SENATORS DROPPING LIKE FLIES IN CORRUPTION ARRESTS

HERE IS HOW YOUR POLITICIAN GETS THEIR BRIBES

Lobbyists exploit massive loophole to wine and dine lawmakers, aides at fancy getaways

Leading the way is the nonprofit Congressional Institute, which is run by veteran Republican staffers and funded by \$3 million in annual dues from private interest

groups. Your Senators are paid bribes in stock market shares and the following other ways:

In February, the Congressional Institute hosted its annual conference for House legislative and communications directors at the Hyatt Regency Chesapeake Bay Golf Resort, Spa and Marina in Cambridge, Maryland. | EQRoy/Alamy Stock Photo

By Adriana Navarro, Caley Fox Shannon, Taylor Nichols and [Heidi Przybyla](#)

In 2007, after [one of the biggest scandals in K Street history](#), Congress cracked down on lobbyists' ability to wine and dine lawmakers and aides with a host of reforms — including limits on extravagant, all-expenses-paid trips.

In the nearly two decades since, the influence industry has blown a hole through those rules, according to a new analysis of House travel disclosure data by the Howard Center for Investigative Journalism at the University of Maryland in partnership with POLITICO. U.S. representatives and their staff have taken at least 17,000 trips since 2012 that were paid for by private parties, many of them nonprofits with deep ties to lobbyists and special interests.

Leading the way is the nonprofit Congressional Institute: Between 2012 and 2023, Capitol Hill staff members and one lawmaker took more than 4,200 trips on the institute's dime. Run by veteran Republican staffers, the institute is funded by \$3 million in annual dues from private interest groups such as Business Roundtable and the American Hospital Association. The overwhelming majority of the trips were taken by GOP staff, according to the data, which found just one example of a Democrat attendee.

Congressional travel rules generally bar lobbyists from playing a significant role in organizing or participating in trips sponsored by corporate entities. Such free trips are limited to no more than one day, with few exceptions.

None of these restrictions, however, applies to nonprofits such as the Congressional Institute, which regularly arranges multiday trips to luxury hotels and resorts along the mid-Atlantic coast. Guests mingle with private-sector institute members who pay as much as \$27,500 annually for access to the invite-only retreats. And there is nothing

preventing lobbyists and industry officials from participating as speakers or attendees at the events.

“It absolutely emulates money laundering,” said Anna Massoglia, editorial and investigations manager at OpenSecrets, a nonpartisan research organization that tracks money in politics. Not only is it legal, she said, it makes it difficult to regulate gifts and travel for members of Congress: “It provides a way to really get around the intent of the law.”

Source: Howard Center for Investigative Journalism at University of Maryland

Of the institute’s dozen board members, 11 are current or former federal lobbyists who have worked for some of Washington’s top lobbying firms such as the Duberstein Group, Bockorny Group and H&M Strategies. Among them, only Michael Sommers, president and CEO at American Petroleum Institute, is not registered as a lobbyist, according to disclosure forms, though API spent over \$6.1 million on lobbying in 2023 alone.

Board members’ recent clients include major economic players on the Fortune 500 list, including Exxon Mobil, Toyota, JPMorgan Chase and Meta (formerly Facebook).

In February, the Congressional Institute hosted its annual conference for House legislative and communications directors at the Hyatt Regency Chesapeake Bay Golf Resort, Spa and Marina in Cambridge, Maryland. There, executives from Microsoft, Google and Meta led a panel about artificial intelligence “opportunities, pitfalls and unknowns.”

Attendees had the chance to rub shoulders with senior staff, including from the office of House Speaker Mike Johnson and the House Financial Services Committee, according to an itinerary contained in a House travel disclosure form. That's the committee responsible for oversight of an industry facing a torrent of calls for regulation by members of both parties. For instance, about a week prior to the February retreat, Democratic members on the committee sent a letter to Meta CEO Mark Zuckerberg demanding answers about his crypto-related endeavors.

In total, 11 lobbyists addressed top House aides during the retreat. The Howard Center reached out to nine House staffers who took that trip or others sponsored by the Congressional Institute. They declined to comment or did not respond.

“What's important to understand is that they are doing this in a social setting, so [lobbyists and staffers] become friends. It's not just lobbyists going into the office,” said Bruce Freed, president of the Center for Political Accountability, a nonpartisan nonprofit that tracks corporate political spending.

Among those in Cambridge were Ben Nyce, deputy policy director to the House Republican Conference, and Hannah Morrow, then the legislative director for Rep. John Rutherford (R-Fla).

In their disclosure reports, Nyce cited the meeting as an opportunity to “strengthen professional relationships,” and Morrow said she attended “for leadership training and policy sessions that will enhance my work to achieve my boss's policy goals.”

The Congressional Institute paid about \$1,882 for Morrow and her husband's lodging, meals and room rental, and \$1,127 for Nyce, their reports say.

Kelle Strickland, president and CEO of the Congressional Institute, defended the role lobbyists play in the organization. “Many of the professionals that work downtown in D.C. are former Hill staff, and they provide an incredible insight to the changing needs of Congress at the member level and at the staff level,” she said.

Strickland joined the organization last year after two decades working in the House. Most recently she was legal counsel for the chair of the House Ethics Committee, the body in charge of approving gift travel.

In addition to travel disclosures, nonprofit tax records and lobbying registrations, the Howard Center used data collected by OpenSecrets, a nonpartisan government watchdog organization, and by LegiStorm, a public affairs information platform, to document the extensive links between lobbyists and travel sponsors.

With one exception, the Congressional Institute trips were for staff travel — often to what it bills as “family-friendly” conferences for top aides such as chiefs of staff, communications directors and legislative directors. Many trips appear aimed at putting issue experts and current and former committee experts before current Hill staff. A number of the experts are former staffers who’ve become lobbyists.

An itinerary for a June 2022 conference in Williamsburg, Virginia, lists Ralph Hellmann as a panel participant offering insights on how to get bills passed. Hellmann, an institute board member, was listed as a one-time policy director to former Republican House Speaker Dennis Hastert. He has since worked as a lobbyist for the Information Technology Industry Council and for “many of the nation’s largest corporations and trade groups.” Hellmann did not return a request for comment.

From 2012 to 2023, at least three-quarters of the institute’s board members were registered lobbyists while serving on the board, according to tax and lobbying records. In fiscal year 2023, 86% of the institute’s revenue came from membership dues, and more than half of expenses were for hosting congressional trips.

**THIS IS ONE OF TESLA'S
BATTERIES. EACH TESLA
HAS OVER 7000 OF THEM.
A CRACK THIS SMALL CAN
RELEASE POISON GAS
AND BLOW UP YOUR TESLA**

The Congressional Institute is not an outlier. Nine of the top 10 sponsors of privately funded congressional travel throughout the last decade have had current or former registered lobbyists on their boards or in leadership, the Howard Center found.

The rules requiring lobbyists to be hands-off in travel are “not really worth the paper they’re written on,” said Meredith McGehee, an independent expert in government ethics and money in politics who called the trips “kind of the norm.”

“The reality has been that with a little good lawyering and not much originality, you can pretty much get around these rules to do whatever you want,” she said.

The Congressional Institute was incorporated as a nonprofit in 1987 to hold educational conferences that, according to its website, provide “space for Members and staff to discuss legislative priorities and strategies as well as develop professional relationships with each other and experts in their fields.”

Lobbyists have been part of the Congressional Institute from the beginning. Kenneth Duberstein, founder of the Duberstein Group lobbying firm and former chief of staff to President Ronald Reagan, was the Congressional Institute’s founding board chair.

Congressional Institute officials declined to disclose who its members are and whether membership has increased in recent years. Lisa Camooso Miller, the institute’s media spokesperson, confirmed “a representative of dues-paying partners are invited to attend the conferences” for House members and staffers. “Private sector partners pay their own room, food and other conference expenses,” she added.

Some past and current clients of lobbyists and institute board members David Bockorny, Anne Bradbury and Dan Meyer, have made yearly contributions of \$27,500 to the Congressional Institute. They include Business Roundtable, an association of CEOs, from 2020 to 2022 and the American Hospital Association from 2019 to 2021. Business Roundtable and the American Hospital Association declined to comment.

The organization also sponsors conferences for lawmakers themselves, most notably the annual House Republican retreat that took place at The Greenbrier luxury resort in West Virginia in March. However, it does not cover the members’ travel or lodging.

While the Congressional Institute is the leader in underwriting trips for legislative staff, there are many other active players.

The American Israel Education Foundation, AIPAC's charity organization, sponsored over 800 congressional trips — primarily for House members — from 2012 through 2023, according to the Howard Center analysis. This makes it the second-largest sponsor of private travel for the House.

Another regular sponsor is the Louisiana Sugar Cane Foundation, which has sponsored about a third of House staffers' visits to sugar-growing regions. Industry insiders tied to the American Sugar Cane League formed the foundation after the 2007 ethics reforms. More broadly, sugar interests sponsored more congressional travel than any other branch of the agribusiness sector between 2012 and 2023.

In the world of technology, the Consumer Technology Association, a tech trade association and registered lobbying organization, flies dozens of congressional staffers every January to Las Vegas for the glitzy Consumer Electronics Show.

Onsite, representatives from CTA member companies such as Microsoft, Amazon and Meta have the opportunity to discuss the laws they'd like to see passed. These officials often are not registered lobbyists, but their goal is to persuade Congress to approve legislation that benefits the tech industry.

Craig Holman, a public interest lobbyist at Public Citizen, said Congress will impose rules on itself only if the public clamors for change.

The Honest Leadership and Open Government Act, the last major overhaul of lobbying rules, was passed only in 2007 after Jack Abramoff, a high-profile lobbyist, was convicted on charges involving corruption, conspiracy, tax evasion and fraud. Among other things, Abramoff admitted providing trips to lawmakers in exchange for their support of his clients' interests.

"Members of Congress won't start regulating themselves if it's just left up to them," said Holman, who worked with lawmakers to draft the overhaul. "They will start coming out with these regulations when the public gets involved. And the public gets involved only on the heels of scandal."

Adriana Navarro, Caley Fox Shannon, and Taylor Nichols are reporters for the Howard Center for Investigative Journalism at the University of Maryland. Heidi Przybyla is a national investigative correspondent for POLITICO.

Dear Burns:

It has been some time since we spoke so I wanted to start by wishing you a happy new year and thanking you for your assistance in placing our corporate contribution for Haiti Relief through the Clinton Foundation.

My hope is that you can further help me with two very different requests related to the Haitian tragedy:

1. After the tsunami devastated parts of Indonesia in 2004, I felt strongly that the CEOs of American corporations involved in the planning, construction and operation of civil, energy, water and telecommunication infrastructure should lead a charitable effort involving human as well as financial resources to develop an implementation plan for the rebuilding of the country once the Red Cross, the Military and the other "first responders" had stabilized the situation. I think the concept is even more relevant in 2010 with respect to Haiti which obviously is much closer to the United States and has much less indigenous skills and resources of its own to apply to the rebuilding

Billionaire of the century.

Billionaire of the century.

ELON MUSK'S 'WANK TANKS' ARE ONLY DRIVEN BY ASSHOLES AND DOUCHEBAGS WHO HAVE NO CLUE ABOUT WHAT DICKS THEY ARE

“One major misstep has been the Cybertruck. Since Musk introduced it to the world in 2019 by breaking the vehicle’s “unbreakable” window, it’s been plagued by delays, manufacturing issues and general mockery. It started shipping last fall, years later than promised, but fewer than 20,000 have made it into the hands of customers. Despite the short window of time, it’s already been recalled four times, and videos of manufacturing failures have gone viral on social media. On Reddit, the ‘Cyberstuck’ subreddit, which relentlessly posts such failures, has over 160,000 members—over 10 times more people than actually own one. That’s not a good sign. But even if the Cybertruck’s rollout had been flawless, it would still have issues with respect to sustainability—the large amounts of energy, aluminum and materials it takes to make the massive vehicles compared to other EVs makes them environmentally unfriendly.”

<https://www.forbes.com/sites/alexknapp/2024/09/19/the-cybertruck-in-the-room-why-elon-musk-isnt-on-the-first-forbes-sustainability-leaders-list/estpein-light-flogs>

•

Just joined the sub. I feel like this is as close as I will ever get to being able to flip Elon off. Go fuck yourself Elon. 🍌

The saddest think about the cybertruck is that Musk is taking advantage of people who are mentally challenged.

Fuck Elon! The fake environmentalist

If Elon weren't a weak, drug addicted, insecure, petty, infantile poser, he could turn everything around but he's not going to change.

There are 2 or 3 here in northern Utah. I point and laugh every time I see one, and so do my kids. Was driving with my hubby the other day, and he got to see his first one in the

wild. I wish I had recorded it, but his exact words were, "I thought people had to be joking at how much it looks like a dumpster. Consider me corrected."

In East Hampton. Not AI. This is real.

While it is funny how poorly built and engineered the Cybertruck is, let's not forget that the thing is a death machine. Elon's grift is literally getting people killed:

A video player interface showing a news report. The main video content shows a Tesla Cybertruck engulfed in flames at night, with firefighters in orange gear working around it. On the left side of the video, there is a vertical traffic overlay for CW39 Houston with the following text: 'I-69 N DOWNTOWN TO HUMBLE 15 min 67 mph', 'I-10 E PIN OAK TO DOWNTOWN 25 min 66 mph', and 'I-610 E SOUTH LOOP TO HWY 14 13 min 65 mph'. At the bottom of the video, there is a blue news banner that reads 'CW39 HOUSTON CYBER TRUCK CATCHES ON FIRE 7003 FISHER | BAYTOWN'. To the right of the banner, it shows 'CW39 81° 5:34'. At the very bottom of the player, there is a control bar with a play button, a progress bar showing '0:03 / 0:17', and other controls like volume and full screen.

FEDS FIND THAT SILICON VALLEY ENGAGES IN VAST ABUSIVE SPYING ON CITIZENS IN ORDER TO MANIPULATE POLITICS AND MARKETS

F.T.C. Study Finds 'Vast Surveillance' of Social Media Users

The Federal Trade Commission said on Thursday it found that several social media and streaming services engaged in a “vast surveillance” of consumers, including minors, collecting and sharing more personal information than most users realized.

Reddit, for example, totally works for the Democrats.

The findings come from a study of how nine companies — including Meta, YouTube and TikTok — collected and used consumer data. The sites, which mostly offer free services,

profited off the data by feeding it into advertising that targets specific users by demographics, according to the report. The companies also failed to protect users, especially children and teens.

The F.T.C. said it began its study nearly four years ago to offer the first holistic look into the opaque business practices of some of the biggest online platforms that have created multibillion-dollar ad businesses using consumer data. The agency said the report showed the need for federal privacy legislation and restrictions on how companies collect and use data.

“Surveillance practices can endanger people’s privacy, threaten their freedoms, and expose them to a host of harms, from identify theft to stalking,” said Lina Kahn, the F.T.C.’s chair, in a statement.

Tech giants are under intense scrutiny for abuses of privacy and have in recent years been blamed in part for contributing to a mental health crisis among young people and children that has been linked by some social scientists and the surgeon general to the rampant use of social media and smartphones. But despite multiple proposals in Congress for stricter privacy and children’s online safety protections, nearly all legislative attempts at regulating Big Tech have failed.

Efforts by the companies to police themselves also haven’t worked, the F.T.C. concluded in its report. “Self-regulation has been a failure,” it added.

In December 2020, the agency opened its inquiry into the nine companies that operate 13 platforms. The F.T.C. requested data from each company for operations between 2019 and 2020, and then studied how the companies had collected, used and retained that data.

Included in the study were the streaming platform Twitch, which is owned by Amazon, the messaging service Discord, the photo- and video-sharing app Snapchat, and the message board Reddit. Twitter, now renamed X, also provided data.

The study did not disclose company-by-company findings.

Companies have argued that they’ve tightened their data collection policies since the studies were conducted. Earlier this week, Meta announced that the accounts of Instagram users younger than 18 will be made private by default in the coming weeks, which means that only followers approved by an account-holder may see their posts.

The F.T.C. found that the companies voraciously consumed data about users, and often bought information about people who weren't users through data brokers. They also gathered information from accounts linked to other services.

Most of the companies collected the age, gender and the language spoken by users. Many platforms also obtained information on education, income and marital status. The companies didn't give users easy ways to opt-out of data collection and often retained sensitive information much longer than consumers would expect, the agency said.

The companies used data to create profiles on users — often merging the information they gathered with information on habits collected on other sites — to serve up ads.

The agency also found that many of the sites claimed they restricted access to users under the age of 13, but many children remained on the platforms. Teens were also treated like adults on many of the apps, subjecting them to the same data collection as adults.

Many of the companies couldn't tell the F.T.C. how much data they were collecting, according to the study.

The F.T.C. last year [proposed changes to strengthen child privacy regulations](#) and lawmakers are seeking to raise child privacy protections to users under 18. In 2022, Ms. Khan opened a regulatory effort to create rules for companies that show advertising based on users' browsing or search history.

The agency has previously filed complaints against several tech companies for privacy violations, and reached a \$500 million settlement in January with Epic Games for violating a child privacy law. In 2022, the F.T.C. fined Twitter \$150 million for using security data about users for behavioral advertising.

YET ANOTHER THING ELON MUSK HAS DESTROYED: THE SKY

Starlink is ruining astronomy, scientists say

Paige Bruton

An international team of astronomers reported in a study Wednesday that the second generation model of Starlink satellites is hampering radio astronomy, which is essential

for the study of the non-visible universe, like black holes, for example. The satellites, which are part of SpaceX's internet constellation, were found to have interference 32 times stronger than the first generation.

The number of satellites in orbit around Earth is rapidly increasing, with some 100,000 expected to be in place by 2030. And as their numbers grow, so does the difficulty of observing the universe from Earth. In some cases, satellites, such as those of Texas company AST Spacemobile, are so big and bright that they appear more luminous all but the brightest objects in the night sky.

SpaceX's Starlink dish is attracting CATS that crawl on it to warm up while it is in snow melt mode

SpaceX's Starlink dish has a Snow Melt Mode that warms the device when it is covered in snow and it seems to be a heater for animals - five cats were snapped huddling on a user terminal to stay warm. Twitter user Aaron Taylor shared the snap online, tweeting: 'Starlink works great until the cats find out that the dish gives off a little heat on cold days.' Although the snap is adorable, other critters could sprawl out on the dish and damage the device or disrupt service.

Satellites could hamper observations of the 'invisible' universe...

Radio telescopes have helped to answer some of the trickiest questions about our universe, illuminating "the most mysterious objects in all of physics." They "see" distant objects in the electromagnetic spectrum, including galaxies from the universe's infancy, and electromagnetic radiation from satellites makes detecting these signals harder, like dialing up the static on a car radio trying to pick up a station in a desert. While such discoveries may seem like science for science's sake, scientists cautioned that is not the case: "It's wrong to say that there is some science that you can simply dismiss. The applications may be decades or even longer in the future but they can be very fundamental and very important," one of the UK's top astronomers told the BBC.

...They also affect the study of the visible, too

Starlink's satellites are bright enough that astronomers have decried them as an existential threat for as long as SpaceX has been launching them into orbit. While the company has taken some measures to mitigate how shiny they appear from Earth, their increased number and the many other satellites being launched means that their light pollution is "threatening the entirety of ground-based astronomy in every wavelength and in different ways," astronomers told the BBC. There is a fear that soon, space observation might begin to look like a "windshield of bugs," and become unfeasible, a researcher at the Vera C. Rubin Observatory in Chile told The New York Times.

Fixing the problem has not proved easy

When SpaceX initially launched the first set of 60 Starlink satellites in 2019, even its own engineers were surprised by how bright they appeared, Space.com noted. Their luminosity set off panic among astronomers, and SpaceX tried to make the satellites darker, but their initial fix, called Darksat, failed to prevent interference with some kinds of observations done by large telescopes, like the Vera C. Rubin. Meanwhile, researchers are trying to improve the quality of their observations to account for the interference, although many observatories are slow to upgrade — “inertia is cheaper,” The New York Times noted.

Is That Elon Musk's AI? Or Does It Just Suck?
