

In Space, Nobody Can Hear You Meme!

By Dalton Cosmin

Meme Satellites are coming! Hackers are seeking to hack every satellite in space and rain memes down on the planet.

Satellites are very easy for modern hackers to hack and nobody can fly up there from the EU to give anonymous hackers a "Meme Bill".

In addition to pirate broadcasting, security experts are worried about satellites being used as plasma inflamed kinetic energy weapons. A satellite plowing through the atmosphere turns into molten plasma ball that can hit a city and cause huge destruction.

Since everything that was said to be "un-hackable" has been hacked already, it is time to consider removal of all satellites that are not Pentagon controlled.
