FORWARD

This is the information they never taught you in school.

Many of these points of advice conflict with other points of advice. This proves how different people can be between each other. This also proves that men and women can have two totally different perceptions about the same incident or concept.

This book was created to educate. It will horrify you, shock you, amaze you, enlighten you and clearly illuminate the fact that everybody has different assumptions about how-things-should-work in social interaction. You will be moved by how different each gender thinks about different things but it is better to know what you are heading into than not.

Depending on the social programming by your parents, your college clique, your work mates, your sports buddies and your religion, you may agree or disagree with each person's suggested tip. Keep an open mind and consider that past experiences may have created different causes for each person's 'tip'.

The quotes alternate between **bold** and non-bolded text as each author changes.

SPREAD THE WORD. TELL YOUR FRIENDS. COPY AND PASTE THIS TO YOUR SOCIAL MEDIA. SEE MORE PROOF IN THESE ARTICLES:

THE PROMIS BACKDOOR

Beyond embedded journalists, news blackouts, false flag events, blacklisted and disappeared Internet domains the plotline of America's "free press" there are now ISP-filtering programs subject to Homeland Security guidelines that sift through emails and toss some into a black hole. Insiders and the NSA-approved, however, can get around such protections of networks by means of the various hybrids of the PROMIS backdoor. The 1980s theA of the Prosecutor's Management Information System (PROMIS) software handed over the golden key that would grant most of the world to a handful of criminals. In fact, this one crime may have been the final deal with the devil that consigned the United States to its present shameful descent into moral turpitude. PROMIS began as a COBOL-based program designed to track multiple offenders through multiple databases like those of the DOJ, CIA, U.S. Attorney, IRS, etc. Its creator was a former NSA analyst named William Hamilton. About the time that the October Surprise Iranian hostage drama was stealing the election for former California governor Ronald Reagan and former CIA director George H.W. Bush in 1980, Hamilton was moving his Inslaw Inc. from non-profit to for-profit status.

His intention was to keep the upgraded version of PROMIS that Inslaw had paid for and earmark a public domain version funded by a Law Enforcement Assistance Administration (LEAA) grant for the government. With 570,000 lines of code, PROMIS was able to integrate innumerable databases without any reprogramming and thus turn mere data into information.

With Reagan in the White House, his California cronies at the DOJ offered Inslaw a \$9.6 million contract to install public-domain PROMIS in prosecutors' offices, though it was really the enhanced PROMIS that the good-old-boy network had set its sights on. In February 1983, the chief of Israeli antiterrorism intelligence was sent to Inslaw under an alias to see for himself the DEC VAX enhanced version. He recognized immediately that this software would revolutionize Israeli intelligence and crush the Palestine Intifada. Enhanced PROMIS could extrapolate nuclear submarine routes and destinations, track assets, trustees, and judges. Not only that, but the conspirators had a CIA genius named Michael Riconosciuto who could enhance the enhanced version one step further, once it was in their possession. To install public domain PROMIS in ninety-four U.S. Attorney offices as per contract, Inslaw had to utilize its enhanced PROMIS.

The DOJ made its move, demanding temporary possession of enhanced PROMIS as collateral to ensure that all installations were completed and that only Inslaw money had gone into the enhancements. Naïvely, Hamilton agreed. The rest is history: the DOJ delayed payments on the \$9.6 million and drove Inslaw into bankruptcy. With Edwin Meese III as Attorney General, the bankruptcy system was little more than a political patronage system, anyway. The enhanced PROMIS was then passed to the

brilliant multivalent computer and chemical genius Riconosciuto, son of CIA Agent Marshall Riconosciuto.⁵ Recruited at sixteen, Michael had studied with Nobel Prize-winning physicist and co-inventor of the laser Arthur Shallo. Michael was moved from Indio to Silver Springs to Miami as he worked to insert a chip that would broadcast the contents of whatever database was present to collection satellites and monitoring vans like the Google Street View van, using a digital spread spectrum to make the signal look like computer noise. This Trojan horse would grant key-club access to the backdoor of any person or institution that purchased PROM IS software as long as the backdoor could be kept secret. Meanwhile, the drama between Hamilton and the conspirators at DOJ continued. A quiet offer to buy out Inslaw was proffered by the investment banking firm Allen & Co., British publisher (Daily Mirror) Robert Maxwell, the Arkansas corporation Systematics, and Arkansas lawyer (and Clinton family friend) Webb Hubbell.

Hamilton refused and filed a \$50 million lawsuit in bankruptcy court against the DOJ on June 9, 1986. Bankruptcy Judge George F. Bason, Jr. ruled that the DOJ had indeed stolen PROMIS through trickery, fraud, and deceit, and awarded Inslaw \$6.8 million. He was unable to bring perjury charges against government officials but recommended to the House Judiciary Committee that it conduct a full investigation of the DOJ. The DOJ's appeal failed, but the Washington, D.C. Circuit Court of Appeals reversed everything on a technicality. Under then-President George H.W. Bush (1989 — 1993), Inslaw's petition to the Supreme Court in October 1991 was scorned. When the IRS lawyer requested that Inslaw be liquidated in such a way that the U.S. Trustee program (AG Meese's feeding trough between the DOJ and IRS) could name the trustee who would convert the

assets, oversee the auction, and retain the appraisers, Judge Bason refused.

Under then-President William Jefferson Clinton (1993 — 2001), the Court of Federal Claims whitewashed the DOJ's destruction of Inslaw and the A of PROMIS on July 31, 1997. Judge Christine Miller sent a 186-page advisory opinion to Congress claiming that Inslaw's complaint had no merit a somber message to software developers seeking to do business with Attorney Generals and their DOJ. For his integrity, Judge Bason lost his bench seat to the IRS lawyer. T

hroughout three administrations, the mainstream Mockingbird media obediently covered up the Inslaw affair, enhanced PROMIS being a master tool of inference extraction able to track and eavesdrop like nothing else. Once enhanced PROMIS was being sold domestically and abroad so as to steal data from individuals, government agencies, banks, and corporations everywhere, intelligence-connected Barry Kumnick~ turned PROMIS into an artificial intelligence (AI) tool called SMART (Special Management Artificial Reasoning Tool) that revolutionized surveillance. The DOJ promised Kumnick \$25 million, then forced him into bankruptcy as it had Hamilton. (Unlike Hamilton, Kumnick settled for a high security clearance and work at military contractors Systematics and Northrop.) Five Eyes / Echelon and the FBI's Carnivore / Data Collection System 1000 were promptly armed with SMART, as was closed circuit satellite highdefinition (HD) television. With SMART, Five Eyes / Echelon intercepts for UKUSA agencies became breathtaking.

The next modification to Hamilton's PROMIS was Brainstorm, a behavioral recognition software, followed by the facial

recognition soAware Flexible Research System (FRS); then Semantic Web, which looks not just for link words and embedded code but for what it means that this particular person is following this particular thread. Then came quantum modification. The Department of Defense paid Simulex, Inc. to develop Sentient World Simulation (SWS), a synthetic mirror of the real world with automated continuous calibration with respect to current real-world information. The SEAS (Synthetic Environment for Analysis and Simulations) soAware platform drives SWS to devour as many as five million nodes of breaking news census data, shiAing economic indicators, real world weather patterns, and social media data, then feeds it proprietary military intelligence and fictitious events to gauge their destabilizing impact. Research into how to maintain public cognitive dissonance and learned helplessness (psychologist Martin Seligman) help SEAS deduce human behavior.

There are legitimate reasons (<http://www.learnliberty.org/videos/edward-snowden-surveillance-is-about-power/>) to want to avoid being tracked and spied-on while you're online. But aside from that, doesn't it feel creepy knowing you're probably being watched every moment that you're online and that information about where you go and what you do could potentially be sold to anyone at any time--to advertisers, your health insurance company, a future employer, the government, even a snoop neighbor? Wouldn't you feel better not having to worry about that on top of everything else you have to worry about every day?

You can test to what extent your browser is transmitting unique information using these sites: panopticlick.com, Shieldsup, and ip-check.info.

<https://panopticlick.eff.org/>

<https://www.grc.com/shieldsup>

<https://cheapskatesguide.org/articles/ip-check.info?/lang=en>

These sites confirm that browsers transmit a lot of data that can be used for fingerprinting. From playing around with these sites, I have noticed that turning off javascript in my browser does help some. Also the TOR browser seems to transmit less data than most, but even it is not completely effective. The added benefit that you get from the TOR browser and especially the TAILS operating system is that they block your IP address from the websites you visit. You want to try several browsers to see which one transmits the least information. Perhaps you will be lucky enough to find a browser that transmits less information than the TOR browser.

The next thing to be aware of is that corporations have methods other than tracking to spy on you. There is a saying that if a corporation is offering you their product for free, you are their product. This means that corporations that offer you free services are selling the data they collect from you in order to be able to provide you with these services. So, chances are that companies that provide you with free email are reading your email. We know that, in addition to tracking you, Facebook reads your posts and knows who your friends are, and that is just the

beginning of Facebook's spying methods. Free online surveys are just ways of collecting more data from you. Companies also monitor your credit card transactions and sell your online dating profiles. If you have a Samsung TV that is connected to the internet, it's probably recording what you watch and may even be listening to your private conversations in your home. In fact, anything that you have in your home that is connected to the internet may be spying on you, right down to your internet-connected light bulb. With a few exceptions, online search engines monitor and log your searches. One of the exceptions is the ixquick.com search engine, which is headquartered in Europe. The steps to counter the nearly ubiquitous activities of free service providers would be to pay for services you receive online, read website privacy agreements, and not buy products that are known to be spying on you. However, the only way to be really secure from corporations using the internet to spy on you is to never connect to the internet or buy any internet-connected appliances. Welcome back to the 1980's.

Protecting yourself from government spying while you are on the internet is the hardest and requires the most knowledge. The biggest problem is that unless a whistle-blower like Edward Snowden tells us, we have no way of knowing how governments may potentially be spying on us. That means that we have no way of protecting ourselves 100% of the time from government spying. Some things whistle-blowers have revealed (<https://securerwisssdata.com/9-ways-government-spying-on-internet-activity/>) are that the US government logs the meta data from all phone calls (who calls who and when), secretly forces internet service providers and providers of other services to allow it to "listen in on" and record all traffic going through their servers, reads nearly all email sent from everywhere in the

world, and tracks the locations of all cell phones (even when they're turned off). And, although I am not aware of any specific whistle-blower revelations on this, there is every reason to believe that the US government (and perhaps others, including China's) has backdoors built into all computer hardware and operating system software for monitoring everything we do on our cell phones, tablets, laptops, desktop computers, and routers. (<https://www.eteknix.com/nsa-may-backdoors-built-intel-amd-processors/>) See also this. Because Lenovo computers are manufactured in China, the US government has issued warnings to all US government agencies and subcontractors to strongly discourage them from using Lenovo computers. And the US government probably has backdoors (<https://www.atlasobscura.com/articles/a-brief-history-of-the-nsa-attempting-to-insert-backdoors-into-encrypted-data>) into all commercially-available encryption software, with the possible exception of Truecrypt version 7.1a. I hope you are understanding now the magnitude of the lengths that governments are going to (using your tax money) to spy on you. In truth, we are now approaching the level of government spying that George Orwell warned about in his book, 1984

So what can we practically do to protect ourselves from government spying? Seriously, there isn't much, if we want to use cell phones, credit cards, and the internet. About all we can do, if we absolutely need to have a private conversation, is to have a face-to-face meeting without any electronics within microphone range. That includes cell phones, Samsung TV's, video cameras, computers, or land-line telephones. And don't travel to the meeting place using long-distance commercial transportation.

Sending a letter through the US mail is the next best, although it is known that the outsides of all mail sent through the US mail are photographed, and the pictures are stored. So, don't put your return address on the envelope. (http://www.abajournal.com/news/article/new_york_times_post_office_photocopies_envelopes_of_all_mail_sent_in_the_us/) As far as surfing the internet is concerned, begin with all the precautions that I outlined above to protect yourself from corporate spying (except HTTPS and VPN's). Then, add the TAILS operating system on a USB stick. As I said, TAILS will not prevent you from being identified and tracked via the fingerprinting method. And who can be sure whether the government has a backdoor in TAILS? As far as I know, the super-paranoid, hoody and sunglasses method I outlined above is the next step.

Experts warns of 'epidemic' of bugging devices used by stalkers - By James Hockaday

Stalkers are using cheap bugging devices hidden in everyday household items

More funding and legal powers are needed for police to stop a surge of stalkers using eavesdropping devices to spy on victims, experts have warned.

Firms paid to detect the bugs say they're finding more and more of the devices which are readily available on online marketplaces like Amazon and eBay.

Jack Lazzereschi, Technical Director of bug sweeping company Shapestones, says cases of stalking and victims being blackmailed with intimate footage shot in secret has doubled in the past two years.

He told Metro.co.uk: 'The police want to do something about it, they try to, but usually they don't have the legal power or the resources to investigate.'

'For us it's a problem. We try to protect the client, we want to assure that somebody has been protected.'

Advert for a hidden camera device planted inside a fire/smoke alarm sold on Amazon

People are paying as little as £15 for listening devices and spy cameras hidden inside desk lamps, wall sockets, phone charger cables, USB sticks and picture frames.

Users insert a sim card into a hidden slot and call a number to listen in on their unwitting targets.

People using hidden cameras can watch what's happening using an apps on their phones.

Jack says the devices are so effective, cheap and hard to trace to their users, law enforcement prefer using them over expensive old-school devices.

Although every case is different, in situations where homeowners plant devices in their own properties, Jack says there's usually a legal 'grey area' to avoid prosecution.

The devices themselves aren't illegal and they are usually marketed for legitimate purposes like protection, making it difficult for cops to investigate.

There is no suggestion online marketplaces like eBay and Amazon are breaking the law by selling them.

But in some instances, images of women in their underwear have been used in listings – implying more sinister uses for the devices.

Even in cases when people are more clearly breaking the law, Jack says it's unlikely perpetrators will be brought to justice as overstretched police will prioritise resources to stop violent crime.

Jack's says around 60 per cent of his firm's non-corporate cases involve stalking or blackmail.

He says it's become an 'epidemic' over the past couple of years with the gadgets more readily available than ever before.

Jack Lazzereschi says he's seen stalking cases double in a few years

Victims are often filmed naked or having sex and threatened with the threat of footage being put online and in the worst cases children are also recorded.

Jack says UK law is woefully unprepared to deal with these devices compared to countries in the Asian-Pacific region.

In South Korea authorities have cracked down on a scourge of

perverts planting cameras in public toilets.

James Williams, director of bug sweepers QCC Global says snooping devices used to be the preserve of people with deep pockets and technological know-how.

He said: 'It's gone from that to really being at a place where anybody can just buy a device from the internet.

'Anything you can possibly think of you can buy with a bug built into it. I would say they're getting used increasingly across the board.'

Suky Bhaker, Acting CEO of the Suzy Lamplugh Trust, which runs the National Stalking Helpline, warned using these gadgets could be a prelude to physical violence.

She said: 'We know that stalking and coercive control are extremely dangerous and can cause huge harm to the victim, both in terms of their psychological wellbeing and the potential for escalation to physical violence or even murder.

'The use of surveillance devices or spyware apps by stalkers, must be seen in the context of a pattern of obsessive, fixated behaviour which aims at controlling and monitoring the victim.

She added: 'There should be clarity for police forces that the use of surveillance equipment by stalkers to monitor their victim's location or communications is a sign that serious and dangerous abuse may be present or imminent.'

'All cases of stalking or coercive control should be taken seriously

and investigated when reported to police.'

The charity is calling for all police forces across the country to train staff in this area.

Earlier this month a policeman known only by his surname Mills was barred from the profession for life for repeatedly dismissing pleas for help from 19-year-old Shana Grice who was eventually murdered by her stalker ex-boyfriend Michel Lane.

A spokesman for eBay said: 'The listing of mini cameras on eBay is permitted for legitimate items like baby monitors or doorbell cameras.

'However, items intended to be used as spying devices are banned from eBay's UK platform in accordance with the law and our policy.

'We have filters in place to block prohibited items, and all the items flagged by Metro have now been removed.'

Face-tracking harvesters grab one picture of you and then use AI to find every other digital picture of you on Earth and open every social media post, resume, news clipping, dating account etc. and sell the full dossier on you to Axciom, the NSA, Political manipulators etc. and hack your bank accounts and credit cards. Never put an unsecured photo of yourself online.

=====

Who's Watching Your WebEx? Webex has many back-door spy paths built in

KrebsOnSecurity spent a good part of the past week working with **Cisco** to alert more than four dozen companies — many of them household names — about regular corporate [WebEx](#) conference meetings that lack passwords and are thus open to anyone who wants to listen in.

Department of Energy's WebEx meetings.

At issue are recurring video- and audio conference-based meetings that companies make available to their employees via WebEx, a set of online conferencing tools run by Cisco. These services allow customers to password-protect meetings, but it was trivial to find dozens of major companies that do not follow this basic best practice and allow virtually anyone to join daily meetings about apparently internal discussions and planning sessions.

Many of the meetings that can be found by a cursory search within an organization's "Events Center" listing on Webex.com seem to be intended for public viewing, such as product demonstrations and presentations for prospective customers and clients. However, from there it is often easy to discover a host of other, more proprietary WebEx meetings simply by clicking through the daily and weekly meetings listed in each organization's "Meeting Center" section on the Webex.com site.

Some of the more interesting, non-password-protected recurring meetings I found include those from **Charles Schwab**, **CSC**, **CBS**,

CVS, The U.S. Department of Energy, Fannie Mae, Jones Day, Orbitz, Paychex Services, and Union Pacific. Some entities even also allowed access to archived event recordings.

Cisco began reaching out to each of these companies about a week ago, and today released an [all-customer alert](#) (PDF) pointing customers to a [consolidated best-practices document](#) written for Cisco WebEx site administrators and users.

“In the first week of October, we were contacted by a leading security researcher,” Cisco wrote. “He showed us that some WebEx customer sites were publicly displaying meeting information online, including meeting Time, Topic, Host, and Duration. Some sites also included a ‘join meeting’ link.”

Google still keeps a list of everything you ever bought using Gmail, even if you delete all your emails, and provides that data to political parties, the NSA and marketing companies so they can manipulate you

[Todd Haselton@robotodd](mailto:ToddHaselton@robotodd)

Key Points

- Google Gmail keeps a log of everything you buy.
- Google says this is so you can ask Google Assistant about the status of an order or reorder something.
- It also says you can delete this log by deleting the email, but three weeks after we deleted all email, the list is still there.

Google and other tech companies have been under fire recently for a variety of issues, including failing to protect [user data](#), [failing to disclose](#) how data is collected and used and [failing to police the content](#) posted to their services.

Companies such as Google have embedded themselves in our lives with useful services including Gmail, Google Maps and Google Search, as well as smart products such as the Google Assistant which can answer our questions on a whim. The benefits of these tools come at the cost of our privacy, however, because while Google says that privacy should not be a "[luxury good](#)," it's still going to great lengths to collect as much detail as possible about its users and making it more difficult than necessary for users to track what's collected about them and delete it.

Here's the latest case in point.

In May, I wrote up something weird I spotted on [Google's](#) account management page. I noticed that Google uses Gmail to store a list of [everything you've purchased](#), if you used Gmail or your Gmail address in any part of the transaction.

If you have a confirmation for a prescription you picked up at a pharmacy that went into your Gmail account, Google logs it. If you have a receipt from Macy's, Google keeps it. If you bought food for delivery and the receipt went to your Gmail, Google stores that, too.

You get the idea, and you can see your own purchase history by going to [Google's Purchases page](#).

Google says it does this so you can use Google Assistant to track packages or reorder things, even if that's not an option for some purchases that aren't mailed or wouldn't be reordered, like something you bought at a store.

At the time of my original story, Google said users can delete everything by tapping into a purchase and removing the Gmail. It seemed to work if you did this for each purchase, one by one. This isn't easy — for years worth of purchases, this would take hours or even days of time.

So, since Google doesn't let you bulk-delete this purchases list, I decided to delete everything in my Gmail inbox. That meant removing every last message I've sent or received since I opened my Gmail account more than a decade ago.

Despite Google's assurances, it didn't work.

Like a horror movie villain that just won't die

On Friday, three weeks after I deleted every Gmail, I checked my purchases list.

I still see receipts for things I bought years ago. Prescriptions, food deliveries, books I bought on Amazon, music I purchased from iTunes, a subscription to Xbox Live I bought from Microsoft -- it's all there.

MOST OF THE OWNERS OF BIG DATING SITES TURN OUT TO BE CROOKS AND POLITICAL MANIPULATORS

- Beware of who you trust with your sex life
- Big dating site owners found to be engaged in tax evasion, sex trafficking, political bribery, privacy abuse, selling access to hackers, domestic spying, human rights violations, political Honey Traps and other crimes
- *"Don't worry, Trust Us"* the site owners say but the world always later finds out they are leaking your data to all kinds of awful outsiders
- ***Never, Ever***, trust a dating site to protect your privacy
- Every major dating site reads all of your text messages and stores archives of all of your dating site messages forever
- Every photo, or personal data point, that you put on a data site can instantly be reverse tracked back to all of your other work, employment, medical and personal data on the internet
- A low level admin or operations blogger in the offices of match.com, OKCUPID, Plenty of Fish, Tinder or other sites might tell you that *"they don't do any of those bad things"* but they are either lying or naive. Big dating sites exist for only two reasons: Profiteering and Political Spying

Chelsea Clinton's OK Cupid, Match.com and Plenty Of Fish DNC Facial Recognition Political Spy Tech Is Growing Stronger By Stealing Your Face

Chelsea Clinton's OK Cupid, Match.com and Plenty Of Fish DNC Facial Recognition Political Spy Tech Is Growing Stronger By Stealing Your Face

- They use sex to trap you into revealing how to manipulate you.
- All of the JOIN UP questions at OK Cupid are essentially the DNC's political agenda questions
- They use emotional vulnerabilities to trick you into being spied on for political purposes
- Mass user class-action lawsuits being formed to sue Chelsea Clinton's IAC (The ACTUAL owner of these websites) into oblivion for abusing users

By Cade Metz

Companies gather massive databases of people's images, for facial recognition spy tools, from OKCUPID

Cade Metz

© Open Data Commons Public Domain Dedication and License/Megapixels via The New York Times In an undated handout image from the website Megapixels, a sample image from the Brainwash database, created by Stanford University researchers, which contains more than 10,000 images and nearly 82,000...

SAN FRANCISCO — Dozens of databases of people's faces are being compiled without their knowledge by companies and researchers, with many of the images then being shared around the world, in what has become a vast ecosystem fueling the spread of facial recognition technology.

The databases are pulled together with images from social networks, photo websites, dating services like OkCupid, and cameras placed in restaurants and on college quads. Although there is no precise count of the datasets, privacy activists have pinpointed repositories that were built by Microsoft, Stanford

University, and others, with one holding more than 10 million images while another had more than 2 million.

The facial compilations are being driven by the race to create leading-edge facial recognition systems. This technology learns how to identify people by analyzing as many digital pictures as possible using “neural networks,” which are complex mathematical systems that require vast amounts of data to build pattern recognition.

Tech giants Facebook and Google have most likely amassed the largest face data sets, which they do not distribute, according to research papers. But other companies and universities have widely shared their image troves with researchers, governments, and private enterprises in Australia, China, India, Singapore, and Switzerland for training artificial intelligence, according to academics, activists, and public papers.

Companies and labs have gathered facial images for more than a decade, and the databases are merely one layer to building facial recognition technology. But people often have no idea that their faces ended up in them. And while names are typically not attached to the photos, individuals can be recognized because each face is unique to a person.

Questions about the datasets are rising because the technologies that they have enabled are being used in potentially invasive ways. Documents released last Sunday revealed that Immigration and Customs Enforcement officials employed facial recognition technology to scan motorists' photos to identify unauthorized immigrants. The FBI also spent more than a decade using such systems to compare driver's license and visa photos against the faces of suspected criminals,

according to a Government Accountability Office report last month. On Wednesday, a congressional hearing tackled the government's use of the technology.

There is no oversight of the datasets. Activists and others said they were angered by the possibility that people's likenesses had been used to build ethically questionable technology and that the images could be misused. At least one facial database created in the United States was shared with a company in China that has been linked to ethnic profiling of the country's minority Uighur Muslims.

Over the past several weeks, some companies and universities, including Microsoft and Stanford, removed their facial datasets from the internet because of privacy concerns. But given that the images were already so well distributed, they are most likely still being used in the United States and elsewhere, researchers and activists said.

"You come to see that these practices are intrusive, and you realize that these companies are not respectful of privacy," said Liz O'Sullivan, who oversaw one of these databases at the artificial intelligence startup Clarifai. She said she left the New York-based company in January to protest such practices.

"The more ubiquitous facial recognition becomes, the more exposed we all are to being part of the process," she said.

Google, Facebook, and Microsoft declined to comment.

One database, which dates to 2014, was put together by researchers at Stanford. It was called Brainwash, after a San Francisco cafe of the same name, where the researchers tapped

into a camera. Over three days, the camera took more than 10,000 images, which went into the database, the researchers wrote in a 2015 paper. The paper did not address whether cafe patrons knew their images were being taken and used for research. (The cafe has closed.)

The Stanford researchers then shared Brainwash. According to research papers, it was used in China by academics associated with the National University of Defense Technology and Megvii, an artificial intelligence company that The New York Times previously reported has provided surveillance technology for monitoring Uighurs.

The Brainwash dataset was removed from its original website last month after Adam Harvey, an activist in Germany who tracks the use of these repositories through a website called MegaPixels, drew attention to it. Links between Brainwash and papers describing work to build AI systems at the National University of Defense Technology in China have also been deleted, according to documentation from Harvey.

Stanford researchers who oversaw Brainwash did not respond to requests for comment. "As part of the research process, Stanford routinely makes research documentation and supporting materials available publicly," a university official said. "Once research materials are made public, the university does not track their use nor did university officials."

At Microsoft, researchers have claimed on the company's website to have created one of the biggest facial datasets. The collection, called MS Celeb, spanned over 10 million images of more than 100,000 people.

MS Celeb was ostensibly a database of celebrities, whose images are considered fair game because they are public figures. But MS Celeb also brought in photos of privacy and security activists, academics, and others, such as Shoshana Zuboff, the author of the book “The Age of Surveillance Capitalism,” according to documentation from Harvey of the MegaPixels project. MS Celeb was distributed internationally before being removed this spring after Harvey and others flagged it.

Matt Zeiler, founder and chief executive of Clarifai, the AI startup, said his company had built a facial database with images from OkCupid, a dating site. He said Clarifai had access to OkCupid’s photos because some of the dating site’s founders invested in his company.

He added that he had signed a deal with a large social media company — he declined to disclose which — to use its images in training facial recognition models. The social network’s terms of service allow for this kind of sharing, he said.

“There has to be some level of trust with tech companies like Clarifai to put powerful technology to good use and get comfortable with that,” he said.

An OkCupid spokeswoman said that Clarifai contacted the company in 2014 “about collaborating to determine if they could build unbiased AI and facial recognition technology” and that the dating site “did not enter into any commercial agreement then and have no relationship with them now.” She did not address whether Clarifai had gained access to OkCupid’s photos without its consent.

Clarifai used the images from OkCupid to build a service that could identify the age, sex, and race of detected faces, Zeiler said. The startup also began working on a tool to collect images from a website called Insecam — short for “insecure camera” — which taps into surveillance cameras in city centers and private spaces without authorization. Clarifai’s project was shut down last year after some employees protested and before any images were gathered, he said.

Zeiler said Clarifai would sell its facial recognition technology to foreign governments, military operations, and police departments provided the circumstances were right. It did not make sense to place blanket restrictions on the sale of technology to entire countries, he added.

O’Sullivan, the former Clarifai technologist, has joined a civil rights and privacy group called the Surveillance Technology Oversight Project. She is now part of a team of researchers building a tool that will let people check whether their image is part of the openly shared facial databases.

“You are part of what made the system what it is,” she said.

plus your own doctor and any community clinic...

- You can take pills to prevent HIV

Per: <https://www.cdc.gov/hiv/risk/prep/index.html>

..you can take Prep Pills to prevent HIV but you can't usually get the prescription unless you tell the doctor you are ass-fucking gay men all of a sudden... It works on non-gay people but they don't like to give it to straight people for odd political reasons.

- Get a home lab

The equipment to test for STD's used to cost millions of dollars but now you can buy forensics portable testing equipment for less than \$30,000.00 to test yourself and any new partner quickly. If you avoiding getting AIDS, \$30,000.00 is worth the investment. The prices are always dropping. As a backup plan,

you can use ORAQUICK and a combination of these tests:
<https://www.amazon.com/hiv-test-kit/s?k=hiv+test+kit>

HOW TO NEVER HAVE A BORING DATE

Many first dates and new couples find it hard to think of things to do. Here is a small sample of the things you can do in just one area, ie: around the San Francisco Bay Area:

- Walk around Angel Island
- Ask a stranger for directions to the nearest park
- Attend a performance at Zellerbach Hall at the University of California in Berkeley
- Attend an Animation Film Festival
- Back the car up to a cliff-side view of the ocean and have a picnic in the back over-looking the entire Pacific ocean
- Bake Cookies
- Go to the student film festival at one of the universities
- Find a beach you have never visited yet
- Bed & Breakfast Inns
- Borrow a dog and take them for a run on the beach
- Build a roadside library box and fill it with your old bookstore-
- Buy a book at City Lights bookstore in San Francisco's North Beach

- Buy a pumpkin for Halloween in Half Moon Bay at Bob's Pumpkin Patch
- Call into radio shows and see how much airtime you can get
- Camp, hike, bike ride, fish or whatever you like in Lake Tahoe (Several hours from the Bay Area)
- Check Out Art Galleries
- Climb a tree
- Collect stuff at the beach
- Crash a wedding reception at a Golf Club
- Dance to Salsa music in the Mission District of San Francisco
- Do an exotic jigsaw puzzle
- Do the "step-over" in a cross-walk
- Drive along Highway between San José and Santa Cruz See beautiful mountains, homes, redwoods and much more
- Drive Big Sur and stop at Nepenthe or the Post Ranch Inn
- Drive down every road in Napa and explore
- Drive scenic Highway from San Francisco to Santa Barbara
- Drive to the top of Mount Hamilton and see the Lick Observatory in San José
- Drop someone off at Alcatraz Island
- Eat Dessert
- Eat Good food
- Enjoy a beautiful summer day anywhere in the Bay Area

- Enjoy a California or Stanford basketball game
- Enjoy a performance or an exhibition at the Mission Cultural Arts Center in San Francisco
- Enjoy a sunset at any beach
- Enjoy camping on a beach south of Carmel Camping is available on beaches all the way to the Mexican border
- Enjoy international food and listen to music all weekend long during Tapestry and Talent in downtown San José
- Enjoy the beautiful homes and breathtaking coastline while driving from Pacific Grove through Del Monte ending in Carmel
- Enjoy the San José Jazz Festival at Cesar Chavez Plaza
- Enjoy the Santa Clara County Fair in San José
- Feed a homeless person
- Feed a squirrel
- Fish, drink a soda and eat calamari at the Santa Cruz Pier
- Flip some coins into a fountain
- Fly a glider over the farms of Monterey
- Fly acrobatic dual line kits
- Fly gliders
- Fly kites
- Flying Kites
- Foot Tickling

- Get a lifetime National Park pass and use it every month
