One is building the new Bohemian Grove on the California coast at Half Moon Bay. One has started a Jr. Illuminati initiation program for young recruits that begins in the Stanford dorm rooms. One has publicly been charged with multiple crimes. One runs the technology suppression team for the NCVA. One has broken the record for hiring local escorts. Come watch the fun! It's non-stop hijinks with those crazy old boys from the Tech Branch of the Illuminati. Stay tuned for each episode of this made-for-tv romp that is guaranteed to be great fun for the whole family."" Elon Musk, and these sorts of ego-maniac billionaires, do not care about regular people or customers. They exist for the joy they get in manipulating power and control and tend to do things like this: [wpvideo jMnc6LJb] [wpvideo 6syz0vNW] [wpvideo h3AixjhD] [wpvideo 6syz0vNW] [wpvideo eFQDTOLF] [wpvideo fsB9480q] [wpvideo QrKvoUYa] <http://www.youtube.com/watch?v=5BYc3PqvBCo> <http://www.youtube.com/watch?v=XIdprsGvlb8> <http://www.youtube.com/watch?v=6PZipwucanc> <http://www.youtube.com/watch?v=amnwBzcxMAU> KL, HJK, H, TH, JKL, PROPU- Denver News, LA Times, WSJ, BB, Susu ----- "

"Steven Lawrence Rattner (born July 5, 1952) is an American financier who served as lead adviser to the Presidential Task Force on the Auto Industry in 2009 for the Obama administration.[1]"

New York Pension Fund Investigation

"In 2005, Quadrangle made payments to private placement agent Hank Morris to help Quadrangle raise money for its second buyout fund.[13] Morris had come highly recommended to Rattner from U.S. Senator Charles Schumer.[14] Morris was also the chief political advisor to Alan Hevesi, the New York State Comptroller and manager of the New York State Common Retirement Fund (CRF), which invests in many private equity funds. Morris told Rattner he could increase the size of the CRF investment in Quadrangle's second buyout fund. Rattner agreed to pay Morris a placement fee of 1.1% of any investments greater than \$25 million from the CRF.[15] In

2009, Quadrangle and a dozen other investment firms, including the Carlyle Group, were investigated by the U.S. Securities and Exchange Commission for their hiring of Morris. The SEC viewed the payments as "kickbacks" in order to receive investments from the CRF since Morris was also a consultant to Hevesi.[16] Quadrangle paid \$7 million in April 2010 to settle the SEC investigation, and Rattner personally settled in November for \$6.2 million without admitting or denying any wrongdoing.[17]"

Prosecution by Attorney General Cuomo

"The case drew significant media attention when Andrew Cuomo, the New York State Attorney General, demanded more severe penalties from Rattner than any of the other firms or individuals who had hired Morris as a placement agent.[18] Rattner was once a major fundraiser for Democratic Party candidates including Al Gore and Hillary Clinton, but Rattner had repeatedly passed on fundraising for Cuomo despite Cuomo's past attempts to cultivate Rattner's support.[19] In an appearance on the Charlie Rose Show, Rattner asserted that hiring Morris as a placement agent was "legal then, legal now, and done properly." [20] He explained he was willing to settle on reasonable terms as he had done with the SEC, but questioned whether Cuomo was motivated by the "facts" of the case and called Cuomo's demands "close to extortion." [21] On December 30, 2010, Rattner reached a settlement with Cuomo to pay \$10 million in restitution but no fines or penalties. He was not prohibited from continuing to protest his innocence.[22] Wikipedia ----- "

"Ray Lane Rode Tech Boom Tax-Shelter Wave Broken by IRS By Andrew Zajac & Jesse Drucker The dot-com boom of the late 1990s has come back to haunt former Hewlett-Packard Co. (HPQ) Chairman Ray Lane. Lane's dispute with the Internal Revenue Service opens a window to a mostly bygone era when accounting and law firms conceived and sold tax-dodging strategies to investors seeking to avoid taxes on outsized gains from the still-swelling tech bubble. A file photo shows Hewlett-Packard Co. former Chairman Ray Lane speaking during the Wall Street Journal ECO:nomics conference in Santa Barbara, California, during March 2011. Photographer: Jonathan Alcorn/Bloomberg The shelters had memorable nicknames, based on acronyms: Son of BOSS, BLIPS, PICO and COBRA. Lane used one called POPS. Then the IRS cracked down, triggering the kind of legal battles with the agency Lane is now embroiled in. "Most of these types of tax shelters have flushed through the system," said Bryan Skarlatos, a tax attorney at Kostelanetz & Fink LLP in New York. "The ones like you're seeing with Lane are some of the stragglers." "It's not the very last dinosaur caught in the tar pit, but it's one of the last," said Skarlatos, who represents clients in disputes with the IRS over POPS transactions. Tax Bill Lane, also the former president of Oracle Corp. (ORCL) and partner emeritus at venture-capital firm Kleiner Perkins Caufield & Byers, used POPS in an attempt to shield \$250 million of income through what the IRS ruled were "sham" transactions. Lane, 66, who left Oracle with more than \$1 billion in stock and stock options in mid-2000, has agreed to settle with the IRS on a tax bill that could be as much as \$100 million, even as he appeals the agency's ruling in U.S. Tax Court in Washington. He said he fully paid his tax bill on sale of his Oracle options. "My tax advisers put me into an investment," he said in an interview. "Somewhere along the way I knew these things were being questioned by the IRS." The investment totaled \$25 million, Lane said, and included an \$18 million up-front payment used to fund startups. A portion of that went to purchase warrants or stock options in five companies, including RocketGas Inc., Kleptomaniac.com. and Spectrum Target Detection Inc., according to a filing in one of at least five U.S. Tax Court cases involving Lane's tax shelter investments. Tech Startups RocketGas was described in court papers as a business to "bring services traditionally available only at a gasoline station to customer's home or office." Kleptomaniac.com was an "e-commerce solutions provider and e-tailing consultant" to brick-and-mortar retailers and Spectrum had developed a traffic radar gun that "was expected to replace traditional speed measuring devices used by law enforcement agencies." "Like most high tech startups which seemed so attractive in 2000, that high risk, high reward portfolio proved worthless within three years and petitioner simply seeks to recognize the real, hard-cash economic loss," one of Lane's lawyers argued in a court filing. Losses for the five companies totaled about \$17 million, according to another filing. The IRS argued that the investments in the companies "were payments of fees to promoters of listed and/or abusive tax avoidance transactions." Other Investors Lane and other investors didn't establish the value of stock options or warrants in an "amount greater than zero," and as a result, no losses were allowable, IRS lawyers wrote. Lane said the POPS shelter was assembled for him by Sidley Austin LLP, a Chicago-based law firm, the BDO Seidman consulting firm and Deutsche Bank AG, he said. Deutsche Bank, Germany's largest bank, admitted criminal wrongdoing in 2010 and agreed to pay \$553.6 million to avoid prosecution over its participation in 15 fraudulent tax shelters,

including POPS transactions. The bank admitted to involvement in at least 1,300 deals, helping more than 2,100 customers evade about \$5.9 billion in individual income tax on capital gains and ordinary income, according to a settlement agreement with the Justice Department. Duncan King, a spokesman for Frankfurt-based Deutsche Bank, and Jerry Walsh, a spokesman for BDO, declined to comment on Lane's remarks. Sidley Austin didn't reply to phone and e-mail messages requesting comment. Conspiracy Charge BDO, now known as BDO USA LLP, said in June 2012 it would pay \$50 million to settle a charge of tax-fraud conspiracy for helping wealthy individuals evade about \$1.3 billion in taxes from 1997 to 2003. In 2011, a jury convicted former BDO chief executive officer Denis Field and three others of more than 20 criminal counts including conspiracy and tax evasion. A judge threw out Field's conviction after finding that a juror lied about her past. A re-trial is pending. POPS stands for Partnership Option Portfolio Securities. Though it has multiple variations, a POPS transaction, in general, worked like this: an accounting firm would set up a series of partnerships, which would typically enter into transactions called straddles using foreign currencies. Straddles involve simultaneously taking long and short positions to offset the investment risks. Offsetting Loss The partnership would sell off the position that generates the gain, which would be attributed to a partner that would be indifferent to the tax, such as a tax-exempt entity. That would leave one of the partnerships with the offsetting loss. An investor with a big gain somewhere else could then buy into the partnership and thus take advantage of the loss. The IRS attacked such transactions for separating out the losses from the gains. The IRS case against Lane's Vanadium Partners LLC mentions "a series of meaningless steps," involving a straddle, a tiered partnership structure and a transitory partner that allowed "a tax shelter investor to claim a permanent non-economic loss." Lane's attorney, Charles Hodges, disputed the IRS contention that Vanadium was a sham that "lacked economic substance." In addition to the tech boom, conditions were ripe for tax shelters in the 1990s because the IRS had eased off enforcement under pressure from Congress, said Christopher Rizek, a lawyer at Caplin & Drysdale, a Washington-based law firm that specializes in tax matters. Wealthy Individuals "They spent about two years re-organizing themselves," he said. "They were intimidated." By the mid-2000s more aggressive enforcement resumed. Wealthy individuals who purchased POPS and other tax shelters were often identified by the IRS and Justice Department in probes of the accounting firms and law firms that sold them. The uproar in Congress over whether the IRS tried to head off conservative groups from getting non-profit status could curb challenges to tax shelters again, Rizek said. Tax lawyers are watching how the agency responds to "this month's use as a pinata by Congress," he said. "They could be cowed again," Rizek said. "We'll see." The case is Vanadium Partners Fund LLC v. IRS, 9970-13, U.S. Tax Court (Washington). -----"

"BLOOMBERG: Tom Steyer: The Wrath of a Green Billionaire By Joshua Green April 25, 2013 The billionaire -- with a jar of tar sand oil Billionaires get frustrated by Washington ineptitude just like everybody else. The difference is that they can afford to do something about it. Tom Steyer, who founded the San Francisco-based hedge fund Farallon Capital Management and retired last year with an estimated \$1.4 billion fortune, is one such fed-up billionaire. Steyer's particular grievance is the lack of government action to combat global warming. "If you look at the 2012 campaign, climate change was like incest?something you couldn't talk about in polite company," he says. "With the current Congress, the chance of any significant energy or climate legislation that would move the ball forward is somewhere around nil?possibly lower." So Steyer, 55, a major Democratic contributor, quit Farallon to devote his time and much of his money to changing this reality. In doing so, he's joined an emerging class of billionaires?including this magazine's owner, Michael Bloomberg and Facebook

(FB) co-founder Mark Zuckerberg who have forsaken the traditional approach of working through the political parties and instead jumped directly into the fray, putting their reputations and fortunes behind a cause. Some environmental activists are thrilled. In a country that's dominated by billionaires gaming the political system for their narrow self-interest, it's pretty neat to see a player who's in it for the common good, says author and environmentalist Bill McKibben. He's not a greedhead. Many Democrats, McKibben among them, view Steyer as a liberal analogue of the conservative Koch brothers, the billionaire owners of Koch Industries, whose lavish support of free-market causes and political ruthlessness loom large in the liberal imagination. Steyer's financial commitment is unquestioned. In 2010 he and his wife, philanthropist Kat Taylor, signed the Giving Pledge begun by Warren Buffett and Bill and Melinda Gates to persuade wealthy people to devote the majority of their fortunes to good causes. That same year he spent \$5 million successfully defending California's greenhouse gas emissions law against a ballot measure, heavily financed by oil companies, to weaken it. He spent an additional \$35 million last year on an initiative to close a tax loophole that benefited out-of-state corporations. Voters approved the measure, which will raise \$1 billion a year in new revenue for the state, in November. He has made a difference in California, says Representative Henry Waxman, the Los Angeles Democrat. His aptitude for hardball politics is less certain. On March 18, Steyer, a vocal opponent of the proposed Keystone XL pipeline that would pump tar sands oil from Canada to the Gulf Coast, clumsily inserted himself into the Massachusetts Democratic primary race between Representatives Edward Markey and Stephen Lynch for the state's open Senate seat. Channeling John Wayne, Steyer penned a bullying letter demanding that Lynch renounce his support for the pipeline by high noon a few days later or face the wrath of all the opposition Steyer and his checkbook could muster. Lynch's campaign dismissed the stunt as billionaires issuing ultimatums. The Boston Globe chastised Steyer for butting into a race in which both candidates had pledged to eschew PAC support. Markey probably doesn't even need the support: But after the searing defeat in Congress three years ago of legislation to cap carbon emissions, Steyer and many other Democrats preoccupied with climate change are convinced that only a smash-mouth, confrontational style of politics can save the planet. He subscribes to the analysis offered in a recent paper by Harvard sociologist Theda Skocpol that the loss derived from Democrats' naive faith that their best chance at climate legislation was cooperating with polluters on a grand bargain negotiated by Washington power brokers. The strategy failed to account for Republicans' radicalization and use of the filibuster. And because environmental groups had neglected to organize, no grassroots pressure materialized when the legislation stalled. Steyer confidently presents himself as being in the vanguard of a hardheaded new approach. The way politics works is by people winning and losing jobs their own jobs, he says. Until people running for office believe it's in their own interest, that it will make them popular with their constituents to stand up for good policy, it's not going to be good politics. For now, this approach entails rounding up a posse of environmental activists and making blustery threats to keep Democrats in line. Earlier this month, Steyer paid for an airplane to circle a Boston Red Sox game at Fenway Park trailing a banner that read, Steve Lynch for Oil Evil Empire. -----

----- Team Obama Releases List of Campaign Bundlers
 Corrupt Jon Corzine and Solyndra Goons Steve Spinner/Steve Westly Top the List February 1, 2012 by Scotty Starnes
 What a list of corruption. Ex-Democrat Senator Jon Corzine is on the list. Corzine bankrupted MF Global and stole hundreds of billions from investors. Steve Spinner is an Obama bundler who pushed the Solyndra loan and Steve Westly has received billions for corporations he has ties to. Remember, Obama pretended to hate lobbyist as he issued waivers for lobbyists to work in his administration. WASHINGTON (AP) President Barack Obama's re-election campaign identified its top fundraisers on Tuesday, including 61 people who each raised at least half a million dollars. Altogether, the more than 440 fundraisers collected at least \$75 million to help Obama win a second term. Among them are embattled former New Jersey Gov. Jon Corzine. Obama's campaign and the Democratic National Committee late last year returned \$70,000 in contributions from Corzine and his wife following questions about the collapse of MF Global, the financial firm Corzine ran. The list includes two fundraisers linked to Solyndra LLC, the California solar company that received a \$528 million federal loan and then later declared bankruptcy, prompting a federal investigation. Steve Spinner, an Energy Department adviser, raised at least \$500,000 and Steve Westly, a venture capitalist who was an unpaid adviser to the department, raised between \$200,000 and \$500,000. Though Obama rejects contributions from lobbyists, his top fundraisers include individuals involved in the business of influencing government. Michael Kempner, among those who raised more than \$500,000, is president and CEO of MWW Group, a public relations firm with a large lobbying business. Kempner himself is not a registered lobbyist. Sally Susman, another fundraiser in the \$500,000-plus category, is executive vice president for policy, external affairs and communications at Pfizer Inc.,

a job that includes directing the pharmaceutical giant's government relations operations. Spinner and Westly are lobbyist as well. They bundled money for Obama then lobbied for money to be invested in corporations they have interest in. ----- Obama releases list of top money 'bundlers' Associated Press By JIM KUHNHENN and KEN THOMAS February 1, 2012 9:32 AM WASHINGTON (AP) ? President Barack Obama's re-election campaign identified its top fundraisers on Tuesday, including 61 people who each raised at least half a million dollars. Altogether, the more than 440 fundraisers collected at least \$75 million to help Obama win a second term. Among them are embattled former New Jersey Gov. Jon Corzine. Obama's campaign and the Democratic National Committee late last year returned \$70,000 in contributions from Corzine and his wife following questions about the collapse of MF Global, the financial firm Corzine ran. Corzine is no longer raising money for the re-election, campaign officials said. The campaign divided the list into four groups based on how much money donors raised: \$50,000-\$100,000, \$100,000-\$200,000, \$200,000 to \$500,000 and those who raised more than \$500,000 apiece. The donors represent a broad network of contributors, many of them longtime Democratic Party stalwarts. The list includes two fundraisers linked to Solyndra LLC, the California solar company that received a \$528 million federal loan and then later declared bankruptcy, prompting a federal investigation. Steve Spinner, an Energy Department adviser, raised at least \$500,000 and Steve Westly, a venture capitalist who was an unpaid adviser to the department, raised between \$200,000 and \$500,000. The disclosure came as Obama headed back out on the money trail, speaking Tuesday night at two high-dollar fundraisers in the Washington area where donors paid \$35,800 per ticket to see him. At an event at the posh St. Regis Hotel, the president told donors that Republicans have ""the wrong vision for America,"" though he didn't mention any of his opponents by name or reference the voting under way in Florida, where polls were closing in the state's GOP primary. Obama said voters needed to know ""that this is not an abstract ideological argument, that this is a practical concrete argument,"" and that the election is about whether they'll be able to find a good job with a living wage and get health care for their families. ""They've got to feel that we are actively advocating on their behalf."" Obama's campaign ended the year with more than \$81 million in the bank, but Republicans are gearing up in the race for the White House. The Republican National Committee collected \$27 million during the final three months of 2011, compared with \$23 million by the DNC. In December, the RNC raised \$11.6 million while the DNC collected \$8.8 million. Through the end of 2011, the RNC had \$20 million in the bank and \$13 million in debt, while the DNC held \$12.5 million in cash on hand and \$6.5 million in debt. Though Obama rejects contributions from lobbyists, his top fundraisers include individuals involved in the business of influencing government. Michael Kempner, among those who raised more than \$500,000, is president and CEO of MWW Group, a public relations firm with a large lobbying business. Kempner himself is not a registered lobbyist. Sally Susman, another fundraiser in the \$500,000-plus category, is executive vice president for policy, external affairs and communications at Pfizer Inc., a job that includes directing the pharmaceutical giant's government relations operations. California figured most prominently on Obama's roster of big money ""bundlers."" Sixteen are from California and 13 are from New York. Top fundraisers include movie producers Jeffrey Katzenberg and Harvey Weinstein, and Vogue editor-in-chief Anna Wintour. Actress Eva Longoria was in the second highest tier, bundling \$200,000 to \$500,000 for Obama's re-election. Associated Press writer Erica Werner contributed to this report. ----- D- LAT, GH- WAPO, HJ- HuffPO, Surf Alliance- FGT, ----- Trolling the illuminati! According to all of these studies, and general consensus, people who drive Tesla's are arrogant pricks. According to all of the studies, and general consensus, about Silicon Valley Billionaires, they, too are arrogant pricks. Arrogant Fraternity House prick boys are the most entitled, egotistical pseudo-macho people on Earth. Ergo, they will defend their sports team, beer brand, stock portfolio and anything that questions their penis-size, to the death. So, if you are trying to drain the illuminati's bank accounts in order to achieve a political advantage, there is no greater gift than Tesla Motors. By Elon Musk's own published admission, Tesla was dead in 2008. It was only kept alive as The Walking Dead by Silicon Valley VC's in order to get battery kickback deals and policy control. Every time the Tesla stock ticker starts dropping like a rock, when real investors realize it is a scam, the Silicon Valley VC's run out and buy a bunch of stock to make it look like Tesla has risen from the stock market dead in spite of the fires, recalls, management walk-outs, employee accidents, fraud charges, lawsuits and all of the other things that would kill any other company in the stock market. (Is that legal?) That is called ""pumping the stock"". Those are fake stock buys from Silicon Valley VC's. The only thing is, the more they pump, the poorer they get. T. C. - BB ----- <http://www.youtube.com/watch?v=kA04EVMlpwM> <http://www.youtube.com/watch?v=PFvKQhQzZPI> <http://www.youtube.com/watch?v=i3Z6CsMHeMo> -----

----- Ha! In San Francisco they are rioting against Google's buses, everybody hates the entitled freaks ("Hipsters") from Silicon Valley and Silicon Valley has become the most un-cool thing on the planet because of all the personal data harvesting and that spy thing. As usual, Obama is 2 weeks behind in his news updates, he mentioned "Silicon Valley" in his press conference today as if that was a good thing. It is lucky he is firing most of his staff, that never told him what was really going on. Somebody better tell tell him that The Valley is a very negative brand item these days. No wonder Silicon Valley wants to succeed from California: Everybody hates them! Dione- H ----- "

Department of Energy Head announces he engaged in ?Meticulous Due Diligence? to ensure that only campaign billionaire funders got DOE funding!

"Tags 60 minutes investigation, auto green, autogreenblog.com, barack obama, Boycott Tesla, Department of Energy, Dept. of energy, diane feinstein, DOE Corruption, Elon MUsk, gao investigation, grassley, Iron Man, John Doerr, Kleiner Perkins, kleiner perkins lawsuit, kleiner perkins sex allegations, LA Times Investigation, LIBOR SCANDAL, mitt romney, NASDAQ: TSLA, Peter Davidson, Senator Upton, solyindra, Solyindra scandal, solyindramobile, Steven Chu, tesla kleiner, Tesla Stock, Throw Them All Out, washington corruption investigation"

Department of Energy Head announces he engaged in ?Meticulous Due Diligence? to ensure that only campaign billionaire funders got DOE ATVM and LG funding!

"Under federal investigation, DOE staff are required to now testify about what happened to billions of taxpayer dollars that were conduit-ed, by DOE staff, to Senators pockets and billionaires investment portfolios as campaign favors. Peter Davidson, the executive director for the DOE?s LPO, defended his office, saying its achievements to date are ?remarkable.? Investigators commented that ?it is remarkable that your whole agency isn?t in federal prison!? Davidson said that due in large part to the DOE?s ?meticulous due diligence, its commitment to establishing protections within all agreements, and robust project monitoring??. that nobody but a handful of crony campaign billionaire funders got DOE ATVM and LG funding! All other applicants were automatically kicked out, and ?tossed in the Potomac?, if they did not bribe the right people. The GAO, Senate investigators and thousands of media reports have labelled the DOE funding program as ?NOTHING MORE THAN A POLITICAL CASH KICK-BACK SCHEME TO USE TAXPAYER MONEY TO PAY OFF SILICON VALLEY BILLIONAIRES FOR PROVIDING CAMPAIGN SERVICES? Donna Lester- DC ?????????????????? Which Senators, and their families, profited through kickback trusts, campaign funding ?dark money?, insider trading investments and shadow accounts, in vast conflicts-of-interest, in the Department of Energy funding scandal?: Under Investigation- Reid Feinstein Granholm Pelosi Boxer Yee and more coming? \$200+ Billion of taxpayer losses, yet Department of Energy officials still repeat their mantra-lie of: ?oh it was a huge success?. It WAS a huge success for the kickback and bribery business! Is it ?organized crime?? You be the judge: Roger- DC Ti ??????????????????-"

Who's Tesla's Bitch? THE LIST:

"(Draft 1.3 - Constantly updated) Which media outlets cover-up Tesla Motors misdeeds and abuses? Which ones are run, or directed, by Tesla's investors seeking to manipulate stock values? Let's track, chart and document which media outlets are willfully smoke-screening Tesla Motors. Which outlets publish counter-stories when other outlets publish negative disclosure about Tesla to try to cover-up, or flood-out, the Tesla issues and charges? Since this tactic was used to manipulate public stock, it is considered to be a felony crime. Some reporters are compensated by Tesla's IR Department, PR contractors, founders, VC and banking groups with either cash, discounts, tickets, jobs, advertising contracts, sex workers, meals, travel and/or political access. Send in your submissions... Which outlets now have documented tracking evidence, that can be exhibited in court?: -- Google (Investors) - Hundreds of online news outlets - Also via web routing manipulation -- Hearst Communications (Investors) - SF Gate - SF Chronicle - 15 daily and 34 weekly newspapers including - Houston Chronicle - San Francisco Chronicle - San Antonio Express-News - Albany Times Union - Hundreds of magazines around the world, including - Good Housekeeping - Cosmopolitan - ELLE - O - The Oprah Magazine - 29 television stations, which reach a combined 18 percent of U.S. viewers; ownership in leading cable networks, including Lifetime, A&E, HISTORY and ESPN; significant holdings in automotive, electronic and medical/pharmaceutical business information companies - a 50 percent stake in global ratings agency Fitch Group - Internet and marketing services businesses - television production - etc... -- Gawker Media (White House Character Attack Conduit) - Gawker - Gizmodo - Jalopnik - Kinja - Deadspin - Kotaku - Jezebel - Valleywag - Lifehacker - 109 etc... -- The A.L.I.C.E. Alliance (Investor-Synchronized Reporters) - Stands for: American Legislative and Issue Campaign Exchange - 1400 coordinated reporters using the ""Alice News Alerts"" in order to seek to cover up campaign backer crimes with synchronized story releases, include: - The top two political reporters for The Huffington Post - A Reuters reporter - The editor of The Nation magazine - A producer for Al Jazeera America television - A U.S. News & World Report columnist - Approximately two dozen Huffington Post contributors - All of ""Gamechanger Salon"" - Sally Kohn, formerly a Fox News contributor, now works for CNN - Amanda Terkel, the ?Senior Political Reporter and Politics Managing Editor at The Huffington Post - The Huffington Post's Washington bureau chief, Ryan Grim. - A former New York Times freelance columnist who now works as an energy and commodities reporter for Thomson Reuters is also a member of Gamechanger Salon. - Anna Louie Sussman is listed as an ?investigative reporter and journalist? on the Gamechanger Salon membership list, and while her beat focuses on energy issues, she has also writes about ?local and international human rights and social justice issues? according to her website. - Katrina vanden Heuvel is the editor and publisher of The Nation magazine, a prominent and well-known periodical of leftwing political and social thought. She is also a member of Gamechanger Salon and a regular opinion writer for the online edition of The Washington Post. - Lisa Graves, who leads the Madison, Wisconsin-based Center for Media and Democracy, is also a member of Gamechanger Salon, and ? according to e-mails reviewed by Media Trackers ? regularly promotes material developed by CMD to attack ALEC and the right-of-center lawmakers who tend to make up the majority of ALEC's active legislative membership. - Vanden Heuvel suggested in her column that liberals support the efforts of the American Legislative and Issue Campaign Exchange ? ALICE (a leftwing counterpart to ALEC) ? and the Progressive States Network. - Jordan Flaherty was, as of last year, a producer for Al Jazeera America television. He is also listed as a member of Gamechanger Salon and for a while he occasionally blogged for The Huffington Post. - In addition to working at the left-leaning American Sustainable Business Council, David Brodwin writes an online

column for U.S. News & World Report."

Hackers hacking Tesla to eavesdrop, manipulate GPS, make batteries blow up and generally screw with the car: Most easily hackable car in the world.

"Elon MUsk is well known to have told a reporter, that he was battling with, that he has technology built into every Tesla so he can spy on each car at will. This revelation was part of his undoing. 4Chan, and the hacker crowd, took this as an open invitation to target the Tesla for ""opportunity testing"". Hackers have found that, like the back-doors in Cisco routers: One person's keyhole is a hackers trap door. Top hackers will tell you (AND SHOW YOU) that there is nothing they can't break into if it is on a network. Hackers have already hacked the Tesla in many ways: listening to users conversations in the vehicle, changing GPS routes and, according to the darker hackers, even changing the BMS (Battery Management System) to overload and too quickly overcharge the batteries and make them explode.. nasty! Most hackers claim to hack in order to ""demonstrate security vulnerabilities for rapid repair"". many of them do it, though, to impress their friends with how spooky at level they can attain. As any glance at contemporary news coverage will show you, once a system is hacked, it is pretty near impossible to go back and stop it. The software upgrade and remotely surveillance technology that Tesla built into it's cars, according to one ""expert hacker"" can be ""opened by any capable 14 year old."" Tesla needs to either pull all of the remote surveillance technology out of their cars or fully inform the owners of the risks Lets discuss. Send links: Tom- Ex-Tesla Worker -----"

"Trillions of dollars of Afghan mineral corruption cost America: Lives, the economy, PR, status, jobs and more because of a few billionaire's tech monopoly schemes!"

ISSUES AND CHARGES:

Congressional bribes: insider trading stock/campaign funds for cartel rights
Goldman Sachs involved in every deal tied to Afghan minerals and DOE funded schemes
Campaign cash kick-backs
"Solyndra & Abound, DOE ""Winners"", needed Afghan Minerals"
Explosive batteries from Afghan minerals
Cancer causing batteries from Afghan minerals
Factory workers in US & Asia killed poisoned and/or burned from Afghan mineral battery and related manufacturing
Lied on DOE application to monopolize Afghan minerals
Investors charged with using Google media manipulation to rig stock market in order to cartel Afghan minerals
Overall manufacturing from Afghan minerals is highly toxic
"Possible cover-up murders, unusually large number of untimely deaths "
Fires from Afghan minerals; Solyndra & Abound solar panels just exploded on roof-tops because of their chemistry
Fraud charges/lethal work environment/immigrant death charges re: Tesla/Panasonic factory from Afghan minerals
SEC financial records fraud charges
White House staff cover-up charges
"Even China outlaws these types of battery factories due to overwhelming deaths, poisoned cities and birth defects. No U.S. issues raised due to political kick-backs
Rigging of lithium ion market via Afghan War by Tesla VC?s
Rigging of lithium ion market by Tesla VC?s and Senators with campaign funding/insider trading kickbacks?
Law enforcement blockaded from investigating on orders of whom?
"VC Cartel charged with seeking to control Washington A La ?Smedley Butler Business Plot"

\$1 Trillion Dollar Lithium Ore Scheme

"Silicon Valley VC's, Goldman Sachs, Tesla, Batteries and Afghanistan = Afghani-Scam "

Intro: A \$1 Trillion insider market-monopoly scheme that ?blew up!?

"Ingredients: Silicon Valley VC/Campaign funders; Russian miners; Goldman Sachs; Knowingly complicit federal officials; Innocent goat herders; Over \$1 Trillion Dollars in profiteering; Hookers; Taxpayer cash; Criminally corrupt senators; Toxic gas; Explosions; Dead people and Electric cars. The stuff (Chemical ore) that Solyndra, Abound, Fisker, Tesla, A123, Enerdel, and the rest of the failures, needed to make their scheme pan out, was buried under some goat farmers in Afghanistan! Almost all of these companies had their products blow up, in average use, (Even the solar panels caught fire) and, in most cases, release a ?Cancer-Cocktail? of toxic gas; Tens of thousands of Lithium fires and explosions have now been documented to have crashed planes, exploded cars, set data centers on fire, burned children, blown up IPAD?s and have just been a very bad chemical concept. Lithium has gone off many, many more times than the public has been told. Over time, the compounds become MORE likely to go off! To make the chemicals work for Solyndra, Abound, Tesla, Fisker and the rest, these companies mixed them together into a compound that ends up being a military-grade toxicity, carcinogenic powder. Even making the compounds kills overseas factory workers. Not very good research on the part of the bad guys, but greed often outpaces sanity! ? and the money people behind everything were the same exact handful of bad guys in each and every case. If Silicon Valley created the latest version of the Afghan War for private gain, they got screwed. Not only do they now realize that the cost of the war was many, many magnitudes more than just giving the goat herders a check and buying the rocks, but the stuff they were trying to monopolize turns out to be explosively dangerous, hard to use and cancer-causing."

Cowboys and Indium:

"Solyndra was exploiting Indium, and a large number of other key chemicals, from Afghanistan that directly paid into the ?DOE insider profit pool?. Abound was exploiting key chemicals from Afghanistan that directly paid into the ?DOE insider profit pool?. Nissan?s Smyrna plant, Tesla, A123, Ener1, Fisker and Ford were exploiting Lithium from Afghanistan that directly paid into the ?DOE insider profit pool?. Other ?failed DOE winners? had the same connected materials supply routes. In this Watergate-type scandal (Should we call it Lithium-Gate, instead?) Secretary of Energy Steven Chu appears to have been told to let no applicant through unless they were in the ?DOE insider profit pool?. The pool consisted of Deloitte staff, Goldman Sachs staff, DOE staff, Silicon Valley venture capitalists and, possibly, at least two White House staff. Rahm Emanuel is known to have had an intimate connection with the Argonne labs lithium ion program research funding while in the White House and after he returned to Chicago. Dianne Feinstein personally arranged for, and opened, the NUMMI plant for Tesla.

Her husband's company CBRE were the real estate hooks for the Tesla, and next door, Solyndra property deals. Her staff and lobby people work there now. Her husband goes to Mongolia all the time for 'special meetings' according to Sunshine. So one wonders if Feinstein got on the intelligence committee so she could see if she was about to get caught or if a savvy NSA section chief 'helped' her get there on the premise of 'keep your friends close and your enemies closer' so the NSA could watch her in intimate detail. The recent hack of her files by intelligence officers seems to be indicative. "

"(Editors Note: There have been letters to SOMO charging that the CIA is leaking information to SOMO, and other reporters, in order to expose Feinstein. To the best knowledge of all queried SOMO reporters and editors, this is not the case. The facts speak for themselves ? Ed. Team) Many high level politicians made a grab for their piece of the trillion dollars so investigations keep getting squashed by them. Steven Chu killed off the non-toxic fuel cell, wind and natural gas programs while at DOE to give a clear runway to his 'DOE insider profit pool', in which he participated. The Russian mining connections run throughout the above group but now that the U.S. is back in a Cold War with Russia, Russian insiders are delighted to spill the beans, on the whole deal, to reporters. One is even out taking competitive bids for exclusive whistleblower interviews. The insider profit pool consisted of the same investors in the above efforts, who also happen to be the same people who nominated and lobbied for the appointment of Steven Chu, according to his nomination docket. All of these people had a personal profit side deal in the same profit pool through stock holdings, trusts, revolving doors and repercussive gains. All of the above are connected in a very tiny business circle. The odds of that circle of 30, or so, people, out of 318 million Americans, being the only people to have access to these profits and federal funds, without rigging the program, is calculated on a book-makers metric at 12 billion to 1. Even now, one can easily see the disparity between the NHTSA wave-through of the coddled White House campaign-backer funded Tesla (hushed up by Tesla silent owner: Google) and the bone crunching hearings and fines that GM and Toyota have had to endure, at the same time, for less dangerous defects. [slideshow_deploy id='1708'] The Senate Ethics Committee members have hundreds of thousands of background documents on this matter but they have been stone-walled. The FBI has nearly a million documents on this matter and reporters are eager to see the anticipated indictments from years of surveillance of the key parties of interest. NSA, DIA and CIA have tens of millions of documents on this matter from nearly a decade of surveillance of parties of interest, but they are stalled up with inter-party politics. The press has vast amounts of this evidence. The Russians are shopping vast new repositories of disclosure. Within the year, expectations are high for a tsunami of enforcement activity. The recent record-breaking number of White House and Congressional 'retirement announcements' may be the first wave of the storm. As Richard Byrne Reilly found out, the 'no comment' responses are piling up. That is always a good sign that the 'We just got caught' Freak-Out Factor Frenzy has begun among the Politicos. While party mouth-foamers are trying to make the Afghani-scam scandal not about their party, with their constant drone of 'Nothing's been proven?' they are now realizing that it is not a Democrat Vs. Republican issue. It is about being for, or against, Organized Crime. It is about being part of, or not part of, Organized Crime. It is about losing their federal pensions because of crimes they may have knowingly supported. When investigative reporters found that Goldman Sachs and Silicon Valley VC's were involved in almost every single one of the DOE money deals, they had to ask why? How much did they make in, around and through the whole thing? Who was connected to them and decision makers? Would they really rig a whole market (and a war?) just to get a few TRILLION dollars worth of lithium cornered? Looks like they did? Link to this page: <http://wp.me/P4e1uX-22I> Everything in this collaborative article can be researched and verified by YOU, online, from thousands of published documents. PART ONE:

The future of Silicon Valley may lie in the mountains of Afghanistan

Above: An Italian helicopter flies over western Afghanistan during an international operation. Lithium reserves have been found in the western part of that country.

Image Credit: ISAF Media
By Richard Byrne Reilly
for VENTUREBEAT

"The future of Silicon Valley's technological prowess may well lie in the war-scarred mountains and salt flats of Western Afghanistan. United States Geological Survey teams discovered one of the world's largest untapped reserves of lithium there six years ago. (Editorial Team Note: Right about the time the DOE started rounding up the key ATVM and LG program insiders) The USGS was scouting the volatile country at the behest of the U.S. Department of Defense's Task Force for Business and Stability Operations. Lithium is a soft metal used to make the lithium-ion and lithium-polymer batteries essential for powering desktop computers, laptops, smartphones, and tablets. And increasingly, electric cars like Tesla's. The vast discovery could very well propel Afghanistan ? a war-ravaged land with a population of 31 million largely uneducated Pashtuns and Tajiks, and whose primary exports today are opium, hashish, and marijuana ? into becoming the world's next ?Saudi Arabia of lithium," according to an internal Pentagon memo cited by the New York Times. The USGS survey report on Afghanistan

that detailed the findings also noted that, in addition to lithium, the country also contains huge deposits of iron ore, gold, cobalt, copper, and potash, among many other valuable minerals. "The mineral wealth there is astonishing," said professor Michel Chossudovsky of the Montreal-based Center for Research and Globalization, who has written extensively on Afghanistan. A conservative estimate of the riches is \$1 trillion. In some circles, it's as high as \$5 trillion. "

"In Silicon Valley and beyond, tech companies like Apple, Google, Amazon, Microsoft, Hewlett-Packard, Samsung, Sony, and Tesla rely on continual, and uninterrupted, access to lithium, as lithium-based batteries are the primary power storage devices in their mobile hardware. Without these batteries, MacBooks, iPads, iPhones, Kindles, Nooks, Galaxy IIIs, Chromebooks, and, yes, Tesla Model S cars would be largely worthless. If forced to use older, nonlithium batteries, their battery lives would certainly be much shorter. The world's current lithium heavyweight is Bolivia, the biggest exporter of the element. There, in the swamps and marshlands of the southern region of the country near where the borders of Chile and Argentina meet, are the biggest deposits. Canada, China, Australia, and Serbia also have varying amounts of lithium, but not as much as Bolivia. Or apparently, Afghanistan."

Enough to last a lifetime

"Depending on who you talk to, the current lithium global reserves are adequate for at least another generation of lithium-ion battery manufacturers to produce them. But not everybody thinks so, and some say the light metal compound may someday run dry. That could in turn spell trouble for any company whose business depends on light and portable mobile electronics unless someone comes up with an alternative to lithium batteries before then. The experts VentureBeat interviewed pointed to sharp year-on-year increases in the demand for lithium. That's putting heavy pressure on existing stockpiles. According to Lithium Americas, a Canadian lithium-mining company with significant business interests in Argentina, lithium demand will more than double in the next 10 years, while lithium prices have nearly quadrupled during the same timeframe. Tesla, for its part, is in the process of investing up to \$5 billion to build its own lithium-ion Gigafactory in Texas, a plant capable of churning out 500,000 expensive battery packs a year by 2020 for its line of zero-emission, all-electric cars. "

"A Tesla spokeswoman did not return calls seeking comment. As a potential source to feed that demand, enter Afghanistan. "At some point, if present trends continue, demand [for lithium] will outstrip the supply. And again, at some point, the market for lithium-ion could get so big that it actually affects the supply chain," said Donald R. Sadoway, a professor of the Materials Chemistry Department of Materials Science and Engineering at MIT. Looking at Afghanistan, Sadoway says the war-ravaged nation, which has no effective mining infrastructure in place, may well be attractive to the world's mining outfits. "In this regard," Sadoway, one of the world's foremost experts on energy sources, says, "the deposits in Afghanistan could be important." Andrew Chung, a venture capitalist with Khosla Ventures in Silicon Valley who has invested in multiple startups producing alternative batteries, says lithium-ion batteries are limited in their lifetime cycles, scalability, and cost. Despite this, Chung says, he can understand how the untapped reserves of Afghan lithium are now an increasing focus. "It is an issue of the supply chain, whether it's Afghanistan or other [countries]. There is a finite supply, and lithium-ion will continue to be the [power] choice for the next decade," Chung said. Some of the Valley's biggest and most powerful tech companies either declined to comment for this story or never returned calls. But they didn't deny the importance of lithium-ion batteries. For instance, an Apple spokesperson declined to comment for this

story but provided VentureBeat with a 2014 "Suppliers List" of the 200-plus vendors it uses to produce its products. A related post made the Cupertino, Calif.-based company's commitment to lithium batteries clear, at least in the short term. "Rechargeable, lithium-based technology currently provides the best performance for your Apple notebook computer, iPod, iPhone, or iPad," the Apple post says. Sony Energy Devices Corp. invented the lithium-ion battery in 1994. It was hailed as a breakthrough, providing longer battery life and without the "memory effect" that gradually reduced the effective capacity of previous types of batteries. Since then, companies have gradually refined lithium battery technology but have not succeeded in moving beyond it. Indeed, early Tesla cars are actually powered by large packs of industry-standard lithium-ion battery cells "the same type of cells found in many laptop batteries. And here is where it gets interesting. Sharply increasing demand"

"If electric car manufacturers begin ramping up production of lithium-ion battery-powered cars, the global demand for lithium will skyrocket. This could potentially come about at the same time for increasing demand for handheld consumer goods like tablets and laptops, Chung said, thus creating a perfect storm. "So you want to start looking at other sources producing it with current supplies being called into question, if we move more toward production of electric cars," Chung said. Which is why, increasingly, eyes are turning to Afghanistan and its new purported lithium reserves, a country long referred to as the "graveyard of empires." The U.S. invaded Afghanistan after the terror attacks of Sept. 11, 2001, and according to iCasualties, 2,315 American servicemen and women have been killed there. Analyst Jay Jacobs of Global X Funds in New York, which has interests in lithium mining, said demand for the compound is growing, and that "there are two regions that have been revealed to contain huge lithium reserves: Afghanistan and Bolivia." William Tahil, a respected lithium expert who lives in France and is the general director for Material International Research, argues that lithium deposits in Bolivia will at some point be depleted. Jacobs was sanguine about safely extracting lithium from Afghanistan. He said political risks there were considerable. "With that being said, should there be a substantial and sustained increase in demand for lithium, lithium miners may become increasingly interested in the country as it has an abundance of the resource," Jacobs said. It was the Soviets who first discovered the country's deposits when they invaded in 1979. Soviet geologists began mapping Afghanistan's lithium, gold, and potash fields but abandoned their efforts after the former communist superpower pulled out of the country in 1989. But with a weak and corruption-plagued "central government," Afghanistan is now ripe for the picking, Chossudovsky said. Indeed, the country is still very much divided into fiefdoms, with the Muslim fundamentalist Taliban, warlords, and drug traffickers controlling large swaths of the country "and using violence to advance their interests. "There's no question the mining companies will go in there. No question. There's no real functioning government there to reap the foreign investment of the mineral deposits. This makes it all the more enticing to the mining companies because nobody in the government of [President] Hamid Karzai will be regulating the bonanza of lithium, so they can do what they want," he said."

Jockeying for position

"For its part, the U.S. government, which helped locate the lithium deposits using flyovers with a sensor-filled Lockheed P-3 Orion and teams of geologists fielding soil samples, knows a potential gold rush when it sees one. And it has no intention of being left on the sidelines. Especially since the Chinese are now "and quickly " making deals with Afghan pols for mineral rights to copper deposits. The USGS did return multiple calls seeking comment. Nor did the Pentagon. Despite what some say are the shortcomings of lithium-ion batteries, venture capitalists and investors continue pouring money into them. Amprius, a lithium battery maker based in Sunnyvale, Calif., snared a \$30 million infusion round of investor cash in January. Over at the Afghan embassy in Washington, D.C., the Afghans are licking their lips at the potential lithium and mineral windfall despite the

country's continued conflict with a resurgent Taliban. What this may portend for the impoverished and war-torn nation is anybody's guess. But the Afghans are playing up the finds — or they were, until recently. In recent years, headlines from the Afghan mineral sector have competed to outdo each other in scale: from the landmark \$3 billion Chinese investment in the Aynak copper concession to the astounding survey work of the U.S., Afghan, and British Geological Services estimating anywhere between \$1 trillion and \$3 trillion in mineral potential, to the historic \$11 billion deal now being finalized with an Indian consortium for the Hajigak iron ore concession, said a posting on the Afghani Washington DC website. The post has since been removed. Afghanistan's ambassador to the U.S., Eklil Hakimi, presided over a press conference at the Afghan embassy in Washington, D.C., on March 10, where he talked about the untapped deposits, along with reps from the USGS and other U.S. politicians. But Hakimi, through a spokesman, told me he simply didn't have the time to talk.

"

"Solyndra, Abound and Tesla need these chemicals. The investors and the campaign backers and the product owners are all the same people. Tesla doesn't care about selling cars, they care about selling LITHIUM. The car is like the handle for the razor blade, they want to sell the razor blades, not the shaver. But the idiots backing the scheme rushed into it, without checking into things, because they saw all the free Department of Energy and TARP cash. They did not realize that Lithium blows up all the time and, when mixed, becomes a 'Cancer Cocktail', gives off toxic smoke, kills factory workers and is just kinda bad stuff" oops "

Most investigators believe that the 2008 Campaign staff, who later became the senior White House staff, negotiated a campaign funding scheme with Silicon Valley billionaires. They traded DOE and TARP funding decisions, in their exclusive favor, for campaign resources, campaign web marketing, stock "skims" and insider trading edges. Goldman Sachs participated in most of the deals with a commodities and trade-fixing swindle. The amount of taxpayer funds manipulated, appears to exceed \$300B.

12,000 MISSING TESLA ELECTRIC CARS! WANING DEMAND, TESLA PUMPING STOCK, COOKING THE BOOKS?

Many have charged that Tesla's own shareholders are the buyers of Tesla's in order to make demand look better. - Bad reputation from Tesla and fraud lawsuits against Elon Musk taking their toll - GOP Congress in January to investigate Fed and White House ""stock Pumping"" with ""fine tooth comb"" - GOP Senator: ""If we find out the White House is helping Tesla ""pump stock"" in order to protect Tesla's, and the White House's, mutual cross-investment, then that could mean felony jail time for somebody.."" FROM THE CANTECH LETTER:
<http://www.cantechletter.com/2014/11/geeks-reading-list-week-november-21st-2014/> The Mystery of 12,000 Missing Tesla's: Overseas Boom or Waning U.S. Demand? I have to be very careful what I say here, however, as a general rule, declining demand in the early adopter market is not a promising development for a technology company, or, in the case of Tesla, an automobile manufacturer. As with other remarkable observations regarding Tesla (fires, Trabant level reliability, etc.) no doubt a positive spin will be placed on this or, alternatively, aspersions will be cast on the data themselves. Nonetheless, as I said, declining demand in your early adopter market, especially when it is the US, is never a good sign. Never, ever, ever, a good sign. ?Tesla Motors (TSLA) is slowly ramping up production. Demand for its electric sedans allegedly remains high. Yet far fewer of the vehicles are making their way onto U.S. roads this year. In the first nine months of 2014, the number of U.S.

registrations of Tesla vehicles fell by one-third to 9,331, according to an analysis of public records by Hedges & Co., an Ohio-based market-research firm. In the same period, however, Tesla said it delivered 21,821 cars—a 40 percent increase from a year earlier. What happened to the other 12,490 cars?? About Brian Piccioni Brian is a Partner at J Capital Partners, a new breed of investment bank focused on non resource growth companies with special emphasis on technology companies. He has been part of the technology industry for a third of a century. For 13 years he was an electronics designer and software developer. He designed early generation PCs, mobile phones (including cell phones) and a number of embedded systems which are still in use today. He then became a sell-side research analyst for the next 20 years, where he was ranked the #1 tech analyst in Canada for six consecutive years, named one of the best in the world, and won a number of awards for stock-picking and estimating. He started writing the Geek's Reading List about 10 years ago. In addition to the company specific research notes he was publishing almost every day, the Geek's Reading List was a weekly list of articles he found interesting ? usually provocative, new, and counter-consensus. The sorts of things he wasn't seeing being written anywhere else. They were not intended, at the time, to be taken as investment advice, nor should they today. But, investors need to understand crucial trends and developments in the industries in which they invest. Therefore, these comments may actually help investors with a longer time horizon. Not to mention they might come in handy for consumers, CEOs, IT managers ? or just about anybody, come to think of it. Technology isn't just a niche area of interest to geeks these days: it impacts almost every part of our economy. In a way, we are all geeks now."http://www.thenewsdaily.org/12000-missing-tesla-electric-cars-waning-demand-tesla-pumping-stock-cooking-books/ 11/22/2014 THE EDITORS & WIKI MEMBERS "HOT TOPIC, Uncategorized" publish ccft_post_comment_title:

By Peter Elkind FOR FORTUNE MAGAZINE

"The crazy, real-life story of how the CEO of electric-car maker Tesla dazzled, seduced, squeezed, bluffed, manipulated, and prodded his way to epic state incentives to build a massive battery plant in the Nevada desert. It's hard to overstate the mystique surrounding Elon Musk these days. He has been compared to Steve Jobs, Henry Ford, and Thomas Edison. At 43, he's the CEO of Tesla Motors, an electric-car company so white-hot that it speaks of someday vanquishing the internal combustion engine. He's chairman of SolarCity, whose panels hold the promise of helping save the world from global warming and fossil fuels. His rocket company, SpaceX, wants to travel to Mars. Never mind that such audacious goals won't be realized for decades, if ever. Musk's brilliance, his vision, and the breadth of his ambition make him the one-man embodiment of the future. The frenzy that attends his stature was visible on Oct. 9, when Musk unveiled two enhancements to Tesla's Model S before 4,000 people at an airport in Hawthorne, Calif. Musk took the spotlight outdoor stage at 9 p.m.?an hour late, like a rock star?wearing a black velvet blazer. Smartphones flashed; bloggers live-streamed his jokes. Standing in front of his image on a giant videoscreen, Musk showed off the model's four-wheel drive and autopilot features. Musk wowed the crowd with the \$120,000 sedan, which goes 0 to 60 mph in 3.2 seconds. ?It's like taking off from a carrier deck,? he said. Musk took reporters for a ride, leaving them slack-jawed at the S's acceleration and technology. No matter that, as others pointed out, competitors already have some auto-drive capabilities. As Charlie Rose put it on CBS This Morning, ?Elon Musk is the kind of guy you want to invest in.? Millions have done just that. Since the start of 2013, Tesla's stock has soared 614%, producing a market cap of \$30 billion?more than half the value of GM, which is expected to sell 10 million vehicles in 2014, compared with Tesla's 33,000. The company has produced a stellar sedan?Consumer Reports scored it higher than any other car it has ever tested?and Musk's achievements justify accolades: He co-founded PayPal and has made billions; SpaceX has made multiple missions to the International Space Station. (All of this was enough to make him Fortune's Businessperson of the Year in 2013 and he's on this year's list, too.) Yet Tesla offers only a single model, and it has yet to record an annual profit. The company's future?and its giddy stock price?hinge on a

seemingly paradoxical strategy: Tesla isn't profitable selling cars for \$70,000 and up, but it's planning to sell a model for half that price starting in 2017. In theory, sales will jump more than 10-fold, to 500,000, by 2020. "

"A Tesla with vanity license plate 'GAS LOL' at a charging station in Truckee, CA, the closest station to the 'gigafactory' site near Reno. Photo by Winni Wintermeyer for Fortune That brings us to the key to the whole strategy, a decision that would raise the stakes for the company and ripple through multiple states: Tesla's plans to build a gigantic factory to manufacture batteries. To make his new model affordable, Musk decided he needs a plant that can produce 500,000 lithium-ion battery packs per year—equal to the world's current production. He expects the Pentagon-size facility to cost about \$5 billion and begin turning them out by the end of 2016. Some see this as a bet-the-company move, requiring near-perfect execution and a wholesale public embrace of electric cars, which today account for less than 1% of the auto market. To make the challenge even harder, every big carmaker is racing to develop its own electric models. The factory also means an outlay by Tesla of \$2 billion or more—a hefty sum for a company with \$3.7 billion in projected 2014 revenues. The plan is 'a tremendous risk,' says Cosmin Laslau, a technology analyst for Lux Research. He thinks Tesla will meet less than half of its 2020 sales target, which will saddle it with cash-draining overcapacity. 'Tesla's grand designs,' Laslau concludes, 'are dangerously ambitious.' But 'Do the impossible' is one of Tesla's slogans, and Musk set out to make it happen. He looked to spread the costs, seeking a mammoth package of incentives from states for the right to be the factory's home. He succeeded—and then some. Musk landed a stunning \$1.4 billion in tax breaks, free land, and other beneficence from Nevada to build the factory outside Reno. It's one of the biggest gift baskets in history. Moreover, the other companies that have received such massive largesse were giants like Boeing, Nike, and Intel with decades of profits and much more predictable future sales. These days companies routinely use the cudgel of jobs to extract huge offers from desperate states—a process that can resemble a shakedown. Musk showed himself to have nearly as much genius for that sort of maneuvering as he does for innovation. He took a process that typically plays out behind the scenes and made it public. Musk played an Oz-like role as master orchestrator, sending signals through earnings calls and blog postings, while keeping the states in the dark and playing on their fears of losing out. The combination of his strategy, the electric Musk factor, and the lure of 6,500 jobs inspired excited bidding among seven states and staggering leaps of faith. States were willing to move mountains (or highways, as the case may be) for a chance to have the factory."

"Along the way Musk encountered a few surprises, not least that a key figure in this saga is the owner of the legal brothel known as the Mustang Ranch (this is Nevada we're talking about), who presides over his own realm in the scrub desert east of Reno. Nevada won the deal. Whether that will be a triumph for its citizens will take many years to determine. ??? Elon Musk is no rookie when it comes to winning gaudy incentives. He previously proved himself a shrewd and unsentimental player. In 2007 he joined Bill Richardson, then New Mexico's governor, in announcing that Tesla would build its first U.S. auto-assembly plant in Albuquerque. New Mexico had outbid Arizona with \$20 million in goodies, including a cash 'signing bonus.' After the announcement—but before the plant could be built—California made a richer offer. Tesla promptly abandoned New Mexico. (The company now says it shifted its site because the New Mexico plan was unworkable.) In California, Tesla has received sales-tax exemptions, which it expects will save the company \$90 million over a decade. In its early days—until Musk added the CEO title to his chairmanship in 2008—the company suffered from infighting, product delays, and a near-bankruptcy. But those early struggles, and skepticism about its prospects, seem only to have fueled its confidence. 'At each stage of this company, people said we weren't going to get to the next stage,' says

Diarmuid O'Connell, Tesla's vice president of business development. "We don't worry about these things." (Tesla declined to make its CEO available for an interview.) "

"Tesla founder and chief executive Elon Musk unveils the dual engine chassis of the new Tesla 'D' model which is a faster and all-wheel-drive version of the Model S electric sedan at the Hawthorne Airport in Los Angeles on October 9, 2014. While Tesla produces relatively few vehicles, it has become a star in the sector due to keen demand and a reputation for high quality. A surge in its share price over the past year has pushed its value over \$30 billion. MARK RALSTON AFP/Getty Images Tesla has followed a master plan Musk laid out in a 2006 blog post: "to enter at the high end of the market, where customers are prepared to pay a premium, and then drive down market as fast as possible to higher unit volume and lower prices with each successive model." Musk's premise is that economies of scale, technological advances, and efficiencies at the new plant will cut battery costs by more than 30%, providing a chunk of the savings needed to sell a Tesla for \$35,000. (Tesla's cells are now made in Japan by Panasonic, which will also be building them inside the gigafactory.) Far from being daunted by the magnitude of its ambitions, Tesla seems to be energized by it. "We don't have any concern about the generation of demand," says Tesla co-founder and chief technical officer J.B. Straubel. "That's not really something we lose any sleep over." And so it was that Tesla's campaign to find a home for its battery plant began in mid-October of last year with an almost coy mixture of mystery and secrecy. Susan St. Germain, a senior business recruiter for the state of Washington, says her office got a call from a Tesla executive who explained that the company had a "major" project to discuss in confidence. She was invited to fly down to Tesla's car factory in Fremont, Calif., on condition that she sign a nondisclosure agreement. When she arrived, St. Germain discovered counterparts from California, Texas, Nevada, New Mexico, Arizona, and Oregon. It was clear there was to be a competition. Tesla executives presented their plans to build a massive battery plant in one of the states represented at the meeting. It would mean thousands of new jobs and billions in investment. Every detail seemed perfectly stage-managed, down to the name of the planned facility. Any company can build a large factory. Only Tesla would give a manufacturing facility its own brand and hype, dubbing it the "gigafactory." The company executives distributed handouts but collected them before anyone could leave the room. Taking notes was prohibited. Afterward, to make sure they were truly hooked, each attendee got a turn at the wheel of a Model S on a private street where it was possible to floor it. "It was enough to throw you back in your seat," recalls St. Germain. "It made me a little nervous you don't want to wreck their car." The company made it clear it wanted to proceed quickly. The states were given just three weeks to submit proposals. Tesla said it expected to select a few finalists the week after that, make site visits before Thanksgiving, and decide where to put the gigafactory by Jan. 10, 2014—less than three months off. Tesla gave the states a spreadsheet to fill out for each location they proposed. It had more than 90 questions, everything from details on the local labor market to the site's susceptibility to hurricanes, sinkholes, and floods. At that point, Tesla wanted a minimum of 90 acres, expandable to 300 acres by 2018, or an existing 1.7 million-square-foot building that could also be dramatically enlarged. It needed rail access to move its half-ton battery packs to Fremont for installation and a vast supply of power and water. Equally important, the company requested details on what enticements the state would offer: tax breaks, free land, infrastructure improvements, job training, and cash. "It was left to the states to be creative," says St. Germain. Even as the seven states scrambled to meet Tesla's submission deadline of Nov. 8, Musk was cagey. When an analyst on the company's quarterly earnings call asked about the idea of building a battery plant—an idea the CEO had previously discussed—Musk replied that he hadn't yet decided what to do. "We're not quite ready to make a big announcement on the cell and battery gigafactory, but we are exploring a lot of different options right now," he said. "If I were to guess, I think we would do that, that soup-to-nuts gigafactory—that factory would most likely be in North America, but we are investigating other options as well." Read more: Tesla closes on free Nevada land for gigafactory Musk's chief lieutenant on the search was O'Connell, the judicious yang to Musk's creative yin. A 50-year-old Dartmouth graduate and Northwestern MBA from a prominent Boston Irish family, he has a background as a consultant, which is reflected in his propensity for management jargon. As buttoned-up as he is, he realizes how crucial the new plant is. "The gigafactory," he says, "is going to be decisive." O'Connell's team soon emailed the bidding states confirmations that their proposals had been received, noting, "We expect internal reviews to take one to two weeks and will notify all participants once any decisions are made." Some states heard nothing more. After about a month without a peep, St. Germain called a Tesla executive, who informed her that Washington hadn't made the cut. The state's low power rates were attractive, but its refusal to offer big tax abatements was a deal killer, she concluded. Oregon also quickly got the ax—and, surprisingly, so did California. Because Tesla's assembly plant is already there, a California site would have been ideal. "All things

being equal, the best place for this facility is across the street from the factory," says O'Connell. Yet even more than proximity, Musk cared about getting his plant up and running fast. Musk's timetable to start churning out battery packs in time for the planned 2017 launch of its mass-market Model 3 was already abbreviated. California's tough environmental laws, which require detailed studies and allow legal challenges, made meeting that deadline daunting. Tesla, says O'Connell, didn't want to take that "executional risk." That left four states: Texas, Arizona, New Mexico, and Nevada. "At first, Joey Grisham, president of the economic development corporation in Hutto, Texas, a town of 20,000 about 25 miles northeast of Austin, didn't even know who he was courting. The governor's office had told him there was an opportunity, which it code-named Project Five Star. It was identified only as a "publicly traded high tech company." The mystery didn't faze Grisham, an earnest cheerleader for his town. He proposed a 465-acre tract of farmland. In late November, Grisham received word that "Five Star" wanted to make a site visit. He finally learned its identity in an excited email from Dave Porter, economic-development chief for the Austin chamber of commerce. "The state confidentially told us this afternoon the prospect coming to visit next Friday is Tesla," Porter advised Grisham on Thanksgiving eve. "This is a HUGE opportunity for Central Texas! We will assist with the Red Carpet treatment! Hope this makes your turkey taste better." The Texans' relationship with Tesla kicked off on Dec. 5, when they hosted two executives for dinner in a private room at a downtown Austin steak house, then took them on a windy helicopter tour of the area the next day. Days later, Grisham submitted what he calls an "aggressive" proposal, including some property-tax breaks that lasted for 30 years. Word soon arrived from the governor's office: Tesla was "very positive about Hutto." Under Republican Gov. Rick Perry, Texas has actively chased economic-development projects, closing deals by writing big checks from the Texas Enterprise Fund, a special pot doled out largely at the governor's discretion. Perry's office promised to come up with a cash offer if Tesla would commit to Texas by year-end. "Any news?" I'm getting nervous," Porter wrote Grisham after 2013 ended with no word. Tesla finally offered encouragement 11 days later. "Happy New Year!" wrote Kevin Kassekert, Tesla's director of infrastructure development, on Jan. 15. "I wanted to write to you and inform you that we have completed our next level down-selection and Hutto is still in the running."

"Texas Gov. Rick Perry, eager to show he was standing up for his state in the contest for jobs, drove a Tesla up to the state capitol in Sacramento (never mind that Tesla's headquarters is hours away in Palo Alto). Photo: Rich Pedroncelli/AP At that point, Grisham began worrying about Texas competitors. There were rumors Ross Perot Jr. was personally pitching two sites to Musk, including an old American Airlines facility at Alliance Airport, his industrial development north of Fort Worth. "Hopefully their visit sucked!" Grisham wrote Porter. Grisham had put forward what he considered a dynamite offer, but Tesla soon made it clear it wanted much more. At a 7:30 a.m. meeting on Jan. 17, a team of company executives and finance experts presented a PowerPoint slide showing how the total costs of putting the gigafactory there measured up against four other locations. Based on incentives, utility costs, and various other measures, the final slide showed a \$700 million gap between Hutto and "The Competition"—an unnamed leading prospect. The message was blunt: Hutto needed to up the ante. Tesla didn't offer specific details of the other offers, much less reveal who was making them. Grisham was negotiating in the dark, obliged to take the company's word. (O'Connell describes the blind bidding, apparently without irony, as Tesla's "attempt to be forthright and transparent.") After the meeting, Grisham wrote to thank the Tesla team for its "candid conversation—we heard it loud and clear and are working diligently as we speak to significantly decrease that \$700 M figure." Already he was working on sweetened tax-abatement offers; a clarification of local electricity costs narrowed the gap further. "As you can tell, we want you in Hutto!" Grisham wrote. "I believe Tesla fits the Austin region and we will do EVERYTHING in our power to help make that a reality!" "The suitors continued to line up. Nevada's governor, a former federal judge named Brian Sandoval, had run for office in 2010 promising to attract jobs to the state, desperate to expand beyond its casino industry after unemployment topped 14%. Sandoval restructured Nevada's ineffectual business-recruitment bureaucracy, naming a development czar who reported directly to him. Sandoval was eager to win the gigafactory. Nevada officials pitched Tesla on potential locations, two of them near Reno and others close to Las Vegas. In early December, company executives, short on time, made plans to visit the Vegas prospects. Hearing about this, the Reno contingent—co-led by Mustang Ranch owner Lance Gilman—feared they'd never even get a shot. They decided to bring a bit of Nevada-style glitz to their courtship."

"The site of Tesla's battery factory will be located at the end of a street that has been renamed Electric Avenue. Photo by Winni Wintermeyer for Fortune Chartering a 10-passenger Learjet for \$10,000, they offered to pick up the Tesla team in California and ferry them around Nevada so they'd have time to visit Reno too. The

Tesla executives agreed, and after dark on Dec. 9, Daniel Witt and Kevin Kassekert boarded the plane at the Oakland airport. A local economic-development executive was waiting to pick them up in a limousine at the airport in Reno, where they'd have dinner in a private room with local promoters and spend the night in a deluxe suite at the Peppermill resort and casino. The next morning, they were to tour the two Reno properties, then hop back aboard the Learjet for Las Vegas. But as the jet was taxiing toward the runway, an emergency call halted it: Tesla's brass had second thoughts about the appearance of all this, and yanked Witt and Kassekert off the plane. Still, Reno had made an impression. Kassekert made plans to fly in a week later on a commercial flight. There he met Gilman, 69, the exclusive broker, minority partner, and manager of the mammoth Tahoe-Reno Industrial Center. At 6-foot-2 and 270 pounds, sporting a diamond ring on each hand and a gold coin on a chain around his neck, Gilman is a big presence and a Reno-style philosopher. (As he puts it, "They say gambling is at the crap tables. Gambling is buying 100,000 acres worth of dirt and hoping the economy holds.") A onetime country singer, he has sold yachts in San Diego, Harley-Davidsons in Carson City, and flesh at the Mustang Ranch, which he has owned since 2003. After buying it, he had the building airlifted by helicopter to just outside the Tahoe-Regional Industrial Center, prompting some local wags to refer to the park by the acronym TRIC. "

"Lance Gilman, owner of the Mustang Ranch and the promoter behind Reno's bid, hatched the idea for a "biblical" armada of graders and earthmovers to show how quickly he could prep his site. Photo by Winni Wintermeyer for Fortune "Industrial park" isn't quite the right term for what Gilman runs, though he bills it as the world's largest. Located in Storey County, where just 4,000 people live, it feels more like its own 166-square-mile principality, with 166 tenants and its own rules. Under a sweeping agreement reached back in 2000, nearly every imaginable land use has been approved. Tenant U.S. Ordnance, which manufactures for the U.S. military, tests machine guns on a 5,000-acre shooting range inside the park. The county government, where Gilman serves as one of three elected commissioners, promises building permits in fewer than 30 days. To speed construction, county officials will inspect concrete pours at 2 a.m. So when Kassekert finally came to visit, Gilman told him just what Tesla wanted to hear: "We can put up a building as fast or faster than anyplace in the U.S."

On Feb. 26, Tesla finally confirmed that it was building its battery plant, in a blog posting on the company website. A map showed the four "Gigafactory Location Finalists" in red: Nevada, Texas, Arizona, and New Mexico and noted that "final site selection activities are underway."

Gigafactory Rendering

A new rendering of Tesla's Gigafactory. Courtesy: Tesla Motors One Wall Street analyst immediately concluded that New Mexico "always aggressive in chasing big projects" would land the prize. Arizona's governor, pressing her state's bid, called Musk directly. Tesla never ruled out any finalists, but it was spending the most time in Nevada and Texas. Musk's ambitions for the site, already outsize, were growing: He now wanted 1,000 acres rather than 90. That would give the plant lots of room for future expansion. Meanwhile, the company had passed its mid-January deadline for picking a site. The states rushed to adapt their bids. Hutto's Grisham secured options on farmland adjacent to its original tract, expanding the site to 1,241 acres. This did present one problem: It would require rerouting a mile and a half of state highway that ran through the middle of it. The Texas team began working to arrange that too. Meanwhile, two more contenders emerged. The first was San Antonio, which had landed a Toyota assembly plant back in 2003. Eager to duplicate that feat, the area's recruiters were "super-aggressive," says Tesla's O'Connell. San Antonio's trump card was its city-owned utility, CPS Energy, which offered ultracheap electricity. Musk had publicly promised that the gigafactory would be run entirely on

renewable fuels, but that wouldn't happen for years; until then, its site team told bidders, the plant would require an enormous power load. The San Antonio discount could save Tesla \$25 million a year. The second was California. Shocked by its early elimination, state political leaders begged Tesla to reconsider, promising to come up with a sweet offer and expedite the dreaded environmental reviews. Two lawmakers announced plans to draft special legislation to address the carmaker's desires. On a conference call on May 7, Musk announced that California, while still "in the category of being improbable," was "potentially back in the running," ratcheting up the pressure on the other contenders. ??? Tesla continued to press the states. The company informed Nevada that its "off-the-shelf" assortment of incentives placed Nevada last among the finalists—about \$900 million behind an (as always) unidentified front-runner. Nevada was seemingly out of its league. The state had never given any company more than \$89 million. It had no Texas-size "enterprise" fund it could tap to close the deal. "Texas is the 800-pound gorilla in the room in any economic-development conversation," says Nevada economic-development chief Steve Hill, who led the negotiations with Tesla. "They have more resources—and are more willing to use them—than any other state in the country." At this point, Hill says, he and Nevada's governor asked themselves, How much do we want this? The answer: a lot. The two men talked about not giving away too much. Then they decided, says Hill, "to start offering things that go beyond what we're normally willing to offer." These new enticements would be so outsize that they would ultimately require a special legislative session to draft new laws. Silver-haired and low key, Hill, 55, made his fortune building the biggest concrete supplier in Las Vegas and then entered government in 2011. Hill knew that Gilman's industrial park outside Reno, the only Nevada site still under consideration, offered a key advantage: It was fewer than 300 miles from Fremont, far closer than its rivals. Hill calculated that this proximity was worth about \$300 million to Tesla."

Map

"Some 166 square miles, Tahoe-Reno Industrial Center, site of Tesla's new battery plant, is billed as the largest industrial park in the world, a realm that is home to 166 companies, including Wal-Mart, 1-800-Diapers, and weapons manufacturer U.S. Ordnance. Map Source: Nevada DOT But no matter how far Nevada was willing to go, it seemed Tesla kept asking for even more. It wanted free land, zero taxes of any sort for 20 years, and a 25% electricity discount. As desperate as it was, Nevada balked at the big power subsidy. It would cost the average residential customer about \$20 a year and commercial accounts hundreds or thousands of dollars and was likely to be bitterly unpopular with residents. Nevada refused. That prompted what looked like sullen silence from Tesla. Hill and Sandoval thought the project was lost. But then, in what would become a pattern, the automaker's negotiators resumed talks. Says Hill: "That was the first solid indication that they would like to be here." ??? In retrospect, Musk's next move seems like a calculated bit of misdirection. On a May 7 earnings call, he announced that Tesla would soon break ground on "multiple" gigafactory sites, even before deciding where to put it. Musk elaborated at the annual shareholders meeting a month later, saying the company would begin site preparation work in "two or maybe three states, all the way to creating a foundation and completing the plans and getting approvals and everything?" to assure the plant was ready on time. Musk was also now saying he didn't expect to make a final decision before year-end. The man who had previously pushed the states to act quickly now looked as if he would extract advantage by showing he was in no hurry. (O'Connell denies Tesla was "disingenuous" with dates and then seems to say the precise opposite: "You have to create forcing mechanisms in these processes. We had a straw man for how this was going to go? We took the time that was necessary.") Musk's calculated ambiguity seemed to be working. At least two states? Texas and Nevada? thought they were nearing a deal and redoubled their efforts. Says Grisham of Texas: "There was a point where we felt like we were the bride." In Nevada, Tesla had zeroed in on a site in the Eagle Valley section of the Tahoe-Reno park. O'Connell and Kassekert wondered how the harsh terrain could be flattened into the giant pad the gigafactory required, but Gilman assured them it wasn't a problem. They had marveled at the progress of a nearby project for online retailer Zulily, transformed from rugged hillside into a 700,000-square-foot warehouse in 180 days. Musk, who implored his team to "find the right dirt," quietly dropped in to check out the site himself. (Locals spotted the tail numbers on his jet.) Tesla decided to put Nevada to the test and once again the team from Reno put on a show. Gilman's team responded with what he later described as a "biblical" show of force. On June 26, an armada of 200 earthmovers and graders? planned by Gilman but paid for by Tesla? descended onto the site. Work continued 24 hours a day, seven days a week. Drones circled overhead, providing Tesla executives with images of the project's progress. In four weeks the workers leveled hundreds of acres and moved some 3 million cubic yards of dirt? enough to fill three football stadiums. This made the desired impression. Says O'Connell: "That grading exercise certainly demonstrated how quickly we can execute in that part of the world."

"Overlooking Tesla's factory inside the Tahoe-Reno Industrial Center Photo by Winni Wintermeyer for Fortune Better still for Nevada, the two sides seemed to have reached agreement on the crucial provisions: a generous 20-year package of 100% tax abatements, conditioned on specific levels of investment and job creation. On July 3, Sandoval briefed Nevada legislative leaders. He discussed calling a special session starting in late July to pass the needed legislation. "We thought the terms of the agreement were pretty much settled," says Hill. Then Musk talked to Sandoval about two weeks later, and the deal was suddenly off. Musk had changed his demands. He now wanted a staggering \$500 million in cash upfront instead of some of the tax abatements. This was simply impossible for Nevada. The state didn't have that kind of money? its entire budget is just \$6.5 billion? and it wasn't about to write a half-billion-dollar check. For a second time, Nevada's team braced itself and said no. "The conversations got pretty darn tense," says Hill. "Tesla was not happy." The company made its pique apparent: On July 23 it shut down the grading work outside Reno, abruptly sending 240 construction workers home. O'Connell explains Tesla's attitude this way: "Okay, fine, if it's not going to work in Nevada, we'll take our shovel and go somewhere else." This charged drama played out entirely in secret. It took weeks for anyone to even notice the site work, at the end of a remote road, behind miles of fencing, and past a manned guardhouse marked with the code name Project Tiger. When bloggers finally got wind of it? and then learned that work had halted? no one would say what was going on. Asked about it on his July 31 earnings call, Musk confirmed that Tesla had broken ground in Nevada but said that work had stopped because the pad was "substantially complete." He insisted that Tesla still planned to do "something similar in one or two other states." As for Nevada? "At this point," Musk cryptically added, "the ball is in the court of the governor and the state legislature." Hill and the governor, listening in on the public call, knew the message was intended for them. ??? It's not exactly clear what prompted Musk's sudden request for \$500 million in cash. One explanation: Battery partner Panasonic was

limiting its initial commitment to a few hundred million dollars, leaving Tesla—which had expected \$1.5 billion to \$2 billion from the electronics company—with a big gap to fill. (Tesla executives deny this, insisting they will have no trouble funding the project, whatever Panasonic invests.) Then there was a second factor: Just a day or two before Musk's request, Tennessee announced it was giving \$230 million to Volkswagen to help fund a \$600 million plant expansion in Chattanooga, expected to create 2,000 jobs. It struck Musk that his larger project should reap Tesla an even bigger windfall. "The VW deal was an eye-opener," acknowledges O'Connell. Tesla continued to press to see what it could get from other states. In June, the automaker suggested Hutto buy its potential gigafactory tract outright, at a cost of \$10 million to \$20 million—without any promise to put the plant there. When Hutto rejected this extremely unusual request, it, too, got the silent treatment. A similar request and rebuff occurred in San Antonio. In mid-August, after Nevada spurned Musk's \$500 million request, Tesla returned to Texas, making the same proposal to promoters of both sites there—and again getting no takers. Recalls Mario Hernandez, president of San Antonio's economic-development foundation, describing the request from a Tesla executive: "We needed to be heavy upfront, up to a half-billion—that would be their ideal package—to be under serious consideration." "By this point, there had been no shortage of stunts by states eager to woo the automaker. Texas Gov. Perry, sporting sunglasses, drove a Tesla up to the California state capitol in Sacramento (never mind that Tesla's headquarters is hours away in Palo Alto) to show he was fighting for his state. The mayor of Tucson sent Musk a city building permit, good for a \$3 billion, 5-million-square-foot building at an Arizona address "to be determined." California state senator Ted Gaines delivered a golden shovel to Tesla headquarters. Local promoters seized on every connection they thought might deliver an advantage. Reno reveled in Musk's history as an attendee at Burning Man, in the Nevada desert, which surely meant he'd passed through town. Hutto noted that Austin held an annual Tesla Project, celebrating the birthday of the inventor who gave the company its name. Says Grisham: "The stars just seemed to be aligned for this. You just think, "This is the one." It's like dating." (Of course, not everybody was so enamored with Tesla. One columnist for the San Antonio Express-News wrote, after Musk's request for \$500 million in cash became public, "It's getting harder to tell the difference between Tesla's search and a shakedown.") Musk continued to use his public statements to influence and manipulate the contenders. By contrast, the company expected the states to maintain absolute silence. In May a California newspaper reported that Tesla was considering a site at a Sacramento business park. It included a bland comment from a state development spokesman: "The administration is working every day to bring companies to California and help them grow here. Tesla is certainly one of those companies." That prompted a tart email from Tesla's O'Connell to the top jobs adviser to Gov. Jerry Brown: "This is unhelpful." "In mid-August, Nevada Sen. Harry Reid shared his dismay at the unfolding process at a press conference, telling home-state reporters, "I would not start counting jobs on Tesla—I'm not sure they aren't playing us." But Nevada still wanted in the game—and Tesla, finding no takers elsewhere at \$500 million, was ready to play. Most of the final deal was already in place. To give Tesla free land, Hill had orchestrated a three-way agreement to pay for it at public expense. Gilman and his partners would give the automaker the now-level 980 acres. As compensation, the state would pay Gilman's group \$43 million to purchase right-of-way to extend a four-lane road through the industrial park to U.S. Route 50, a major highway. The state would also build the road, at a cost of another \$70 million. "That's our reward," says Gilman. The industrial park's owners had sought the extension, which will cut travel times while opening up thousands of acres for development, for more than 15 years. "

"Scrapers prepare Tesla's new factory site Photo by Winni Wintermeyer for Fortune Tesla would get \$1.1 billion in abatements: 20 years without paying sales tax on equipment and construction materials (worth \$725.8 million), 10 years without property taxes (\$349 million), and a 10-year break on payroll taxes (\$29.4 million). It would receive \$8 million in electricity discounts. All the subsidies would start kicking in after Tesla hit targets for job creation and investment. To offset lost education taxes during a decade in which children of gigafactory workers are certain to boost enrollment, Tesla agreed to donate \$37.5 million to local public schools starting in 2018. It would give \$1 million to battery research at the University of Nevada. Sandoval also agreed to push through a bill to legalize direct car sales in Nevada, one of six states that permitted automakers to sell only through licensed dealerships. By contrast, in Texas, the state Automobile Dealers Association wrote an open letter to state legislators, urging them to resist any temptation to spike the law to win the gigafactory. That letter, says O'Connell, was "extremely unhelpful." It wasn't the only factor, he says, but adds, "It's hard to imagine us making a \$5 billion investment in a state where we can't sell cars." The final piece remained: Even if Tesla couldn't have half a billion, it still wanted cash to help build the project. Hill found a solution: The state would give the company \$195 million in transferable tax credits previously set aside for filmmakers and insurance

companies, which it could then sell. Tesla agreed. Combined with the \$113 million in highway funds and \$1.1 billion in abatements, that brought the total tally to \$1.4 billion. In the last days of August, Nevada's Hill joined Tesla's O'Connell and its CFO on a conference call. "I think we're done," O'Connell told Hill. Nevada had won the prize. ??? As of Labor Day, Texas (and Arizona and New Mexico and California) didn't know that Tesla had made its choice. They still harbored faint hopes that they'd somehow land the factory. That day Musk called Nevada's governor to make it official. The next day Sandoval briefed delighted legislative leaders, laying plans for a Thursday press conference in Carson City to trumpet the news, followed by a special session to approve the legislation to benefit Tesla. (Grisham realized Texas had lost when he read about the news conference.) But there was one final obstacle. According to Hill and Nevada assembly speaker Marilyn Kirkpatrick, who both attended the meeting, Musk—who was in Europe, then due in Japan for its launch of the Model S—had a schedule conflict with the press conference. Kirkpatrick insisted the deal couldn't go forward without him. "He's got to be here," she declared. "We insisted that he tell Nevada residents himself that he was willing to invest in our state."

"Musk (center, wearing no tie) with state officials at the deal's announcement in Carson City, Nev. Photo: Cathleen Allison/AP The state team, it seems, didn't entirely trust Musk. Hill wanted him to give a public assurance—even after reaching an agreement with Nevada—that he wouldn't put his factory someplace else. Hill didn't want the New Mexico treatment. "This was a very significant step for Nevada," says Hill. "We didn't want to take the step and then not have the project." Musk agreed to upend his schedule. He arrived ruffled and bleary-eyed from London for the public announcement on the capitol steps. It was a heady victory for Nevada. The little Silver State had bested the likes of Texas and California. The governor, standing on the steps of the capitol with the Tesla CEO, called Musk "a rare visionary who has the courage to reach beyond and to convert the unthinkable into reality." Tesla, the governor later declared, has "changed the trajectory of our state forever." Over 20 years, Sandoval predicted, the gigafactory will generate 22,000 jobs, including indirect employment, and add \$100 billion to the Nevada economy. (Several outside experts have disputed those claims, saying they rest on shaky assumptions, anticipating an unknowable distant future.) "

"From left: Nevada's development chief Steve Hill and Gov. Brian Sandoval present a commemorative license plate to Tesla's Diarmuid O'Connell. Photo: Tim Dunn/Reno Gazette-Journal Still, the victory came at an eye-popping price, generating criticism in the press. Nevada is paying more than \$200,000 for each of the 6,500 direct jobs the gigafactory is supposed to create. "I read Nevada's incentive package," says former New Mexico Gov. Bill Richardson, who negotiated with Tesla for its first assembly plant. "They literally handed over Reno and Las Vegas, lock, stock, and barrel." Richardson is quick to add, in a rueful comment that captures the bind that states find themselves in, "I probably would've done the same thing as Governor Sandoval. It's a lot of jobs in a recessionary period. You create a new kind of economy in your state." For his part, Musk noted that Nevada hadn't even offered the biggest package (San Antonio would claim that title). Low costs and high speed had carried the day, he said. "It's a real get-things-done state," Musk declared. "The biggest single factor was time to completion." By November, when Musk discussed the deal on an earnings call, he sounded exasperated with continued condemnation of the terms he had extracted from Nevada. Calling the deal a "super-good idea" for the state, he said the criticism "kind of bugs me. I thought we got an okay incentive package, given the scale, but not a super-huge one." This story is from the December 1, 2014 issue of Fortune."

SHOCKER POLITICAL CRIME REPORT! "COMING SOON... - Over 12,000 pages from an in depth case report on the ""Crime of The Century"" - Now in the hands of top investigators - Cost taxpayers hundreds of billions of dollars - Breaks the biggest cover-up ever! - Task force seeks appointment of Special Federal Prosecutor and open public hearings From the opening statement: ""Based on published federal and media investigations, it appears that White House Staff and Silicon Valley billionaires engaged in a racketeering operation to manipulate hundreds of billions of dollars of taxpayer funds into their own pockets via TARP and Department of Energy funding programs created for the purpose of running this scam. The individuals involved, are charged with organized crime activities, by investigators, but major regulatory agency executives have participated in delays, and cover-ups, in order to prevent effective prosecution of the parties involved. All of the parties involved in the swindle have now had their communications, meetings, money paths, beneficiary routes and competing interest attacks tracked, documented and verified. Major banking and corporate entities participated in the crimes and, while all of the banks have been charged with other crimes, they have yet to be prosecuted for this crime. Any jury trial evidence presentation opportunity can now clearly document the crimes, the players and the facts of this case. The many investigators, journalists and members of the public, who participated in the assembly of this evidence, challenge all parties to come forward in a live, televised, open public hearing to confirm, or deny, these facts...."" "INVESTIGATION: Did White House Staff Trade D.O.E. Funding in exchange for campaign resources from Tesla's investors and then help ""pump"" the stock market for Musk? "
"Read The Book: ""FLASH BOYS!"" to see how it is done... "

"From part of the report, provided by an investigator with an advance draft: ""CHARGES OF CONCERN- Issues raised by various investigations and tipsters. Covered in this case investigation: A. Did Chicago mobsters see that Obama was a compelling public speaker and use him as a front so as to gain control of the White House in order to conduit cash and power to their group. Once they acquired the assets they sought, those players appear to have bailed out of the White House, leaving Obama to flounder. Investigation connections: V. Jarrett, R. Blogoyivitch, R. Emanuel, R. Gibbs, S. Rattner, D. Axelrod, D. Plouffe, B. Daly, others? B. Did Goldman Sachs, and related banking entities, demand TARP and DOE funding awards directly to their clients, using elected officials who were in their pockets, while using those awards to artificially enhance the appearance of, or ?pump?, stocks on the listed exchanges? Investigation connections: Blankfein, Goldman Sachs, JP Morgan, Duestch Bank, Others? C. Did Chicago handlers coordinate with Silicon Valley billionaires to exchange exclusive TARP and DOE funding, stock pumps and perks for campaign resources including internet news media and search manipulation? Was Solyndra part of the kick-back scheme? Investigation connections: D. Feinstein, H. Reid, E. Musk, J. Doerr, R. Lane, Other? D. Were a number of person?s murdered for reporting aspects of these crimes? Investigation connections: D. Feinstein, G. Conley, D. Bird, R. Motwani, H. Brown, Other " "

"All of these rumors and suspicions can be easily put to rest with a simple public hearing. Let's just have the hearing, listen to the facts from both sides, and be done with it. The people listed in the files are actually dead and missing. The banks listed have actually been charged with massive crimes. The people listed have been charged with manipulating public funds by most major agencies. Anybody can research many of these facts and confirm them, themselves. Clearly, there is something to all of this. The public is owed the truth. If these possibilities really are as ""outlandish and impossible"" as the other side is saying, then they should have no problem supporting such a hearing and putting these issues to bed once and for all. Ray Postin- Journalist"

Report - BY AUTOBLOG

"Is Tesla quietly sitting on 3,000 cars

By Chris Bruce RSS feed

"Tesla's 2014 third quarter financial report mixed some positive news with gloomy messages. On one hand, the electric carmaker posted its best quarter ever in terms of deliveries, including its best single day with 907 EVs delivered. The company also announced expanded production to get even more vehicles out the door by the end

of 2015. However, the Model X got delayed yet again and higher prices in Europe were mulled. Dousing the results with a bit more cold water, a Merrill Lynch investor letter claims there's more to be pessimistic about the business than meets the eye. The Daily Kanban, quoting research meant for Merrill Lynch clients, claims that Tesla had ""approximately 3K vehicles stocked in inventory or in transit"" at the end of the Q3. That's a fairly large number considering that the company reports selling 7,785 units for the whole quarter. The statement is also surprising because the automaker has a reputation for keeping excess supply low, and there are allegedly waiting lists for Model S sedans. CEO Elon Musk maintains that the automaker has a problem being able to keep up with high demand, as well. According to Daily Kanban, the letter further states, ""China is proving to be more challenging for Tesla to penetrate than expected."" The automaker does not break out sales by region in its Q3 financials to check this assertion, however, the company does report the recently opened store in Shenzhen is one of its top-grossing stores worldwide and that there are now 23 Supercharger locations in 10 Chinese cities. Merrill Lynch is hardly the first company to challenge the consistently positive assertions made by Musk. In late October, the stock price bounced all over the place after a claim of falling sales by The Wall Street Journal prior to the Q3 announcement. Another analyst believed the company might need around \$6 billion to get all of its plans accomplished by 2025."

"when the BS and hype stop, and all of the balls that Musk has in the air fall, this will be looked back on as a bigger scam than John Delorean pulled. EVERY automaker in the world (yes, every one) reports quarterly sales and production figures. EVERYONE. except Elon Musk, as he is somehow ""special"", at least in his own mind. so Tesla sells cars worldwide. in today's world, who doesn't? the thought of a cross country trip in a Tesla is still a joke (look at the Supercharger map, and tell me your ONE route), and the Model X has been delayed for almost a year. when asked why two weeks ago, Musk replied, ""BUILDING CARS IS HARD!""

Joeviocoe

14 Hours Ago

@reattadudes

""EVERY automaker in the world (yes, every one) reports quarterly sales and production figures. EVERYONE. except Elon Musk"" Ummm... Tesla reports quarterly. It is ""monthly sales"" that they don't. And not every automaker does, nor are they required to."

We may be witnessing THE GLOBAL RESET

"Have you ever played a video game and it just hangs on some effect? Have you ever been working on a project on your computer and it just freezes? Has your car just flooded out? What Do You Do? RESET ! Turn it off, wait, and turn it back on. Why? Because life has taught you that resets often work. What if a bunch of people; engineers, writers, public servants and the like, saw the world coming apart a decade, or two, ago? What if they saw this internet thing as the ultimate tool for a reset via total-transparency? What if another group saw the internet thing as the ultimate tool for harvesting human behavior for profit? What if both groups embarked on their efforts at the same time, but on totally different paths? What if one got a little ahead of the other? Would that create 2014? Could all of the ruckus and change in the world be the breaking of ALL of the paths of oppression, at the same time, as EVERYONE around the world goes for human equality at the same time? Are we witnessing THE GLOBAL RESET? The financial reset has already started and even the combined power of every nation on Earth was unable to stop it. The cultural reset has also already started but it does not stand out as much. Politicians may be able to delay things but, one has to wonder, is everything from here forward, inevitable? As the poets say, is it truly impossible to stifle the human need for freedom and independence forever? Almost every ruckus point has to do with the population waking up, seeing that they were being used by a small group of rich elites and saying: ""hell, no!"" Are we in the middle of The Reboot, right after The Reset? After it all shakes out, what will the New World of Total Transparency feel like? Just wonderin' if that is what all of this is about..... - Westin L- Davis University "

"So wait, let me understand this: You think that the public got mad about criminal politicians working with criminal bankers, ego-maniacal billionaires and corporations to trick people into letting them get into their income so those criminals could make billions off of the mass populations with little, or no, benefit for the regular folks? Why would anybody get upset about finding out about something like that? TJ (Public Reporter)"

"What has already started happening in THE RESET: - Less marriages - More renters/less buyers - Millennials want more proof of less corruption from candidates - Women are over categorization (Ahem..NFL..) - Frat Houses & ""Ivy League"" are now evil - Less reliance on credit and loans - Populations around the world want equal democracy rights - Less willingness to be used by corporations - No tolerance of political scams - Campus

""RAPE-CULTURE"" being over-thrown - FRAT BOY Elitist Campus male programming being over-thrown - No babies or babies later in life - Less tolerance for 9-5 work hours - READERS: SEND IN MORE OBSERVATIONS... "

The Great Unraveling

Roger Cohen

"It was the time of unraveling. Long afterward, in the ruins, people asked: How could it happen

"It was a time of beheadings. With a left-handed sawing motion, against a desert backdrop, in bright sunlight, a Muslim with a British accent cut off the heads of two American journalists and a British aid worker. The jihadi seemed comfortable in his work, unhurried. His victims were broken. Terror is theater. Burning skyscrapers, severed heads: The terrorist takes movie images of unbearable lightness and gives them weight enough to embed themselves in the psyche."

"It was a time of aggression. The leader of the largest nation on earth pronounced his country encircled, even humiliated. He annexed part of a neighboring country, the first such act in Europe since 1945, and stirred up a war on further land he coveted. His surrogates shot down a civilian passenger plane. The victims, many of them Europeans, were left to rot in the sun for days. He denied any part in the violence, like a puppeteer denying that his puppets' movements have any connection to his. He invoked the law the better to trample on it. He invoked history the better to turn it into farce. He reminded humankind that the idiom fascism knows best is untruth so grotesque it begets unreason."

"It was a time of breakup. The most successful union in history, forged on an island in the North Sea in 1707, headed toward possible dissolution ? not because it had failed (refugees from across the seas still clamored to get into it), nor even because of new hatreds between its peoples. The northernmost citizens were bored. They were disgruntled. They were irked, in some insidious way, by the south and its moneyed capital, an emblem to them of globalization and inequality. They imagined they had to control their National Health Service in order to save it even though they already controlled it through devolution and might well have less money for its preservation (not that it was threatened in the first place) as an independent state. The fact that the currency, the debt, the revenue, the defense, the solvency and the European Union membership of such a newborn state were all in doubt did not appear to weigh much on a decision driven by emotion, by urges, by a longing to be heard in the modern cacophony ? and to heck with the day after. If all else failed, oil would come to the rescue (unless somebody else owned it or it just ran out)."

"It was a time of weakness. The most powerful nation on earth was tired of far-flung wars, its will and treasury depleted by absence of victory. An ungrateful world could damn well police itself. The nation had bridges to build and education systems to fix. Civil wars between Arabs could fester. Enemies might even kill other enemies, a low-cost gain. Middle Eastern borders could fade; they were artificial colonial lines on a map. Shiite could battle Sunni, and Sunni Shiite, there was no stopping them. Like Europe's decades-long religious wars, these wars had to run their course. The nation's leader mockingly derided his own ?wan, diffident, professorial? approach to the world, implying he was none of these things, even if he gave that appearance. He set objectives for which he had no plan. He made commitments he did not keep. In the way of the world these things were noticed. Enemies probed. Allies were neglected, until they were needed to face the decapitators who talked of a Caliphate and called themselves a state. Words like ?strength? and ?resolve? returned to the leader's vocabulary. But the world

was already adrift, unmoored by the retreat of its ordering power. The rule book had been ripped up."

"It was a time of hatred. Anti-Semitic slogans were heard in the land that invented industrialized mass murder for Europe's Jews. Frightened European Jews removed mezuzahs from their homes. Europe's Muslims felt the ugly backlash from the depravity of the decapitators, who were adept at Facebooking their message. The fabric of society frayed. Democracy looked quaint or outmoded beside new authoritarianisms. Politicians, haunted by their incapacity, played on the fears of their populations, who were device-distracted or under device-driven stress. Dystopia was a vogue word, like utopia in the 20th century. The great rising nations of vast populations held the fate of the world in their hands but hardly seemed to care. It was a time of fever. People in West Africa bled from the eyes."

It was a time of disorientation. Nobody connected the dots or read Kipling on life's few certainties: "The Dog returns to his Vomit and the Sow returns to her Mire / And the burnt Fool's bandaged finger goes wabbling back to the Fire."

Until it was too late and people could see the Great Unraveling for what it was and what it had wrought.

Is the world going nuts?

By Fareed Zakaria

STORY HIGHLIGHTS

"There is an unraveling taking place in parts of the world, writes Fareed Zakaria"

"In the Middle East, people were tired of the old dictatorships"

"They weren't prepared for what should follow them, Zakaria says"

"Europe went through its turmoil before it became stable continent it is today, he says"

Editor's note: Fareed Zakaria is the host of CNN's Global Public Square. Watch his interviews with Indian Prime Minister Narendra Modi and former U.S. President Bill Clinton this Sunday at 10 a.m. and 1 p.m. ET on CNN.

(CNN) -- Is the world spinning out of control?

"I get asked this question a lot these days, and for understandable reasons. Look at what's been in the news in just the last few weeks. The Islamic State of Iraq and Syria's execution videos, Scotland's bid for secession, Russian soldiers in Ukraine."

"There is an unraveling taking place in parts of the world. In the Middle East, the old order that stretched from Libya to Syria has collapsed. In Russia, the rise of oil prices has empowered and emboldened President Vladimir Putin -- and he wants a makeover on the fall of the Soviet Union. Putin is testing the stability of the old international order built after World War II, and sees that it is weaker than most people might have guessed."

"But why is all this happening? In the Middle East, people were tired of the old dictatorships. They weren't prepared for what should follow them, but they wanted greater space and voice. The result has been chaos and violence, but perhaps that is the brutal, ugly phase that will force people there to find a way to make their peace with the modern world. After all, Europe went through its own religious wars, wars of nationalism, and world wars before it became the stable continent it is today."

"Similarly, in Eurasia, the real driver of what has happened there is not the West or Russia, but the Ukrainian people. They decided that they didn't want to be vassals of the Kremlin. They look with longing at Poland, which in 1989 had a similar-sized economy to theirs and is now twice the size, and is a member in good standing of the European Union."

"Of course there are Ukrainians who feel differently -- that's what's causing the turmoil -- but most, overwhelmingly, want to chart a future with the West. Whether they can remains an open question, given Putin's firm resolve to sabotage their plans. But again, this is a sign of people searching for greater connections with the civilized world."

"And look at the rest of the world. India and Indonesia have elected leaders who are friendly towards markets, the West, and America -- resolutely democratic and yet strong nationalists. Mexico and Colombia have reformers at the helm. In Africa, there are many governments from Ethiopia to Rwanda, where you see real progress in health and living conditions. There are many pieces of bad news coming out of that continent -- from Ebola to Boko Haram -- but there is also good news, growing economies, a surging middle class."

"And look at the world's two largest economies. The United States remains economically vibrant, with a dynamic society, new technologies that dominate the world, and new sources of energy that will power it for a few generations. China, for all the noise, remains committed to economic development first, is embarking on anti-corruption and reform drives and has even begun to tackle pollution and climate change as an issue."

"I'm not saying that all is well in the world -- I'm really suggesting that we are in the midst of great global change. Much of this change is driven by good news -- people's desires for greater freedom and autonomy, new information technologies, etc. But all change is disruptive, and without the institutions of freedom and the civic culture of liberty, this period of transition can be dangerous. The forces of integration will not automatically triumph over the forces of disintegration. But there are many good forces out here that are also sweeping through the world these days."

"And, of course, Scotland did not end up seceding. Score one for integration."

Google charged with 'steering' Tesla articles to favored searches "Per this link on Muckety: <http://news.muckety.com/2013/05/16/tesla-announces-450m-stock-sale/42801#comment-5034721> The researched chart by Muckety reveals the secret connections to the control, and manipulation, of consumer perceptions, federal public policy and law-making. If proven, this subjects both Tesla and Google to SEC fraud charges. Google has been shown to have a senior silent control ownership in Tesla. Tests by IT and SEO engineers show that Tesla receives an inordinate position in all Google News stories and general searches, while negative stories about Tesla are diminished. This ONLY takes places on the Google search engine and Google News. In the average search or comparative news cycle on any other search engine, Tesla does not show up or is 90% less visible in searches. Other companies and politicians have charged that Google artificially steers its search settings in favor of personal friends and in disfavor of its enemies. This demonstrates that Google is untrustworthy. Sen. Santorum and many companies and individuals have previously charged Google with manipulating it's search engine results. Carlos Rodriguez - Denver, CO ===== From Andrew Wesguter, New York, NY Google owners are personal advisors to the White House. Google Owners sit on White House advice groups. Google is pumping the Tesla stock offering by making it look like there is a stock demand for Google stock and by using the Google IR analysts and I-banks it has control over to inflate the stock value along with making the newsfeeds that Google covers about Tesla look 300% better than the actual circumstances. This is a conflict of interest as Google and it's VC's are investors in Tesla. This should be against the law.

===== From Parker Summers, San Diego Calif. Google is not thought very highly of by those who pay attention, this posting is all over the internet: ""GOOGLE is ACTUALLY DOING MUCH EVIL! They are simply a spy service. Every location you search on google earth is logged and tracked and sold to government agencies and ad agencies. Every word or sentence you type into google is logged and tracked and sold to government agencies and ad agencies. Every page you click on in google is logged and tracked and sold to government agencies and ad agencies. A data file about everything you do on the internet using any google technology is logged and tracked and sold to government agencies and ad agencies. Google makes most of its money by spying on people. Why would you use something that makes you cooperate in spying on yourself? Everything you watch on googles youtube is logged and tracked and sold to government agencies and ad agencies. Google reads all of your email. Google sends any interesting emails with words it doesn't like to agencies and the rest are put in an advertising database to trick you into thinking you stumbled upon certain ads when, in fact Google is secretly pushing those ads on you. Google GLASS is the ultimate spy-on-you-tool, it has face recognition, fashion recognition and pretty much spies on everybody and everything around you, and you, and then Google sends that data off to the Government. Never get near anybody wearing a Google Glass. Ask to have them out-lawed. Google Maps camera cars take pictures & capture wifu data for everyone in the US. Google saves a file of everything you have ever done, looked at, sent or moused over IN YOUR ENTIRE HISTORY OF USING THE INTERNET. It isn't a business right anymore, it is an abuse of the public trust. <https://anonfiles.com/file/08d71da7cfd68cc782e50cd156283457> Google has thousands of people that work for them to create technologies to control the internet in order to make people give more information to google about themselves and that personal information is logged and tracked and sold to government agencies and ad agencies. Do you like being used as a tool? Do you like Google infesting your life for profit and special interest control of what you do? Twitter & Facebook are just as sinister and evil. Dump all 3 of them. Use www.duckduckgo.com or any other non tracking search engine. Find a non tracking replacement for every service google offers. Google is very evil! You will NEVER be able to trust Google. Write your Congressman. Tell them to outlaw Google data capture. Join a class action lawsuit against them"" PLEASE RE-POST""

===== From Martin Seester, Chicago, Ill. It is very clear from the filings that Google is a huge investor group and the mouthpiece for Tesla, why is this not made more public?

Panasonic engineers GUARANTEE that Tesla battery packs will explode when wet!!!! "Panasonic engineers GUARANTEE that Tesla battery packs will explode when wet!!!! After the cataclysmic explosions and self combustion devastation of the Fisker electric cars because they simply GOT WET in the Hurricane Sandy rain, Panasonic has now, not only, stated that Tesla Lithium batteries will also explode and kill the baby, or dog, or other family member you have in the back seat, but that Tesla also received written warnings, in hard copy documents, in the quotations and shipping MSDS sheets that the Tesla batteries are ""guaranteed"" to explode if salt, or any other water touches them. With all of the other lawsuits Tesla now has, they expect to get liability lawsuits from owners, suppliers that they sold battery packs to (without disclosing the danger their engineers knew of) and consumer class action groups. Panasonic engineers have been retained to examine safety issues with the cars." <http://www.thenewsdaily.org/panasonic-engineers-guarantee-that-tesla-battery-packs-will-explode-when-wet/> 11/10/2014 THE EDITORS & WIKI MEMBERS Uncategorized "auto green, autogreenblog.com, barack obama, Bob Woodward, Boycott Tesla, Bribery, Corruption, Dept. of energy, Dianne FEinstein, DOE Corruption, Elon MUsk, fisker battery explosion, fisker fires, gao investigation, grassley, hurricane sandy, Iron Man, Issa, John Doerr, Kleiner, Kleiner Perkins, kleiner perkins lawsuit, kleiner perkins sex allegations, LA Times Investigation, LIBOR SCANDAL, mitt romney, outsource, romney, Sen. What does a missing Wall Street Journal energy reporter on the East Coast have to do with a dead energy CEO body found on the West Coast? "David Bird was a highly respected Wall Street Journal energy reporter known for his deep dives into energy industry analytics and the energy players and politics. He disappeared off of an east coast country road and has never been seen since. Theories range from murder, to ""black-bagged"" to a ""safe-house"" to Galt's Gulch. On the other side of the country, investigators are taking a closer look at the very suspicious death of solar and hydrogen energy CEO Gary D. Conley. Found with a bullet in his head, in the back of a Northern California Air Force Base, with all of the nearby surveillance videos ""not available"". His friends and family say he never would have considered suicide. Prior to his death, he had been talking to major newspaper energy reporters about potential crimes, involving insider trading and kick-backs, with Solyndra, Ivanpah and other ""CleanTech"" companies connected to Silicon Valley. Did they both find out about something that became ""sensitive information"", for someone? ""CleanTech"" is now the most forbidden word in Silicon Valley. Companies have died because of it. Careers have died because of it. Political careers were terminated because of it. Now...people may have died because of it. David Bird and Gary D. Conley are only part of the body count, when you matrix the words ""dead bodies"" and ""CleanTech"". 60 Minutes did a segment called the ""CleanTech Crash"" in which they mention over one hundred billion dollars of cash that flowed through the ""CleanTech"" funnel. As of today, federal investigators now believe it was north of \$300 billion. As the numbers get pulled together, one things is clear: The 48 people who financially benefited from the ""CleanTech"" funnel were all connected, all knew each other and had all participated in the same 3 political campaigns. Let's stay tuned as this story evolves... Kyle Dintle- LA Times Stringer "

White House urged to end of the use of ?Hit Lists? and character assassination attacks on journalists and taxpayers! "A group known as the ANTI-TARGETING ALLIANCE is calling for taxpayers to write Congress and demand a law that makes it a felony for White House staff, or any elected officials, to deploy surreptitious attack tactics on members of the public, including journalists out of sheer spite. The website <http://www.paybackpolitics.org> covers examples and disclosures of over 10,000 attacks on the public, ordered by top Washington political figures. Said Andrea of the group: "" at a point in American history, where trust in the government it universally polled at it's lowest point, it is hard to comprehend the thought process of people who would engage in these sorts of attacks on their own constituents"" She continued, ""...using cover organizations, like Gawker, A.L.I.C.E., Think Progress, New America Foundation, Media Matters, etc. as facades is a known tactic by this White House and most journalists are now wise to it. Everyone knows who is connected to whom."" Sharyl Attkisson, Bob Woodward, Monica Lewinsky, Dr. Katherine Mitchell of the VA crisis, Edward Snowden and many, many other well known, and not so well known people, have recently disclosed organized attacks on them by senior Washington federal officials. Mitt Romney has recently stated that ""The character assassination"" is the number one trick the White House used against him. In today's press, an article on Valarie Jarrett discloses a hit list she waved at her own progressive activist people as a threat to ""not make trouble."" When is it OK for your elected representatives, your employees, to attack you for speaking your mind? Forbes Rips Musk's smoke-screen "Forbes Rips Musk's smoke-screen (Photo Above: Tinman was RIGHT be to afraid of Fires. Musk is a carny with shiny objects) Red Herrings And Straw Men: Musk's Argument On Tesla Fires Dale Buss- Forbes It's still a good bet that the Tesla Model S and Elon Musk will come through their fire-investigation saga relatively unscathed and even vindicated in the end. But in the meantime, what lingers is Musk's take-no-prisoners argument, which essentially is that the National Highway Transportation Safety

Administration probe into two fires in the car in incidents on U.S. roads is a monumental waste of time; that any media outlets even discussing the fires are irresponsible; and that Americans should take his word that the cars are safe. Musk has to try to ensure that consumers and investors don't lose faith in him and his technology, and three Model S cars turning into hibachis on the highway (including one in Mexico) comprise a significant obstacle. This is a refutation of significant parts of his argument, which turns out to be filled with red herrings and straw men that not even the formidable Musk can spin into smooth persuasion. In attempting to thwart attention to this little problem, Musk has tried to have it just about every way. First he insisted that there was no flaw in the design of Model S; but then he decided to adjust the suspension on the vehicles via a software change so that they ride higher on the highway and are less likely to take a hit from debris. Initially Musk insisted the cars wouldn't be recalled, but then he said Tesla actually had asked the federal highway-safety agency to examine Model S – an assertion that NHTSA officials have said simply isn't true. Then Musk laid out his broad argument in the context of what he believes is an unassailable rationale for his creation of Tesla in the first place. In "The Mission of Tesla" post that he put on the Tesla blog this week, Musk penned an eloquent explosion of triumphalist fury. But Musk also exposed some logical vulnerabilities that shouldn't be ignored even amid his intellectual suppleness: A murky standard: Musk wrote that "new technology should be held to a higher standard than what has come before" but didn't say what that loftier standard should be. Then he seemed to undercut his concession by comparing the record of car fires in the Model S – "new technology" – to what he said were a quarter-million gasoline-car fires in the U.S. alone over the last year. Certainly he believes Model S should be pulled up short at some number far lower than a quarter-million fires; but what is that number? Would he argue that forest fires aren't important because house fires turn out so many more Americans from their homes each year? And Musk didn't mention another relevant comparison: the Nissan Leaf all-electric vehicle, which has had no reports of fires with many thousands of models on the road. The media straw man: Musk complained in the post about "an onslaught of popular and financial media seeking to make a sensation out of something that a simple Google search would reveal to be false." But he didn't really specify what it is that is "false." By "false," was he referring to mere reporting about the fires, which seemed by and large to be pretty factual? Or reporters' failing to compare the number of Model S fires to the much higher number in gasoline-powered vehicles? Or media speculation about the effects of the fires on Tesla? Or was Musk implying that a substantial number of media outlets leaped to the conclusion that these three incidents mean the Model S somehow is poorly engineered? If it's the last option, there's little evidence for his charge. Besides, whatever "persecution" Tesla might be suffering at the moment at the hands of the media – most of whom actually seem to adore Musk, his technology and his cars – is nothing compared to what, for example, General Motors has suffered in the past. Just a couple of years ago, NHTSA briefly investigated a single fire in a Chevrolet Volt plug-in hybrid that occurred days after it had been crash-tested, and some wild media speculation ensued about the very future of the car. Going back even further: Dateline NBC aired an investigative report in 1992 that allegedly showed C/K-Series pickup trucks exploding upon impact during accidents due to the poor design of fuel tanks. The NBC producers didn't tell the audience their nasty little secret: that they had rigged the truck's fuel tank with remotely controlled model rocket engines to initiate the explosion. The lightning canard: Musk turned to a ready old comparison about the odds of experiencing "even a non-injurious fire in a Tesla" being less than those of getting struck by lightning. Yet actually, the odds of getting struck by lightning are about the same as the odds of dying in a plane crash, depending on the time horizons involved. And yet, even the slim odds of fatal airplane fatalities are such that an entire branch of the federal government has been built around preventing and analyzing them, and airlines spend hundreds of millions of dollars a year to try to make sure it doesn't happen. Or, closer to home for Musk: What would he say is the importance of the odds of a fire not occurring in one of the SpaceX transport crafts that his other company plans to hurtle into space next year, carrying civilian passengers? The no-harm, no-foul red herring: He pointed out that the drivers of the two Tesla's in the U.S. fires weren't hurt and were, in fact, able to pull their cars safely over to the side of the highway after the car gave them appropriate warnings that things were awry. Musk wrote that "the primary concern is not for the safety of the vehicle, which can easily be replaced, but for the safety of our customers and the families they entrust to our cars." But the statement implies somehow that it's, well, alright to have a fire under the hood of a Model S as long as no one actually has gotten hurt so far. But what if either of those two drivers in the U.S. accidents were upset or panicked or just not quick enough to react to the car's warnings, and the Model S had burst into flames before they'd had a chance to pull over? Things could have turned out quite worse for those drivers and for others on the road. And by Musk's logic, only worse outcomes would have made the fires unacceptable. A devil's choice: As another way of illustrating the relative

danger of gasoline-powered vehicles versus Model S, Musk wrote that "arsonists tend to favor gasoline" and used the analogy, "Trying to set the side of a building on fire with a battery pack is far less effective" than using gasoline would be. Yet Boeing faced significant fire concerns about its Dreamliner jets, and even grounded them for a while, in battery systems similar in basic technology to those used in the Tesla Model S. Besides, the lethality of a particular form of power depends on the application: Apparently no one pointed out to Musk that prison wardens prefer carrying out capital punishment with electricity rather than gasoline. That fact is just about as relevant as the one he pulled out of the air. Feigned concern: True, Musk did selflessly suggest that NHTSA shouldn't be bothering with investigating the paltry little pair of Model S fires when there are "hundreds of gasoline fire deaths per year that warrant their attention." But is he really that concerned about the stretching of federal resources? Musk's other grandiose notion was to state unequivocally that the very survival of the planet may hinge on whether the gnashing media hordes stop bugging him about the two campfires in the Model S. "If a false perception about the safety of electric cars is allowed to linger, it will delay the advent of sustainable transport and increase the risk of global climate change," he wrote, "with potentially disastrous consequences worldwide. That cannot be allowed to happen." NHTSA, are you listening

Reddit Roasts Tesla "There are many Reddit Posters who bring the pain on Tesla but this one goes full down: ""Just saw this: ""Tesla caught pumping stock with fake orders. Corporate email busts Tesla scam. Is this a credible product? Tesla Motors is under Fed investigation for bribery & corruption; Musk stole the company from Martin the founder; Tesla has been sued many, many times for misdeeds; Tesla took taxpayer \$\$ yet hired off-shore workers and fired NUMMI union workers; Their batteries blow up when they get wet or overcharge- Tesla's own patent filings say so; They owe more \$ than they can ever pay back. The Leaf does the same thing for \$100k less. The billionaire owner got free tax money without earning it; Goldman, K&L Gates, KPCB & their investors put in fake car orders and fake stock buys to pump the stock; They lied to San Jose, Downey, New Mexico and many cities about building a factory in each; The CEO cheated on his wife & business partners; The CEO hires magazines to write glory-stories about him; Tesla has 30 Indian bloggers hired to write fake user postings; The EMF from the car is measured to cause biological damage; They changed the prices on customers after they ordered; They never get their costs right; each car coming off the line has problems according to Musk himself; Selling 4K cars after a decade is a pathetically small # for such a run-of-the-mill electric car; They announce they "intend" to pay the loan back early, yet do not actually pay it back even though the owner has a billion dollars; Former staff have accused the CEO of everything from spying to harassment; When the Feds finally serve their indictments, forensic audits of Tesla will show they lied in their financials; The public calls the car the "Solyndra-Mobile" and say it is an ""Un-American Product?"; It is made, and priced, by and for Stanford elitist yuppie rich boys; The same six writers that support Tesla have been shown to be paid shills; All of this is well documented. Wouldn't anyone be ashamed to drive a Tesla ""<http://www.thenewsdaily.org/reddit-roasts-tesla/> 11/9/2014

Is SolarCity's use of Tesla batteries unsafe for homes and for Solarcity? "Is SolarCity's use of Tesla batteries unsafe for homes and for Solarcity? Washington, DC - Solarcity has announced that they will be using Tesla's lithium ion battery systems for their energy systems. Engineers are wondering if this is a good idea in light of the extensive numbers of lithium ion fires that have taken place, with little or no stimulation. Lithium ion Apple tablets and cell phones have exploded into flames and burned down the structures they were in as documented when you search the phrase: ""ipad air explodes"". Authorities in Sugar Land, Texas, ruled that the Fisker Karma parked in the attached garage of a newly built home was the origin of a fire in 2012 that completely destroyed the car as well as the garage and a portion of the house, causing hundreds of thousands of dollars' worth of damage. The owner and his family escaped safely. The batteries were the same kind of lithium ion batteries used in the Tesla and now intended to be used by SolarCity. This video shows another one just blowing up in flames for no good reason:"<http://www.thenewsdaily.org/chu-expect-more-green-energy-bankruptcies/> 11/7/2014 THE EDITORS & WIKI MEMBERS Uncategorized "Boycott Tesla, Bribery, crony, crony politics, cronyism, Daily Caller, Dept. of energy, Diane Feinstein, Dianne FEinstein, DOE Corruption, Elon MUSK, gao investigation, grassley, Iron Man, Issa, John Doerr, Kanye West, Kim Kardashian, Kleiner Perkins, Kleiner Perkins sex allegations, LA Times Investigation, LIBOR SCANDAL, outsource, Sen. The \$9 Billion Witness: Meet JPMorgan Chase's Worst Nightmare

Andrew Querner
Chase whistle-blower Alayne Fleischmann risked it all.

Meet the woman JPMorgan Chase paid one of the largest fines in American history to keep from talking

By Matt Taibbi |

"She tried to stay quiet, she really did. But after eight years of keeping a heavy secret, the day came when Alayne Fleischmann couldn't take it anymore. "It was like watching an old lady get mugged on the street," she says. "I thought, 'I can't sit by any longer.'" Fleischmann is a tall, thin, quick-witted securities lawyer in her late thirties, with long blond hair, pale-blue eyes and an infectious sense of humor that has survived some very tough times. She's had to struggle to find work despite some striking skills and qualifications, a common symptom of a not-so-common condition called being a whistle-blower."

Related

The Vampire Squid Strikes Again

"Fleischmann is the central witness in one of the biggest cases of white-collar crime in American history,

possessing secrets that JPMorgan Chase CEO Jamie Dimon late last year paid \$9 billion (not \$13 billion as regularly reported ? more on that later) to keep the public from hearing. Back in 2006, as a deal manager at the gigantic bank, Fleischmann first witnessed, then tried to stop, what she describes as ""massive criminal securities fraud"" in the bank's mortgage operations. Thanks to a confidentiality agreement, she's kept her mouth shut since then. ""My closest family and friends don't know what I've been living with,"" she says. ""Even my brother will only find out for the first time when he sees this interview."" Six years after the crisis that cratered the global economy, it's not exactly news that the country's biggest banks stole on a grand scale. That's why the more important part of Fleischmann's story is in the pains Chase and the Justice Department took to silence her. She was blocked at every turn: by asleep-on-the-job regulators like the Securities and Exchange Commission, by a court system that allowed Chase to use its billions to bury her evidence, and, finally, by officials like outgoing Attorney General Eric Holder, the chief architect of the crazily elaborate government policy of surrender, secrecy and cover-up. ""Every time I had a chance to talk, something always got in the way,"" Fleischmann says. This past year she watched as Holder's Justice Department struck a series of historic settlement deals with Chase, Citigroup and Bank of America. The root bargain in these deals was cash for secrecy. The banks paid big fines, without trials or even judges ? only secret negotiations that typically ended with the public shown nothing but vague, quasi-official papers called ""statements of facts,"" which were conveniently devoid of anything like actual facts."

Jamie Dimon (Photo: Bloomberg/Getty)

"And now, with Holder about to leave office and his Justice Department reportedly wrapping up its final settlements, the state is effectively putting the finishing touches on what will amount to a sweeping, industrywide effort to bury the facts of a whole generation of Wall Street corruption. ""I could be sued into bankruptcy,"" she says. ""I could lose my license to practice law. I could lose everything. But if we don't start speaking up, then this really is all we're going to get: the biggest financial cover-up in history."" Alayne Fleischmann grew up in Terrace, British Columbia, a snowbound valley town just a brisk 18-hour drive north of Vancouver. She excelled at school from a young age, making her way to Cornell Law School and then to Wall Street. Her decision to go into finance surprised those closest to her, as she had always had more idealistic ambitions. ""I helped lead a group that wrote briefs to the Human Rights Chamber for those affected by ethnic cleansing in Bosnia-Herzegovina,"" she says. ""My whole life prior to moving into securities law was human rights work."" But she had student loans to pay off, and so when Wall Street came knocking, that was that. But it wasn't like she was dragged into high finance kicking and screaming. She found she had a genuine passion for securities law and felt strongly she was doing a good thing. ""There was nothing shady about the field back then,"" she says. ""It was very respectable."" In 2006, after a few years at a white-shoe law firm, Fleischmann ended up at Chase. The mortgage market was white-hot. Banks like Chase, Bank of America and Citigroup were furiously buying up huge pools of home loans and repackaging them as mortgage securities. Like soybeans in processed food, these synthesized financial products wound up in everything, whether you knew it or not: your state's pension fund, another state's workers' compensation fund, maybe even the portfolio of the insurance company you were counting on to support your family if you got hit by a bus. As a transaction manager, Fleischmann functioned as a kind of quality-control officer. Her main job was to help make sure the bank didn't buy spoiled merchandise before it got tossed into the meat grinder and sold out the other end. A few months into her tenure, Fleischmann would later testify in a DOJ deposition, the bank hired a new manager for diligence, the group in charge of reviewing and clearing loans. Fleischmann quickly ran into a problem with this manager, technically one of her superiors. She says he told her and other employees to stop sending him e-mails. The department, it seemed, was wary of putting anything in writing when it came to its mortgage deals."

----- And who now has access to all of this data? People from BOTH parties, hackers, private eye's that were

value than just about everyone. The first point is not location-dependent. You can find this type of girl anywhere in the world, but it will require an immense number of approaches. In effect, you're looking for a needle in a haystack. In my 10+ years of gaming, I have found less than 10 of them. It's hard to develop a strategy on meeting these girls, but focusing on day game is the best way to start. The second point is obviously location-dependent. In effect, you're looking for poosy paradise where local environmental factors greatly aid in a man's search for beautiful women. You will be looking for a non-Western location with a high busted dudes score and a population of more women than men (it is possible to find this type of advantage in the West only if you develop a localized niche). This is what I have been doing for roughly the past five years, searching for the one place where my value is higher due to local factors. The third point is limited by genetic factors. Some men, no matter how hard they work, will never be a 10, but it is our duty to hit the limit that our genetics allow, both in appearance, resource accumulation, charm, and interestingness. If you are a 4 currently, and your genetic ceiling is a 6, it's still in your best interest to reach for that value. I figure my default value is a 5 (average), but with strenuous work I pulled it up to something in the 7's. From whichever angle I look at it, the same answers to the 'woman problem' keep popping up, and years of experience both in America and abroad keep supporting these conclusions. They are essentially the three immutable laws for any man to lay a beautiful woman and keep her in a way that provides him with happiness. Here they are: 1. Learn game. 2. Increase your value as much as possible through work, effort, and persistence. 3. Be as location independent as possible (have penis, will uproot). This is the 'secret.' From the time I was 22 to about 28, I diligently worked on game, racking up god knows how many approaches. From approximately 26 to 33, I got my money right by publishing over 15 books that earn me passive income today and which allow me to pursue non-monetary goals like learning a new language. From around 28 to currently, I have researched over 20 countries in the search of poosy paradise, and while my standards seem to always stay just ahead of my results, I have drastically increased both the quality of women I've layed and the happiness of mini relationships I've ended up with. I know some guys are thinking, 'But I can't spend years to travel to find my poosy paradise!' Then you'll have to massively step up your efforts in the other two areas. If you nail at least two of the three, you should have strong results. If you can nail all three, then you are probably hitting your ceiling. Within the next few years, I will lay the highest quality girls that is possible based on who I am. Then I will enter my 40's and start seeing a decline (based on the same amount of work). It's important to note that my increase in qualitative results with women have been so gradual I can't perceive it in real time. Every couple of years it gets just a tiny bit better, a change so slow that only when I look at girls I banged several years ago do I realize the jump I've made. The sad thing is that with such a slow change, you really don't feel like you're getting better, so the struggle of yesterday always remains with you today. Tomorrow I will wake up and still have to tweak my game to deal with ever changing factors that require different strategies to attract a higher quality of women I want. I still have to keep my value high and make sure my money is good. I still have to be flexible with my location, and get ready to move away from places that used to serve me in the past but have recently changed. For most of us not born with top genetic looks or stock, the quest for great women is all encompassing, continuous, exhausting, and full of hardship. That's never going to change, and most men will say no to taking this path because it's harder than playing video games or watching sports, but for men like myself who want to enjoy its rewards, at least we know what we have to do. - Now GOP can turn the tables with this case. Felony lock-up potential for some Senators and Senior White House officials.

"- Using federal funding to hype, pump, skim and dump public stocks and manipulate the stock market. Senators and some regulators implicated in running the cover-up? Big players grabbed billions of dollars up front, for their personal pockets, while workers at the Cleantech ""bait companies"" lost their jobs and their futures."

"- Solyndra, Tesla, Fisker and Abound investors bragged about ""pulling a scrape""."

"- Vc's used taxpayer loans to fake stock values and reap massive windfalls off of felony market manipulation violations under Section 9(a)(2) of the Securities Exchange Act of 1934.""

"GOLDMAN SACHS WAS THE ""COORDINATING"" LINK IN ALMOST EVERY DEAL UNDER INVESTIGATION:"

"An extensive number of recordings, by multiple whistle-blowers, and agencies, now exist:"

"News media have speculated that the actual reason for ""the CleanTech Crash"" may have to do with a massive embezzlement scheme such as the concept shown in this published diagram:"

"FEDERAL AND INDUSTRY INVESTIGATORS DISCOVER ""PUMP AND DUMP"" AND ""PUMP AND FLUFF"" STOCK SCAMS IN THE CLEANTECH FUNDING PROGRAM:""The use of the media and the internet by a company, or it's investors, to pump that company's stocks is a felony. The use, by a company of armies of fake bloggers, paid for by that company to post false praise in order to raise that company's stocks is a felony. In the United States, this falls under market manipulation and is prohibited under Section 9(a)(2) of the Securities Exchange Act of 1934."" The CleanTech stocks that crash and then suddenly recover are getting instantly ""pumped"" with fake investor buys computer ""flashed"" to make them look like Day-traders.""Pump and dumps are illegal because you are willfully attempting to manipulate the value of a security. And if you are doing this with other people as well, it's even worse because that implies it is more of a concentrated effort to do that. An example is if you and a few buddies are looking at a stock that only trades a few thousand shares a day. Between the group of you, you trade the stock so the volume is much, much higher than what it usually is. Others will notice this and think that the stock is going up by its own merits, clueless to the fact that you and your buddies are artificially driving up the price and volume. Others start buying and drive the price further based on the artificial demand you've created, and then you sell it off and the price probably tanks to where you started or less. In a sense and your buddies would be guilty of collusion and artificially manipulating the value of the security. That's why it's not fair, and understandably, that's why it's illegal. Furthermore, pump and dumps are also carried out by people that hack into others trading accounts, sell off their assets, and use the money to buy stocks involved in the pump and dump, which has the same effect of artificially driving up the price. Source: Licensed Stock Broker <http://www.sec.gov/answers/pumpdump.htm>"

"Watch the movie Boiler Room <http://www.imdb.com/title/tt0181984/>""Nothing wrong with buying low and selling high. But willful manipulation of worthless stocks of synthetically created Cleantech facade companies, like Abound, Solyndra, Fisker, Tesla, etc... crosses the legal boundary. When lying hype drives the price of a stock

rather than financial performance of the company, the activity becomes criminal. It's considered fraud because the pumper (AKA: The Tech CEO that just got free federal cash from a kick-back program) is artificially inflating the price of a stock through false and misleading statements."''''

ENRON AGAIN: ENERGY INDUSTRY SCAMS - WIKIPEDIA

''''Pump and dump'''' (P&D) is a form of microcap stock fraud that involves artificially inflating the price of an owned stock through false and misleading positive statements, in order to sell the cheaply purchased stock at a higher price. Once the operators of the scheme ''dump'' their overvalued shares, the price falls and investors lose their money. Stocks that are the subject of pump and dump schemes are sometimes called ''chop stocks''.^[1]While fraudsters in the past relied on cold calls, the Internet now offers a cheaper and easier way of reaching large numbers of potential investors.^[1] Contents [hide]

''Pump and dump scenarios''^[edit]Pump and dump schemes may take place on the Internet using an e-mail spam campaign, through media channels via a fake press release, or through telemarketing from ''boiler room'' brokerage houses (for example, see Boiler Room).^[2] Often the stock promoter will claim to have ''inside'' information about impending news. Newsletters may purport to offer unbiased recommendations, then tout a company as a ''hot'' stock, for their own benefit. Promoters may also post messages in chat rooms or stock message boards urging readers to buy the stock quickly.^[1] If a promoter's campaign to ''pump'' a stock is successful, it will entice unwitting investors to purchase shares of the target company. The increased demand, price, and trading volume of the stock may convince more people to believe the hype, and to buy shares as well. When the promoters behind the scheme sell (dump) their shares and stop promoting the stock, the price plummets, and other investors are left holding stock that is worth significantly less than what they paid for it. Fraudsters frequently use this ploy with small, thinly traded companies?known as ''penny stocks,'' generally traded over-the-counter (in the United States, this would mean markets such as the OTC Bulletin Board or the Pink Sheets), rather than markets such as the New York Stock Exchange (NYSE) or NASDAQ?because it is easier to manipulate a stock when there is little or no independent information available about the company.^[3] The same principle applies in the United Kingdom, where target companies are typically small companies on the AIM or OFEX. A more modern spin on this attack is known as hack, pump and dump.^[4] In this form, a person purchases penny stocks in advance and then uses compromised brokerage accounts to purchase large quantities of that stock. The net result is a price increase, which is often pushed further by day traders seeing a quick advance in a stock. The holder of the stock then sells his stock at a premium.^[5] Specific examples^[edit]Jonathan Lebed^[edit]During the dot-com era, when stock-market fever was at its height and many people spent significant amounts of time on stock Internet message boards, a 15-year-old named Jonathan Lebed showed how easy it was to use the Internet to run a successful pump and dump. Lebed bought penny stocks and then promoted them on message boards, pointing at the price increase. When other investors bought the stock, Lebed sold his for a profit, leaving the other investors holding the bag. He came to the attention of the U.S. Securities and Exchange Commission (SEC), which filed a civil suit against him alleging security manipulation. Lebed settled the charges

by paying a fraction of his total gains. He neither admitted nor denied wrongdoing, but promised not to manipulate securities in the future.[6] Enron[edit]As late as April 2001, before the company's collapse, Enron executives participated in an elaborate scheme of pump and dump,[7] in addition to other illegal practices that fooled even the most experienced analysts on Wall Street. Studies of the anonymous messages posted on the Yahoo board dedicated to Enron revealed predictive messages that the company was basically a house of cards, and that investors should bail out while the stock was good.[8] After Enron falsely reported profits which inflated the stock price, they covered the real numbers by using questionable accounting practices. 29 Enron executives sold overvalued stock for more than a billion dollars before the company went bankrupt.[9] Park Financial Group[edit]In April 2007, the U.S. SEC brought charges against Park Financial Group as a result of an investigation into a pump and dump scheme during 2002-2003 of the Pink Sheet listed stock of Spear & Jackson Inc.[10] John Babikian[edit]John Babikian got rich, authorities allege, by what is known in the business as pumping-and-dumping stocks. He was operating 'AwesomePennyStocks' website and the 700,000 email push hyping America West.[11] Langbar International[edit]Started as Crown Corporation, Langbar was the biggest pump and dump fraud on the Alternative Investment Market, part of the London Stock Exchange. The company was at one point valued greater than \$1 Billion, based on supposed bank deposits in Brazil which did not exist. None of the chief conspirators were convicted, although their whereabouts is known. A Patsy who made a negligent false statement about the assets was convicted and banned from being a director. The investors who lost as much as €100 million sued one of the fraudsters and recovered €30 million. Pump and dump spam[edit]Pump and dump stock scams are prevalent in spam, accounting for about 15% of spam e-mail messages. A survey of 75,000 unsolicited emails sent between January 2004 and July 2005 concluded that spammers could make an average return of 4.29% by using this method, while recipients who act on the spam message typically lose close to 5.5% of their investment within two days.[12] A study by Bhme and Holz[13] shows a similar effect. Stocks targeted by spam are almost always penny stocks, selling for less than \$5 per share, not traded on major exchanges, are thinly traded, and are difficult or impossible to sell short. Spammers acquire stock before sending the messages, and sell the day the message is sent.[14] Pump and dump differs from many other forms of spam (such as advance fee fraud emails and lottery scam messages) in that it does not require the recipient to contact the spammer to collect supposed ""winnings,"" or to transfer money from supposed bank accounts. This makes tracking the source of pump and dump spam difficult, and has also given rise to ""minimalist"" spam consisting of a small untraceable image file containing a picture of a stock symbol.[citation needed] Short and distort[edit]Main article: Short and distortA variant of the pump and dump scam, the ""short and distort"" works in the opposite manner. Instead of first buying the stock, and then artificially raising its price before selling, in a ""short and distort"" the scammer first short-sells the stock, and then artificially lowers the price, using the same techniques as the pump and dump but using criticism or negative predictions regarding the stock. The scammer then covers his short position when he buys back the stock at a lower price.[15] Regulation[edit]One method of regulating and restricting pump and dump manipulators is to target the category of stocks most often associated with this scheme. To that end, penny stocks have been the target of heightened enforcement efforts. In the United States, regulators have defined a penny stock as a security that must meet a number of specific standards. The criteria include price, market capitalization, and minimum shareholder equity. Securities traded on a national stock exchange, regardless of price, are exempt from regulatory designation as a penny stock,[16] since it is thought that exchange traded securities are less vulnerable to manipulation.[17] Therefore, CitiGroup (NYSE:C) and other NYSE listed securities which traded below \$1.00 during the market downturn of 2008-2009, while properly regarded as ""low priced"" securities, were not technically ""penny stocks"". Although penny stock trading in the United States is now primarily controlled through rules and regulations enforced by the Securities and Exchange Commission and the Financial Industry Regulatory Authority (FINRA), the genesis of this control is found in State securities law. The State of Georgia was the first state to codify a comprehensive penny stock securities law.[18] Secretary of State Max Cleland, whose office enforced State securities laws[19] was a principal proponent of the legislation. Representative Chesley V. Morton, the only stockbroker in the Georgia General Assembly at the time, was principal sponsor of the bill in the House of Representatives. Georgia's penny stock law was subsequently challenged in court. However, the law was eventually upheld in U.S. District Court,[20] and the statute became the template for laws enacted in other states. Shortly thereafter, both FINRA and the SEC enacted comprehensive revisions of their penny stock regulations. These regulations proved effective in either closing or greatly restricting broker/dealers, such as Blinder, Robinson & Company, which specialized in the penny stocks sector. Meyer Blinder was jailed for securities fraud in 1992, after the collapse of his firm.[21]

However, sanctions under these specific regulations lack an effective means to address pump and dump schemes perpetrated by unregistered groups and individuals. References[edit]"

The SEC on Pump and dump stock Schemes in 2001
"The movie Boiler Room, a fictional account of a pump and dump company"

""One should either write ruthlessly what one believes to be the truth, or else shut up."" ? Arthur Koestler "

Solyndra and Tesla: Pump and Dump

"A Wall Street Journal article quotes an investor in the bankrupt ?green energy? boondoggle describing what the half-billion-dollar federal loan guarantee meant: ?There was a perceived halo around the loan . . . If we get the loan, then we can definitely go public and cash out.? Ed Lasky at American Thinker explains: The huge loan would be a selling point in an initial public offering. The company promoters could point out that the loan gave them credibility ? that the government had vouched for their viability and prospects. The private investors would cash out and when the loan came due and the company was unable to pay, taxpayers would be the ones left holding the IOUs. Take the money and run. It was a straight-out scam, in other words, with a major Democratic donor as one of the primary beneficiaries. An environmentally-friendly three-card monte game ? burning taxpayers instead of burning CO2."

"Solyndra Investor admits: we wanted the loan so we could 'go public and cash out' By Ed Lasky A clearer picture of the underlying insider scheme at Solyndra is beginning to emerge. Yuliya Chernova of the Wall Street Journal writes a superb column today regarding all the business problems that beset the scandal plagued Solyndra. There were a litany of engineering and business problems that were very apparent to everyone except, apparently, the White House politicos that pressured career officials in the government to extend a 500 million dollar loan guarantee. The crony investors were given an unusually low interest rate for such a venture. Solyndra was first in line to get loan guarantees under the Obama program to promote solar energy ventures. Solyndra private investors were given priority in case of bankruptcy that placed their claims above those of taxpayers -- a highly unusual occurrence, according to the Wall Street Journal. So who were the type of people granted such favorable treatment? Yes, Obama donors and bundlers. That has been widely publicized. But beyond that, what type of character did they possess? One investor behind Solyndra blurted out the truth. The loan was needed and needed urgently to fatten up the company and show a going concern (with a factory, etc). Why? From the column: There was another motivator -- Solyndra's management and investors had an eye on an initial public offering. ""There was a perceived halo around the loan,"" said an investor with knowledge of the company. ""If we get the loan, then we can definitely go public and cash out."" The huge loan would be a selling point in an initial public offering. The company promoters could point out that the loan gave them credibility -- that the government had vouched for their viability and prospects. The private investors would cash out and when the loan came due and the company was unable to pay, taxpayers would be the ones left holding the IOUs. Take the money and run. Read more: <http://www.americanthinker.com/blog/2011>"

""Almost every one of the CleanTech ""Winners"" under the Steven Chu Department Of Energy, engaged in this kind of felony grade stock manipulation and insider exploitation knowing that all of the federal law enforcement players were controlled by the insiders with a ""hands-off "" protection directive. Using newly optimized web techniques called ""Flash Boy"" stock processing and ""blog meat puppets"" they could totally manipulate the stock market and laugh in the faces of the few regulators who dared to step up. The bet that they have to make is that the Republicans do not win the majority in the 2014 Mid-Term elections....""

"Micheal Lewis best-selling book ""Flash Boys"" reveals how much of what you think is happening, on the stock market, may be contrived false-hoods created by computerized manipulations and fake coordinated skill

bloggers. The White House games the stock market to payback Silicon Valley campaign funding VC's and the GOP blows up those very games, right afterwards, in a secret dance of stock fraud tricks. They made a mistake, this time around, and the tricks became visible to everybody in the stock market world. This, on top of the Goldman Sachs sting operation recordings, shows that something is deeply wrong in Stock Land! In the coming mid-term elections we are seeing Barbara Streisand and DNC notables bemoan the reduced budgets they have to work with this year. Privately, the DNC is ringing their core finance base (The Silicon Valley Vc's) telephones off the hook. One of the most successful tactics by GOP specialists involves Tesla Motors. Called out by Mitt Romney, and other Republican notables, as White House fronts. Tesla gets strange and illogical bumps in the stock market in spite of massive numbers of lawsuits, consumer complaints, the lowest sales volume for the money invested in a car company in history, and other facts which, in a rational world, would say they should not survive. In fact, what is happening is that the backers of Tesla, the same Silicon Valley investors who pay for the White House and DNC campaigns, ""Pump"" the stock from their own bank accounts each time more bad news comes out about Tesla. There are now charges that the White House is even ""pumping the TSLA stock"", like it may have done on the supposed October 16, 2014 ""Pump"" on the overall market, in order to protect Obama's ""brand name"". This makes the stock chart for TSLA go up but it is not from mom and pop day-traders. It is ""Pumping Cash"" right out of the Vc's investment bank fronts to artificially inflate the stock. While a final Tesla bankruptcy might seem like the dream for GOP PR; allowing them to point and say ""Ha, look, another Department of Energy Crony-Kickback deal gone south"", Tesla has provided even greater grist for the GOP strategy meat-hooks. "

MUSK GREED AND HUBRIS BLEW THE SECRET:

"By forcing the Silicon Valley VC campaign backers to constantly drain their bank accounts in order to keep Tesla looking like it is still alive, the GOP strategists are also draining the life out of the funding for mid-term and 2016 Democratic candidates. The GOP finally figured out that almost all of the cash and web media manipulation was coming from one tiny spot in California: SandHill Road and the area around Stanford University. They decided that to take down the GOP they just had to expose Silicon Valley. Tesla was a test case and it worked well. The investment banks with auto refills on Tesla stock, running the investment funds for Doerr, Thiel, Westly, Draper and all the rest of the DNC VC's is running overtime trying to keep the stock pumped as one set of bad news after another gets exposed about Tesla. One GOP operative claims that every Kleiner Perkins investment has been: ""Targeted, tracked and media exposed""...""can you hear that giant sucking sound"", he says ""...that's the sound of DNC VC cash sliding into oblivion...not only are they beating a dead horse but we have infected the very horse they are beating.."" The operative claims that Musk's carve-outs for Solar, Space and batteries is his gift, by the White House for conduit-ing cash, through those, ""fronts"" back to DNC candidates. Sierra Nevada Corp is suing Musk's Space X, claiming similar industry rigging. Tesla has been under investigation by many parties. People don't like taking it in the ass unexpectedly. In this case the old adage of ""You F**ed me in the ass, so now I'm F***ing you guys in the ass tens times more.."" Seems to be the rule of the game. Thomas Roster-Palo Alto Rev"

""Flash Boys"" and the Speed of Lies - Proactiveinvestors UK"

BACK-UP INVESTIGATION DOCUMENTS- State TaskForce 6 "BACK-UP INVESTIGATION DOCUMENTS- State TaskForce 6 12,500+ pages of investigative proof of corruption: December 9, 2013 by Dr. Nora Bergstrom Earlier this month, actor Paul Walker tragically passed away when his 2005 Porsche Carrera GT supercar wrecked and caught on fire. Just weeks before, Tesla Motors (NASDAQ: TSLA) continually made headlines when several flagship Model S cars caught fire and nearly caused serious injury to the drivers. A new

study by Osurv suggests these automotive events are linked and the fires may have a deadly connection."

Three Model S fires in 30 days

"On Oct 1st, 2013 in Seattle, a Tesla Model S struck a metal object on the highway and quickly caught fire. The driver narrowly escaped. On Oct 18th in Mexico, a Model S was involved in a high speed car accident that ended with the vehicle becoming engulfed in flames. Finally, on Nov 6, outside of Nashville, another Model S ran over a tow hitch and then caught fire. All three incidents were ultimately caused by battery packs igniting from punctures and other damage. Tesla has since made engineering changes to all their cars and now offers fire coverage on an extended warranty. The upcoming BMW i3 and i8 have already been designed with special shields to protect their battery packs from this kind of damage, and the Nissan Leaf has yet to report a single fire in 60k+ vehicles in operation, presumably due to a similar construction."

Paul Walker's Porsche may have a similar design flaw

"According to new reports about the Paul Walker accident, the 2005 Porsche Carrera GT that carried him and Roger Rodas may have been leaking power steering fluid. This is typically caused by wear and tear on the steering lines (i.e. dry rot) and/or undercarriage impact damage from a road object. Since undercarriage vulnerability was the root cause for the Tesla fires, there appears to be a deeper connection between the two vehicles and the nature of their design. It is still unknown what specifically caused Rodas' Carrera GT to lose control, though some witnesses reported hearing a bang before the actual impact. This could have been caused by the car striking road debris. If this is the case, then it's possible the debris struck a vital unprotected component like on the Tesla's, initiating a chain of events that led to a deadly outcome. Due to the intense heat of the fire burning up evidence and the lack of clear video footage, we may never know what really happened."

Elon Musk has a history with Porsche

"Elon Musk, the eccentric founder of Tesla, is rumored to have owned the same model of Porsche that cost the life of Paul Walker. The photo below, from a Business Insider interview of Elon Musk, shows the exterior of his lavish estate. In the corner of the photo, tucked in the far left garage bay, is another Porsche model. Since Musk appears to be a fan, one must wonder if Porsche design served as inspiration for Model S's sleek look and potential undercarriage design issues. The cars do look remarkably similar. "

Exotic car owners take a mobile survey

"To investigate these connections, Osurv conducted a mobile survey of 248 exotic car owners in California while they attended various automotive events including Supercar Sunday, Motor4Toys, Cars & Coffee, and the Paul Walker memorial car rally. Events like these are often frequented by celebrity car enthusiasts such as Jay Leno, pictured below at Supercar Sunday. In 2005, Jay Leno lost control of a Carrera GT at a racetrack, ending in a brutal wreck. Jay walked away without a scratch. "

"In the survey, we asked several key questions exploring owners' thoughts and beliefs about their exotic cars. When asked which car manufacturer they strongly associated with Porsche design, a whopping 82% selected Tesla, 9% picked Mercedes Benz, 5% selected BMW, and 4% were spread across other manufacturers. This proves there is at least a superficial connection between the Porsche Carrera GT and the Tesla Model S. Special Osurv technology allowed for precise followup questions. Certain respondents were asked why they associate Tesla with Porsche, specifically what trait they think the two brands have in common. The majority, 65%, selected Safety. 29% selected Design and only 6% picked Engineering. Safety is apparently a very hot topic. Do you believe there is a link between Tesla's fires and Paul Walker's fiery crash

78% replied Yes
3% said No
19% were unsure

More questions than answers

"Until the National Highway Traffic Safety Administration (NHTSA) safety probe into Tesla is complete and the final Paul Walker crash scene investigation wraps up, nobody can say for sure that the two are linked. However, the survey shows that people are starting to put the pieces of the puzzle together. Whether it's an innocent trait carried over by a zealous designer or something more, only time will tell. In the meantime, prospective buyers of both Tesla and Porsche are staying on the sidelines until the smoke clears. -----

----- The Non Specialness of Tesla Anybody with a room full of engineers can start a car company and sell a few thousand cars if they get hundreds of millions of free tax dollars to kick it off. Anybody with a room full of engineers can start a car company and sell a few thousand cars if they get hundreds of millions of free tax dollars to kick it off and then use the manipulated winning of that free tax money to falsely hype the stock market. Anybody with a hundreds of millions of free tax dollars can put some batteries and an electric motor on a car. The engineering of the Tesla has failed so many times and had to redone over and over so that the car is now just a plain old electric car with a sleek body. Anybody can put a sleek body on a plain old electric car. Anybody can say Tesla is not Solyndra but Solyndra was a scam for funding and Tesla is the same scam for funding, walking distance from Solyndra, using the same people, tricks, manipulations and payoffs; thus Tesla is a non-special scam exactly like Solyndra. Peter Deakins AAMF Chicago, III"

by Ross Eisenbrey For The Economic Policy Institute

"Laura Rowley has an excellent response to the silly op-ed by Steve Cohen published in Tuesday's Wall Street Journal. Cohen wrote that paying interns to deliver clothing for photo shoots, run copy machines, or clean the green room at a TV studio is dumb. The young people doing those jobs are not employees, according to Cohen; they're simply auditioning. Cohen admits that the grunt work he and his son did in separate internships at a law firm and a magazine was "boring, mindless, repetitious" and yet, "essential to the workings of our offices." Nevertheless, Cohen says the chance to prove himself a good employee was so valuable to him, as was the exposure to a law office's operations, that his employer shouldn't have had to pay him even minimum wage. Rowley accepts Cohen's conclusion that his internship was valuable but says the experience shouldn't be limited to people like Cohen (a former media executive) and his son, who can afford to work for free. What about the kids graduating from college with \$50,000 of debt, or the children of factory workers or waitresses who can't support their grown children in New York City? Should they be denied the audition, the exposure to interesting work environments, the chance to prove themselves? My own response is more fundamental. Cohen admits that the work he and his son did was essential to the for-profit businesses that employed them. If the Cohens hadn't worked for free, someone else (in an economy with terribly high unemployment) would have had the opportunity for a paying job, and the competitors of those firms would not have been at a disadvantage because of the illegal labor cost savings and payroll tax savings the Cohens' free labor enabled. Addressing the possibility that unpaid "interns are really doing the jobs of displaced low-wage workers," Cohen admits that in the case of the recently settled Charlie Rose lawsuit, "Unskilled workers could clean up a TV-studio green room or escort guests to the elevator or assemble press packets." What he doesn't mention is that half the jobs in New York that New Yorkers are paid to do are unskilled, and the unemployment rate in New York City has exceeded 8 percent for the last five years. Cohen goes on and on about how much he learned by copying litigation documents on the office copy machine. I did that job before I went to law school 35 years ago, and I learned a lot, too; but I was paid for the work, as were the other clerks. It was an audition for later employment, but first and foremost it was a job, and the law firm followed the Fair Labor Standards Act and paid us for our work. It might be true, as Cohen predicts, that enforcing the law will mean that companies "will now be less likely to bring on interns." Good! They will have to bring on employees and pay them to do the essential work that interns have been doing, unpaid. Everyone but the partner at the top, who will have to shell out \$7.25 an hour and some employment taxes, will be better off."

Why Paid Internships Matter

Laura Rowley For The Huffington Post

"In an op-ed in the Wall Street Journal, former media executive Steve Cohen decries the class-action lawsuit against TV host Charlie Rose. The suit charged Rose's production company with failing to pay college interns a minimum wage. Cohen calls the suit ""dumb"" and the recent settlement ""worse."" (Some 189 former interns will receive back pay of \$1,100 each.) But here's a truly dumb idea: Let's reserve valuable internships for the wealthiest families alone, at a time when college costs continue to surge past middle-class family incomes and available aid. This is what Cohen effectively recommends. ""An internship isn't a substitute for minimum-wage work. It is an audition,"" Cohen writes, arguing the suit was wrong to suggest unpaid interns were really doing the jobs of low-wage workers. The interns' menial tasks -- assembling press kits and escorting guests to the elevator -- were actually quite valuable, Cohen argues. He cites his own internships during his recent law school studies -- part of which he spent copying documents. He also describes his son's unpaid magazine internship, in which he served as a ""glorified messenger."" I agree with Cohen on one point: Internships, even those involving mundane tasks, provide enormous advantages. Getting to the office on time, dressing and communicating appropriately, doing grunt work with a positive attitude and learning how to make oneself valuable to the boss are hugely important lessons. But unpaid internships add to the widening gap between the wealthy and the rest of America -- leaving talented middle-class students to flip burgers or babysit (if they can even find those jobs) while their well-heeled peers make important advances into the work world. Cohen would add internships to the exclusive array of privileges -- SAT tutors, Mandarin lessons, overseas service trips -- that upper-class students already enjoy. I did three newspaper internships in college -- at the Chicago Southtown Economist, the Peoria Journal Star, and the Milwaukee Journal. I could not have taken these jobs if they were unpaid. I was the tenth of eleven children from the south side of Chicago and the income was my ticket through a highly regarded state university. I also won several academic scholarships and my parents gave me a few hundred dollars a month to help with room and board. I watched some of my friends who didn't have that latter advantage disappear from school, unable to afford the cost. And this was in a quaint era long ago -- when one could work a full-time job in the summer and a part-time one during the school year, and with a little help from the parents, graduate debt-free. Had I followed the exact same path now, I'd be encumbered with tens of thousands of dollars in student loans -- another reason students need paid internships more than ever. Moreover, my wonderful college newspaper, The Daily Illini, was an independent nonprofit that paid students the minimum wage -- so that became my part-time gig during the school year. We put out a newspaper five days a week, and my assignments included covering the Illinois state legislature. As a result, my summer internships started with mundane transcribing tasks and ended with front-page stories. In short, the income mattered -- a lot. Three of my four grandparents came to the U.S. on a boat, and none of them went to college (one didn't make it beyond elementary school). For my family, paid internships, coupled

with hard work and common sense, served as crucial building blocks to success. It disturbs me deeply to suggest that internships should be put beyond the reach of middle-class Americans -- something we've already seen happen with housing in the best public school districts and increasingly, college educations. The middle class doesn't need more ways to fall behind. Last summer I found myself in the ironic position of subsidizing my oldest daughter, a high school student, in an unpaid internship in New York City. She did the tedious filing and organizing of the stock room -- but also sat in on a client conference call and helped managed the firm's social media. We were truly fortunate to have the means to subsidize her experience. But you will never find me on a soapbox advocating for unpaid internships. Because the concept is not only dumb -- it's un-American."

"Charlie Rose settles \$250,000 suit with interns over wages"

By STEVEN GREENHOUSE The New York Times

"Charlie Rose and his production company have agreed to pay as much as \$250,000 to settle a class-action lawsuit brought by a former unpaid intern who claimed minimum-wage violations. Under the settlement, Rose and his production company, Charlie Rose Inc., will pay back wages to a potential class of 189 interns. The settlement calls for the interns to receive generally \$1,100 each: \$110 a week in back pay, up to a maximum of 10 weeks, the approximate length of a school semester. The main plaintiff was Lucy Bickerton, who said she was not paid when she worked 25 hours a week for the 'Charlie Rose' show from June through August 2007. Bickerton said her responsibilities at the show, which airs on PBS stations, included providing background research for Rose about interview guests, putting together media packets, escorting guests through the studio and cleaning up the green room. Bickerton described the settlement as 'a really important moment for this movement against unpaid internships.' This is the first settlement in a series of lawsuits brought by unpaid interns who claimed violations of minimum-wage laws. Other such lawsuits have been filed against Hearst and Fox Entertainment. Both companies deny they failed to comply with wage- and-hour laws regarding their interns. The settlement states that Rose and his production company 'do not admit any liability or wrongdoing' and says they agreed to the settlement 'solely for the purpose of avoiding the costs and disruption of ongoing litigation and to settle all claims.' The settlement also calls for \$50,000 in attorney fees for Bickerton's lawyers. Bickerton's lawsuit was brought under New York state law, which allows plaintiffs to seek back wages going back six years, and not under federal law, which sets a three-year limit. The lawsuit noted that unpaid internships have proliferated among many white-collar professions, including film, journalism, fashion and book publishing. Workplace experts say hundreds of thousands of young Americans work as unpaid interns each year as they seek to gain experience and get a foothold in with highly desired employers in coveted industries. But some interns and labor advocates assert that many employers who use unpaid interns are violating federal and state laws by using them essentially to do the jobs of other workers and by not providing a true educational experience. Bickerton's lawsuit asserted that according to the New York State Department of Labor, 'an unpaid internship is only lawful in the context of an educational training program, when the interns do not perform productive work and the employer derives no benefit.

How Obama Killed The Democrats: His Staff Did Some Crimes That Took His Whole Party Down. More? "Featured prominently in the 60 Minutes Episode called ""THE CLEANTECH CRASH"", associated articles, a scathing U.S. Senate investigative report and multiple scathing federal GAO investigative reports is the fact that hundreds of billions of dollars were exclusively directed to Obama's, Reid's and Feinstein's campaign backers in TARP, DOE and other specialized programs. The scheme is said to have been arranged by the folks who talked Obama into running: Rahm Emanuel, Steve Rattner, David Axelrod, Valarie Jarrett, Robert Gibbs, and Bill Daley. All of them bailed out of the White House, aside from VJ, as soon as people started figuring out that something was fishy. You will notice that, over time, no heavy-hitters have since been willing to join the White House. The Tier 1 showboats were the first team. Once word was out that organized crime operations were going on in the West Wing, everybody knew that whoever was there when the prosecutions came down were going to lose their careers. So now you have a West Wing full of low level people, some at nearly intern-level skillsets, who can't go

through a single month without mismanaging DC into some crisis or other. The White can't get any high level new people for two reasons: 1.) actually skilled new senior level people will figure out that a crime was committed, and covered-up, and either bail-out or rat-it-out. 2.) Really good people are not going to come on-board a sinking ship where the rats have already crawled to the exits. The crime was a kickback scheme to reward Silicon Valley with massive numbers of contracts, grants, tax credits and tax breaks in exchange for campaign ""resources"". It has been uncovered, it has failed and Eric Holder, who was hired to cover it up, has headed for the door while the GOP has now acquired the power to open EVERY covered up file folder, hard-drive and, finally, get those subpoena's responded to. Bigger than Watergate? Yes! How a Secret GOP Technical Team Destroyed Google's Democrat election manipulation algorithm and took the Senate back on Election Night! - Google backers funded Obama campaign in exchange for ""favors"". - Google backers had Google techs rig Google so it hurt the GOP and helped the DNC in first Obama election. - GOP went to Silicon Valley and hired some of the people that rigged Google for DNC. - GOP Techs figured out how they did it, thanks to pissed of Santorum consultants, who examined why Google made Santorum come up as butt sex on all Google searches - GOP Techs then built counter-measures servers and software and ran it against DNC Google systems during time just prior to Mid-Terms - GOP took Senate back in Mid-terms and Obama cried. - Public is now highly suspicious of Google and it's ""Spy Programs"". Public not happy with being manipulated by internet.

Inside the GOP's secret school

"By Peter Hamby, CNN National Political Reporter"

"Priebus: ""People need to be trained and disciplined."""
STORY HIGHLIGHTS

GOP media operations have lagged behind Democrats for the past two presidential elections

Overwhelming disdain of market corruption by billionaires follows Fisker hearing. "Overwhelming disdain of market corruption by billionaires follows Fisker hearing. In the days following the Fisker hearing nearly a thousand articles, and counting, have emerged condemning the buying of the auto market by billionaires and corrupt politics. Tens of thousands of reader comments show that the American public has had it with unfair fixing of markets by the 1% ego-driven Stanford men who tried to control the next auto opportunity. The billionaires have been shown to be more concerned about their personal image more than the needs of the consumer. Building rich-boy jock-cars and avoiding the family SUV that is so strongly demanded. It has now been revealed by emails, letters and daily increasing volumes of evidence that these elite billionaires paid to get their companies favored, to get their competitors cut-out of the process and to buy the perception that they were ""Winning"". Newly discovered documents show Tesla failed all reviews and was only funded because White House staff ordered DOE to fund in order to compensate Tesla investors for campaign contributions. "Newly discovered documents show Tesla failed all reviews and was only funded because White House staff ordered DOE to fund in order to compensate Tesla investors for campaign contributions. New discovered documents show that, at the time Tesla applied for DOE funds, it failed its technical, financial, asset, collateral, and merit reviews but was pushed ahead of others because of orders from on high. Tesla's original application documents, emails and

reviewer discussions along with emails from Wells Fargo, Deloitte, Secretary Chu, Steve Rattner, Rahm Emanuel and Tesla investors have now been sourced and they reveal that Tesla exists today because of criminal actions in the past. Freedom of Information Act releases from associates agencies and investigators show that Tesla broke federal laws for SEC disclosure, lobbying, SFL filings, insider trading and a variety of other actions. Prosecution and investigation of these acts has been ordered to be delayed by those who will be embarrassed by the revelations. Anybody with unlimited ""protection"" and hundreds of millions of free tax payer dollars and stock market rigging can start and run a company to make cars. Tesla is no success, Tesla is a scam. Tesla has also been shown, via forensic audit, to have cooked its financial statements in order to make it look better than it is actually doing in finance marketing to seek to sell stock. more to come... How To Make Your Own MAGIC LEAP augmented reality experience? "If you have seen the MAGIC LEAP Demo with the miniature elephant dancing in someones hand, now you can make your own, with just your smartphone and rudimentary additive programming. There are many augmented-reality (AR) software APPS. You can easily find them by searching that term on any App Store. The problem with the first generations AR apps is the mapping of the added images was crude. Now programmers have the keys to fix that. The process involves using the camera image to also gather light fields and match those fields to the added object or over-laid video. With position mapping and a device as basic as a torn apart Kinect Sensor, you can have a system even better and more interactive than the Magic Leap. In the massive number of sudden UFO videos on YouTube, the reason all of the fake UFO's suddenly look very real is that they have proper shadows and lighting that comes from the same direction. The older fake UFO images from 5 years or so back were not that convincing because the lighting of the UFO was bad. Modern, leaner lighting calculation algorithms make it look much better with much easier coding. So Magic Leap got insane amounts of money from relatively dumb VC's who are good at working the stock market, but bad at understanding technology. If it dazzles them it gets dollars. You can see them talk about it in an ""it's so cool, man"" dynamic and they clearly do not understand that it is not that hard to do. Magic Leap-like Demos have already taken place in Asia and Europe produced by competing companies. It is amazing that Google poured so much cash into it without realizing that it can be easily created with many different processes. Magic Leap's filed patents only disclose one way to accomplish the feat. Buy the first, pricey Magic Leap system or... wait for Korea to ship over the much lower cost copy cat.. or just DIY! <http://greencorruption.blogspot.com>"

Ebola: Solyndra is dead and politics is alive

"As the Ebola epidemic ravages West Africa, it has also wreaked havoc on the sanity of American citizens across the nation. Fear and loathing has crept in, especially in light of how the Obama administration has mishandled, and seems to be scrambling behind this deadly disease since it reached Dallas, Texas on September 20, 2014 ?? and as of late, hit New York City. This despite the fact that about two weeks prior to Ebola landing on American shores, President Obama had comforted our nation with the following statement that eventually made Chris Matthews, host of the talk show, Hardball, which airs on the left-wing channel MSNBC, and one of the president's biggest fans, squirm. First and foremost, I want the American people to know that our experts, here at the CDC and across our government, agree that the chances of an Ebola outbreak here in the United States are extremely low. We've been taking the necessary precautions?In its wake, the Ebola outbreak began raging through the midterm elections, even dominating the recent Sunday show circuit. But the astonishing moment came when the Left shamelessly started blaming the Ebola crisis on Republicans. This included an October 12 ad called ""Republican Cuts Kill,"" which was produced by the left-wing group, The Agenda Project. According to Real Clear Politics, ""[The] ad, featuring clips of Mitch McConnell, Pat Roberts, and many other Republicans implies that austerity cuts to the Centers for Disease Control and National Institutes of Health are responsible for the 2014 Ebola outbreak."" Meanwhile, Accuracy in Media took aim at this nonsense by exposing pertinent data on the topic, but also gave this counter: The Washington Post's fact-checker Glenn Kessler calls the arguments in this ad, and the similar strategy by the Democratic Congressional Campaign Committee of blaming Republicans for cuts, ?absurd.? He bestows such claims with four Pinocchios. Nevertheless, shortly after this ad hit the airwaves, during opening statements at the October 16 House Energy & Commerce Subcommittee on Oversight & Investigations hearing about the U.S. response to Ebola, ""Democrats on the committee already seem to have identified one of the culprits."" Again, blaming the GOP. One Democrat in particular that stood out was California Rep. Henry Waxman, pleading for ""NO PANIC and NO POLITICS."" However, Waxman took to the stand by also blaming ?funding cuts? for increasing the Ebola threat ? even pointing his misinformed political finger at sequestration. Waxman said: ?All of these were also subject to the sequestration. And those who allowed that

sequestration to happen by closing the government have to answer to the American people as well.? Clearly, Mr. Waxman doesn't allow facts to enter in when attempting to score political points ?? or maybe he didn't get the memo. First, according to The Washington Examiner, ""sequestration was already in place when the government shutdown of October 2013 began."" Second, the truth is that sequestration came straight from the Obama White House. Remember back in February 2013, when Bob Woodward said this: ""Sequester was President Obama's idea."" In fact, ""It was Obama and Jack Lew and Rob Nabors who went to the Democratic Leader in the Senate, Harry Reid, and said, 'this is the solution.'"" While I'll leave the Center for Disease Control (CDC) bashing ?? big bonus and all ?? for my twitter page, such as the fact that CDC director Dr. Frieden, who was initially giving the Ebola Intel, reminded me of Baghdad Bob, the Iraqi Misinformation Minister, there is more to this Ebola story. Toxic Scandals Now labeled ""a toxic president"" ?? and not just because of this deadly disease ?? but for the toxic scandals that have swarmed the Obama White House since the beginning of their reign. This ranges from the deadly; such as Fast & Furious, Benghazi, and the ""Taliban Five Swap."" Then there's the IRS targeting; ObamaCare lies; spying on the press; hacking inside reporters' computers; as well as leaving the U.S. border open and in utter chaos ?? even as the Obama administration ""lurches from crisis to crisis."" One last thing to consider is what Michael Goodwin of the New York Post wrote: ""Don't forget 'shovel-ready jobs' to justify a trillion-dollar boondoggle."" This is the American Recovery and Reinvestment Act of 2009, which is known as ?the stimulus bill? and was used to push and begin to pay for the Obama Regime's deceptive and expensive clean-energy revolution that included \$100 billion of taxpayer money. Even so, Obama's October 17th move is worthy of another Green Corruption File, because it leads to one of those Top Ten Obama Scandals. In the face of a massive medical emergency, the president appointed a ""political hack as the Ebola Czar,"" which is, by the way, a paid position. And, after skipping two White House meetings of the Ebola response team since his appointment, Ron Klain officially began on October 22, yet was missing in action until Wednesday when he ""surfaced at an Ebola messaging event."" This pick is best introduced by Derek Hunter in his Townhall.com piece entitled: ""Ebola: Politics, Failure, And Opportunism:"" The appointment of Ron Klain as Ebola czar shows the president is more interested in appearing to take Ebola seriously than actually doing so. Klain is a Democratic Party operative, lawyer and former chief of staff to both Al Gore and Joe Biden who has zero medical background. On top of that, this vital new czar won't be reporting directly to the president at all."" Why in the hell did the president pick a lawyer to be the Ebola Czar " is the million-dollar question posed by Representative Trey Gowdy as well as pundits, politicians and those citizens paying attention. Obviously, this was a political move. After all, there is an election right around the corner, and since the GOP has an edge in a tight race for Senate control, Democrats desperately need cover. Even as the criticism rages on, there is more to share about Mr. Klain, starting with what was noted by Power Line: ""He was the ""debate preparation advisor to Barack Obama and Bill Clinton, as well as Al Gore and John Kerry. Klain was General Counsel for the Gore Recount Committee in 2000."" Klain's long political pedigree also includes his role as a ""long-time lobbyist,"" which was documented by The Federalist Papers: ""In January of 2011, Klain stepped down as chief of staff for Vice President Joe Biden. Before that, Ron Klain was a well-connected Washington lobbyist. According to Senate lobbying disclosure records, Klain's clients included Fannie Mae, U.S. Airways, Time Warner, CIGNA, and Imclone."" In addition, ""Klain has remained a familiar presence at the White House, making roughly 75 visits there between January 2011, when he stepped down as Biden's top aide, and June 2014, according to visitor logs,"" wrote the Calgary Sun. But that's not all: Klain ?? also a global warming alarmist ?? was deeply involved in the Solyndra boondoggle. And just when you thought that the Obama Regime's massive green energy scandal was dead?. Solyndra: March 2009; ""NOT Ready for Prime Time"" Ancient news? Yes, but since the Solyndra scandal broke, it has been reported on in drips. What's compelling is to see the story in its entirety. And, while the Solyndra tale would require an entire book to cover all the dirty details, there are some key points, key players and additional data pertinent to the cronyism and corruption surrounding it, that most may have missed. First, here is a quick timeline of some key dates on the Solyndra \$535 million Energy Department's deal that began as early as 2006 until it went down at the end of August 2011."

"2006: Solyndra Loan-Review Process begins under the 2005 Title XVII Loan Guarantee Program created (as part of EPAct 2005), created by President Bush"

"January 20, 2009: Obama administration takes office"

"February 17, 2009: Under the Obama administration, Section 1705 Loan Guarantee Program created and financed by the American Recovery and Reinvestment Act (ARRA)"

February to March 2009: DOE continues to negotiate terms/conditions with Solyndra

"March 2009: Those at the Office of Management and Budget (OMB) said about Solyndra, "[t]his deal is NOT ready for prime time

"March 20, 2009: Energy Secretary Steven Chu announces the ""offering"" of the \$535 million loan guarantee to Solyndra, which came from the stimulus created 1705 Section"

"September 4, 2009: Vice President Biden announces the finalization of Solyndra's \$535 million loan guarantee"

"May 26, 2010: President Obama visited the California Solyndra plant, proclaiming: ?The true engine of economic growth will always be companies like Solyndra.

May 2010 to August 2011: Tons of things occurred...

"August 31, 2011: Solyndra goes bankrupt "

"Second, the Washington Free Beacon recently exposed Klain's ties to a secret liberal dark money group via the Third Way, which is a progressive think tank, and where the head of the Energy Department's loan program, Jonathan Silver, also went ?? only for the ""Ebola Czar to vanishes from Democracy Alliance website"" shortly thereafter. Additionally, the Beacon revealed that ""Klain is also on the Board of Directors for the Center for American Progress [CAP] Action Fund."" Most know that CAP is the powerful left-wing think tank that has been closely aligned with the Obama White House as far back as the 2008 Obama-Biden Transition Team. ""CAP Fellows"" have held and continue to hold key positions inside the Obama administration. This past May I unleashed a Green Corruption File on CAP as ""the dark, driving force behind the president?s massive green energy scheme,"" so today's focus will be on the fact that Mr. Klain was a key player inside the Solyndra ordeal, which also includes additional CAP cohorts. Keep in mind that President Obama and his administration have continually ""guarded"" the Department of Energy's (DOE) \$32.4 billion Loan Guarantee Program since it came under fire in September 2011 ?? even defending the failed, scandal-ridden solar firm Solyndra, implying that the \$535 million DOE stimulus loan that was finalized in September 2009, was based NOT on political influence, but ""on the merits."" Moreover, since Solyndra began seeking a government loan in 2006, those on the Left have attempted to blame President Bush ?? but what else is new. Obviously, Bush has been gone since January 2009, and it was the Obama administration that, via the February 2009-Stimulus Bill, created and financed Section 1705 of the loan program, which is where Solyndra got the cash. Merits? If Solyndra was so worthy, than why do we find inside the August 2012 Energy and Commerce Committee Report, The Solyndra Failure, which gives an in-depth, chronological timeline and narrative of this shady deal (147 pages worth), that in early March 2009, those at the Office of Management and Budget (OMB) had this to say about Solyndra: "[t]his deal is NOT ready for prime time? [p. 31]? This interaction was in response to those rushing the Solyndra loan for a presidential PR event [pp. 17 - 32], of which it seems that the DOE stimulus advisor, Matt Rogers, was at the helm and will be addressed later, but here is a clip: On March 6, 2009, Mr. Rogers emailed Ronald Klain, Vice President Biden?s Chief of Staff, and Rod O?Connor, Chief of Staff to Secretary Chu, regarding the timetable for Solyndra?s application. In that email, Mr. Rogers stated ?we are on track to have potus announce the first doe loan to solyndra a thin film solar mfg in la on march 19, assuming their board approves the terms this monday. But the report also reveals the following [p. 31]: The Solyndra board approved the terms of the Solyndra loan guarantee on March 19, 2009. As discussed above, DOE stimulus advisor, Mr. Rogers, emailed Mr. Klain to inform him of this event, and stated that the agreement was ?setting us up for the first loan guarantee conditional commitment for the president?s visit to California on the 19th.? Mr. Klain then forwarded this email to OMB staff to ask their thoughts on the announcement. Mr. Nabors responded that ?[w]e are working to get a legal read quickly,? and summarized the process for moving a conditional commitment through DOE, the OMB, and Treasury. In addition, Mr. Nabors asked Sally Ericsson, Associate Director of Natural Resources Programs at OMB, including the DOE Loan Guarantee Program, to ?expedite the conversation? and noted that if he ?need[s] to pull this off the track, its [sic] needs to be within the next few hours.? Ms. Ericsson responded that ?[t]his deal is NOT ready for prime time,? and explained that OMB staff had yet to see the ?the draft Term Sheet (or any of the negotiated terms), the independent engineer?s report, or the independent market assessment.? At any event, the president's ""green Recovery-Act"" photo op date changed to May 26, 2010, because as the emails show, Obama was traveling to a different part of California. However, despite not being ready for prime time, the loan-review

process was rush, and the conditional commitment went forward when on March 20, 2009, then-Energy Secretary Steven Chu made a special announcement offering \$535 million of taxpayer money to Solyndra. And if this deal was based on merit, then why did Solyndra, on August 7, 2009, receive a non-investment grade by Fitch? Yet, even then, they moved forward to close the deal. The August 2012 Solyndra Investigation [pp. 35 - 41], is where it's discovered that in August 2009, the White House and the DOE were scheduling a "Solyndra closing announcement event," which included the presidents participation prior to the OMB's review and approval of the Solyndra loan guarantee." It turns out that this was the bright idea of President Obama's former chief of staff Rahm Emanuel, which is documented below:"

""POTUS involvement was Rahm's idea"" [p. 38]."

?Rahm was super hot for this? because ?[j]obs and high tech and Recovery Act is a winning combination? [p. 39].

"Here is some of that interaction: Only three days after Fitch issued its credit rating for the Solyndra loan guarantee, [this was on August 7, 2009, when Fitch assigned the Solyndra loan guarantee project, known as Solyndra Fab 2, LLC, a rating of ?BB-,? which Fitch explained was ?Speculative? under Fitch's rating definitions], Aditya Kumar, the Director for Special Projects in the office of White House Chief of Staff Rahm Emanuel, emailed James Carney, then-Communications Director to Vice President Biden, Elizabeth Oxhorn, then-Spokesperson for the Vice President on Recovery Act-related issues, and Mr. Klain on August 10, 2009, about the Solyndra closing. In particular, Mr. Kumar asked about the ?announcement value? in the event, noting that the loan guarantee ?will lead to thousands of new jobs? and would be the first DOE loan guarantee closing using Recovery Act funding. Mr. Klain responded the same day, stating that ?[t]his is great? and asked when the Vice President and President would next be in California. [p. 35] By August 17, 2009, it appears that the White House had decided to move forward with an event at Solyndra that would feature remarks by the President. On August 17, 2009, Mr. Kumar emailed two scheduling and advance staff for the President, Alyssa Mastromonaco and Danielle Crutchfield, and stated that ?Ron [Klain] said this morning that the POTUS definitely wants to do this (or Rahm definitely wants the POTUS to do this)? DoE says they should be ready to go by 8/28 or soon thereafter.? Mr. Kumar asked about the President's availability in early September for an appearance via satellite at the event, and indicated that the Solyndra event ?passed vet by the VP team.? [pp. 36 & 37] After discussing a possible announcement event with DOE, documents produced by the White House show that Mr. Kumar became aware that Heather Zichal, a top deputy to White House Office of Energy and Climate Change Policy Director Carol Browner, had concerns about the Solyndra event... [p. 37] From what I gather, the issues that they were dealing with even after the March 20, 2009 announcement, were ""funding community concerns about Solyndra,"" as well as other concerns, specifically, ""the finance question, the jobs numbers, and the fact that the Solyndra guarantee had already been publicly announced at the time of conditional commitment."" Around that time (August 19 or 20, 2009), Steve Spinner, the DOE Loan Programs Advisor to then-Energy Secretary Chu, who will be profiled later, decided to handled the concerns this way [pp. 37 & 38]: ...[Spinner] he forwarded to Mr. Kumar a list of Solyndra's major investors and a Forbes.com biography of George Kaiser. Mr. Kaiser is the billionaire investor behind Argonaut and a contributor to President Obama. The report also notes the following [p. 39]: As Mr. Kumar attempted to address the funding community concerns with DOE and White House staff, Ms. Zichal contacted Ronald Klain about the event. In an email dated August 19, 2009, Ms. Zichal asked Mr. Klain if he was ?pushing for POTUS to do this Solyndra announcement via video?? Ms. Zichal stated that she had learned about the event from Mr. Kumar and wanted to know ?who actually wants this.? Mr. Klain explained that ?Rahm was super hot for this? because ?[j]obs and high tech and Recovery Act is a winning combination.? Ms. Zichal stated that she was ?worried? about the event because she felt it would not be ?sexy? to the press given that the Administration previously had announced the conditional commitment to Solyndra. In addition, Ms. Zichal stated that ?folks in the financing community? had also raised concerns about the Solyndra loan guarantee, ?[b]ut if Rahm wants it, we'll make it happen.? Ms. Zichal stated that her understanding was that the event would include appearances by Secretary Chu and Ms. Browner and that the President would appear via satellite. This section of the report concludes with this [p. 41]: The White House's decision to move up the Solyndra closing event to September 4 [instead of September 8] was made on the same day that DOE briefed OMB on the Solyndra loan guarantee. This decision ? to schedule the event before OMB had begun its review ? put pressure on OMB staff to quickly approve the Solyndra loan guarantee and ultimately impacted the quality of their

review. Additionally, The Washington Post reported that "Thomas Baruch, a Solyndra board member and owner of a company that held millions of dollars of Solyndra stock, reportedly met with Emanuel at least once in 2010 and scheduled a later White House meeting. At least three companies in which he invested received federal assistance." Despite the fact that this was an extremely risky investment, Solyndra's \$535 million loan guarantee had been finalized on September 4, 2009. At that time, they snagged a special appearance by Vice President Biden, who spoke at its groundbreaking ceremony via live video, and had this to say: This announcement today is part of the unprecedented investment this Administration is making in renewable energy and exactly what the Recovery Act is all about... By investing in the infrastructure and technology of the future, we are not only creating jobs today, but laying the foundation for long-term growth in the 21st-century economy. Then on May 26, 2010, Solyndra received another White House endorsement, but this came directly from the top, when President Obama and Energy Secretary Chu visited Solyndra's California plant. At that time, "each described the company as a model of the administration's effort to create millions of new 'green' American jobs." More like jobs lost in the case of Solyndra. But those so-called green jobs were just a ruse behind the green energy scam. Initially, between 2009 and 2011, the DOE guaranteed \$34.7 billion of taxpayer money to 33 clean-energy projects. However, at this point, and not counting Cape Wind that just snagged \$150 million, the Energy Department has doled out 32.4 billion of taxpayer money to 31 clean-energy projects. And, since the Obama administration sold the 2009-Recovery Act as a "jobs creator," in calculating just the 1705 loans ?? after eliminating SoloPower and Prologis (both loans pulled) ?? this stimulus-created program, that once was at \$16 billion, so far cost taxpayers about \$14.4 billion. The kicker is that it has only generated 696 jobs, which is about \$20 million per green job. Research confirms that every Obama chief of staff, staffers across numerous agencies, government watchdogs, even Solyndra investors knew that the risks were too high for taxpayers.? Also, iWatch News and ABC reported in May of 2011, "that the Department of Energy bypassed important steps meant to protect taxpayers in awarding that loan guarantee to Solyndra." Nevertheless, the Solyndra ordeal eventually became a public relations nightmare that included a loan restructuring, which is an apparent violation of the law, and even a plot to hide the company's troubles from the 2010 midterm glare. And if you dig into the August 2012 Solyndra Investigation or even its press release, there is much more damning evidence such as: "The Department of Energy ignored critical red flags about Solyndra's financial condition prior to closing the loan guarantee in September 2009." And this gem: "The DOE closed the Solyndra loan guarantee and moved forward with Solyndra's second loan guarantee application before DOE had the capability to monitor the first loan guarantee." Just about two years after snagging the big DOE loan, on August 31, 2011, Solyndra went bust ?? and get this... "required a big hazardous waste cleanup after it went bankrupt and abandoned its property." We also know that Solyndra also snagged \$25.1 million in California tax credit. And, in June 2011, that taxpayer-funded Export-Import Bank "provided \$10.3 million in renewable express financing for the California-based Solyndra's Solar exports to Belgium." Taxpayer money lost: The DOE loan drawn was \$528 million, while the monies recovered was \$0. Furthermore, there was an October 2012 analysis by the Institute for Energy Research regarding the Solyndra damage that predicted that the loss to taxpayers "could be as high as \$849 million." In the meantime, the Heritage Foundation places the Solyndra bad bet at \$570 million. Solyndra became a cautionary tale of sorts: a failed Obama green investment, one of the first to go kaput, unethical executive bonuses included, leaving in its wake FBI raids; a trail of resignations; executives taking the Fifth before Congress; and damning emails ?? all evidence that this president's clean-energy deals are dirty. Solyndra, which came from humble junk beginnings, now has its place in history: an art exhibit at the UC Botanical Garden at Berkeley, at the price tag of half a billion taxpayer dollars. Solyndra Key Players While Mr. Klain is a key player, The Washington Post, in their December 2011 "Greenlighting Solyndra" graph, lists more players inside the Solyndra Saga that were "interconnected in many ways, as investors enjoyed access to the White House and the Energy Department." Those include three key areas:"

"1. The White House: President Obama, Vice President Joe Biden, Ron Klain, Rahm Emanuel, and Valerie Jarrett"

2. The Department of Energy: Stephen Chu and Jonathan Silver ?? with Steve Westly in the middle

"3. Solyndra investors and staff: George Kaiser, Steve Mitchell, Thomas Baruch as well as Christian Gronet and Brian Harrison"

"However, there are more names to divulge, which include Steve Spinner, David Prend, Matt Rogers, Goldman Sachs, Top D.C. Lobbyist McBee Strategic Consulting, and Fred P. Hochbergm, the Chairman and President of the Export-Import Bank. Yet, I'm sure that these names and the information I am about to share, only scratch the surface. Ron Klain: Vice President Joe Biden's Chief of Staff, from January 20, 2009 (appointed in November 2008) to January 14, 2011"

Board of Directors for the Center for American Progress [CAP] Action Fund.
Trustee for the Third Way
October 2014 Ebola Czar

"First, in their September 2011 piece entitled, "'Emails: Obama White House Monitored Huge Loan to Connected' Firm,'" ABC News reported on Klain's part in securing the initial \$535 million DOE stimulus loan, which was six months to its final approval. This was briefly addressed in the Solyndra opening of this post, but is worth reiterating: Newly uncovered emails show the White House closely monitored the Energy Department's deliberations over a \$535 million government loan to Solyndra, the politically-connected solar energy firm that recently went bankrupt and is now the subject of a criminal investigation. Internal emails uncovered by investigators for the House Energy and Commerce Committee that were shared exclusively with ABC News show the Obama administration was keenly monitoring the progress of the loan, even as analysts were voicing serious concerns about the risk involved. "'This deal is NOT ready for prime time,'" one White House budget analyst wrote in a March 10, 2009 email, nine days before the administration formally announced the loan. "'If you guys think this is a bad idea, I need to unwind the W[est] W[ing] QUICKLY,'" wrote Ronald A. Klain, who was chief of staff to Vice President Joe Biden, in another email sent March 7, 2009. The "'West Wing'" is the portion of the White House complex that holds the offices of the president and his top staffers. Klain declined comment to ABC News. But this is just the beginning. In two deeply disturbing accounts (reminders) of Klain's participation in Solyndra, we discover that in 2010, "'Klain, then Vice President Joe Biden's chief of staff, was right in the middle of the administration's poor and controversial handling of Solyndra's bankruptcy'" ?? documented both PJMedia as well as The Daily Caller. Despite the Obama White House's full knowledge of Solyndra's financial woes, which included Communications Director Dan Pfeiffer and senior adviser Valerie Jarrett and Vice Presidential Chief of Staff Ron Klain, on May 26, 2010, President Obama visited the California Solyndra plant, where he proclaimed, 'The true engine of economic growth will always be companies like Solyndra.' Prior to this special visit, more emails revealed that while the White House was worried about Solyndra's solvency, Mr. Klain was willing to take the risk ?? financially (with taxpayer money) and politically (with the president's visit). Townhall.com gives another interesting observation surrounding Klain's part at this juncture; May 25, 2010 and President Obama's special visit: Much of the criticism for Solyndra came from the Office of Management and Budget where one key official said in an e-mail that the Department of Energy was "'completely oblivious'" about the company's financial troubles, warning the White House that "'bad days are coming.'" But the political skids were greased for the project in 2010 and Obama planned to tour the plant to promote his jobs program as a huge success. Still, the warnings continued. A former California state controller wrote to Obama senior adviser Valerie Jarrett in May 2010, voicing concerns that this was not a viable firm. "'I just want to protect the president from anything that could result in negative or unfair press,'" he said. Jarrett, one of the president's closest aides, relayed the message to Klain, saying "'We clearly need to make sure that they are stable and solid.'" Klain checked further with DOE officials who insisted the company was "'strong,'" but with this troubling warning: "'the company is okay in the medium term, but will need some help of one kind or another down the road.'" Nevertheless, despite all of these doubts, Klain gave the project and Obama's visit a qualified green light the day before the president toured the plant. Meanwhile, Fox News, in November 2011, reported the series of emails that were provided to the House Energy and Commerce Committee from individuals tied to Solyndra. This evidence "'offered striking characterizations about running strategy with the White House to secure assistance'" for the failed solar energy firm. Fox News goes on: "'Emails among George Kaiser, head of the George Kaiser Family Foundation; Ken Levit, the executive director of the Foundation; and Steve Mitchell, who manages Argonaut Private Equity and was a member of Solyndra's board; show that Vice President Joe Biden's office were very gung-ho'" about Solyndra ?? "'it was one of their prime poster children.'" During the time that Klain was Biden's chief of staff, the following email interactions were found, which occurred in 2010, and just a few months prior to President Obama's May 26, 2010 Solyndra visit. "'They about had an orgasm in Biden's office when we

mentioned Solyndra,"" reads a Feb. 27, 2010, email from Levit to Mitchell. A follow-up email from Mitchell to Levit later that day responds with: ""That's awesome! Get us a (Department of Energy) loan."" According to exchanges obtained by Fox News, in an email from Mitchell to Kaiser on March 5, 2010, Mitchell writes that ""it appears things are headed in the right direction and (Energy Secretary Steven) Chu is apparently staying involved in Solyndra's application and continues to talk up the company as a success story."" In a Feb. 27, 2010, message from Levit to a party whose name has been redacted, Levit writes that there was a meeting with a group of people in ""Biden's office -- they seemed to love our Brady Project -- also all big fans of Solyndra."" In an email from Mitchell to Kaiser on March 5, 2010, Mitchell writes that ""it appears things are headed in the right direction and Chu is apparently staying involved in Solyndra's application and continues to talk up the company as a success story."" George Kaiser: 2008 Obama bundler "

"George Kaiser Family Foundation (GKFF), whose primary investment arm, Argonaut Private Equity, was Solyndra's largest shareholder"

"In 2008, it was listed that Solyndra's investors included Argonaut Private Equity, Artis Capital Management, CMEA Ventures, Madrone Capital Partners, Masdar Clean Tech Fund, Redpoint Ventures, RockPort Capital Partners, U.S. Venture Partners, and the Virgin Green Fund. What's key to this story is George Kaiser. He's an Oklahoma billionaire, who gained his net worth by being the president and CEO of Kaiser-Francis Oil. Kaiser is also the founder of Argonaut Private Equity, a private equity and venture capital firm listed above. According to The Washington Post, ""The primary investors in Solyndra were groups linked to Kaiser: the family foundation, where he is the primary funder; and the investment firm Argonaut Private Equity."" Needless to say, the Huffington Post, a while back, also noted that, ""Kaiser was a bundler for Obama's 2008 campaign, raising between \$50,000 and \$100,000 for the president."" Kaiser was also ""a frequent White House visitor in 2009 and 2010."" In fact, ABC News reported in October 2011: Questions about Kaiser's 16 White House visits ?? including four that occurred in the days and weeks before the Energy Department approved Solyndra's loan ?? have been the focus of significant attention since Solyndra declared bankruptcy. And while White House officials have continually denied that Kaiser talked about Solyndra during any visits, it was later revealed by the House Energy and Commerce Committee that this was false. Even the left-leaning Huffington Post, in November 2011, had to admit that emails released by the committee at that time ""contradict repeated assurances by the Obama administration that the donor, George Kaiser, never talked about Solyndra Inc. with the White House"" ?? both leading up to the initial \$535 million loan guarantee or when they were seeking a second federal loan. But there's more? Around the time that Solyndra went bust toward the end of August 2011, The Gateway Pundit revealed the following: Top Obama bundler George Kaiser made multiple visits to the White House in the months before the company was granted a \$535 million loan from the government. And top Solyndra officials also made numerous visits ? 20 ? to the White House, according to logs and reporting by The Daily Caller. Solyndra officials in the logs included chairman and founder Christian Gronet and board members Thomas Baruch and David Prend. The company secured the \$535 million loan despite the fact that it was widely known Solyndra was in deep economic trouble and had negative cash flows since its inception. Interestingly, David Prend leads to the Energy Department insiders that were either tied to, or influenced this half-billion DOE deal ?? in some cases both. DOE Insiders Tied to and/or Influenced the Solyndra Deal Jonathan Silver, Executive Director of the DOE Loan Programs Office, from November 2009 to early October 2011 "

Reported to be an Obama bundler
Third Way Fellow

"Due to his powerful position inside the DOE, I've written extensively about Mr. Silver since July 2010 when I first began unleashing my green corruption research, which included the news that a number of Venture Capitalists (VC) jumped ship in the summer of 2009 in order to join the Obama administration and begin executing the president's green power policy, including Jonathan Silver. However, it was the July 2012 Oversight Committee hearing when Silver's shady email practices were revealed, that heated up my efforts in tracking the Executive Director, which includes reports that he was an Obama bundler as well as the fact that he has quite the impressive background. Here is the brief rundown: As noted by Barron's Magazine in 2010, ""Silver had been a managing partner at Core Capital Partners [and co-founder] in Washington."" Coincidentally, one of his

colleagues there was Tom Wheeler, who was two-time Obama bundler, and was part of the Obama-Biden Transition Team. We also know that Silver's wife has served as financial director of the Democratic Leadership Council, and that the couple hosted a party to promote Al Gore's environmental advocacy group, the Alliance for Climate Protection. This party (fundraiser) surrounded Silver's vetting process (September 2009), in which he invited two key DOE officials. Silver was appointed as the Executive Director of the DOE Loan Programs Office in November 2009, and resigned in early October 2011, amidst the "Solyndra \$535 Million Saga" ?? even testifying in September 2011, on Solyndra's behalf. At the time of his resignation, POLITICO reported that Silver "stepped down to become a distinguished visiting fellow at Third Way." This is the same progressive think tank with ties to the Democracy Alliance (dark money) that Mr. Ron Klain was part of, yet it seems both Klain's and Silver's bios are gone. Considering that there is much to be said about Silver's just shy of a two-year stint at the DOE, we do know that according to the Center for Public Integrity, "Silver had portrayed the Solyndra financing as a good bet for the public even as the company was falling apart financially behind the scenes." Despite his resignation, Silver not only appeared before Congress in September 2011, but twice after that: July 2012 and September 2013. During the July 18th Oversight hearing, it was revealed that he and other DOE officials and advisors were using their personal email accounts to conduct Energy Department business. At that time, Silver also made this denial under oath: "...as I say, almost nobody that I am aware of in the Loan Program even knew who the individuals were who had invested, either directly or indirectly into these companies." This is an outright lie that we've exposed many times in the course of unleashing the "2012 Internal DOE Email Dump," which began shortly after their release ?? even discovering more clean-energy dirt along the way. These emails confirm that Silver knew exactly who the investors were in the companies (projects) seeking Energy Department loans in at least four of the deals that were approved: BrightSource (\$1.6B), Shepherds Flat (\$1.3B), Kahuka Wind (\$117 million), and Fisker Automotive (\$529 million) for starters ?? all with deep ties to the Obama White House. Moreover, the August 2012 Solyndra Investigation divulges evidence that Silver also knew about billionaire George Kaiser, an Obama bundler and the major investor in Solyndra ?? and worse, he "attempted to leverage it." The report also gives an in-depth look into the role played by one of President Obama's prominent backers in the administration's decision to issue the loan guarantee and the loan's restructuring that put taxpayers behind two private investors. Key decision makers at DOE, including head of the loans program office Jonathan Silver, knew of billionaire George Kaiser's influence and attempted to leverage it. According to the report, "Individuals connected to the George Kaiser Family Foundation (GKFF) ? whose primary investment arm, Argonaut, was Solyndra's largest shareholder ? played important roles in a series of critical discussions and negotiations with DOE. George Kaiser, whose fortune funds the GKFF, was closely involved in financial decisions related to Solyndra, often authorizing key disbursements and restructuring proposals, as well as in Solyndra's lobbying, public relations, and government procurement strategies in Washington." While Silver is understandably all over this report as the Executive Director of the DOE Loan Program, there is also proof that in August 2011 [pp. 109 - 110], when the DOE began "negotiating a second restructuring with Solyndra's investors," he had reached out to Mr. Kaiser directly on at least two occasions:"

"1. According to the documents, at 6:40 p.m. on August 11, 2011, Mr. Silver left a voicemail on Mr. Kaiser's assistant's telephone leaving his cell phone number..."

"2. On the morning of August 18, 2011, Mr. Silver left another voicemail for Mr. Kaiser's assistant..."

"The report continues with some interesting email interactions and observations: On August 17, Brad Carson, Director of the GKFF-funded National Energy Policy Institute, who had accompanied Mr. Kaiser and Mr. Levit on several visits to the White House, had emailed Mr. Kaiser stating, "The Obama folks called saying that the White House Liaison for the Department of Energy wanted your contact information. Usually these people handle appointments and the like." No response to Mr. Carson was provided to the Committee, however, Mr. Kaiser forwarded Mr. Carson's email to Mr. Mitchell, Mr. Levit, and others at the GKFF at first simply stating, "Whoops?" and then clarifying separately to Mr. Levit, "Solyndra, of course. Coming through the political arm." These emails initiated a debate within the GKFF. As Mr. Levit described it, "This is going to be very big. We need to think through PR even if the answer is to do nothing[.]" Mr. Kaiser asked, "Should Steve reflect back that GKFF is the decision maker, advised by Argonaut, and that I want to continue the policy of having no discussions re Solyndra with anyone in government? We may have to work with them in the reorganization and it makes no

sense to irritate them.? He went on to state, ?Just ignoring him, I think, would be the worst option.? After others seemed to agree but noted that Mr. Kaiser ?taking a call and saying 1) it isn?t your call on whether or not to make a loan and 2) from what you understand, there is no believable workable business plan would not be out of line,? Mr. Mitchell added, ?I agree with you that George should probably call him. This is certainly not us trying to influence the government, it is obviously the other way around. I?m curious what Jonathan will say as well.? However, it appears from the documents that Mr. Kaiser was firm in his decision not to communicate with Mr. Silver when telling Mr. Levit at 4:55 p.m., ?I have refused the call and Steve is explaining why.? This timing is important to note, as significant decisions were made just before 6:00 p.m. on August 18, as will be detailed below. Mr. Silver testified before the Subcommittee on Oversight and Investigations on September 12, 2012, and stated that with respect to George Kaiser, ?I have never met or spoken to the man.? While this may be true, it was not for lack of effort. Again, this contradicts what Silver told Congress at the July 18th Oversight hearing? that he did NOT know ""who the individuals were who had invested, either directly or indirectly into these [DOE loan] companies.? Also revealed is that Solyndra and its advocates were not only doing whatever possible to save Solyndra, which included this ""restructuring scheme,"" but they also in 2010, prior to President Obama's May 26, 2010 visit, began ""aggressively pursuing additional assistance from 'the Bank of Washington,' particularly in securing government contracts."" Some in particular were from the Department of Defense, General Services Administration (GSA) as well as the Project Amp that will highlighted later. This ""wheeling and dealing"" [pp 57 - 64] also involved Mr. Silver, many others as well as Solyndra's lobbyists at that time, Steve McBee, whom will be addressed later. Also on page 61, there is a sample of some of the inside communication regarding Solyndra's desperate attempt in getting a meeting with Peter Rouse, who was the interim White House Chief of Staff from October 2010 until January 2011. Solyndra's in-house lobbyist stated on October 6, 2010, ?Due to the very sensitive nature of the items I believe we intend to discuss, I?m hesitant to inform any of our outside consultants of our facts to the extent necessary for them to really help . . . Everyone in Washington will be trying to access Pete Rouse for the next few weeks and if Mr. Kaiser has a long personal relationship with him he?ll get to the head of the line . . .? In response to Mr. Levit's expression of hesitation about Mr. Kaiser's involvement in the meeting, Mr. Mitchell stated, ?All we are asking is that the WH helps us soften some of the terms of the DOE financing we received and work with us to give Solyndra the runway needed to take off (i.e. help us get some orders with DOD and others ? which Obama offered to do in May). If they don?t, it will be a tragic failure of not just one high-potential company, but of an Obama effort to nurture an industry of the future. AND GKFF will have \$400m less to pursue other charitable initiatives and the kind of high-risk investments this country needs for new job creation.?On page 64, we find that Solyndra had ran out of cash: ""While Solyndra and its advocates were pursuing an aggressive government sales strategy throughout the fall of 2010, the company's financial condition was rapidly declining,"" of which ultimately the DOE, in August 2011, decided not to fund Solyndra any further, and the company filed for bankruptcy on August 31, 2011. First keep in mind that: In August 11, 2011, Kelly Colyar, a program analyst in OMB's Energy Branch, informed her boss, Kevin Carroll, and others at OMB that ?DOE told OMB and other EOP staff today that Solyndra is experiencing difficulties and that a bankruptcy or restructuring is imminent (potentially in the next few days). At this point, \$526.8 million of the \$535 million loan guarantee has been disbursed. [p. 111]Then in reading the section entitled: ""DOE decides not to fund Solyndra and the company files for bankruptcy,"" is where it seems that Silver fought to the bitter end [pp 120 to 126]: While Ms. Zichal's phone call with Secretary Chu, Deputy Secretary Poneman, and Mr. Silver on the night of Sunday, August 28, concluded with an agreement that ?DOE's view is that the additional funds should not be extended,?863 additional documents indicate that throughout the weekend, Mr. Silver had been determined in his efforts to access the additional \$5.4 million in Tranche B. According to an email from Mr. Mitchell on August 29, 2011, at 1:51 a.m., ?I have had extensive conversations over the weekend with the DOE, Lazard (DOE's advisor) and the company. Jonathan Silver is attempting to get access to the Tranche B funds in an effort to give the company 3 weeks to try and effect a fund raise or trade sale. I see this as highly unrealistic but the DOE wants to give it a shot. We have been very clear with the DOE that we cannot raise outside money if the balance sheet isn't dramatically revised to make this interesting as a going concern . . .? Based on the documents, Mr. Silver appears to have wasted little time in his efforts to do just that and more. In addition, the documents indicate that he continued to seek approval for the additional Tranche B funding and attract new investors as well as new business for the company. For instance, August 29?the day after his call with Secretary Chu, Deputy Secretary Poneman, and Ms. Zichal?was when Mr. Silver reached out to Commissioner Peck at the GSA for a second time informing him that ?a California company that manufactures solar panels is looking for

business. 866 In addition, using his personal email address, Mr. Silver let Steve Mitchell know that he had made a few calls [to investment bankers] to begin to elicit interest. He stated, "As folks respond, I will explain our flexibility, connect them with you and step back." On August 30, 2011, in response to Mr. Mitchell notifying him that Solyndra finally agreed to terms with Prologis, Mr. Silver responded to Mr. Mitchell again using his personal email address thanking him for the update and informing him that he sent the Senior Managing Partner at a Silicon Valley venture capital firm his contact information. Later that day, Mr. Mitchell responded that Brian Harrison would be meeting with the firm the next day, on August 31. When asked whether he would be attending, Mr. Mitchell responded that he could not but that he had a couple of good calls with potential investors today as well. In addition, he asked Mr. Silver, "When do you think we will have feedback on the Tranche B?" Apparently Mr. Silver failed to inform Mr. Mitchell that two days earlier, he was on a call with Secretary Chu, Deputy Secretary Poneman, and Ms. Zichal, on which they confirmed that DOE was of the position that they should not extend any additional funds to the company. No subsequent communications between Mr. Silver and Mr. Mitchell were produced to the Committee... At 5:00 p.m. Pacific Time [August 30, 2011], the Solyndra board voted to move forward with the bankruptcy. According to Mr. Mitchell it was "[a]n incredible evening with some bombs dropped by the DOE..." NOTE: The above excerpts are found on pages 124 through 126. It's also important to reiterate that in reading hundreds of pages of internal emails unleashed in October 2012 from the House Oversight and Government Reform Committee "2012 Internal DOE Email Dump" is where we find startling evidence that the president, the White House, Secretary Chu, and certain DOE officials lied about how they handled the green energy loans on various fronts which was followed by secrecy, cover-ups, and even perjury. In the case of Silver; he aggressively pushed the loans through (fast tracked) as directed, influenced, and pressured by the POTUS, the vice president, the White House, the "7th Floor," and "The Hill" and did so with arrogance, even as he was fraternizing with those seeking the DOE loans. It turns out that Solyndra was on the first of its kind. These emails reveal that most of the DOE loans were rushed and approved for political reasons visits, speeches, announcements, photo ops, and talking points for the president as well as for the purpose of helping those connected to the companies seeking the loans CEO's, investors, and Democrat politicians, which goes beyond subsidizing Nevada companies

in order to help Senate Majority Leader Harry Reid win his 2010 reelection campaign. These bombshell emails also expose the cozy relationships DOE officials and advisors had during the loan review process with loan applicants and their CEO's, lobbyists, and investors, etc. It's no surprise that they had meetings and calls with DOE officials and Energy Secretary Chu, but there are documented meetings and calls with the president, VP, and WH as well as plenty of "green fraternizing" going on bike riding, coffee meetings, sleepovers, "beer summits," Al Gore parties, dinners, Democrat fundraisers, and so on. Lastly, on Silver: During the September 10, 2013 House Oversight hearing on "Preventing Violations of Federal Transparency Laws," members questioned two of the most egregious offenders: Mr. Silver and Lisa Jackson the former head of the EPA, who was also part of the Obama-Biden Transition Team. Sadly, this hearing didn't get much coverage except for Paul Chesser at the National Legal and Policy Center, noting that this event "didn't last long enough to get very deep." However, what caught my attention was when Committee Republican Jim Jordan of Ohio grilled Mr. Silver "about his directives to keep messaging out of the public eye" as well as reading particular email exchanges that implicated Silver helping his buddies get DOE loans. Also at issue were the loan program failures. However, the most unbelievable attempt to conceal the truth came out at that time: The congressman then showed an email that was sent to the committee staff a couple of days prior to the hearing from Silver's lobbyist (lawyer, it's unclear) demanding, "Don't direct any questions to Mr. Silver." Silver denied knowing anything about THE request, but we never got to the bottom of it because the Ranking Member, Congressman Elijah Cummings stopped Jordan from going down that path due to confusion over attorney/client privilege, and that he and Committee Chairman Darrell Issa would be looking into that issue off the record. No news yet... Steve Spinner: Department of Energy Loan Programs Advisor, from April 2009 to September 2010"

"Spinner's wife, Allison Berry Spinner, is a partner at Wilson Sonsini Goodrich & Rosati, the law firm that represented Solyndra on matters related to the DOE loan"

"Senior Fellow at the Center for American Progress from September 2010 to October 2011, where he publicly advocated for energy policies that support clean, renewable energy"

Two-time Obama Bundler

"2008 Obama-Biden Transition Team role: Technology, Innovation & Government Reform Policy Working

Groups"

"Steve Spinner, a two-time Obama bundler, not only worked for Obama's 2008 Transition Team, he also was part the president's 2012 reelection campaign, serving as a California finance chair and founded ""Technology for Obama (T4O).? Spinner was also handpicked to make a cameo appearance at the 2012 Democratic National Convention, along with other wealthy Obama green cronies: Steve Westly, Tom Steyer, and Jim Rogers. In April 2009, Spinner was appointed as the DOE Loan Programs Advisor to then-Energy Secretary Steven Chu, yet by September 2010, he left the DOE and about that same time joined CAP as a Senior Fellow until October 2011. In his DOE position, ""Spinner helped oversee the strategic operations of the clean energy loan guarantee program under the Recovery Act."" However, according to the DOE, ?In that capacity, [Spinner] played no role in the decision-making on or evaluation of individual loan applications or the awarding of any grants.? Still, Spinner is well known for his involvement and influence (investigations and internal emails prove) to the ill-fated, politically connected Solyndra. Spinner?s participation, despite the DOE's denial, has been proven many times over, including in October 2011, when POLITICO and others seized on his role inside this scandal, stating, ?[Spinner] played an active part in Solyndra's \$535 million loan guarantee [approved in September 2009] despite conflict of interest concerns over his wife's work at a law firm that also represented the California solar company."" It should be emphasized that on August 7, 2009, Fitch had rated the Solyndra deal as ""speculative,"" as revealed by the Committee on Oversight and Government Reform in March 2012, which exposes more evidence of Spinner's part in the Solyndra scandal. Spinner?s wife, Allison Berry Spinner, is a partner at Wilson Sonsini Goodrich & Rosati, the law firm that represented Solyndra on matters related to the DOE loan. According to federal records, the firm received at least \$2.4 million in federal funds for legal fees related to the representation. White House e-mails released late last year [2011] indicate that Spinner was influential in securing the \$528 million loan to now-bankrupt Solyndra. Many of those emails were written just days after he signed an ethics agreement pledging that he would ?not participate in any discussion regarding any application involving? his wife?s law firm. In one message to a DOE official on August 28, 2009, Spinner wrote, ?How hard is this? What is he waiting for? . . . I have OVP and WH breathing down my neck on this.? The e-mail went on to demand that the DOE official ?walk over there and force [the official working on the Solyndra evaluation] to give [him] an answer.? After just being contacted by Solyndra, Spinner inquires in another e-mail, ?Any word on OMB? Solyndra?s getting nervous.? The e-mail correspondence occurring in the final days before the Solyndra loan closed in September 2009 centers heavily on Spinner?s efforts to coordinate plans for either the President or Vice President to announce the first loan approval at a scheduled visit to Solyndra. Green Energy Collusion: Spinner & Silver We also know that Spinner and Silver colluded on the green front: Silver, who was at that time an Obama administration official at the Energy Department ""actively collaborated with Center for American Progress (CAP) in 2011 to advance the president?s green energy agenda, in possible violation of federal law,"" documented the Washington Free Beacon in September 2012. This is also where internal emails surfaced showing that over several days via Spinner and Silver?s personal email accounts (correspondences that also imply the two were in touch multiple times over the phone), the two colluded: ""In July 2011, Steve Spinner, then a senior fellow at the Center for American Progress (CAP), sought and received guidance from Jonathan Silver, executive director of the Department of Energy?s (DOE) loans program, regarding a CAP editorial urging Congress to expand funding for the program and permanently establish a Clean Energy Deployment Administration (CEDA), or 'green bank,' to further fund clean energy projects."" But that's not all, because in my March 2014 Green Corruption File, CAP, Silver, Spinner, and other key players behind the Obama administration's green energy scam. Matt Rogers: Senior Advisor to Energy Secretary Steven Chu, from January 2009 until September 2010 "

"Currently Director at McKinsey & Co. with Expertise in Oil & Gas, Electric Power & Natural Gas"

"Matt Rogers, as the Senior Adviser to then-Energy Secretary Steven Chu, oversaw the disbursement of tens of billions of dollars in stimulus funds for renewable energy projects. Both Rogers and Kristina Johnson ?advised? Secretary Chu on implementing the massive energy programs in the 2009 stimulus law, which topped \$36 billion. Prior to helping Secretary Chu, Rogers came from McKinsey & Company, ?a global management consulting firm,? where he was quite active. ?Over time with McKinsey, Matt led the Americas Petroleum Practice and the North American Electric Power and Natural Gas practice and helped establish the Firm's Resource Productivity

practice, documents his biography. Prior to his short DOE stint (January 2009 to September 2010), Rogers was a senior partner at McKinsey & Co. only to return to the firm as a Director at their San Francisco office, and it seems that he's still there. What's interesting, too, is that McKinsey & Company is also listed as an Obama donor (through PACS and personnel); a firm whose executives not only give to the right Democrat causes (Priorities USA Action), but seem to enjoy easy access to the Obama White House, including the handful that sat on president's Jobs Council when it was in operation from 2009 until early 2013. While there is a big story here that needs to be flushed out McKinsey & Company is all over the place including another Democrat moneyman, who was also an Obama donor and a guest at the president's first state dinner. This would be Rajat Gupta, McKinsey & Co.'s former chief executive (also an ex Goldman Sachs director), whom, in 2012, was convicted of Wall Street insider trading. More relevant here is that Jonathan Silver, the former executive director of the Energy Department's Loan Guarantee Program, profiled earlier, started his career at McKinsey & Company. While Rogers' role at the DOE is pretty clear, we also know that he was on board with Chu expediting the loans, which is found inside the August 2012 Solyndra Investigation [p. 16 -17]. Matt Rogers, Senior Advisor to the Secretary of Energy for Recovery Act Implementation (ARRA Advisor), confirmed the Secretary's interest in accelerating the processes of the LPO, stating in testimony before the House Committee on Science and Technology in March 2009 that "Secretary Chu has directed us to accelerate the process significantly and deliver the first loans in a matter of months, while maintaining appropriate oversight and due diligence to protect taxpayers' interests." In an interview with Committee staff, Matt Rogers explained that the September 30, 2011, deadline necessarily forced DOE to "reduce the cycle time" for the reviews of loan guarantee applications. Mr. Rogers explained that his job was to ensure that all DOE Recovery Act programs had clear decision-making timelines so that the stimulus funds were spent by the deadlines set forth in the law. Furthermore, as alluded to earlier in this post, Rogers was in the middle of pressuring the Solyndra's conditional commitment for President Obama's March 19, 2009 California visit [pp. 17 - & 21], which also involved Mr. Klain, our new Ebola Czar, and at that time VP Biden's chief of staff. ...scheduling of President Obama's speech on March 19 set the timetable for the Credit Committee and Credit Review Board meetings for Solyndra... On March 5, 2009, one LPO staff member sent an email to colleagues in the LPO stating, "Hot off the press. Dates were reviewed with Matt Rogers. The wish is to have Solyndra through the CRB in time for the President's speech in California on the 18th." Further, on March 5, 2009, Mr. Isakowitz sent an email to Mr. Frantz asking how the negotiations with Solyndra ended, and stating that "[a]ssuming we can get to a handshake, I need to send to Rod O'Connor the significance of the event so he can send to the WH." The next day, on March 6, 2009, Mr. Rogers emailed Ronald Klain, Vice President Biden's Chief of Staff, and Rod O'Connor, Chief of Staff to Secretary Chu, regarding the timetable for Solyndra's application. In that email, Mr. Rogers stated "we are on track to have potus announce the first doe loan to solyndra a thin film solar mfg in la on march 19, assuming their board approves the terms this monday. We will then need credit committee and credit [review] board meetings on our side next week to confirm the conditional commitment So, we are working the weekend to make both go. Your call on next steps." That same day, David Frantz sent an email to Mr. Isakowitz noting that the Credit Committee and Credit Review Board meetings for Solyndra had been scheduled for March 12 and March 17, respectively. Later in that section entitled, "Review of the Solyndra Application Leading to the March 2009 Conditional Commitment," the following is found: DOE and Solyndra finally reached an agreement on a proposed term sheet shortly after midnight on Tuesday, March 10, 2009. In an email to Mr. Frantz, Mr. Rogers, and other DOE staff on March 10, Mr. Isakowitz noted that Solyndra had "blinked." Confirming that the possibility of a White House speech was a factor influencing the Solyndra review schedule, Mr. Rogers responded, asking two LPO staff members to "prepare a short memo for the whitehouse folks on what an announcement could look like on the 19th. We will want to try to get to [the Credit Review Board] on friday to make sure we have enough time for the wh folks. Solyndra will be happy they blinked when potus arrives." [sic] Shortly after receiving this email, Mr. Isakowitz emailed Mr. O'Connor to gauge White House interest in a Solyndra announcement. He asked if there was "still an interest in a loan announcement on March 19th? I ask because we successfully wrapped up intense negotiations yesterday for a conditional commitment with Solyndra. There's still much paperwork to complete and wanted to check how hard we need to press." Mr. O'Connor replied, stating that "[t]here is still strong interest . . . that is great news and great work. When does the CRB meet?" Mr. Isakowitz explained that the Credit Review Board meeting was originally planned for March 17, but "we will move it up to this Friday [March 13] now that I know there is still great interest." Although DOE had planned to accelerate the CRB process in order to accommodate the President's speech on March 19, 2009, it was ultimately not necessary. When Mr. Rogers

informed Ronald Klain, Vice President Biden's then-Chief of Staff, on March 10, 2009, that Solyndra had approved the proposed term sheet "setting us up for the first loan guarantee conditional commitment for the president's visit to California on the 19th," Mr. Klain asked Mr. Rogers to confirm that Solyndra was located in Los Angeles, rather than Northern California. After Mr. Rogers noted that Solyndra's facilities were in Northern California, Mr. Klain explained that "[t]he President is not traveling to Fremont. He is going to So Cal." Mr. Rogers then floated the option of featuring a DOE loan to Tesla, under the ATVM program, but noted that the LPO staff did not think they could complete the work in time... These emails, and the fact that several significant terms were still unresolved at the time the Solyndra Credit Review Schedule was set, establish that the White House's desire to highlight Recovery Act-related programs was a determining factor in the timing of the Solyndra loan guarantee application review. Also, in the mix it became public knowledge how Obama's pals felt about Matt Rogers when he joined the DOE, as reflected in this statement by Paul Holland at an energy conference in 2009. Holland is a general partner at Foundation Capital, which is another VC firm that won a lot of green energy stimulus funds. He came in to do his talk and opened his talk with, "I'm Matt Rogers I am the Special Assistant to the Secretary of Energy and I have \$134 billion that I have to disperse between now and the end of December. So upon hearing that I sent an email to my partners that said Matt Rogers is about to get treated like a hooker dropped into a prison exercise yard. David Prend: Co-Founder & Managing General Partner at Rockport Capital Partners"

"Department of Energy's National Renewable Energy Laboratory (NREL), National Advisory Council, member, since 2007"

"NREL, Solar Technology Review Panel, chairman"

His firm Rockport Capital 7.5 percent stake in Solyndra

"As reported by The Washington Post in 2012, "David Prend had worked closely with the Energy Department since the Bush administration, when he was first appointed to an advisory panel for the National Renewable Energy Laboratory. He continued to advise the Obama administration, while also chairing a panel that helps advise the department on solar technologies." But what's astonishing is that Mr. Prend also surfaces in some emails as a venture capital investor who had White House access. The Post goes on give insight, because his firm, Rockport Capital Partners in Boston, "was an early investor in Solyndra, starting in 2007" "with was among a 7.5 percent stake. According to The Post, the emails show that in 2009, when Solyndra was seeking a half-billion-dollar Energy Department loan, Prend "pushed the White House to support the solar panel maker" and had sought "help on another Rockport portfolio company. They show he and a group of venture capital investors met with new White House climate czar Carol Browner [another CAP Fellow and major player inside the DOE deals] before Solyndra's loan was tentatively approved.." This inside lobbying occurred despite his stake in Solyndra, and during the time when Prend "chaired a renewable energy panel that advised Obama's Energy Department on solar technologies and investments." The August 2012 Solyndra Investigation provides evidence that Mr. Prend was kept in the loop about Solyndra at many junctures. Here is just a snippet found on page 74: The meeting on December 6, 2010, marked the beginning of a series of arduous negotiations between DOE representatives, led by Ms. Nwachuku, and Solyndra officials, along with Mr. Mitchell, "to work out terms to the DOE loan that would enable the company to raise money (internally or externally) and also keep the DOE on its current funding schedule." Throughout the course of the discussions, Mr. Mitchell provided detailed updates to and sought input from individuals at GKFF as well as Jamie McJunkin of Madrone Capital and David Prend of Rockport Capital. He set the stage by stipulating, "I have been very upfront that the likelihood of reaching a deal this week was low and that if the DOE decides not to fund on Friday [December 10, 2010] that we understand the ramifications (i.e. we move toward a liquidation scenario). And page 120: On August 25, 2011, after negotiating pricing and several additional details with Prologis, Brian Harrison appeared optimistic that the deal would close. He emailed Solyndra's primary investors, Steve Mitchell, Jamie McJunkin, and David Prend, informing them that "[w]e are agreed on all major elements and these are being 'papered' now." However, it is apparent that they thought DOE would provide additional funding under the restructuring framework being proposed so long as the Prologis deal closed. Mr. Prend replied asking, "What is up on the Tranche B funding?" Mr. Mitchell stated, "Not good. [T]he DOE changed their story (though they are claiming no change) and are requiring the Prologis deal to close and to have a fully committed and funded plan prior to closing the Tranche B. I don't see that happening over the next 48 to 72 hours." While The Post notes that "The agency [DOE] provided \$550 million to several

firms in which Rockport had invested at the time,"" I have yet to do a complete analysis of Prend's ""energy portfolio."" However, other than Solyndra, three stand out, which include their own crony, corruption tale ?? with two that went bankrupt or were sold after receiving taxpayer money."

1. Solyndra: The Heritage Foundation places the Solyndra bad bet at \$570 million.

"2. Ener1: The Heritage Foundation places the Ener1 (EnerDel, subsidiary) bad bet total at \$182.8 million."

3. Evergreen Solar: The Heritage Foundation places Evergreen Solar's bad bet total at \$84.9 million

"4. Enphase Energy: Both Enphase Energy, Inc. and Transphorm Inc. are investments of Kleiner Perkins (Al Gore and John Doerr's VC firm), of which these two companies collectively received over \$9 million in grants from ARPA-E program funded by the 2009-Stimulus."

"While Enphase can be found in my January 2013 Green Corruption File on John Doerr and Al Gore, and how they scored billions in green funds, my January 2014 Cleantech Crash Report is where I documented 32 Obama-backed green energy companies that have gone under, costing taxpayers over \$3 billion. Still, there is an equal amount that have been in chaos: the Obama-backed Green Energy Troubled Watch List, which, as of January 2014, includes five bailouts, 22 green energy companies/projects that have been problematic for some time ?? placing \$14.2 billion of taxpayer money still at risk. This brings the ""Green Alert: Clean Misses"" list to 59, with a pile of failures I have left to add. And this list does not take into account \$3 billion that went to First Solar; the \$1.4 billion in green energy funds that Nissan received from the ATVM loan program for their all-electric LEAF vehicles as well as the green energy stimulus funds that General Motors received for their Chevy Volt. Moreover, this doesn't factor in the numerous DOE funded projects that are still in the shadows, nor my blistering story on the ""law-breaking, American hating"" Spanish conglomerate Abengoa, that was subsidized with over \$3.6 billion in stimulus loans and grants from the U.S. taxpayer ?? and is currently under investigation by various federal agencies. Also, excluded President Obama's three ""nuclear deals"" (currently costing taxpayers \$11.6 billion and counting) that were having issues for some time. Last but not least, not in these stats, but detailed in my report, are some of the stimulus-created and/or funded programs that also flopped, costing taxpayer billions of dollars. One example is the \$5 billion Home Weatherization Program, which ended up complete with waste, fraud and abuse. Another stimulus disaster is the National Renewable Energy Laboratory (NREL), where Prend has been a member since 2007. In short, Back in May 2009, Energy Secretary Stephen Chu visited Golden to promote the NREL as a beneficiary of stimulus funds. ?? anywhere between \$200 and \$300 million. However, this Colorado lab, since my 2009 green energy stimulus tracking, not only carries issues and corruption, but has been funding job cuts and craziness, which was all documented in April 2013 by Tori Richards and Carten Cordell at Watchdog.org. The Solyndra, Prologis Shady DOE Deal Again, in referencing the August 2012 House Energy and Commerce Committee massive report, ""The Solyndra Failure,"" which included a press release the following is exposed: Documents obtained by the committee exposed a startling relationship between Solyndra and another stimulus-backed project. The report details Solyndra's role as a supplier for Prologis' Project Amp, a solar panel installation project and the recipient of a partial loan guarantee for \$1.4 billion. The White House was well aware of Solyndra's deteriorating financial condition when it allowed DOE to move forward with Project Amp. DOE would later use the relationship between Project Amp and Solyndra as a key bargaining tool to push for a second restructuring while directly engaging in last minute negotiations between Solyndra and the Project Amp sponsor. In short, back in September 2011, Prologis, the world's biggest warehouse owner, received a \$1.4 billion partial DOE loan guarantee to put solar panels on about 750 buildings. This was Project Amp and another ""non-investment grade"" shady DOE stimulus deal connected to the Obama administration's futile and deceptive attempt to shelter and save Solyndra. Moreover, Bank of America Corp. and NRG Energy Inc. at that time were both investing in the project ?? even as both are connected to President Obama and were big winners of green energy funds. The Prologis project ""was partially financed by NRG Energy [a Fortune 500 and S&P 500 Index company], which also enjoys significant political clout, wrote Lachlan Markay of The Daily Signal. Adding to the corruption, it has been well documented that Obama's pal, the left-wing billionaire George Soros (a big CAP donor), helped craft the 2009-Recovery Act. Then, just after the stimulus was passed in February 2009, Mr. Soros bought 500 shares of NRG Energy, whose subsidiaries was the recipient of most of 1705 stimulus loans ?? placing that figure, as of March 2013 (counting Prologis), at \$5.2 billion of taxpayer money. This DOE deal and

more is detailed in my March 2013 Green Corruption File, "Left-wing Billionaire George Soros: Obama's Agent of Green." However, it was reported by POLITICO in October 2013, that the Prologis loan was "de-obligated," and that they had never tapped into the \$1.4 billion. But along the way, Prologis did secure "a grant for \$68,000 for the purpose of ?rent for warehouse space? under the Recovery Act." The DOE Dirty Dozen Even as Silver, Spinner, Rogers and Prend are major "Solyndra Corruption Culprits," there are many more that operated inside the DOE that deserve scrutiny in regards to the Solyndra deal as well as the other 30 plus clean-energy deals made by the Energy Department's loan program. The Post in their February 2012 piece, "Federal funds flow to clean-energy firms with Obama administration ties," note some of these DOE insiders. Yet, there are others that came from Obama's "Green Team" as well as Energy Department officials and advisors. These included its fair share of Al Gore disciples and well-connected Venture Capitalists. There has been a dozen on my radar that are either directly connected to tens of billions of green-government subsidies (loans, grants and special tax breaks), or helped their friends secure the funds. Ironically, many have fled since their 2009 appointments, but it's worth noting that the "DOE Dirty Dozen," under Energy Secretary Stephen Chu, includes Carol Browner (1), Lisa Jackson, Van Jones (2), Steve Isakowitz, Steve Spinner (3), Matt Rogers, Jonathon Silver (4), Cathy Zoi (5), Kristina Johnson (6) and others like James Markowsky (7), Steven Westly (8), Sanjay Wagle (9), David Danielson (10), David Sandalow (11), David Prend (12) ?? with Prend, according to PJ Media a while back, "may well be the nexus of the whole Obama green scandal. His name turns up all over the place." Today's focused was Solyndra, but the "DOE Dirty Dozen" is another piece of Green Corruption that I have yet to unleash in its entirety. However, what's telling is that these DOE insiders were part of the decision-making process, even as the rest had access influence in one way or another. What we find is that many of those operating inside the Energy Department had more sinister roles and were using tactics such as lobbying, pressure, collusion, and coercion. The evidence of this started circulating in 2011, when the Solyndra Saga broke, but worse, was confirmed in many of the DOE email exchanges released to the public since that time. Three More Obama, Solyndra Connections Goldman Sachs: Credited as the ?exclusive financial adviser? for Solyndra Goldman Sachs was a top Obama donor in 2008, but we also know that two Goldman executives sat on Obama's 2008 Finance Committee and a slew of partners, executives and board members bundled for, and donated to Obama's 2008 campaign. Meanwhile, his administration has been infested with Goldmanites ?? even as early as 2008 when a Goldman board member, James A. Johnson (also an Obama bundler that I profiled many times due to his former firm Perseus), was chosen as head of Barack Obama's vice presidential search team. Known as Jim Johnson and ?a fixture of establishment Washington, with ties to Wall Street and ?a major presence in Democratic politics for more than two decades,? Mr. Johnson resigned his VP vetting role amidst criticism over his part in the Countrywide Financial scandal as well as controversy surrounding his role as Fannie Mae's chief executive from 1991 to 1999. Even though in 2012, Goldman Sachs turned their back on Mr. Obama in 2012, there were many executives and board members that helped him get reelected. While I began to unravel their part in this post Green Corruption: The Plot Thickens back in the summer of 2010, I've been tracking how this Big Bank has been cashing in on the green energy stimulus funds ever since Team Obama started dishing it out to his cronies. In late 2013, it was revealed that Goldman was a CAP donor. So, in exposing the left-wing think tank's clean-energy dirt, I documented the following: Goldman Sachs has an invested interest ?? via various roles, and having entered the scene at different junctures (before, during and after taxpayer subsidies were awarded) ?? in at least 14 projects and firms that received green energy loans, grants and special tax breaks, including Solyndra. This means that Goldman is tied to over \$8.5 billion from the Green Bank of Obama, and the majority came from the 2009-Recovery Act. McBee Strategic Consulting: Lobbyists for Solyndra from 2008 until 2011 My September 2013 Green Corruption File details the Top D.C. Lobbyist McBee Strategic Consulting and how its founder Steve McBee ?opened the spigot of green corporate welfare? ?? then billions of stimulus cash flooded the firm's energy clients. My research reflected the fact that I found 31 McBee energy clients with 19 (over 60 percent) that received green-government subsidies under the Obama administration, totaling approximately \$13.7 billion of taxpayer money. Additionally, with only two clients (Honeywell and Tesla) that were hired prior to 2009, when the Recovery Act was approved, I calculated that from these 31 energy clients, McBee Strategic Consulting "green kickbacks" in September 2013, were close to \$9 million ?? and that's just from energy. These calculations include twelve DOE loans, including Solyndra, of which we know that Steve McBee was instrumental in "changing the game" by his involvement in eliminating the so-called "required down payment." Solyndra, by the way, spent nearly \$1.9 million on lobbying activities over a period of 43 months from 2008 to 2011, even as the DOE failed to comply with the stimulus law by

reporting on all lobbying activity. Still, McBee represented the solar panel company from 2009 to 2011, and received \$380,000 over that time period. Steve McBee is also found inside the August 2012 Solyndra Investigation where he was part of "Solyndra's efforts to secure additional government assistance..." which included Jonathan Silver, as documented earlier [p. 57 - 64]: On June 17, 2010, just a few weeks after President Obama's [June] visit, Steve McBee, the President of McBee Strategic Consulting (McBee), a lobbying firm, began to chart out this course in an email to Mitchell. Mr. Mitchell forwarded McBee's proposal to Mr. Gronet and another Solyndra executive noting, "The white house offer to help may cut this short but it could be done in conjunction." This new emphasis on garnering assistance in the procurement of government contracts was shared with and supported by George Kaiser and Ken Levit. Fred P. Hochberg: Chairman and President of the Export-Import Bank and a 2008 Obama bundler As documented by iWatch in June 2011, "the chairman and president of the Export-Import Bank, Fred P. Hochberg, bundled at least \$100,000 for Obama." Keep in mind that another means where huge corporations and Obama's green cronies get taxpayer money is through the taxpayer-supported Export-Import Bank (Ex-Im), which "has a Congressional mandate to support renewable energy and has been directed that 10% of its authorizations should be dedicated to renewable energy and environmentally beneficial transactions." Ex-Im has been doling out money to politically connected green energy companies such as Solyndra, First Solar, the big Spanish firm Abengoa ?? just to name a few. In the case of Solyndra, in June 2011, "the Ex-Im Bank provided \$10.3 million in renewable express financing for the California-based Solyndra's Solar exports to Belgium." Solyndra: Only a "smidgen" of the cronyism and corruption behind President Obama's clean-energy junk loans Over two years ago, I unleashed The Green Corruption Files, with my first report entitled, Department of Energy "Junk Loans" and Cronyism, whereas the emphasis at that time was the report that was released by the Committee on Oversight and Government Reform, which "painted a startling picture of mismanagement at the Department of Energy." The most damaging is that of the 27 loan guarantees under the 1705 program, of which the DOE doled out in excess of \$16 billion, 23 of the loans were rated "Junk grade" due to their poor credit quality, including Solyndra, while the other four were rated BBB, which is at the lowest end of the "investment" grade of categories. ?? Within the pages of the House Oversight report, are disturbing charges ?? backed up with corroboration ?? that range from poor to disastrous management, to bias and favoritism, as well as wasteful spending, in some cases a series of DOE violations, and how the DOE touted "misleading job creation statistics." Even so, the DOE has come under fire by other federal watchdog agencies, especially since their loan programs were significantly expanded under the American Recovery and Reinvestment Act of 2009, which was meant to stimulate the economy and create jobs. But since the Solyndra story broke, it has become clear that Energy Department's loan program has stimulated the pockets and secured jobs for those with access and influence to the Obama White House and the Democratic Party, especially the wealthy. Winners were those with meaningful political connections to the president and other high-ranking Democrats and/or their green cronies ?? in many cases to both and in some cases to multiple "friends," with Majority Leader Harry Reid tied to five, which I unveiled last November. Political buddies that primarily comprise of Obama's campaign backers, bundlers, top donors as well as liberal allies. Adding to the mix are members of the president's former Job Council; those that helped craft the 2009 economic stimulus package; and at least a dozen inside the Energy Department, and we find a much bigger scandal. Needless to say, in early 2012, I wasn't the only one screaming about the Energy Department "junk bond portfolio" and the obvious cronyism surrounding these risky deals. Sharyl Attkisson, the longtime CBS reporter, in January 2012, took on the Obama administration's clean-energy failures and corruption, including Solyndra, only to be "stonewalled." The New York Post, in their recent and chilling review of her bombshell book, Stonewalled: My Fight for Truth Against the Forces of Obstruction, Intimidation, and Harassment in Obama's Washington, noted the following: Attkisson mischievously cites what she calls the "Substitution Game": She likes to imagine how a story about today's administration would have been handled if it made Republicans look bad. In green energy, for instance: "Imagine a parallel scenario in which President Bush and Vice President Dick Cheney personally appeared at groundbreakings for, and used billions of tax dollars to support, multiple giant corporate ventures whose investors were sometimes major campaign bundlers, only to have one (or two, or three) go bankrupt . . . when they knew in advance the companies' credit ratings were junk." But still, President Obama, just before the 2012 election, when a Colorado reporter asked him about another failed solar company called Abound, which is also connected to one of his billionaire fundraisers, Mr. Obama made this denial: "And these are decisions, by the way, that are made by the Department of Energy, they have nothing to do with politics..." Politics Above All Solyndra, once the poster child for the president's clean-energy crusade, quickly morphed into the template for Obama's green corruption scandal: political payback,

costing taxpayers at least \$570.4 million. Yet most concluded a long time ago that Solyndra was only the tip of the iceberg. And while Solyndra is dead, these DOE deals had everything to do with politics ?? even as billions have already been flushed down the Eco-toilet, tens of billions are still at risk, and all under the guise of ""saving the planet."" Sadly, due to the president's Ebola Czar choice, pundits and politicians have equated Ebola with Solyndra ?? although temporarily. Meanwhile the Democrats, in their quest to stay in power, have hijacked this horrifying epidemic to wage war against the Republican Party in an election that will take place in a few days. Worse, the White House continues to play politics with Ebola, and his crony pick of Mr. Klain that carries with him the reputation as a ""fixer"" for top Democrats, is more evidence that President Obama continually places politics above what's right for America. In the case of Solyndra, it was using taxpayer money to reward his wealthy cronies, but this time it's the health of American citizens, which is much more fatal. So, at the end of the day, we can only hope and pray that this deadly disease will have a similar fate as Solyndra, which was demolished down to some glass tubes, and soon be wiped off the face of the planet. SIDE NOTE: These reports are worth reading: #1) The ""August 2012 Solyndra Investigation"" (The Solyndra Investigation) means the Energy and Commerce Committee Report, The Solyndra Failure, which is the culmination of the committee's 18-month investigation into the failed loan guarantee to the now-bankrupt solar panel manufacturer. Click here to read the report called The Solyndra Failure, and click here to read the press release. This investigation includes the following hearings"

THE MISSION

" Since late 2009, we've been exposing the Obama Regime's clean-energy dirt ?? aligned with the Left as well as those with political ""access and influence"" ?? proving that this green energy scam is at least the largest, most expensive and deceptive case of crony capitalism in American history. Stay tuned as we expose one chunk of this scheme at a time... For those not familiar with The Green Corruption Files: In short, since 2010, I've been tracking the \$150 billion (so far) that this administration has spent on green (clean, renewable, alternative) energy ?? President Obama's ""save the planet slush fund."" More thoroughly, I've followed the money: the \$32B that was doled out via the DOE loan program, of which the loans as well as the billions in 1603 stimulus grants, special tax breaks and various programs were used as political payback, crony capitalism, and corporate welfare. In April 2012, I launched this blog, publishing over 60 posts. Also, in the mix, from June 2012 to March 2014, I collaborated with Marita Noon, energy columnist and Executive Director at Energy Makes America Great. Ms. Noon has written about 25 stories based on my research, however, ""together we have covered Obama's Green-Energy Crony-Corruption Scandal more extensively than any other single outlet."" An array of popular conservatives such as Rush Limbaugh, Michelle Malkin, Jerome Corsi, John Hinderaker (Power Line), John Ransom, Jim Simpson, Daniel Greenfield (FontPageMag.com), and others have cited our work ?? sometimes multiple times. On May 6, 2014, James Delingpole at Breitbart London, linked to The Green Corruption Files in his piece, ""OBAMA'S LAST SHOT ? CLIMATE CHANGE ? AND WHY IT'S DOOMED TO FAIL."" Meanwhile, in July 2014, a ?green corruption tip? ended up becoming a bombshell piece by Lachlan Markay of the Washington Free Beacon ?? which was later ?spotted? at the House Financial Services Committee website. Even conservative organizations and online media outlets have cited my blog or featured my work. Those include World Net Daily, The Minority Report, National Review Online, Townhall.com, Reason Foundation, Accuracy in Media (AIM), Institute for Energy Research, Real Clear Energy, John Locke Foundation, GOP USA, Fox Nation, The Daily Caller, PJMedia, California Political News and Views, and the Patriot Action Network (PAN). The Green Corruption Files has been found (sometimes regularly) at the Alliance for Wise Energy Decisions (AWED), RedState.com, NetRightDaily, the Heartland Institute, Canada Free Press, Liberty Voice, New Hampshire News, Hawaii Free Press, Natural News, EPA Abuse, OurMoney.Net, MyGovCost.org, and many more. We've been interviewed for print and radio shows such as the Rodger Hedgecock Show, African American Conservatives (AACONS), Right Side Patriots, the David Madeira Radio Show, The American Free Press (the EU Times), The Daily Caller, and others.?? NOTE: See side panel of The Green Corruption Files for these and much more... Christine Lakatos, a writer for Blogcritics Magazine, is the founder of The Green Corruption Files, which was basically born as a concerned citizen to take on a big and corrupt government ?? emerging as a well-respected citizen journalists. Lakatos is a Christian, and the mother of two wonderful daughters. Her extensive background as an ACE Certified Fitness Trainer, with over 30 years experience in the health and fitness industry, includes authoring the amazing fat loss program for women and girls of all ages, My Diva Diet ?? eventually to be unleashed as a Fitness Superhero cartoon and video game. Lastly (but not the entire story), she is a retired bodybuilder and fitness competitor with quite a few titles under her belt (see website), including a competitor on American Gladiators in 1990."

My Diva Diet: A Woman's Last Diet Book

How DOE staff and Public Policy Staff in Washington Were Bribed: "How DOE staff and Public Policy Staff in Washington Were Bribed: Jack Abramoff: The lobbyist's playbook Jack Abramoff, the notorious former lobbyist at the center of Washington's biggest corruption scandal in decades, spent more than three years in prison for his crimes. Now a free man, he reveals how he was able to influence politicians and their staffers through generous gifts and job offers. He tells Lesley Stahl the reforms instituted in the wake of his scandal have had little effect. ----- The following is a script of ""The Lobbyist's Playbook"" which aired on Nov. 6, 2011. Jack Abramoff may be the most notorious and crooked lobbyist of our time. He was at the center of a massive scandal of brazen corruption and influence peddling. As a Republican lobbyist starting in the mid 1990s, he became a master at showering gifts on lawmakers in return for their votes on legislation and tax breaks favorable to his clients. He was so good at it, he took home \$20 million a year. Jack Abramoff: Inside Capitol corruption How corrupt is lobbying in Washington, DC? Enough to get ""60 Minutes"" correspondent Lesley Stahl angry when she hears how Jack Abramoff bribed and influenced legislators. It all came crashing down five years ago, when Jack Abramoff pled guilty to corrupting public officials, tax evasion and fraud, and served three and a half years in prison. Today he's a symbol of how money corrupts Washington. In our interview tonight, he opens up his playbook for the first time. And explains exactly how he used his clients' money to buy powerful friends and influence legislation. Jack Abramoff: I was so far into it that I couldn't figure out where right and wrong was. I believed that I was among the top moral people in the business. I was totally blinded by what was going on. Jack Abramoff was a whiz at influencing legislation and one way he did that was to get his clients, like some Indian tribes, to make substantial campaign contributions to select members of Congress. Abramoff: As I look back it was effective. It certainly helped the people I was trying to help, both the clients and the Republicans at that time. Lesley Stahl: But even that, you're now saying, was corrupt? Abramoff: Yes. Stahl: Can you quantify how much it costs to corrupt a congressman? Abramoff: I was actually thinking of writing a book - ""The Idiot's Guide to Buying a Congressman"" - as a way to put this all down. First, I think most congressmen don't feel they're being bought. Most congressmen, I think, can in their own mind justify the system. Stahl: Rationalize. Abramoff: --rationalize it and by the way we wanted as lobbyists for them to feel that way. Abramoff would provide freebies and gifts - looking for favors for his clients in return. He'd lavish certain congressmen and senators with access to private jets and junkets to the world's great golf destinations like St. Andrews in Scotland. Free meals at his own upscale Washington restaurant and access to the best tickets to all the area's sporting events; including two skyboxes at Washington Redskins games. Abramoff: I spent over a million dollars a year on tickets to sporting events and concerts and what not at all the venues. Stahl: A million dollars? Abramoff: Ya. Ya. Stahl: For the best seats? Abramoff: The best seats. I had two people on my staff whose virtual full-time job was booking tickets. We were Ticketmaster for these guys. Stahl: And the congressman or senator could take his favorite people from his district to the game-- Abramoff: The congressman or senator uh, could take two dozen of his favorite people from their district. Stahl: Was all that legal? Ira Rosen is the producer. Abramoff: We would certainly try to make the activity legal, if we could. At times we didn't care. But the ""best way"" to get a congressional office to do his bidding - he says - was to offer a staffer a job that could triple his salary. Abramoff: When we would become friendly with an office and they were important to us, and the chief of staff was a competent person, I would say or my staff would say to him or her at some point, ""You know, when you're done working on the Hill, we'd very much like you to consider coming to work for us."" Now the moment I said that to them or any of our staff said that to 'em, that was it. We owned them. And what does that mean? Every request from our office, every request of our clients, everything that we want, they're gonna do. And not only that, they're gonna think of things we can't think of to do. Neil Volz: Jack Abramoff could sweet talk a dog off a meat truck, that's how persuasive he was. Neil Volz was one of the staffers Abramoff was

talking about. He was chief of staff to Congressman Bob Ney, who as chairman of the House Administration Committee had considerable power to dispense favors. Abramoff targeted Volz and offered him a job. Stahl: You're the chief of staff of a powerful congressman. And Jack owns you and you haven't even left working for the congressman. Volz: I have the distinct memory of, you know, negotiating with Jack at a hockey game. So we're, you know, just a few rows back. The crowd's goin' crazy. And Jack and I are havin' a business conversation. And, you know, I'm-- I'm wrestlin' with how much I think I should get paid. And then five minutes later we're-- he's askin' me questions about some clients of his. Stahl: When you look back was that the corrupting moment? Volz: I think we were guilty of engaging in a corrupt relationship. So there were several corrupting moments. There isn't just one moment. There were many. Abramoff: At the end of the day most of the people that I encountered who worked on Capitol Hill wanted to come work on K Street, wanted to be lobbyists. Stahl: You're telling me this, the genius of figuring out you could own the office by offering a job to the chief of staff, say. I'm having two reactions. One is brilliant. And the other is I'm sick to my stomach. Abramoff: Right. Evil. Yeah. Terrible. Stahl: 'Cause it's hurting our country. Abramoff: Shameful. Absolutely. It's the worst thing that could happen. All parts of the system. Stahl: I'm mad at you. Abramoff: I was mad at me-- Stahl: I'm not kidding. I'm not kidding. Abramoff: Look I did things and I was involved in the system I should not have been in. I'm ashamed of the fact I was there, the very reason why now I'm speaking about it. And now I'm trying to do something, in recompense, is the fact that I thought it was-- it was wrong of me to do it. One of the offices he keyed on was that of his good friend, the Majority Leader Tom Delay, eventually hiring his deputy chief of staff and his press secretary, and going into business with Delay's chief of staff. Stahl: Did you own his staff? Abramoff: I was as close to his staff as to any staff. I had a very strong personal relationship with a lot of his staff. Stahl: How many congressional offices did you actually own? Abramoff: We probably had very strong influence in 100 offices at the time. Stahl: Come on. Abramoff: No. Stahl: A hundred offices? Abramoff: In those days, I would view that as a failure. Because that leaves 335 offices that we didn't have strong influence in. Stahl: Did he own you? Bob Ney: Oh, I don't believe Jack Abramoff owned me. But were we involved in the culture of corruption together? Absolutely. Former Republican Congressman Bob Ney was ambitious and looked at Abramoff as a way to build alliances with the White House and the majority leader. Ney: I wanted to be speaker of the House and Jack Abramoff was the beautiful light of day for me to get to the person who I had had some conflicts with, Tom Delay. Abramoff began inviting Ney on golf trips including one to Scotland and to his restaurant Signatures, where Ney was given food and drinks on the house, a violation of the congressional gift limit laws. Ney says he was hardly the only one crossing the line. Ney: But I will still tell you, at that point in time, in order to get a drink at Signatures you had to shove White House staffers of George Bush the heck away from the bar. And it was packed with people. And there were members. Now that doesn't mean everybody did everything for Jack. But if you wanna talk about strict interpretation of violation of the-- of-- of the laws of drink and food, Katey bar the door, she was wide open, two shotguns blarin'. After months of taking handouts, Ney was approached by Neil Volz, his former chief of staff, by then a lobbyist for Abramoff. Volz: I let you down man and I'm sorry... Volz asked Ney to insert some language into a reform bill that would give a backdoor license to an Indian casino owned by one of Abramoff's clients. You often hear about lobbyists getting special secret deals for their clients like this. It's an insidious technique that Abramoff perfected. Abramoff: So what we did was we crafted language that was so obscure, so confusing, so uninformative, but so precise to change the U.S. code. Stahl: Here's what you tried to get tacked on to this reform bill. Abramoff: Yeah. Stahl: ""Public law 100-89 is amended by striking section 207 (101 stat. 668, 672)."" Abramoff: Right. Now isn't that obvious what that means? It was perfect. It was perfect. Stahl: So that's what you tried to get inserted? Abramoff: Yes. Stahl: And that was gonna provide for a casino? Abramoff: Yes. Stahl: And who on earth is gonna know that? Abramoff: No one except the chairmen of the committees. Stahl: Who stuck it in there? Abramoff: Yes. Stahl: And that's one of the things you used to do? Abramoff: Yes. Stahl: And it was deliberately written like that? Abramoff: Precisely. Yes. Stahl: And that's done a lot? Abramoff: Members don't read the bills. Stahl: You didn't even know what it

was

for? Ney: Had no idea. And then when we got the written language-- Stahl: Well-- why didn't you know what it was for? Ney: I didn't-- I didn't care. Stahl: Oh! Ney: It was a great big shell game. And I was in the middle of it, whether, you know, knowing or not. I-- I was dumb enough to not say, ""What's this thing do "" Ney would eventually serve 17 months in federal prison, the only congressman who was ever charged in the scandal. But Abramoff says that there were many other members that did his bidding that could have been charged. Stahl: Was buying favors from lawmakers easy? Abramoff: I think people are under the impression that the corruption only

involves somebody handing over a check and getting a favor. And that's not the case. The corruption, the bribery, call it, because ultimately that's what it is. That's what the whole system is. Stahl: The whole system's bribery? Abramoff: In my view. I'm talking about giving a gift to somebody who makes a decision on behalf of the public. At the end of the day, that's really what bribery is. But it is done everyday and it is still being done. The truth is there were very few members who I could even name or could think of who didn't at some level participate in that. Abramoff prided himself on being a man who did good. He was devoutly religious and exorbitantly charitable and he says he gave away 80 percent of his earnings. When he fell from grace, his reputation was in tatters because it was not just that he had corrupted Congress - it was found he had cheated his clients, like the Indian tribes. Abramoff: Most of the money I made I gave away, to either communal or charitable causes. So I thought frankly I was one of the most moral lobbyists out there. Things began to unravel for Abramoff when the Washington Post published a largely unflattering portrait of him in 2004, reporting that he charged his clients 10 times more than any other lobbyist in town. Abramoff: My first response was, ""What's the big deal? I don't understand what this is about. This is what lobbyists do. What he didn't understand was the part that said he and a former aide to Tom Delay had overbilled four of his Indian casino clients by \$45 million. In the end, he was brought up on federal charges of tax evasion and ripping off Indian tribes. On the day he went to court and pled guilty, Abramoff looked grim. The judge sentenced him to four years. Stahl: I really think what you were doing was-- was subverting the essence of our system. Abramoff: Yes. Absolutely right. But our system is flawed and has to be fixed. Human beings populate our system. Human beings are weak. Stahl: And you preyed on that? Abramoff: I did. I was one of many who did. I did. And I'm ashamed of that fact. He was sent to a medium security facility in Cumberland, Maryland. When he was released last June, he began working as an accountant at a kosher pizza parlor. Turns out Jack Abramoff was broke, partly because he is paying off nearly \$24 million in restitution to the Indian tribes. Today he lives in his old house in Maryland with his wife, five children and the two doberman pinschers Mrs. Abramoff bought to protect the family while he was away. After the scandal, Congress instituted a package of reforms, making what Abramoff did - like plying members of Congress with free expensive meals - illegal. But he doesn't see the new reforms as being very effective. Abramoff: The reform efforts continually are these faux-reform efforts where they'll change, they'll tweak the system. They'll say, ""You can have a meal with a congressman if they're standing up, not sitting down."" Stahl: Is that serious? Or are you joking? Abramoff: Oh no, I'm not joking at all. Stahl: So, it's okay if you pay for lunch as long as you stand up? Abramoff: Well, it's actually worse than that. You can't take a congressman to lunch for \$25 and buy him a hamburger or a steak of something like that. But you can take him to a fundraising lunch and not only buy him that steak, but give him \$25,000 extra and call it a fundraiser. And have all the same access and all the same interaction with that congressman. So the people who make the reforms are the people in the system. Stahl: Could you do the same thing today? I'm asking you whether you think the system's been cleaned up? Abramoff: Could do the same thing that I? Yeah. No, the system hasn't been cleaned up at all. Stahl: At all. Abramoff: There's an arrogance on the part of lobbyists, and certainly there was on the part of me and my team, that no matter what they come up we, we're smarter than they are and we'll overcome it. We'll just find another way through. That's all. He says the most important thing that needs to be done is to prohibit members of Congress and their staff from ever becoming lobbyists in Washington. Abramoff: If you make the choice to serve the public, public service, then serve the public, not yourself. When you're done, go home. Washington's a dangerous place. Don't hang around. Former Congressman Bob Ney now works part-time as a radio host. His former chief of staff Neil Volz is currently working as a night janitor at a Florida restaurant. And Jack Abramoff has written a memoir called ""Capitol Punishment."" ? 2011 CBS Interactive Inc.. All Rights Reserved. App Authentication Flaw Creates Tesla Motors Hack Concern. Your Tesla can spy on you and drive you off the road on command. "App Authentication Flaw Creates Tesla Motors Hack Concern. Your Tesla can spy on

you and drive you off the road on command. While Elon Musk has admitted to the New York Times that he can spy on any Tesla at any time, personally, the story gets worse: The Tesla Model S is such an advanced automobile it even comes with its own mobile authentication vulnerability. According to George Reese, Senior Distinguished Engineer and Executive Director of Cloud Computing at Dell, there's a flaw in the REST API used in Android and iPhone apps that connect to the car. While he stresses one cannot crash the car with this, one could cause excess electrical usage and force excess wear on batteries. (ED. At the DEFCON hacker conference, though, other hackers demonstrated a system to take over the GPS which could be used to crash the car by suddenly turn inputs or cruise control bursts. To be safe, have your GPS and all transceiver chips removed from the car.) He notes that "[a]uthentication happens when you call the /login action with the email address and password of the Tesla customer. This is the same email address and password used to log in to www.teslamotors.com. Every customer has one because this web site is where the customer builds their car." He then cites five vulnerabilities: "It requires the sharing of the user's password with third-parties (major); no mechanism exists for cataloging applications with active tokens (significant); Only an inconsistent blunt-force mechanism exists for revoking access to a compromised application (moderate); No mechanism exists for revoking the access of a compromised application (major); The automated expiration of tokens in 3 months encourages applications to improperly store your email and password (significant). By Robert Vamosi ----- In another Tesla failure, the doors of the car can be electronically hacked to not only lock you out of your car but LOCK YOU IN YOUR CAR. There are a number of published complaints online about the ongoing lock-in of Tesla owners. "The perfectly healthy person that suddenly falls over dead on a crowded commuter platform, bus, subway or on the street, may have been the victim of a high-tech hit-man. Using either a modified Taser, a portable Medtronic defibrillator in a backpack or a motorcycle battery and large capacitor, the attacker runs insulated wires out to highly shielded spiked pads on their finger-tips and simple touches the target, in a certain way, and the victim is silently, undetectably dead from an apparent heart attack. Emergency medical technicians will tell you that they are trained to never shock a person with a ""defib"" unless they are already flat-lined. Doing so to a live person will kill them. Sometimes the hit-man is waiting for the target in their home, hidden in the basement or attic, to do the deed while they are in the shower, or sleeping. The newly spotlighted knowledge of these types of political kill-jobs has police re-examining cold-cases and families signing exhumation orders to look for possible indicators. Although very hard to find, unless you are looking for certain specific trace aspects, science may have made the ""undetactable"", detectable. New tests, for certain chemical elements that the brain and organs release

into the system during a heart attack can now be found with state-of-the-art equipment. Entry and exit points, of the electrical occurrence, may also leave skin and cellular modifications that can now be detected. "

"Rajeev Motwani | FamousDEAD - Famous Dead, Celebrity Deaths .."

Why Bank of America hates single people and gays! " - They won't breed - When they breed they keep needing bigger and bigger cars as the kids get bigger and more voluminous. So: they don't need car loans. - When they breed they keep needing bigger houses for more kids. So: They don't need mortgages; they rent. - Millennials are better educated and know that credit cards are a scam. So: They avoid using credit cards. - Also: This is why GOP never supports education improvement funding. Smart kids don't get suckered into dumb banking ploys. - Banks, in general, are GOP leaning because the GOP hates singles and gays. GOP hates them more because they are ""low profit"" than because of ""moral issues"". - Banks beg Millennials: ""Please help us make money off of you! What do you want that you can't afford? We can help get you in the right kind of debt!... How about expensive beard wax, or cool titanium sneakers.. you can't afford that, apply for a loan with us.. please God.. oh please..."" - Millennials don't get married or have kids very much. - Millennials expected to cost the banking industry trillions of dollars because they don't buy into the ""White Picket Fence"", you must ""have-a-family"" media programming of the banks. - Using their Washington DC lobby power to create a federal law requiring all singles to marry, have sex and get pregnant has failed...except the sex part, Millennials are all about the sex part...

Shallow Analysis Deems DOE Electric Vehicle Loans a Success"Shallow Analysis Deems DOE Electric Vehicle Loans a Success Submitted by Paul Chesser on Mon, 07/08/2013 Popular automotive Web site?s attempt to set the record straight on the degree of success and failure of the Department of Energy?s Advanced Technology Vehicles Manufacturing loan program was well-intentioned, but missed the mark on several points and overall gave the initiative far too much credit. Jalopnik.com contributor Patrick George was pointed in the right direction when he characterized DOE?s boastful Loan Program Office as ?rosy,? but more accurate descriptors would be ?excessive? and ?unrealistic.? It?s clear his analysis was one of an automotive enthusiast and reviewer, rather than someone who regularly watchdogs government with a skeptic?s eye and knows how bureaucrats fudge and exaggerate numbers to claim credit for their politician bosses. As NLPC has reported often, DOE ? before a taxpayer-backed bank check was ever issued to an electric automaker ? has made absolutely unbelievable claims about jobs, fuel savings and carbon dioxide emission reductions that were to be realized as a result of their loans. ?The Energy Department?s rosy website claims the government?s Advanced Technology Vehicle Manufacturing loan program has ?created or saved? 37,000 jobs,? George wrote. ?A Jalopnik analysis of the current states of the five companies involved shows that this number is technically true, but not the way the government tells it.? George gave DOE far too much credit. Even now, after more than three years for most of the projects, the Loan Program Office can?t be bothered to update statistical expectations even though two of the companies (Fisker Automotive and Vehicle Production Group) are non-operational and on the verge of bankruptcy. No one should take the agency seriously if it doesn?t even attempt to correct the record for the projects it manages. Even the original exaggerations were obvious. For example, DOE claimed the \$5.9 billion loan guarantee issued to Ford

Motor Company (the largest recipient in the ATVM program) made possible the conversion of nearly 33,000 employees to green manufacturing jobs, with an alleged 509,000 cars off the road, 268 million gallons of gasoline displaced annually, and 2.38 million tons of carbon dioxide avoided. This miraculously occurred with Ford's refurbishment of a few manufacturing plants. Rather than simply deliver the derisive laughter that Ford and DOE deserve, George asked a company spokeswoman what "converting jobs" means. He was told that the loan guarantee helped "retain" 33,000 workers for new roles. "For example, Michigan Assembly Plant used to be a truck plant," the Ford spokeswoman explained. "It is now the world's first factory to build not only fuel-efficient gas-powered small cars, but also three versions of electrified vehicles - battery electric, hybrid and plug-in hybrid vehicles - all in one place." That seemed good enough for George, who expressed mild skepticism that only went so deep. "Though it is unlikely that 33,000 Ford employees would be out of work without the loan," he reasoned, "they are now in new roles manufacturing more efficient vehicles, which was indeed the goal of the program." True, of course, but George left so much unaddressed. First, the very claim that it was only because of the U.S. government that 33,000 auto manufacturing jobs were "saved," at a perfectly healthy company, was just brazen lying. The appropriate response should be, "What do you take us for? Idiots?" But there was so much more beyond that. The only reason the administration launched the program, and that Ford was willing to accept the loan, is that the federal government created a heightened regulatory scheme that exacted greater vehicle fuel economy in the first place. The automotive market has shown little demand for electric vehicles, at least to justify the extensive financing and construction that automakers have undertaken. What little sales there have been were goosed only by subsidies and tax breaks. And even with that, the claims about gas displacement, avoided carbon dioxide and gas-powered cars "off the road" were created out of thin air and likely supplied by Ford itself to justify the loan, which in turn gave DOE a sales pitch to the public for the program. The Congressional Budget Office has determined that the overall \$7.5 billion in subsidies for electric vehicle production will have little or no benefit on gas consumption or emissions avoidance. Even now, with the Focus Electric that Ford doesn't seem to care about selling, the numbers haven't been modified. The truth is, as Car and Driver reported in November, is that many companies have put barely enough alternative vehicles on the market just so they can comply with government-mandated Corporate Average Fuel Economy (CAFE) standards. The automakers incur huge penalties for failing to bring up the average gas mileage for the vehicles they sell up to federal demands. On the other hand, with the taxpayer subsidies like Ford enjoys, the car companies get much of the expenses for the lousy-selling EVs in their lineups covered. "In many cases this is intentional," Car and Driver reported, "with automakers building EVs to satisfy regulators and leasing a limited number of loss-making vehicles in California and a handful of other states." Another ATVM loan program beneficiary, Nissan, has acknowledged the strategy. After admitting mistakes in trying to promote its all-electric, poor-selling Leaf "like Altimas," vice president for sales Al Castignetti became more realistic. "We've pulled back a little bit and are telling our dealers, 'You don't market this car traditionally,'" he told Automotive News. "No carmaker makes 54.5 miles per gallon without alternative-fuel vehicles," he said of CAFE. "Direct-injection engines are not going to get you there." Nonetheless the DOE Loan Program Office boasts that, as a result of its \$1.4 billion backing for a Leaf plant in Tennessee, that 5.7 million gallons of gasoline will be displaced annually, with 51,000 tons of CO₂ avoided, 11,000 gasoline-powered cars "off the road," and 1,300 permanent jobs created. However, Jalopnik's George confirmed from a Nissan spokesman that the jobs number is really closer to 300, and the larger number reflects the plant at full capacity. At that level the factory would produce up to 150,000 Leafs and 200,000 battery packs per year, but Nissan has sold only 9,839 Leafs (thanks to extreme discounts on leasing deals) through June, so "full capacity" is nowhere in sight. It's not worth rehashing the bogus statistical claims DOE has made (and still maintains on its site) for Fisker (\$529 million loan; \$193 million paid out) and Vehicle Production Group (\$50 million loan), since their downfalls mean the stats have been essentially zeroed out. So between those two and Ford and Nissan's unsupportable claims, George had one DOE loan recipient left to demonstrate that its job claims are "technically true": Tesla Motors. George argued that the company's \$465 million loan enabled the luxury automaker owned by Paypal billionaire Elon Musk (in photo with President Obama) enabled it to grow to 4,000 employees, surpassing the 1,500 that DOE claimed credit for on the Loan Program Office Web site. According to George a Tesla spokeswoman told him, "the ATVM loan did contribute to our abilities to grow our workforce." Maybe that's true, but in Tesla's and Musk's case, it's just a matter of deciding how to use money and debt at their disposal. The CEO, who is also head of SolarCity and out-of-this-world private travel company SpaceX, would have almost infinite options of where to draw financing from, if he decided not to use his own fortune (and what rich person would do that when he can use other people's money?). So grabbing hold of a cheap interest,

government-backed loan for Tesla would be a no-brainer ? but Musk didn't need it. Therefore as for the ?success? that George gives Tesla credit for, none of it is attributable to the DOE loan because it could have been achieved without putting U.S. taxpayers' money at risk. And so far the jury is still out on Tesla's success: the company announced its first profitable quarter ever a couple of months ago, but it was largely because it was able to sell California emissions credits to other auto companies who were not in compliance with the state's strict mandates. So again, there are far more losers than winners in a market distorted by government meddling. Nevertheless George gives DOE credit for the creation of 4,000 jobs by Tesla and 33,000 jobs ?retained? by Ford, because that was the program's ?intent.? Thus he concludes that despite inaccuracies in the details, the ATVM program's claim of 37,000 jobs is accurate. This is the kind of thing the White House will seize upon as ?proof? of its policy ?successes,? while ignoring the unpleasant details. ?But the Energy Department could stand to be a lot more honest and transparent with the taxpayers who are backing these loans, and that includes no longer telling us everything is stellar with VPG and Fisker,? George wrote. ?The Obama Administration is still trying to have an ?an unprecedented level of openness in Government,? right?? At least we can agree on that. Paul Chesser is an associate fellow for the National Legal and Policy Center and publishes CarolinaPlottHound.com, an aggregator of North Carolina news. Obama Administration Goes Down Hard on Cheryl Attkisson: WAR! "Obama Administration Press Office front organization ""Media Matters"" and ""Gawker Media"" (Which operate covertly as undisclosed operations for the Obama Press Office for media hit jobs) has launched a scathing internet carpet bombing attack on Sharyl Attkisson in an attempt to character assassinate her in retribution for her book: STONEWALLED. Interestingly enough, her book is about how the Obama Administration Press Office manipulates the media. The ""Media Matters"" attacks pretty much prove her point! Ironically, the Media Matters attacks are full of lies and false spin about facts that have been clearly proven in GAO, Federal Senate Investigations and national investigative news broadcasts. All the points that the Media Matters attacks are trying to use to attack Attkinsson are stated erroneously by Media Matters in order to make her look bad. Attkinsson associates say they are ready to go on a live CNN broadcast with the heads of ""Media Matters"", and go over each and every point that Media Matters raises. Said one associate: ""I am betting a year's salary that Media Matters doesn't have the balls to do it!"" Reporters, tired of political smear campaigns against their associates, are joining together in a bi-partisan effort to counter such attacks. Attkisson Site: <http://sharylattkisson.com/> Political Payback Site:

<http://www.paybackpolitics.org> This time ALEC, thousands of investigative reporters and Sharyl were ready for the Gawker and Media Matters tactics. Obama Subsidized Electric Car Company Tesla Investigated for Fires

<http://frontpagemag.com/2013/dgreenfield/obama-subsidized-electric-car-company-tesla-investigated-for-fires/>
Obama Subsidized Electric Car Company Tesla Investigated for Fires November 22, 2013 By Daniel Greenfield
Tesla has some big problems. This month it posted a loss of \$38 million and its shares fell 16%. On top of that, it's got battery issues. The company, which got \$465 million from Obama, makes electric cars which depend on wiring together 7,000 laptop batteries together. This is just as clumsy and unwieldy as a solution as it sounds. For one thing, laptop batteries are expensive. And it's a clunky solution. Obama donor Elon Musk, who got his buddy to trash the space program to give his Space X company a shot at the market, is talking up some giga solution, but for the moment Tesla can't be much more than a niche company for people who like to waste money to have a car they can use as a talking point in California. Obama's battery factory push has failed. Musk is probably thinking that he can pry some more taxpayer cash out of Obama to build a battery factory, like the ones that Obama already subsidized. Considering Obama's appetite for doing favors for donors, he's probably right. But that doesn't mean it will work. And meanwhile an investigation just opened into Tesla over its battery fires. (Apparently wiring together thousands of laptop batteries to power a car isn't that great of a solution.) The National Highway Traffic Safety Administration said it would launch a formal investigation into recent fires that destroyed two Tesla Motors Inc. Model S electric cars that had run over metal debris. "The agency's investigation was prompted by recent incidents in Washington state and Tennessee that resulted in battery fires due to undercarriage strikes with roadway debris," the agency said in a statement. The probe would determine whether the vehicle has a defect that makes it dangerous to operate and could result in a recall and remedy. Over a five-week period, two Model S sedans burned after hitting large pieces of metal on the highway in the U.S. Neither driver was injured. NHTSA declined to open an investigation after the first incident. There was a third fire in Mexico reported after a high-speed crash. Musk then did what he does best, court publicity and make loud statements of dubious accuracy. Tesla Chief Executive Elon Musk claimed that the automaker requested the investigation to refute fears that electric cars were more prone to fires than other vehicles. But the NHTSA disputed that, saying its decision was an independent process. "In regards to Tesla, the agency notified the automaker of its plans to open a formal investigation and requested their cooperation," the agency said, "which is standard agency practice for all investigations." So Musk went on to suggest that Tesla's rep was the only thing that could save mankind from extinction. "If a false perception about the safety of electric cars is allowed to linger, it will delay the advent of sustainable transport and increase the risk of global climate change," Musk wrote in a post to his blog on the Tesla website Monday night. Err okay. No doubt, Obama can fix this for him after the next OFA fundraiser. Tesla fans will crow that the company repaid its debt and that it's unfair to call it government subsidized. It's no longer Obama subsidized, that's true. It still however is government subsidized. Tesla didn't generate a profit by selling sexy cars, but rather by selling sleazy emissions "credits," mandated by the state of California's electric vehicle requirements. Absent this shakedown of potential car buyers, Tesla would have lost \$57 million, or \$11,400 per car. As the company sold 5,000 cars in the quarter, though, \$13,600 per car was paid by other manufacturers, who are going to pass at least some of that cost on to buyers of their products. Folks in the new car market are likely paying a bit more than simply the direct tax subsidy. So basically if you buy a real car in California, you're subsidizing Tesla's crony capitalist vehicles for celebs. This makes Musk's campaign for direct sales hypocritical. He's only against restrictive government monopolies that hurt consumers when he's not the one profiting from them. More to the point, Tesla doesn't have a business model for selling cars, but for selling emission credits. Tesla isn't a car company. It's an ecoscam rent-seeking company using the Global Warming myth to profit from government regulation and confiscation. Like a lot of eco businesses, it exists to profit from Global Warming regulations, rather than to sell a product on its own merits."

The Dianne Feinstein Investigation "The Dianne Feinstein Investigation- -----
----- U.S. Government Vs. Senator C. and Does 1-20 Tonight Al Jazeera ripped Feinstein's colleague, one Mr. Calderone, a new one per an FBI sting operation. He's off to jail soon. You can see the movie about his crimes on America Tonite. Will he roll over on Feinstein and the Senate bribes-for-laws program? It is early in the game and pleas are only just getting discussed. Ms. Feinstein has some movies out too:

<http://www.youtube.com/watch?v=-r6qsQNURow> <https://www.youtube.com/watch?v=-r6qsQNURow> PLUS

<http://www.carandsenatormovie.com> Says Feinstein: ""I can't believe I keep getting away with all this shit but they never shut me down so screw it, I'm sad all the way to the bank"" Edward A. - NYG -----

----- [caption id=""attachment_8583"" align=""aligncenter"" width=""269""] Tesla: 45500 Fremont Blvd., Fremont, CA 94538 and Solyndra: 47488 Kato Road, Fremont, CA, 94538 Feinstein's ex-staff & lobbyists work there now. Former Feinstein staffer now on staff at a major investigative group. TA- <http://www.youtube.com/watch?v=JRa1b24ptQs> -----

----- Who is Dianne Feinstein? If you were in the Senate and you had been involved in corruption things, you would want to try to get yourself on the Senate Intelligence Committee so you could use, and monitor, agency information and resources to make sure nobody found out about the corruption things you and your husband were doing. Let's take Dianne Feinstein and her husband Richard Blum and his CBRE and vast other stealth companies and funds. When she was mayor of San Francisco, the San Francisco newspapers were rife with charges of corruption and cronyism about her. Her associate, Roger Boas, went to federal prison for corruption in City Hall AND for child prostitutes. Police reports show that he used child prostitutes plus sent prostitutes out to buy favors for City Hall corrupt winner/loser rigged selections. She personally interceded in getting Solyndra funded from taxpayer dollars and getting them to build the Solyndra buildings where it benefited her husbands business connections. Her Family made profits off of Solyndra getting picked as a DOE funding ?winner?. <http://www.youtube.com/watch?v=Vv86dCW85uw> She personally interceded in getting Tesla funded from taxpayer dollars, and getting them to acquire buildings (physically next to Solyndra in the boondocks of Fremont, California) and equipment where it benefited her husbands business connections. Her Family made profits off of Tesla getting picked as a DOE funding ?winner?. Guardian staff report that her husband has made multiple trips to Mongolia transporting cash for deals and now holds business interests there on mining companies that make materials for electric car batteries and other interests that she fought for bill or budget passage on. They have airport records, travel expense reports and photographs of him in Mongolia meeting with sketchy Chinese and Asian Business men. They state that he took suitcases full of cash to Mongolia. Why did Feinstein not properly document this in her disclosures? What intelligence did Blum get near, or to, China? Richard Blum got a group of Silicon Valley VC's to buy votes, get out the vote for her and push votes to get her on Committee when she was hanging by a thread from previous near-catches of their misdeeds according to a former reporter from ValleyWag. Feinstein wrote laws regarding the Regents of California which benefited her husband. If you web search their names and ?Corruption? or ?Crony? you will find a vast number of stories about all kinds of kickbacks that the Feinstein/Blums have been charged with. And a person like this has access to all the secret files? When you chart out all of the front companies, fake family trusts under other trusts, Blum offshore accounts in Belize, The Caymans and other interesting places, companies behind other companies between her and Mr. Blum, you have a facade of misdirection and phoney business names that would make any spy envious. Feinstein's bills and budgets tie back to more false front organizations that benefit her family interests than almost any other person in the Senate per the latest research from The Guardian. If you were someone like that you would certainly try to get yourself on the intelligence committee so you could have the first clue when you were about to get caught and to steer investigations away from your crony deals. You would certainly support domestic phone-tapping because you would order such taps on your public-interest agency enemies like the ACLU and BigGovernment.com and The Schweizer team in order to keep an eye on them. Of course she is fighting on behalf of ongoing domestic spying. It is how she covers her ass. UPDATE: Here is a teeny, tiny selection of the many corruption charges against Feinstein: <https://www.sodahead.com/united-states/dianne-feinstein-the-most-corrupt-person-in-congress-routes-even-more-money-to-husbands-firm/question-3651127/> <http://capoliticalnews.com/2013/06/03/more-dianne-feinstein-corruption-husband-given-exclusive-to-sell-56>

<https://spotlightoncorruption.wordpress.com/tag/dianne-feinstein/>
http://www.conservapedia.com/Dianne_Feinstein <http://dccllothesline.com/2013/01/25/why-america-can-not-trust-the-motives-of-dianne-feinstein/> Greenwald asks: ""What is the relationship between Feinstein's husband's company: CBRE; and the Tesla, Solyndra and other Green Loan Real Estate deals " and thousands more? How is it even remotely possible that this person is in a public office? D. ? Portland Obs. ?????????????????????? Who do we trust anymore? Didn't we hire these people to go Washington to serve each individual living in America? Am I confused on the concept? I thought getting elected was like winning the best student award so you could go impress us with great deeds as opposed to winning American Idol where you can go impress us with great greed! Debbie K. ??????????????????????- NUMMI Why did Feinstein and her staff sabotage other companies trying to use NUMMI? What is the relationship between the Comptroller of Fremont California, the Mayor and Feinsteins staff? Elon Musk is on public record, published and recorded in national media, saying that NUMMI is no good for Tesla and a bad choice for Tesla. Why did Feinstein make him flip flop? What is the relationship between NUMMI, the properties adjacent to NUMMI, The adjacent Solyndra property and the real-estate company owned by Feinsteins husband: CBRE? Why do the Feinstein staff that helped get TESLA its taxpayer money now work FOR TESLA? Isn't that illegal? Isn't that unethical? Do the CIA, The NSA and federal investigators have recordings of Feinstein breaking the law? Did Snowden get some of that data in his cache? Is that why Snowden and Greenwald are so comfortable mouthing off to Feinstein? What is going on in that meeting with the City of Fremont insiders that Feinstein's chief of staff headed up and who recorded that on their cell phone? It sounds suspicious. Why did TOYOTA and GENERAL MOTORS say that NUMMI was a ""failed plant""? What was the fire and explosion that the Fremont fire department responded to at the Tesla Nummi plant?... no, not the second one where the hot metal burned the workers, the earlier one? Why did Feinstein met with UAW representatives and promise them NUMMI jobs if they supported requested issues and then how many UAW jobs did Musk actually keep on site? Why does LinkedIn show a huge number of Tesla H1-B lawyer hires advertised when all workers were supposed to be American's per the U.S. tax dollar funding? There are many more questions the federal investigators are asking, let's keep an eye on this... TDF-H -----

"Ok, Here is the most extreme theory ever, "
but it is amusing:

"?Google, Twitter and Facebook are actually spy agency sting operations and were originally created as such. They conduited the money through Kleiner Perkins offices to launder it. They paid Kleiner?s people off by giving them monopolies on the electric car and battery industries and associated mining interests.

"I saw that on a blog and just had to repost it. How about them Apples? One of the original founders of Twitter is running around saying it wasn?t what he had in mind. Even though they are supposed to be competitors you usually see their ?join? or ?login as? buttons clumped together on other sites and they sell ads for each other secretly. Those ?Google Barges? could just be international waters scrutiny evasion systems. While it sounds crazy, with all the related news coming out this week, it could almost be true. "

H.T. -----

Feinstein Corruption Scandal

"Last week California Senator Diane Feinstein abruptly resigned her position as the chairman and ranking member of the Senate Military Construction Appropriations Subcommittee (MILCON).The MILCON subcommittee is in charge of supervising military construction. The committee also oversees ""quality of life"" issues for veterans, which includes building housing for military families and operating hospitals and clinics for wounded soldiers.During her six years as MILCON leader Senator Feinstein had a conflict of interest due to her husband Richard C. Blum's ownership of two major defense contractors, who were awarded billions of dollars for military construction projects that were approved by Senator Feinstein.That's Billion with a capitol B. My very own California Senator Diane Feinstein may have just hit one out of the park folks. By directing Billions of dollars of our tax dollars to her husbands companies, DiFi may have have set a new record for corruption.According to a report compiled by MetroActive a San Francisco area newspaper Diane Feinstein used insider information to direct billions of dollars of military construction projects to companies, URS Corporation and Perini Corporation, that were owned or controlled by her husband."

"While setting MILCON agendas for many years, Feinstein, 73, supervised her own staff of military construction experts as they carefully examined the details of each proposal. She lobbied Pentagon officials in public hearings to support defense projects that she favored, some of which already were or subsequently became URS or Perini contracts. From 2001 to 2005, URS earned \$792 million from military construction and environmental cleanup projects approved by MILCON; Perini earned \$759 million from such MILCON projects."

792 million and 759 million works out to 1.551 Billion dollars. And what portion of this billion and a half dollars did DiFi and her husband pocket?

"In 2005, Roll Call calculated Feinstein's wealth at \$40 million, up \$10 million from just a year earlier. Reports show her family earned between \$500,000 and \$5 million from capital gains on URS and Perini stock. From CB Richard Ellis, her husband earned from \$1.3 million to \$4 million. Public records show Blum's company paid \$4 a share for controlling interest in Perini, and later sold about three million shares for \$23.75 each. The report also showed URS' military construction work in 2000 was only \$24 million, but the next year, when Feinstein took over as MILCON chair, military construction earned URS \$185 million. Additionally, its military construction architectural and engineering revenue rose from \$108,000 in 2000 to \$142 million in 2001, a thousand-fold increase. In late 2005, Blum sold 5.5 million URS shares, worth \$220 million"

"So a US Senator has used insider information to direct billions of tax payer dollars to her husband's companies and yet I have not seen one word of this in a single antique media outlet. Where is the outrage, where is the indignation, where are CNN, Fox, MSNBC, NBC, ABC, CBS news? And even more importantly where is an

investigation by the Senate Rules Committee? Oh wait, Difi is the newly appointed chairman of the Rules Committee so I guess we can rule out an investigation there. So after pocketing over as much as 300 million dollars as a direct result of her involvement with the MILCON committee DiFi just walks away unscathed? Where is the investigation and where is DiFi's resignation followed shortly by her indictment? Or does that only happen to Republicans? Full information can be found here and here and here."

"The federal investigation of DiFi is under deepest security because she keeps pulling the plug on the stings and research in her current position, but multiple agencies are still working the case and now multiple news organizations so her day will come."

Andrea - LAT

"RT, Al-Jazeera and The Guardian are all said to have narrowed their focus onto Feinstein with a blockbuster story on her expected from one, or all, soon. Glenn Greenwald has been building an ongoing large-format story on her, and took her on, previously. His story, though, is likely not the same as the Guardian effort. Andrea - LAT"

Tesla gets another \$34M of your tax \$\$\$ in campaign finance kickbacks. "Tesla gets another \$34M of your tax \$\$\$ in campaign finance kickbacks!!!! Part of a number of lawsuits currently filed on Tesla note that Tesla books tax giveaways as ""profit or revenue"" instead of selling cars it has made a business out of taking tax money. Today, the State of California revealed that Tesla had received another \$34 million in a one-of-a-kind, exclusive kickback of taxpayer money to help a bunch of billionaires who just happened to be the same billionaires that financed the related campaigns! Amazing! DG- Bost -----

Tesla just got a \$30-million tax break

"By Giuseppe Macri- Daily Caller The state of California just approved a \$34.7-million tax break for electric car manufacturer Tesla Motors to expand the company's production capability by another 35,000 additional units per year. As a result, Tesla will be exempt from paying sales and use taxes on its planned purchase of \$415 million in new manufacturing equipment, which California estimates will result in a \$24-million economic boon to the state's economy. The California Alternative Energy and Advanced Transportation Financing Authority was the state panel that authorized the tax break. The panel is chaired by California state Treasurer Treasurer Bill Lockyer."

"----- Since Tesla is still using our tax money, that means all of their internal financial records are available, on request, for public review, right? Dj- -----
 ----- The lawsuits against Tesla state that Tesla is pulling funny business with the numbers. Why wouldn't the State of California wait until the NHTSA review is complete, or is this because they know the NHTSA review is going to go south? T- Fresno B ----- Tesla has gotten tax money from California before and they STILL need more cash from the taxpayers? Why can't the Google Guys or Kleiner pay for this instead of the taxpayers? WTF? Dan ----- Google+ Political White House super executives Bill Daley and Larry Summers, both thought to be shoe-ins, shockingly end candidacies at same time as investigations reveal their participation at the time and place that the Google and DOE kickbacks began. Watch the news for more as details evolve.... The net is tightening around the suspects who ran a multi-billion dollar DOE/Google/Election scam: Daley, Summers, Rattner, Emanuel, Gibbs, Axelrod. All of whom suddenly quit the White House or high office when investigators let them know what they had on them! Roberts- LA Times, Chicago Office ----- All of them bailed out, at the height of their careers, in a bad economy, when they had the best jobs online already, because of ""information they received"". It made no sense for them to cancel campaigns or jump ship, when they did, unless they knew they were going to be busted. They all issued comments that used the suspicious: ""after careful consideration"" language and the ""spend more time with my family"" smoke-screen phrasing. They all worked at the White House on the illegal ordering of the direction of the DOE funding decisions and they, and their chief of staff's, all met with Google's investors, who benefited the most from the DOE funding decisions. They all are under investigation by multiple organizations for re-routing federal funds to special interests during their White House stint. Ironic? Coincidence? or Crime? Baily Johnson- Times Independent ----- Bill Daley ends his campaign, former White Chief of Staff. Larry Summers ends his White House nomination campaign at the same time. Two of the most powerful people in politics suddenly bail. Deja Vu.. Yes: Can you say Emanuel, Gibbs, Rattner, Axelrod? They find out all of their back-door, insider, communications are on record with NSA, DEA, and many other agencies, who caught them while looking for other crimes. Betty T.- Wall St. J. Stringer -----"

"Elon Musk, ?The Bad Luck Billionaire? First his cars catch on fire, then his solar panels, now his rockets.. What's a billionaire to do "Elon Musk's Tesla Motors cars are famous for catching on fire because the highly explosive, and toxic batteries, he used were never meant to be massively packed in a metal box in a car."http://www.thenewsdaily.org/elon-musk-bad-luck-billionaire-first-cars-catch-fire-solar-panels-now-rockets-whats-billionaire/ 10/31/2014 THE EDITORS & WIKI MEMBERS Uncategorized ""The Bad Luck Billionaire"" First his cars catch on fire, Bribery, Dept. of energy, Diane Feinstein, Elon Musk, Kleiner, now his rockets.. What's a billionaire to do?, Solyndra scandal, Steve Spinner, Steven Chu, then his solar panels, Washington corruption investigation" publish wp-mm-fb-likes-enabled: wp-mm-fb-likes-num: wp-mm-fb-likes-duration: wp-mm-fb-likes-weekends: wp-mm-fb-shares-enabled: wp-mm-fb-shares-num: wp-mm-fb-shares-duration: wp-mm-fb-shares-weekends: wp-mm-google-plus-enabled: wp-mm-google-plus-num: wp-mm-google-plus-duration: wp-mm-google-plus-weekends: wp-mm-twitter-tweets-enabled: wp-mm-twitter-tweets-num: wp-mm-twitter-tweets-duration: wp-mm-twitter-tweets-weekends: ccft_post_comment_title: panels_data: Array snap_MYURL: snapEdit: 1 kopa_fastnewsight_total_view: 16

"Then, via Dianne Feinstein, (who funded and took personal gain from both Tesla and Solyndra) (on adjacent plots of land), and Musk got started on a deal for his other company: Solar City, with Solyndra, only to find out that Solyndra's chemistry caused it's solar panels to set the roofs of peoples homes on fire. Then other panels that Solar City was using also began setting homes on fire. You see Solar City had some chemicals in it from Afghanistan called Indium, and other odd names, Musk's Lithium for Tesla also comes from Afghanistan and all of Musk's investment partners and Senators are invested in Afghan mineral mining.. interesting.. huh? Of course Afghanistan also ""blew up"" in every sense of the word."

"Then Musk has multiple horrible divorces and girl troubles with women who say, really, really bad things about him."

Then Musk's other Company: Space X has it's rocket blow up.

"On top of all of this, all of his companies are under government investigations and tons of law-suits."

"Elon still comes out on stage, the able Huckster, with his ""nothing to see here""-smile and his effective avoidance of all topics related to the failures."

"Musk's Silicon Valley cartel paid for the campaigns of Obama, Reid and Feinstein in exchange for TARP and

DOE cash. How is that working out for those three so far...What's that you say? NOT SO WELL?!"

With charges that White House Campaign backers are pumping his stocks in order to avoid a stock crash.. one has to wonder how long that can last...

"- Nobody but ""old people"" watch TV anymore, say TV execs, and they don't have any money in this economy. Millennials have cash but watch IPADS and don't like to be pandered to. - Old-School TV is Dead! NETFLIX and HULU are the future "

Are we tired of reality TV?

By James Hibberd @james_hibberd

"Maybe it was DC Cupcakes, because we didn't need another cable reality show about cake bosses. Or perhaps it was the latest chronicling of blue-collar workers in Alaska or Louisiana. (Doesn't Crawfish Catchers look tedious? And we bet you can't even tell whether that title is real or not). Or it could have been Bravo's seventh Real Housewives series. Or E!'s fourth Kardashians title. Whatever marked the official tipping point, it all feels familiar now: the master chefs, treasure seekers, tattoo artists, makeover experts, ghost hunters, dirty jobbers, untrained pets, C-list celebrity families, and glow-tanned bickering glambots overturning restaurant tables. We've been Flipping Out for years, and don't necessarily want to flip out anymore. Even VH1's Dating Naked, a series that got more buzz than any other new reality show in 2014, disappointed in the ratings (it debuted to just 826,000 viewers). You know a genre's in trouble when hot naked singles rubbing body paint on one another can't draw a crowd."

GET MORE EW: Subscribe to the magazine for only 33¢ an issue!

"The diminishing returns of cable TV's sea of reality sameness? ratings for 14 of the top 20 major cable channels declined in 2014? is one of the reasons networks that have devoted decades to producing unscripted shows are suddenly making dramas too. Bravo, E!, WGN, Pivot, WEtv, and even Animal Planet have all either recently launched, or are readying to launch, their first scripted shows. "Every year the number of shows that premiere increases exponentially while the number that hit decreases exponentially," says Lara Spotts, Bravo's senior VP of development. "It's the most Hunger Games-ian environment we've ever seen as programmers. We're all trying as many strategic moves as we can. And it's not just cable networks that are finding the odds are not in their favor. There hasn't been a new breakout reality show on broadcast TV since The Voice launched in 2011. Before that, there was Fox's MasterChef in 2010 and ABC's Shark Tank in 2009. But most of the broadcast reality hits are more than a decade old? like CBS' Survivor (2000), ABC's The Bachelor (2002), and Fox's American Idol (2002). There has been plenty written about why there hasn't been a new hit lately, but it all comes down to saturation. We are full. Several hundred new shows are launched across cable and broadcast every year, and most are unscripted. It's very difficult to show us a reality concept that's both (A) truly intriguing and (B) somewhat original? as the producers of Fox's Utopia can attest. Even AMC decided the reality TV game was too tough to crack right now. Two years ago the channel made an investment in reality programming with a new batch of shows. The network recently canceled all but two of of them (and one survivor is its Walking Dead chat show). "In an environment of exploding content options for viewers, we have decided to make scripted programming our priority," AMC announced in early October. "

"So now, even die-hard reality TV networks are trying scripted shows instead. Bravo will enter the scripted fray in December with *Girlfriends' Guide to Divorce*, starring Lisa Edelstein as a fortysomething self-help author who navigates her marital split. "Shonda Rhimes isn't on five nights a week, so maybe [her audience] will come to us on Tuesdays," Spotts reasons. Next year Bravo's rival E! will launch *The Royals*, a soapy scripted drama about a wildly fictionalized British royal family, starring Elizabeth Hurley as the queen of England. "It's harder and harder for a reality show to break through," says Jeff Olde, executive VP of programming at E!. "And for us *The Royals* felt like a natural extension, to give our viewers a look into a world where we'd gladly send our reality cameras but where they could never go." At least three new scripted projects made by basic cable networks are horror series, and there's one obvious inspiration there: AMC's *The Walking Dead*, which is delivering an incredible 17 million viewers weekly. WETV's new scripted show will be the exorcism drama *South of Hell*, executive produced by Eli Roth and starring Mena Suvari. Animal Planet is developing the graphic-novel series *The Other Dead*, about zombie animal attacks in Louisiana. And WGN America, a network best known for sports coverage and sitcom reruns, bypassed the reality genre altogether and turned to original programming earlier this year with the scripted witches'-brew drama *Salem*. "[Horror] has a built-in audience that you can count on to come to your network and check it out," Cherniss says. "There were people building fan websites for *Salem* before they had even seen it?and that's very specific to these kinds of shows." Obviously, a drama doesn't guarantee an audience will show up, either. On Thursday, WETV canceled its first scripted drama series effort *The Divide*. Don't take all this the wrong way. Reality TV isn't going anywhere. In the early days of the genre, that was the cliched media story?reporters would ask. "Is reality TV a trend?" It's not a trend. It's not dying or dead. But there does seem to be a weariness and a need for a format that's truly original to break away from the pack?and not just be yet another variation on what we've already seen. "There's an ebb and flow, certainly, a natural lunar cycle," Spotts says. "But I think people's interest in what other people are doing is as fertile as ever." Still, expect to see fewer shows about naked house-flipping polygamous bass fishers in the near future?and a few more shows with impressive acting, smooth camera work, and snappily crafted dialogue. (Along with a zombie gator or two.) "

" THE WORST PART OF THE CRISIS, THE NEW TV SHOW: ""LOOK WHO'S VOTING IN THE NEXT ELECTION!"" HAS BEEN CANCELLED! HERE ARE SOME SCENES FROM THE SHOW: "

Virgin Galactic Crash: Enough With Amateur Hour

Jeffrey Kluger @jeffreykluger

"End of the line: Wreckage from Virgin Galactic's SpaceShipTwo is shown in this still image captured from KNBC video footage from Mojave, California on Oct. 31, 2014. KNBC-TV/Reuters"

A fatal accident in the Mojave Desert is a lesson in the perils of space hubris

More

Virgin Galactic Spaceship ?SpaceShipTwo? Crashes During Flight Test

NASA's Antares Explosion: What it Means

"It's difficult not to feel sympathy for the hard-working people of Virgin Galactic's Sir Richard Branson's private space tourism company after the loss of their SpaceShipTwo vehicle in a crash in the Mojave Desert at a little after 10 a.m. PDT Friday. And it's completely impossible not to hurt for the families of the two pilots involved in the accident—one of whom was killed and the other of whom suffered serious injuries, according to local police."

EarthVirgin Galactic Space Tourism Rocket Crashes: 1 Dead, 1 Injured NBC NewsTaken by Surprise: Police Got Lucky Stumbling on Cop Slayer NBC NewsEx-SEAL Probed Over Best-Selling Book on Bin Laden Raid NBC News"

"But it's hard too not to be angry, even disgusted, with Branson himself. He is, as today's tragedy shows, a man driven by too much hubris, too much hucksterism and too little knowledge of the head-crackingly complex business of engineering. For the 21st century billionaire, space travel is what buying a professional sports team was for the rich boys of an earlier era: the biggest, coolest, most impressive toy imaginable. Amazon.com zillionaire Jeff Bezos has his own spacecraft company?because what can better qualify a man to build machines able to travel to space than selling books, TVs and lawn furniture online? Paul Allen, co-founder of Microsoft, has a space operation too because, well, spacecraft have computers and that's sort of the same thing, right

"Interstellar, Where No Movie Has Gone Before"

"Branson, founder of Virgin Airlines, is at least in the business of flying aircraft, but the key part of that compound word is air. Space, as Branson surely knows, has none of that?and that changes the physics considerably."

"A Virgin crash always seemed troublingly likely. And since it is the company's whole purpose to carry passengers, it seemed equally likely to hurt or kill a lot of people too. I visited Branson's self-styled spaceport in the Mojave last year to watch a brief test flight of his spacecraft. The mission that day was intended more as an air show than anything else?part of a pep rally for the hundreds of Virgin customers who would be attending to hear about the company's progress. All of them had reserved a seat and paid a deposit toward their \$200,000 ticket for a trip that?if it ever happened?would last just 15 minutes and ascend to just 62 miles (100 kilometers), which technically counts as being in space, but only to the extent that riding a jet ski off the beach in Ft. Lauderdale counts as going to sea. But never mind, because the crowd seemed happy to be there and to take Branson's word that they really, truly would get their chance to be astronauts. For the record, the demonstration flight they had come to see never took off due to high desert winds. The Virgin crash comes just three days after the Oct. 28 explosion of an Antares rocket taking off from Wallops Island, Va., on an unmanned resupply mission to the International Space Station. That first part of a very bad week for the space industry was especially cautionary, because Orbital Sciences, the Virginia-based manufacturer of the rocket, is by no means a newcomer. It's been in the business for more than three decades and has a very good track record of getting payloads?not passengers?off the ground and into orbit. Yet even it cannot control all of the lethal variables?technical, meteorological, human?that make space travel such a dicey game. The practice of non-professionals insinuating themselves into the space business is not new. We have a launch facility at Cape Canaveral yet built a Mission Control center halfway across the country in Houston?the least efficient, most senseless arrangement imaginable?because then-Vice President Lyndon Johnson was the White House point man for the space program and he wanted his home state of Texas to get a bite of the big moon pie. Ex-Sen. Jake Garn and current Sen. Bill Nelson both elbowed their way aboard space shuttle flights since, unlike all of the other American kids who want to play spaceman, they were powerful figures in Congress and could loosen or tighten NASA's purse strings at will. Once NASA announced that after the shuttle program ended in 2011 it would be outsourcing the low Earth orbit portion of its portfolio to the private sector, it was inevitable that there would be a scramble of companies vying for those contracts?and that's by no means all bad. In some respects, space has always been privatized: North American Aviation, Grumman Aerospace, Boeing and others have all been major NASA contractors, and they are hardly government-owned operations. All, however, are deeply experienced in the business of aeronautical and astronautical design, too. Elon Musk, founder of the upstart SpaceX is, so far, defying doubters, with a string of both commercial launches and resupply missions to the ISS and no major disasters. But SpaceX is a rare bird?and still a young one?and it has a while to go before it establishes its true space cred. It's Branson, however, who has always been the most troubling of the cosmic cowboys?selling not just himself on his fever dreams but his trusting customers. One of those would-be astronauts I met in the Mojave that day was a teenage girl, whose parents had put aside enough money to buy her the singular experience of a trip to space. They beamed at her courage as we spoke, and seemed thrilled about the ride she was soon to take. Those plans, presumably, are being rethought today."

Virgin Galactic Spaceship ?SpaceShipTwo? Crashes During Flight Test

Justin Worland @justinworland

One pilot was killed and another seriously injured

NASA?s Antares Explosion: What it Means

"A Virgin Galactic spacecraft crashed in the California desert during a test flight Friday, the company said. The crash killed one test pilot and left another seriously injured."

More

"NASA?s Antares Rocket Explodes During Take-OffSpaceShipOne?s Dubious BirthdayVirgin Galactic Space Tourism Rocket Crashes: 1 Dead, 1 Injured NBC NewsTaken by Surprise:"

"Visibly shaken officials at a Friday press conference said that the surviving pilot is being treated at Antelope Valley Hospital and that little is known at this time about what caused the crash. A witness told the Associated Press that SpaceShipTwo, which is carried aloft by a separate aircraft called WhiteKnightTwo, exploded shortly after detaching from its carrier craft and igniting its rockets. Virgin Galactic has been testing the aircraft, known as SpaceShipTwo, in the Southern California desert in hopes that it could one day be used to shuttle tourists to space. Virgin Galactic recently changed SpaceShipTwo?s fuel mixture from a rubber-based solution to a plastic mix, but it?s unclear if that switch had anything to do with Friday?s explosion. ?We will work closely with relevant authorities to determine the cause of this accident and provide updates ASAP,? the company said in a tweet."

" Officials from the Kern County Fire Department and the California Highway Patrol both responded to the incident, while local news helicopter footage of the scene showed debris clearly from SpaceShipTwo littering the test area. The National Transportation Safety Board said Friday it?s sending a ?go-team? to investigate the incident."

Virgin Galactic founder Richard Branson tweeted Friday afternoon that he?s flying to the scene of the crash immediately:

The SpaceShipTwo incident follows Tuesday?s loss of an unmanned Orbital Sciences Antares rocket shortly after liftoff from Virginia?s Wallops Flight Facility.

"?It hasn?t been an easy week,? said Stuart Witt, CEO of the Mojave Air & Space Port, at a press conference Friday. ?It?s certainly been a challenge, but, where I?m from, this is where you find out your true character."

Collateral Damage Victims

"Research the facts yourself: All of these connected people are, indeed, dead under suspicious circumstances or were targeted. They all died in unexpected, surprise, deaths; They died in similar time envelopes; They all had business and financial connections to, and insider knowledge of, the Silicon Valley Cartel plans; Almost all of them have been documented, filmed or recorded in involvements with the Silicon Valley Cartel members or Google controlling members; Many of them had started whistle-blowing or were already whistle-blowing; per laws of averages- this is a lot of related people to have died unexpectedly with this much in common, near impossible for these combined data points to be coincidental: Gary D. Conley- Dead Whistle-blower who railed against Silicon Valley VC's Cleantech Monopoly. Died from lead poisoning via bullet in head (Case Under Investigation) (DEAD!) Rajeev Motwani- Google Founder. Possible Murder. Found floating dead in swimming pool. Cardiac Incident or Micheal Clayton-type (see the George Clooney Movie) Murder similar to Andrew Breitbart? (DEAD!) Forrest Hayes, a married 51-year-old father-of-five, Ran Google Glass Mood Manipulation development- Killed By Hooker (DEAD!) James D Johnston, GM lobbyist/key witness- Dead! Questionable Circumstances? (DEAD!) Three crucial Tesla Senior Staff killed, one of whom was whistleblower- Accidental Plane Crash or ?Boston Brakes?? (DEAD!) Investigative Reporter Michael Hastings fiery crash- ?Boston Brakes?? (look it up) per Defcon Hackers Convention showcase on how easy it is to takeover car, plane or boat controls by radio and crash the vehicle. (DEAD!) Rory Johnson- Targeted by DOE for his novel engine patent- Dead! (DEAD!) Stanley Meyer- Hydrogen car promoter- Murder by poisoning? (DEAD!) JP Morgan Senior Technology Banker Gabriel Magee jumped off HQ building. (DEAD!) William ?Bill? Broeksmit Deutsche Banker , Tesla German ?safety inspection fixer? who got a free-pass for Tesla on safety report in Germany- Hanged at home! (DEAD!) Danny Lewin, Creator of Bulk Internet at Akamai. Attempted to copy Google Page-

ranking and Mood Manipulation technology. The Architect and Builder of the Internet Tracking System- Plane Crash 9/11? (DEAD!) Ravi Kumra- Founder, Tesla Capital- Murdered! (DEAD!) Jofi Joseph - White House staffer, Whistle-Blower on White House mismanagement by Valarie Jarret. (Targeted with Character Assassination) Silicon Valley VC Attorney- Autoerotic asphyxiation or Murder? (DEAD!) One Senator's Son- Accidental Plane Crash or 'Boston Brakes'?? (DEAD!) White House liason's wife- Burned to Death in Parked Car/Murder? (DEAD!) John Wheeler- Washington DC- Drugged, escaped, recaptured, murdered? (DEAD!) Two Guys from McKinsey Consulting- Questionable Circumstances? (DEAD!) Top DC Madam's and Escorts, including 'THE' DC Madam herself- Suicides? (DEAD!) Tata Motors Head Karl Slym dies in ""fall"" from hotel- Suicide or Push? (DEAD!) Wall Street Journal DOE/Oil Investigative Writer David Bird who was working on story about these characters. -Missing- ??? Top DOE funding oversight aide for energy-radical Senator Alexander had vast insider knowledge of DOE staff actions. Did he leak to Greenwald, and others, before his death? Senate aide found hanged in basement- Suicide or sex-scandal set-up like Arrington? Do suicidal people write such carefully composed, edited, grammar-perfect suicide letters in their dire states? (DEAD!) Andrew Brietbart the Blogger/whistleblower. First to provide tips about CARGATE online.- Cardiac Incident or Micheal Clayton-type Murder similar to Rajeev Motwani (DEAD!) "

Facilitating Contractors for Cartel Effort

"Investigation Issues: Organized Crime; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud lawsuits underway; Contract rigging; Lithium cartel organization for Afghan war; Crimes recorded by multiple law enforcement and intelligence agencies; Raj Gupta- McKinsey Fixer (Indicted, Jailed)(Under Investigation)(24/7 DS) Brian Goncher- Deloitte VC intermediary (Under Investigation)(24/7 DS) John Weinberg- Fixer (Under Investigation)(24/7 DS) McKinsey Consulting (DOE/Federal Contractor- Wrote biased/rigged whitepapers for White House & Congress on behalf of Silicon Valley VC's to sell the feds on backing the VC's investment holdings) (24/7 DS) Nick Denton- 'Hit-Man' for Robert Gibbs and Jay Carney in White House. Tabloid owner who did the dirty work for White House Press Secretaries. Formerly involved with British tabloid hacking. Thought to be hacking U.S. celebrities and senators for tips (On CIA and NSA Watchlist) (24/7 DS) Perkins Coie (Law Firm who staged many of the insider deals. Suspected of improper gain.)(24/7 DS) Deloitte Consulting (DOE Contractor- Suspected manipulated evaluation results) Operared in conflict of interest as both banking strategist for DOE 'Winners' and Evaluator for DOE. Controlled by Silicon Valley Cartel. Under world-wide investigation (24/7 DS) Google (Connected to every investor/campaign funder in this group. Suspected of news manipulation & campaign trades) (Moles planted) (24/7 DS) Lois Lerner- Director of 'Hits and Deletions' (Charged with crimes) (24/7 DS) Midland Services (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu)(24/7 DS) Technology Management Services (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu)(24/7 DS) IBM Consulting Services (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu) Had strange fake office in Virginia church building (24/7 DS) Covington & Burling, LLP (Arranged appointment of Eric Holder on behalf of campaign backers & Silicon Valley) Put Eric Holder in Office to protect White House Staff from discovery (24/7 DS) Debevoise (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu) (24/7 DS) The Petroleum Institute (Lobbyists who worked the Detroit side of the insider deals) (24/7 DS) Argonne National Labs (DOE Contractor- Suspected manipulated evaluation results on orders from Steven Chu and Rahm Emanuel) (24/7 DS) "

States Whose Tax and Operations Offices, in Their State Capitals, Participated in Cover-Ups and Kick-Backs"

"Investigation Issues: Organized Crime; abuse of tax incentives in exchange for campaign contributions, abuse of cleantech credits in exchange for campaign issues; improper relationships with Senators; Kick-backs; Fraud

lawsuits underway; Contract rigging; Lithium cartel organization for Afghan war; Misdeeds recorded by multiple law enforcement and intelligence agencies; Michigan State Offices (Under Investigation) (24/7 DS) Illinois State Offices (Under Investigation) (24/7 DS) Nevada State Offices (Under Investigation) (24/7 DS) California State Offices (Under Investigation) (24/7 DS) "

" Note from Team: Investigative members have relied on published reports, papers, GAO, OPM, U.S. Treasury, FBI, published investigations, interviews with City, State and Federal staffs and law enforcement tips. While there may be one or two names that do not belong on this list, any clarity can be easily rectified by the appointment of a public special prosecutor and an open public hearing process which allows protections for tipsters and whistleblowers. Such a hearing will dispel any confusion about who did, or didn't, do what! On orders from highly placed political officials?, FBI investigations and assignment of a Special Prosecutor or Public Judge is being blocked to avoid embarrassing public review of the corruption. Using commonly available databases, YOU can track the financial, business, political and operational connections of all of these individuals, yourself, and validate this information. While this whole case sounds wild, please remember, billionaires have extreme ways of thinking, and acting. They do things that normal people can't even conceive of. The lust for Power will drive these sorts of people to do un-heard of things in order to control that power and take those hundreds of billions of dollars in tax and treasury profits for themselves. "

Tesla's financial advisors: Deloitte charged in Money Laundering Scheme "Tesla's financial advisors: Deloitte charged in Money Laundering Scheme NY State top legal bulldog Benjamin M. Lawsky has charged and fined Deloitte tens of millions of dollars for their involvement in Money Laundering Schemes. Deloitte was the financial advisor for both Tesla and the DOE during the give-away of the money from DOE to Tesla proving that: The snakes in the henhouse should not guard the eggs. Deloitte made vast millions off their concurrent double-agent role with DOE and Tesla. Further investigations of Deloitte and their relationship with Tesla, Wells Fargo, and DOE continue to swing the spotlight onto the worms-nest of corruption."http://www.thenewsdaily.org/Tesla's-financial-advisors-deloitte-charged-in-money-laundering-scheme/ 10/30/2014 THE EDITORS & WIKI MEMBERS Uncategorized "Boycott Tesla, Bribery, Deloitte, Deloitte DOE, Dianne FEinstein, DOE Corruption, Fisker, illuminati, John Doerr, Kleiner, kleiner perkins sex allegations, LIBOR SCANDAL, NASDAQ: TSLA, Senator Upton, solyandra, Solyandra scandal, solyandra-mobile, solyndramobile, Steve Spinner, Steve Westly, Steven Chu, tesla kleiner, Tesla motors, Tesla Stock, TSLA, wall street journal investigation, washington corruption investigation" publish original_post_id: 525 reddit: Array kopa_fastnewsight_total_view: 13 wp-mm-fb-likes-enabled: wp-mm-fb-likes-num: wp-mm-fb-likes-duration: wp-mm-fb-likes-weekends: wp-mm-fb-shares-enabled: wp-mm-fb-shares-num: wp-mm-fb-shares-duration: wp-mm-fb-shares-weekends: wp-mm-google-plus-enabled: wp-mm-google-plus-num: wp-mm-google-plus-duration: wp-mm-google-plus-weekends: wp-mm-twitter-tweets-enabled: wp-mm-twitter-tweets-num: wp-mm-twitter-tweets-duration:wp-mm-twitter-tweets-weekends: OPH_original_pub_date: 2013-06-19 01:22:57

More from gizmodo.com

"The Eric Schmidt Worse-Case Scenario Theory: - There was a posting on the web, some time ago, that proposed what sounded like a crazy concept about Eric Schmidt and Google running some insane scheme to take over America. That posting was before The Snowden thing happened. If you had come across this guy's posting from a year, or so, ago, you might have dismissed it as whack. In light of the facts that have now emerged in the news.. it's kinda sounding more ""right on the mark"". See what you think: ""I used to work at Google. I left because of what I saw. Eric Schmidt has gone nuts. He can act normal in interviews but behind the scenes, he has lost his marbles from hyper-affluenza. He has this secret group called New America Foundation that tells politicians what to do, he even tells Obama. His people are ON STAFF in the White House. He has this spy thing called INQTEL that does weird politics manipulation. He buys girls for weird parties. He has a concept that he wants America run ""his way"" and that he has the money to buy that plan. He got some other big Silicon Valley investors to buy into his plan and they seem to be doing this thing based around the FDR Smedley Butler federal take-over attempt. Look up ""Smedley Butler"" online but don't look anything up on Google. Schmidt, and the boys, have the Google search engine rigged to hide anything that comes out about this. He and the boys got Obama to give billions and billions of dollars to them through TARP and the Department of Energy. He even claimed, once at a private party, to have arranged, with Goldman Sachs, to have faked the last economic collapse

in order to get the TARP and Department of Energy funds created so that they could be given to ""his boys"". I'm going to China until this blows over. You will see that the beneficiaries of the TARP and DOE cash were almost all connected to Eric. Schmidt uses the Google built-in spying systems to keep an eye out for any trouble-makers who might squeal. Good Luck."" Hmmmmm.. What do you think? "

Assange: Google Is Not What It Seems

By Julian Assange

""When Google Met Wikileaks"" by Julian Assange published by OR Books. Reuters; OR Books"

"Filed Under: World, WikiLeaks, Julian Assange, Google, Eric Schmidt"

"In June 2011, Julian Assange received an unusual visitor: the chairman of Google, Eric Schmidt, arrived from America at Ellingham Hall, the country house in Norfolk, England where Assange was living under house arrest."

"For several hours the besieged leader of the world's most famous insurgent publishing organization and the billionaire head of the world's largest information empire locked horns. The two men debated the political problems faced by society, and the technological solutions engendered by the global network?from the Arab Spring to Bitcoin. "

"They outlined radically opposing perspectives: for Assange, the liberating power of the Internet is based on its freedom and statelessness. For Schmidt, emancipation is at one with U.S. foreign policy objectives and is driven by connecting non-Western countries to Western companies and markets. These differences embodied a tug-of-war over the Internet's future that has only gathered force subsequently."

Newsweek Magazine is Back In Print

In this extract from When Google Met WikiLeaks Assange describes his encounter with Schmidt and how he came to conclude that it was far from an innocent exchange of views.

"Eric Schmidt is an influential figure, even among the parade of powerful characters with whom I have had to cross paths since I founded WikiLeaks. In mid-May 2011 I was under house arrest in rural Norfolk, England, about three hours' drive northeast of London. The crackdown against our work was in full swing and every wasted moment seemed like an eternity. It was hard to get my attention."

"But when my colleague Joseph Farrell told me the executive chairman of Google wanted to make an appointment with me, I was listening."

In some ways the higher echelons of Google seemed more distant and obscure to me than the halls of Washington. We had been locking horns with senior U.S. officials for years by that point. The mystique had worn off. But the power centers growing up in Silicon Valley were still opaque and I was suddenly conscious of an opportunity to understand and influence what was becoming the most influential company on earth. Schmidt had taken over as CEO of Google in 2001 and built it into an empire.

I was intrigued that the mountain would come to Muhammad. But it was not until well after Schmidt and his companions had been and gone that I came to understand who had really visited me.

"The stated reason for the visit was a book. Schmidt was penning a treatise with Jared Cohen, the director of

Google Ideas, an outfit that describes itself as Google's in-house think/do tank.

"I knew little else about Cohen at the time. In fact, Cohen had moved to Google from the U.S. State Department in 2010. He had been a fast-talking Generation Y ideas man at State under two U.S. administrations, a courtier from the world of policy think tanks and institutes, poached in his early twenties."

"He became a senior advisor for Secretaries of State Rice and Clinton. At State, on the Policy Planning Staff, Cohen was soon christened Condi's party-starter, channeling buzzwords from Silicon Valley into U.S. policy circles and producing delightful rhetorical concoctions such as Public Diplomacy 2.0. On his Council on Foreign Relations adjunct staff page he listed his expertise as terrorism; radicalization; impact of connection technologies on 21st century statecraft; Iran.

"It was Cohen who, while he was still at the Department of State, was said to have emailed Twitter CEO Jack Dorsey to delay scheduled maintenance in order to assist the aborted 2009 uprising in Iran. His documented love affair with Google began the same year when he befriended Eric Schmidt as they together surveyed the post-occupation wreckage of Baghdad. Just months later, Schmidt re-created Cohen's natural habitat within Google itself by engineering a think/do tank based in New York and appointing Cohen as its head. Google Ideas was born."

"Later that year two co-wrote a policy piece for the Council on Foreign Relations' journal Foreign Affairs, praising the reformative potential of Silicon Valley technologies as an instrument of U.S. foreign policy. Describing what they called coalitions of the connected, Schmidt and Cohen claimed that:"

Democratic states that have built coalitions of their militaries have the capacity to do the same with their connection technologies.

They offer a new way to exercise the duty to protect citizens around the world [emphasis added].

Schmidt and Cohen said they wanted to interview me. I agreed. A date was set for June.

"Executive Chairman of Google Eric Schmidt and Jared Cohen, director of Google Ideas Olivia Harris/Reuters "

* * *

"By the time June came around there was already a lot to talk about. That summer WikiLeaks was still grinding through the release of U.S. diplomatic cables, publishing thousands of them every week. When, seven months earlier, we had first started releasing the cables, Hillary Clinton had denounced the publication as an attack on the international community that would tear at the fabric of government."

"It was into this ferment that Google projected itself that June, touching down at a London airport and making the long drive up into East Anglia to Norfolk and Beccles."

"Schmidt arrived first, accompanied by his then partner, Lisa Shields. When he introduced her as a vice president of the Council on Foreign Relations—a U.S. foreign-policy think tank with close ties to the State Department—I thought little more of it. Shields herself was straight out of Camelot, having been spotted by John Kennedy Jr.'s side back in the early 1990s."

"They sat with me and we exchanged pleasantries. They said they had forgotten their Dictaphone, so we used mine. We made an agreement that I would forward them the recording and in exchange they would forward me the transcript, to be corrected for accuracy and clarity. We began. Schmidt plunged in at the deep end, straightaway quizzing me on the organizational and technological underpinnings of WikiLeaks."

* * *

"Some time later Jared Cohen arrived. With him was Scott Malcomson, introduced as the book's editor. Three months after the meeting Malcomson would enter the State Department as the lead speechwriter and principal advisor to Susan Rice (then U.S. ambassador to the United Nations, now national security advisor)."

"At this point, the delegation was one part Google, three parts U.S. foreign-policy establishment, but I was still none the wiser. Handshakes out of the way, we got down to business."

"Schmidt was a good foil. A late-fiftysomething, squint-eyed behind owlsh spectacles, managerially dressed?Schmidt's dour appearance concealed a machinelike analyticity. His questions often skipped to the heart of the matter, betraying a powerful nonverbal structural intelligence."

"It was the same intellect that had abstracted software-engineering principles to scale Google into a megacorp, ensuring that the corporate infrastructure always met the rate of growth. This was a person who understood how to build and maintain systems: systems of information and systems of people. My world was new to him, but it was also a world of unfolding human processes, scale and information flows."

"For a man of systematic intelligence, Schmidt's politics?such as I could hear from our discussion?were surprisingly conventional, even banal. He grasped structural relationships quickly, but struggled to verbalize many of them, often shoehorning geopolitical subtleties into Silicon Valley marketese or the ossified State Department micro-language of his companions. He was at his best when he was speaking (perhaps without realizing it) as an engineer, breaking down complexities into their orthogonal components."

"I found Cohen a good listener, but a less interesting thinker, possessed of that relentless conviviality that routinely afflicts career generalists and Rhodes Scholars. As you would expect from his foreign-policy background, Cohen had a knowledge of international flash points and conflicts and moved rapidly between them, detailing different scenarios to test my assertions. But it sometimes felt as if he was riffing on orthodoxies in a way that was designed to impress his former colleagues in official Washington."

"Malcomson, older, was more pensive, his input thoughtful and generous. Shields was quiet for much of the conversation, taking notes, humoring the bigger egos around the table while she got on with the real work."

"As the interviewee, I was expected to do most of the talking. I sought to guide them into my worldview. To their credit, I consider the interview perhaps the best I have given. I was out of my comfort zone and I liked it."

"We ate and then took a walk in the grounds, all the while on the record. I asked Eric Schmidt to leak U.S. government information requests to WikiLeaks, and he refused, suddenly nervous, citing the illegality of disclosing Patriot Act requests. And then, as the evening came on, it was done and they were gone, back to the unreal, remote halls of information empire, and I was left to get back to my work."

"That was the end of it, or so I thought."

* * *

"Two months later, WikiLeaks' release of State Department cables was coming to an abrupt end. For three-quarters of a year we had painstakingly managed the publication, pulling in over a hundred global media partners, distributing documents in their regions of influence and overseeing a worldwide, systematic publication and redaction system, fighting for maximum impact for our sources."

"But The Guardian newspaper?our former partner?had published the confidential decryption password to all 251,000 cables in a chapter heading in its book, rushed out hastily in February 2011."

"By mid-August we discovered that a former German employee?whom I had suspended in 2010?was cultivating business relationships with a variety of organizations and individuals by shopping around the location of the encrypted file, paired with the password?s whereabouts in the book. At the rate the information was spreading, we estimated that within two weeks most intelligence agencies, contractors and middlemen would have all the cables, but the public would not."

I decided it was necessary to bring forward our publication schedule by four months and contact the State Department to get it on record that we had given them advance warning. The situation would then be harder to spin into another legal or political assault.

"Unable to raise Louis Susman, then U.S. ambassador to the U.K., we tried the front door. WikiLeaks investigations editor Sarah Harrison called the State Department front desk and informed the operator that ?Julian Assange? wanted to have a conversation with Hillary Clinton. Predictably, this statement was initially greeted with bureaucratic disbelief."

"We soon found ourselves in a reenactment of that scene in Dr. Strangelove, where Peter Sellers cold-calls the White House to warn of an impending nuclear war and is immediately put on hold. As in the film, we climbed the hierarchy, speaking to incrementally more superior officials until we reached Clinton?s senior legal advisor. He told us he would call us back. We hung up, and waited."

"When the phone rang half an hour later, it was not the State Department on the other end of the line. Instead, it was Joseph Farrell, the WikiLeaks staffer who had set up the meeting with Google. He had just received an email from Lisa Shields seeking to confirm that it was indeed WikiLeaks calling the State Department."

"It was at this point that I realized Eric Schmidt might not have been an emissary of Google alone. Whether officially or not, he had been keeping some company that placed him very close to Washington, D.C., including a well-documented relationship with President Obama. Not only had Hillary Clinton?s people known that Eric Schmidt?s partner had visited me, but they had also elected to use her as a back channel."
